Data: 06.12.2017 12:57  Autumn Semester 2015  Page 424 of 1432
Introduction into the theoretical background and the practical application of methods of data analysis in meteorology and climatology.

Topics: exploratory methods, hypothesis tests, analysis of climate trends, measuring the skill of climate and forecasting models, analysis of extreme events, principal component analysis and maximum covariance analysis.

The lecture also provides an introduction into R, a programming language and graphics tool frequently used for data analysis in meteorology and climatology. During hands-on computer exercises the student will become familiar with the practical application of the methods.

Lecture notes:
Documentation and supporting material include:
- documented view graphs used during the lecture
- exercise sets and solutions
- R-packages with software and example datasets for exercise sessions

All material is made available via the lecture web-page.

Lecture notes:

Literature:
Prerequisite:
- Atmosphäre, Mathematik IV: Statistik, Anwendungsnahes Programmieren.

701-1235-00L Cloud Microphysics W 4 credits 2V+1U U. Lohmann, B. Sierau

Abstract:
Clouds are a fascinating climate phenomenon central to the hydrological cycle and the Earth’s radiation balance. Interactions between cloud particles can result in precipitation, glaciation or evaporation of the cloud depending on its microstructure and microphysical processes. In this course the sought-after topic of ice formation in clouds is studied from a theoretical and empirical perspective.

Objective:
Students will gain an appreciation and understanding of the complex processes in clouds and the necessary physical phenomenon that are involved and need to be accounted for in order to study cloud and precipitation formation.

Content:
Microstructure of clouds and precipitation, aerosol activation to form cloud droplets, ice crystal nucleation (homogeneous freezing of supercooled aerosol and heterogeneous freezing), precipitation formation

Lecture notes:
Powerpoint slides will be made available

Literature:

Prerequisites / notice:
Prerequisite: Atmosphäre, Mathematik IV: Statistik, Anwendungsnahes Programmieren.

701-1221-00L Dynamics of Large-Scale Atmospheric Flow W 4 credits 2V+1U H. Wernli, S. Pfahl

Abstract:
Dynamic, synoptic Meteorology

Objective:
Understanding the dynamics of large-scale atmospheric flow

Content:
Dynamical Meteorology is concerned with the dynamical processes of the earth’s atmosphere. The fundamental equations of motion in the atmosphere will be discussed along with the dynamics and interactions of synoptic system - i.e. the low and high pressure systems that determine our weather. The motion of such systems can be understood in terms of quasi-geostrophic theory. The lecture course provides a derivation of the mathematical basis along with some interpretations and applications of the concept.

Lecture notes:
Powerpoint slides will be made available

Literature:
- Pichler H., Dynamik der Atmosphäre, Bibliographisches Institut, 456 pp. 1997

701-1251-00L Land-Climate Interactions W 3 credits 2G S. Seneviratne, E. L. Davin

Abstract:
The purpose of this course is to provide fundamental background on the role of land surface processes (vegetation, soil moisture dynamics, land energy and water balances) for the climate system. The course consists of 2 contact hours per week, including 2 computer exercises.

Objective:
The students can understand the role of land processes and associated feedbacks for the climate system.

Prerequisites / notice:
Prerequisites: Introductory lectures in atmospheric and climate science

701-1237-00L Solar Ultraviolet Radiation W 1 credit 1V J. Gröbner

Abstract:
The lecture will introduce the student to the thematics of solar ultraviolet radiation and its effects on the atmosphere and the biosphere. The lecture will cover the modeling and the measurement of solar ultraviolet radiation. The instruments used for solar radiation measurements will also be introduced.

Objective:
The lecture should enable the student to understand the specific problematics related to solar ultraviolet radiation and its interaction with the atmosphere and the biosphere.
1) Einführung in die Problematik  Motivation  
  - Begriffe (UV-C, UV-B, UV-A,...)  
  - Einfluss der UV Strahlung auf Biosphäre (Mensch, Tier, Pflanzen)  
  - Positive und schädliche Effekte  
  - Wirkungsspektrum, Konzept, Beispiele  
  - UVIndex  

2) Geschichtlicher Rückblick  
  - Rayleigh - Himmelsblau  
  - 1907: Dorno, PMOD  
  - 1970: Bener, PMOD  
  - 1980: Berger, Erythemal sunburn meter  
  - 1990-: State of the Art  

3) Extraterrestrische UV Strahlung  
  - Spektrum  
  - Energieverteilung  
  - Variabilität (Spektral, zeitlich, relativ zu Totalstrahlung)  
  - Satellitenmessungen, Übersicht  

4) Einfluss der Atmosphäre auf die solare UV Strahlung  
  - Atmosphärenaufbau  
  - Beinflussende Parameter (Ozon, Wolken, ...)  
  - Ozon, Stratosphärisches versus troposphärisches Gesicht: Ozondepletion, Polare Ozoniöcher und Einfluss auf die UV Strahlung  
  - Wolken  
  - Aerosole  
  - Rayleighstreuung  
  - Trends (Ozon, Wolken, Aerosole)  
  - Radiation Amplification Factor (RAF)  

5-6) Strahlungstransfer  
  - Strahlungstransfergleichung  
  - Modellierung, DISORT  
  - IrbRadtran, TUV, FASTRT  
  - Parameter  
  - Sensitivitätsstudien  
  - Vergleiche mit Messungen  
  - 3-D Modellierung (MYSTIC)  
  - Beer-Lambert Gesetz  

7) Strahlungsmessungen  
  - Instrumente zur Strahlungsmessung  
  - Messgrössen: Irradiance (global, direct, diffus), radiance, aktinischer Fluss  
  - Horizontale und geneigte Flächen  
  - Generelle Problematik: Freiluftmessungen...  
  - Qualitätssicherung  

8) Solare UV Strahlungsmessungen  
  - Problematik: Dynamik, Spektrale Variabilität, Alterung  
  - Stabilität  
  - Spezifische Instrumente: Filtrerradiometer, Spektroradiometer, Dosimetrie  
  - Übersicht Aufbau und Verwendung  

9-10) Solare UV Strahlungsmessgeräte  
  - Spektroradiometer, Filterradiometer (Breit und schmalbandig)  
  - Charakterisierung  
  - Kalibriermethoden (Im Labor, im Feld)  
  - Qualitätssicherung, Messkampagnen  

11-12) Auswerteverfahren  
  - AtmosphärischeParameter aus Strahlungsmessungen  
  - Ozon, SO2  
  - Albedo (Effektiv versus Lokal)  
  - Aerosol Parameter (AOD, SSA, g, Teilchenverteilungen)  
  - Zusammenspiel Messungen - Modellierung  
  - Aktinische UV-Strahlungsfrequenzen und Bestimmung von atmosphärischen Photolysefrequenzen  

13) UV Klimatologie  
  - Trends  
  - UV Klimatologie durch Messnetze  
  - UV Klimatologie durch Satellitenmessungen am Beispiel von TOMS  
  - Modellierung am Beispiel Meteosat-JRC  
  - UV Rekonstruktionen  

14) Aktuelle Forschungen  
  - Internationale Projekte, Stand der Forschung  

---

**Abstract**  
Thermodynamical and kinetic basics: bi- and termolecular reactions, photo-dissociation. Chemical family concept. Chapman chemistry. Radical reactions of oxygen species with nitric oxide, active halogens and odd hydrogen. Ozone depletion cycles. Methane depletion and ozone production in the lower stratosphere. Heterogeneous chemistry on background aerosol. Chemistry and dynamics of the ozone hole. The lecture gives an overview on the manifold reactions which occur in the gas phase, in stratospheric aerosol droplets and in polar cloud particles. The focus is on the chemistry of stratospheric ozone and its influence through natural and anthropogenic effects. Especially the intercontinental air traffic and the ozone depletion caused by FCKW CFC in the mid-latitude and the polar regions as well as coupling with the greenhouse effect.

---

**Objective**  
- Radical reactions of oxygen species with nitric oxide, active halogens and odd hydrogen.
- Ozone depletion cycles. Methane depletion and ozone production in the lower stratosphere.
- Heterogeneous chemistry on background aerosol.
- Chemistry and dynamics of the ozone hole.
- The lecture gives an overview on the manifold reactions which occur in the gas phase, in stratospheric aerosol droplets and in polar cloud particles.
- The focus is on the chemistry of stratospheric ozone and its influence through natural and anthropogenic effects.
- Especially the intercontinental air traffic and the ozone depletion caused by FCKW CFC in the mid-latitude and the polar regions as well as coupling with the greenhouse effect.
Short presentation of thermodynamical and kinetic basics of chemical reactions: bi- and thermo molecular reactions, photo-dissociation. Introduction to the chemical family concept: active species, their source gases and reservoir gases. Detailed treatment of the pure oxygen family (odd oxygen) according to the Chapman chemistry. Radical reactions of the oxygen species with nitric oxide, active halogens (chlorine and bromine) and odd hydrogen. Ozone depletion cycles. Methane depletion and ozone production in the lower stratosphere (photo-smog reactions). Heterogeneous chemistry on the background aerosol and its significance for heavy air traffic. Chemistry and dynamics of the ozone hole: Formation of polar stratospheric clouds and chlorine activation.

**Lecture notes**

Documents are provided in the contact hours.

**Literature**

**Prerequisites / notice**

Prerequisites: Basics in physical chemistry are required and an overview equivalent to the bachelor course in atmospheric chemistry (lecture 701-0471-01) is expected.

701-1233-00 V starts in the first week of the semester. The exercises 701-1233-00 U will start only in the 2nd week of the semester.

Seminar in Evolutionary Ecology of Infectious Diseases

Objective
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

Content
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

Lecture notes
Publications and class notes can be downloaded from a web page announced during the lecture.

Literature
Papers will be assigned and downloaded from a web page announced during the lecture.

Eco-Biology

Objective
Students will learn how to develop and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

Content
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

Lecture notes
Publications and class notes can be downloaded from a web page announced during the lecture.

Literature
Papers will be assigned and downloaded from a web page announced during the lecture.
The course structure changes between lecture parts, seminars and discussions. The didactic atmosphere is intended as working group.

Prerequisites for attending this course are skills and knowledge equivalent to those taught in the following ETH courses:
- Pflanzen- und Vegetationsökologie
- Systematische Botanik
- Raum- und Regionalentwicklung
- Naturschutz und Stadtbioökologie

---

**551-1701-00L Research Seminar: Ecological Genetics**

**W** 2 credits 1S A. Widmer, S. Fior

*Minimum number of participants is 4.*

**Abstract**

In this research seminar we will critically discuss current topics in Ecological Genetics using publications from the leading scientific journals in this field.

**Objective**

It is our aim that participants gain insight into the current research topics and knowledge available in Ecological Genetics and learn to critically assess and appreciate scientific publications in this field.

**Lecture notes**

none

**Literature**

will be distributed

**Prerequisites / notice**

Active participation in the discussions is a prerequisite for this course.

---

**701-1425-01L Genetic Diversity: Techniques**

**W** 1 credit 2U A. M. Minder Pfy1

*Number of participants limited to 8.*

*Selection of the students: order of registration*

*Registration until 26.10.15*

**Abstract**

This course provides training for advanced students (master, doctoral or post-doctoral level) in how to measure and collect genetic diversity data from populations, experiments, field and laboratory. Different DNA/RNA extraction, genotyping and gene expression techniques will be addressed. Choice of topic by demand and/or availability of data.

**Objective**

To learn and improve on standard and modern methods of genetic data collection. Examples are: use of pyrosequencing, expression analysis, SNP-typing, next-generation sequencing, etc. A course for practitioners.

**Content**

After an introduction (one afternoon), students will have 3 weeks to work independently or in groups through different protocols. At the end the whole group meets for another afternoon to present the techniques/results and to discuss the advantages and disadvantages of the different techniques.

Techniques addressed are: RNA/DNA extractions and quality control, SNP genotyping, pyrosequencing, real-time qPCR.

**Lecture notes**

Material will be handed out in the course.

**Literature**

Material will be handed out in the course.

**Prerequisites / notice**

Two afternoons are hold in the class. The lab work will be done from the students according to their timetable, but has to be finished after 3 weeks. Effort is roughly 1-2 days per week, depending on the skills of the student.

---

**701-1676-01L Landscape Genetics**

**W** 2 credits 3G R. Holderegger, J. Bolliger, F. Gugerli

*Number of participants limited to 14.*

**Prerequisites / notice**

Active participation in the discussions is a prerequisite for this course.

---

**551-0737-00L Experimental Ecology: Evolution and Ecology**

**W** 2 credits 2K S. Bonhoeffer

*Interaction seminar. Student-mediated presentations, guests and discussions on current themes in ecology, evolutionary and population biology.*

**Objective**

Getting familiar with scientific arguments and discussions. Overview of current research topics. Making contacts with fellow students in other groups.

**Content**

Scientific talks and discussions on changing subjects.

**Lecture notes**

None

**Literature**

None

**Prerequisites / notice**

---|---|---|---|---|---
701-1651-00L | Environmental Governance | W | 3 credits | 2G | E. Lieberherr, G. de Buren

---

To understand how an environmental problem may (or not) become a policy and explain political processes, using basic concepts and techniques from political science. To analyze the evolution as well as the key elements of environmental governance. To be able to identify the main challenges and opportunities for environmental governance and to critically discuss them with reference to various practical policy examples.

Improvements in environmental quality and sustainable management of natural resources cannot be achieved through technical solutions alone. The quality of the environment and the achievement of sustainable development strongly depend on human behavior and specifically the human uses of nature. To influence human behavior, we rely on public policies and other societal rules, which aim to steer the way humans use natural resources and their effects on the environment. Such steering can take place through government intervention alone. However, this often also involves governance, which includes the interplay between governmental and non-governmental actors, the use of diverse tools such as emission standards or financial incentives to steer actors' behavior and can occur at the local, regional, national or international level.

In this course, we will address both the practical aspects of as well as the scientific debate on environmental governance. The course gives future environmental experts a strong basis to position themselves in the governance debate, which does not preclude government but rather involves a spectrum from government to governance.

Key questions that this course seeks to answer: What are the core characteristics of environmental challenges from a policy perspective? What are key elements of 'environmental governance' and how legitimate and effective are these approaches in addressing persistent environmental challenges?

We will mostly work with readings from the following books:

Lecture notes

Lecture slides and additional course material will be provided throughout the semester.

Prerequisites

We recommend that students have (a) Three-years BSc education of a (technical) university; (b) Successfully completed Bachelor introductory course to environmental policy (Entwicklungen nationaler Umweltpolitik (or equivalent)) and (c) Familiarity with key issues in environmental policy and some fundamental knowledge of one social science or humanities discipline (political science, economics, sociology, history, psychology, philosophy).

Prerequisites / notice

A detailed course schedule will be made available at the beginning of the semester.
Literature

Prerequisites / notice

The 2-hour course (5-7 p.m.) will be held as a series of lectures. The course materials will be available in form of an electronic Reader at the beginning of the semester.

The class will be taught in English.

Students will be asked to give a (a) presentation (15 Minutes) or write a review paper based on a article selected from the electronic script, and (b) they will have to pass a written test at the end of the course in order to obtain 3 credit points in the ECTS System. In the final mark (a) will have a weight of 40% and (b) 60%.

701-1543-00L Transdisciplinary Methods and Applications W 3 credits 2G P. Krütli, M. Stauffacher

Abstract

The course deals with transdisciplinary (td) methods, concepts and their applications in the context of case studies and other problem oriented research projects. Td methods are used in research at the science-society interface and when collaborating across scientific disciplines.

Students learn to apply methods within a functional framework. The format of the course is seminar-like, interactive.

Objective

At the end of the course students should:

Know:
- Function, purpose and algorithm of a selected number of transdisciplinary methods

Understand:
- Functional application in case studies and other problem oriented projects

Be able to reflect on:
- Potential, limits, and necessity of transdisciplinary methods

Be prepared for:
- Transdisciplinary Case Study 2016

Content

The lecture is structured as follows:
- Overview of concepts and methods of inter-/transdisciplinary integration of knowledge, values and interests (approx. 20%)
- Analysis of a selected number of transdisciplinary methods focusing problem framing, problem analysis, and impact (approx. 50%)
- Practical application of the methods in a broader project setting (approx. 30%)

Lecture notes

Handouts are provided by the lecturers

Literature

Selected scientific articles and book-chapters

This course is recommended for students participating in the Transdisciplinary Case Study 2016.

701-1551-00L Sustainability Assessment W 3 credits 2G P. Krütli, C. E. Pohl

Abstract

The course deals with the concepts and methodologies for the analysis and assessment of sustainable development. A special focus is given to the social dimension and to social justice as a guiding principle of sustainability as well as to trade-offs between the three dimensions of sustainability.

The course is seminar-like, interactive.

Objective

At the end of the course students should

Know:
- core concepts of sustainable development, and;
- the concept of social justice - normatively and empirically - as a core element of social sustainability;
- important empirical methods for the analysis and assessment of local / regional sustainability issues.

Understand and reflect on:
- the challenges of trade-offs between the different goals of sustainable development;
- and the respective impacts on individual and societal decision-making.
The course is structured as follows:
- Overview of rationale, objectives, concepts and origins of sustainable development;
- Importance and application of sustainability in science, politics, society, and economy;
- Sustainable (local / regional) development in different national / international contexts;
- Analysis and evaluation methods of sustainable development with a focus on social justice;
- Tradeoffs in selected examples.

Lecture notes: Handouts.

Literature: Selected scientific articles & book chapters

<tr>
<td></td>
<td>Traditional management systems focus on extraction of natural resources, and their manipulation and governance. However, traditional management has frequently resulted in catastrophic failures such as, for example, the collapse of fish stocks and biodiversity loss. These failures have stimulated the development of alternative ecosystem management approaches that emphasise the functionality of human-dominated systems. Inherent to such approaches are system-wide perspectives and a focus on ecological processes and services, multiple spatial and temporal scales, as well as the need to incorporate diverse stakeholder interests in decision making. Thus, ecosystem management is the science and practice of managing natural resources, biodiversity and ecological processes, to meet multiple demands of society. It can be local, regional or global in scope, and addresses critical issues in developed and developing countries relating to economic and environmental security and sustainability.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>This course provides an introduction to ecosystem management, and in particular the importance of integrating ecology into management systems to meet multiple societal demands. The course explores the extent to which human-managed terrestrial systems depend on underlying ecological processes, and the consequences of degradation of these processes for human welfare and environmental well-being. Building upon a theoretical foundation, the course will tackle issues in resource ecology and management, notably forests, agriculture and wild resources within the broader context of sustainability, biodiversity conservation and poverty alleviation or economic development. Case studies from tropical and temperate regions will be used to explore these issues. Dealing with ecological and economic uncertainty, and how this affects decision making, will be discussed. Strategies for conservation and management of terrestrial ecosystems will give consideration to landscape ecology, protected area systems, and community management, paying particular attention to alternative livelihood options and marketing strategies of common pool resources.</td>

We will mostly work with readings from the following books:

Key questions that this course seeks to answer: What are the core characteristics of environmental challenges from a policy perspective? What are key elements of 'environmental governance' and how legitimate and effective are these approaches in addressing persistent environmental challenges?

Lecture notes

- Lecture slides and additional course material will be provided throughout the semester.

We will mostly work with readings from the following books:

A detailed course schedule will be made available at the beginning of the semester.

We recommend that students have (a) Three-years BSc education of a (technical) university; (b) Successfully completed Bachelor introductory course to environmental policy (Entwicklungsgenossenschaft Umweltökonomik (or equivalent)) and (c) Familiarity with key issues in environmental policy and some fundamental knowledge of one social science or humanities discipline (political science, economics, sociology, history, psychology, philosophy)

**701-1671-00L Sampling Techniques for Forest Inventories**

- **W** 3 credits 2V
- D. Mandallaz

**Abstract**

Introduction to design and model assisted sampling theory for forest inventories. Two-phase two-stage forest inventories with simple or cluster sampling. Small area estimation. Presentation of the Swiss National Inventory.

**Objective**

Short introduction to Kriging techniques.

**Content**

Students should have a good understanding of the concepts of general sampling theory in a modern framework. They should also master the specific problems arising in forest inventory and be able, if necessary, to read more specialized books or research papers.

**Lecture notes**

- Sampling techniques for forest inventories. Daniel Mandallaz, Chapman and Hall. A free electronic copy of the book is also available. A PDF file containing parts of the book will be mailed to the participants.

**Literature**

- Sampling methods, remote sensing and GIS multisource forest inventory M. Köhl, S. Magnussen, M. Marchetti, 2006, Springer.
- Sampling techniques for forest inventories, Daniel Mandallaz, 2007, Chapman and Hall.

**Prerequisites / notice**

- A simulation software will be used throughout the lectures to illustrate the theoretical developments. Upon request a half day field demonstration can be organized at the WSL outside the lecture time. A repetitorium for the exam is also offered.

**751-5125-00L Stable Isotope Ecology of Terrestrial Ecosystems**

- **W** 2 credits 2G
- R. A. Werner, N. Buchmann, R. Siegwolf

**Abstract**

This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to process-oriented ecological research. Topics focus on stable isotopes as indicators for the origin of pools and fluxes, partitioning of composite fluxes as well as to trace and integrate processes. In addition, students carry out a small project during lab sessions.

**Objective**

Students will be familiar with basic and advanced applications of stable isotopes in studies on plants, soils, water and trace gases, know the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small lab project, practice to search and analyze literature as well as to give an oral presentation.

**Content**

The analyses of stable isotopes often provide insights into ecophysiological and ecological processes that otherwise would not be available with classical methods only. Stable isotopes proved useful to determine origin of pools and fluxes in ecosystems, to partition composite fluxes and to integrate processes spatially and temporally.

**Lecture notes**

- Handouts will be available on the webpage of the course.

**Prerequisites / notice**

This course will provide an introduction to the applicability of stable isotopes to ecological research questions. Topics will focus on carbon (13C), nitrogen (15N), oxygen (18O) and hydrogen (2H) at natural isotope abundance and tracer levels. Lectures will be supplemented by intensive laboratory sessions, short presentations by students and computer exercises.

**102-0675-00L Earth Observation**

- **W** 4 credits 3G
- I. Hajnsek, E. Baltzavias, further lecturers

**Information:**

As of examination session winter 2015, examination block 3 will be implemented in its new structure (i.e. new, Earth Observation will be examined within examination block 3 instead of within examination block 4). As of examination session summer 2015, examination block 4 will be implemented in its new structure. The new structure is valid for those students NOT having taken exams of examination block 3 nor of examination block 4 for the first time. All other students take the exams of examination block 3 as well as of examination block 4 in the present
structure, including repetition where applicable.

Abstract
The aim of the course is to provide the fundamental knowledge about earth observation sensors, techniques and methods for bio/geophysical environmental parameter estimation.

Objective
The aim of the course is to provide the fundamental knowledge about earth observation sensors, techniques and methods for bio/geophysical environmental parameter estimation. Students should know at the end of the course:
1. Basics of measurement principle
2. Fundamentals of image acquisition
3. Basics of the sensor-specific geometries
4. Sensor-specific determination of environmental parameters

Content
Die Lehrveranstaltung gibt einen Einblick in die heutige Erdbeobachtung mit dem folgenden skizzierten Inhalt:
1. Einführung in die Fernerkundung von Luft- und Weltraum gestützten Systemen
2. Einführung in das Elektromagnetische Spektrum
3. Einführung in optische Systeme (optisch und hyperspektral)
4. Einführung in Mikrowellen-Technik (aktiv und passiv)
5. Einführung in atmosphärische Systeme (meteo und chemisch)
6. Einführung in die Techniken und Methoden zur Bestimmung von Umweltparametern
7. Einführung in die Anwendungen zur Bestimmung von Umweltparametern in der Hydrologie, Glaziologie, Forst und Landwirtschaft, Geologie und Topographie

Lecture notes
Folien zu jeden Vorlesungsblock werden zur Verfügung gestellt.

Literature
Ausgewählte Literatur wird am Anfang der Vorlesung vorgestellt.

701-1681-00L  Element Balancing and Soil Functions in Managed Ecosystems  W  3 credits  2G  A. Keller

Abstract
Applying element balances of agricultural soils and the assessment of soil functions for real applications in computer exercises to design preventive strategies against soil pollution and to support sustainable management of regional agroecosystems also in the context of spatial planning procedures.

Objective
The students learn to critical assess changes in land use management on element cycles in agro-ecosystems and to assess soil services (soil functions). You design solutions for chemical problems in soil protection at the regional scale and learn to assess soil functions using different methods.

Content
The students apply a regional balance model for Swiss regions in computer exercises and assess major soil functions of agricultural soils. You assess the sustainability of current land use and analyse management options improving nutrient and metal cycling in agro-ecosystems. The students will have the opportunity to calculate specific scenarios regarding land use management and environmental changes. Special focus we be paid on the soil services such as regulation-, production function and soil as habitat, and the assessment of these functions based on soil mapping data.

Lecture notes
Literature and Exercises for a case study

Prerequisites / notice
The course consists of lectures and computer exercises. The course take place every 2 weeks à 4 hours.

recommended prerequisites for attending this course:
- Bodenschutz und Landnutzung
- Biochemistry of Trace Elements
- Angewandte Bodenökologie

701-1776-00L  Geographic Data Processing with Python and ArcGIS  W  1 credit  2U  A. Baltensweiler

Abstract
The course gives a general introduction into the geoprocessing framework of ArcGIS and shows how to use python scripts to access and automate geoprocessing tasks. Furthermore, the basics of the programming language Python will be communicated which is required for the implementation of multilevel spatial analysis and dynamic models.

Objective
The students learn the basics of geographic data processing based on the programming language Python and ArcGIS (arcpy). They get the ability to implement their own processing sequences and models for geoprocessing.

Content
The course communicates a deepend understanding of geoprocessing frameworks arcpy and covers basic language concepts of Python e.g. like control structures, functions and sequences.

Lecture notes
Lecture notes, exercises and worked out solutions to them will be provided.

Literature
Lutz M. (2013); Learning Python, 5th Edition, O'Reilly Media

Prerequisites / notice
The course will be taught in German. All material will be provided in English. Knowledge of ArcGIS is assumed.

701-1682-00L  Dendroecology  W  3 credits  3G  C. Bigler, D. Frank, A. Rigling

Abstract
The course dendroecology offers theoretical and practical aspects of dendrochronology. The impact of different environmental influences on tree-ring characteristics will be shown. The students learn various methods to date tree rings and they understand how ecological and environmental processes and patterns can be reconstructed using tree rings.

Objective
The students:
- understand, how wood is configured and how tree-ring structures are formed.
- are able to identify and describe different tree-ring structures.
- understand the theoretical and practical aspects of the dating of tree rings.
- know the effects of different abiotic and biotic environmental influences (climate, site, competition, insects, fire, physical-mechanical influences) on trees and tree rings.
- discover a tool for understanding and reconstructing global change processes.
- learn software to date, standardize and analyze tree rings.
- get hands-on experience based on the demonstration of wood (increment cores, stem discs, wedges), sampling in the field, and measuring and dating of tree rings in the tree-ring lab.
- solve R-based exercises (R tutorial will be provided) and answer questions in Moodle.
- work out an independent research question related to a dendroecological topic and write a short literature review based on scientific papers.
The seminar is designed for students and researchers (MA, PhD, PostDoc) who use inter- and transdisciplinary elements in their projects. The seminar covers the following topics:

1. Theories and concepts of inter- and transdisciplinary research
2. The specific challenges of inter- and transdisciplinary research
3. Involving stakeholders
4. Collaborating disciplines
5. Exploration of tools and methods
6. Analysing participants' projects to improve inter- and transdisciplinary elements

Literature lists will be handed out in the class.

The seminar is specifically suitable for PhD or PostDoc researchers. It is open to master students (minor "global change and sustainability") and further interested people, who preferably are preparing, or working on, a project/thesis.

Abstract

The seminar covers the following topics:

1. The seminar is designed for students and researchers (MA, PhD, PostDoc) who use inter- and transdisciplinary elements in their projects. It addresses the challenges of this research: How to integrate disciplines? How (and in what role) to include societal actors? How to bring results to fruition? We discuss these questions based on case studies and theories and on the participant's projects.
2. The participants understand the specific challenges of inter- and transdisciplinary research in general and in the context of sustainable development in particular. They know methods and concepts to address these challenges and apply them to their research projects.

Objective

The class language is German and English, on request English only.

Requirements:

Basics of biology, ecology and forest ecology

The CCES Winter School takes place at Propstei Wislikofen, January 5-8 and February 2-5, 2015. Accommodation is provided.

The program will be announced through various channels and also be made available through the teaching materials.

The seminar is specifically suitable for PhD or PostDoc researchers. It is open to master students (minor "global change and sustainability") and further interested people, who preferably are preparing, or working on, a project/thesis.

Abstract

Increasingly scientists need to interact more with people and institutions outside the scientific community. This requires the capability to understand and critically reflect about scientific activities and consequences for society and environment and to communicate with confidence. The CCES Winter School builds capacity to create and manage forms of interactions beyond scientific boundaries.

The seminar covers the following topics:

1. To acquire knowledge of key aspects of the interplay between science and practice
2. To reflect on and understand the role and consequences of scientific activity in relation to society and environment
3. To acquire skills and learn about a systematic application of methods to create and manage interactions between science and society

Objective

1. To acquire knowledge of key aspects of the interplay between science and practice
2. To reflect on and understand the role and consequences of scientific activity in relation to society and environment
3. To acquire skills and learn about a systematic application of methods to create and manage interactions between science and society

Content

The Winter School provides insights into theoretical and methodological foundations on the challenges of knowledge exchange and dialogue between science and practice. It offers media and knowledge management training for enhancing stakeholder involvement. Selected case examples support group work discussions and analysis. Real stakeholder meetings are organized for testing techniques in view of identifying diverse expectations and needs and working towards solutions. Together the Winter School participants and stakeholders experience and develop ways for better linking environmental science and practice.

The course offers insights into a wide spectrum of crossing boundaries between science and practice (e.g. information, consultation, co-production of knowledge) and provides test fields for and room for reflection of own experiences.

Lecture notes

Course materials (e.g. slides, articles, toolboxes) are provided for preparatory reading and during the course (on BSCW).

Literature

Collection of key literature in online reader on BSCW
The CCES Winter School addresses PhD students and postdocs from environmental and natural sciences, engineering, and social sciences related to sustainable development. Participants are required to apply online providing key information about their interest and PhD project - details and application form can be found here: http://www.cces.ethz.ch/winterschool/

The Winter School runs with a maximum of 25 participants.

- Carolina Adler (USYS TdLab, environmental philosophy group, ETH Zurich)
- Claudia Frick (sciencetext, HAFL Zollikofen)
- Martina Mittler (corporate communications, ETH Zurich)
- Patricia Fry (Wissensmanagement Umwelt GmbH)
- Pius Krütli (USYS TdLab, Natural and Social Science Interface, ETH Zurich)
- Christian Pohl (USYS TdLab, ETH Zürich & td-net, Bern)
- Michael Stauffacher (USYS TdLab, Natural and Social Science Interface, ETH Zurich)

The total time requirement is in the range of 120 hours, equivalent to 4 ECTS. The learning control focuses on i) active participation, engagement in case examples, and reflection against the background of own projects and experiences, 2) active team involvement in implementing tasks on information, consultation, and co-production of knowledge, including the design and organization of stakeholder meetings. The course is successfully completed by pass (pass/no pass, thus no marks). The language of the Winter School is English. Stakeholder meetings will be in the local language (Swiss German) and translation into English is provided.

There is a participation fee of 400 CHF for the course, which is a contribution to the costs for the two blocks at the seminar venue Propstei Wilslikofen, organizational support as well as material for the stakeholder meetings. Travel expenses to the venue are to be borne by the participants.

701-1505-00L “Global Water Challenges” Engineering for Development (E4D) Winter School  W  4 credits  4G to be announced

Abstract
The E4D winter school 2015 aims at an integrated vision of Global Water Challenges. The programme is designed to present water resources challenges that are of global relevance. Experts will outline the issues and will present their experiences working in different parts of the world. The programme will focus on three main topics: Water & Health, Water & Food, and Water & Energy, but it will also

Objective
The E4D winter school will be composed of 30 graduate students, 15 each from ETH Zurich and from other academic institutions, particularly from developing countries. They will be joined by faculty members and external experts from fields of expertise related to the winter school topic. The Master and PhD students will come from different disciplines related to the E4D topic.

During the first week, students will be introduced to fields relevant to the topic at hand through a series of input speeches, lectures and workshops conducted by experts. All participants will stay in a country house eco hotel in Emmental, 2h away from Zurich. During weeks two and three, students will relocate to ETH Zurich and be split into three thematic groups to carry out guided case studies. The case study work will provide them with hands-on opportunities to work in an interdisciplinary and intercultural team and to develop solutions to the chosen topic.
Three case studies will cover the following topics and will be based on modelling solutions in a specific country context:

**WATER, SANITATION AND HYGIENE (WASH)**

WASH is a UNICEF programme that is central to the millennium development agenda. In 2012, UNICEF expanded its support to WASH in Schools, which aims at providing gender-sensitive and child-friendly sanitation, washing, and water facilities to students. The purpose of this group work is to develop an integrated WASH programme for schools in Bolivia which would combine water treatment with hygiene awareness, handwashing, sanitation, etc. The group work will include field testing of existing household water treatment systems such as Sodis, gdm-filters, chlorination, and boiling with different types of water, as well as some lab analysis (microbial analysis).

**WATER ALLOCATION FOR FOOD AND ECOSYSTEM HEALTH**

The Yanqi Basin in Northwest China is an irrigation oasis. Agriculture is the main income of the population, but leads to numerous problems: salinization of soils due to groundwater table rise, increasing salinity of Lake Bosten, a fresh water lake receiving all drainage waters from the basin, diminished river flow in the downstream and die-off of Populus euphratica forests. You are supposed to formulate sustainability goals and find solutions for the allocation of water with regards to quantity and quality in order to have maximum agricultural production under constraints for soil salinity, downstream ecosystem health, lake salinity and lake water level. A MATLAB software is available which allows you to evaluate each course of action. A Pareto front between economic and ecological benefits should be identified and ideas for implementation should be formulated.

**EXPLORING THE ENERGY-WATER NEXUS IN THE KAFUE RIVER BASIN**

In the Kafue Flats, part of the Zambezi River Basin, the operation of two dams built in the seventies has completely altered the hydrological natural regime of this internationally important wetland. Backwater from downstream Katue Gorges reservoir and releases from upstream Thezi Thezi dam have created a permanently inundated area within the flats and reduced floods elsewhere, with large impacts on wildlife, vegetation and their dependent livelihoods. The group work will explore the water-energy nexus in the Flats from a multi-stakeholders perspective, by developing, based on the literature available, a set of indicators representing the main interests in the basin, including the ecosystem, the local population and the main economic sectors (sugar cane plantations and hydropower). Using a simplified model of the systems, several alternative operations of the systems (e.g., prioritizing different objectives) will be analysed to explore the tradeoffs among the interests of different stakeholders and explore options for more balanced and sustainable management.

---

**Prerequisites / notice**

The Engineering for Development (E4D) Winter School 2015 will invite 30 Master and PhD students from different disciplines related to the topic of "Global Water Challenges". Applicants will be selected based on their academic record and previous work experience, as well as their dedication to solving humanity's grand challenges. Applicants must send a one-page CV and one-page letter of motivation in PDF format stating their interest in one of the three themes:

- **Theme 1: Water and Health: Water, Sanitation, and Hygiene (WASH), Bolivia**
- **Theme 2: Water and Food: Water allocation in China**
- **Theme 3: Water and Energy: Exploring the water-energy nexus in the Katue river basin, Zambia**

Admission will be for one of these three themes and cannot be altered once accepted.

Please send your full application to catherine.lippuner@sl.ethz.ch (resend your application if you did not receive an acknowledgement of receipt within two days).

**Deadline:** October 12, 2014  
**Notification:** October 31, 2014

</tbody>
</table>

**Abstract**

This course introduces students to foundational texts that led to the emergence of the environment as a subject of scientific importance, and shaped its relevance to society. Above all, the course seeks to give confidence and raise enthusiasm among students to read more widely around the broad subject of environmental sciences and management both during the course and beyond.

**Objective**

The course will provide students with opportunities to read, discuss, evaluate and interpret key texts that have shaped the environmental movement and, more specifically, the environmental sciences. Students will gain familiarity with the foundational texts, but also understand the historical context within which their academic and future professional work is based. Moreover, the course will encourage debate and discussion of each text that is studied, from both the original context as well as the modern context. In so doing students will be forced to consider and justify the current societal relevance of their work.
The course will be run as a book reading club. The first session will provide a short introduction as to how to explore a particular text (that is not a scientific paper) to identify the key points for discussion.

Thereafter, in each week a text (typically a chapter from a book or a paper) considered to be seminal or foundational will be assigned by a course lecturer. The lecturer will introduce the selected text with a brief background of the historical and cultural context in which it was written, with some additional biographical information about the author. He/she will also briefly explain the justification for selecting the particular text.

The students will read the text, with two to four students (depending on class size) being assigned to present it at the next session. Presentation of the text requires the students to prepare by, for example:
- identifying the key points made within the text
- identifying issues of particular personal interest and resonance
- considering the impact of the text at the time of publication, and its importance now
- evaluating the text from the perspective of our current societal and environmental position

Such preparation would be supported by a mid-week tutorial discussion (about 1 hour) with the assigning lecturer.

These students will then present the text (for about 15 minutes) to the rest of the class during the scheduled class session, with the lecturer facilitating the subsequent class discussion (about 45 minutes). Towards the end of the session the presenting students will summarise the emerging points (5 minutes) and the lecturer will finish with a brief discussion of how valuable and interesting the text was (10 minutes). In the remaining 15 minutes the next text will be presented by the assigning lecturer for the following week.

**Literature**

The specific texts selected for discussion will vary, but examples include:

- D. R. Johnson, J. Hering
- EAWAG PhD Skills Seminar
- The course will be run as a book reading club.
- The first session will provide a short introduction as to how to explore a particular text (that is not a scientific paper) to identify the key points for discussion.
- Thereafter, in each week a text (typically a chapter from a book or a paper) considered to be seminal or foundational will be assigned by a course lecturer. The lecturer will introduce the selected text with a brief background of the historical and cultural context in which it was written, with some additional biographical information about the author. He/she will also briefly explain the justification for selecting the particular text.
- The students will read the text, with two to four students (depending on class size) being assigned to present it at the next session. Presentation of the text requires the students to prepare by, for example:
- identifying the key points made within the text
- identifying issues of particular personal interest and resonance
- considering the impact of the text at the time of publication, and its importance now
- evaluating the text from the perspective of our current societal and environmental position
- Such preparation would be supported by a mid-week tutorial discussion (about 1 hour) with the assigning lecturer.

**Literature**

Abstract
This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective
The main goal of this course is to enhance the student's ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.

Content
I. Ethics & the Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is “integrity” in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.
Literature

- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

| Abstract     | Electrostatic field; Stationary electric current flow; Basic electric circuits; current conduction mechanisms; time variant electromagnetic field; alternating voltages and currents. | | | | |
| Objective    | Voltage, current and properties of basic elements of electric circuits, i.e. capacitors, resistors and inductors should be understood in relation to electric and magnetic fields. Furthermore, the students should be able to mathematically describe, analyze and finally design technical realizations of circuit elements. Students should also be familiar with the calculation of voltage and current distributions of DC circuits. The effect and the mathematical formulation of magnetic induction should be known for technical applications. The fundamentals of complex AC current calculus for description of periodic sinusoidal quantities should be known and students should be able to apply the concept to basic AC circuits. | | | | |
| Content      | Electrostatic field; Stationary electric current flow; Basic electric circuits; current conduction mechanisms; time variant electromagnetic field; alternating voltages and currents. | | | | |

Abstract
Digital and analogue signals and their representation. Combinational and sequential circuits and systems, boolean algebra, K-maps. Finite state machines. Memory and computing building blocks in CMOS technology, programmable logic circuits.

Objective
Provide basic knowledge and methods to understand and to design digital circuits and systems.

Content
Digital and analogue signals and their representation. Boolean Algebra, circuit analysis and synthesis, the MOS transistor, CMOS logic, static and dynamic behaviour, tristate logic, Karnaugh-Maps, hazards, binary number systems, coding. Combinational and sequential circuits and systems (boolean algebra, K-maps, etc.). Memory building blocks and memory structures, programmable logic circuits. Finite state machines, architecture of microprocessors.

Lecture notes
Lecture notes for all lessons, assignments and solutions.
Textbook: http://www.ife.ee.ethz.ch/education/Digitaltechnik

Literature
Literature will be announced during the lessons.

Prerequisites / notice
No special prerequisites

Abstract
Digital and analogue signals and their representation. Combinational and sequential circuits and systems, boolean algebra, K-maps. Finite state machines. Memory and computing building blocks in CMOS technology, programmable logic circuits.

Objective
Deepen and extend the knowledge from lecture and exercises, usage of design software Quartus II as well as an oscilloscope

Content
The contents of the digital circuits laboratory will deepen and extend the knowledge of the correspondent lecture and exercises. With the help of the logic device design software Quartus II different circuits will be designed and then tested on an evaluation board. You will build up the control for a 7-digit display as well as an adder and you will create different types of latches and flip-flops. At the end of the laboratory a small synthesizer will be programmed that is able to play self-created melodies. At the same time the usage of a modern oscilloscope will be taught in order to analyse the programmed circuits through the digital and analogue inputs.

Abstract
In this lecture we treat problems in applied analysis. The focus lies on the simplest cases of three fundamental types of partial differential equations of second order: the Laplace equation, the heat equation and the wave equation.

Content
1.) Klassifizierung von PDE's
- linear, quasilinear, nicht-linear
- elliptisch, parabolisch, hyperbolisch

2.) Quasilineare PDE
- Methode der Charakteristiken (Beispiele)

3.) Elliptische PDE
- Bsp: Laplace-Gleichung
- Harmonische Funktionen, Maximumsprinzip, Mittelwerts-Formel.
- Methode der Variablenseparation

4.) Parabolische PDE
- Bsp: Wärmeleitungsgleichung
- Bsp: Inverse Wärmeleitungsgleichung
- Methode der Variablenseparation

5.) Hyperbolische PDE
- Bsp: Wellengleichung
- Formel von d'Alembert in (1+1)-Dimensionen
- Methode der Variablenseparation

6.) Green'sche Funktionen
- Rechnen mit der Dirac-Deltafunktion
- Idee der Green'schen Funktionen (Beispiele)

7.) Ausblick auf numerische Methoden
- 5-Punkt-Diskretisierung des Laplace-Operators (Beispiele)

Abstract
The goal of the Physics II class is an introduction to quantum mechanics (lecture given in German)

Objective
Die gegenwärtigen Entwicklungen der Ingenieurwissenschaften verlangen, dass auch StudentInnen dieser Fächer die Grundlagen der Quantenmechanik und Festkörperphysik (mit den Bandstrukturen) beherrschen. Es ist das Ziel dieser Vorlesung das Gebiet der Quantenmechanik auf einem Weg einzuführen, der zwar elementar ist, es aber ermöglicht die quantenmechanische Begriffe auf die verschiedensten Situationen anzuwenden.
Die Grundlagen der Quantenphysik

Quantenmechanik
Wellenfunktion und Wahrscheinlichkeitsdichte, Schrödingergleichung, Potentialstufe, Teilchen im Potentialkasten, harmonische Oszillator, Tunneleneffekt, zeitaabhängige Schrödingergleichung, Übergangswahrscheinlichkeiten und Auswahlregeln

Atome mit einem Elektron
Wasserstoffatom, Quantisierung des Drehimpulses, Einelektronen-Wellenfunktion in Zentralfeldern, Zeeman-Effekt, Elektronenspin, Spin-Bahn-Wechselwirkung

Atome mit vielen Elektronen
Heliumatom, Ausschliessungsprinzip, Elektronenstruktur der Atome, Röntgenspektren

Moleküle
Wasserstoffmolekül-Ion, Molekulwellenfunktion zweiatomiger Moleküle, Kovalente Bindung, Molekulares Rotation und Schwingung

Festkörper
Typen der Festkörper, Bändermodell der Festkörper, "Tight Binding Model" explizit hergeleitet, Modell der freien Elektronen, Elektronenbewegung in einer periodischen Struktur, "effective mass approximation", Leiter, Isolator und Halbleiter, Quantentheorie der elektrischen Leitfähigkeit, Strahlungsübergänge in Festkörpern

Quantenstatistik
Fermi-Dirac Verteilung, Elektronengas, Elektronen in Metallen und Halbleiter (Anwendung der Fermi-Dirac Verteilung), Photonengas, Wärmekapazität von Festkörpern, ideale Gas in der Quantenstatistik

Option: Phononen

Lehrbuch
Alonso, Marcelo / Finn, Edward J. Quantenphysik und Physikalische Chemie 5. Auflage aus 2011 978-3-486-71340-4

http://www.degruyter.com/view/product/221450?rskey=JqMV1g&result=1

Prerequisites / notice
Prerequisites: Physics I.

Lecture notes
Computer Engineering

227-0045-00L Signals and Systems I

Abstract

Objective
Introduction to mathematical signal processing and system theory.

Content

Lecture notes
Lecture notes, problem set with solutions.

227-0013-00L Computer Engineering II

Abstract
The course provides knowledge about structures and models of digital systems (abstract data types finite state automata, dependence and process graphs), abstraction and hierarchy in computer systems, assembler and compiler, control path and data path, I/O, bus systems, memory hierarchy, operating system, pipelining, speculation techniques, superscalar computer architectures.

Objective
Logical and physical structure of computer systems. Introduction to principles in hardware design, datapath and control path, assembler programming, modern architectures (pipelining, speculation techniques, superscalar architectures), memory hierarchy, software concepts.

Content
Structures and models of digital systems (abstract data types finite state automata, dependence and process graphs), abstraction and hierarchy in computer systems, assembler and compiler, control path and data path, I/O, bus systems, memory hierarchy, operating system, pipelining, speculation techniques, superscalar computer architectures.

Lecture notes
Theoretical and practical exercises using a simulation-based infrastructure.

Literature

Prerequisites / notice
Prerequisites: Programming skills in high level language, knowledge of digital design.
Implementing the knowledge acquired during the basic studies.

A. Steger
Foundations of Discrete Mathematics; combinatorics (elementary counting), graph theory (paths, walks, euler circuits, matchings, trees, planar graphs), algebra (modular arithmetic, groups, fields), applications (network flows, cryptography, coding theory).

Modern, transistor-based electronics has transformed our lives and plays a crucial role in our economy since the 2nd half of last century. Get to know and understand basic transistor and op amp based electronic circuits. Build and operate simple electronic circuits including

The Laboratory courses in the 5th and 6th semesters enable the students to put the the contents of the courses from the four first semesters to the test and to consolidate the acquired knowledge. Furthermore students have the possibility to gain specific knowledge in certain software packages as MATLAB.

A minimum of 18 cp must be obtained from the category "Laboratory Courses, Projects, Seminars".

Enrolment via Online-Tool (EE-Website: Studies -> Bachelor Program -> Third Year -> Laboratory Courses)

The Laboratory courses in the 5th and 6th semesters enable the students to put the the contents of the courses from the four first semesters to the test and to consolidate the acquired knowledge. Furthermore students have the possibility to gain specific knowledge in certain software packages as MATLAB.

A maximum of 13 cp can be obtained from Projects & Seminars. Each course can be registered for only once.

Projects & Seminars
Course can only be registered for once. A repeatedly registration in a later semester is not chargeable.

Procurement of skills in the area of Electrical Engineering and Information Technology that are useful for the remaining terms as well during ones work life.

Enrolment through the Online-Tool, https://isgapps.ee.ethz.ch/pppsapp/

</table>
| Abstract     | Participants learn how to design a predefined electronic circuit and how to lay out the pertaining circuit board. CAE and CAD activities for design and simulation is carried out with the aid of Altium Designer.  
Objective       | The goal is to become acquainted with all those practical aspects of electronic circuit and PCB design by working through a modest but complete application example. This involves analysis of specifications, the evaluation of electronic parts, efficient testing and failure search, electromagnetic compatibility (EMC), the usage of industrial CAE/CAD tools for circuit simulation and PCB layout, generating production data for the board manufacturer, board mounting, testing and start up.  
Content       | Content:  
- Understanding circuit, system, and product specifications  
- Guidelines, standards, and regulations  
- Design and development flow  
- Introduction to the Altium Designer environment  
- Selection of components and circuit sizing  
- Preparing schematic symbols and footprints for CAE/CAD  
- Working with database component libraries  
- Logically structured schematic circuit diagrams  
- Capturing a predefined circuit  
- Definition of net classes and layout rules in schematics  
- Design for EMC  
- Checking schematic data  
- Simulation of mixed signal circuits using Spice  
- Hints for improved testing and debugging  
- Component placement on the PCB  
- Turning circuit diagrams into a workable layout  
- Manual and automatic interconnect routing  
- Definition of layout rules  
- RF- and EMC-guidelines for circuit wire routing  
- Differential pairs and impedance-controlled routing  
- Introduction to PCB manufacturing  
- Preparation of production and assembly data  
- PCB and device assembly (component mounting)  
- Final circuit testing and start up  
Literature     | All necessary documents will be available as electronic documents (PDF).  
Prerequisites / notice | - The course is recommended to all students who plan to design an electronic circuit or a PCB in an upcoming term project or as part of their master thesis. Attending this course during the term before will ensure they are optimally prepared and will allow them to fully focus on their project.  
- The number of participants is limited.  
- For their own students and staff, the Department of Information Technology and Electrical Engineering provides electronic components and consumables free of charge. All other participants have to bear a 200 CHF fee for those items.  

### Third Year Core Courses

*Can be freely combined, a list of recommendations is available under [www.ee.ethz.ch/bachelor-kernfaecher](http://www.ee.ethz.ch/bachelor-kernfaecher)*

| Abstract     | The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications: discrete-time linear filters, equalization, DFT, discrete-time stochastic processes, elements of detection theory and estimation theory, LMMSE estimation and LMMSE filtering, LMS algorithm, Viterbi algorithm.  
Objective       | The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications. The two main themes are "linearity" and "probability". In the first part of the course, we deepen our understanding of discrete-time linear filters. In the second part of the course, we review the basics of probability theory and discrete-time stochastic processes. We then discuss some basic concepts of detection theory and estimation theory, as well as some practical methods including LMMSE estimation and LMMSE filtering, the LMS algorithm, and the Viterbi algorithm.  
Content       | Discrete-time linear systems and the z-transform.  
- Discrete time and continuous time: forth and back.  
- Digital filters.  
- DFT.  
- Elements of probability theory.  
- Discrete-time stochastic processes.  
- Elements of detection theory and estimation theory.  
- Linear estimation and filtering.  
- Wiener filter.  
- LMS algorithm.  
- Viterbi algorithm.

227-0102-00L | Discrete Event Systems                      | W    | 6    | 4G    | L. Thiele, L. Vanbever, R. Wattenhofer
Introduction to discrete event systems. We start out by studying popular models of discrete event systems. In the second part of the course we analyze discrete event systems from an average-case and from a worst-case perspective. Topics include: Automata and Languages, Specification Models, Stochastic Discrete Event Systems, Worst-Case Event Systems, Verification, Network Calculus.

Over the past few decades the rapid evolution of computing, communication, and information technologies has brought about the proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans. The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss).

The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems, such as automata and Petri nets. In the second part of the course we analyze discrete event systems. We first examine discrete event systems from an average-case perspective: we model discrete events as stochastic processes, and then apply Markov chains and queuing theory for an understanding of the typical behavior of a system. In the last part of the course we analyze discrete event systems from a worst-case perspective using the theory of online algorithms and adversarial queuing.

1. Introduction
2. Automata and Languages
3. Smarter Automata
4. Specification Models
5. Stochastic Discrete Event Systems
6. Worst-Case Event Systems
7. Network Calculus

High-Speed Signal Propagation

Understanding of high-speed signal propagation in microwave cables and integrated circuits and printed circuit boards.

As clock frequencies rise in the GHz domain, there is a need grasp signal propagation to maintain good signal integrity in the face of symbol interference and cross-talk.

The course is of high value to all interested in high-speed analog (RF, microwave) or digital systems.
### 227-0113-00L Power Electronics

<table>
<thead>
<tr>
<th>Objective</th>
</tr>
</thead>
<tbody>
<tr>
<td>Understanding of high-speed signal propagation in interconnects, microwave cables and integrated transmission lines such as microwave integrated circuits and/or printed circuit boards.</td>
</tr>
</tbody>
</table>

As system clock frequencies continuously rise in the GHz domain, a need urgently develops to understand high-speed signal propagation in order to maintain good signal integrity in the face of phenomena such as inter-symbol interference (ISI) and cross-talk.

Concepts such as Scattering parameters (or S-parameters) are key to the characterization of networks over wide bandwidths. At high frequencies, all structures effectively become "transmission lines." Unless care is taken, it is highly probable that one ends-up with a bad transmission line that causes the designed system to malfunction.

Filters will also be considered because it turns out that some of the problems associated by lossy transmission channels (lines, cables, etc) can be corrected by adequate filtering in a process called "equalization."

Objective
Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems.

Content
- The basic elements, design issues and techniques for analog integrated circuits will be taught in this course.

Literature

Objective
To understand the physical and technical principles underlying X-ray imaging, computed tomography, single photon and positron emission tomography, magnetic resonance imaging, ultrasound and Doppler imaging techniques. The mathematical framework is developed to describe image encoding/decoding, point-spread function/modular transfer function, signal-to-noise ratio, contrast behavior for each of the methods. Matlab exercises are used to implement and study basic concepts.

Content
- X-ray imaging
- Computed tomography
- Single photon emission tomography
- Positron emission tomography
- Magnetic resonance imaging
- Ultrasound/Doppler imaging

Prerequisites / notice
Analysis, Linear Algebra, Physics, Basics of Signal Theory, Basic skills in Matlab programming

Abstract

Evidence-based management requires valid empirical research. In this course, students will learn the basics of research design, fundamentals of data collection and statistical methods to analyze the data acquired in social science research. Students are expected to apply their knowledge in class discussions and out-of-class assignments.

Objective

- Ability to formulate research questions and design an appropriate study
- Ability to collect and analyze data using a variety of methods
- Ability to critically assess the quality of empirical research in management
- Applied knowledge of empirical methods through out-of-class assignments

Content

1) Introduction to empirical management research
2) Research designs: exploratory, descriptive, experimental
3) Measurement and scaling
4) Data collection and sampling
5) Data analysis methods
6) Reporting and presenting empirical research

Bi-weekly out-of-class assignments and projects on covered subjects

Prerequisites / notice

Assignments and projects: This course includes out-of-class assignments and projects to give students some hands-on experience in conducting empirical research in management. Projects will focus on one particular aspect of empirical research, like the formulation of a research question or the design of a study. Students will have at least one week to work on each assignment. Students are expected to work on these assignments individually. Duplicate answers will receive no credit and will be subject to a disciplinary review. Assignments will be graded and need to be turned-in on time. Exemplary answers to the assignments will be posted online after the submission date for students to review. Some assignments will also be discussed in class.

Class participation: Class participation is encouraged and can greatly improve students' learning in this class. Class participation will not be graded; however, it will be considered favorably if a student is between grades. Note, however, that quality is more important than quantity. In this spirit, students are expected to attend class regularly and come to class prepared.

363-0503-00L Principles of Microeconomics

W 3 credits 2G M. Filippini

Abstract

The course introduces basic principles, problems and approaches of microeconomics.

Objective

The course includes the following main topics:

- Basic principles of demand and supply, market and state in a modern economy, externalities, cost analysis, consumer behaviour, economies of scale and economies of scope, perfect competition, monopoly, oligopoly, monopolistic competition, mathematical treatment of some basic concepts.

Lecture notes

Lecture notes, exercises and reference material can be downloaded from Moodle.

Literature

N. Gregory Mankiw and Mark P. Taylor (2014), "Economics", 3rd edition, South-Western Cengage Learning. The book can also be used for the course ‘Principles of Macroeconomics’ (Sturm)

For students taking only the course ‘Principles of Microeconomics’ there is a shorter version of the same book:

Mentored Work Subject Didactics Electrical Engineering and Information Technology

Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Content
- Anlässlich der Hospitationen erläutert die Praktikumslehrperson ihre fachlichen, fachdidaktischen und pädagogischen Überlegungen, auf deren Basis sie den Unterricht geplant hat und tauscht sich mit dem/der Studierenden aus. Die von dem/der Studierenden gehaltenen Lektionen werden vor- und nachbesprochen.
- Die Themen für die beiden Prüfungslektionen am Schluss des Praktikums erfahren die Studierenden in der Regel eine Woche vor dem Prüfungstermin. Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie bis am Vortrag um 12 Uhr den beiden Prüfungsexperten (Fachdidaktiker/-in, Departementsvertreter/-in) ein. Die gehaltenen Lektionen werden kriteriumsbasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/der Kandidatin über die gehaltenen Lektionen im Rahmen eines kurzen Kolloquiums.

Prerequisites: successful completion of FD I and FD II.

Abstract
In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

Objective
The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Eine kurze Anleitung zur mentorierten Arbeit in Fachdidaktik wird zur Verfügung gestellt.
Die Literatur ist themenspezifisch. Die Studierenden beschaffen sie sich in der Regel selber (siehe Lernziele). In besonderen Fällen wird sie vom Betreuer zur Verfügung gestellt. Die Arbeit sollte vor Beginn des Praktikums abgeschlossen werden.

**Prerequisites / notice**

**151-1061-00L Subject Didactics I for D-MAVT and D-ITET**

- Didactical methods in mechanical and electrical engineering.
- The students can plan, conduct and critically reflect single lessons.
- They orient themselves towards the academic goals and take into account existing knowledge, the professional environment and the ambitions of the students.
- They can apply the basic teaching principles meaningfully in their subject and suitably structure the learning phases.
- They can reduce and present complex technical content such that it is in a form suitable for the students to learn.
- They have considered examples of the common conceptual errors encountered by students

**Abstract**

**Objective**

- Didactic analysis
- Competences and goals
- Preparation and wrap-up of lessons
- Process and structure of a typical lesson
- Teaching techniques (informative introduction to lessons, Advance Organizer, learning assignments, frontal teaching, questions, assignments, feedback)
- Assignments and short tests
- Media and language competence
- Conceptual change, misconceptions
- Integration of the subcomponents of a lesson.

**Content**

**Prerequisites / notice**

Voraussetzung: Erziehungswissenschaftliche Lehrveranstaltung schon absolviert oder gleichzeitig.

**Further Subject Didactics**

**Abstract**

In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

**Objective**

The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

**Content**

Auszugehen ist vom verwendeten Skript / Lehrbuch Zu erarbeiten ist die dazugehörende eLearning-Umgebung (Tests, Repetitionsfragen, Uebungsaufgaben, Arbeitsprogramme, etc.).

Die anzuwendende eLearning-Plattform richtet sich nach den lokalen Usanzen der FH / BMS. Andernfalls ist eine einfach handhabbare, lizenzfreie Plattform in Absprache mit dem Betreuer festzulegen.

Der abzuliefernde Bericht hat sich an die Richtlinien der vorhandenen Manuals aus den IfV zu halten. Er ist in zwei Teilen zu erstellen, für Studenten/(Benützer), und für den Dozenten/(Entwickler) getrennt.

Typisch soll die Arbeit 3 - 4 Unterrichts-Einheiten à 45 Minuten abdecken (bei Einzelarbeit), bei Arbeit zu zweit mindestens 6 solche Einheiten.

**Lecture notes**

Eine kurze Anleitung zur mentorierten Arbeit in Fachdidaktik wird zur Verfügung gestellt.

**Literature**

K. Frey, Allgemeine Didaktik, FH-Skript bzw. Lehrbuch des Praktikumslehrers.

Die Literatur ist themenspezifisch. Die Studierenden beschaffen sie sich in der Regel selber (siehe Lernziele). In besonderen Fällen wird sie vom Betreuer zur Verfügung gestellt.

Die Arbeit sollte vor Beginn des Praktikums abgeschlossen werden.

Abstract

Introduction to discrete event systems. We start out by studying popular models of discrete event systems. In the second part of the course we analyze discrete event systems from an average-case perspective.

Objective

The past few decades have brought about the proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans. The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss).

Content

1. Introduction
2. Automata and Languages
3. Smarter Automata
4. Specification Models
5. Stochastic Discrete Event Systems
6. Worst-Case Event Systems
7. Network Calculus

<td>High-Speed Signal Propagation</td>
<td>W</td>
<td>6</td>
<td>2V+2U</td>
<td>C. Bolognesi</td>
</tr>
<tr>
<td>Abstract</td>
<td>Understanding of high-speed signal propagation in microwave cables and integrated circuits and printed circuit boards. As clock frequencies rise in the GHz domain, there is a need grasp signal propagation to maintain good signal integrity in the face of symbol interference and cross-talk. The course is of high value to all interested in high-speed analog (RF, microwave) or digital systems. Understanding of high-speed signal propagation in interconnects, microwave cables and integrated transmission lines such as microwave integrated circuits and/or printed circuit boards. As system clock frequencies continuously rise in the GHz domain, a need urgently develops to understand high-speed signal propagation in order to maintain good signal integrity in the face of phenomena such as inter-symbol interference (ISI) and cross-talk. Concepts such as Scattering parameters (or S-parameters) are key to the characterization of networks over wide bandwidths. At high frequencies, all structures effectively become &quot;transmission lines.&quot; Unless care is taken, it is highly probable that one ends-up with a bad transmission line that causes the designed system to malfunction. Filters will also be considered because it turns out that some of the problems associated by lossy transmission channels (lines, cables, etc) can be corrected by adequate filtering in a process called &quot;equalization.&quot; Transmission line equations of the lossless and lossy TEM-transmission line. Introduction of current and voltage waves. Reference of reflections in the time and frequency domain. Application of the Smith chart. Behavior of low-loss transmission lines. Attenuation and impulse distortion due to skin effect. Transmission line equivalent circuits. Group delay and signal dispersion. Coupled transmission lines. Scattering parameters. Butterworth-, Chebychev- and Bessel filter approximations: filter synthesis from low-pass filter prototypes. Script: Leitungen und Filter (In German). Exercises will be held in German, but assistants also speak English.</td>

<tr>
<td>Abstract</td>
<td>Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems. The basic elements, design issues and techniques for analog integrated circuits will be taught in this course. Review of bipolar and MOS devices and their small-signal equivalent circuit models; Building blocks in analog circuits such as current sources, active load, current mirrors, supply independent biasing etc; Amplifiers: differential amplifiers, cascode amplifier, high gain structures, output stages, gain bandwidth product of op-amps; Stability; Comparators; Second-order effects in analog circuits such as mismatch, noise and offset; A/D and D/A converters; Introduction to switched capacitor circuits. The exercise sessions aim to reinforce the lecture material by well guided step-by-step design tasks. The circuit simulator SPECTRE is used to facilitate the tasks. There is also an experimental session on op-amp measurements. Handouts of presented slides. No script but an accompanying textbook is recommended.</td>

Course material: Script, computer demonstrations, exercises and problem solutions

H. G. Feichtinger

**227-0377-00L**

**Physics of Failure and Failure Analysis of Electronic Devices and Equipment**

**W** 3 credits 2V 3G U. Sennhauser

**Abstract**

Failures have to be avoided by proper design, material selection and manufacturing. Properties, degradation mechanisms, and expected lifetime of materials are introduced and the basics of failure analysis and analysis equipment are presented. Failures will be demonstrated experimentally and the opportunity is offered to perform a failure analysis with advanced equipment in the laboratory.

**Objective**

Introduction to the degradation and failure mechanisms and causes of electronic components, devices and systems as well as to methods and tools of reliability testing, characterization and failure analysis.

**Content**

Summary of reliability and failure analysis terminology; physics of failure: materials properties, physical processes and failure mechanisms; failure analysis of ICs, PCBs, opto-electronics, discrete and other components and devices; basics and properties of instruments; application in circuit design and reliability analysis

**Lecture notes**

Comprehensive copy of transparencies

**227-0447-00L**

**Image Analysis and Computer Vision**

**W** 6 credits 3V+1U G. Székely, O. Göksel, L. Van Gool

**Abstract**

**Objective**

Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.

**Content**

The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

**Lecture notes**

Course material Script, computer demonstrations, exercises and problem solutions

**Prerequisites / notice**

Prerequisites:

Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C. The course language is English.

---

**227-0445-00L**

**Advanced Mathematical Signal Processing**

**W** 3 credits 3G H. G. Feichtinger

**Block course:**

Starts on October 8 and ends on November 26, 2015

Thursdays 10-12 and 13-16

**Abstract**

Usually Fourier Analysis and Systems Theory emphasize the analogy between the different settings (continuous&discrete, periodic&non-period). The author proposes a simple approach to generalized functions, based on a Banach space of test functions. The course provides the foundations to Banach Gelfand triples, but also concrete applications in signal processing (time-variant systems, sampling).

**Objective**

Deeper mathematical understanding of the foundations of signal processing and system theory. The setting of Banach Gelfand Triples allows to provide a framework that allows among others to discuss the relations between different settings (e.g. the generalized Fourier transform of functions on the Euclidean space and corresponding FFT-based routines).

**Content**

Time-Frequency Analysis and its discretized version, namely Gabor Analysis have to develop a family of function spaces (the so-called modulation spaces, introduced by Feichtinger in the 80th) which is different from the usual Lebesgue spaces. There is a smallest space (called S_0) and a largest space (namely the dual space), which is a suitable reservoir of generalized functions relevant for the rigorous establishment of basic results in signal processing (sampling theorem, Poisson formula, Fourier inversion, etc.). The course will be centered about the basic properties of the Banach Gelfand triple (S_0,L2,S'_0) (also called rigged Hilbert space), its use for signal processing and systems theory applications. In addition to classical questions we will also discuss the fundamental results of time-frequency analysis (Short-time Fourier transform, Gabor frames, Gabor multipliers, best approximation of operators by Gabor multipliers, identification of slowly varying channels using pilot tones, etc.).

**Lecture notes**

There will a script related to the course. In fact, material for a book project on the subject is developed while the course is given. In principle a good understanding of concepts from linear algebra is sufficient. Of course, basic knowledge about functional analysis (Banach and Hilbert spaces, linear operators and linear functionals) is helpful. We will, however, explain all these concepts as we go along.

We will not need background on Lebesgue integration or topological vector spaces (as usually required for the treatment of distributions).

**227-0468-00L**

**Analog Signal Processing and Filtering**

**W** 6 credits 2V+2U H. Schmid

**Suitable for Master Students as well as Doctoral Students.**

**Abstract**

This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers.
Objective

This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers. The way the exam is done allows for the different interests of the two groups.

The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

Content

At the beginning, signal-flow graphs in general and driving-point signal-flow graphs in particular are introduced. We will use them during the whole term to analyze circuits and understand how signals propagate through them. The theory and CMOS implementation of active filters is then discussed in detail using the example of Gm-C filters and active-RC filters. The ideal and nonideal behaviour of opamps, current conveyors, and inductor simulators follows. The link to the practical design of circuits and systems is done with an overview over different quality measures and figures of merit used in scientific literature and datasheets. Finally, an introduction to discrete-time and mixed-domain filters and circuits is given, including sensor read-out amplifiers, correlated double sampling, and chopping, and an introduction to sigma-delta A/D and D/A conversion on a system level.

Lecture notes

The base for these lectures are lecture notes and two or three published scientific papers. From these papers we will together develop the technical content.

Details: https://people.ee.ethz.ch/~haschmid/asf/wiki/

Some material is protected by password; students from ETHZ who are interested can write to haschmid@ethz.ch to ask for the password even if they do not attend the lecture.

Prerequisites / notice

Prerequisites: Recommended (but not required): Stochastic models and signal processing, Communication Electronics, Analog Integrated Circuits, Transmission Lines and Filters.

Knowledge of the Laplace transform and z transform and their interpretation (transfer functions, poles and zeros, bode diagrams, stability criteria ...) and of the main properties of linear systems is necessary.

227-0477-00L  Acoustics I  W  6 credits  4G  K. Heutschi

Abstract

Introduction to the fundamentals of acoustics in the area of sound field calculations, measurement of acoustical events, outdoor sound propagation and room acoustics of large and small enclosures.

Objective

Introduction to acoustics. Understanding of basic acoustical mechanisms. Survey of the technical literature. Illustration of measurement techniques in the laboratory.

Content

Fundamentals of acoustics, measuring and analyzing of acoustical events, anatomy and properties of the ear. Outdoor sound propagation, absorption and transmission of sound, room acoustics of large and small enclosures, architectural acoustics, noise and noise control, calculation of sound fields.

Lecture notes

yes

227-0778-00L  Hardware/Software Codesign  W  6 credits  2V+2U  L. Thiele

Abstract

The course provides advanced knowledge in the design of complex computer systems, in particular embedded systems. Models and methods are discussed that are fundamental for systems that consist of software and hardware components.

Objective

The course provides advanced knowledge in the design of complex computer systems, in particular embedded systems. Models and methods are discussed that are fundamental for systems that consist of software and hardware components.

Content

The course covers the following subjects: (a) Models for describing hardware and software components (specification), (b) Hardware-Software Interfaces (instruction set, hardware and software components, reconfigurable computing, heterogeneous computer architectures, System-on-Chip), (c) Application specific instruction sets, code generation and retargetable compilation, (d) Performance analysis and estimation techniques, (e) System design (hardware-software partitioning and design space exploration).

Lecture notes

Material for exercises, copies of transparencies.

Literature

G. DeMicheli, R. Ernst and W. Wolf, Readings in Hw/Sw Co-design, M. Kaufmann, 2003.

Prerequisites / notice

Prerequisites for the course is a basic knowledge in the following areas: computer architecture, digital design, software design, embedded systems

252-0535-00L  Machine Learning  W  6 credits  3V+2U  J. M. Buhmann

Abstract

Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

Objective

Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real world data.

Content

The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.

Topics covered in the lecture include:

- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non parametric density estimation: Parzen windows, nearest neighbour
- Dimension reduction: principal component analysis (PCA) and beyond

Lecture notes

No lecture notes, but slides will be made available on the course webpage.
The course covers the following subjects: (a) Models for describing hardware and software components (specification), (b) Hardware-
Software Codesign, (c) Application specific instruction sets, code generation and retargetable compilation, (d) Performance analysis and
estimation techniques, (e) System design (hardware-software partitioning and design space exploration).

### Prerequisites

Knowledge in computer networking and Internet protocols (e.g. course Communication Networks (D-ITET) or Operating Systems and
Networks (D-INFK)).

Due to recent changes in the Swiss law, ETH requires each student of this course to sign a written declaration that he/she will not use the
information given in this for illegal purposes. This declaration will have to be signed and submitted no later than at the beginning of the
second lesson.

### Core Subjects

These core subjects are particularly recommended for the field of "Computers and Networks".

<tr>
<td>Content</td>
<td>Designing systems with a low energy footprint is an increasingly important. There are many applications for low-power systems ranging from mobile devices powered from batteries such as today's smart phones to energy efficient household appliances and datacenters. Key drivers are to be found mainly in the tremendous increase of mobile devices and the growing integration density requiring to carefully reason about power, both from a provision and consumption viewpoint. Traditional circuit design classes introduce low-power solely from a hardware perspective with a focus on the power performance of a single or at most a hand full of circuit elements. Similarly, low-power aspects are touched in a multitude of other classes, mostly as a side topic. However in successfully designing systems with a low energy footprint it is not sufficient to only look at low-power as an aspect of second class. In modern low-power system design advanced CMOS circuits are of course a key ingredient but successful low-power integration involves many more disciplines such as system architecture, different sources of energy as well as storage and most importantly software and algorithms. In this lecture we will discuss aspects of low-power design as a first class citizen introducing key concepts as well as modeling and measurement techniques focusing mainly on the design of networked embedded systems but of course equally applicable to many other classes of systems. The lecture is further accompanied by a reading seminar as well as exercises and lab sessions.</td>

The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over operating system related security mechanisms to application software systems, such as host based intrusion detection systems. In the second part, the focus is on system design and methodologies for large projects.

In this lecture, students learn about the security requirements and capabilities that are expected from modern hardware, operating systems and other software environments. An overview of available technologies, algorithms and standards is given, with which these requirements can be met.

The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over operating system related security mechanisms to application software systems such as host based intrusion detection systems. The main topics covered are: tamper resistant hardware, CPU support for security, protection mechanisms in the kernel, file system security (permissions / ACLs / network filesystem issues), IPC Security, mechanisms in more modern OS, such as Capabilities and Zones, Libraries and Software tools for security assurance, etc.

In the second part, the focus is on system design and methodologies for large projects. The main question answered is how to get a large secure system. Topics include: patch management, common software faults (buffer overflows, etc.), writing secure software (design, architecture, QA, testing), compiler-supported security, language-supported security (java...), logging and auditing (BSM audit, dtrac,...), cryptographic support, TCG, secure file systems, dos/windows/ windowsXP security issues.

Along the lectures, model cases will be elaborated and evaluated in the exercises.

#### Abstract

- **227-0101-00L**
  - The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications: discrete-time linear filters, equalization, DFT, discrete-time stochastic processes, elements of detection theory and estimation theory, LMMSE estimation and LMMSE filtering, LMS algorithm, Viterbi algorithm.

- **227-0103-00L**
  - Study of concepts and methods for the mathematical description and analysis of dynamical systems. The concept of feedback. Design of control systems for single input - single output and multivariable systems.

#### Objective

- **227-0101-00L**
  - The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications. The main topics are "linearity" and "probability". In the first part of the course, we deepen our understanding of discrete-time linear filters. In the second part of the course, we review the basics of probability theory and discrete-time stochastic processes. We then discuss some basic concepts of detection theory and estimation theory, as well as some practical methods including LMMSE estimation and LMMSE filtering, the LMS algorithm, and the Viterbi algorithm.

- **227-0103-00L**
  - Study of concepts and methods for the mathematical description and analysis of dynamical systems. The concept of feedback. Design of control systems for single input - single output and multivariable systems.

Future mobile systems will act as personal and cooperative assistant by providing the appropriate information and services. The systems consist of a smart phone which communicates with sensors on-body and in the environment. Context comprises user's behavior, his activities, his local and social environment.

In the data path from the sensor level to signal segmentation to the classification of the context, advanced methods of signal processing, pattern recognition and machine learning will be applied. Sensor data generated by crowdsourcing methods are integrated. The validation using MATLAB is followed by implementation and testing on a smart phone.

Context recognition as the crucial function of mobile systems is the main focus of the course. Using MatLab the participants implement and verify the discussed methods also using a smart phone.

The next generation of mobile communication systems are integrated in our clothes and act as personal and cooperative assistant providing information we need just now (see www.wearable.ethz.ch). Context recognition - what is the situation of the user, his activity, his environment, how is he doing, what are his needs - as the central functionality of mobile systems constitutes the focus of the course.

The main topics of the course include

- Sensor nets, sensor signal processing, data fusion, time series (segmentation, similarity measures), supervised learning (Bayes Decision Theory, Decision Trees, Random Forest, kNN-Methods, Support Vector Machine, Hidden Markov Models, AdaBoost), clustering (k-means, dbscan, topic models)
- Crowdsourcing,

The exercises show concrete design problems like motion and gesture recognition using distributed sensors, detection of activity patterns and identification of the local environment.

Presentations of the PhD students and the visit at the Wearable Computing Lab introduce in current research topics and international research projects.

Languages: german/english (depending on the participants)

Lecture notes

- Lecture notes for all lessons, assignments and solutions.
- http://www.ife.ee.ethz.ch/education/wearable_systems_1

Literature

- Literature will be announced during the lessons.

No special prerequisites

Objective

Abstract

- Principles of failure and failure analysis of electronic devices and equipment
- Faults and degradation mechanisms, and the expected lifetime of materials are introduced
- Advanced methods for failure analysis are presented
- Failures will be demonstrated experimentally
- Opportunity for use of failure analysis software in laboratory

Content

- Introduction to the degradation and failure mechanisms of electronic components, devices and systems as well as to methods and tools of reliability testing, characterization and failure analysis
- Summary of reliability and failure analysis terminology, physics of failure, materials properties, physical processes and failure mechanisms, failure analysis of ICs, PCBs, opto-electronics, discrete and other components and devices, basics and properties of instruments
- Application in circuit design and reliability analysis

Additional note on course content:

1. Failure Analysis Terminology
2. Physics of Failure
3. Materials Properties
4. Physical Processes and Failure Mechanisms
5. Failure Analysis of ICs, PCBs, Opto-Electronics
6. Discrete Components and Devices
7. Basics and Properties of Instruments
8. Application in Circuit Design and Reliability Analysis

Lecture notes

- Comprehensive copy of transparencies

Objective

Abstract

- Models of distributed computations, time space diagrams, virtual time, logical clocks and causality, wave algorithms, parallel and distributed graph traversal, consistent snapshots, mutual exclusion, election and symmetry breaking, distributed termination detection, garbage collection in distributed systems, monitoring distributed systems, global predicates

Content

- Become acquainted with algorithms and models for distributed systems
- Verteilte Algorithmen sind Verfahren, die dadurch charakterisiert sind, dass mehrere autonome Prozesse gleichzeitig Teile eines gemeinsamen Problems in kooperativer Weise bearbeiten und der dabei erforderliche Informationsaustausch ausschliesslich über Nachrichten erfolgt. Derartige Algorithmen kommen im Rahmen verteilter Systeme zum Einsatz, bei denen kein gemeinsamer Speicher existiert und die Übertragungszeit von Nachrichten i.a. nicht vernachlässigt werden kann. Da dabei kein Prozess eine aktuelle konsistente Sicht des globalen Zustands besitzt, führt dies zu interessanten Problemen.
- Modelle verteilter Berechnungen; Raum-Zeit Diagramme; Virtuelle Zeit; Logische Uhren und Kausalität; Wellenalgorithmen; Verteilte und parallele Graphtraversierung; Berechnung konsistenter Schnappschüsse; Wechselseitiger Ausschluss; Wahl und Symmetriebrechung; Verteilte Terminierung; Garbage-Collection in verteilten Systemen; Verfolgen verteilter Systeme; Berechnung globaler Prädiskate.

Objective

Abstract

Content

- Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.
Security of Wireless Networks

The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

Lecture notes
Course material Script, computer demonstrations, exercises and problem solutions

Prerequisites / notice
Prerequisites:
Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.
The course language is English.

Context recognition in mobile communication systems like mobile phone and wearable computer will be studied using advanced methods and tools.

**Objective**
- Know how to design digital VLSI circuits that are safe, testable, durable, and make economic sense.
- Design of Very Large Scale Integration (VLSI) circuits.
- Understanding the entire VLSI design process from architecture to layout.
- The next generation of mobile communication systems are integrated in our clothes and act as personal and cooperative assistants.

**Content**
- The system comprises a smart phone which communicates with sensors on-body and in the environment.
- Context comprises user's behavior, his activities, his local and social environment.
- Sensor nets, sensor signal processing, data fusion, time series (segmentation, similarity measures), supervised learning (Bayes Decision Theory, Decision Trees, Random Forest, kNN-Methods, Support Vector Machine, Hidden Markov Models, Adaboost), clustering (k-means, dbscan, topic models) Crowdsourcing.
- The next generation of mobile communication systems are integrated in our clothes and act as personal and cooperative assistants providing information we need just now (see www.wearable.ethz.ch). Context recognition - what is the situation of the user, his activity, his environment, how is he doing, what are his needs - as the central functionality of mobile systems constitutes the focus of the course.

**Prerequisites**
- "VLSI I: from Architectures to Very Large Scale Integration Circuits and FPGAs" or equivalent knowledge.

**Literature**

**Lecture notes**
- English lecture notes.
- All written documents in English.

**Further details:**
http://www.iis.ee.ethz.ch/stud_area/vorlesungen/vlsi2.en.html
The path of an analog signal in the transmitter to the digital world in a communication link and back to the analog world at the receiver is discussed. The lecture covers the fundamentals of all important optical and optoelectronic components in a fiber communication system. This includes the transmitter, the fiber channel and the receiver with the electronic digital signal processing elements.

**Content**

- Chapter 1: Introduction: Analog/Digital conversion, The communication channel, Shannon channel capacity, Capacity requirements.
- Chapter 4: The Receiver: Photodiodes, Receiver noise, Detector schemes (direct detection, coherent detection), Bit-error ratios and error estimations.
- Chapter 5: Digital Signal Processing Techniques: Digital signal processing in a coherent receiver, Error detection techniques, Error correction coding.
- Chapter 6: Pulse Shaping and Multiplexing Techniques: WDM/OFDM, TDM, OFDM, Nyquist Multiplexing, OCDMA.
- Chapter 7: Optical Amplifiers: Semiconductor Optical Amplifiers, Erbium Doped Fiber Amplifiers, Raman Amplifiers.

**Prerequisites / Literature**

- Lecture notes are handed out.
- Govind P. Agrawal; "Fiber-Optic Communication Systems"; Wiley, 2010

**227-0655-00L**

**Nonlinear Optics**

**Abstract**

Nonlinear Optics deals with the interaction of light with material, the response of material to light and the mathematical framework to describe the phenomena. As an example we will cover fundamental phenomena such as the refractive index, the electro-optic effect, second harmonic generation, four-wave mixing or soliton propagation and others.

**Objective**

The important nonlinear optical phenomena are understood and can be classified. The effects can be described mathematical by means of the susceptibility.

**Content**

Chapter 1: The Wave Equations in Nonlinear Optics
Chapter 2: Nonlinear Effects - An Overview
Chapter 3: The Nonlinear Optical Susceptibility
Chapter 4: Second Harmonic Generation
Chapter 5: The Electro-Optic Effect and the Electro-Optic Modulator
Chapter 6: Acousto-Optic Effect
Chapter 7: Nonlinear Effects of Third Order
Chapter 8: Nonlinear Effects in Media with Gain

**Prerequisites / Literature**

- Fundamentals of Electromagnetic Fields (Maxwell Equations) & Bachelor Lectures on Physics.
- Lecture notes are handed out.

**227-0663-00L**

**Nano-Optics**

**Abstract**

Nano-Optics is the study of optical phenomena and techniques on the nanometer scale. It is an emerging field of study motivated by the rapid advance of nanoscience and technology. It embraces topics such as plasmonics, optical antennas, optical trapping and manipulation, and high-resolution imaging and spectroscopy.

**Objective**

Understanding concepts of light localization and light-matter interactions on the nanoscale.

**Content**

Starting with an angular spectrum representation of optical fields the role of inhomogeneous evanescent fields is discussed. Among the topics are: theory of strongly focused light, point spread functions, resolution criteria, confocal microscopy, and near-field optical microscopy. Further topics are: optical interactions between nanoparticles, atomic decay rates in inhomogeneous environments, single molecule spectroscopy, light forces and optical trapping, photonic bandgap materials, and theoretical methods in nano-optics.

**Prerequisites / Literature**

- Electrodynamics (or equivalent)
- Physics I+II

**227-1033-00L**

**Neuromorphic Engineering I**

**Abstract**

This course covers analog circuits with emphasis on neuromorphic engineering: MOS transistors in CMOS technology, static circuits, dynamic circuits, systems (silicon neuron, silicon retina, silicon cochlea) with an introduction to multi-chip systems. The lectures are accompanied by weekly laboratory sessions.

**Objective**

Understanding of the characteristics of neuromorphic circuit elements.

**Content**

Neuromorphic circuits are inspired by the organizing principles of biological neural circuits. Their computational primitives are based on physics of semiconductor devices. Neuromorphic architectures often rely on collective computation in parallel networks. Adaptation, learning and memory are implemented locally within the individual computational elements. Transistors are often operated in weak inversion (below threshold), where they exhibit exponential I-V characteristics and low currents. These properties lead to the feasibility of high-density, low-power implementations of functions that are computationally intensive in other paradigms. Application domains of neuromorphic circuits include silicon retinas and cochleas for machine vision and audition, real-time emulations of networks of biological neurons, and the development of autonomous robotic systems. This course covers devices in CMOS technology (MOS transistor below and above threshold, floating-gate MOS transistor, phototransducers), static circuits (differential pair, current mirror, transconductance amplifiers, etc.), dynamic circuits (linear and nonlinear filters, adaptive circuits), systems (silicon neuron, silicon retina and cochlea) and an introduction to multi-chip systems that communicate events analogous to spikes. The lectures are accompanied by weekly laboratory sessions on the characterization of neuromorphic circuits, from elementary devices to systems.

**Literature**

S.-C. Liu et al.: Analog VLSI Circuits and Principles; various publications.

**Prerequisites / Literature**

Particular: The course is highly recommended for those who intend to take the spring semester course 'Neuromorphic Engineering II', that teaches the conception, simulation, and physical layout of such circuits with chip design tools. Prerequisites: Background in basics of semiconductor physics helpful, but not required.

**151-0605-00L**

**Nanosystems**

**Abstract**

From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles. Intermolecular forces, their macroscopic manifestations, and ways to control such interactions. Self-assembly and directed assembly of 2D and 3D structures. Special emphasis on the emerging field of molecular electronic devices.
Objective
Familiarize students with basic science and engineering principles governing the nano domain.

Content
The course addresses basic science and engineering principles ruling the nano domain. We particularly work out the links between topics that are traditionally taught separately.

Special emphasis is placed on the emerging field of molecular electronic devices, their working principles, applications, and how they may be assembled.

Topics are treated in 2 blocks:

(I) From Quantum to Continuum
From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

(II) Interaction Forces on the Micro and Nano Scale
Intermolecular forces, their macroscopic manifestations, and ways to control such interactions.

Self-assembly and directed assembly of 2D and 3D structures.

Literature
- Ibach & Lüth, Festkörperphysik
- Ashcroft & Mermin, Festkörperphysik
- W. Känzig, Kondensierte Materie

Prerequisites / notice
Lectures and Mini-Review presentations: Thursday 10-13, ML F 36

Homework: Mini-Reviews
Students select a paper (list distributed in class) and expand the topic into a Mini-Review that illuminates the particular field beyond the immediate results reported in the paper.

402-0255-00L Introduction to Solid State Physics W 10 credits 3V+2U K. Ensslin

Abstract
The course provides an introduction to solid state physics, covering several topics that are later discussed in more detail in other more specialized lectures. The central topics are: solids and their lattice structures; interatomic bindings; lattice dynamics, electronic properties of insulators, metals, semiconductors, transport properties, magnetism, superconductivity.

Objective
Introduction to Solid State Physics.

Content
The course provides an introduction to solid state physics, covering several topics that are later discussed in more detail in other more specialized lectures. The central topics are: solids and their lattice structures; interatomic bindings; lattice dynamics, thermal properties of insulators; metals (classical and quantum mechanical description of electronic states, thermal and transport properties of metals); semiconductors (bandstructure and n/p-type doping); magnetism, superconductivity.

Lecture notes
A Manuscript is distributed.

Literature
Ibach & Lüth, Festkörperphysik
C. Kittel, Festkörperphysik
Ashcroft & Mermin, Festkörperphysik
W. Känzig, Kondensierte Materie

Prerequisites / notice
Familiarize students with basic science and engineering principles governing the nano domain.

These courses are recommended, but you are free to choose courses from any other special field. Please consult your tutor.

Number Title Type ECTS Hours Lecturers
227-0121-00L Communication Systems W 6 credits 4G A. Wittneben

Abstract
Information Theory, Signal Space Analysis, Baseband Transmission, Passband Transmission, Example un and Channel, Data Link Layer, MAC, Example Layer 2, Layer 3, Internet

Objective
Introduction into the fundamentals of digital communication systems. Selected examples on the application of the fundamental principles in existing and upcoming communication systems

Content
Covered are the lower three layer of the OSI reference model: the physical, the data link, and the network layer. The basic terms of information theory are introduced. After this, we focus on the methods for the point to point communication, which may be addressed elegantly and coherently in the signal space. Methods for error detection and correction as well as protocols for the retransmission of perturbed data will be covered. Also the medium access for systems with shared medium will be discussed. Finally, algorithms for routing and flow control will be treated.

The application of the basic methods will be extensively explained using existing and future wireless and wired systems.

Literature

227-0157-00L Semiconductor Devices: Physical Bases and Simulation W 4 credits 3G A. Schenk

Abstract
The course addresses the physical principles of modern semiconductor devices and the foundations of their modeling and numerical simulation. Necessary basic knowledge on quantum-mechanics, semiconductor physics and device physics is provided. Computer simulations of the most important devices and of interesting physical effects supplement the lectures.

Objective
The course aims at the understanding of the principle physics of modern semiconductor devices, of the foundations in the physical modeling of transport and its numerical simulation. During the course also basic knowledge on quantum-mechanics, semiconductor physics and device physics is provided.

Autumn Semester 2015

Data: 06.12.2017 12:57
The main topics are: transport models for semiconductor devices (quantum transport, Boltzmann equation, drift-diffusion model, hydrodynamic model), physical characterization of silicon (intrinsic properties, scattering processes), mobility of cold and hot carriers, recombination (Shockley-Read-Hall statistics, Auger recombination), impact ionization, metal-semiconductor contact, metal-insulator-semiconductor structure, and heterojunctions.

The exercises are focused on the theory and the basic understanding of the operation of special devices, as single-electron transistor, resonant tunneling diode, pn-diode, bipolar transistor, MOSFET, and laser. Numerical simulations of such devices are performed with an advanced simulation package (Sentaurus-Synopsys). This enables to understand the physical effects by means of computer experiments.

Analog Integrated Circuits

W 6 credits 2V+2U Q. Huang

Abstract

This course provides a foundation in analog integrated circuit design based on bipolar and CMOS technologies. Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems.

The basic elements, design issues and techniques for analog integrated circuits will be taught in this course.

Content

Review of bipolar and MOS devices and their small-signal equivalent circuit models; Building blocks in analog circuits such as current sources, active load, current mirrors, supply independent biasing etc.; Amplifiers: differential amplifiers, cascode amplifier, high gain structures, output stages, gain bandwidth product of op-amps; Stability: Comparators; Second-order effects in analog circuits such as mismatch, noise and offset; A/D and D/A converters; Introduction to switched capacitor circuits.

The exercise sessions aim to reinforce the lecture material by well guided step-by-step design tasks. The circuit simulator SPECTRE is used to facilitate the tasks. There is also an experimental session on op-amp measurements.

Lecture notes

Handouts of presented slides. No script but an accompanying textbook is recommended.

Physics of Failure and Failure Analysis of Electronic Devices and Equipment

W 3 credits 2V U. Sennhauser

Abstract

Failures have to be avoided by proper design, material selection and manufacturing. Properties, degradation mechanisms, and expected lifetimes of materials are introduced and the basics of failure analysis and analysis equipment are presented. Failures will be demonstrated experimentally and the opportunity is offered to perform a failure analysis with advanced equipment in the laboratory.

Objective

Introduction to the degradation and failure mechanisms and causes of electronic components, devices and systems as well as to methods and tools of reliability testing, characterization and failure analysis.

Content

Summary of reliability and failure analysis terminology; physics of failure: materials properties, physical processes and failure mechanisms; failure analysis of ICs, PCBs, opto-electronics, discrete and other components and devices; basics and properties of instruments; application in circuit design and reliability analysis.

Analog Signal Processing and Filtering

W 6 credits 2V+2U H. Schmid

Abstract

This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers.

Objective

This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers. The way the exam is done allows for the different interests of the two groups.

Content

The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

Lecture notes

The base for these lectures are lecture notes and two or three published scientific papers. From these papers we will together develop the technical content.

Details: https://people.ee.ethz.ch/~haschmid/aswiki/

Prerequisites / notice

Some material is protected by password; students from ETHZ who are interested can write to haschmid@ethz.ch to ask for the password even if they do not attend the lecture.

Prerequisites: Recommended (but not required): Stochastic models and signal processing, Communication Electronics, Analog Integrated Circuits, Transmission Lines and Filters.

Knowledge of the Laplace transform and z transform and their interpretation (transfer functions, poles and zeros, bode diagrams, stability criteria ...) and of the main properties of linear systems is necessary.

227-0617-00L

Solar Cells

W 4 credits 3G A. N. Tiwari, S. Bücheler, Y. Romanyuk

Abstract

Physics, technology, characteristics and applications of photovoltaic solar cells.

Objective

Introduction to solar radiation, physics, technology, characteristics and applications of photovoltaic solar cells and systems.

Content

Solar radiation characteristics, physical mechanisms for the light to electrical power conversion, properties of semiconductors for solar cells, processing and properties of conventional Si and GaAs based solar cells, technology and physics of thin film solar cells based on compound semiconductors, other solar cells including organic and dye sensitized cells, problems and new developments for power generation in space, interconnection of cells and solar module design, measurement techniques, system design of photovoltaic plants, system components such as inverters and controllers, engineering procedures with software demonstration, integration in buildings and other specific examples.

Lecture notes

Lecture reprints (in english).

Prerequisites / notice

Prerequisites: Basic knowledge of semiconductor properties.
227-0618-00L  Modeling, Characterization and Reliability of Power Semiconductors  W  6 credits  4G  M. P. M. Ciappa

Abstract
This lecture provides theoretical and experimental knowledge on the techniques for the characterization and numerical modeling of power semiconductors, as well as on the related built-in reliability strategies.

Objective
The students shall get acquainted with the most important concepts and techniques for characterization, numerical modeling and built-in reliability of modern power semiconductor devices. This knowledge is intended to provide the future engineer with the theoretical background and tools for the design of dependable power devices and systems.

Content
This lecture consists of a theoretical part (50%) and of laboratory exercises and demonstrations (50%).

The theoretical part covers the basic techniques and procedures for characterization, modeling and built-in reliability of modern power semiconductor devices with special attention to MOS and IGBT. The starting part on technology provides an overview on the main device families and includes a review of the most relevant application-oriented aspects of the device physics, thermal management, and packaging. The second section deals with the basic experimental characterization techniques for the definition of the semiconductor material properties, electrical characteristics, safe operating area, and junction temperature of the devices. The following section introduces the basic principles for electrical, thermal, and electro-thermal simulation of power semiconductors by Technology Computed Aided Design (TCAD) and compact modeling. Finally, procedures are methods are presented to implement efficient built-in reliability programs targeted on power semiconductors. They include failure physics, dedicated failure analysis techniques, accelerated testing, defect screening, and lifetime modeling.

During the laboratory activities, selections of the experimental techniques presented in the lecture are demonstrated on the base of realistic examples. Furthermore, schematic power devices will be simulated by the students with advanced TCAD tools and circuit simulators.

227-0620-00L  Characterization of the Electronic Properties of Materials for Semiconductor Devices  W  4 credits  3G

Abstract
This lecture provides theoretical and experimental knowledge on the techniques for the characterization of the main electronic properties of semiconductors and thin film materials used in microelectronics, with special focus on silicon.

Objective
The characterization of the electronic properties of semiconductor and related materials is fundamental to manufacture integrated devices, which fulfill the required specifications. By this lecture, the students shall get acquainted with the main electrical characterization techniques for the electronic properties of semiconductors and thin film materials used in microelectronics.

Content
This lecture consists of a theoretical part (80%) and of laboratory exercises and demonstrations (20%). In the first section of the lecture, methods and procedures are presented for the experimental characterization of relevant electronic parameters in the bare semiconductor (mainly silicon), like resistivity, carrier and doping density, contact resistance, and Schottky barriers. The second section deals with techniques involving basic structures and devices (contact chains, MIS capacitors, diodes, gated diodes, BJT, MOSFET) for the characterization of atomic transport, mechanical stress, dielectric thickness, impact ionization, channel mobility, instabilities, defect formation at interfaces and in thin film dielectrics, carrier transport and trapping in thin film dielectrics, quasi-static and dynamic device characteristics.

F. Balestra Ed., Nanoscale CMOS : innovative materials, modeling and characterization, ISTE

227-0627-00L  Applied Computer Architecture  W  6 credits  4G  A. Gunzinger

Abstract
This lecture gives an overview of the requirements and the architecture of parallel computer systems, performance, reliability and costs.

Objective
Understand the function, the design and the performance modeling of parallel computer systems.

Content
The lecture "Applied Computer Architecture" gives technical and corporate insights in the innovative Computer Systems/Architectures (CPU, GPU, FPGA, special processors) and their real implementations and applications. Often the designs have to deal with technical limits. Which computer architecture allows the control of the over 1000 magnets at the Swiss Light Source (SLS)? Which architecture is behind the alarm center of the Swiss Railway (SBB)? Which computer architectures are applied for driver assistance systems? Which computer architecture is hidden behind a professional digital audio mixing desk? How can data volumes about 30 TB/s, produced by a protone accelerator, be processed in real time? Can the weather forecast also be processed with GPUs? How can a good computer architecture be found? Which are the driving factors in succesful computer architecture design?

Lecture notes
Script and excercises sheets.

Prerequisites / notice
Prerequisites:
Basics of computer architecture.

227-0659-00L  Integrated Systems Seminar  W  1 credit  1S  A. Schenk

Abstract
In the "Fachseminar IIS" the students learn to communicate topics, ideas or problems of scientific research by listening to more experienced authors and by presenting scientific work in a conference-like situation for a specific audience.

Objective
The seminar aims at instructing graduate and PhD students in the basics of presentation techniques, i.e. "how to give a professional talk". Attendees have the possibility to become acquainted with a current topic by a literature study, and to present the results thereof in a 20 minutes talk in English. The participation at the seminar gives also an overview on current problems in modern nano- and opto-electronics.

Content
The seminar topics' are simulation of nanoelectronic processes and devices, and the optical as well as electronics simulation of optoelectronic devices as lasers, photodiodes, etc.

Lecture notes
Presentation material

227-0707-00L  Optimization Methods for Engineers  W  3 credits  2G  C. Hafner, P. Leuchtmann

Abstract
First half of the semester: Introduction to the main methods of numerical optimization with focus on stochastic methods such as genetic algorithms, evolutionary strategies, etc.
Second half of the semester: Each participant implements a selected optimizer and applies it on a problem of practical interest.
**Introduction to Plasmonics**

This course provides fundamental knowledge of surface plasmon polaritons and discusses their applications in plasmonics.

**Objective**

Numerical optimization is of increasing importance for the development of devices and for the design of numerical methods. The students shall learn to select, improve, and combine appropriate procedures for efficiently solving practical problems.

**Content**

Typical optimization problems and their difficulties are outlined. Well-known deterministic search strategies, combinatorial minimization, and evolutionary algorithms are presented and compared. In engineering, optimization problems are often very complex. Therefore, new techniques based on the generalization and combination of known methods are discussed. To illustrate the procedure, various problems of practical interest are presented and solved with different optimization codes.

**Lecture notes**

PDF file see http://alphard.ethz.ch/haenef Vorles/lect.htm

**Prerequisites / notice**

Lecture in the first half of the semester, exercises in form of small projects in the second half, presentation of the results in the last week of the semester.

---

**227-2037-00L**

**Abstract**

Physical modelling plays an important role in the analysis and design of new structures, especially for micro and nano devices where fabrication and measurement are difficult. After the fundamentals of electromagnetics, mechanics, and thermodynamics, an introduction to the main concepts and most widely used codes for physical modelling is given and commercial codes are applied.

**Objective**

Basic knowledge of the fundamental equations and effects of electromagnetics, mechanics, and thermodynamics. Knowledge of the main concepts of numerical methods for physical modelling and simulation. Ability 1) to select appropriate software, 2) to apply it for solving given problems, 3) to validate the results, 4) to interactively improve the models until sufficiently accurate results are obtained.

**Content**

Since the fabrication and characterization of micro- and nanostructures is difficult, expensive, and time-consuming, numerical modelling drastically reduced the design process. Although many commercial software packages are available, it is important to know the drawbacks and difficulties of the numerical methods behind them and to be able to validate the results obtained with such packages.

First, an introduction to the fundamental equations and effects of electromagnetics, mechanics, and thermodynamics is given. This is important for understanding the problems to be analyzed and for validating results obtained from software packages. After this, the main concepts of numerical methods and of the most widely used codes for physical modelling are outlined and compared, which is essential for the adequate selection of software for solving given problems. After this, prominent commercial software packages are applied to various types of problems, ranging from electrodynamics to multiphysics. For becoming able to select appropriate software and to validate the results obtained, different commercial software packages will be used and compared during the exercises in form of small projects.

---

**151-0601-00L**

**Abstract**

This course provides an introduction and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. It is a requirement for the Robotics Vertiefung and for the Masters in Mechatronics and Microsystems.

**Objective**

Robotics is often viewed from three perspectives: perception (sensing), manipulation (affecting changes in the world), and cognition (intelligence). Robotic systems integrate aspects of all three of these areas. This course provides an introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. This course is a requirement for the Robotics Vertiefung and for the Masters in Mechatronics and Microsystems.

**Content**

An introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control.

**Lecture notes**

The course will be taught in English.

**Prerequisites / notice**

The course is limited to 15 students per semester for safety and efficiency reasons. Participating students are required to provide proof that they have personal accident insurance prior to the start of the laboratory portion of the course. Participating students are required to attend all scheduled lectures and meetings of the course.

---

**151-0620-00L**

**Abstract**

Practical course: Students are introduced to the process steps required for the fabrication of MEMS (Micro Electro Mechanical System) and carry out the fabrication and testing steps in the clean rooms by themselves. Additionally, they learn the requirements for working in clean rooms. Processing and characterization will be documented and analyzed in a final report. Limited access

**Objective**

Students learn the individual process steps that are required to make a MEMS (Micro Electro Mechanical System). Students carry out the process steps themselves in laboratories and clean rooms. Furthermore, participants become familiar with the special requirements (cleanliness, safety, operation of equipment and handling hazardous chemicals) of working in the clean rooms and laboratories. The entire production, processing, and characterization of the MEMS is documented and evaluated in a final report.

**Content**

With guidance from a tutor, the individual silicon microsystem process steps that are required for the fabrication of an accelerometer are carried out:
- Photolithography, dry etching, wet etching, sacrificial layer etching, critical point drying, various cleaning procedures
- Packaging and electrical connection of a MEMS device
- Testing and characterization of the MEMS device
- Written documentation and evaluation of the entire production, processing and characterization

**Lecture notes**

A document containing theory, background and practical course content is distributed at the first meeting of the course.

**Literature**

The document provides sufficient information for the participants to successfully participate in the course.

**Prerequisites / notice**

Participating students are required to attend all scheduled lectures and meetings of the course.

Participating students are required to provide proof that they have personal accident insurance prior to the start of the laboratory portion of the course.

This master's level course is limited to 15 students per semester for safety and efficiency reasons. If there are more than 15 students registered, we regret to restrict access to this course by the following rules:

**Priority 1:** master students of the master's program in “Micro and Nanosystems”

**Priority 2:** master students of the master's program in "Mechanical Engineering" with a specialization in Microsystems and Nanoscale Engineering (MAY-tutors Profs Daraio, Dual, Hierold, Koumoutsakos, Nelson, Norris, Park, Poulikakos, Pratsinis, Stemmer), who attended the bachelor course "151-0621-00L Microsystems Technology" successfully.

**Priority 3:** master students, who attended the bachelor course "151-0621-00L Microsystems Technology" successfully.

**Priority 4:** all other students (PhD, bachelor, master) with a background in silicon or microsystems process technology.

If there are more students in one of these priority groups than places available, we will decide by drawing lots.

Students will be notified at the first lecture of the course (introductory lecture) as to whether they are able to participate.

The course is offered in autumn and spring semester.

Students will be notified at the first lecture of the course (introductory lecture) as to whether they are able to participate.

The course is offered in autumn and spring semester.
Electromagnetic oscillations known as surface plasmon polaritons have many unique properties that are useful across a broad set of applications in biology, chemistry, physics, and optics. The field of plasmonics has arisen to understand the behavior of surface plasmon polaritons and to develop applications in areas such as catalysis, imaging, photovoltaics, and sensing. In particular, metallic nanoparticles and patterned metallic interfaces have been developed to utilize plasmonic resonances. The aim of this course is to provide the basic knowledge to understand and apply the principles of plasmonics. The course will strive to be approachable to students from a diverse set of science and engineering backgrounds.

**Objects of Plasmonics**

- Waveguides
- Extraordinary optical transmission
- Enhanced spectroscopy
- Sensing
- Metamaterials

**Lecture notes** Class notes and handouts

**Prerequisites / notice** Physics I, Physics II

---

**Objective**

This course focuses on the analysis of innovation as a pervasive process that cut across organizational and functional boundaries. It looks at the sources of innovation, at the tools and techniques that organizations deploy to routinely innovate, and the strategic implications of technical change.

**Content**

Fundamentals of Plasmonics

- Basic electromagnetic theory
- Optical properties of metals
- Surface plasmon polaritons on surfaces
- Surface plasmon polariton propagation
- Localized surface plasmons

- Applications of Plasmonics
- Waveguides
- Enhanced optical transmission
- Sensing
- Metamaterials

**Lecture notes** Class notes and handouts

**Prerequisites / notice** Physics I, Physics II

- Technology and Innovation Management
- Energy and Power Electronics
- Physics I, Physics II

---

**Objective**

This course focuses, relying on a combination of lectures, case-based discussion, guest speakers, simulations and group work.

**Content**

Converter topologies (switch or cell based), multi-pulse diode rectifiers, system aspects of transformer and electrical machines, 3-level inverter with its switching and transfer functions, grid side harmonics, modeling and control of synchronous machines (including permanent magnet machines), control of line-side converters, reflection effects with power cables, winding isolation and bearing stress. Field trip to ABB Semiconductors.

**Lecture notes** Skript is sold at the beginning of the lectures or can be downloaded from Ilias
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large and non-linear systems of equations related to electrical power networks.

**Content**

The electrical power transmission system, the energy management system, requirements of the electrical power transmission (demand oriented, operationally, economically), network planning and network operation, models of N-port network components (line, cables, shunts, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.

**Lecture notes**

Lecture notes. Course is supported by WWW-teaching system.

<tr>
<td><strong>Objective</strong></td>
<td>The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications. The two main themes are &quot;linearity&quot; and &quot;probability&quot;. In the first part of the course, we deepen our understanding of discrete-time linear filters. In the second part of the course, we review the basics of probability theory and discrete-time stochastic processes. We then discuss some basic concepts of detection theory and estimation theory, as well as some practical methods including LMMSE estimation and LMMSE filtering, the LMS algorithm, and the Viterbi algorithm.</td>

Data: 06.12.2017 12:57 Autumn Semester 2015 Page 473 of 1432
EST I (Frühjahrsemester) - Begriffen, Grundlagen, Merkmale

1 Einführung:
1.1 Geschichte und Struktur des Bahnsystems
1.2 Fahrdynamik

2 Vollbahnfahrzeuge:
2.1 Mechanik: Kasten, Drehgestelle, Lauftechnik, Adhäsion
2.2 Bremsen
2.3 Traktionsantriebssysteme
2.4 Hilfsbetriebe und Komfortanlagen
2.5 Steuerung und Regelung

3 Infrastruktur:
3.1 Fahrweg
3.2 Bahnstromversorgung
3.3 Sicherungsanlagen

4 Betrieb:
4.1 Interoperabilität, Normen und Zulassung
4.2 RAMS, LCC
4.3 Anwendungsbeispiele

Voraussichtlich ein oder zwei Gastreferate

Geplante Exkursionen:
Betriebsszentrale SBB, Zürich Flughafen
Reparatur und Unterhalt, SBB Zürich Altstetten
Fahrzeugfertigung, Stadler Bussnang

Lecture notes
Abgabe der Unterlagen (gegen eine Schutzgebühr) zu Beginn des Semesters. Rechtzeitig eingeschriebene Teilnehmer können die Unterlagen auf Wunsch und gegen eine Zusatzgebühr auch in Farbe beziehen.

Prerequisites / notice
Dozent:
Dr. Markus Meyer, Emkamatik GmbH

Voraussichtlich ein oder zwei Gastvorträge von anderen Referenten.

EST I (Herbstsemester) kann als in sich geschlossene einsemestrige Vorlesung besucht werden. EST II (Frühjahrssemester) dient der weiteren Vertiefung der Fahrzeugtechnik und der Integration in die Bahninfrastruktur.

227-0618-00L Modeling, Characterization and Reliability of Power Semiconductors
W 6 credits 4G  M. P. M. Ciappa

Abstract
This lecture provides theoretical and experimental knowledge on the techniques for the characterization and numerical modeling of power semiconductors, as well as on the related built-in reliability strategies.

Objective
The students shall get acquainted with the most important concepts and techniques for characterization, numerical modeling and built-in reliability of modern power semiconductor devices. This knowledge is intended to provide the future engineer with the theoretical background and tools for the design of dependable power devices and systems.

Content
This lecture consists of a theoretical part (50%) and of laboratory exercises and demonstrations (50%). The theoretical part covers the basic techniques and procedures for characterization, modeling and built-in reliability of modern power semiconductor devices with special attention to MOS and IGBT. The starting part on technology provides an overview on the main device families and includes a review of the most relevant application-oriented aspects of the device physics, thermal management, and packaging. The second section deals with the basic experimental characterization techniques for the definition of the semiconductor material properties, electrical characteristics, safe operating area, and junction temperature of the devices. The following section introduces the basic principles for electrical, thermal, and electro-thermal simulation of power semiconductors by Technology Computed Aided Design (TCAD) and compact modeling. Finally, procedures are methods are presented to implement efficient built-in reliability programs targeted on power semiconductors. They include failure physics, dedicated failure analysis techniques, accelerated testing, defect screening, and lifetime modeling.

During the laboratory activities, selections of the experimental techniques presented in the lecture are demonstrated on the base of realistic examples. Furthermore, schematic power devices will be simulated by the students with advanced TCAD tools and circuit simulators.

227-0697-00L Industrial Process Control
W 4 credits 3G  G. Maier, A. Horch

Abstract
Introduction to process automation and its application in process industry and power generation

Objective
Knowledge of process automation and its application in industry and power generation

Content
Introduction to process automation: system architecture, data handling, communication (fieldbusses), process visualization, engineering, etc. Analysis and design of open loop control problems: discrete automata, petri-nets, decision tables, drive control and object oriented function group automation philosophy, RT-UML. Engineering: Application programming in IEC61131-3 (function blocks, sequence control, structured text); Process visualization and operation; engineering integration from sensor, cabling, topology design, function, visualization, diagnosis, to documentation; Industry standards (e.g. OPC, Profbus). Ergonomic design, safety (IEC61508) and availability, supervision and diagnosis. Practical examples from process industry, power generation and newspaper production.

Lecture notes
Slides will be available as .PDF documents, see “Learning materials” (for registered students only)

Exercises: Tuesday 15-16

Prerequisites / notice
Practical examples will illustrate some topics, especially some control software coding using industry standard programming tools based on IEC61131-3.

227-0707-00L Optimization Methods for Engineers
W 3 credits 2G  C. Hafner, P. Leuchtmann

Abstract
First half of the semester: Introduction to the main methods of numerical optimization with focus on stochastic methods such as genetic algorithms, evolutionary strategies, etc.
Second half of the semester: Each participant implements a selected optimizer and applies it on a problem of practical interest.
Numerical optimization is of increasing importance for the development of devices and for the design of numerical methods. The students shall learn to select, improve, and combine appropriate procedures for efficiently solving practical problems.

Typical optimization problems and their difficulties are outlined. Well-known deterministic search strategies, combinatorial minimization, and evolutionary algorithms are presented and compared. In engineering, optimization problems are often very complex. Therefore, new techniques based on the generalization and combination of known methods are discussed. To illustrate the procedure, various problems of practical interest are presented and solved with different optimization codes.

Globalization of markets increases global competition and requires enterprises to continuously improve their performance to sustainably survive. Engineers substantially contribute to the success of an enterprise provided they understand and follow fundamental international market forces, economic basics and operational business management.

The goal of the lecture is to get a basic understanding of international market mechanisms and their consequences for a successful enterprise. Students will learn by practical examples how to analyze international markets, competition as well as customer needs and how they convert into a successful portfolio an enterprise offers to the global market. They will understand the basics of international business management, why efficient organizations and effective business processes are crucial for the successful survival of an enterprise and how all this can be implemented.

The first part of the course provides an overview about the development of international markets, the expected challenges and the players in the market. The second part is focusing on the economic aspects of an enterprise, their importance for the long term success and how to effectively manage an international business. Based on these fundamentals the third part of the course explains how an innovative product portfolio of a company can be derived from considering the most important external factors and which consequences in respect of product innovation, competitive product pricing, organization and business processes emerge. Each part of the course includes practical examples to demonstrate the procedure.

A script is provided for this lecture.

The lecture will be held in three blocks each of them on a Saturday. Each block will focus on one of the three main topics of the course.

Between the blocks the students will work on specific case studies to deepen the subject matter. About two weeks after the third block a written examination will be conducted.

The class is intended to provide an overview about the development of international markets, their use in control, filtering, and estimation and their applications to areas ranging from avionics to systems biology.

- Rings, fields and linear spaces, normed linear spaces and inner product spaces.
- Ordinary differential equations, existence and uniqueness of solutions.
- Continuous and discrete time, time varying linear systems. Time domain solutions. Time invariant systems treated as a special case.
- Controllability and observability, canonical forms, Kalman decomposition. Time invariant systems treated as a special case.
- Stability and stabilization, observers, state and output feedback, separation principle.
- Realization theory.

The lecture will be held in three blocks each of them on a Saturday. Each block will focus on one of the three main topics of the course.

Between the blocks the students will work on specific case studies to deepen the subject matter. About two weeks after the third block a written examination will be conducted.

Introduction to Dynamic Programming and Optimal Control.

Dynamic Programming Algorithm; Deterministic Systems and Shortest Path Problems; Infinite Horizon Problems, Bellman Equation; Deterministic Continuous-Time Optimal Control.

Requirements: Knowledge of advanced calculus, introductory probability theory, and matrix-vector algebra.

These core subjects are particularly recommended for the field of "Systems and Control".

Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience available. The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans. The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss).

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems, such as automata and Petri nets. In the second part of the course we analyze discrete event systems. We first examine discrete event systems from an average-case perspective: we model discrete events as stochastic processes, and then apply Markov chains and queuing theory for an understanding of the typical behavior of a system. In the last part of the course we analyze discrete event systems from a worst-case perspective using the theory of online algorithms and adversarial queuing.

The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

**Content**

1. Introduction  
2. Automata and Languages  
3. Smarter Automata  
4. Specification Models  
5. Stochastic Discrete Event Systems  
6. Worst-Case Event Systems  
7. Network Calculus

**Objective**

Over the past few decades the rapid evolution of computing, communication, and information technologies has brought about the proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans. The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss).

Abstract
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Objective
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Content
The electrical power transmission system, the energy management system, requirements of the electrical power transmission (demand oriented, operationally, economically), network planning and network operation, models of N-port network components (line, cables, shunt, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.

Abstract
Theory and techniques for the identification of dynamic models from experimentally obtained system input-output data.

Objective
To provide a series of practical techniques for the development of dynamical models from experimental data, with the emphasis being on the development of models suitable for feedback control design purposes. To provide sufficient theory to enable the practitioner to understand the trade-offs between model accuracy, data quality and data quantity.

Content
The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in engineering and life sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Prerequisites / notice
Control systems (227-0216-00L) or equivalent.

Abstract
Introduction to modeling: Black-box and grey-box models; Parametric and non-parametric models; ARX, ARMAX (etc.) models.

Objective

Content
Content will be on the basic organization of eukaryotic cells, molecular mechanisms and cellular functions. Textbook knowledge will be combined with results from recent research and technological innovations in biology.

Prerequisites / notice

Abstract

Objective
After completing this course, engineering students will be able to apply their previous training in the quantitative and physical sciences to problems in mechanical, electronic, and systems engineering. Students will also learn the principles how biological models are established, and how these models can be tested.

Content
Lectures will include the following topics: DNA, chromosomes, RNA, protein, genetics, gene expression, membrane structure and function, vesicular traffic, cellular communication, energy conversion, cytoskeleton, cell cycle, cellular growth, apoptosis, autophagy, cancer, development and stem cells.

Prerequisites / notice

Abstract
Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective
The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Content
Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Prerequisites / notice
Abstract
This course provides an introduction and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. Its a requirement for the Robotics Vertiefung and for the Masters in Mechatronics and Microsystems.

Objective
Robotics is often viewed from three perspectives: perception (sensing), manipulation (affecting changes in the world), and cognition (intelligence). Robotic systems integrate aspects of all three of these areas. This course provides an introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. This course is a requirement for the Robotics Vertiefung and for the Masters in Mechatronics and Microsystems.

Content
An introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control.

151-0563-01L Dynamic Programming and Optimal Control
W 4 credits 3G R. D’Andrea
Abstract Introduction to Dynamic Programming and Optimal Control.
Objective Covers the fundamental concepts of Dynamic Programming & Optimal Control.
Content Dynamic Programming Algorithm; Deterministic Systems and Shortest Path Problems; Infinite Horizon Problems, Bellman Equation; Deterministic Continuous-Time Optimal Control.
Prerequisites / notice Requirements: Knowledge of advanced calculus, introductory probability theory, and matrix-vector algebra.

376-1219-00L Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions
W 3 credits 2V R. Riener, R. Gassert, L. Marchal Crespo
Abstract Rehab. Engineering is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.
Objective Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.
Content Introduction, problem definition, overview
- Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces
Literature

Introductory Books:

Selected Journal Articles and Web Links:

Prerequisites / notice

This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture covering similar topics and more.

Mathematical Optimization

W 11 credits 4V+2U  R. Weismantel

Abstract

Mathematical treatment of diverse optimization techniques.

Objective

Advanced optimization theory and algorithms.

Content

1. Linear optimization: The geometry of linear programming, the simplex method for solving linear programming problems, Farkas' Lemma and infeasibility certificates, duality theory of linear programming.

3. Integer optimization: Ties between linear and integer optimization, total unimodularity, complexity theory, cutting plane theory.

4. Combinatorial optimization: Network flow problems, structural results and algorithms for matroids, matchings and, more generally, independence systems.
### Subjects of General Interest

</tbody>
</table>

**Abstract**

Failures have to be avoided by proper design, material selection and manufacturing. Properties, degradation mechanisms, and expected lifetime of materials are introduced. The course aims at providing an overview of failure analysis and analysis equipment presented. Failures will be demonstrated experimentally and the opportunity is offered to perform a failure analysis in advanced equipment in the laboratory.

**Objective**

Introduction to the degradation and failure mechanisms and causes of electronic components, devices and systems as well as to methods and tools of reliability testing, characterization and failure analysis.

**Content**

Summary of reliability and failure analysis terminology; physics of failure: materials properties, physical processes and failure mechanisms; failure analysis of ICs, PCBs, opto-electronics, discrete and other components and devices; basics and properties of instruments; application in circuit design and reliability analysis.

**Abstract**

Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding. The course offers the fundamentals in theory and practice of entrepreneurship in new technology ventures. Main topics covered are success factors in the creation of new firms, including founding, financing and growing a venture.

**Objective**

This course provides theory-grounded knowledge and practice-driven skills for founding, financing, and growing new technology ventures. A critical understanding of dos and don'ts is provided through highlighting and discussing real life examples and cases.

**Content**

See course website

</tbody>
</table>

**Abstract**

This course offers deeper knowledge on the possible applications of virtual reality, its basic technology, and future research fields. The goal is to provide a strong knowledge on Virtual Reality for a possible future use in business processes.

**Objective**

Virtual Reality can not only be used for the visualization of 3D objects, but also offers a wide application field for small and medium enterprises (SME). This could be for instance an enabling technology for net-based collaboration, the transmission of images and other data, the interaction of the human user with the digital environment, or the use of augmented reality systems.

The goal of the lecture is to provide a deeper knowledge of today's VR environments that are used in business processes. The technical background, the algorithms, and the applied methods are explained more in detail. Finally, future tasks of VR will be discussed and an outlook on ongoing international research is given.

**Content**

Introduction into Virtual Reality; basics of augmented reality; interaction with digital data, tangible user interfaces (TUI); basics of visualization; simulation; compression procedures of image-, audio-, and video signals; new materials for force feedback devices; introduction into data security; cryptography; definition of free-form surfaces; digital factory; new research fields of virtual reality

**Lecture notes**

The handout is available in German and English.

**Prerequisites / notice**

"Visualization, Simulation and Interaction - Virtual Reality II" is recommended.

Didactical concept:

The course consists of lectures and exercises.

### Semester Projects

<td></td>
<td>J. Leuthold</td>
</tr>
</tbody>
</table>

**Abstract**

The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training. The lecture will be thought on two afternoons. Some exercises will be built into the lecture.

**Objective**

Knowledge on structure and content of a scientific text. The course further is arranged to stimulate a discussion on how to properly write a legible scientific text versus writing an interesting novel. We will further discuss the practice of properly citing and critically reflect on recent plagiarism allegations.
Content

* Topic 1: Structure of a Scientific Text (The Title, the author list, the abstract, State-of-the Art, the "in this paper" paragraph, the scientific part, the summary, Equations, Figures).

* Topic 2: Power Point Presentations.

* Topic 3: Citation Rules and Citation Software.

* Topic 4: Guidelines for Research Integrity.

Literature

ETH "Citation Etiquette", see www.plagiate.ethz.ch.

Prerequisites / notice

Students should already have a Bachelor degree and plan to do either a semester project or a master thesis in the immediate future.

MATLAB is used for system analysis and simulation.

227-0166-AAL Analog Integrated Circuits E- 6 credits 8R Q. Huang

Course offered only in the autumn semester with an examination only in winter.

Enrolment only for MSc students who need this course as additional admission requirement.

Abstract
This course provides a foundation in analog integrated circuit design based on bipolar and CMOS technologies.

Objective
Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems.

The basic elements, design issues and techniques for analog integrated circuits will be taught in this course.

Content
Review of bipolar and MOS devices and their small-signal equivalent circuit models; Building blocks in analog circuits such as current sources, active load, current mirrors, supply independent biasing etc; Amplifiers: differential amplifiers, cascode amplifier, high gain structures, output stages, gain bandwidth product of op-amps; Stability; Comparators; Second-order effects in analog circuits such as mismatch, noise and offset; A/D and D/A converters; Introduction to switched capacitor circuits.

Lecture notes
Handouts of slides. No script but an accompanying textbook is recommended.

Literature

227-0117-AAL High Voltage Technology E- 6 credits 8R C. Franck

Enrolment only for MSc students who need this course as additional admission requirement.

Abstract
Understanding of the fundamental phenomena and principles connected with the occurrence of extensive electric field strengths. This knowledge is applied to the dimensioning of high-voltage equipment. Methods of computer-modeling in use today are presented and applied within a workshop in the framework of the exercises.

Objective
The students know the fundamental phenomena and principles connected with the occurrence of extensive electric field strengths. They comprehend the different mechanisms leading to the failure of insulation systems and are able to apply failure criteria on the dimensioning of high voltage components. They have the ability to identify of weak spots in insulation systems and to name possibilities for improvement. Further they know the different insulation systems and their dimensioning in practice.

Content
- discussion of the field equations relevant for high voltage engineering.
- analytical and numerical solutions/solving of this equations, as well as the derivation of the important equivalent circuits for the description of the fields and losses in insulations
- introduction to kinetic theory of gases
- mechanisms of the breakdown in gaseous, liquid and solid insulations, as well as insulation systems
- methods for the mathematical determination of the electric withstand of gaseous, liquid and solid insulations
- application of the expertise on high voltage components
- excursion to manufacturers of high voltage components
- exercise to learn on computer-modeling in high voltage engineering

<td>G. Habert</td>
</tr>
<tr>
<td>Abstract</td>
<td>This course was offered as &quot;Sustainable Construction&quot; until HS14.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>This year the UN Conference in Paris will shape future world objectives to tackle climate change. At the end of the semester, the students have an understanding of the term of sustainable development, its history, the current political and scientific discourses and its relevance for our built environment. In order to address current challenges of climate change mitigation and resource depletion, students will learn a holistic approach of sustainable development. Ecological, economical and social constraints will be presented and students will learn about methods for argumentation and tools for assessment (i.e. life cycle assessment). For this purpose an overview of sustainable development is presented with an introduction to the history of sustainability and its today definition as well as the role of cities, urbanisation and material resources (i.e. energy, construction material) in social economic and environmetal aspects. The course aims to promote an integral view and understanding of sustainability and describing different spheres (social/cultural, ecological, economical, and institutional) that influence our built environment. Students will acquire critical knowledge and understand the role of involved stakeholders, their motivations and constraints, learn how to evaluate challenges, identify deficits and define strategies to promote a more sustainable construction. After the course students should be able to define the relevance of specific local, regional or territorial aspects to achieve coherent and applicable solutions toward sustainable development. The course offers an environmental, socio-economic and socio-technical perspective focussing on buildings, cities and their transition to resilience with sustainable development. Students will learn on theory and application of current scientific pathways towards sustainable development.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| Content      | The following topics give an overview of the themes that are to be worked on during the lecture.  
- Overview on the history and emergence of sustainable development  
- Overview on the current understanding and definition of sustainable development  
- Case Study 1: Sustainable construction, the role of construction industry (national/international)  
- Case Study 2: Cities, forms of settlements  
- Case Study 3: Material resources, scenarios, energy, construction materials, urban metabolism  
- Case Study 4: Buildings, heating/cooling, consumers, prosumers and other stakeholder, cooperations  
- Method 1: Life cycle assessment (planning, construction, operation/use, deconstruction)  
- Method 2: Economics for sustainable construction  
- Method 3: Construction, flexibility, modularity  
- Synthesis 1: Climate Change mitigation and adaptation in cities  
- Synthesis 2: Transition to sustainable development |
| Lecture notes | Lecture script in English, exercises and sample solutions, translation of important vocabulary: english-german. |

The course presents an overview of measurement tasks in engineering environments. Different concepts for the acquisition and processing of typical measurement quantities are introduced. Following an initial in-class introduction, laboratory exercises from different application areas (especially in thermofluidics and process engineering) are attended by students in small groups.

**Objective**
Introduction to various aspects of measurement techniques, with particular emphasis on thermo-fluidic applications. Understanding of various sensing technologies and analysis procedures. Exposure to typical experiments, diagnostics hardware, data acquisition and processing.

**Content**
In-class introduction to representative measurement techniques in the research areas of the participating institutes (fluid dynamics, energy technology, process engineering)
Student participation in 8-10 laboratory experiments (study groups of 3-5 students, dependent on the number of course participants and available experiments)
Lab reports for all attended experiments have to be submitted by the study groups.
A final exam evaluates the acquired knowledge individually.

**Literature**
- Dieter Smidt: Reaktortechnik, Band 1 und Band 2, G. Braun Karlsruhe, 1971

**Prerequisites / notice**
- Basic understanding in the following areas:
  - fluid mechanics, thermodynamics, heat and mass transfer
  - electrical engineering / electronics
  - numerical data analysis and processing (e.g. using MATLAB)

**151-0163-00L Nuclear Energy Conversion**

**Abstract**
The fundamentals of fission reaction and the sustainable chain reaction, thermal design, construction, reaction of operation of nuclear reactors and power plants, light water reactors and other reactor types, conversion and breeding

**Objective**
Students get an overview on energy conversion in nuclear power plants, on construction and function of the most important types of nuclear reactors with special emphasis to light water reactors. They obtain the mathematical/physical basis for quantitative assessments concerning most relevant aspects of design, dynamic behaviour as well as material and energy flows.

**Content**
Nuclear physics of nuclear chain reaction. Thermodynamics of nuclear reactors. Design of the reactor core. Introduction into the dynamic behaviour of nuclear reactors. Overview on types of nuclear reactors, difference between thermal reactors and fast breeders. Construction and operation of nuclear power plants with pressurized and boiling water reactors, role and function of the most important safety systems, special features of the energy conversion, Development tendencies of reactor technology.

**Prerequisites / notice**

**Literature**
- Dieter Smidt: Reaktortechnik, Band 1 und Band 2, G. Braun Karlsruhe, 1971

**151-0185-00L Radiation Heat Transfer**

**Abstract**
Advanced course in radiation heat transfer

**Objective**
Fundamentals of radiative heat transfer for high-temperature applications. Examples are combustion and solar thermal/thermochemical processes, and other applications in the field of energy conversion and material processing.

**Content**

**Prerequisites / notice**
- Copy of the slides presented.

**Literature**

**151-0203-00L Turbomachinery Design**

**Abstract**
Introduction to the understanding of a broad range of turbomachinery devices. Learn the steps of turbomachinery design.

**Objective**
Understand the principles, and learn the design procedures and the behaviour of turbomachines.

**Content**

**Prerequisites / notice**
- Lecture notes

**Literature**

**151-0207-00L Theory and Modeling of Reactive Flows**

**Abstract**
The course first reviews the governing equations and combustion chemistry, setting the ground for the analysis of homogeneous gas-phase mixtures, laminar diffusion and premixed flames. Catalytic combustion and its coupling with homogeneous combustion are dealt in detail, and turbulent combustion modeling approaches are presented. Available numerical codes will be used for modeling.

**Objective**
Theory of combustion with numerical applications

**Content**
The analysis of realistic reactive flow systems necessitates the use of detailed computer models that can be constructed starting from first principles i.e. thermodynamics, fluid mechanics, chemical kinetics, and heat and mass transport. In this course, the focus will be on combustion theory and modeling. The reacting flow governing equations and the combustion chemistry are firstly reviewed, setting the ground for the analysis of homogeneous gas-phase mixtures, laminar diffusion and premixed flames. Heterogeneous (catalytic) combustion, an area of increased importance in the last years, will be dealt in detail along with its coupling with homogeneous combustion. Finally, approaches for the modeling of turbulent combustion will be presented. Available numerical codes will be used to compute the above described phenomena. Familiarly with numerical methods for the solution of partial differential equations is expected.

<td>Abstract</td>
<td>The objective of this course is to introduce the students to the fundamentals, technologies, modern day application, and economics of wind energy. These subjects are introduced through a discussion of the basic principles of wind energy generation and conversion, and a detailed description of the broad range of relevant technical, economic and environmental topics.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>The objective of this course is to introduce the students to the fundamentals, technologies, modern day application, and economics of wind energy.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Content</td>
<td>This mechanical engineering course focuses on the technical aspects of wind turbines; non-technical issues are not within the scope of this technically oriented course. On completion of this course, the student shall be able to conduct the preliminary aerodynamic and structural design of the wind turbine blades. The student shall also be more aware of the broad context of drivetrains, dynamics and control, electrical systems, and meteorology, relevant to all types of wind turbines.</td>

Content
Basics of the switching behavior and gate drive circuits of power semiconductor devices and auxiliary circuits for minimizing the switching losses are explained. Furthermore, zero voltage switching, zero current switching, and resonant DC/DC converters are discussed in detail; the operating behavior of isolated full-bridge DC/DC converters is detailed for different secondary side rectifier topologies; high frequency loss mechanisms of magnetic components of converter circuits are explained and approximate calculation methods are presented; the concept of space vector calculus for analyzing three-phase systems is introduced; finally, phase-oriented and space vector modulation of three-phase inverter systems are discussed related to voltage DC link inverter systems and the design of the main power components based on analytical calculations is explained.

Lecture notes
Lecture notes and associated exercises including correct answers, simulation program for interactive self-learning including visualization/animation features.

Prerequisites / notice
Prerequisites: Introductory course on power electronics.

227-0523-00L Railway Systems I

Abstract
Basic characteristics of railway vehicles and their interfaces with the railway infrastructure:
- Transportation tasks and vehicle types
- Running dynamics
- Mechanical part of rail vehicles
- Brakes
- Traction chain and auxiliary supply
- Railway power supply
- Signaling systems
- Traffic control and maintenance

Objective
- Overview of the technical characteristics of railway systems
- Know-how about the design and construction principles of rail vehicles
- Interrelationship between different fields of engineering sciences (mechanics, electro and information technology, transport systems)
- Understanding tasks and opportunities of engineers working in an environment which has strong economical and political boundaries
- Insight into the activities of the railway vehicle industry and railway operators in Switzerland
- Motivation of young engineers to start a career in the railway industry or with railway operators

Content
EST I (Frühjahrsemester) - Begriffen, Grundlagen, Merkmale

1 Einführung:
1.1 Geschichte und Struktur des Bahnsystems
1.2 Fahrdynamik

2 Vollbahnhärtzeuge:
2.1 Mechanik: Kasten, Drehgestelle, Laufradtechnik, Adhäsion
2.2 Bremsen
2.3 Traktionsantriebsysteme
2.4 Hilfsbetriebe und Komfortanlagen
2.5 Steuerung und Regelung

3 Infrastruktur:
3.1 Fahrweg
3.2 Bahnstromversorgung
3.3 Sicherungsanlagen

4 Betrieb:
4.1 Interoperabilität, Normen und Zulassung
4.2 RAMS, LCC
4.3 Anwendungsbereiche

Voraussichtlich ein oder zwei Gastreferate

Geplante Exkursionen:
Betriebszentrale SBB, Zürich Flughafen
Reparatur und Unterhalt, SBB Zürich Altstetten
Fahrzeugsicherung, Stadler Bussnang

Lecture notes
Abgabe der Unterlagen (gegen eine Schutzgebühr) zu Beginn des Semesters. Rechtzeitig eingeschriebene Teilnehmer können die Unterlagen auf Wunsch und gegen eine Zusatzgebühr auch in Farbe beziehen.

Prerequisites / notice
Dozent:
Dr. Markus Meyer, Emkamatik GmbH

Voraussichtlich ein oder zwei Gastvorträge von anderen Referenten.

EST I (Herbstsemester) kann als in sich geschlossene einsemestrige Vorlesung besucht werden. EST II (Frühjahrssemester) dient der weiteren Vertiefung der Fahrzeugtechnik und der Integration in die Bahinfrastruktur.

227-0526-00L Power System Analysis

Abstract
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Objective
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Content
The electrical power transmission system, the energy management system, requirements of the electrical power transmission (demand oriented, operationally, economically), network planning and network operation, models of N-port network components (line, cables, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.

Lecture notes
Lecture notes. Course is supported by WWW-teaching system.

227-0731-00L Power Market I - Portfolio and Risk Management

Abstract
Portfolio and risk management in the electrical power business, Pan-European power market and trading, futures and forward contracts, hedging, options and derivatives, performance indicators for the risk management, modelling of physical assets, cross-border trading, ancillary services, balancing power market, Swiss market model, strategy development and positioning.
The goal of the lecture is to get a basic understanding of international market mechanisms and their consequences for a successful enterprise. Students will learn by practical examples how to analyze international markets, competition as well as customer needs and how to effectively manage an international business. Based on these fundamentals the third part of the course explains how an innovative product portfolio of a company can be derived from considering the most important external factors and which consequences in respect of product innovation, competitive product pricing, organization and business processes emerge. Each part of the course includes practical examples to demonstrate the procedure.

**Objective**

Globalization of markets increases global competition and requires enterprises to continuously improve their performance to sustainably survive. Engineers substantially contribute to the success of an enterprise provided they understand and follow fundamental international market forces, economic basics and operational business management.

**Content**

- Pan-European power market and trading
- Energy economics
- Spot and OTC trading
- European energy exchange EEX
- Market model
- Balance groups / balancing energy
- Ancillary services
- Market for ancillary services
- Cross-border trading
- Capacity auctions
- Portfolio and Risk management
- Portfolio management 1 (introduction)
- Forward and futures contracts
- Risk management 1 (m2m, VaR, hpfC, volatility, cVaR)
- Risk management 2 (PaR)
- Contract valuation (HPFC)
- Portfolio management 2
- Risk Management 3 (enterprise wide)
- Energy & Finance I
- Options 1 basics
- Options 2 hedging with options
- Introduction to derivatives (swaps, cap, floor, collar)
- Financial modelling of physical assets
- Trading and hydro power
- Incentive regulation
- Strategy
- Strategic Positioning
- Development of strategies and examples
- Cases for team work
- Lecture notes
- Handouts of the lecture
- Prerequisites / notice
- 1 excursion per semester, 2 case studies, guest speakers for specific topics

**Literature**

This course deepens students' knowledge of environmental, economic, and social assessment methodologies and their various applications. In particular, students completing the course should have the ability to judge the scientific quality and reliability of environmental assessment studies, the appropriateness of inventory data and modellling, and the adequacy of life cycle impact assessment models and factors. Knowledge about the current state of the scientific discussion and new research developments. Students will learn to describe key sustainability problems of the current economic system and measuring units. Describe the management system of an organisation and illustrate how to improve its sustainability management (especially planning and controlling), based on current ISO management standards and additional frameworks. Discuss approaches to measure environmental performance measurement of an organisation, including ‘organisational LCA’ (Ecobalance). Explain the pros and cons of single score env. assessment methods. Demonstrate life cycle costing from a sustainability viewpoint. Interpret stakeholder relations of an organisation. If time allows, describe sustainable supply chain management. Part I (Advanced Environmental Assessments): Inventory database developments, transparency, data quality, data completeness, and data exchange formats, uncertainties. Software tools (MFA, LCA). Allocation (multinput processes and recycling). Hybrid LCA methods. Consequential and marginal analysis. Impact assessment of waterborne chemical emissions, sum parameters, mixture toxicity. Spatial differentiation in Life Cycle Assessment. Workplace and indoor exposure in Risk and Life Cycle Assessment. Subjectivity in environmental assessments. Case Studies. Part II (Implementation of Environmental and other Sustainability Goals): Sustainability problems of the current economic system and its measuring units. The structure of a management system, and elements to integrate environmental management (ISO 14001) and social management (SA8000 as well as ISO 26000), especially into strategy development, planning, controlling and communication. Sustainability Opportunities and Innovation. The concept of ‘Continuous Improvement’. Life Cycle Costing, Life Cycle Management. Environmental performance measurement of an organisation, including ‘organisational LCA’ (Ecobalance), based on practical examples of companies and new concepts. Single score env. assessment methods (Swiss ecopoints). Stakeholder management and sustainability oriented communication. An intro into sustainability issues of supply chain management. Students will get small exercises related to course issues. Part III (Computer Lab): this is an exercise and software lab to apply the methods from Part I and II of this lecture. Basic knowledge of environmental assessment tools is a prerequisite for this class. Students who have not yet had classwork in this topic are required to read an appropriate textbook before or at the beginning of this course (e.g. Baumann&Tillman, The Hitchhiker's Guide to LCA: An Orientation in Life Cycle Assessment Methodology and Applications, Studentlitteratur, Lund, 2004).
The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life sciences. This course covers separation techniques that are central in the purification and downstream processing of chemicals and biopharmaceuticals. Examples from both areas illustrate the utility of the methods: 1) Liquid-liquid extraction; 2) Adsorption and chromatography; 3) Membrane processes; 4) Crystalization and precipitation.

Lecturer: V. Hoffmann

Literature:
- Rate-Controlled Separations in Fine Chemistry V. Hoffmann
Content
Overview of the grand sustainability challenges of Water, Energy, Mobility, and Food

Business implications of sustainable development, in particular for corporate strategy, marketing & leadership, technology & innovation, and financial markets.

Critical thinking skills for corporate sustainability

In-depth case study of concrete corporate sustainability challenge in the group project phase, such as: How to deal with environmental pressure groups? How to use the strengths of business to solve pressing sustainability problems? How to catalyze radical innovations for sustainability? How to invest money in a sustainable way?

Lecture notes
Presentation slides will be distributed prior to lectures.

Literature
Literature recommendations will be distributed during the lecture

363-0537-00L Resource and Environmental Economics W 3 credits 2G L. Bretschger, A. Vinogradova

Abstract
Relationship between economy and environment, market failure, external effects and public goods, contingent valuation, internalisation of externalities; economics of non-renewable resources, economics of renewable resources, cost-benefit analysis, sustainability, and international aspects of resource and environmental economics.

Objective
Understanding of the basic issues and methods in resource and environmental economics; ability to solve typical problems in the field using the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Topics are:
Introduction to resource and environmental economics
Importance of resource and environmental economics
Main issues of resource and environmental economics
Normative basis
Utilitarianism
Fairness according to Rawls
Economic growth and environment
Externalities in the environmental sphere
Governmental internalisation of externalities
Private internalisation of externalities: the Coase theorem
Free rider problem and public goods
Types of public policy
Efficient level of pollution
Tax vs. permits
Command and Control Instruments
Empirical data on non-renewable natural resources
Optimal price development: the Hotelling-rule
Effects of exploration and Backstop-technology
Effects of different types of markets.
Biological growth function
Optimal depletion of renewable resources
Social inefficiency as result of over-use of open-access resources
Cost-benefit analysis and the environment
Measuring environmental benefit
Measuring costs
Concept of sustainability
Technological feasibility
Conflicts sustainability / optimality
Indicators of sustainability
Problem of climate change
Cost and benefit of climate change
Climate change as international ecological externality
International climate policy: Kyoto protocol
Implementation of the Kyoto protocol in Switzerland

Content
Economy and natural environment, welfare concepts and market failure, external effects and public goods, measuring externalities and contingent valuation, internalising external effects and environmental policy, economics of non-renewable resources, renewable resources, cost-benefit-analysis, sustainability issues, international aspects of resource and environmental problems, selected examples and case studies.

Literature

529-0613-00L Process Simulation and Flowsheeting W 7 credits 3G E. Capón Garcia, K. Hungerbühler

Abstract
This course encompasses the theoretical principles of chemical process simulation, as well as its practical application in process analysis and optimization. The techniques for simulating stationary and dynamic processes are presented, and illustrated with case studies.

Commercial software packages are presented as a key engineering tool for solving process flowsheeting and simulation problems.

Objective
This course aims to develop the competency of chemical engineers in process flowsheeting and simulation. Specifically, students will develop the following skills:
- Deep understanding of chemical engineering fundamentals: the acquisition of new concepts and the application of previous knowledge in the area of chemical process systems and their mechanisms are crucial to intelligently simulate and evaluate processes.
- Modeling of general chemical processes and systems: students have to be able to identify the boundaries of the system to be studied and develop the set of relevant mathematical relations, which describe the process behavior.
- Mathematical reasoning and computational skills: the familiarization with mathematical algorithms and computational tools is essential to be capable of achieving rapid and reliable solutions to simulation and optimization problems. Hence, students will learn the mathematical principles necessary for process simulation and optimization, as well as the structure and application of process simulation software. Thus, they will be able develop criteria to correctly use commercial software packages and critically evaluate their results.
Overview of process simulation and flowsheeting
- Definition and fundamentals
- Classification: stationary (steady-state) versus dynamic (transient state) systems
- Fields of application
- Case studies

Process modeling
- Modeling strategies of process systems
- Mass conservation
- Species balance
- Energy conservation
- Momentum balance
- Multiphase-systems: equilibrium & non-equilibrium models
- Process system model

Process simulation
- Process specification
- Introduction to process specification
- Classification of mathematical models: AMS, DOE, DAE, PDE
- Model validation
- Software tools
- Solution methods for process flowsheeting
- Simultaneous methods
- Sequential methods
- Dynamic simulation
- Numerical solution: explicit and implicit methods
- Continuous-discrete simulation: handling of discontinuities

Commercial software for simulation: Aspen Plus
- Thermodynamic property methods
- Reaction and reactors
- Separation / columns
- Convergence & debugging

Literature
An exemplary literature list is provided below:

Prerequisites / notice
A basic understanding of material and energy balances, thermodynamic property methods and typical unit operations (e.g., reactors, flash separations, distillation/absorption columns etc.) is required.

Abstract
The lecture Energy and Transportation imparts profound knowledge of energy- and environment-related difficulties of the intersection of energy and transportation with focus on the motorized individual traffic. The students gain the ability to approach energy- and environment-related problems with special consideration of the demand side, and to evaluate possible solutions.

Objective
The main objectives of this lecture are:
(i) The students gain profound knowledge of energy- and environment-related difficulties of the intersection of energy and transportation, and learn strategies to cope with these difficulties.
(ii) The students are able to approach energy- and environment-related problems with special consideration of the demand side, and to evaluate possible solutions.

Content
The lecture Energy and Transportation deals with the intersection of energy and transportation with focus on the motorized individual traffic.

Main topics are:
(i) Fundamentals of energy use in the transportation sector, today's present state and future developments.
(ii) Technical potentials for the reduction of greenhouse gas (GHG) emissions and the dependence on fossil fuels: Evaluation of (a) alternative fuels, and (b) alternative propulsion systems.
(iii) The relevance of demand on efforts to reduce GHG emissions and the dependence on fossil fuels.
(iv) Strategies and measures for influencing the demand side.

► Multidisciplinary Courses
The listed courses are specially recommended. Beyond these, the students are free to choose individually from the entire course offer of ETH Zürich, ETH Lausanne and the Universities of Zürich and St. Gallen.

Abstract
The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training. The lecture will be thought on two afternoons. Some exercises will be built into the lecture.

Objective
Knowledge on structure and content of a scientific text. The course further is arranged to stimulate a discussion on how to properly write a legible scientific text versus writing an interesting novel. We will further discuss the practice of properly citing and critically reflect on recent plagiarism allegations.

Content
* Topic 1: Structure of a Scientific Text (The Title, the author list, the abstract, State-of-the Art, the "in this paper" paragraph, the scientific part, the summary, Equations, Figures).
* Topic 2: Power Point Presentations.
* Topic 3: Citation Rules and Citation Software.
* Topic 4: Guidelines for Research Integrity.

Literature
ETH "Citation Etiquette", see www.plagiate.ethz.ch.

Prerequisites / notice
Students should already have a Bachelor degree and plan to do either a semester project or a master thesis in the immediate future.

Abstract
General Chemistry I: Chemical bond and molecular structure, chemical thermodynamics, chemical equilibrium.

Objective
Introduction to general and inorganic chemistry. Basics of the composition and the change of the material world. Introduction to the thermodynamically controlled physico-chemical processes. Macroscopic phenomena and their explanation through atomic and molecular properties. Using the theories to solve qualitatively and quantitatively chemical and ecologically relevant problems.

Content
1. Stoichiometry
2. Atoms and Elements (Quantenmechanical Model of the Atom)
3. Chemical Bonding
4. Thermodynamics
5. Chemical Kinetics
6. Chemical Equilibrium (Acids and Bases, Solubility Equilibria)

Abstract
This course covers mathematical concepts and techniques necessary to model, solve and discuss scientific problems - notably through ordinary differential equations.

Objective
Mathematics is of ever increasing importance to the Natural Sciences and Engineering. The key is the so-called mathematical modelling cycle, i.e. the translation of problems from outside of mathematics into mathematics, the study of the mathematical problems (often with the help of high level mathematical software packages) and the interpretation of the results in the original environment.

The goal of Mathematics I and II is to provide the mathematical foundations relevant for this paradigm. Differential equations are by far the most important tool for modelling and are therefore a main focus of both of these courses.

Content
1. Single-Variable Calculus:
   - review of differentiation, linearisation, Taylor polynomials, maxima and minima, antiderivative, fundamental theorem of calculus, integration methods, improper integrals.
2. Linear Algebra and Complex Numbers:
   - systems of linear equations, Gauss-Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, cartesian and polar forms for complex numbers, complex powers, complex roots, fundamental theorem of algebra.
3. Ordinary Differential Equations:
   - separable ordinary differential equations (ODEs), integration by substitution, 1st and 2nd order linear ODEs, homogeneous systems of linear ODEs with constant coefficients, introduction to 2-dimensional dynamical systems.
   - Bretscher, O.: Linear Algebra with Applications (Pearson Prentice Hall).

Literature
- Brown, LeMay, Bursten CHEMIE (deutsch)
- Housecroft and Constable, CHEMISTRY (englisch)
- Oxtoby, Gillis, Nachtrieb, MODERN CHEMISTRY (englisch)

Prerequisites / notice
Prerequisites: familiarity with the basic notions from Calculus, in particular those of function and derivative.

Assistance:
Mondays 12-13, Tuesdays 17-19, Wednesdays 17-19, in Room HG E 41.

Abstract
Basics of structure, formation and function of cells and biomacromolecules, principles of metabolism, as well as basic classical and molecular genetics and evolutionary biology. First in a series of two lectures given over two semesters for students of agricultural and food sciences, as well as of environmental sciences.

Objective
The understanding of some basic principles of biology: the hierarchy of the structural levels of biological organisation, with particular emphasis on the cell and its functions, as well as metabolism, inheritance and evolution.
The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level. The students should learn ecological concepts at these different levels in the context of concrete examples from terrestrial and aquatic ecology. Corresponding methods for studying the systems will be presented. A further aim of the lecture is that students achieve an understanding of biodiversity, why it is threatened and how it can be managed. The lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research: the individual, the population, the community and the ecosystem level. The students should learn ecological concepts at these different levels in the context of concrete examples from terrestrial and aquatic ecology. Corresponding methods for studying the systems will be presented. A further aim of the lecture is that students achieve an understanding of biodiversity, why it is threatened and how it can be managed.

**Prerequisites / Literature**

- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution
- Aktuelle Naturschutzprobleme und -massnahmen
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartimente, Stoff- und Energieflüsse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution
- Biochemistry: Biological Macromolecules and Lipids
- Cell biology: Cell Structure and Function
- Cell biology: Cell Membranes
- Cell biology: Cellular Respiration: An Introduction to Metabolism
- Cell biology: Cellular Respiration
- Cell biology: Photosynthesis
- Cell Biology: Mitoxis
- The Genetic Basis of Life: Sexual Life Cycles and Meiosis
- The Genetic Basis of Life: Mendelian Genetics
- The Genetic Basis of Life: Linkage and Chromosomes
- The Genetic Basis of Life: The Evolution of Genomes
- Evolution: How Evolution Works
- Evolution: Phylogenetic Reconstruction
- Evolution: Microevolution
- Evolution: Species and Speciation
- Evolution: Macroevolution

**Lecture notes**

- no script

**Content**

- The structure and function of biomacromolecules; basics of metabolism; cell biology; membrane structure and function; basic energetics of cellular processes; respiration, photosynthesis; cell cycle, meiosis and sexual life cycles; Mendelian and molecular genetics; animal reproduction and behavior; sensory and motor mechanisms; population biology and evolution; principles of phylogeny.

The Campbell Chapters 1-4 (10th edition) under the heading "The role of chemistry in biology" are expected. We will treat the following Campbell chapters:

- Biochemistry: Biological Macromolecules and Lipids
- Cell biology: Cell Structure and Function
- Cell biology: Cell Membranes
- Cell biology: Cellular Respiration: An Introduction to Metabolism
- Cell biology: Cellular Respiration
- Cell biology: Photosynthesis
- Cell Biology: Mitoxis
- The Genetic Basis of Life: Sexual Life Cycles and Meiosis
- The Genetic Basis of Life: Mendelian Genetics
- The Genetic Basis of Life: Linkage and Chromosomes
- The Genetic Basis of Life: The Evolution of Genomes
- Evolution: How Evolution Works
- Evolution: Phylogenetic Reconstruction
- Evolution: Microevolution
- Evolution: Species and Speciation
- Evolution: Macroevolution

**Lecture notes**

- Underlagen, Vorlesungsfolien und relevante Literatur sind in der Lehrdokumentenablage abrufbar. Die Unterlagen für die nächste Vorlesung stehen jeweils spätestens am Freitagmorgen zur Verfügung.

**Literature**

**Page:** 496 of 1432
Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects. The following topics are covered: publishing over the internet, processing and visualizing time series, visualizing multi-dimensional data, managing data with lists and tables and with relational databases, introduction to macro programming, universal methods for algorithm design.

The students learn to
- choose and apply appropriate tools from computer science,
- process and analyze real-world data from their subject of study,
- handle the complexity of real-world data,
- know universal methods for algorithm design.

This practical course provides an introduction to elementary laboratory techniques. The experiments cover a wide range of techniques, including analytical and synthetic techniques (e.g. investigation of soil and water samples or the preparation of simple compounds). Furthermore, the handling of gaseous substances is practised.

This course is intended to provide an overview of experimental chemical methods. The handling of chemicals and proper laboratory techniques represent the main learning targets. Furthermore, the description and recording of laboratory processes is an essential part of this course.

The classification and analysis of natural and artificial compounds is a key subject of this course. It provides an introduction to elementary laboratory techniques, and the experiments cover a wide range of analytic and synthetic tasks:

- Selected samples (e.g. soil and water) will be analysed with various methods, such as titrations, spectroscopy or ion chromatography. The chemistry of aqueous solutions (acid-base equilibria and solvation or precipitation processes) is studied.
- The synthesis of simple inorganic complexes or organic molecules is practised.
- Furthermore, the preparation and handling of environmentally relevant gaseous species like carbon dioxide or nitrogen oxides is a central subject of the Praktikum.

The students spend most of their time working through electronic tutorials and discussing their results with teaching assistants.

Abstract

The central aim is to provide an individual experience of the physical phenomena and the basic principles of the experiment. By conducting simple physical experiments the student will learn how to properly use physical instruments and how to evaluate the results correctly.

Objective

This laboratory course aims to provide basic knowledge of
- the use of measurement instruments,
- various measuring techniques,
- the analysis or measurement errors,
- and the interpretation of the measured quantities.

Abstract

To understand, qualitatively and semi-quantitatively, crystal and mineral formation, the interdependence between crystals structure, chemical composition and physical properties. This dependence is especially the case for the structural dependence of optical anisotropy and the elastic properties of the minerals as well as for the growth of crystals and their defect structures.

Objective

Qualitatives und teilweise quantitatives Verständnis für den Aufbau von Kristallen und Mineralien, für die Zusammenhänge zwischen chemischer Zusammensetzung, Kristallstruktur und physikalischen Eigenschaften, für das Wachstum von Kristallen sowie wichtiger identifikationen relevanter makroskopischer Eigenschaften; selbständige Identifikation der rund 70 wichtigsten Mineralarten.

Content

- Symmetrien und Ordnung, Punktklassen, Translationsgruppen, Raumgruppen.
- einfache Strukturtypen, dichte Kugelpackungen, Strukturbestimmende Faktoren
- Chemisch Bindungen, Beziehungen zwischen Struktur und Eigenschaften eine Kristalls.
- Grundlagen von Thermodynamik und Computersimulationen in der Kristallographie.
- Einführung in die Mineralogie und Mineralisystematisch.
- Praktikum in Mineralbestimmen aufgrund makroskopischer Eigenschaften.
Literature

651-3321-00L Interpretation of Geological Maps I
Abstract
Introduction to reading and construction of simple geologic maps. Construction of geological cross-sections. Introduction to Lambert projection and Schmidt net (i.e., stereoplots).

This course is mainly a hands-on-training, where students solve exercises under supervision.

Objective
To improve the ability to understand geological structures in three dimensions and visualize them.

Learn how to read and interpret geological maps, as well as drawing geological cross-sections.

Learn the handling of the Schmidt net, so that students can later plot their own field data.

Content
strike lines, symbols
true and apparent thickness of geological units
true and apparent dip
V-rule
3-Point-Problems
unconformities
folds
introduction to the Lambert projection
magmatic structures

Lecture notes
Exercises and instructions are handed out and are available online in Moodle.

Literature
Semester literature can be found in the ERDW-library.

Prerequisites / notice
This course is not a prerequisite, but nevertheless extremely helpful for the Terrainkurs II.

651-3323-00L Earth and Climate History
Abstract
The goal of the course is to give the students a perception of the major aspects of planetary history and to add to their curiosity about methods which can be applied in the investigations of more specific problems and to planetary features.

Objective

Frühe Geschichte der Erde, der Litho-, Atmo- und Biosphäre; Phanerozoische Platten und Terranes; Entwicklung des Lebens im Phanerozökom, Mesozoische Anoxia, Kreide-Tertiär-Grenze, Tertiäre Abkühlung, Messian-Salinitätskrise, Hominidenentwicklung, Quartäre Klimaschwankungen.

Content
Unterlagen werden abgegeben.

Abstract
Introduction to the "way of thinking" and the methodology in Physics, with the help of demonstration experiments. The Chapters treated are Electromagnetism, Refraction and Diffraction of Waves, Elements of Quantum Mechanics with applications to Spectroscopy, Thermodynamics, Phase Transitions, Transport Phenomena. Whenever possible, examples relevant to the students' main field of study are given.

Objective
Introduction to the scientific methodology. The student should develop his/her capability to turn physical observations into mathematical models, and to solve the latter.

Content
Elektromagnetismus, Elektromagnetische Wellen, Wellenoptik, Strahlenoptik, Quantenoptik, Quantenmechanik, Thermische Eigenschaften, Transportphänomene, Wärmestrahlung

651-3341-00L Lithosphere
Prerequisite: successful completion of Dynamic Earth I and II is mandatory.
Comprehensive understanding of role and evolution of oceanic and continental lithosphere in global plate tectonics and evolution of earth.

Objective
Comprehensive understanding of role and evolution of oceanic and continental lithosphere in global plate tectonics and evolution of earth.

Content

Lecture notes
Detailed scriptum in digital form and additional learning modules (www.lead.ethz.ch) available on intranet.

Literature
see list in scriptum.

Prerequisites / notice
PPT-files of each lecture may be played back for rehearsal on www.lead.ethz.ch.

701-0023-00L

Abstract
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

Objective
Understanding of basic physical and chemical processes in the atmosphere. Understanding of mechanisms of and interactions between weather - climate, atmosphere - ocean - continents, troposphere - stratosphere. Understanding of environmentally relevant structures and processes on vastly differing scales. Basis for the modelling of complex interrelations in the atmosphere.

Content
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

Lecture notes
Written information will be supplied.

Hydrosphere

Abstract
Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

Objective
Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

Content
Topics of the course.
- Physical properties of water (i.e. density and equation of state)
- Mixing and transport processes in open waters
- Global water resources
- Groundwater and its dynamics
- Mixing and exchange processes in rivers
- Groundwater use
- Case studies
- 1. Water as resource, 2. Water and climate

Literature
In addition to the suggested literature handouts are distributed.

Prerequisites / notice
The case studies and the analysis of the questions and problems are integral part of the course.

5. Semester Majors

Major in Geology

Advisor of the major in Geology is Prof. Stefano Bernasconi

Major in Geology: Core Courses

From the offered core courses in autumn and spring semester, 27 credits have to be acquired.
We will discuss how these methods are used in the following research fields: geochemistry of the earth, age dating, paleotemperature reconstructions, evolution of the crust and mantle reservoirs, sediment diagenesis, fluid rock interactions, hydrothermal activity, paleoceanography, biogeochemical cycles.

The following methods will be discussed in detail: the radioactive-radiogenic systems Rb-Sr, Sm-Nd, U-Th-Pb and K-Ar, as well as the stable isotope systems of oxygen, carbon, nitrogen, sulfur and hydrogen.

**Objective**
Development of a basic knowledge and understanding of the applications of the most important systems of stable and radiogenic isotopes.

**Content**
The following methods will be discussed in detail: the radioactive-radiogenic systems Rb-Sr, Sm-Nd, U-Th-Pb and K-Ar, as well as the stable isotope systems of oxygen, carbon, nitrogen, sulfur and hydrogen.

The course focuses on the most important systems of radioactive and stable isotopes used in geochemistry and geology. Applications of isotope geochemistry for solving fundamental geological problems are discussed on the basis of case studies.

**Abstract**

- This course introduces the different parts of the cryosphere - snow, glaciers, sea ice, permafrost - and their role in the climate system. A significant physical aspect is the focus in each part. Those completing the course are able to describe the dynamics of cryosphere components both formally and using examples.

**Objective**

- Students are able to:
  - qualitatively describe the main components of the cryosphere and their role in the climate system
  - formally describe the relevant physical processes which determine the state of cryosphere components

**Content**

- Introduction into the different components of the Cryosphere: Snow, glaciers, sea ice and permafrost, and their roles in the climate system. Each part is used to emphasize on one specific physical aspect: material qualities of ice, mass balance and dynamics of glaciers and energy balance of sea ice.

**Lecture notes**

**Abstract**

- Introduction to Engineering Geology
- This introductory course starts from a description of the behavior and phenomena of soils and rocks under near surface loading conditions and their key geotechnical properties. Lab and field methods for the characterization of soils, rocks and rock masses are introduced. Finally, practical aspects of ground engineering, including tunneling and landslide hazards are presented.

**Objective**

- Understanding the basic geotechnical and geomechanical properties and processes of rocks and soils. Understanding the interaction of rock and soil masses with technical systems. Understanding the fundamentals of geological hazards.

## Earth Science Mapping Exercises II

This introductory course starts from a descriptions of the behavior and phenomena of soils and rocks under near surface loading conditions. Basics of Geophysical Methods: Potential field methods (Gravimetrics and Magnetics), Electrical and electromagnetic methods, Refraction and reflection seismics, Georadar. Discussion of survey design, sources and receivers and data processing. Additional material will be provided by the lecturers.

**Overview and understanding of the most important geophysical methods: Potential field methods (Gravimetrics and Magnetics), Electrical and electromagnetic methods, Refraction and reflection seismics, Georadar. Discussion of survey design, sources and receivers and data processing.**

**Prerequisites / notice**

Requirement: Earth science mapping exercises I

**Lecture notes**

Available through eDoz/ILIAS.

**Prerequisites**

Requirement: Earth science mapping exercises I

### Literature

---

### Key Points

- Overview and understanding of the most important geophysical methods.
- Proposed solutions to assess and observe problems relevant to exploration and environmental geophysics in soil, ice and lithosphere at different scales.
- Getting familiar with measuring- and interpretation procedures. Pointing out the possibilities and limitations of geophysical methods.

**Abstract**

Overview and understanding of the most important geophysical methods: Potential field methods (Gravimetrics and Magnetics), Electrical and electromagnetic methods, Refraction and reflection seismics, Georadar. Discussion of survey design, sources and receivers and data processing.

**Objective**

Overview and understanding of the most important geophysical methods. Proposed solutions to assess and observe problems relevant to exploration and environmental geophysics in soil, ice and lithosphere at different scales. Getting familiar with measuring- and interpretation procedures. Pointing out the possibilities and limitations of geophysical methods.

Prerequisites / notice
Voraussetzung erfolgreicher Abschluss von 701-0401-00 Hydroosphäre

651-3521-00L Tectonics W+ 3 credits 2V J.P. Burg, E. Kissling

Abstract
Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wrenching tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales. Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alps-Himalaya orogenic system.

Objective
Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wrenching tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales. Assessment of mechanisms responsible for plate movements (the Earth as a heat transfer machine, dynamics of earth mantle, plate driving forces) and subsequent large-scale structures (oceanic basins and cycle of the oceanic lithosphere, convergence and mountain systems and continental growth, etc) through theoretical and experimental information. Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alps-Himalaya orogenic system.

Content

Lecture notes
Detailed scriptum in digital form and additional learning module (www.lead.ethz.ch) available on the intranet.

Literature

651-3505-00L Mineral Resources W+ 3 credits 2V C. A. Heinrich, R. Kündig, W. Leu, F. Schenker

Abstract
Overview of the geological formation processes and the global distribution of mineral resources (metals, energy resources, bulk materials and industrial minerals), their economic importance, as well as the political and environmental aspects of responsible resource extraction and site rehabilitation.

Objective

Content
- Vorstellung der Dozierenden mit Fallstudie aus der persönlichen Berufspraxis (CH, RK, WL, FS)
- Resourcen der Welt und Bedeutung für die Schweiz (RK)
- Metalliche Erzlagertätten - Einführung (CH)
- Metalliche Erzlagertätten - Magmatische Prozesse Test 1 (CH)
- Ozeanische Hydrothermalsysteme, Oberflächenerzter und Atmosphärenentwicklung (CH)
- Metalliche Erzlagertätten - Magmatisch-hydrothermale Systeme Test 2 (CH)
- Energierohstoffe - Einführung: Bildungsprozesse Petroleum und Endgas (WL)
- Energierohstoffe - Oel und Gas (WL)
- Energierohstoffe - Kohle und CO2-Entsorgung Test 3 (WL/RK)
- Nichtmetalliche Rohstoffe - Baustoffe (RK)
- Nichtmetalliche Rohstoffe - Erden (RK/FS)
- Nichtmetalliche Rohstoffe - Industriemineneralien Test 4 (FS)
- Industriemineneralien und nachhaltige Nutzung von Rohstoffen der Erde (FS)

Prerequisites / notice

651-3503-00L Metamorphism W+ 3 credits 3G M. W. Schmidt

Abstract
Understanding of the principles governing (chemical) reactions in metamorphic processes and resulting (physical) properties of metamorphic rocks s.l.. Recognition of metamorphic minerals and rocks (e.g. Gesteinsbestimmung).

651-3501-00L Isotope Geochemistry and Isotope Geology W+ 3 credits 2G S. Bernasconi, D. Vance

Abstract
The course focuses on the most important systems of radioactive and stable isotopes used in geochemistry and geology. Applications of isotope geochemistry for solving fundamental geological problems are discussed on the basis of case studies.

Objective
Development of a basic knowledge and understanding of the applications of the most important systems of stable and radiogenic isotopes.

Data: 06.12.2017 12:57
Autumn Semester 2015
Page 505 of 1432
**Content**

The following methods will be discussed in detail: the radioactive-radiogenic systems Rb-Sr, Sm-Nd, U-Th-Pb and K-Ar, as well as the stable isotope systems of oxygen, carbon, nitrogen, sulfur and hydrogen.

We will discuss how these methods are used in the following research fields: geochemistry of the earth, age dating, paleotemperature reconstructions, evolution of the crust and mantle reservoirs, sediment diagenesis, fluid rock interactions, hydrothermal activity, paleoceanography, biogeochemical cycles.

**Prerequisites**

- Dickin A. P., Radiogenic Isotope Geology, (2005), Cambridge University Press

William White (2011) Geochemistry

http://www.geo.cornell.edu/geology/classes geo455/Chapters.HTML

**Lecture notes**

Available

**Literature**

- Dickin A. P., Radiogenic Isotope Geology, (2005), Cambridge University Press

**Prerequisites / notice**

- to formally describe the relevant physical processes which determine the state of cryosphere components both formally and using examples.
- to qualitatively describe the main components of the cryosphere and their role in the climate system
- to formally describe the relevant physical processes which determine the state of cryosphere components

**ECTS**

3 credits

**Lecturers**

M. Funk, M. Huss, K. Steffen

**Lecture notes**

handouts will be distributed during the teaching semester

**Objective**

Students are able

- Students are able to held scientific presentations.
- Students can plan and present a scientific poster.
- Students can search scientific publications in an effective and efficient manner.

**Content**

- Auftreten vor Publikum
- (Gestik, Haltung, Sprechen und Sprache, Hemmungen abbauen)
- Medieneinsatz
- (Powerpoint Standard für wissenschaftliche Präsentationen, Stärken und Gefahren von Präsentationen mit Powerpoint; Einsatz von Text, Graphiken, Ton, Video, Animationen etc.)
- Beantwortung von Fragen: das Nach-dem-Vortrag, Umgang mit Fragen, Verhalten in kritischen Situationen
- Tipps zum Zeitmanagement
- Kriterien für Bewertung von Vorträgen anwenden können und konstruktives Feedback geben können
- (Was ist gut? Warum? Was ist nicht so gut? Warum nicht und wie wäre es besser?)
- Strukturieren, Reduzieren, Fokussieren, Präzisieren. Gliederung und Aufbau eines Posters
- Technische Anforderungen (Software, Drucken ...)
- Posterpräsentation
- Effizientes Suchen nach wissenschaftlichen Publikationen (Bibliotheken, Datenbanken, search tools...)
- Analyse von wissenschaftlichen Artikeln (Aufbau, Struktur, Beurteilung der Qualität...)

**Number**

651-3597-00L

**Type**

W+

**ECTS**

2 credits

**Hours**

2S

**Lecturers**

W. Schatz, J. D. Rickli

**Abstract**

In this seminar, students learn to search effectively for scientific knowledge and how to present scientific results orally and in written form to different audiences.

**Objective**

Students are able to held scientific presentations.

**Content**

- Students can plan and present a scientific poster.
- Students can search scientific publications in an effective and efficient manner.

**Number**

651-3561-00L

**Type**

**ECTS**

3 credits

**Hours**

2V

**Lecturers**

M. Funk, M. Huss, K. Steffen

**Abstract**

This course introduces the different parts of the cryosphere - snow, glaciers, sea ice, permafrost - and their role in the climate system. A significant physical aspect is the focus in each part. Those completing the course are able to describe the dynamics of cryosphere components both formally and using examples.

**Objective**

Students are able

- to qualitatively describe the main components of the cryosphere and their role in the climate system
- to formally describe the relevant physical processes which determine the state of cryosphere components

**Content**

- in each part is use to emphasized on one specific physical aspect: material qualities of ice, mass balance and dynamics of glaciers and energy balance of sea ice.

**Lecture notes**

handouts will be distributed during the teaching semester

**Number**

651-3561-00L

**Type**

**Abstract**

This course introduces the different parts of the cryosphere - snow, glaciers, sea ice, permafrost - and their role in the climate system. A significant physical aspect is the focus in each part. Those completing the course are able to describe the dynamics of cryosphere components both formally and using examples.
The lecture provides an introduction to atmospheric chemistry at bachelor level. It introduces the kinetics of gas phase and heterogeneous reactions on aerosols and in clouds and explains the chemical and physical mechanisms responsible for global (e.g. stratospheric ozone depletion) as well as regional (e.g. urban air pollution) environmental problems.

**Objective**

The students will understand the basics of gas phase and heterogeneous reactions and will know the most relevant atmospheric chemical processes taking place in the gas phase as well as between different phases including aerosols and clouds. The students will also acquire a good understanding of atmospheric environmental problems including air pollution, stratospheric ozone destruction and changes in the oxidative capacity of the global atmosphere.

**Content**

- Origin and properties of the atmosphere: structure, large scale dynamics, UV radiation
- Thermodynamics and kinetics of gas phase reactions: enthalpy and free energy of reactions, rate laws, mechanisms of bimolecular and termolecular reactions.
- Tropospheric photochemistry: Photolysis reactions, photochemical O3 formation, role and budget of HOx, dry and wet deposition
- Aerosols and clouds: chemical properties, primary and secondary aerosol sources
- Multiphase chemistry: heterogeneous kinetics, solubility and hygroscopicity, N2O5 chemistry, SO2 oxidation, secondary organic aerosols
- Air quality: role of planetary boundary layer, summer- versus winter-smog, environmental problems, legislation, long-term trends
- Stratospheric chemistry: Chapman cycle, Brewer-Dobson circulation, catalytic ozone destruction cycles, polar ozone hole, Montreal protocol
- Global aspects: global budgets of ozone, methane, CO and NOx, air quality - climate interactions

**Lecture notes**

Vorlesungsunterlagen (Folien) werden laufend während des Semesters jeweils mind. 2 Tage vor der Vorlesung zur Verfügung gestellt.

**Prerequisites / notice**

Attendance of the lecture "Atmosphäre" LV 701-0023-00L or equivalent is a pre-requisite.

---

**701-0475-00L Atmospheric Physics**

**Abstract**

This course covers the basics of atmospheric physics, which consist of: cloud and precipitation formation, thermodynamics, aerosol physics, radiation as well as the impact of aerosols and clouds on climate and artificial weather modification.

**Objective**

Students are able to:
- explain the mechanisms of cloud and precipitation formation using knowledge of humidity processes and thermodynamics.
- evaluate the significance of clouds and aerosol particles for climate and artificial weather modification.

**Content**

- Moist processes/thermodynamics; aerosol physics; cloud formation; precipitation processes, storms; importance of aerosols and clouds for climate and weather modification, clouds and precipitation

**Lecture notes**

Powerpoint slides and script will be made available

**Literature**

Rogers and Yau, A Short Course in Cloud Physics, Pergamon Press, 1989;

Wallace and Hobbs, Atmospheric Science: An Introductory Survey, Elsevier, 2006

**Prerequisites / notice**

50% of the time we use the concept of "flipped classroom" (en.wikipedia.org/wiki/Flipped_classroom), which we introduce at the beginning.

We offer a lab tour, in which we demonstrate with some instruments how some of the processes, that are discussed in the lectures, are measured.

There is an additional tutorial right after each lecture to give you the chance to ask further questions and discuss the exercises. The participation is recommended but not voluntary.

---

**701-0461-00L Numerical Methods in Environmental Sciences**

**Abstract**

This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

**Objective**

This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

**Content**

Classification of numerical problems, introduction to finite-difference methods, time integration schemes, non-linearity, conservative numerical techniques, an overview of spectral and finite-element methods. Examples and exercises from a diverse cross-section of Environmental Science.

Three obligatory exercises, each two hours in length, are integrated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

**Lecture notes**

Is provided (CHF 10.- per copy).

**Literature**

List of literature is provided.

**Prerequisites / notice**

Die Vorlesung verlangt Vorkenntnisse in Linearer Algebra, Analysis und Physik (z.B. komplexe Zahlen, Beschreibung von ebenen Wellen, einfache gewöhnliche Differentialgleichungen)

---

**701-0473-00L Weather Systems**

**Abstract**

This lecture introduces the theoretical principles and the observational and analytical methods of atmospheric dynamics. Based on these principles, the following aspects are discussed: the energetics of the global circulation, the basic synoptic- and meso-scale flow phenomena, in particular the dynamics of extratropical cyclones, and the influence of mountains on the atmospheric flow.

**Objective**

The students are able to:
- explain up-to-date meteorological observation techniques and the basic methods of theoretical atmospheric dynamics
- to discuss the mathematical basis of atmospheric dynamics, based on selected atmospheric flow phenomena
- to explain the basic dynamics of the global circulation and of synoptic- and meso-scale flow features
- to explain how mountains influence the atmospheric flow on different scales

**Content**

Satellite observations; analysis of vertical soundings; geostrophic and thermal wind; cyclones at mid-latitude; global circulation; north-atlantic oscillation; atmospheric blocking situations; Eulerian and Lagrangian perspective; potential vorticity; Alpine dynamics (storms, orographic wind); planetary boundary layer

**Lecture notes**

Lecture notes and slides

**Major in Climate and Water: Electives**

In addition to the mandatory seminar for Bachelor Students: Atmosphere and Climate (course nr. 701-0459-00 in autumn semester) another 22 credits must be acquired from the offered elective courses during the 5th and 6th semester. The choice of other courses has to be granted by the advisor (Dr. Erich Fischer).

---

**Data: 06.12.2017 12:57  Autumn Semester 2015  Page 507 of 1432**
Objective
In this seminar all students in the realm of atmospheric and climate science convene to train presentation techniques (talks, posters) by means of classic and modern scientific articles.

Content
1st week: course organisation and presentation of the institute
2nd and 3rd week: introduction to oral presentation technique
11th week: introduction to poster presentation technique
12th and 13th week: poster design
14th week: concluding poster presentation

Lecture notes
Documents are offered via the course's web page.

Literature
Documents are offered via the course's web page.

Prerequisites / notice
This course can only be offered to a limited number of students, however, in any case for everybody having to attend it compulsory. We beg you to sign in to this course early.

102-0635-00L
Air Pollution Control
W 6 credits 4G B. Buchmann, P. Hofer

Abstract
The lecture provides in the first part an introduction to the formation of air pollutants by technical processes, the emission of these chemicals into the atmosphere and their impact on air quality. The second part covers different strategies and techniques for emission reduction. The basic knowledge is deepened by the discussion of specific air pollution problems of today's society.

Objective
The students gain general knowledge of the factors resulting in air pollution and the techniques used for air pollution control. The students can identify major air pollution sources and understand the methods for measurement, data collection and analysis. The students can evaluate possible control methods and equipment, design a control system and estimate the efficiency and cost.

The students know the different techniques of air pollution control and their scientific basements. They are able to incorporate goals concerning the air quality into their engineering work.

Content
Part 1 Emission, Immission, Transmission
- physical and chemical processes leading to emission of pollutants
- mass and energy of processes
- Emission measurement techniques and concepts
- quantification of emissions from individual and aggregated sources
- extent and development of the emissions (Switzerland and global)
- propagation and transport of pollutants (transmission)
- meteorological parameters influencing air pollution dispersion
- deterministic and stochastic models, describing the air pollution dispersion
- dispersion models (Gaussian model, box model, receptor model)
- measurement concepts for ambient air (immission level)
- extent and development of ambient air mixing ratios
- goal and instrument of air pollution control

Part 2 Air Pollution Control Technologies
- The reduction of the formation of pollutants is done by modifying the processes (process-integrated measures) and by different engineering operations for the cleaning of waste gas (downstream pollution control). It will be demonstrated, that the variety of these procedures can be traced back on the application of a few basic principles of physical chemistry.
- Procedures for the removal of particles (inertial separator, filtration, electrostatic pre-cipitators, scrubbers) with their different mechanisms (field forces, impaction and diffusion processes) and the modelling of these mechanisms.
- Procedures for the removal of gaseous pollutants and the description of the driving forces involved, as well as the equilibrium and the kinetics of the relevant processes (absorption, adsorption as well as thermal, catalytic and biological conversions).
- Discussion of the technical possibilities to solve the actual air pollution problems.

Lecture notes
- Brigitte Buchmann, Air pollution control, Part I
- Peter Hofer, Air pollution control, Part II
- Lecture slides and exercises

Literature
List of literature included in script

Prerequisites / notice
College lectures on basic physics, chemistry and mathematics

401-0649-00L
Applied Statistical Regression
W 5 credits 2V+1U M. Dettling

Abstract
This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning “good practice” that can be applied in every student's own projects and daily work life.

Objective
The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.

Content
The course starts with the basics of linear regression modeling, and then proceeds to parameter estimation, tests and confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, categorical input variables, shrinkage and general modeling strategies.

The last third of the course is dedicated to an introduction into generalized linear regression models: this includes logistic regression for binary response variables, Poisson regression for count data, cumulative logit models for ordered, and multinomial regression for categorical response variables.

Lecture notes
A script will be available.

Literature
Faraway (2005): Linear Models with R
Faraway (2006): Extending the Linear Model with R
Draper & Smith (1998): Applied Regression Analysis
Fox (2008): Applied Regression Analysis and GLMs
Montgomery et al. (2006): Introduction to Linear Regression Analysis

Prerequisites / notice
The exercises; but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-6215-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

401-6215-00L
Using R for Data Analysis and Graphics (Part I)
W 1 credit 1G A. J. Papritz, C. B. Schwierz

Abstract
The course provides the first part an introduction to the statistical software R for scientists. Topics covered are data generation and selection, graphical and basic statistical functions, creating simple functions, basic types of objects.

Objective
The students will be able to use the software R for simple data analysis.
The course provides the first part of an introduction to the statistical software R for scientists. R is free software that contains a huge collection of functions with focus on statistics and graphics. If one wants to use R one has to learn the programming language R - on very rudimentary level. The course aims to facilitate this by providing a basic introduction to R.

Part I of the course covers the following topics:
- What is R?
- R Basics: reading and writing data from/to files, creating vectors & matrices, selecting elements of dataframes, vectors and matrices, arithmetics;
- Types of data: numeric, character, logical and categorical data, missing values;
- Simple (statistical) functions: summary, mean, var, etc., simple statistical tests;
- Writing simple functions;
- Introduction to graphics: scatter-, boxplots and other high-level plotting functions, embellishing plots by title, axis labels, etc., adding elements (lines, points) to existing plots.

The course focuses on practical work at the computer. We will make use of the graphical user interface RStudio: www.rstudio.org

Note: Part I of UsingR is complemented and extended by Part II, which is offered during the second part of the semester and which can be taken independently from Part I.

Lecture notes
- An Introduction to R. http://stat.ethz.ch/CRAN/doc/contrib/Lam-IntroductionToR_LHL.pdf

Prerequisites / notice
The course resources will be provided via the Moodle web learning platform. Please login (with your ETH (or other University) username+password) at https://moodle-app2.let.ethz.ch/enrol/users.php?id=1145

Choose the course "Using R for Data Analysis and Graphics" and follow the instructions for registration.

701-0535-00L Environmental Soil Physics/Vadose Zone Hydrology W 3 credits 2G+2U D. Or

Abstract
The course provides theoretical and practical foundations for understanding and characterizing physical and transport properties of soils/ near-surface earth materials, and quantifying hydrological processes and fluxes of mass and energy at multiple scales. Emphasis is given to land-atmosphere interactions, the role of plants on hydrological cycles, and biophysical processes in soils.

Objective
Students are able to
- characterize quantitative knowledge needed to measure and parameterize structural, flow and transport properties of partially-saturated porous media,
- quantify driving forces and resulting fluxes of water, solute, and heat in soils.
- apply modern measurement methods and analytical tools for hydrological data collection
- conduct and interpret a limited number of experimental studies
- explain links between physical processes in the vadose-zone and major societal and environmental challenges

Content
Weeks 1 to 3: Physical Properties of Soils and Other Porous Media Units and dimensions, definitions and basic mass-volume relationships between the solid, liquid and gaseous phases; soil texture; particle size distributions; surface area; soil structure. Soil colloids and clay behavior

Soil Water Content and its Measurement - Definitions; measurement methods - gravimetric, neutron scattering, gamma attenuation; and time domain reflectometry; soil water storage and water balance.

Weeks 4 to 5: Soil Water Retention and Potential (Hydrostatics) - The energy state of soil water; total water potential and its components; properties of water (molecular, surface tension, and capillary rise); modern aspects of capillarity in porous media; units and calculations and measurement of equilibrium soil water potential components; soil water characteristic curves definitions and measurements; parametric models; hysteresis. Modern aspects of capillarity

Weeks 6 to 9: Water Flow in Soil - Hydrodynamics:
- Laminar flow in tubes (Poiseuille's Law); Darcy's Law, conditions and states of flow; saturated flow; hydraulic conductivity and its measurement.

Lab #1: Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.

Part II: Unsaturated steady state flow; unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximation solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties. Midterm exam

Lab #2: Measurement of vertical infiltration into dry soil column - Green-Ampt, and Philip's approximations; infiltration rates and wetting front propagation.

Part 3 - Use of Hydrus model for simulation of unsaturated flow

Week 10 to 11: Energy Balance and Land Atmosphere Interactions - Radiation and energy balance; evapotranspiration definitions and estimation; transpiration, plant development and transpiration coefficients small and large scale influences on hydrological cycle; surface evaporation.

Week 12 to 13: Solute Transport in Soils Transport mechanisms of solutes in porous media; breakthrough curves; convection-dispersion eq.; solutions for pulse and step solute application; parameter estimation; salt balance.

Lab #3: Miscible displacement and breakthrough curves for a conservative tracer through a column; data analysis and transport parameter estimation. Additional topics:

Temperature and Heat Flow in Porous Media - Soil thermal properties; steady state heat flow; nonsteady heat flow; estimation of thermal properties; engineering applications.

Lecture notes
- Biological Processes in the Vadose Zone An overview of below-ground biological activity (plant roots, microbial, etc.); interplay between physical and biological processes. Focus on soil-atmosphere gaseous exchange; and challenges for bio- and phytoremediation. Classnotes on website: Vadose Zone Hydrology, by Or D., J.M. Wraith, and M. Tuller (available at the beginning of the semester) http://www.step.ethz.ch/education/active-courses/vadose-zone-hydrology

Literature
- Supplemental textbook (not mandatory) -Environmental Soil Physics, by: D. Hillel

Data: 06.12.2017 12:57 Autumn Semester 2015 Page 509 of 1432
Abstract
This course covers the basic physical concepts and mathematical equations used to describe environmental fluid systems on the rotating Earth. Fundamental concepts (e.g. vorticity dynamics and waves) are formally introduced, applied quantitatively and illustrated using examples. Exercises help to deepen knowledge of the material.

Objective
Students are able
- to name the bases, concepts and methods of environmental fluid dynamics.
- to understand and discuss the components of the basic physical equations in fluid dynamics
- to apply basic mathematical equations to simple problems of environmental fluid dynamics

Content
Basic physical terminology and mathematical laws:
Continuum hypothesis, forces, constitutive laws, state equations and basic principles of thermodynamics, kinematics, laws of mass and momentum on rotating earth.
Concepts and illustrative flow systems: vorticity dynamics, boundary layers, instability, turbulence - with respect to environmental fluid systems.
Scale analysis: dimensionless variables and dynamical similarity, simplification of the fluid system, e.g. shallow water assumption, geostrophic flow.
Waves in environmental fluid systems.

Lecture notes
In English language

Literature
Will be presented in class.
See also: web-site.

102-0455-01L Groundwater I W 3 credits 2G M. Willmann

Abstract
The course provides an introduction into quantitavie analysis of groundwater flow and transport. It is focussed on formulating flow and transport problems in groundwater, which are to be solved analytically or numerically.

Objective
a) Students understand the basic concepts of flow and contaminant transport processes and boundary conditions in groundwater.

b) Students are able to formulate simple practical flow and transport problems.

c) Students are able to understand and apply simple analytical solutions to simple flow and transport problems.

d) Students are able to use simple numerical codes to adequately solve simple flow (and transport) problems.

Content
Introduction, aquifers, groundwater use, sustainability, porosity.

Properties of porous media.
Exercises: Groundwater use, porosity, grain size analysis.

Flow properties, Darcy's law, filter.
Flow equations, stream function.
Exercises: Darcy's law.

Analytical solutions, confined aquifers, steady-state flow.
Exercises: Head isolines.

Use of superposition principles, transient flow, freee surface flow.
Exercises: Analytical solutions to flow problems.

Finite difference solutions to flow problems I.
Exercises: Analytical solutions to flow problems.

Finite difference solutions to flow problems II.
Exercises: Finite difference formulations to flow problems.

Transport processes.
Exercises: Computer workshop using PMWIN.

Analytical solutions to transport problems I.
Exercises: Computer workshop using PMWIN.

Analytical solutions to transport problems II.
Exercises: Analytical solutions to transport problems.

Path lines, groundwater protection.
Exercises: Analytical solutions to transport problems.

Groundwater remediation, groundwater management.
Exercises: Groundwater remediation.

Field Trips, Laboratory and Block Courses
The Practical Training in Atmosphere and Climate takes place in Spring Semester.

Electives
Courses can be chosen from the complete offerings of the ETH Zurich and University of Zurich.
Abstract
Concepts will be explained step-by-step through a set of case studies, and applied in lab by the students. The following principal steps are used when coping with natural hazard-risks. At each step, students will learn and apply the following skills:
- Risk analysis - What can happen?
- Characterize the processes and environmental measures that lead to a natural hazard and integrate modeling results of these processes.
- Identify threats to human life and assets exposed to natural hazards and estimate possible drawbacks or damages.
- Risk assessment - What are the acceptable levels of risk?
- Apply principles to determine acceptable risks to human life and assets in order to identify locations which should receive added protection.
- Explain causes for conflicts between risk perception and risk analysis.
- Risk management - What steps should be taken to manage risks?
- Explain how various hazard mitigation approaches reduce risk.
- Describe hazard scenarios as a base for adequate dimensioning of control measures.
- Identify the best alternative from a set of thinkable measures based on an evaluation scheme.
- Explain the principles of risk-governance.

Objective
Concepts will be explained step-by-step through a set of case studies, and applied in lab by the students. The following principal steps are used when coping with natural hazard-risks. At each step, students will learn and apply the following skills:
- Risk analysis - What can happen?
- Characterize the processes and environmental measures that lead to a natural hazard and integrate modeling results of these processes.
- Identify threats to human life and assets exposed to natural hazards and estimate possible drawbacks or damages.
- Risk assessment - What are the acceptable levels of risk?
- Apply principles to determine acceptable risks to human life and assets in order to identify locations which should receive added protection.
- Explain causes for conflicts between risk perception and risk analysis.
- Risk management - What steps should be taken to manage risks?
- Explain how various hazard mitigation approaches reduce risk.
- Describe hazard scenarios as a base for adequate dimensioning of control measures.
- Identify the best alternative from a set of thinkable measures based on an evaluation scheme.
- Explain the principles of risk-governance.

Content
Die Vorlesung besteht aus folgenden Blöcken:
1) Einführung ins Vorgehenskonzept (1W)
2) Risikoanalyse (6W + Exkursion) mit:
   - Systemabgrenzung
   - Gefahrenbeurteilung
   - Exposions- und Folgenanalyse
3) Risikobewertung (2W)
4) Risikomanagement (2W + Exkursion)
5) Abschlussbesprechung (1W)

Choice of courses from the complete offerings of ETH and UZH.

► Social Sciences
Recommended GESS compulsory elective courses (Type B) for D-ERDW.

see GESS Compulsory Electives: Type A: Enhancement of Reflection Capability

see GESS Compulsory Electives: Language Courses ETH/UZH

► Bachelor Seminar
The Bachelor Seminar (651-3698-00L) takes place in spring semester.

► Bachelor Thesis
The Bachelor Thesis and Bachelor-Seminar are offered once per year in the 6th semester, in the spring.

► Complementary Courses
The Complementary Courses take place in Spring Semester.

ECTS European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
Basis of the optical determinations of (igneous) minerals using the polarizing microscope are the tables of Tröger ('Optische Bestimmung der gesteinsbildenden Minerale', Optical determination of rock-forming minerals, 1982) that are available in sufficient volumes in the class room.

There are several good textbooks on the subject of ´mineralogy in thin sections´ that I can suggest upon request.

Students need to register for 6 credits in part A, and 6 credits in part B.

**Objective**

- Advanced knowledge in optical mineralogy
- Application of methods to determine minerals in thin sections
- Identification and characterisation of metamorphic minerals
- Description of rocks. Derive correct petrographic rock name, based on modal abundance and microstructure/texture
- Interpretation of rock fabric/microstructure, parageneses and mineral reactions

**Content**

- Repetition of principal optical properties and of microscopic methods to identify minerals. Emphasis on interpretation of interference figures.
- Study typical metamorphic rocks in thin sections
- Description and interpretation of parageneses and texture/microstructures. Study the age relationship of crystallisation and deformation.
- Estimation of metamorphic grade
- Quantitative determination: To determine volume percentage of rock components
- Scientific documentation: Descriptions, drawings, photomicrography using different kinds of illumination and using plane- or circular-polarised light.

**Lecture notes**

- handouts with additional information on theory and for exercises, in English.
- To brush up knowledge in optical mineralogy read the relevant chapters in the book of W.D. Nesse (2004);
- Nesse, W.D.: Introduction to optical mineralogy. 3. Ed. (2004). Figures from this book will be used in lectures. Besides the theory, this book describes all optical properties of important minerals. Petrographers working on varying types of silicate rocks should have a look at this book.
- Also available in the D-ERDW library, NO building, on D-floor.

**Prerequisites / notice**

Participants should have basic knowledge in crystallography, mineralogy and petrology, and have taken practical courses in microscopy of thin sections, as well as lectures in metamorphic petrology and structural geology!

Other microscopy courses at department D-ERDW are on:
- magmatic rocks, following this course in second half of semester (P. Ulmer, IGP; Inst. for Geochemistry and Petrology)
- sedimentary rocks (Geol. Institute)
- ore minerals (reflected light microscopy, Th. Driesner, IGP)
- microstructures, deformed rocks (Geol. Institute)

### Autumn Semester 2015

**Reflected Light Microscopy and Ore Deposits Practical**

- Identification of igneous minerals using reflected light microscopy.
- Study of ore deposits in thin sections.
- Quantification of mineral abundance.
- Description and interpretation of parageneses and texture/microstructures.
- Study of typical igneous rocks in thin sections.

**Lecture notes**

**Prerequisites / notice**

Other microscopy courses taught at ETH Zurich at the D-ERDW are:
- Microscopy of metamorphic rocks (P. Nievergelt, required for this course)
- Microscopy of sedimentary rocks (W. Winkler & Blaesi)
- Microscopy of magmatic rocks, following this course in second half of semester (P. Ulmer, IGP; Inst. for Geochemistry and Petrology)

**Literature**

- Nesse, W.D.: Introduction to optical mineralogy. 3. Ed. (2004). Figures from this book will be used in lectures. Besides the theory, this book describes all optical properties of important minerals. Petrographers working on varying types of silicate rocks should have a look at this book.

**Prerequisites / notice**

There are several good textbooks on the subject of 'mineralogy in thin sections' that I can suggest upon request.

This course does not include an introduction in optical mineralogy and the use of a polarizing microscope and, therefore, bases on the course 'Microscopy of metamorphic rocks' taught by P. Nievergelt immediately before this course where these basic principles are provided. Alternatively, e.g. for external students, an equivalent course is required to follow this practical course.

**Other microscopy courses taught at ETH Zurich at the D-ERDW are:**
- Microscopy of metamorphic rocks (P. Nievergelt, required for this course)
- Microscopy of sedimentary rocks (W. Winkler & Blaesi)
- Reflected light microscopy and ore deposits practical (T. Driesner)
- Microstructures (deformation structures, B. Cordonnier)
Theoretical introduction to the architecture, modules, spatial data types and spatial data handling functions of geographic information systems.

Aims, usefulness and theoretical background of methods for sediment analysis.

Introduction to analytical chemistry and atom physics.

Geographic Information Systems

Staining of thin sections for feldspar and carbonate, peels of carbonate rocks, modal analysis of siliciclastic rocks, calcimetry and organic exoscopy of quartz grains.

Recognition of the most important ore minerals in polished section, interpretation of mineral textures in geological context.

E. Reusser

Sedimentary Petrography and Microscopy

Introduction to reflected light microscopy. Leaning main diagnostic criteria. Study of small selection of important and characteristic minerals. Interpreting polished (thin) sections as exercise

Prerequisites / notice

To be handed out in class

The earlier attendance of other MSc microscopy courses (e.g. magmatic and metamorphic rocks) is not required if during the BSc a general course on microscopy of rocks was completed.

Part B: Methods

Analytical Methods in Petrology and Geology

Practical work in analytical chemistry for Earth science students.

W+ 3 credits 2G E. Reusser, S. Bernasconi, M. Wallé, L. Zehnder

Knowledge of some analytical methods used in Earth sciences.

Sediment Analysis

Staining of thin sections for feldspar and carbonate, peels of carbonate rocks, modal analysis of siliciclastic rocks, calcimetry and organic carbon measurement, heavy mineral analysis, cold cathodoluminescence microscopy of carbonate rocks, simple clay mineral separation, exoscopy of quartz grains.

For the earlier attendance of other MSc microscopy courses (e.g. magmatic and metamorphic rocks) is not required if during the BSc a general course on microscopy of rocks was completed.

Sedimentary Petrography and Microscopy

Introduction to analytical chemistry and atom physics.

X-ray diffraction (XRD), X-ray fluorescence analysis (XRF), Electron Probe Microanalysis (EPMA), Laser ablation inductively coupled plasma mass spectroscopy (LA-ICP-MS), Mass spectroscopy for light isotopes.

Analytical Methods in Petrology and Geology

Introduction to reflected light microscopy. Leaning main diagnostic criteria. Study of small selection of important and characteristic minerals. Interpreting polished (thin) sections as exercise

Prerequisites / notice

To be handed out in class

The earlier attendance of other MSc microscopy courses (e.g. magmatic and metamorphic rocks) is not required if during the BSc a general course on microscopy of rocks was completed.

Part B: Methods

Analytical Methods in Petrology and Geology

Practical work in analytical chemistry for Earth science students.

W+ 3 credits 2G E. Reusser, S. Bernasconi, M. Wallé, L. Zehnder

Knowledge of some analytical methods used in Earth sciences.

Sediment Analysis

Staining of thin sections for feldspar and carbonate, peels of carbonate rocks, modal analysis of siliciclastic rocks, calcimetry and organic carbon measurement, heavy mineral analysis, cold cathodoluminescence microscopy of carbonate rocks, simple clay mineral separation, exoscopy of quartz grains.

For the earlier attendance of other MSc microscopy courses (e.g. magmatic and metamorphic rocks) is not required if during the BSc a general course on microscopy of rocks was completed.

Sedimentary Petrography and Microscopy

Introduction to analytical chemistry and atom physics.

X-ray diffraction (XRD), X-ray fluorescence analysis (XRF), Electron Probe Microanalysis (EPMA), Laser ablation inductively coupled plasma mass spectroscopy (LA-ICP-MS), Mass spectroscopy for light isotopes.

Analytical Methods in Petrology and Geology

Introduction to reflected light microscopy. Leaning main diagnostic criteria. Study of small selection of important and characteristic minerals. Interpreting polished (thin) sections as exercise

Prerequisites / notice

To be handed out in class

The earlier attendance of other MSc microscopy courses (e.g. magmatic and metamorphic rocks) is not required if during the BSc a general course on microscopy of rocks was completed.

Part B: Methods

Analytical Methods in Petrology and Geology

Practical work in analytical chemistry for Earth science students.

W+ 3 credits 2G E. Reusser, S. Bernasconi, M. Wallé, L. Zehnder

Knowledge of some analytical methods used in Earth sciences.

Sediment Analysis

Staining of thin sections for feldspar and carbonate, peels of carbonate rocks, modal analysis of siliciclastic rocks, calcimetry and organic carbon measurement, heavy mineral analysis, cold cathodoluminescence microscopy of carbonate rocks, simple clay mineral separation, exoscopy of quartz grains.

Prerequisites / notice

To be handed out in class

The earlier attendance of other MSc microscopy courses (e.g. magmatic and metamorphic rocks) is not required if during the BSc a general course on microscopy of rocks was completed.
Introduction to the programming software Matlab.

J.P. Burg

The script is very diverse and ranges from PowerPoint-based pdf-files, to self-study tutorials. Also, the more theoretical and mathematical.

This course gives a tool to describe and interpret microstructures of deformed rocks. It begins with the definition of fabric elements and classification of cleavages. The second part deals with the relation between fabric, microstructure and deformation mechanisms. Finally will be examined the microstructures of high strain zones and the tools to quantify fabric and microstructure.

The lecture course is limited to 12 participants.

#### Prerequisites / notice

The course includes a high portion of practical exercises in sample preparation as well as measurement and evaluation of X-ray powder diffraction data.

Own sample will be analysed qualitatively and quantitatively. Knowledge in mineralogy of this system is essential.

#### Literature

### Objective

At the end of this course, the students should be able to:

- Understand the fundamental concept of the finite-element method
- Use the finite-element method to successfully work on a small project tailored to the student's interests.

In addition, innovative methods will be applied to mark the performance in the course, which includes self-evaluation and peer-evaluation among the students. Therefore, some soft-skills will be required and trained as well, such as:

- Receiving feedback from a colleague without taking criticism personal
- Providing honest feedback to a colleague in a tone that is acceptable
- Learning the procedure of scientific peer-evaluation

### Content

- Introduction to Matlab
- Numerical integration + isoparametric elements
- Going to 2D finite elements
- Finite-element method for 2D viscous materials
- Heterogeneous media
- Continuum mechanics equations necessary to describe rock deformation
- Rheological equations: elasticity + viscous materials
- Introduction to the finite-element method (in 1D)
- Numerical Modelling of Rock Deformation

#### Prerequisites / notice

Successful participation in Field Courses I-III.

### Literature

### Prerequisites / notice

Students may bring their own laptop with a pre-installed copy of Matlab.

A substantial part of the lecture will take place in the computer-lab, where numerical finite element codes will be applied. The used software is Matlab. Students may bring their own laptop with a pre-installed copy of Matlab.

The script is very diverse and ranges from PowerPoint-based pdf-files, to self-study tutorials. Also, the more theoretical and mathematical aspects will be explained on the black board without a proper script.

All lecture-presentations, as well as the numerical codes, will be made available to the students online.

There is no mandatory literature. The following literature is recommended:

A good knowledge of linear algebra is expected.

The used software is Matlab. So, knowledge of Matlab is advantageous. Students may bring their own laptop with a pre-installed copy of Matlab.

Title
Rock Physics

The modern discipline of Rock Physics serves as a bridge between traditional Rock Mechanics and traditional Rock Physical Property

Type

Sedimentary Systems

W 3 credits 2G A. S. Zappone, K. Kunze, C. Madonna, S. Subramanayan

Abstract

Lecture notes

Practical microscopy session!

Content

1) Terminology: grain, grain shape, grain boundaries, cracks, cleavages.

2) Recall Foliation mechanisms and their microstructures:
   a. passive rotation (examples of mica in marbles)
   b. dissolution and precipitation (+Q and M domains in schists)
   c. nucleation and growth (metamorphism, e.g. low grade schists)
   d. crystal plastic deformation (e.g. calcite, quartz)
   e. recrystallization (dynamic) (e.g. calcite)

3) Deformation mechanisms, their microstructures and CPO
   a. Cataclastic deformation (cataclastic flow, trails of fluid inclusions, interaction with fluids and melt, pseudotachylites, breccias)
   b. Intracrystalline plasticity (monomineralic calcite, olivine, quartz.microstructures and CPO, progressive deformation in simple and pure shear)
   c. Diffuse mass transfer in presence of fluids (pressure solution)
   d. Solid state
   e. Grain boundary sliding and superplastic flow (calcite)
   f. Dynamic recrystallization (e.g. Calcite and olivine): rotation Rxx and GB migration Rxx.
   g. Twinning (calcite, as thermometer; plagioclase)
   h. Recovery and static recrystallization
   i. Deformation of polyminerical rocks (e.g. quartzofeldspatic and schists)
   j. synkinematic mineral reactions

4) Microstructures in Fault rocks
   a. Fault gouge
   b. Mylonites (evolution of microstructures and PO with progressive strain. Natural examples and the experimental results from torsion testing: calcite and olivine).
   c. Sense of shear: Matrix, Porphyroclasts etc.

5) Advanced techniques for microstructural characterization
   a. Electron microscopy (SEM, TEM, FIB, EDX, EBSD)
   b. Texture goniometry

Upon successful completion of this course students are able to:

- understand chemistry and biology of the marine carbonate system
- be able to relate carbonate mineralogy with facies and environmental conditions
- be familiar with cool-water and warm-water carbonates
- see carbonate and organic-carbon rich sediments as part of the global carbon cycle
- be able to recognize links between climate and marine carbonate systems (e.g. acidification of oceans and reef growth)
- use geological archives as source of information on global change
- have an overview of marine sedimentation through time

Students will be made familiar with the details of the six dating methods through lectures on basic principles, analysis of case studies, solving of problem sets for age calculation and visits to dating laboratories.

At the end of the course students will:
1. understand the fundamental principles of the most frequently used dating methods for Quaternary studies.
2. be able to calculate an age based on data of the six methods studied.
3. choose which dating method (or combination of methods) is suitable for a certain field problem.
4. critically read and evaluate the application of dating methods in scientific publications.

Students will be made familiar with the details of the six dating methods through lectures on basic principles, analysis of case studies, solving of problem sets for age calculation and visits to dating laboratories.

The grading of students is based on in-class exercises and end-semester examination.

We will read and critically discuss scientific articles relevant for "biological and chemical processes in marine and lacustrine systems"

The grading of students is based on in-class exercises and end-semester examination.

The course will focus on biological and chemical aspects of sedimentation in marine environments. Marine sedimentation will be traced from coast to deep-sea. The use of stable isotopes and paleoceanography will be discussed. Neritic, hemipelagic and pelagic sediments will be used as proxies for environmental change during times of major perturbations of climate and oceanography.

Upon successful completion of this course students are able to:
- understand the principle of X-ray diffraction analysis
- carry out a qualitative and quantitative mineralogical analysis independently
- critically assess the data,
- communicate the results in a scientific report.

Required attending the lecture, visiting laboratories, handing back solutions for problem sets (Exercises)
The course includes a high portion of practical exercises in sample preparation as well as measurement and evaluation of X-ray powder diffraction data. Own sample will be analysed qualitatively and quantitatively. Knowledge in mineralogy of this system is essential. The lecture course is limited to 12 participants.

**Abstract**
The course "Climate history and palaeoclimatology gives an overview on climate through geological time and it provides insight into methods and tools used in palaeoclimate research.

**Objective**
The student will have an understanding of evolution of climate and its major forcing factors -orbital, atmosphere chemistry, tectonics-through geological time. He or she will understand interaction between life and climate and he or she will be familiar with the use of most common geochemical climate "proxies", he or she will be able to evaluate quality of marine and terrestrial sedimentary palaeoclimate archives. The student will be able to estimate rates of changes in climate history and to recognize feedbacks between the biosphere and climate.

**Content**
Climate system and earth history - climate forcing factors and feedback mechanisms of the geosphere, biosphere, and hydrosphere.

Geological time, stratigraphy, geological archives, climate archives, palaeoclimate proxies

Climate through geological time: "lessons from the past"

- Cretaceous greenhouse climate
- The Late Paleocene Thermal Maximum (PETM)
- Cenozoic Cooling
- Onset and Intensification of Southern Hemisphere Glaciation
- Pliocene warmth
- Glacial and Interglacials
- Millennial-scale climate variability during glaciations
- The last deglaciation(s)
- The Younger Dryas

Holocene climate - climate and societies

**Abstract**
The course will focus on biological and chemical aspects of sedimentation in marine environments. Marine sedimentation will be traced from coast to deep-sea. The use of stable isotopes palaeoceanography will be discussed. Neritic, hemipelagic and pelagic sediments will be used as proxies for environmental change during times of major perturbations of climate and oceanography.

**Objective**
- You will understand chemistry and biology of the marine carbonate system
- You will be able to relate carbonate mineralogy with facies and environmental conditions
- You will be familiar with cool-water and warm-water carbonates
- You will see carbonate and organic-carbon rich sediments as part of the global carbon cycle
- You will be able to recognize links between climate and marine carbonate systems (e.g. acidification of oceans and reef growth)
- You will be able to use geological archives as source of information on global change
- You will have an overview of marine sedimentation through time

**Content**
- carbonates, chemistry, mineralogy, biology
- carbonate sedimentation from the shelf to the deep sea
- carbonate facies
- cool-water and warm-water carbonates
- organic-carbon and black shales
- C-cycle, carbonates, Corg : CO2 sources and sink
- Carbonates: their geochemical proxies for environmental change: stable isotopes, Mg/Ca, Sr
- marine sediments through geological time
- carbonates and evaporites
- lacustrine carbonates
- economic aspects of limestone

**Literature**
We will read and critically discuss scientific articles relevant for "biological and chemical processes in marine and lacustrine systems"

**Prerequisites / notice**
The grading of students is based on in-class exercises and end-semester examination.

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: BIO280

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

**Objective**
On successful completion of the module, the students should be able to explain how plants are preserved in the fossil record, to describe the morphology of plant mega fossils, and of spores and pollen. They can describe how plant fossils can be used for reconstructing palaeoenvironments. Students should be able to explain the interactions between evolution of plants, climate and physical environment and they will be able to integrate the dimension of geological time into their understanding of biological events.

651-4057-00L | Climate History and Palaeoclimatology | W | 3 credits | 2G | G. Haug, A. Martinez-Garcia |

Abstract

The course “Climate history and palaeoclimatology gives an overview on climate through geological time and it provides insight into methods and tools used in paleoclimate research.

Objective

The student will have an understanding of evolution of climate and its major forcing factors -orbital, atmosphere chemistry, tectonics- through geological time. He or she will understand interaction between life and climate and he or she will be familiar with the use of most common geochemical climate "proxies", he or she will be able to evaluate quality of marine and terrestrial sedimentary paleoclimate archives. The student will be able to estimate rates of changes in climate history and to recognize feedbacks between the biosphere and climate.

Content

Geological time, stratigraphy, geological archives, climate archives, paleoclimate proxies

Climate through geological time: “lessons from the past”

Cretaceous greenhouse climate

The Late Paleocene Thermal Maximum (PETM)

Cenozoic Cooling

Onset and Intensification of Southern Hemisphere Glaciation

Onset and Intensification of Northern Hemisphere Glaciation

Pliocene warmth

Glacial and Interglacials

Millennial-scale climate variability during glaciations

The last deglaciation(s)

The Younger Dryas

Holocene climate - climate and societies

651-4058-00L | Basics of Palaeobotany (University of Zurich) | W | 3 credits | 2G | University lecturers |

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: BIO280

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html
The course "Basics in Palaeobotany" gives an overview on the evolution and palaeobiology of plants and their relevance for the reconstruction of past environments.

On successful completion of the module, the students should be able to explain how plants are preserved in the fossil record, to describe the morphology of plant mega fossils, and of spores and pollen. They can describe how plant fossils can be used for reconstructing palaeoenvironments. Students should be able to explain the interactions between evolution of plants, climate and physical environment and they will be able to integrate the dimension of geological time into their understanding of biological events.

- Preservation of plants in the fossil record.
- First evidence for plants on Earth
- The conquest of the continents by plants
- Major adaptation and innovations leading to the present plant diversity
- The evolution and morphology of the major plant groups
- Plant associations through geological time and their palaeogeographic and stratigraphic relevance
- Mass extinctions and the fossil plant record
- Interaction between past vegetation and climate
- The relevance of plant microfossils for reconstruction of palaeoclimate and palaeoecology

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 519 of 1432
The following topics are covered:

- Introduction; classification schemes and types of basins; heat conduction; geotherms;
- The lithosphere; isostasy; rifts and basins due to lithospheric stretching; uniform extension model; modifications to the uniform stretching model; dynamics of rifting.
- Elasticity of the lithosphere; flexural compensation; geometry and analytical description of loads and the resulting deflection; foreland basins; their anatomy;
- Reconstruction of basin evolution; borehole data; porosity loss and decompaction; backstripping; subsidence curves; thermal history and its reconstruction;
- Petroleum play concept; organic production; source rock prediction and depositional environment; petroleum generation, expulsion, migration, alteration; reservoir and traps;
- Carbon cycle; maturation of organic matter; geochemistry of biogenic carbon; biomarkers; analytical techniques
- Overview of other basin types: effects of mantle dynamics, strike-slip basins.

Each week of the course is split in lectures and corresponding practicals, in which the concepts are applied to simplified problems.

Grading of the semester performance is based on submitted practicals (50%) and a final exam (50%). The exam will take place in the time slot of the last practical (18.12.).

Lecture notes
Lecture notes are provided online during the course. They summarize the current subjects week by week, and provide the essential theoretical background.

Abstract
Introduction into seismic interpretation for solving geological and environmental problems. A special focus is given to the seismic facies analysis and seismic sequence stratigraphy. In addition, the seismic attributes are explained, which are important for the analysis of paleo-geomorphology and structural deformation.

Objective
1. Acquire techniques for a comprehensive interpretation of seismic sections for solving geologic, tectonic, stratigraphic and environmental problems
2. Correlation of seismic facies to lithologic facies in different sedimentary systems
3. Recognition of structural elements and faults on seismic sections.
4. Learning the techniques of 3D seismic data interpretation
5. Reconstruction of sedimentary history using seismic stratigraphy and facies analysis and core information.

Content
The four day course consists of lectures that are accompanied by a variety of exercises.

Day 1:
Introduction seismic facies analysis with exercise
Seismic resolution
Factors controlling sedimentation
Exercise: Seismic section in Straits of Florida

Day 2:
Seismic attributes and seismic geomorphology
Siliciclastic deltas, shelves and turbidite systems, 2D-3D
Exercise: Seismic section Tarragon Basin
Seismic facies carbonates
Exercise: Seismic section platform margin Great Bahama Bank
Deepwater environments, including cold-water coral habitats

Day 3:
Seismic facies of mixed systems with exercises
Faults and structures on seismic sections
Exercise: Seismic section Golf von Mexiko

Day 4:
Telling ages on seismic section
Seismic stratigraphy and sequence stratigraphy
Exercise: Sequence analysis Straits of Andros
Final discussion
Lecture notes: An original script (110 pages) designed for the class will be distributed at the beginning of the course.

Abstract

The course will cover basic physical theory related to mineral and rock magnetism, measurement techniques, and applications in earth and soil sciences, climatology and biophysics.

Objective

There are two objectives in this course: (1) to acquire an understanding of the physical theory behind the origin of magnetism in a mineral or rock; and (2) to learn how magnetic properties can be used to study environmental and geologic systems and processes.

Content

1. Fundamentals of magnetism
2. Magnetic mineralogy
3. Measurement techniques
4. Time
5. Special Topics: Magnetoclimatology, mass transport, pollution monitoring, biophysics, magnetic properties of nanoscale materials

Abstract

The course will introduce students to the general principles of Geothermics and is suitable for students who have a basic knowledge of Geoscience or Environmental Science (equivalent of a Bachelor degree).

Objective

To provide students with a broad understanding of the systems used to exploit geothermal energy in diverse settings.
Content

The course will begin with an overview of heat generation and the thermal structure of the Earth. The basic theory describing the flow of heat in the shallow crust will be covered, as will be the methods used to measure it. Petrophysical parameters of relevance to Geothermics, such as thermal conductivity, heat capacity and radiogenic heat productivity, are described together with the laboratory and borehole measurement techniques used to estimate their values. The focus will then shift towards the exploitation of geothermal heat at various depths and temperatures, ranging from electricity and heat production in various types of deep geothermal systems (including high and medium temperature hydrothermal systems, and Engineered Geothermal Systems at depths of 5 km or more), to ground-source heat pumps installed in boreholes at depths of a few tens to hundreds of meters for heating domestic houses.

The subjects covered are as follows:

Week 1: Introduction. Earth's thermal structure. Conductive heat flow
Week 3: Temperature measurement. Hydrothermal reservoirs & well productivity
Week 4: Hydrological characterisation of reservoirs. Drilling. Optimised systems
Week 5: Petrothermal or Engineered Geothermal Systems
Week 6: Low-enthalpy systems 1
Week 7: Low-enthalpy systems 2.

Lecture notes

The script for each class will be available for download from the Ilias website no later than 1 day before the class.

**Abstract**
Seismic tomography is the science of interpreting seismic measurements (seismograms) to derive information about the structure of the Earth. The subject of this course is the formal relationship existing between a seismic measurement and the nature of the Earth, or of certain regions of the Earth, and the ways to use it, to gain information about the Earth.

**Abstract**
Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wrenching tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales. Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alps-Himalaya orogenic system.

**Objective**
Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wrenching tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales. Assessment of mechanisms responsible for plate movements (the Earth as a heat transfer machine, dynamics of earth mantle, plate driving forces) and subsequent large-scale structures (oceanic basins and cycle of the oceanic lithosphere, convergence and mountain systems and continental growth, etc) through theoretical and experimental information. Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alps-Himalaya orogenic system.

**Abstract**
This course is a general introduction to the methods of seismic hazard analysis. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties.

**Objective**
This course is a general introduction to the methods of seismic hazard analysis.

**Content**
In the course it is explained how the disciplines of seismology, geology, strong-motion geophysics, and earthquake engineering contribute to the evaluation of seismic hazard. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties. The course includes the discussion related to Intensity and macroseismic scales, historical seismicity and earthquake catalogues, ground motion parameters used in earthquake engineering, definitions of the seismic source, ground motion attenuation, site effects and microzonation, and the use of numerical tools to estimate ground motion parameters, both in a deterministic and probabilistic sense.

During the course recent earthquakes and their impacts are discussed and related to existing hazard assessments for the areas of interest.
This course teaches earthquake source theory, covering the moment-tensor representation of earthquakes treated as point-sources, the kinematic characterization of extended-fault ruptures, and the dynamics of earthquake rupture. Fault mechanics and fault-zone structure as well as implication of rupture dynamics for near-source ground-motion prediction will complement the material.

The aim of the course is to gain a thorough understanding of the physical processes (and their mathematical description) leading to and governing earthquake source ruptures. Simplified earthquake-source representations will be used to motivate the study of the complexity of the dynamic rupture process, its fundamental aspects in terms of fracture mechanics and friction, and its implications for ground-motions (and hence seismic hazard).

The course is sub-divided in two parts:

**FIRST PART**
- Introduction: Definition of earthquake, faults, elastic rebound theory, source parameters definition.
- Introduction to elastodynamic: strain, stress, equation of motion.
- Mathematical description of the source: Representation theorem, earthquakes as point sources, moment-tensor derivation, source spectra.
- Earthquakes on extended faults: Kinematic earthquake characterization, kinematic source inversion

**SECOND PART**
- Earthquake source dynamics: Introduction to Linear Elastic Fractures mechanics, the state of stress and friction models,
- Energy partition during Earthquake
- Numerical simulation of shear earthquake rupture: Fault representation methods, elastodynamic coupled to frictional sliding.
- Identifying source-dominant ground motion phenomena
- Numerical exercise to model earthquake rupture dynamic

Course notes will be made available on a designated course web site several days in advance of each lecture. No single script of book will be distributed or recommended as the material is compiled from several text books and the recent literature.

The grading is based on participation, homework sets, and a final oral presentation. There is no final exam.

**Prerequisites / notice**

The course will be evaluated in four parts, from a two hours final exam at the end of the course, a final presentation which will be based on a paper-study from the relevant recent literature, a writing report of a computer exercise and homework delivered during the course. The course will be worth 3 credit points, and a satisfactory total grade (4 or better averaged from the four evaluation parts) is needed to obtain 3 CPs. The final writing exam has a weight of 40% and the other three has a weight of 60% (each contributing 20 %) of the total grade.

The course will be given entirely in English.

Course pre-requisites: standard "higher maths for physicists" (i.e. linear algebra, calculus, ODE's, PDE's, Fourier-Transforms, some probability theory); useful but not mandatory courses would be "Inverse Theory in Geophysics" and general geophysics courses (i.e. seismo-tectonics, seismic waves, introduction to geophysics).

### 651-3561-00L
**Cryosphere**

**Type:** O  
**ECTS:** 3  
**Hours:** 2V  
**Lecturers:** M. Funk, M. Huss, K. Steffen

**Abstract:** This course introduces the different parts of the cryosphere - snow, glaciers, sea ice, permafrost - and their role in the climate system. A significant physical aspect is the focus in each part. Those completing the course are able to describe the dynamics of cryosphere components both formally and using examples.

**Objective:**
- To qualitatively describe the main components of the cryosphere and their role in the climate system
- To formally describe the relevant physical processes which determine the state of cryosphere components

**Content:** Introduction into the different components of the Cryosphere: Snow, glaciers, sea ice and permafrost, and their roles in the climate system. Each part is use to emphasize on one specific physical aspect: material qualities of ice, mass balance and dynamics of glaciers and energy balance of sea ice.

**Lecture notes:** handouts will be distributed during the teaching semester

### 101-0289-00L
**Applied Glaciology**

**Type:** W  
**ECTS:** 3  
**Hours:** 2G  
**Lecturers:** M. Funk, A. Bauder

**Abstract:** We will explain the fundamentals of physics of glaciers which are necessary for treating applied problems. We will go into climate-glacier interactions, flow of glaciers, lake ice and hydrology of glaciers.

**Objective:**  
To understand the fundamental physical processes in glaciology.

**Content:**
- Basics in physical glaciology
- Dynamics of glaciers: deformation of glacier ice, role of water in glacier motion, reaction of glaciers to climate changes, glacier calving, surges.
- Ice falls, ice avalanches
- Glacier floods
- Lake ice and bearing capacity

**Lecture notes:** Handouts are available

**Literature:** Relevante Literatur wird während der Vorlesung angegeben.

**Prerequisites / notice:** Für aktuelle Fallbeispiele werden risikobasierte Massnahmen bei glaziologischen Naturgefahren diskutiert.

**Assessment:** Voraussetzungen: Es werden Grundkenntnisse in Mechanik und Physik vorausgesetzt.

### 651-4101-00L
**Physics of Glaciers**

**Type:** W  
**ECTS:** 3  
**Hours:** 3G  
**Lecturers:** M. Lüthi, G. Jouvet, F. T. Walter

**Abstract:** Application of basic physical concepts to glaciers and ice caps. Understanding glaciers and ice sheets with simple physical concepts. Topics include the reaction of glaciers to the climate, ice rheology, temperature in glaciers and ice sheets, glacier hydrology, basal motion and calving glaciers. A special focus is the current development of Greenland and Antarctica.

**Objective:**
- The course outlines the physical principles governing the gravity-driven motion of glacier ice. This is applied to understand the response of glaciers and ice sheets to changes in their environment. Polar ice caps, ice streams and mountain glaciers and their recent rapid changes are discussed.

**Content:**
- The dynamics of glaciers and polar ice sheets is the key requisite to understand their history and their future evolution. We will take a closer look at ice deformation, basal motion, heat flow and glacier hydraulics. The specific dynamics of tide water and calving glaciers is investigated, as is the reaction of glaciers to changes in mass balance (and therefore climate).

**Lecture notes:** http://people.ee.ethz.ch/~luethim/teaching.html

### 651-4077-00L
**Quantification and Modeling of the Cryosphere:**

**Type:** W  
**ECTS:** 3  
**Hours:** 1V  
**Lecturers:** University lecturers

**UZH Module Code:** GEO815

**Abstract:**
Each part is use to emphasized on one specific physical aspect: material qualities of ice, mass balance and dynamics of glaciers and energy balance of sea ice.

**Objective:**
- To formally describe the relevant physical processes which determine the state of cryosphere components
- To qualitatively describe the main components of the cryosphere and their role in the climate system

**Content:**
- Overview of the most important earth surface processes and landforms in cold regions (regions with glaciers and intense frost) with emphasis on high-altitude processes. Discussion of present research challenges.
- Knowledge of the most prominent climate-related geomorphological processes and phenomena in high-mountain regions, understanding of primary research challenges.
- Erosion and sedimentation by glaciers as a function of topography, englacial temperature, sediment balance, sliding and melt water runoff. Processes and landforms in regions of seasonal and perennial frost (frost weathering, rock falls, debris cones/talus, solifluction, permafrost creep/rock glaciers, debris flows).

**Lecture notes:** Glacial and periglacial geomorphodynamics in high-mountain regions. Ca. 100 pages. Literature references in skript

**Prerequisites / notice:**
- Basic knowledge about geomorphology and glaciers/permafrost from corresponding courses at ETH/UZH or from the related lecture notes
- Good high school mathematics and physics knowledge required.

### 651-1581-00L
**Seminar in Glaciology**

**Type:** W  
**ECTS:** 3  
**Hours:** 2S  
**Lecturers:** A. Bauder

**Abstract:** Studium aktueller und klassischer Arbeiten der glaziologischen Forschung

**Objective:** Vertiefte Kenntnisse in ausgewählten Bereichen der glaziologischen Forschung erarbeiten. Kennenlernen von Formen der wissenschaftlichen Präsentation und Verbessern der eigenen Fähigkeit in der Diskussion von wissenschaftlichen Themen.

**Content:**

**Lecture notes:**
- Studium aktueller und klassischer Arbeiten der glaziologischen Forschung
- benötigte Unterrichten werden im Verlauf der Veranstaltung abgegeben

### Palaeontology

**Number:** 651-1380-00L
**Title:** Paleontological Excursions (University of Zürich)

**Type:** W  
**ECTS:** 1  
**Hours:** 1P  
**Lecturers:** University lecturers

**UZH Module Code:** BIO279

**Abstract:**
- No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
- Mind the enrolment deadlines at UZH:

**Notice:**

**Abstract**

This course focusses on the principles (fundamentals) and basic concepts of rock mechanics and rock engineering (e.g. tunnelling, rock slope stability).

**Objective**

The course aims to introduce the fundamentals and basic concepts of rock mechanics and generic rock engineering. The student shall understand how rocks behave at different scales, under various artificial loads and in the shallow subsurface (a few km below ground). The link between rock mechanics, geology, hydrogeology and tectonics (i.e. the conditions under which the rock formed) will be clearly established.

The student shall understand basic principles of rock mechanics and rock engineering. In addition, the student shall learn how to carry out laboratory test, to interpret these tests and to apply the results from lab and field investigations to simple engineering problems. This knowledge is required for subsequent integration courses (Landslide Analysis and Hazard Mitigation; Engineering Geology of Underground Excavations).

**Content**

This course focusses on the principles (fundamentals) and basic concepts of rock mechanics and generic rock engineering. The behavior of different rock types is studied with laboratory investigations which are linked to the theoretical aspects discussed in lectures and applied in exercises. The course is compulsory for the MSc Eng Geo. The applications of rock mechanical principles and rock engineering methods are extensively covered in subsequent courses.

**Lecture notes**

Written course documentation available on our homepage: [www.engineeringgeology.ethz.ch](http://www.engineeringgeology.ethz.ch)

**Abstract**

The course presents the principles of soil mechanics and soil behaviour characteristics and its applications in geotechnical structures and systems. It is based on more descriptive courses on Engineering Geology within the BSc Geol. Program and is a compulsory prerequisite for other courses within the MSc Eng. Geol. program.

**Objective**

Understanding the principles of soil behaviour and the fundamentals of geotechnical practices in soils.

**Content**

**Soil Mechanics:**

- Fundamental concepts of strength and deformation of different soils.
- Introduction to geotechnical calculations
- Significance of (ground)water

**Geotechnical Engineering in Soils:**

- Evaluation of geotechnical scenarios, handling of forecast uncertainties, relation of soil properties and soil composition, interactions between soil and building,
- standard construction methods in soils (foundations, slopes, dams and levees),
- requirements for the geotechnical prognosis

**Lecture notes**

This lecture is supported by the textbook: "Geotechnical Engineering" by Donald P. Coduto, 2nd edition, 2011; ISBN-13: 978-0-13-135425-8

**Prerequisites / notice**

Courses must be completed:

- Introduction to Engineering Geology (BSc level)
- Introduction to Groundwater
- Sedimentology and Quaternary deposits
- Principles of Physics

Courses recommended:

- Eng Geol Site Investigations
- Eng Geol Field Course I (soils)
- Clay Mineralogy

**Abstract**

The course provides an introduction into quantitative analysis of groundwater flow and transport. It is focussed on formulating flow and transport problems in groundwater, which are to be solved analytically or numerically.

**Objective**

a) Students understand the basic concepts of flow and contaminant transport processes and boundary conditions in groundwater.

b) Students are able to formulate simple practical flow and transport problems.

c) Students are able to understand and apply simple analytical solutions to simple flow and transport problems.

d) Students are able to use simple numerical codes to adequately solve simple flow (and transport) problems.
1. Introduction to groundwater problems. Concepts to quantify properties of aquifers.

2. Flow equation. The generalized Darcy law.

3. The water balance equation.

5. Analytical solutions to flow problems I

6. Analytical solutions to flow problems II

7. Finite difference solution to flow problems.

12. Analytical solutions to transport problems I.

13. Analytical solutions to transport problems II

Abstract

This course introduces students to the methods used in characterising, developing or monitoring geotechnical engineering project sites. Measurements, tools and analyses are described that are relevant to determining the geologic conditions at a site as well as deformations that occur under natural or construction conditions.

Objective

This course aims to introduce the general procedures taken during a engineering geological site investigation. Students who complete the course should be able to design a site investigation program of measurements based on information from initial desk studies, and to analyse, integrate and interpret data from the measurement program.

Content

The methods that are routinely employed in site investigations will be described focusing on their applicability in different geologic environments. The limitations of the data in constraining the parameters of interest will be addressed together with problems of interpretation and cost-versus-information value. Specific topics addressed include drilling, coring, sampling, borehole testing, geophysical methods used in engineering geology, satellite, air- and ground-based surface and displacement monitoring (photogrammetry, LIDAR and Radar), and in-situ deformation measurement methods.

Lecture notes

Lecture notes will be available for download 1-2 days before each class.

Literature

Supplemental literature will be suggested and made available during the course.

Engineering Geology Integration

Courses for this Module take place in spring semester.

Prerequisites: successful participation in all 3 compulsory modules of the Major in Engineering Geology (Fundamentals, Methods and Integration).

The Industrial Internship of the Eng Geol Major should take place in the second MSc year after consultation with Dr. Björn Oddsson. Detailed regulations of this practical are published on the Eng Geol Website.
The goals of the industry practical are to become familiar with technical, economic, legal and communication issues of real-life work in private industry or technical administration.

Abstract

This course presents fundamental digital signal processing and filter theory with a focus on geophysical applications.

Objective

The goal of this course is to develop familiarity with basic fluid dynamical concepts relevant to geophysical and astrophysical problems.

Content

- Fluid mechanics is one of the fundamental building blocks of modern geophysics. This course aims to provide the students with the basics tools used in fluid dynamics studies of geophysical-astrophysical problems. The course is a combination of lectures, exercises and demo experiments to present the same concepts in various forms.

</table>

**Abstract**

In this course, students learn crucial partial differential equations (conservation laws) that are applicable to any continuum including the Earth's mantle, core, atmosphere and ocean. The course will provide step-by-step introduction into the mathematical structure, physical meaning and analytical solutions of the equations. The course has a particular focus on solid Earth applications.

**Objective**

The goal of this course is to learn and understand few principal partial differential equations (conservation laws) that are applicable for analysing and modelling of any continuum including the Earth's mantle, core, atmosphere and ocean. By the end of the course, students should be able to write, explain and analyse the equations and apply them for simple analytical cases. Numerical solving of these equations will be discussed in the Numerical Modelling I and II course running in parallel.

**Content**

A provisional week-by-week schedule (subject to change) is as follows:

- **Week 1:** The continuity equation
  - Theory: Definition of a geological media as a continuum. Field variables used for the representation of a continuum. Methods for definition of the field variables. Eulerian and Lagrangian points of view. Continuity equation in Eulerian and Lagrangian forms and their derivation.
  - Exercise: Computing the divergence of velocity field.

- **Week 2:** Density and gravity
  - Exercise: Computing density, thermal expansion and compressibility from an equation of state.

- **Week 3:** Stress and strain
  - Theory: Deformation and stresses, definition of stress, strain and strain-rate tensors. Deviatoric stresses. Mean stress as a dynamic (nonlithostatic) pressure. Stress and strain rate invariants.
  - Exercise: Analysing rate tensor for solid body rotation.

- **Week 4:** The momentum equation
  - Exercise: Deriving viscous rheological equations for computing effective viscosities from empirical flow laws.

- **Week 6:** The heat conservation equation
  - Exercise: steady temperature profile in case of channel flow.

- **Week 7:** Elasticity and plasticity

**GRADING** will be based on homeworks (30%) and oral exams (70%).

</tr>
</tbody>
</table>

**Abstract**

The course is a general introduction to the theory of seismic wave propagation. It explains the principles and assumptions used in seismology. It provides the tools to solve basic seismological problems.

**Objective**

The course is a general introduction to the theory of seismic wave propagation.
The course explains the principles and assumptions used in seismology. It provides the tools to solve basic seismological problems. The course includes the theorems in dynamic elasticity, the formulation with potentials, Greens function, elastic waves from point dislocations sources, moment tensors, 1D, 2D, and 3D wave propagation problems, reflection and transmission at plane boundaries, and surface waves in a vertically heterogeneous medium.

**651-4015-00L Seismotectonics**  
**W 3 credits 2G**  
J. D. Zechar, A. P. Rinaldi

**Abstract**  
If you're interested in knowing more about the relationship between seismicity and plate tectonics, this is the course for you. (If you're not that interested, but yr program of study requires that you complete this course, this is also the course for you.)

**Objective**  
By the conclusion of this course, we hope that you:

- have a solid understanding of stress and strain and tensor representations;
- have a feeling for what rheology is and why it is important;
- have a more sophisticated understanding of the relationship b/w plate tectonics and eqks;
- understand eqk source representations of varying complexity;
- understand eqks in the context of different tectonic settings;
- understand why we can't predict eqks; and
- understand that "modern science is... a set of research directions rather than a collection of nuggets of established truth."

**Content**  
To begin our series of 14 meetings, we will review fundamentals of continuum mechanics and tensor analysis; our goal is to help you understand deformation from the scale of comastarch in the classroom to the scale of plate tectonics. We will tell you about several ways to approximately represent an earthquake source; we'll present these in order of increasing sophistication. We'll discuss a currently-popular theory to explain earthquake triggering. We'll talk about the conceptual connections between earthquakes and tectonic deformation. You will enjoy (at least) two computer exercises.

Discussed: stress and deformation in the Earth; stress and strain tensors; rheology and failure criteria; fault stresses, friction and effects of fluids; stable and unstable sliding; earthquake focal mechanisms; relationship between stress fields and focal mechanisms; seismic moment and moment tensors; relationship between moment- and deformation tensors; crustal deformation from seismic, geologic, and geodetic observations; earthquake stress drop, scaling, and source parameters; earthquake induced stress changes; global earthquake distribution; current global earthquake activity; different seismotectonic regions; examples of earthquake activity in different tectonic settings, such as in subduction zones, California, the Mediterranean, and in Switzerland.

**Lecture notes**  
TBA

**Literature**  

**Prerequisites / notice**  
You should have at least a foggy recollection of calculus.

**651-4021-00L Engineering Seismology**  
**W 3 credits 2G**  
D. Fäh, J. Burjánek

**Abstract**  
This course is a general introduction to the methods of seismic hazard analysis. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties.

**Objective**  
This course is a general introduction to the methods of seismic hazard analysis.

**Content**  
In the course it is explained how the disciplines of seismology, geology, strong-motion geophysics, and earthquake engineering contribute to the evaluation of seismic hazard. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties. The course includes the discussion related to Intensity and macroseismic scales, historical seismicity and earthquake catalogue, ground motion parameters used in earthquake engineering, definitions of the seismic source, ground motion attenuation, site effects and microzonation, and the use of numerical tools to estimate ground motion parameters, both in a deterministic and probabilistic sense.

During the course recent earthquakes and their impacts are discussed and related to existing hazard assessments for the areas of interest.

The course will give an introduction to phase petrology and its application to magmatic and metamorphic systems. Further, the course will provide a comprehensive introduction to heterogeneous phase equilibria in the geosciences. This course addresses master students interested in an integral view of processes operating in various tectonic environments, most of which are major topics.

The specific topics will include:
- Mineral reactions and chemical equilibrium in metamorphic and magmatic rocks, recalibration of rock and mineral analyses, mineral modes, P-T-X relations.
- The effect of the crystal symmetry on the symmetry of physical properties as well as the mathematical formulation of the physical properties in rocks will be discussed. We will also touch kinetics of rock forming processes and the role of fluids during the lectures.

The aim of the course is to give insight into processes that lead to the formation of magmatic and metamorphic rocks. Upon successful completion of this course students are able to:
- Communicate the results in a scientific report.
- Critically assess the data, present data accurately and interpret it in the right context.
- Qualitative and quantitative mineral composition as well as crystallographic parameters.

Selected handouts will be made available in the lecture. Notes handed out during lectures:

Lecturers: L. Tajcmanová, C. A. Heinrich, M. W. Schmidt, P. Ulmer, L. M. Plötze

Literature:
- The blue book by F Spear 1993 Metamorphic phase equilibria and pressure-temperature-time paths. MSA Monograph

Prerequisites / notice:
The course involves a high portion of practical exercises in sample preparation as well as measurement and evaluation of X-ray powder diffraction data.

Own sample will be analysed qualitatively and quantitatively. Knowledge in mineralogy of this system is essential. The lecture course is limited to 12 participants.

Data: 06.12.2017 12:57
Autumn Semester 2015
Page 532 of 1432
Computer programs and course material will be distributed during the course. Introduction to computer tools for the simulation of hydrothermal processes: HYDROTHERM for fluid flow simulations, HCh for thermodynamic modeling. While learning the respective computer programs is an essential part of the course, the emphasis will be on using these tools to learn how the physics and chemistry of hydrothermal system actually work.

Objective

Students will learn to understand the use of non-metallic mineral resources from a geological and mineralogical point of view as well as from industrial, technical and strategical (political) point of view. Environmental aspects on the worldwide use of non-metallic mineral resources are discussed. A special focus will be given on the situation in Switzerland.

Content

Teaching, case-studies and excursions (e.g. raw-material industry).

Course “Applied mineralogy and non-metallic resources I” (autumn/winter semester):

Non-metallic resources. Occurrences, geology, extraction, properties, fabrication and use. Industrial aspects, (new) technologies, market, stock, situation, reserves & resources, trends and development, environmental aspects, law.

Chapters: e.g. coal/carbon (coal, graphite, diamond, fullerene); oil/gas (oil- and tarsands, oil-shirts); phosphates/nitrates; aluminum (bauxite, corundum); salt; carbonates; titanium; clay and clay minerals; sulphur; gypsum/anhydrite; fluoride; asbestos; talc; micas; rare earth elements.

Course “Applied mineralogy and non-metallic resources II” (fall/summer semester):

Chapters: e.g. Stone industry - technical aspects of building stones, properties, weathering, treatment, quarries, products, Crushed stones - quarries, products, planning, environment. Gravel an sand - resources/reserves, environment (protection/law), alternative products (substitution). Cement and concrete (geological resources, prospection, fabrication, environment).

Lecture notes will be given according to the lessons. Partially integration of e-learning tools.

Literature

**Prerequisites / notice**

2 contact hours per lecture / week including lectures, exercises and practical study of samples, and small literature-based student presentations. Supplementary contact for sample practicals and exercises as required. Credits and mark based on participation in course (exercises, 50%) and 1h written exam in the last lecture of the semester (50%).

**651-4034-00L Resource Economics and Mineral Exploration**

**Abstract**

Global mineral economics and the strategies of mineral exploration -- including geological, geochemical and geophysical methods, but also non-geological factors such as organisational, political and environmental aspects. Changing external lecturers.

**Objective**

Practical understanding of the procedure of exploring a mineral prospect, based on geological analysis, exploration by drilling, resource calculation of tonnage and grade as a basis for the procedure for economic evaluation for reporting to investors.

**Content**

This block course in will comprise 4 half-day lectures and a series of practical exercises from a selection of a mineral property to discovery of mineral resources and their valuation. Teams are formed as Limited Partnership companies that have to select and bid for a mineral property offered during an auction. Each company has the same nominal budget. The highest bidder purchases the selected property, others need to purchase the remaining properties during an auction. Justification for selecting the property is justified in a report. The companies must interpret the geological of their mineral property to prepare a diamond drill program to discover and, eventually, delineate the mineral resources. This drill program is presented in a report prior to drilling. Drilling in the tri-dimensional matrix of the property is simulated using the software FOREUR, until budget lapse. The companies must select drill intervals for chemical analysis to document the extent and composition of the discovered mineralization. Portions of the mineral rights can be traded for capital between the companies. An estimate of the tonnage and grade of the discovered resource is prepared using geometrical methods and GIS software (ex. Arc GIS). The ground value of the resource is estimated by a computation of the Net Smelter Return at current metal prices. The results of the exploration program are presented in a comprehensive report.

**Lecture notes**

Handouts for background information and a computer simulation program for the case-study exercise will be provided. Participants must bring a Windows-based laptop computer.

**Prerequisites / notice**

Prerequisites: Knowledge of mineral deposit-type characteristics is useful (orogenic gold, Cu-Zn VMS, Ni-Cu-PGE); at least “Ressourcen der Erde”, or adequate knowledge of mineral deposits acquired by preparatory reading. Basic knowledge of ArcGIS software is important to produce maps and sections required in reports. Training exercises and tutorials will be provided in advance to prepare for the course. Taught biennially in collaboration with University of Geneva.

This course is co-organised by ETH Zurich (Prof. C. Heinrich) and University of Geneva (Prof. L. Fontbote)

**651-4221-00L Numerical Modelling of Ore Forming Hydrothermal Processes**

**Abstract**

Introduction to computer tools for the simulation of hydrothermal processes. This includes fluid flow modelling and thermodynamic modelling of hydrothermal reactions. The computer programs are handed out to the students and can be run on normal PCs. No programming knowledge is necessary.

**Objective**

Learn how to use the simulation programs HYDROTHERM and HCh to explore how hydrothermal systems work.

**Content**

Introduction to computer tools for the simulation of hydrothermal processes: HYDROTHERM for fluid flow simulations, HCh for thermodynamic modeling. While learning the respective computer programs is an essential part of the course, the emphasis will be on using these tools to learn how the physics and chemistry of hydrothermal system actually work.

**Lecture notes**

Computer programs and course material will be distributed during the course.

**Literature**

Objective
Practical ability to carry out a meaningful fluid or melt inclusion study in the fields of geochemistry, petrology or resource geology, involving problem definition, research planning, quantitative measurements using a combination of techniques, critical interpretation and correct documentation of results.

Lecture notes
Handouts with extensive list of primary literature available

<td>The sun and solid objects in the solar system (planets, comets, asteroids, meteorites, interplanetary dust) are discussed with a geochemical perspective. What does their present-day composition tell us about the origin and evolution of the solar system? The lecture first introduces the basic facts of the terrestrial and giant planets, as well as comets and asteroids, as mainly gained from modern planetary missions. The chemical and isotopic composition of meteorites, being the most primitive material available for study, is a further major topic.</td>

<td>The purpose of this lecture is to provide a comprehensive overview of: a) the different radiometric methods in Geology, the different dating tasks and the constraints put by the complexity of natural systems, including dating by cosmogenic nuclides, b) the various analytical tools available today for radiometric dating, their advantages and disadvantages, c) the use of noble gases in Geochemistry and d) detailed description of case studies, as examples of approach of a number of geological problems and interpretation of the data.</td>
</tr>
</tbody>
</table>

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 534 of 1432
The content of this lecture is summarised as follows:

Anthi Liatí:
- Ion microprobes - U-Pb SHRIMP dating (zircon, sphene, rutile, monazite)
- Dating metamorphic rocks
- Combined geochronology and petrology subduction and exhumation rates
- Tracing the timing of mantle and crustal events via zircon-dating in mantle xenoliths: Two case studies: South Namibia, Kilbourne Hole (New Mexico)

Giuadita Fellin:
- Fission track dating (two hours lecture)
- U-Th/He dating
- Visit of the laboratories

Henner Busemann:
- Noble gas geo- and cosmochemistry
- Surface exposure dating with cosmogenic nuclides
- carbon-14 dating and U-Th-He thermochronology
- Visit of the radiogenic and noble gas isotope laboratories of IGMR

Albrecht von Quadt:
- Analytical tools and applications to radiogenic isotopes (basics about TIMS, LA-ICP-MS-MC)
- Dating magmatic rocks and ore deposits (porphyry, epithermal Cu-Au-(Mo) deposits)
- U-Pb, Re-Os, Pb-Pb methods - HI tracing of zircons
- Geochronology and geochemistry of magmatic systems

Marcel Guillong:
- LA-ICP-MS as the method of choice for dating, in comparison to other methods (Ion-probe, TIMS, ...)
- Data reduction in LA-ICP-MS: from measured counts per seconds to the final age of a sample, with hands on example.
- The challenge to date very young Zircons, with an example from Kos.

Ben Ellis:
- Ar-Ar dating techniques
- Ar-Ar dating of volcanic rocks

Lecture notes
Script (for part of the lecture), partly power point presentations (in the web) and partly copies of power point transparencies.

Literature

651-4235-00L  Marine Geology and Geochemistry  W  3 credits  2G  G. Bernasconi-Green
Abstract
Introduction to oceanographic methods and international research programs in marine geology and an overview of physical, chemical and biological processes in modern marine environments.

Objective
This course aims at giving an overview of oceanographic methods and an understanding of physical, chemical and biological processes in modern marine environments. This course will combine lectures and student participation. Student presentations are based on critical reading of research papers and integration of data and results from international oceanographic programs and ocean drilling.

Content
Specific topics will be chosen to examine processes of crustal formation, alteration, mass transfer and biological activity in mid-ocean ridge, continental margin and subduction zone settings, with consideration of data and new results obtained from international oceanographic programs and from DSDP, ODP and IODP drilling.

Student participation and discussions are based on critical reading of research papers, use of internet-based data, and web-based cruise results. Requirements to obtain credit points are oral or poster presentations and a short written summary of selected themes.

Lecture notes
No formal script will be distributed. Handouts will be given, where necessary. These will consist of the most important diagrams presented in the lectures. The students are expected to take their own notes and consult the literature for more details.

Literature
Lists of literature relevant to the selected topics will be handed out in the course.

This course is offered every 2 years.

651-4057-00L  Climate History and Palaeoclimatology  W  3 credits  2G  G. Haug, A. Martinez-Garcia
Abstract
The course “Climate history and palaeoclimatology gives an overview on climate through geological time and it provides insight into methods and tools used in palaeoclimatic research.

Objective
The student will have an understanding of evolution of climate and its major forcing factors -orbital, atmosphere chemistry, tectonics- through geological time. He or she will understand interaction between life and climate and he or she will be familiar with the use of most common geochemical climate "proxies", he or she will be able to evaluate quality of marine and terrestrial sedimentary palaeoclimate archives. The student will be able to estimate rates of changes in climate history and to recognize feedbacks between the biosphere and climate.

Autumn Semester 2015
Content

Climate system and earth history - climate forcing factors and feedback mechanisms of the geosphere, biosphere, and hydrosphere.

Geological time, stratigraphy, geological archives, climate archives, paleoclimate proxies

Climate through geological time: "lessons from the past"

Cretaceous greenhouse climate

The Late Paleocene Thermal Maximum (PETM)

Cenozoic Cooling

Onset and Intensification of Southern Hemisphere Glaciation

Onset and Intensification of Northern Hemisphere Glaciation

Pliocene warmth

Glacial and Interglacials

Millennial-scale climate variability during glaciations

The last deglaciation(s)

The Younger Dryas

Holocene climate - climate and societies

Planetary Physics and Chemistry

W 3 credits 2G P. Tackley

Abstract

This course aims to give a physical understanding of the formation, structure, dynamics and evolution of planetary bodies in our solar system and also apply it to ongoing discoveries regarding planets around other stars.

Objective

The goal of this course is to enable students to understand current knowledge and uncertainties regarding the formation, structure, dynamics and evolution of planets and moons in our solar system, as well as ongoing discoveries regarding planets around other stars. Students will practice making quantitative calculations relevant to various aspects of these topics through weekly homeworks.

The following gives an overview of the course content and approximate schedule (subject to change).

Lecture notes

Slides and scripts will be posted at the moodle site: https://moodle-app2.let.ethz.ch/course/view.php?id=1658

Literature

It is recommended but not mandatory to buy one of these books:

Fundamental Planetary Science, by Jack J. Lissauer & Imke de Pater (paperback), Cambridge University Press, 2013. (books.ch Fr64.90, amazon.co.uk £35.00, amazon.de €38.61, amazon.com $49.26).

651-4233-00L Geotectonic Environments and Deep Global Cycles W 3 credits 2V M. W. Schmidt, P. Ulmer

Abstract

This course addresses master students interested in integral view of processes operating in various tectonic environments, most specifically divergent and convergent plate margins

Open Choice Modules

Modules from the complete offerings of the Earth Science Program

Electives

Courses can be chosen from the complete offerings of the ETH Zurich and University of Zurich (according to prior agreement with the MSc Committee).

This colloquium comprises geophysical research presentations by invited leading scientists from Europe and overseas, advanced ETH Ph.D. students, new and established ETH scientists with specific new work to be shared with the institute. Topics cover the field of geophysics and related disciplines, to be delivered at the level of a well-informed M.Sc. graduate/early Ph.D. student.

Attendants of this colloquium obtain a broad overview over active and frontier research areas in geophysics as well as opened questions. Invited speakers typically present recent work: Attendants following this colloquium for multiple terms will thus be able to trace new research directions, trends, potentially diminishing research areas, controversies and resolutions thereof, and thus build a solid overview of state and direction of geophysical research. Moreover, the diverse content and delivery style shall help attendants in gaining experience in how to successfully present research results.

**651-1851-00L**

**Introduction to Scanning Electron Microscopy**

**Objective**

Introduction in scanning electron microscopy and microanalysis. Obtain practical experience in operating a SEM.

**Content**

**Prerequisites / notice**

Full day block course after the end of HS

**Literature**

**651-0048-00L**

**Electron Microprobe Course**

**Objective**

**Content**

Physical principles of electron optics, interaction of electrons with matter, production of X-rays, interaction of X-rays with matter. Detection of X-rays. Laboratory work in the field of Earth sciences.

**Prerequisites / notice**

Full day course extending over the entire autumn semester

**Literature**

**327-0703-00L**

**Electron Microscopy in Material Science**

**Objective**

A comprehensive understanding of the interaction of electrons with condensed matter and details on the instrumentation and methods designed to use these probes in the structural and chemical analysis of various materials.

**Content**

A comprehensive understanding of the interaction of electrons with condensed matter and details on the instrumentation and methods designed to use these probes in the structural and chemical analysis of various materials.

**Prerequisites / notice**

Max. 8 participants (incl. PhD students and external participants).

**Literature**

- Erni: Aberration-corrected imaging in transmission electron microscopy, Imperial College Press (2010, and 2nd ed. 2015)

**651-3541-00L**

**Exploration and Environmental Geophysics**

**Objective**

Overview and understanding of the most important geophysical methods: Potential field methods (Gravimetrics and Magnetics), Electrical and electromagnetic methods, Refraction and reflection seismics, Georadar. Discussion of survey design, sources and receivers and data processing.

**Content**

**Literature**

**651-4086-00L**

**Experimental Methods in Petrology**

**Objective**

Overview of the most common experimental methods employed in petrology to determine thermodynamic and physical properties and phase equilibria of minerals, mineral assemblages, magmas and fluids. The basic principals of low, moderate, high and ultrahigh pressure devices are discussed combined with an introduction into the synthesis of starting materials and the evaluation of run products.
Objective

This course shall provide the basics of experimental petrology. The principal goals are the acquisition of basic knowledge about experimental equipment employed in petrology and the design and setup of an experimental study targeted to obtain quantitative data on phase relations, thermodynamic, kinetic and rheologic properties of earth materials as well as the examination, analysis and evaluation of experiments. At the end of the course, the participants should be able to evaluate experimental data independently and design appropriate experiments on their own.

Content

The course 'Experimental methods in petrology' covers the following subjects:

1. Introduction and historical summary of experimental petrology
2. Experimental methods at ambient pressure (1 bar) with practical exercise to determine the free energy of formation of wustite (FeO)
3. Experimental buffering techniques (phase rule, buffering of partial pressures of gases and supercritical fluids, buffering of mixed volatile phases at elevated pressures, buffering of activities and solid-solid solutions in solid phases
4. Experimental methods at moderate pressures: externally (cold seal) and internally (HPV) heated gas-pressure apparatus with practical demonstration/exercise
5. High-pressure solid-media experimental techniques (piston cylinders)
6. Ultra-high-pressure experimental techniques (multi-anvil apparatus, diamond-anvil-cells (DAC)
7. Evaluation of petrologic experiments (preparation of run products, analytical and spectroscopic methods of examination and quantification)

The practical work in the laboratories are conducted (with the exception of exercise #1) on a small research project where the various techniques and equipment are demonstrated and the practical use is trained.

Lecture notes

A summary of the material presented in the lectures are distributed weekly.

Literature

Currently, there is no comprehensive book available that summarizes the most important aspects of experimental petrology; publications relating to individual subjects are referred during the lectures.

Prerequisites / notice

This course addresses to a public (master and PhD students) that is interested in an introduction to experimental research in petrology, but does not require basic knowledge in experimental methods. However, basic knowledge in petrology and physical chemistry (thermodynamics) is required to follow the course.

Abstract

Presentations and literature discussions on current research topics in crustal fluids and mineral resources research.

Objective

Provide a deeper understanding in the selected research fields on hydrothermal processes and ore deposit formation. This is achieved by literature work as well as discussions of current BSc, MSc and PhD projects at the institute.

Content

Themen zur Hydrothermalgeochemie, Modellierung von Fluidprozessen, Mikroanalytik, Isotopen-Tracing von hydrothermalen Transportprozessen und der Bildung von Erzlagertätten

Prerequisites / notice

Register in MyStudies and send mail to achille.marsala@erdw.ethz.ch, to be placed on distributor for the evolving program

651-4114-00L Illustrations in Natural History (University of Zürich) W 1 credit 1V University lecturers

Abstract

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: BIO271

Objective

We offer the opportunity to develop drawing skills which can be applied for scientific studies and publications. We emphasise the reproduction of natural objects with and without interpretations. Technical and 3D-drawings as well as descriptive geometry are not dealt with in this course.

Content

In this course, both classic and computer-based drawing and illustration-techniques are presented. We begin with sketches with the pencil and continue with Indian ink which we use for drawings using hatchings and dots. Finally, one drawing is carried out in detail with a pencil. This drawing will then be scanned and processed in PhotoShop. The emphasis is on practicing the methods.

Lecture notes

- Not mandatory!

Literature

Recommended:

Prerequisites / notice

Please bring pencils (HB and 2H) as well as Indian ink-pens or fine black markers. In the second half of the semester, the students may bring their own laptops with PhotoShop because usually, we do not have enough computers in the lecture hall for all.

651-4273-00L Numerical Modelling in Fortran W 3 credits 2V P. Tackley

Abstract

This course gives an introduction to programming in FORTRAN95, and is suitable for students who have only minimal programming experience. The focus will be on Fortran 95, but Fortran 77 will also be covered for those working with already-existing codes. A hands-on approach will be emphasized rather than abstract concepts.

Objective

FORTRAN 95 is a modern programming language that is specifically designed for scientific and engineering applications. This course gives an introduction to programming in this language, and is suitable for students who have only minimal programming experience, for example with MATLAB scripts. The focus will be on Fortran 95, but Fortran 77 will also be covered for those working with already-existing codes. A hands-on approach will be emphasized rather than abstract concepts, using example scientific problems relevant to Earth science.

Lecture notes

See http://jupiter.ethz.ch/~pjt/FORTRAN/FortranClass.html

651-4273-01L Numerical Modelling in Fortran (Project) W 1 credit 1U P. Tackley

Prerequisite: 651-4273-00L Numerical Modelling in Fortran

Abstract

This course gives an introduction to programming in FORTRAN95, and is suitable for students who have only minimal programming experience. The focus will be on Fortran 95, but Fortran 77 will also be covered for those working with already-existing codes. A hands-on approach will be emphasized rather than abstract concepts.

Objective

FORTRAN 95 is a modern programming language that is specifically designed for scientific and engineering applications. This course gives an introduction to programming in this language, and is suitable for students who have only minimal programming experience, for example with MATLAB scripts. The focus will be on Fortran 95, but Fortran 77 will also be covered for those working with already-existing codes. A hands-on approach will be emphasized rather than abstract concepts, using example scientific problems relevant to Earth science.

Content

The project consists of writing a Fortran program to solve a problem agreed upon between the instructor and student; the topic is often related to (and helps to advance) the student's Masters or PhD research. The project is typically started towards the end of the end of the main Fortran class when the student has acquired sufficient programming skills, and is due by the end of Semesterprüfung week.

Lecture notes

See http://jupiter.ethz.ch/~pjt/FORTRAN/FortranProject.html
Seminar in Applied and Environmental Geophysics

**Objective**

Spezielle Vertiefung paläontologischer Kenntnisse.

**Content**

Vorträge von Institutsangehörigen und eingeladenen Gästen aus dem In- und Ausland über aktuelle Themen aus dem Gesamtgebiet der Paläontologie (Paläobotanik, Paläozoologie und Mikropaläontologie) mit anschliessender Diskussion.

---

**651-1001-00L**  
**Physics of Glaciers**  
**W**  
**3 credits**  
**3G**  
**M. Lüthi, G. Jouret, F. T. Walter**

**Abstract**

Application of basic physical concepts to glaciers and ice caps. Understanding glaciers and ice sheets with simple physical concepts. Topics include the reaction of glaciers to the climate, ice rheology, temperature in glaciers and ice sheets, glacier hydrology, basal motion and calving glaciers. A special focus is the current development of Greenland and Antarctica.

**Objective**

The course outlines the physical principles governing the gravity-driven motion of glacier ice. This is applied to understand the response of glaciers and ice sheets to changes in their environment. Polar ice caps, ice streams and mountain glaciers and their recent rapid changes are discussed.

**Content**

The dynamics of glaciers and polar ice sheets is the key requisite to understand their history and their future evolution. We will take a closer look at ice deformation, basal motion, heat flow and glacier hydraulics. The specific dynamics of tide water and calving glaciers is investigated, as is the reaction of glaciers to changes in mass balance (and therefore climate).

**Lecture notes**

Good high school mathematics and physics knowledge required.

651-1091-00L Colloquium Department Earth Sciences E- Dr 0 credits 1K H. Busemann

Abstract
Invited speakers from the entire range of Earth Sciences.

Objective
Selected themes in sedimentology, tectonics, paläontology, geophysics, mineralogy, paleoclimate and engineering geology on a regional and global scale.

Content
According to variable program.

Lecture notes
No

Literature
No

651-2613-00L Humangeography III (Geographies of Difference) W 5 credits 1G+2S University lecturers

Abstract
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: GEO232

Prerequisite: Human Geography II (UZH Module Code: GEO122)

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Objective
Teil GEO232.1: Das Seminar verfolgt das Ziel, ein tieferes Verständnis für sozialwissenschaftliche Grundlagen der Humangeographie zu gewinnen.

Content
- Sie vertiefen ihre theoretischen, empirischen und methodischen Fähigkeiten in folgenden Themenbereichen:
  - Gesellschaft und Raum
  - Gesellschaft und Entwicklung
  - Gesellschaft und natürliche Umwelt/Ressourcen
  - Offenheit und Geschlossenheit in Wirtschaft und Gesellschaft
  - Chancen und Herausforderungen einer globalisierten Weltwirtschaft

Lecture notes
PowerPoint-slides (German)

Literature

651-2601-00L Human Geography I: One Earth - Many Worlds (University of Zurich) W 3 credits 2V University lecturers

Abstract
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: GEO972

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Objective
To get an overview about basic research questions and principles of Human Geography

Content
(1) Society and space (2) Society and development (structure and dynamic of population, urbanisation, disparities (3) Society and natural environment (natural resources; food security, sustainability)

Lecture notes
PowerPoint-slides (German)

651-1617-00L  Geophysical Fluid Dynamics and Numerical Modelling Seminar  

W  Dr  0 credits  1S  P. Tackley, M. D. Ballmer, T. Gerya, D. A. May

651-4931-00L  Heat and Mass Transfers in Magmatology  

Abstract  Heat and mass transfers in the crust control many aspects of the differentiation of our planet, including (1) type of volcanic eruptions we should expect at the surface of our planet, (2) the volcanic/plutonic ratio in the crust, and (3) how volcanic degassing occurs, with important consequences on the climate response following volcanic eruptions.

Objective  The goal of this class is to learn about the modern methods and ideas on heat and mass transfers in magmatology through recently published papers and computer softwares. The class will allow students to explore some of the most challenging concepts in this field, and become familiar with state-of-the-art techniques to model these processes.

Content  The class will focus mostly on reading recent literature on topics of interests, and will contain some computer exercises to allow students to work by themselves on some well-defined problems.

651-1091-02L  Geological Colloquium  

E- Dr  0 credits  2K  J.P. Burg, P. Nievergelt

Abstract  Invited speakers from the entire range of Earth Sciences.

Objective  Selected themes in sedimentology, tectonics, paläontology, geophysics, mineralogy, paleoclimate and engineering geology on a regional and global scale.

Content  According to variable program.

Literature  No

Prerequisites / notice  The presentations are held in German. Membership of the Geological Society in Zurich is not required.

▶ Compulsory Electives in Humanities, Social and Political Sciences

Recommended GESS compulsory elective courses (Type B) for D-ERDW.

The MSc Project Proposal is only offered in autumn semester, a registration in spring semester is subject to special approval by the study director.

All students writing the MSc Project Proposal must attend an introductory lecture on "Conduct as a Scientist" by Prof. Tapio Schneider held in autumn semester.

Abstract  The main purpose of the Master Project Proposal is to help students organize ideas, material and objectives for their Master Thesis, and to begin development of communication skills.

Objective  The main objectives of the Master Project Proposal are to demonstrate the following abilities:
- to formulate a scientific question
- to present scientific approach to solve the problem
- to interpret, discuss and communicate scientific results in written form
- to gain experience in writing a scientific proposal

Prerequisites / notice  All students writing the MSc Project Proposal must attend an introductory lecture on "Conduct as a Scientist" by Prof. Tapio Schneider held in autumn semester.

Only students who fulfill the following criteria are allowed to begin with their master thesis:
- successful completion of the bachelor programme;
- fulfilling of any additional requirements necessary to gain admission to the master programme;
- have successful completed the MSc Project Proposal

Additional registration required in the Learning Agreement Tool on http://la.erdw.ethz.ch required.

▶ Course Units for Additional Admission Requirements

The courses below are only available for MSc students with additional admission requirements.

| 651-3001-AAL| Dynamic Earth I and II  
Enrolment only for MSc students who need this course as additional admission requirement. | 11     | E- | E. Kissling, M. Schönächler                                                                     |
|             | Abstract  
Provides a basic introduction into Earth Sciences, emphasizing different rock-types and the geological rock-cycle, as well as introduction into geophysics and plate tectonic theory. |        |    |                                               |
|             | Objective  
Understanding basic geological and geophysical processes |        |    |                                               |
|             | Content  
Overview of the Earth as a system, with emphasis on plate tectonic theory and the geological rock-cycle. Provides a basic introduction to crystals and minerals and different rock-types. Lectures include processes in the Earth’s interior, physics of the earth, planetology, introduction to magmatic, metamorphic and sedimentary rocks. Exercices are conducted in small groups to provide more in depth understanding of concepts and content of the lectures. |        |    |                                               |
|             | Lecture notes  
werden abgegeben. |        |    |                                               |
|             | Literature  
|             | Prerequisites / notice  
Exercises and short excursions in small groups (10-15 students) will be lead by student assistants. Specific topics in earth sciences will be discussed using examples and case studies. Hand samples of the major rock types will be described and interpreted. Short excursions in the region of Zurich will permit direct experience with earth science processes (e.g. earth surface processes) and recognition of earth science problems and solutions relevant for modern society (e.g. building materials, water resources). Working in small groups will allow for discussion and examination of actual earth science themes. |        |    |                                               |
|             |           |        |    |                                               |
| 651-3341-AAL| Lithosphere  
Enrolment only for MSc students who need this course as additional requirement. | 3      | E- | E. Kissling, S. Wiemer                                                                       |
|             | Abstract  
Comprehensive understanding of role and evolution of oceanic and continental lithosphere in global plate tectonics and evolution of earth. Understanding principles of theoretical and experimental geothermics and fundamentals of mantle and lithosphere rheologies. |        |    |                                               |
|             | Objective  
Comprehensive understanding of role and evolution of oceanic and continental lithosphere in global plate tectonics and evolution of earth. Understanding principles of theoretical and experimental geothermics and fundamentals of mantle and lithosphere rheologies. |        |    |                                               |

**Tectonics**

**Enrolment only for MSc students who need this course as additional admission requirement.**

**Abstract**

Comprehensive understanding of role and evolution of oceanic and continental lithosphere in global plate tectonics and evolution of earth. Understanding principles of theoretical and experimental geothermics and fundamentals of mantle and lithosphere rheologies.

**Objective**

Comprehensive understanding of role and evolution of oceanic and continental lithosphere in global plate tectonics and evolution of earth. Understanding principles of theoretical and experimental geothermics and fundamentals of mantle and lithosphere rheologies.

**Content**

**Lecture notes**

Detailed scriptum in digital form and additional learning modules (www.lead.ethz.ch) available on intranet. See list in scriptum.

**Literature**

see "Content"

---

**Chemistry I and II**

**Enrolment only for MSc students who need this course as additional admission requirement.**

**Abstract**

General Chemistry I and II: Chemical bond and molecular structure, chemical thermodynamics, chemical equilibrium, kinetics, acids and bases, electrochemistry

**Objective**

Introduction to general and inorganic chemistry. Basics of the composition and the change of the material world. Introduction to the thermodynamically controlled physico-chemical processes. Macroscopic phenomena and their explanation through atomic and molecular properties. Using the theories to solve qualitatively and quantitatively chemical and ecologically relevant problems.

**Content**

1. Stoichiometry
2. Atoms and Elements (Quantenmechanical Model of the Atom)
3. Chemical Bonding
4. Thermodynamics
5. Chemical Kinetics
6. Chemical Equilibrium (Acids and Bases, Solubility Equilibria)
7. Electrochemistry

Nivaldo J. Tro

Chemistry - A molecular Approach (Pearson), Chapter 1-18

**Literature**

Housecroft and Constable, CHEMISTRY

Oxtoby, Gillis, Nachtrieb, MODERN CHEMISTRY

---

**Stochastics (Probability and Statistics)**

**Enrolment only for MSc students who need this course as additional admission requirement.**

**Abstract**

Introduction to basic methods and fundamental concepts of statistics and probability theory for non-mathematicians. The concepts are presented on the basis of some descriptive examples. Learning the statistical program R for applying the acquired concepts will be a central theme.

**Objective**

The objective of this course is to build a solid fundament in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

**Content**

From "Statistics for research" (online)

Ch 1: The Role of Statistics
Ch 2: Populations, Samples, and Probability Distributions
Ch 3: Binomial Distributions
Ch 6: Sampling Distribution of Averages
Ch 7: Normal Distributions
Ch 8: Student's t Distribution
Ch 9: Distributions of Two Variables

From "Introductory Statistics with R (online)"

Ch 1: Basics
Ch 2: The R Environment
Ch 3: Probability and distributions
Ch 4: Descriptive statistics and tables
Ch 5: One- and two-sample tests
Ch 6: Regression and correlation

<td>Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.</td>

<td>- to prepare tuition units involving complex learning matter at a high specialist level which are suitably tailored to the recipients, and to teach these in a manner conducive to learning.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Students conduct a series of "classical" biological school experiments and therefore gain practice and experience in this area.

Specialized Biology Course with an Educational Focus

Demanding biological topics are dealt with under consideration of the special needs of persons involved in teaching. The module comprises

1) Lecture (Tues. 08.00-09.45 hrs)
2) Colloquium (every second Tues. 10.15-12.00 hrs., begins on first lecture day)
3) Seminar with presentation (every second Tues. 10.15-12.00 hrs., begins in second lecture week)
4) Semester thesis in a research group (7 weeks)

The Specialized Biology Course with an Educational Focus (12 CP) can be acknowledged, in agreement with the advisor of the respective elective major, as one of the two obligatory research projects (each 15 CP). In such a case, additional 3 CP must be obtained in another course.

In case of overbooking of the course, students enrolled in the Teaching Diploma in Biology will have priority for registration.

The course is organized jointly with the University of Zurich (Fachbereich Biologie) and is held at the Life Science Zurich Learning Center of the ETH Zurich and the University of Zurich.

551-0963-02L Specialized Biology Course with an Educational Focus II: Teaching Diploma

Abstract
Specialized aspects of biology are dealt with under the viewpoint of their presentation, their historical development, their significance for the field, the individual and society.

Objective
The goal is to promote the ability to understand biological concepts, principles and their interrelationships and to communicate specialist knowledge to various groups of recipients in an understandable manner.

Content
Demanding biological topics are dealt with under consideration of the special needs of persons involved in teaching. The module:

1) Lecture (Tues. 08.00-09.45 hrs)
2) Colloquium (every second Tues. 10.15-12.00 hrs., begins on first lecture day)
3) Seminar with presentation (every second Tues. 10.15-12.00 hrs., begins in second lecture week)
4) Semester thesis in a research group (3.5 weeks)

551-0963-00L Specialized Biology Course with an Educational Focus

Abstract
Specialised Courses in the Respective Subject with an Educational Focus in Biology ONLY for students upgrading TC to Teaching Diploma.

Objective
The goal is to promote the ability to understand biological concepts, principles and their interrelationships and to communicate specialist knowledge to various groups of recipients in an understandable manner.

Content
Demanding biological topics are dealt with under consideration of the special needs of persons involved in teaching. The module:

1) Lecture (Tues. 08.00-09.45 hrs)
2) Colloquium (every second Tues. 10.15-12.00 hrs., begins on first lecture day)
3) Seminar with presentation (every second Tues. 10.15-12.00 hrs., begins in second lecture week)
4) Semester thesis in a research group (3.5 weeks)

Abstract | Selected topics in general chemistry:
- The language of chemistry
- Chirality and stereochemistry
- Oxidation of water
- Chemistry of the atmosphere

Objective | In this course, participants acquire extended and more in-depth knowledge of selected chemistry topics. The selection is based on a large extent on the partial aspects of chemistry that are typically taught at high school. By gaining a broader understanding, teachers are put in a position where they can comprehend the topics that are to be taught in a wider and, to some extent, unconventional context and critically process these in respect of their teachability and learnability. At the same time, interrelationships between the classical sub-disciplines of chemistry are highlighted, along with the unique features of chemistry as one of the central natural sciences.

Content | Content of the four modules:
- The language of chemistry: Concepts, formulas, aesthetics, and philosophical aspects
- Chirality and stereochemistry: Selected aspects, origin of biomolecular chirality, inorganic chemistry
- Cosmochemistry
- Chemistry of the atmosphere

Lecture notes | Foilien und ausgewählte Literatur werden zur Verfügung gestellt.
Literature | Ausgewählte Artikel aus der Primärliteratur werden vorgestellt, kommentiert und zur Lektüre empfohlen.
Prerequisites / notice | FV A (gelesen im Frühjahrsemester) und FV B (gelesen im Herbstsemester) bauen nicht aufeinander. Die Reihenfolge der Belegung ist somit indifferent

Abstract | Implementing findings from research into teaching and learning for chemistry lessons and coverage of subject-specific teaching and learning specialties.
Objective | Among other things, students are put in a position where they can
- divide up the subject matter into contents that can be learned by heart or accessed intellectually, and communicate these contents.
- break down technically complex contents to the right level for a class and still present these in a stringent, error-free manner in their simplified form.
- establish which subject matter can be presented with which teaching techniques and methods that have been recognised as efficient in teaching terms, and adapt these tools to the learning content in question.
- plan school experiments, incorporate them in lessons, perform them in accordance with all the rules of the art, and also evaluate them in a beneficial manner.
- assess pupils’ prior knowledge, clarify it in greater detail and take it into account for planning lessons.
- design a sequential curriculum suitable for the levels in question and put it into practice.
- reliably identify stumbling blocks in the contents and get round these.

Content | Schwerpunkte im ersten Studiensemester bilden die folgenden Themen:
- Auswahl gymnasiumsrelevanter Lerninhalte
- Modellbegriff in den Naturwissenschaften, insbesondere der Chemie
- Sprache und Fachsprache im Chemieunterricht
- Wechselspiel zwischen Beobachtungen in der realen Welt und Deutungsversuchen auf der Modell-Ebene
- Interdisziplinarität mit Biologie, Mathematik und Physik
- Leistungserhebung und -beurteilung in Theorie- und Laborunterricht
- Atomanalysen und chemische Bindung
- Mathematische Beschreibung chemischer Systeme (z.B. Stöchiometrie und Gleichgewichtssysteme)
- Auswahl, Konzeption, Einbettung, Vorbereitung, Durchführung, Nachbereitung und Auswertung von Demonstrations- und Schüler-Experimenten

Prerequisites / notice

Der Chemieunterricht am Gymnasium soll einerseits dem zukünftigen Nichtnaturwissenschaftler ein grundlegendes Rüstzeug an chemischen Kenntnissen und Fähigkeiten für den Alltag an die Hand geben, andererseits aber auch auf ein naturwissenschaftlich orientiertes Hochschulstudium vorbereiten können. Diese beiden Anforderungen sind im Unterricht gleichermaßen zu berücksichtigen.

Da viele Lerninhalte zudem zwingend sequentiell und einander benützend strukturiert sind, ist dem logischen und aus Schülerperspektive verständlichen Aufbau des Unterrichts besonderes Augenmerk zu schenken. Dies bedeutet eine besonders feine Abstimmung von fachlichen Inhalten unterschiedlichen Niveaus und der für ihre Vermittlung eingesetzten didaktischen Methoden und Techniken auf die kognitive Leistungsfähigkeit der Lernenden.

Anhand der Diskussion ausgearbeiteter und bewährter Beispiele, aber auch durch selbständiges Probearbeiten und mit Hilfe selbst zu erstellender kleiner Unterrichtsbausteine soll die zukünftige Lehrkraft befähigt werden, einen den spezifischen Rahmenbedingungen angepassten Unterricht zu konzipieren und durchzuführen, der diesem hohen Qualitätsanspruch genügen kann.
Prerequisites / notice
Science promised us truth, or at least a knowledge of such relations as our intelligence can seize: it never promised us peace or happiness
Gustave Le Bon

Physicists learned to realize that whether they like a theory or they don't like a theory is not the essential question. Rather, it's whether or not the theory gives predictions that agree with experiment.
Richard Feynman, 1985

402-0944-00L
Science in School (Current Topics for the Classroom) W 2 credits 2G C. Wagner, A. Vaterlaus

Content
Enrolment in Physics Didactics I (402-0910-00L) and Physics Didactics II (402-0910-00L) is mandatory.

402-0910-00L
Physics Didactics I: Special Didactics of Physics Teaching W 4 credits 3G M. Mohr

Limited number of participants.
Further information is available from the lecturer via email: mamohr@ethz.ch

Simultaneous enrolment in Introductory Internship Physics - course 402-0920-00L - is compulsory for Teaching Diploma Physic

Content
Thematical Schwerpunkte
Fachspezifisches: Sachstrukturen der gängigen Unterrichtsthemen, Alltagsbezüge, Fehlvorstellungen, Demonstrations- und Schülerexperimente, Arbeitsmittel zu physikalischen Themen des Grundlagen- und Schwerpunktunterrichts
Einsatz verschiedener Unterrichtsmaterialien: Experimente, Computer, Taschenrechner, Video, Simulation Unterrichtsformen: Lernaufgabe, Werkstatt, Puzzle, Projekt, Gruppenarbeit, Praktikum Lernformen
Interaktive Lehr-Lernveranstaltung mit Vorträgen und Demonstrationen des Dozenten, studentischer Einzel- und Kleingruppenarbeit, kurzen Präsentationen der Studierenden, Vertiefung der Inhalte durch Bearbeitung von Aufträgen ausserhalb der Kontaktstunden

Teaching science in Higher Education W 2 credits 1V G. Schiltz

Abstract
This course imparts fundamental didactic concepts that are relevant to teaching science in a Higher Education context.

Objective
Students are able to characterize and to discuss the model of outcomes based education.
Students are able to transfer the basic concepts of this model (ILO, TLA, assessment, constructive alignment) to science education.

- Presentation and discussion of current research.
- Distributed electronically.
- Distributed electronically.
- Distributed electronically.

**Abstract**

- This seminar is open for staff members at the Center for Comparative and International Studies, CIS.
- Colloquium for master and doctoral students preparing a thesis in the history of technology.
- In his seminal monograph "The Structure of Scientific Revolutions" Thomas Kuhn referred to an author who anticipated some of his groundbreaking ideas. That was, however, an understatement: Ludwik Fleck (1896-1961), a doctor, microbiologist and bacteriologist, forgotten for a long time, defended a collective constructivism, sociologically informed.
- The seminar aims at introducing into the work of Ludwik Fleck with special regard to the philosophy of science. It gives also the opportunity to deal with basic problems of the subject of the philosophy of science in general, but also of the sociology and parts of the history of science - and all this by well accessible and well written texts.
- The language courses are offered by the ETH and the University of Zurich Language Center (www.sprachenzentrum.uzh.ch).
- The entrepreneurial university is a reality. "In this sense, the entrepreneurial university must maximize profit, countable, in the capture of potential and its potential to develop a systematic classification for them. Then we will look at anomalies in contemporary science and try to assess them according to the topography developed. Students will be requested to assess particular issues with anomalies in working papers up to 6 pages. Anomalies are the salt in the soup of science. Sometimes they can turn into knowledge when they are understood, but this may require a long way of hard work.

**Objective**

- In his seminar staff members of the Center for Comparative and International Studies (CIS) and external guests present and discuss their research.
- In this seminar staff members of the Center for Comparative and International Studies (CIS) and external guests present and discuss their research.
- Presentation and discussion of current research.
- Goals: to identify, discuss, and resolve methodological problems that emerge while elaborating a master or doctoral thesis.
- The representation of such interlevel relations in the pertinent literature will be critically assessed.
- Advantages, disadvantages and possibilities for action within a "fiduciary" versus a "economized" system are investigated.
- Reduction or emergence are relations between different levels of descriptions of a system, its states and properties, or their dynamical behavior. Their general characteristics and differences will be introduced and discussed for selected examples in particular scientific disciplines.
- Students will be requested to assess particular issues with anomalies in working papers up to 6 pages.
- Reduction or emergence are relations between different levels of descriptions of a system, its states and properties, or their dynamical behavior. Their general characteristics and differences will be introduced and discussed for selected examples in particular scientific disciplines.
- Reduction or emergence are relations between different levels of descriptions of a system, its states and properties, or their dynamical behavior. Their general characteristics and differences will be introduced and discussed for selected examples in particular scientific disciplines.

**Prerequisites / notice**

- Follow Bourdieu’s argument, Science Fiction is not to be understood as “Para-Literature”, but as a type of literature with its own poetological discourse. In this course, we would like to approach this specific discourse and get familiar with its programmatic outlines as well as with its crucial debates.
- Following Bourdieu’s argument, Science Fiction is not to be understood as “Para-Literature”, but as a type of literature with its own poetological discourse. In this course, we would like to approach this specific discourse and get familiar with its programmatic outlines as well as with its crucial debates. We are going to read authors such as Darko Suvin, Stanislaw Lemi, Dietmar Dath and Reinhard Jirgl. Next to obviously connected topics (posthuman writing, viruality and fiction, story-telling in unearthly spaces) we will also put a focus on the poetological discourse. In this course, we would like to approach this specific discourse and get familiar with its programmatic outlines as well as with its crucial debates.

<td>Overall, the objective is to become acquainted with the basics of both scientific areas and to make references to military practice. Military psychology is a branch of applied psychology; consequently selected aspects of psychological principles will be covered. Military pedagogy hasn't yet established itself firmly as an independent scientific discipline, it nevertheless can draw on a deep-seated tradition in Switzerland. Thus, the great importance that has been attached to the discussion of education in Swiss society and academia will be taken into account. Subjects:</td>

The lecture is supported by a virtual learning environment containing relevant documents (presentations and texts) and information to further literature.

| 853-0063-00L   | Military History I (with Exercises)                | Z    | 4 credits | 2V+1U | M. Olsansky         |
|                | **Abstract**                                        |      |      |       |                    |
|                | The lecture outlines the development of the armed forces (assets regarding manpower, technology and armament), the concepts of warfare and the actual warfare in the 19th and 20th century. |
|                | **Objective**                                        |      |      |       |                    |
|                | - Distinguish between military history as a subject and historiography as a way of describing events; |
|                | - Analyse the modern developments regarding armed forces and warfare in the context of socio-economic changes; |
|                | - Based on the approach regarding revolution in military affairs, describe the evolution of the armed forces and of warfare; |
|                | - Exemplify the issues regarding the evolution of the combat (First and Second World War, Vietnam War and Algerian War). |
|                | **Content**                                          |      |      |       |                    |
|                | The lecture first examines the bases of the science of (military) history. It focuses on how military history developed from war history, on specific similarities and differences between military history and general historiography, the different ways of dealing with history in Switzerland, Germany, France and in the Anglo-Saxon cultural area (different approaches) as well as on institutions which deal with military history such as universities, military academies, national and international commissions and associations etc. |
|                | **Literature**                                       |      |      |       |                    |

The lecture is structured along the lines of the concept of "Military Revolution" and starts with the formation of modern, European armed forces after the Oranian Army reform in the 17th century. Based on the "Military Revolution" approach, the lecture examines the structural changes regarding the armed forces and the development of warfare from the 18th to the 20th century. Special emphasis will be put on how the battlefield was revolutionized due to the Napoleonic wars, the industrialization in the 19th century, the First World War, the mechanization and totalization during the Second World War and the period of the Cold War. |

| 853-0082-00L   | Strategic Studies I                                 | Z    | 3 credits | 2V | M. Mantovani |
|                | **Abstract**                                        |      |      |       |                    |
|                | The lecture series, spread over two terms, deals with the leading concepts of (military) strategy and theories of war from antiquity to the present. It focuses in particular on the backgrounds of these concepts, their implementation as well as their significance for subsequent conceptual thinking. |
|                | **Objective**                                        |      |      |       |                    |
|                | The participants know the classical conceptions of strategy and war theory from antiquity to the present against their specific background. They recognize aspects, which are useful for the understanding of modern/current conflicts. They are capable of analyzing critically original texts and modern scholarly works in the field of strategic studies. |
|                | **Content**                                          |      |      |       |                    |
|                | The lecture series introduces the basic concepts of strategy and war theory and wants to present the variety of asymmetric warfare throughout history. It critically highlights in particular Sun Tzu, Machiavelli, Jomini, Clausewitz, Moltke, Mahan, Corbett, Douhet, Fuller, Liddell Hart, Tuchsin, Tuchatschewsky, Mao and Che Guevara, etc. (see program). If appropriate, a specific Swiss view is being applied. |
|                | **Lecture notes**                                    |      |      |       |                    |
|                | A textbook with primary sources and a list of further reading are available with the lecturer or electronically on the MILAK website (Lehre und Forschung/Dozentur/Vorlesungsunterlagen). |

Slides are being distributed. |

| 853-0102-00L   | Military Business Administration II - Case Examples | Z    | 3 credits | 2V | M. Keupp |
|                | **Abstract**                                        |      |      |       |                    |
|                | The elective course Military Business Administration II builds on the mandatory course Military Business Administration I and adds to it. It deals with in-depth case studies from international security and economic policy with a special emphasis on the economic and practical relevance of these issues for the Swiss Armed Forces. |
|                | **Objective**                                        |      |      |       |                    |
|                | Students who are intrinsically interested in business-related issues will be provided with a big picture that transcends the micro view of business administration. Students learn how to integrate security and resource-related issues into a global economic analysis and how to derive relevant consequences, particularly economic ones, for Switzerland. |
The program of the course is organized into 14 units of 90 minutes each. The units combine the elements of lecture (where analytical concepts are taught) and application (where these concepts are applied). Additionally, guest lecturers will hold talks on selected issues.

- Swiss economic autarchy - madness or option?
- Global resource positions and world trade: Implications for the Swiss Armed Forces I
- Global resource positions and world trade: Implications for the Swiss Armed Forces II
- Economic causes of military instability
- Aggressive emerging economies: Economic growth and rearmament
- The process of an arms deal
- Costs and financing of a military conflict
- Economic analysis of terrorism
- Economic analysis of cyberwar
- Economic analysis of the present GSOA initiative: Compulsory military service vs. voluntary militia
- Global arms production and international arms trade
- The privatisation of military security
- Standardisation and interoperability: Does NATO membership increase Swiss military efficiency
- Written exam

Lecture notes
As this course has been completely redesigned and is being offered for the first time in the fall semester of 2013, a script is not yet available. However, the lecturer will distribute all necessary course material in time and directly to the students, either in the classroom or by uploading files to a public server.

Literature
The Lecturer will distribute all necessary literature directly to the students by disseminating pdf files or citing links to online references.

Prerequisites / notice
Exam “Military Business Administration I” passed successfully or profound basic knowledge of business administration and economics. The course is open to external participants.

853-0064-00L Military Sociology I

Abstract
Beside of the most important terms of sociology, demographic changes and the related value and structure change will be analysed. The second part focuses on organizational sociology. Thirdly, the course examines to which extent armed forces can be considered as organizations like any other and to which extent they constitute a special case from an organizational and normative point of view.

Objective
Recognize and explain current changes (social change) in modern society (individualisation, pluralisation); describe demographic changes in Switzerland; explain the structures of societies; define issues and fields of research in modern military sociology and explain the foundations of organisational sociology; explain the military in terms of organisational sociology and identify specific traits of the military as an organisation.

Content
Societal change; organizations as societal phenomena; aims, structures, environments of organizations; specifics of the military as an organization; impacts of technological and societal changes on the armed forces in modern societies.

Literature
A reader with a set of texts will be handed out.

<tr>
<td>Abstract</td>
<td>The course offers a historical introduction to modern economic thought. It looks at texts of 'classical economics' as well as 'neo-classical', 20th century texts. In addition, the course addresses some modern contributions in the history of economics - in particular extra-European economic history - and their potential for the enrichment of mainstream economic thought.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>The course is conceptualized as an introduction to the history of economic thought. It acquaints students with the basic tenets of the 'classical economics' through historical accounts of the work of 'worldly philosophers' as well as primary reading of authors such as Adam Smith, David Ricardo and Karl Marx. Further, the course introduces students to 'neo-classical economics' of the 20th century, again looking at authors of particular significance in the furtherance of economic debates such as John Maynard Keynes, Milton Friedman and Friedrich Hayek. The course, however, takes also a closer look at authors whose work is usually situated beyond conventional economic thought, such as Karl Polanyi. Additionally, the course devotes also time to some extra-European economic thought - drain theory, world system and dependency theory, etc. - and its implications/applications in the history of the 20th century. Finally, a particular attention will be paid to some important contributions in the extra-European history of economics and to specific notions such as 'commodity chains', 'divergences' and 'modernization'. Combining these various items, the course aims not simply at introducing students to the 'evolution' of economic thought, but more broadly to ongoing academic debates, political and ideological tensions as well as to critical interventions. The ambition of the course is to inspire through a historical approach and to enrich the 'understanding' of economic theory with a questioning of its underlying structures and tenets and, ultimately, to advance critical thinking among students of modern economics.</td>

History of Art and Architecture III

The history of art and architecture is part of our reality: it confronts us in the historically shaped environment of the city and plays an essential role in the creation of architecture. The historical lectures are therefore part of the fundamental courses of the undergraduate programme in architecture. On the basis of cultural and art-historical research the courses impart knowledge about architecture and art from ancient times to the present. At the same time they sharpen the perception for the conditions and capabilities of building activity in history. Moreover, they convey methodical knowledge and technical language skills and are meant as a preparation for the independent handling of historical sources and scientific literature.

The first one-year course aims at these goals in the form of exemplary epoch representations which through light upon the historical continuities. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

This seminar looks at the concept of failed states and how useful it can be in describing the situation in a country like Yemen. It will also take a closer look at Yemen's political history and its political and social structures. Students are expected to write a paper and make a presentation.

### 853-072S-00L

**History Part One: Europe**

| W | 3 credits | 2V | M. Mülheim |

**Abstract**

Using concrete regional examples, this lecture offers a survey and analysis of the crucial historical transformations that engendered "modernity" in Europe from the late 18th to the mid 20th centuries.

**Objective**

At the end of this lecture course, students can: (a) highlight the most important changes in the "long nineteenth century" in Europe (b) explain their long-term effects; and (c) relate these changes to global developments.

**Content**

The thematic foci include: the economic and social consequences of the industrial revolution, the genesis of political ideologies and social movements, shifts in gender roles, colonialism and imperialism, as well as the emergence of consumerism and a "leisure society."

**Lecture notes**

**Literature**

**Prerequisites / notice**

### 051-036S-00L

**History of Urban Design I**

| W | 2 credits | 2G | V. Magnago Lampugnani |

**Abstract**

The lecture covers the time from the beginning of urban culture until the mid 19th century. With selected examples it emphasizes on the historical planning and methods of European cities. Each specific urban development will be presented within a broader context.

**Objective**

This course analyzes the history of urban architecture primarily in its existing three dimensional form as a complex human artefact. It also explores the inspirations that prompted the creation of this artefact: philosophical and religious concepts, social conditions, property relationships and the mechanisms that exploit the economics of real estate and the influence of building technology. Intellectual, literary or artistic modes of thought will also be assessed with regard to their impact on urban development. Urbanism has its own distinctive approach as a discipline, but it is also clearly responsive to the influence of related disciplines. Study is made of actual cities and urban expansion plans which are in the process of implementation, as well as unrealized projects and visions of the future. These projects sometimes illustrate ways of thinking that are equal to, or clearer than, actual urban situations.

**Content**

In the first semester an introduction to the discipline and the methods are given along the thematic issues from the beginning of urban culture until the mid-19th century.

1. Introduction to the discipline and method: The history of urban design as a historical project
2. Athens and Rome in the ancient world: Myth, self-portrayal and speculation
3. From the spirit of equality to the colonial module: Greek and Roman City foundations
4. From the urban ideal to new cities in the cities of the Middle Ages and the Renaissance
5. Baroque strategies: The new organisation of Rome under Sixtus V, the production of Versailles under Louis XIV and the invention of St. Petersburg
6. The city between Absolutism and Enlightenment: baroque defence-designs, the European colonization of the American continent and the reconstruction of Lisbon
7. Ideology and speculation after the Glorious Revolution: landscapegardens and urban figuring in England from 1650-1850
8. Between modernization, Grandeur and repression: Embellishment in Paris from 1750-1830
9. The construction of the bourgeois city: Georges-Eugène Haussmann transforms Paris into the capital of the 19th century
10. Architectural insertion and plan for the expansion of the city: From the Berlin of Karl Friedrich Schinkel to James Hobrecht
11. Neoabsolute power, bourgeois self-confidence and Marxian Idealism: The Viennese Ringstrasse and Ildefonso Cerdas Ensanche for Barcelona

**Lecture notes**

The lectures are accompanied by a script (two semesters of the bachelor studies), that can be purchased at the chair for the history of art and architecture.

**Literature**

### 051-033S-00L

**History of Art and Architecture I**

| W | 4 credits | 4G | L. Schmitt, U. Schulte-Umberg |

**Abstract**

The lecture conveys historical knowledge about architecture and art as well as methodical knowledge as a preparation for the independent handling of historical sources and scientific literature. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

**Objective**

Acquaintment of basic knowledge of the history of art and architecture, resp. of methodical basic knowledge of historical working.

**Content**

The history of art and architecture is part of our reality: it confronts us in the historically shaped environment of the city and plays an essential role in the creation of architecture. The historical lectures are therefore part of the fundamental courses of the undergraduate programme in architecture. On the basis of cultural and art-historical research the courses impart knowledge about architecture and art from ancient times to the present. Data: 06.12.2017 12:57  Autumn Semester 2015  Page 554 of 1432
The two-semester course offers an introduction to the history and theory of architecture since the beginning of the 19th century up to today. Based on current questions a variety of case studies will be discussed.

The aim is to give an overview on crucial events, works of art, buildings and theories since the beginning of the 19th century up to today. The course should enhance the comprehension of historical and theoretical issues, and allow the students to localize their own practice within a broader historical context.

The subject of this lecture course is the history and theory of architecture since the beginning of the 19th century up to now. It examines the architectural answers to the changing technical inventions and social practices. Consequently, the focus will be less on individual architects or buildings than on various themes that determined the architecture of the period.

http://www.stalder.arch.ethz.ch/courses

Environmental History - Introduction and Overview

Number of participants limited to 100.

Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

Introduction into environmental history; survey of long-term development of human-nature-interrelations; discussion of selected problems. Improved ability to assess current problems from a historical perspective and to critically interrogate one's own standpoint.

Course material is provided on OLAT.

Students are asked to write an exam during the last second session (11.12.2015).

Andreas B. Kilcher (Hrsg.): Metzler Lexikon der deutsch-jüdischen Literatur. 2., aktualisierte und erweiterte Auflage, Stuttgart 2012.

Abstract

The seminar is dedicated to the texts of scandal author Oskar Panizza. Especially the dogmas and beliefs of the Christian churches caused in this perception the grievances in society. Other the subject regimented categories such as ethnicity and gender are denounced by Panizza and discussed in his writings in many ways.

Objective

- Acquiring cultural scientific aspects and perspectives of literature and literary history: alterity, ethnicity, gender constructions, social differences, religion, etc.
- Critical analysis of recent research positions and research questions
- Training problem oriented circumvention of literature and its social functions in historical contexts
- Developing genre typological and narratological foundations
- Independent balancing and writing of one's own research ideas

Content

851-0300-94L Combinatorics: History of a Method Between Mathematics and Literature

- Combinatorics is a procedure shared by various disciplines. In mathematics it concerns the calculation of quanta and probabilities, in philosophy the creation of encyclopedic knowledge, in mysticism the achievement of ecstatic experience, in literature, finally, experimental writing. This course investigates these different forms of combinatorics.

Objective

- comparative understanding of combinatorics as a transcultural and transdisciplinary procedure to generate knowledge
- cultural and epistemic history of combinatorics since the medieval ages
- combinatorics in theology, mysticism and occultism
- combinatorics in philosophy and the natural sciences
- combinatorics in literature and literary theory

Content

Kombinatorik, die Verknüpfung von Elementen, tritt als ein Verfahren in unterschiedlichen Disziplinen und Bereichen des Wissens auf: In der Mathematik, wo man sie zuerst vermutet, ermöglicht sie die Berechnung von Anzahlen und Wahrscheinlichkeiten. Zugleich spielt die Kombinatorik auch eine große Rolle in der Philosophie (als ein Verfahren zur Erzeugung eines enzyklopädischen Wissens), in der Mystik (zur Erlangung ekstatischer Erfahrung) und in der Literatur (als ein experimentelles Schreibverfahren). In dem Seminar werden diese vielfältigen Formen und Funktionen von kombinatorischen Verfahren zwischen mathematischer, philosophischer, mystischer und ästhetischer Anwendung verglichen und analysiert.

851-0300-96L Literature and Photography

The course focuses on writers (such as Henry James, Virginia Woolf, Margaret Atwood, Arthur Miller, Charles Dickens, George Eliot and Oscar Wilde) who by approaching the technique of photography i.e. its optical and chemical procedures have discovered novel modes and methods of representation.

Objective

The course introduces students to what an interdisciplinary approach to literature implies. Students are familiar with the main techniques of photography and relate these to the literary discourse of specifically the 20th century.

851-0300-97L Return of Religions, 'Religious turn', Postsecularity:

Facing the recent return of religion in the public sphere, we discuss concepts of the relation of religion and modernity: the classical theories of secularization and the actual discussion of the post-secular, anthropology of religion, political theology, psychoanalytic and postcolonial theories of religion.

Objective

- The students get familiar with different theories of religion and of the relation of religion and modernity in particular. They discuss the conceptual and epistemological implications of these theories and understand the problems of determining religion, especially under modern conditions. They reflect on the differences and even conflicts between different approaches and face their respective ideas about modernity. The course thus also aims to deepen the self-understanding of our modern standpoint in relation both to one's own religious identity and history and to the religion of 'Others'.

851-0300-98L History and/or "Rigorous" Science?

The difference between the natural sciences and the humanities is often characterized in terms of their relation to history: here rigorous method & transhistorical laws, there historically conditioned, and hence relative, understanding. But the discrepancy between transhistorical immanence and historical constitution figures also within both disciplines. We will discuss precisely this discrepancy.

Objective

- reflect on the ideal of scientific rigor, as well as the historical constitution of all knowledge: question the paradigm of history with regard to both the natural sciences and the humanities; critical reading of theoretical and literary texts that deal with the tension between scientificity and history.

Content

Um deren Verhältnis konkret zu fassen, werden wir die folgenden Oppositionen freilegen und untereinander vergleichen: das reine und das geschichtliche Denken in der Philosophie und Wissenschaftstheorie; die ästhetische Immanenz und historische Bedingtheit literarischen Welten; die Objektivität des Gesetzes und die Historizität der Modellbildung in der Naturbeschreibung. Diese Oppositionen verfolgen wir nicht nur anhand von theoretischen Texten. Wir werden auch literarische Texte heranziehen, und zwar in der Hoffnung, dass die darin erzählten Geschichten den bewussten Gegensatz zwischen zeitloser Immanenz ("Es ist so, weil die Natur der Sache so ist!") und historischer Bedingtheit ("Die Sache ist so, weil sie so worden ist!") dynamisieren, rekombinieren, verwandeln.

Literature

Prerequisites / notice

Readings in German and English, discussions in class in German.
Introduction to English Literature: Science and Fiction

Part I

Abstract

"Plot is to the novelist what experiment is to the scientist." (Lionel Trilling) We will read Emile Zola's essay "The Experimental Novel" and other texts to look on the one hand at the scientific aspect to fiction and fiction writing and on the other hand at the narrative and fictional aspects to science.

Objective

Compare and find out about differences and similarities between natural sciences and fiction/ fiction writing. Maybe become aware that "to conclude that what happens in the laboratory is what happens in the universe requires a leap of the imagination." (Trilling)

Content

We will look at a number of essays and texts on that subject. We will also read Zadie Smith's highly entertaining novel "White Teeth" which has a very elaborate not to say artificial plot. One line of the story is about the geneticist Marcus Challen and the "Future Mouse" he designed.

Literature

Recommended Reading: Zadie Smith: White Teeth; Emile Zola: The Experimental Novel

The Factory of the Origins: Myth and Sciences

Abstract

In which language has God pronounced «Fiat Lux»? Which discourses have dealt with the origins of religions, nations, languages and «races»? Renan questions if the «destiny» of peoples has ever been driven by racial "instinct". In his Schwarze Hefte (2014-2016), Heidegger speaks about the "metaphysics" of «race». The « origins factory» can be related both to oneself as well as to the others.

Objective

More informations will follow in the lecture.

Modern Rome in the Film and the Literature

Abstract

In this course we shall discuss and analyze films and fictional works by modern Italian authors that reflect realities, myths, and dreams about the "Eternal City," Rome. We shall not study classical Rome; rather, the focus will be on a trajectory of works, both written and cinematic, that have settings from the late nineteenth to the late twentieth century.

Objective

The goal is to explore some of the diverse representations of modern Rome that portrayal historical, political, subjective, and/or fantastical elements that have interacted over time to produce the palimpsest that is the city of Rome. Films by Fellini, Rossellini, Pasolini, and Bertolucci as well as some films directed by non-Italians will be viewed and explored; fiction by D'Annunzio, Moravia, Pasolini, and Malerba will be read in conjunction with specific films.

Writing: Precision of Language as a Field of Research

Abstract

When we write a literary text we enter into a set-up for experiments and explore the possibilities ensuing from the specific structure and overall consistency of such a text. Literary writing allows us to go over to another kind of knowledge. Thus, the question: what is it that I want to write about? is replaced by: what do I write?

Objective

In this course we shall analyze and apply conditions and criteria for literary writing on the basis of our own texts. The course is intended for persons who are interested in literary approaches to exactitude. Any attempt to write literature is confronted with an unforeseeable linguistic dynamism whose feasibility is determined by laws and rules quite different from those of science and technology. For the science-oriented writer, experiencing the self-evidence produced by literary approaches in his or her own writing project opens up a field of language with new content and new methods.

Content

In the natural sciences as well as in engineering we set up experiments, analyze equation systems, and formulate theories. In order to complement these practices, the course «Writing» shall pursue precision in literary writing, its choice of word and its self-evidence. When we write a literary text we also enter into a set-up for experiments and explore the possibilities ensuing from the specific structure and overall consistency of such a text. This form of writing takes us from the question: what is it that I want to write about? to the question: what do I write? How do such literary approaches differ from the ways in which the natural sciences use language?

Prerequisites / notice

Voraussetzungen: Die Berechtigung, sich auf ein Projekt mit experimentellem Charakter einzulassen. GUTE BEHERRSCHUNG DER DEUTSCHEN SPRACHE.

Die Teilnehmerzahl ist begrenzt. SCHRIFTLICHE ANMELDUNG erforderlich (bis 31. August): uwe.justus.wenzel@nzz.ch

Behavioral Studies Colloquium

Abstract

This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the macro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their research ideas in relation to behavioral science. The colloquium also features invited research talks.

Objective

Students know and can apply autonomously up-to-date investigation methods and techniques in the behavioral sciences. They achieve the ability to develop their own ideas in the field and to communicate their ideas in oral presentations and in written papers. The credits will be obtained by a written report of approximately 10 pages.
1. **Content**

This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their ideas in so far as they have some relation to behavioral science. The possible research areas are wide and may include theoretical as well as empirical approaches in Social Psychology and Research on Higher Education, Sociology, Modelling and Simulation in Sociology, Decision Theory and Behavioral Game Theory, Economics, Research on Learning and Instruction, Cognitive Psychology and Cognitive Science. Ideally the students (from Bachelor, Master, Ph.D. and Post-Doc programs) have started to start work on their thesis or on any other term paper.

Course credit can be obtained either based on a talk in the colloquium plus a written essay, or by writing an essay about a topic related to one of the other talks in the course. Students interested in giving a talk should contact the organizers (Schinzau, Hoelscher) before the first session of the semester. Priority will be given to advanced / doctoral students for oral presentations. The course credits will be obtained by a written report of approximately 10 pages. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.

2. **851-0609-05L The Economics of Climate Change**

<table>
<thead>
<tr>
<th>W</th>
<th>3 credits</th>
<th>2V</th>
</tr>
</thead>
</table>

   **Abstract**
   Climate change is one of the most pressing issues that governments and the global community have to face. This course outlines the problem of climate change and discusses the economic solutions (both domestic and international) to this problem.

   **Objective**
   This course has a number of objectives: (i) To outline the problem of climate change (ii) to discuss and compare the theoretical economic solutions to combating climate change (iii) to present existing climate change mitigation actions in an economic context and (iv) to outline possible future climate policy issues.

   **Content**
   Economics of pollution, Optimal level of greenhouse gases, International Environmental Agreements, Tradable pollution permit markets, Carbon Taxes, Technological innovation and R&D, The optimal approach to control Climate change, The future of Climate change policy

   **Literature**
   Required reading: Pernan et al. (2003), Natural Resource and Environmental Economics, Pearson Addison Wesley.

   **Prerequisites / notice**
   Prerequisites: The course relies heavily on the concepts and techniques used in basic game theory. Therefore prior knowledge is recommended.

3. **851-0626-01L International Aid and Development**

<table>
<thead>
<tr>
<th>W</th>
<th>2 credits</th>
<th>2V</th>
</tr>
</thead>
</table>

   **Abstract**
   The course gives economic and empirical foundations for a sound understanding of the instruments, prospects and limitations of international development aid.

   **Objective**
   Students have a theoretically and empirically sound understanding of the prospects and limitations of international development aid.

   **Content**
   Introduction to the Determinants of Underdevelopment: History of Aid; Aid and Development: Theories and Empirics; Political Economy of Aid; Experience and Impact of Aid; New Instruments of Aid: e.g. Micro-Finance, Budget-Support; Fair-Trade.

   **Literature**
   Articles and book abstracts will be uploaded to a course website.

4. **151-0757-00L Environmental Management**

<table>
<thead>
<tr>
<th>W</th>
<th>2 credits</th>
<th>2G</th>
</tr>
</thead>
</table>

   **Abstract**
   An environmental management system has the objective to continuously improve the environmental performance of the activities, products and services of a company. The company has to introduce different management procedures. The goal of this lecture is to provide basics and specific procedure to implement the environmental dimension in the planning and decision making processes of an organisation.

   **Objective**
   Students are able to critically discuss the various aid instruments of bi-and multilateral donors and NGOs.

   **Content**
   Introduction to environmental management systems; overview of the ISO 14001 ff. series; methods for environmental evaluation and assessment; integrated management systems; planning methodology and life-cycle-design design; planning example

   **Literature**
   Information about environmental management and environmental management systems will be provided by a CD or mail.

   **Prerequisites / notice**
   Delivery of a case study, worked out in groups. Language: Teaching in English on request.

5. **860-0006-00L Statistical Data Analysis**

<table>
<thead>
<tr>
<th>W</th>
<th>3 credits</th>
<th>3G</th>
</tr>
</thead>
</table>

   **Abstract**
   This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with statistical software such as Stata.

   **Objective**
   Students are able to formulate and implement a regression model for a particular research question and a particular type of data

   **Content**
   The topics covered in the first part of the course are linear and logit regression analysis. Extensions to regression models for ordered, multinomial or censored response variables, as well as for count data

   **Literature**
   Number of participants limited to 20.

   **Prerequisites / notice**
   Students have a sound understanding of linear and logit regression

6. **363-1027-00L Introduction to Health Economics and Policy**

<table>
<thead>
<tr>
<th>W</th>
<th>3 credits</th>
<th>2V</th>
</tr>
</thead>
</table>

   **Abstract**
   Health expenditures constitute about 10% of GDP in OECD countries. Extensive government intervention is a typical feature in health markets. Risk factors to health have been changing with growing importance of lifestyle factors such as smoking, obesity and lack of physical activity. This course gives an introduction to the economic concepts and empirical findings in health economics.

   **Objective**
   Introduce students without prior economics background to the main concepts of health economics and policy to enhance students understanding of how health care institutions and markets function.
The course gives an introduction to the economic concepts and empirical findings in health economics to enhance students understanding of how health care institutions and markets function. First, the three important decisions made by individuals will be analyzed: What determines the health behaviors, like the intensity of preventive measures like sport, that an individual undertakes? What types and amount of personal health care services does an individual demand? How much health insurance coverage will be purchased?

In a second part, the major participants on the supply side of health care markets - physicians, hospitals, nurses and pharmaceutical manufacturers - will be discussed. E.g., how important are financial incentives in the choice of medicine as a career, specialty choice and practice location? What does it mean and imply that a physician is an agent for a patient? How do pharmaceutical firms decide on investments in new products and how can public policy encourage pharmaceutical innovation?

The choices made by society about how health care services are financed and about the types of organizations that supply health care will be addressed in a third part. One important choice is whether a country will rely on public financing of personal health care services or encourage private health insurance markets. How could and should a public health insurance system be designed? What health care services should be included or excluded from a public system? Another important choice is whether a society relies on government provision of health care services, private provision by not-for-profit or for-profit organizations or some combination. The advantages and disadvantages of the alternatives will be discussed to provide a framework for analyzing specific types of health care systems.

For students taking only the course 'Principles of Microeconomics' there is a shorter version of the same book:

The book can also be used for the course 'Principles of Macroeconomics' (Sturm)

For students taking only the course 'Principles of Microeconomics' there is a shorter version of the same book:

Complementary:

-Development of the concepts and tools to understand these risks and master them.

-Working knowledge of the main concepts and tools in finance (Portfolio theory, asset pricing, options, real options, bonds, interest rates, inflation, exchange rates)

-Strong emphasis on challenging assumptions and developing a systematic understanding of financial markets and their many dimensional risks
1- The Financial Crises: what is really happening? Historical perspective and what can be expected in the next decade(s). Bubbles and crashes. The illusion of the perpetual money machine.

2- Risks in financial markets
- What is risk?
- Measuring risks of financial assets
- Introduction to three different concepts of probability
- History of financial markets, diversification, market risks

3- Introduction to financial risks and its management.
- Relationship between risk and return
- Portfolio theory: the concept of diversification and optimal allocation
- How to price assets: the Capital Asset Pricing Model
- How to price assets: the Arbitrage Pricing Theory, the factor models and beyond

4- Financial markets: role and efficiency
- What is an efficient market?
- Financial markets as valuation engines: exogeneity versus endogeneity (reflexivity)
- Deviations from efficiency, puzzles and anomalies in the financial markets
- Financial bubbles, crashes, systemic instabilities

5- An introduction to Options and derivatives
- Calls, Puts and Shares and other derivatives
- Financial alchemy with options (options are building blocks of any possible cash flow)
- Determination of option value; concept of risk hedging

6- Valuation and using options
- A first simple option valuation model
- The Binomial method for valuing options
- The Black-scholes model and formula
- Practical examples and implementation
- Realized prices deviate from these theories: volatility smile and real option trading
- How to imperfectly hedge with real markets?

7- Real options
- The value of follow-on investment opportunities
- The timing option
- The abandonment option
- Flexible production
- Conceptual aspects and extensions

8- Government bonds and their valuation
- Relationship between bonds and interest rates
- Real and nominal rates of interest
- Term structure and Yields to maturity
- Explaining the term structure
- Different models of the term structure

9- Managing international risks
- The foreign exchange market
- Relations between exchange rates and interest rates, inflation, and other economic variables
- Hedging currency risks
- Currency speculation
- Exchange risk and international investment decisions

Abstract
The course objective is to: understand the role of agriculture in the development process; learn about the relevant actors, the small-scale farmers, and how to integrate them into economic development and to be able to derive sound policy measures.

Content
Development economics II is a follow-up of "Development economics I". The main topic is the role of agriculture and in the development process. The main features of this sector will be presented. In many developing countries that are at the beginning of economic development the largest share of the population is often involved in agriculture. In agriculture the production factor land is more important than in other sectors. Agriculture together with fisheries is the only sector that produces food. Food can either be produced locally or imported.

Farmers, even small-scale farmers, are integrated in the monetary world. Trade is very important for growth, food security and environment conservation.

The following topics will be tackled: role of agriculture in economic development, definition of sustainability, role of the various stakeholders in the agricultural sector.

Lecture notes
PPT and selected articles. A monograph is also distributed.

Literature

Prerequisites / notice
Prerequisite: Attendance of introductory micro- and macroeconomics classes. Development economics I & II are one unit.
Discovering Management offers an integrated learning system, which combines in an innovative format a set of lectures, advanced
S. Häfliger
P. Baschera
Economic understanding of agricultural markets and the aspects of the world food problem.
Part I: Principles of agricultural economics
Microeconomic analysis of supply, demand, and price determination in agricultural markets.
Part II: Aspects of globalization, development, natural resources and public health.
Part III: Analysis of selected agricultural and commodity markets; grains, oilseeds, sugar, ethanol and crude oil, milk and meat.

Open- and User Innovation

W 3 credits

G 2

S. Häfliger, S. Spaeth

Abstract
The course introduces the students to the long-standing tradition of actively involving users of technology and other knowledge-intensive products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies.

Objective
The course includes both lectures and exercises alternately. The goal is to understand the opportunity of user innovation for management and develop strategies to harness the value of user-developed ideas and contributions for firms and other organizations.

The students actively participate in discussions during the lectures and contribute presentations of case studies during the exercises. The combination should allow to compare theory with practical cases from various industries.

The course presents and builds upon recent research and challenges the students to devise innovation strategies that take into account the availability of user expertise, free and public knowledge, and the interaction with communities that span beyond one organization.

Grading is based on the final exam, the class presentations (including the slides) as well as class participation.

This course on user innovation extends courses on knowledge management and innovation as well as marketing. The students are introduced to the long-standing tradition of actively involving users of technology and other knowledge-intensive products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies. Theoretical underpinnings taught in the course include models of innovation, the structuration of technology, and an introduction to entrepreneurship.

The slides of the lectures are made available and updated continuously through the SMI website:

Relevant literature for the exam includes the slides and the reading assignments. The corresponding papers are either available from the author online or distributed during class.

Reading assignments: please consult the SMI website:

Discovering Management

W 3 credits

G 3

Abstract
Discovering Management offers an introduction to the field of business management and entrepreneurship for engineers and natural scientists. The module provides an overview of the principles of management, teaches knowledge about management that is highly complementary to the students' technical knowledge, and provides a basis for advancing the knowledge of the various subjects offered at D-MTEC.

Objective
Discovering Management offers an integrated learning system, which combines in an innovative format a set of lectures, an advanced business game simulation and a set of group exercises involving industry speakers (ranging from leading venture capitalists to executives at established corporations). Unlike more traditional courses, the learning model for Discovering Management involves 'learning by doing'. While the 13 different lectures, in-class discussions and assigned readings provide the theoretical and conceptual foundations, the experiential learning outcomes result from the interrelated group activities: 1) the interactive case studies and exercises, 2) the business game simulation.

By discovering the key aspects of entrepreneurial management, the purpose of the course is to advance students’ understanding of factors driving company success, where success is understood as a broad construct including financial return, employee, customer and supplier satisfaction as well as social and ecological responsibility.

Discovering Management is designed to suit the needs and expectations of Bachelor students at all levels as well as Master and PhD students not belonging to D-MTEC. By providing an overview of Entrepreneurial Management, this course is an ideal enrichment of the standard curriculum at ETH Zurich. No prior knowledge of business or economics is required to successfully complete this course.

Content
The lectures for Discovering Management are designed to broaden the participant's understanding of the principles of entrepreneurial management, emphasizing the interdependence of various specialties in the development and management of a firm. For this reason, the lectures are structured on the basis of a coherent business model and will be presented by the respective area specialists at D-MTEC.

The lectures broaden the view and the understanding of technology by interfacing it with society. Corporate sustainability, for example, introduces economic, ecological and social issues that are relevant to all engineering disciplines. Practical examples stimulate the students to assess these issues and be aware of their responsibilities as engineers. Technology and innovation management, to mention a second example, focuses on the interplay of technical and organizational change, and how these often neglected interactions explain why many new technologies are never used. It fosters the students' ability to see the business and social consequences of their 'technical' decisions.

Critical skills will be trained by the case study exercise, a participant-centered learning activity, which provides students with the opportunity to place themselves in the role of the decision maker, as they learn more about the specific case and identify the challenge they are faced with. Students will be presented real case scenarios by industry guests from established corporations and will have to critically analyze specific issues. The case study exercise will provide an insight into the context of a managerial problem-solving and enhance the participants' appreciation for the complex tasks companies deal with.

Discovering Management attempts to overcome the limitations of traditional teaching curricula of management in technical universities, which often merely focus on transferring specific skills to students, e.g. planning or forecasting. In response to the new challenges for entrepreneurial decision-making, students will be offered the opportunity to actively engage in an advanced business game simulation; a business game that establishes a link between business management theory and business management in practice. The simulation presents a realistic model of a company and provides participants with the opportunity to quickly gain the lasting effects of practical experience in a risk-free environment. All this provides a valuable learning platform to integrate the increasingly important development of the skills and competences required to identify entrepreneurial opportunities, analyze the future business environment and successfully respond to it by taking systematic decisions, e.g. critical assessment of technological possibilities.
Politics of Environmental Problem Solving in Developing Countries

Abstract
The course focuses on processes and drivers of decision-making on natural resources management issues in developing countries. It gives insights into the relevance of ecological aspects in developing countries. It covers concepts, instruments, processes and actors in environmental politics at the example of specific environmental challenges of global importance.

Objective
After completion of the module, the student will be able to:
- Identify and appraise ecological aspects in development cooperation, development policies and developing countries’ realities
- Analyze the forces, components and processes, which influence the design, the implementation and the outcome of ecological measures
- Characterize concepts, instruments and drivers of environmental politics and understand, how policies are shaped, both at national level and in multilateral negotiations
- Study changes (improvements) in environmental politics over time as the result of the interaction of processes and actors, including international development organizations
- Analyze politics and design approaches to influence them, looking among others at governance, social organization, legal issues and institutions

Content
Key issues and basic concepts related to environmental politics are introduced. Then the course predominantly builds on case studies, providing information on the context, specifying problems and potentials, describing processes, illustrating the change management, discussing experiences and outcomes, successes and failures. The analysis of the cases elucidates factors for success and pitfalls in terms of processes, key elements and intervention strategies.

Different cases not only deal with different environmental problems, but also focus on different levels and degrees of formality. This ranges from local interventions with resource user groups as key stakeholders, to country level policies, to multi- and international initiatives and conventions. Linkages and interaction of the different system levels are highlighted. Special emphasis is given to natural resources management.

The addresses the following issues:
- Land use and soil fertility enhancement: From degradation to sustainable use
- Common property resource management (forest and pasture): Collective action and property rights, community-based management
- Ecosystem health (integrated pest management, soil and water conservation)
- Payment for environmental services: Successes in natural resources management
- Climate change and agriculture: Adaptation and mitigation possibilities
- Biodiversity Convention: Implications for conservations and access to genetic resources
- Biodiversity as a means for more secure livelihoods: Agroforestry and intercropping
- The Millennium Development Goals: Interactions between poverty and the environment
- Poverty and natural resources management: Poverty reduction strategies, the view of the poor themselves
- Food security: Policies, causes for insecurity, the role of land grabbing
- Biofuels and food security: Did politics misfire?
- Strategy development at global level: IAASTD and World Development Report 2008

This course presents the basics of policy analysis and the specific characteristics of Swiss environmental policy. Political instruments, actors and processes are addressed both theoretically as well as by means of current Swiss environmental policy examples.

Prerequisites / notice
The performance assessment will consist of an individual essay to be written by each student based on at least five references in addition to the sources provided in the course. Students can choose from a list of topics. Criteria for assessment will be communicated at the beginning of the course.

Environmental Policy of Switzerland I

Abstract
This course presents the basics of policy analysis and the specific characteristics of Swiss environmental policy. Political instruments, actors and processes are addressed both theoretically as well as by means of current Swiss environmental policy examples.

Objective
Beyond acquiring basic knowledge about policy analysis, this course teaches students how to analytically address current and concrete questions of environmental policy. Through exercises the students learn about political science concepts and frameworks as well as real-life political decision-making processes. The well-grounded examination of complex political conflict situations is an important precondition for the entry into the (environmental policy) workforce or a future research career.

Content
The processes of change, overuse or destruction of the natural environment through humans have historically placed high demands on social and political institutions. In the interplay between the environment, society and economy, the environmental policy field encompasses the sum of public measures that have the goal to eliminate, reduce or avoid environmental degradation. The course provides insight into the development of Swiss environmental policy and systematically presents the basics of environmental policy actors, instruments, programs and processes as well as their change over time. A key aspect is the distinction between politics and political science and specifically environmental policy.

Environmental Policy of Switzerland II

Abstract
This course presents the basics of policy analysis and the specific characteristics of Swiss environmental policy. Political instruments, actors and processes are addressed both theoretically as well as by means of current Swiss environmental policy examples.

Objective
Beyond acquiring basic knowledge about policy analysis, this course teaches students how to analytically address current and concrete questions of environmental policy. Through exercises the students learn about political science concepts and frameworks as well as real-life political decision-making processes. The well-grounded examination of complex political conflict situations is an important precondition for the entry into the (environmental policy) workforce or a future research career.

Literature

Prerequisites / notice
The detailed semester program (syllabus) is made available to the students at the beginning of the semester.

Principles of Economics

Abstract
This course covers the basics for understanding micro- and macroeconomic issues and theories. Participants are given the tools to argue in economic and political terms and to evaluate the corresponding measures. Group and individual exercises deepen the knowledge gained.
Students are able to
- describe fundamental micro- and macroeconomic issues and theories.
- apply suitable economic arguments to a given theme.
- evaluate economic measures.

Supply and demand behaviour of firm and households; market equilibrium and taxation; national income and indicators; inflation; unemployment; growth; macroeconomic policies

available on electronic platform

The lecture treats the social intercourse with risks of technical systems. The notion of risk and the perception of risk are discussed by case studies (e.g. nanotechnology) and socio-political instruments for decision-making are presented. Methods are presented that can be applied to deal with environmental risks and how they can be used for sustainable innovation.

- Getting acquainted to the extended risk concept
- Evaluation of the risks caused by technology within the societal context
- Knowledge about the mode science and society handle current environmental risks (examples gene- and nanotechnology)
- Knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)
- Knowledge about possibilities for sustainable innovation

The lecture is held biweekly (for 2 hours). The dates are 21.9., 28.9. (attention, out of schedule); 19.10, 21.11, 16.11, 30.11, 14.12

The simulation will take place on the 26 and 27 November 2015 at the University of Geneva.

Languages: English and French

Dates/Time/Location (GE = University of Geneva)
22 Sept. | ETH HG D 22 | 10:15-12:00 | Introduction
29 Sept. | GE Uni Mail Salle 1170 | 10:15-12:00 | Introduction to Negotiation Techniques (Dr. Vitalijs Butenko and Dr. Sibylle Zürcher, ETH)
6 Oct. | ETH HG D 16.2 | 10:15-12:00 | Distribution of the roles, composition of the negotiation tables, preparation of mandates for the HA (humanitarian approach)
13 Oct. | ETH HG D 22 | 10:15-12:00 | Preparation of the mandates for the FMCT (Fissile Material Cut-off Treaty)
20 Oct. | GE Uni Mail Salle 1170 | 10:15-12:00 | No session; Students deepen and summarize their mandates on one page (A4)
27 Oct. | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the Mandates I (FMCT)
10 Nov. | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the Mandates II (HA)
17 Nov. | GE Uni Mail Salle 1170 | 10:15-12:00 | Preparation Meeting
26 & 27 Nov. | GE Salles 407 et 408 | 10:00-18:00 | Simulation at Uni Dufour
1 Dec. | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the results

Note:
The participation in the simulation on 26. and 27. November in Geneva is necessary.
The two hours lectures on the 22. September, 6. and 13. October have to be attended in Zürich via conference call (ETH HG D 16.2). The other lectures during the semester can be attended via Skype.
To get the 3 ECTS, students have to participate at the 2 days simulation In Geneva, attend the 3 mandatory lecture parts via conference call an Zürich and write a report of 5 pages at the end of the course.

(technical note for registration: At this stage all registered students are on the waiting list)
Wisdom is widely - maybe even universally, at all times and everywhere - regarded as one of the highest virtues. But what constitutes wisdom? And is wisdom compatible with uncertainty? Does a wise person have to be certain or can she be uncertain? These and related questions will be discussed in the seminar to gain an understanding of what wisdom, certainty and uncertainty are.

1. Analysis and discussion of different interpretations of the virtue "wisdom".
3. Discussion of the questions what constitutes wisdom today and whether wisdom is a goal of the good life.
4. Examination of the relevance of wisdom in practical and theoretical contexts.

Central Questions in Bioethics

Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decision, principles like "Protect the dignity of the living being"; or "Respect a person's self-determination"? Besides answering such questions, the social, scientific and political processes linked with biotechnologies should be taken into account.

Students should learn about the connections between the history of anthropology and technology and be able at the end of the course to evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

Particularly suitable for students of D-BIOL, D-CHAB, D-HEST, D-MAVT, D-MAVT

</tr>
</thead>
<tbody>
<tr>
<td><strong>Abstract</strong></td>
<td>This is an introductory course in different areas and positions in the philosophy of physics. It falls into different parts, including one on the concepts of space and time and one on the reality of structures in physics.</td>
</tr>
</tbody>
</table>

### The Infinite in Philosophy and in the Exact Sciences

**Course Code**: 851-0144-07L  
**Credit Points**: 3  
**Module**: W  
**Student Group Size**: 2S  
**Instructor**: G. Sommaruga

<table>
<thead>
<tr>
<th>Title</th>
<th>Details</th>
</tr>
</thead>
</table>
| **Abstract** | On the one hand, the topic of the infinite will be dealt with historically by discussing philosophical texts, by e.g., Kant, Bolzano and Cantor.  
On the other hand, the topic will be treated from a (non-historical) scientific point of view: the point of view of logic, mathematics, and physics. |

### The Beginning of Scientific Enquiry - History and Impact of Presocratic Natural Philosophy

**Course Code**: 851-0144-15L  
**Credit Points**: 3  
**Module**: W  
**Student Group Size**: 2V  
**Instructor**: N. Sieroka

<table>
<thead>
<tr>
<th>Title</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Abstract</strong></td>
<td>Several questions and notions introduced by presocratic natural philosophy are still considered important (albeit in historically altered forms, of course). This applies, e.g., to the notion of the infinite, the process character of nature, and atomism. The present lecture discusses both, the origin of these notions and their persistent relevance for later approaches in philosophy.</td>

### Manifolds and Individuation in Mathematics and Philosophy

**Course Code**: 851-0148-02L  
**Credit Points**: 3  
**Module**: W  
**Student Group Size**: 2S  
**Instructor**: T. Böhm

<table>
<thead>
<tr>
<th>Title</th>
<th>Details</th>
</tr>
</thead>
</table>
| **Abstract** | Manifolds and individuation are concepts which allow to reconsider notorious problems such as the relationship between general and particular, substance and modi, physical processes and persons. They may incorporate heterogeneous elements as needed to overcome traditional categories and classifications, and also describe processes leading to the existence of things.  
The students should become familiar with some conceptual possibilities to recognize and deal with structures across the usual division of subjects. The problem areas are discussed on the basis of texts of various mathematicians and philosophers, with a wide range of applications such as psychology and life sciences. |

### Research Ethics

**Course Code**: 851-0180-00L  
**Credit Points**: 2  
**Module**: W  
**Student Group Size**: 2G  
**Instructor**: G. Achermann

<table>
<thead>
<tr>
<th>Title</th>
<th>Details</th>
</tr>
</thead>
</table>
| **Abstract** | This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.  
The main goal of this course is to enhance the student's ability to:  
- recognize and identify ethical issues and conflicts,  
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.  
Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.  
To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises. |

Data: 06.12.2017 12:57  
Autumn Semester 2015  
Page 565 of 1432
I. Ethics & the Process of Ethical Inquiry
---------------------------------------
Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)
----------------------------------------------------------
Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 Rs (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access;
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.
Objective

The overarching objective of this seminar is to get an impression of the specificity of biological problems and to develop an appropriate philosophical sensibility. Accordingly, philosophical traditions in biology will be discussed, just as the application of the history of concepts in the context of biology. The seminar reader will consist of contributions of biologists as well as philosophers of biology. Besides the basic concepts in biology such as gene, species, evolution, or diversity, we will be also reflecting on the relationship between technology, experimenting, and biological objects. Depending on the interests of the seminar participants, the examples to be discussed may be chosen from systems biology, molecular or synthetic biology, ecology or else.

701-0701-00L Philosophy of Science

<table>
<thead>
<tr>
<th>W</th>
<th>3 credits</th>
</tr>
</thead>
</table>

Objectives

1. Core differences between classical Greek and modern conceptions of science.
2. Classic positions in the philosophy of science in the 20th century: logical empiricism and critical rationalism (Popper); the analysis of scientific concepts and explanations.
3. Objections to logical empiricism and critical rationalism, and further developments: What is the difference between the natural sciences, the social sciences and the arts and humanities? What is progress in science (Kuhn, Fleck, Feyerabend)? Is scientific knowledge relativistic? What is the role of experiments and computer simulations?
4. Issues raised by the use of science in society: The relation between basic and applied research; inter- and transdisciplinarity; ethics and accountability of science.

Content

1. Core differences between classical Greek and modern conceptions of science.
2. Classic positions in the philosophy of science in the 20th century: logical empiricism and critical rationalism (Popper); the analysis of scientific concepts and explanations.
3. Objections to logical empiricism and critical rationalism, and further developments: What is the difference between the natural sciences, the social sciences and the arts and humanities? What is progress in science (Kuhn, Fleck, Feyerabend)? Is scientific knowledge relativistic? What is the role of experiments and computer simulations?
4. Issues raised by the use of science in society: The relation between basic and applied research; inter- and transdisciplinarity; ethics and accountability of science.

Lecture notes

A reader will be available for students.

Literature

A list of introductory literature and handbooks will be distributed to the students.

Prerequisites / notice

Oral examination during the Prüfungssession.

The optional exercises accompany the lecture and offer the opportunity for an in-depth discussion of selected texts from the reader.

701-0701-01L Philosophy of Science: Exercises

<table>
<thead>
<tr>

<th>1 credit</th>
</tr>
</thead>
</table>

Objective

Students can engage with problems in the philosophy of science and to relate them to natural and environmental sciences. They learn to analyze and summarize philosophical texts. In this way, they develop their skills in critical thinking with a focus on the rationality of science.

Content

- Students can engage with problems in the philosophy of science and to relate them to natural and environmental sciences.
- They learn to analyze and summarize philosophical texts. In this way, they develop their skills in critical thinking with a focus on the rationality of science.

Lecture notes

A reader will be available for students.

Literature

A list of literature will be distributed to the students together with the reader.

Prerequisites / notice

Students that want to subscribe for this course also have to subscribe for the lecture "Wissenschaftsphilosophie". Credit points are given for preparing a structure and a summary of one of the texts.

701-0703-00L Environmental Ethics

<table>
<thead>
<tr>
<th>W</th>
<th>2 credits</th>
</tr>
</thead>
</table>

Objectives

On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and argumentations to be found within the field of environmental ethics and will have practised these in small case studies.

Content

- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

Literature

- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003
- John O'Neill et al., Environmental Values, 2008
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008

Generel introductions:
- Marcus Düwell et al. (Hrsg.), Handbuch Ethik, 2. Auflage, Stuttgart (Metzler Verlag), 2006
- Johann S. Ach et. al. (Hrsg.), Grundkurs Ethik 1. Grundlagen, Paderborn (mentis) 2008

Prerequisites / notice

The procedure for accumulating CP will be explained at the start of term. I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

Political Science

Number Title Type ECTS Hours Lecturers
851-0577-00L Principles of Political Science W Dr 4 credits 2V+1U S. Mohrenberg, Q. Nguyen

This course covers the basic questions, concepts, theories, methods, and empirical findings of political science.

This course covers the basic questions, concepts, theories, methods, and empirical findings of political science.

| Lecture notes | This course is based on the following textbook: “Politikwissenschaft: Grundlagen“ by Thomas Bernauer, Patrick Kuhn, Stefanie Walter und Detlef Jahn (Nomos, 2013, 2nd Edition). |

| Literature | This course is based on the following textbook: “Politikwissenschaft: Grundlagen“ by Thomas Bernauer, Patrick Kuhn, Stefanie Walter and Detlef Jahn (Nomos, 2013, 2nd Edition). |

| Prerequisites / notice | Students attending this course and passing the required tests (one in the middle, the other at the end of the semester) will obtain 4 ECTS credit points. |

<table>

<td></td>
</tr>
</tbody>
</table>

| Abstract | This course focuses on the conditions under which cooperation in international environmental politics emerges and the conditions under which such cooperation and the respective public policies are effective and/or efficient. |

| Objective | The objectives of this course are to (1) gain an overview of relevant questions in the area of international environmental politics from a social sciences viewpoint; (2) learn how to identify interesting/innovative questions concerning this policy area and how to answer them in a methodologically sophisticated way; (3) gain an overview of important global and regional environmental problems. |

| Content | This course deals with how and why international cooperation in environmental politics emerges, and under what circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation, various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc. |

| The course is open to all ETH students. Participation does not require previous coursework in the social sciences. |

| After passing an end-of-semester test (requirement: grade 4.0 or higher) students will receive 4 ECTS credit points. The workload is around 120 hours (meetings, reading assignments, preparation of test). |

| Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory (http://www.rektorat.ethz.ch/students/admission/auditors/specialstudents_uzh/index_EN; see menu on left side of that webpage for students from other universities). |

| Lecture notes | Slides and reading material will be made available at www.ib.ethz.ch (teaching, materials, then menu on the left side of the screen). They are password protected. Use your Netzh username and password to access the material. |

| Literature | See www.ib.ethz.ch (teaching, materials) |

| Prerequisites / notice | Students from ETH will receive 4 ECTS credit points if they attend classes regularly and obtain a grade of 4.0 or higher for the written exam in the final week of the semester. Students who obtain a grade of less than 4.0 for the end-of-semester test will have a second chance in the first week of the following semester. The rules of the game are defined in detail on the course syllabus. Students who do not participate in the end of semester test will not have access to the repeat exam unless they submit compelling and documented reasons for why they were unable to participate in the first test. Except for language dictionaries, no additional materials and no laptops and mobile phones are allowed during the exam. |

| Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory (http://www.rektorat.ethz.ch/students/admission/auditors/specialstudents_uzh/index_EN; see menu on left side of that webpage for students from other universities). |

| The workload for this course is approx. 120 hours (all inclusive). |

<table>

<tr>
<th>851-0595-01L</th>
<th>International Organizations</th>
</tr>
</thead>
<tbody>
<tr>
<td>W 3 credits 2S Z. Bakaki</td>
<td></td>
</tr>
</tbody>
</table>

| Abstract | This course offers a comprehensive examination of the role of international organizations (IOs) in world politics. Besides teaching the basic theories and methods that are necessary for studying IOs, this course considers the application of those theories and methods to a range of special institutions. |

| Objective | The first part of this course offers an introduction and will seek to explain how, if at all, IOs obtain some measure of authority in international affairs, i.e., why states delegate certain tasks to IOs instead of dealing unilaterally or multilaterally outside of an institutional context. The second part of the course focuses on the impact and effectiveness of international institutions. We assess whether and how IOs influence state compliance with agreements, and whether IOs socialize states to behave in certain ways. The third and final part of the course examines a special set of IOs: international alliances and international regimes, i.e., explicit principles, norms, rules, and decision-making procedures that define expected behavior in a specific problem field. |

| Content | Science and Technology Policy is normally associated with the improvement of national competitiveness; yet, it is also an integral part of effective environmental and development policies. The course will discuss the challenges and opportunities of technological change in terms of sustainable development and show how public policy on the national and the international level is responding to this change. |

In this context, students are to become familiar with the basic principles of political economy and New Growth Theory and how such theories help explain political decisions as well as political outcomes in the area of Science, Technology and Innovation. State interventions are either designed to regulate (e.g., environmental regulations, anti-trust law) or facilitate (e.g., intellectual property rights protection, public investment in R&D and technical education, technology transfer) technological change. This will be illustrated by looking at different industries and different national systems of innovation. Subsequently the positive and negative consequences for society and the natural environment will be discussed from a short-term and a long-term perspective. |

| Abstract | Technological change plays a crucial role in efforts to create a more sustainable future. In this context, policy decision makers must design rules that minimize its risks and maximize its benefits for society at large. The course discusses this challenge from an interdisciplinary perspective taking into account legal, economic, historical, development and environmental aspects. |

| Objective | - to recognize the challenges and opportunities of technological change in terms of sustainable development - to become familiar with policy instruments to promote innovation - to improve understanding of political decision-making processes in the regulation of science & technology - improved understanding of the role of science and technology in the context of human and societal development |

| Content | Science and Technology Policy is normally associated with the improvement of national competitiveness; yet, it is also an integral part of effective environmental and development policies. The course will discuss the challenges and opportunities of technological change in terms of sustainable development and show how public policy on the national and the international level is responding to this change. |

Swiss Foreign Policy

Prerequisites / notice

The 2-hour course (5-7 p.m.) will be held as a series of lectures. The course materials will be available in form of an electronic Reader at the beginning of the semester.

The class will be taught in English.

Students will be asked to give a (a) presentation (15 Minutes) or write a review paper based on a article selected from the electronic script, and (b) they will have to pass a written test at the end of the course in order to obtain 3 credit points in the ECTS System. In the final mark (a) will have a weight of 40% and (b) 60%.

853-0038-00L

Swiss Foreign Policy

This course analyzes the foundations and central challenges of Swiss foreign policy. After reviewing the history of foreign and neutrality policy conceptions since the early 20th century, the determining factors of Swiss foreign policy will be discussed, and issues such as the Ukraine crisis, Swiss-EU relations, and Switzerland and the Middle East will be examined.

Objective

Students should acquire a sound understanding of Swiss foreign policy and the relevant academic and political debates associated with it. After introducing the field of Foreign Policy Analysis, this course will first deal with the historical foundations and the conceptual development of Swiss foreign policy. The focus will be on Switzerland's different reactions to the new international orders after 1918, 1945, and 1989 as well as on the significance of the 9/11 terrorist attacks and the global financial and debt crises since 2009 for Swiss foreign policy. We will also discuss the extent to which the Ukraine crisis and the annexation of Crimea by Russia mark a watershed in the international order - and how Switzerland should respond to these challenges.

Subsequently, key determinants of Swiss foreign policy will be analyzed, with specific attention on neutrality, direct democracy, and the special case paradigm. Finally, the discussion will center on current challenges and issues such as Swiss-EU relations, the Ukraine crisis and the OSCE engagement, Switzerland's role in the UN, Swiss peacebuilding efforts, Swiss policy in the Middle East, and development cooperation.

Content

The first hour will consist of a lecture; in the second hour, we will deepen and discuss the respective issues together with guest speakers from the Swiss foreign ministry, including Secretary of State Rossier.

The course will be supported by an e-learning environment.

Lecture notes

A reading list will be handed out at the beginning of the semester.

853-0047-01L

World Politics Since 1945: The History of International Relations (Without Exercises)

This lecture series provides students with an overview of the development of international relations since the end of World War II. The first part of the series deals with the development of and changes in Cold War security policy structures. The second part deals with the period after the transformation of 1989/91; the focus here is on current issues in international security policy.

Objective

By the end of the semester, participants of the lecture should have a solid knowledge on the history and theoretical foundations of International Relations since the end of the Second World War.

Content

Prerequisites / notice

The lecture is being supported by a virtual classroom. If you have any questions, please contact Lukas Meyer, lukas.meyer@sipio.gess.ethz.ch.

853-0015-00L

Conflict Research I: Causes of War in Historical Context

This course offers an introduction to research on causes of wars. War as a social phenomenon is covered from the pre-state world to today's state system after the end of the Cold War. Topics include state formation and collapse, nationalism, decolonization, democracy, and ethnic conflict.
The aim of the course is to provide the participants with an overview of international security politics in a globalized world. After dealing with leadership research and practice, the lectures “Leadership I” (WS) and “Leadership II” (SS) have been designed as a two-semester lecture series, but may also be followed independently of one another or in reverse order. "Leadership I" covers the following fields: leadership basics, leadership theories and leadership styles, the concept of leadership responsibility and the role of communication in practical leadership. The lectures "Leadership I" (WS) and “Leadership II” (SS) have been designed as a two-semester lecture series, but may also be followed independently of one another or in reverse order. "Leadership I" covers the following fields: leadership basics, leadership theories and leadership styles, the concept of leadership responsibility and the role of communication in practical leadership. The aim of the course is to give students an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organisation, context and situation. They should be informed about the evolution of the understanding of mankind in relation to working processes and its impact on organizations and the understanding of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate adequately in specific situations.

853-0302-00L European Integration: Seminar W 4 credits 3S F. Schimmelfennig

Objective
Developing an understanding for causes of war and their development over the last 500 years. Knowledge of fundamental concepts in research on causes of war.

Abstract
The seminar covers the theory, development, and core policy fields of European integration as well as structures and processes of the EU as a decision- and policy-making system.

Objective
The seminar is designed to help students understand the European Union as a particular kind of political system that differs both from the nation-state and from other international organizations. It imparts basic knowledge on the development, institutions, procedures, and policies of the EU and provides an introduction to major approaches to integration theory and political science research on the EU.

Content
1. Introduction
2. Development of European integration
3. Integration theories
4. Deepening
5. Widening and differentiation
6. Attitudes and public opinion
7. The institutions of the EU
8. Legislation and adjudication in the EU
9. Democracy in the European Union
10. Internal market and monetary union
11. Foreign and security policy
12. Justice and home affairs
13. EEA, Switzerland, and Neighbourhood Policy

Literature
Basislektüre

Prerequisites / notice
Die Leistungskontrolle findet durch eine Seminarpräsentation und einen schriftlichen Schluss-Test statt.

853-0060-00L Current Issues in Security Policy W 3 credits 2V A. Wenger, O. Thranert

Abstract
This course provides an overview of the development of the international system and the central security challenges since the end of the Cold War. The focus of this course will be on security issues of the post 9/11 era: new risks, arcs of crises, security strategies and core actors will be presented during the course.

Objective
Participants should gain a solid understanding of current issues in international security policy as well as of the central academic debates.

Content
The aim of the course is to provide the participants with an overview of international security politics in a globalized world. After dealing with the major changes of the international security environment as compared to the cold war era, we will concentrate on some of the key challenges (international terrorism, proliferation of weapons of mass destruction etc.). The third part of the lecture focuses on security strategies pursued by the ‘Western’ world.

Lecture notes
Participants are expected to study the compulsory texts provided at the beginning of the semester via the online platform Moodle.

Literature
A reading list will be distributed at the beginning of the spring semester.

Prerequisites / notice
An online learning platform serves as a supplement to the lecture course.

853-0033-00L Leadership I W 3 credits 2V F. Kernic

Abstract
The lectures "Leadership I" (WS) and “Leadership II” (SS) have been designed as a two-semester lecture series, but may also be followed independently of one another or in reverse order. "Leadership I" covers the following fields: leadership basics, leadership theories and leadership styles, the concept of leadership responsibility and the role of communication in practical leadership.

Objective
The aim of this lecture is to give students an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organization, context and situation. They should be informed about the evolution of the understanding of mankind in relation to working processes and its impact on organizations and the understanding of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate adequately in specific situations.

Prerequisites / notice
The 1-hour written exam will take place during the last lecture in the semester.

860-0001-00L Public Institutions and Policy-Making Processes ■ W 6 credits 3G T. Bernauer, S. Bechtold, F. Schimmelfennig

Abstract
Students acquire the contextual knowledge for analyzing public policies. They learn why and how public policies and laws are developed, designed, and implemented at national and international levels.

Objective
Public policies result from decision-making processes that take place within formal institutions of the state (parliament, government, public administration, courts). That is, policies are shaped by the characteristics of decision-making processes and the characteristics of public institutions and related actors (e.g. interest groups). In this course, students acquire the contextual knowledge for analyzing public policies. They learn why and how public policies and laws are developed, designed, and implemented at national and international levels. The course is organized in three modules. The first module (Stefan Bechtold) examines basic concepts and the role of law, law-making, and law enforcement in modern societies. The second module (Thomas Bernauer) deals with the functioning of legislatures, governments, and interest groups. The third module (Frank Schimmelfennig) focuses on the European Union and international organisations.

Content
Schedule:
W1: (no class because of ISTP cornerstone course)
W2: Bechtold, Bernauer: Introduction
W3: Bechtold: Why do we need laws and why do people and other actors (e.g. firms) usually obey the law?
W4: Bechtold: How is the law enforced, and when do laws fail to influence the behavior of individuals and other actors (e.g. firms)?
W5: Bechtold: Courts as policy-makers
W6: Bernauer: How are parliaments (legislatures) elected, how do they work, and how do their characteristics and processes affect policy-making?
W7: Bernauer: Why do forms of government differ and how does this affect policy-making? Why and in what respect are public administrations efficient/effective, and why sometimes not?
W8: Bernauer: How do interest groups and social movements affect policy-making?
W9: Schimmelfennig: Governance beyond the state: why and how states create international institutions.
W10: Schimmelfennig: International organizations and regimes: case studies of global governance.
W11: Schimmelfennig: Governance in the European Union: policy-making and policy enforcement.
W12: Schimmelfennig: The international diffusion of policies: how states learn from each other.
W13: study week, Q&A meeting
W14: End of semester test
End of January: deadline for review essay

Lecture notes
Reading materials will be distributed to the students before the semester starts.

Data: 06.12.2017 12:57 Autumn Semester 2015 Page 570 of 1432
This course looks into scientific theories and also empirical Behavioral Studies Colloquium.

Human-Computer Interaction: Cognition and Usability

How can behavioral and cognitive science inform architecture? This project-oriented seminar investigates contributions of cognitive science to architectural design with an emphasis on orientation and navigation in complex buildings and urban settings. It includes theories on spatial memory and decision-making as well as hands-on observations of behavior in real and virtual reality.

Particularly suitable for students of D-ARCH, D-INFK, D-ITET

Literature

Prerequisites / notice

This seminar will introduce key topics, theories and methodology in human-computer interaction (HCI) and usability. Presentations will cover basics of human-computer interaction and selected topics like mobile interaction, adaptive systems, human error and attention. A focus of the seminar will be on getting to know evaluation techniques in HCI. Students form work groups that first familiarize themselves with a select usability evaluation method (e.g. user testing, GOMS, task analysis, heuristic evaluation, questionnaires or Cognitive Walkthrough). They will then apply the methods to a human-computer interaction setting (e.g. an existing software or hardware interface) and present the method as well as their procedure and results to the plenary. Active participation is vital for the success of the seminar, and students are expected to contribute to presentations of foundational themes, methods and results of their chosen group project. In order to obtain course credit a written essay / report will be required (details to be specified in the introductory session of the course).

Number Title Type ECTS Hours Lecturers
851-0240-00L Human Learning (EW1) W 2 credits 2G E. Stern

Abstract

This course looks into scientific theories and also empirical studies on human learning and relates them to the school.

Objective

Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

Content

Thematische Schwerpunkte:
Lernen als Verhaltensänderung und als Informationsverarbeitung; Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzenerwerb unter besonderer Berücksichtigung des Wissenstransfers; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen; Intelligenztheorien, Geschlechtsunterschiede beim Lernen

Lernformen:

Lecture notes

Folien werden zur Verfügung gestellt.

Literature

Prerequisites / notice

This course is only apt for students who intend to enrol in the programs "Lehrfachplom" or "Didaktisches Zertifikat". It is about learning in childhood and adolescence.
Content
This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their ideas in so far as they have some relation to behavioral science. The possible research areas are wide and may include theoretical as well as empirical approaches in Social Psychology and Research on Higher Education, Sociology, Modelling and Simulation in Sociology, Decision Theory and Behavioral Game Theory, Economics, Research on Learning and Instruction, Cognitive Psychology and Cognitive Science. Ideally the students (from Bachelor, Master, Ph.D. and Post-Doc programs) have started to start work on their thesis or on any other term paper.
Course credit can be obtained either based on a talk in the colloquium plus a written essay, or by writing an essay about a topic related to one of the other talks in the course. Students interested in giving a talk should contact the course organizers (Schinazi, Hoelscher) before the first session of the semester. Priority will be given to advanced / doctoral students for oral presentations. The course credits will be obtained by a written report of approximately 10 pages. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.

Abstract

Objective

Learning objectives: to understand the design process from a normative methodological perspective, and descriptive computational, cognitive, and neural perspectives. Learning outcomes: By the end of the seminar the student should be familiar with these literatures, should be able to discuss relative strengths and weaknesses, and identify what each has contributed to our ability to design, and to our understanding of the design process itself.

Learning outcomes: the first session of the semester. Priority will be given to advanced / doctoral students for oral presentations. The course credits will be obtained by a written report of approximately 10 pages. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.

Prerequisites: successful participation in 851-0240-00L "Human Learning (EW1)".

In this seminar students learn advanced techniques to support and to diagnose knowledge acquisition processes in school.

The main goals are:
(1) You have a deep understanding about the cognitive mechanisms of knowledge acquisition.
(2) You have a basic understanding about psychological test theory and can appropriately administer tests.
(3) You know various techniques of formative assessment and can apply these to uncover students’ misconceptions.

Für eine reibungslose Semesterplanung wird um persönlichen Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

The lectures provide an overview of the foundations of cognitive science and investigate processes of human cognition, especially perception, learning, memory and reasoning. This includes a comparison of cognitive processes in humans and technical systems, especially with respect to knowledge acquisition, knowledge representation and usage in information processing tasks.

Cognitive Science views human cognition as information processing and provides an inter-disciplinary integration of approaches from cognitive psychology, informatics (e.g., artificial intelligence), neuroscience and anthropology among others. The lectures provide an overview of basic mechanisms of human information processing and various application domains. A focus will be on matters of knowledge acquisition, representation and usage in humans and machines. Models of human perception, reasoning, memory and learning are presented and students will learn about experimental methods of investigating and understanding human cognitive processes and representation structures.

This body of work, motivated by large, technically sophisticated, geographically dispersed projects like the Polaris missile project, sought to be human, it has only been an object of study for the past 50 years. The initial focus during the 1960s was on "design methodologies." This body of work, motivated by large, technically sophisticated, geographically dispersed projects like the Polaris missile project, sought to develop an analytic, mathematically based, teachable doctrine about the design process that would serve the same role for design as the "scientific method" served for science. During the 1980s interest shifted from a normative approach to a descriptive approach, focusing on the cognitive and computational processes of designers. More recently, several researchers are using neuropsychological methodologies to understand the design process.

In this seminar students learn advanced techniques to support and to diagnose knowledge acquisition processes in school.

The main goals are:
(1) You have a deep understanding about the cognitive mechanisms of knowledge acquisition.
(2) You have a basic understanding about psychological test theory and can appropriately administer tests.
(3) You know various techniques of formative assessment and can apply these to uncover students’ misconceptions.

Für eine reibungslose Semesterplanung wird um persönlichen Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

The aim of the lecture is to impart a well-founded scientific understanding of social influence processes in individuals, groups, organizations, and social settings. The participants should develop competencies in the structuring of communication, interaction, and management processes.

Data: 06.12.2017 12:57 | Autumn Semester 2015 | Page 572 of 1432
Content

Im Einzelnen sollen die Teilnehmerinnen und Teilnehmer lernen:

- an den Beispielen von Kaufverhalten oder ökologischem Verhalten zu beschreiben, wie Normen und Einstellungen Einfluss auf das Verhalten nehmen,
- Die Subjektivität und die Fehlerquellen sozialer Wahrnehmung verstehen,
- Prinzipien der Psychologie der Kommunikation zu nutzen für eine Verbesserung der Kommunikation in Studium und Beruf,
- Merkmale und Strukturen von Gruppen zu identifizieren und mit geeigneten Methoden zu analysieren,
- Die Grundlagen von Konformität und Gehorsam gegenüber Autoritäten zu erkennen,
- Gruppenphänomene wie soziales Faulenzen, Risiko- und Konservativismus-Schub und Gruppendenken entgegenzuwirken,
- Gruppenleistungen und -entscheidungen zu optimieren,
- Führungsstile zu unterscheiden lernen,
- Techniken zur Moderation von interagierenden Gruppen kennen zu lernen.

kein Skript

Literature

Prerequisites / notice

Es werden für D-ITET-Studierende Gruppenarbeiten (6 Kreditpunkte) in Form eines 3-tätigen computer-unterstützten Assessments fachübergreifender Kompetenzen angeboten (Teilnehmerzahl beschränkt auf 12 Studierende). Die Teilnehmenden verfassen Berichte, die benotet werden.

Psychological Aspects of Risk Management and Technology

363-0311-00L

W 3 credits 2V G. Grote, S. A. Maurer, J. Schmutz, R. Schneider, M. Zumbühl

Abstract

Using uncertainty management by organizations and individuals as conceptual framework, risk management and risk implications of new technologies are treated. Three components of risk management (risk identification/evaluation, risk mitigation, risk communication) and underlying psychological and organizational processes are discussed, using company case studies to promote in-depth understanding.

Objective

- understand basic components of risk management in organizations
- know and apply methods for risk identification/evaluation, risk mitigation, risk communication
- know psychological foundations of risk perception, decision-making under risk, and risk communication
- know organizational principles for managing uncertainty
- apply theoretical foundations to applied issues such as safety management, regulatory activities, and technology design and implementation in different domains (e.g. transport systems, IT, insurance)

Content

The syllabus includes the following topics:

- Elements of risk management
  - risk identification and evaluation
  - risk mitigation
  - risk communication

Psychological and organizational concepts relevant in risk management

- decision-making under uncertainty
- risk perception
- resilient organizational processes for managing uncertainty

Case studies on different elements of risk management (e.g., rule making, training, managing project risks, automation)

Group projects related to company case studies

Lecture notes

There is no script, but slides will be made available before the lectures.

Literature

There are texts for each of the course topics made available before the lectures.

Introduction to Law

Students who have attended or will attend the lecture "Introduction to Law for Civil Engineering and Architecture" or "Introduction to Law" (851-0708-00), cannot register for this course unit.

Particularly suitable for students of D-MAVT, D-MATL

Abstract

This class introduces students into basic features of the legal system. Fundamental issues of constitutional law, administrative law, private law and the law of the EU are covered.

Objective

Students are able to

- describe the areas, concepts, theories, methods and findings of psychology.
- differentiate scientific psychology from "everyday" psychology.
- structure the conclusions and significance of an experiment. according to a theory of psychology.
- formulate a problem for psychological investigation.
- apply basic forms of psychological experiment.

Content

Einführung in die psychologische Forschung und Modellbildung unter besonderer Berücksichtigung der kognitiven Psychologie und des psychologischen Experimenten. Themen sind u.a.: Wahrnehmung; Lernen und Entwicklung; Denken und Problemlösen; Kognitive Sozialpsychologie; Risiko und Entscheidung.

Environmental Law: Topics and Case Studies W 2 credits 2S C. Jäger

Number of participants limited to 20.

Prerequisites: Environmental Law: Conceptions and Fields (851-0705-01L) offered in spring semester.

Further documents will be available online (see https://moodle-app2.let.ethz.ch/course/view.php?id=1596).

Es werden für D-ITET-Studierende Gruppenarbeiten (6 Kreditpunkte) in Form eines 3-tätigen computer-unterstützten Assessments fachübergreifender Kompetenzen angeboten (Teilnehmerzahl beschränkt auf 12 Studierende). Die Teilnehmenden verfassen Berichte, die benotet werden.

Autumn Semester 2015
This workshop offers the students the opportunity to intensify their environmental legal knowledge on the basis of individual topics or cases of their respective programme or professional interest in a guided self-study. They develop a better understanding for the practical application of legal regulations on environmental matters.

Objective
The aim of this workshop is to equip students with legal skills and methods to solve or treat problems and questions of the environmental law and foster the understanding on the possibilities and limits of legal problem-solving. The students choose an inquiry with practical relevance. To this end they work out the legal basis demonstrating a legal correct solution or approach to a solution. In doing so, students will get to know legal methods and research possibilities.

Content
At the beginning of the workshop the students are introduced to the legal methods and sources as well as in the aim and the process of the workshop. The participants will organize themselves in a team of two persons giving themselves an inquiry on topics of the environmental law. It is also possible to choose questions at the interfaces of e.g. zoning law, energy law, transport law. A proposal, which will be presented to the lecturer, as well as an optional Q&A-session in class will facilitate the start. Next the working on topics will follow by self-study. The results will be presented in form of a memo/paper with a maximum of ten pages (excluding graphs and tables). At the end of the workshop, a presentation of ten minutes will be made to the plenum including a question-and-answer session. Class language will be German.

851-0707-00L  Space Planning Law and Environment

Objective
Basic understanding of nature and function of space planning from a legal point of view. Basic knowledge of space planning instruments, relationship between space planning and constitutional law (especially property rights), solving of practical cases.

Content

Lecture notes
Den Studierenden werden Unterlagen zur juristischen Methoden- und Quellenlehre sowie zum Inhalt und Ablauf des Kurses zu Beginn der Veranstaltung kostenlos abgegeben.

851-0709-00L  Introduction to Civil Law

Objective

Content
Le cours de droit civil porte notamment sur le droit des obligations (droit des contrats et responsabilité civile) et sur les droits réels (propriété, gages et servitudes). De plus, il est donné un bref aperçu du droit de la procédure et de l'exécution forcée.

Prerequisites / notice
Die Veranstaltung erfordert die Bereitschaft, sich aktiv und selbständig mit einer selbstgewählten Fragestellung oder einem eigenen Fallbeispiel aus dem Gebiet des Umweltschutzes und allenfalls aus Schnittstellengebieten auseinanderzusetzen. Damit die Interaktivität und die Begleitung der Teams gewährleistet werden kann, ist die Teilnehmerzahl auf maximal 16 Personen beschränkt. Es handelt sich um eine Vertiefungsveranstaltung. Der Besuch der Vorlesung "Umweltrecht: Konzepte und Rechtsgebiete" (851-0705-01) ist Voraussetzung.

851-0727-02L  E-Business Law

Objective
The objective is knowing and understanding key legal concepts relevant for doing e-business, in particularly understanding how e-business is regulated by law nationally and internationally, how contracts are concluded and performed electronically, which rules have to be obeyed in particular in the Internet with regard to third party and own content and client data, the concept of liability applied in e-business and the role of the law in the practical implementation and operation of e-business applications.
Vorgesehene Strukturierung der Vorlesung:

1) Welches Recht gilt im E-Business?
   Internationalität des Internets
   Regulierte Branchen

2) Gestaltung und Vermarktung von E-Business-Angeboten
   Verwendung fremder und Schutz der eigenen Inhalte
   Haftung im E-Business (und wie sie beschränkt werden kann)
   Domain-Namen

3) Beziehung zu E-Business-Kunden
   Verträge im E-Business, Konsumentenschutz
   Elektronische Signaturen
   Bearbeitung von Daten über Kunden
   Spam

4) Verträge mit E-Business-Providern

Lecture notes
Es wird mit Folien gearbeitet, die als PDF über die elektronische Dokumentenablage (ILIAS) auf dem System der ETHZ vorgängig abrufbar sind. Auf dem Termin- und Themenplan (ebenfalls online abrufbar) sind Links zu Gesetzestexten und weiteren Unterlagen abrufbar.

Schliesslich wird jede Vorlesung auch als Podcast aufgezeichnet, der jedoch nur für die Studierenden mit einem Passwort (erhältlich beim Dozenten) zugänglich sind.

Literature

Prerequisites / notice
Die Semesterendprüfung ist in Form eines schriftlichen Kurztests (normalerweise MC) in voraussichtlich der letzten Doppelstunde geplant. Es wird angegeben, welche Unterlagen beim jeweiligen Thema den Prüfungsstoff definieren. Der Test wird möglicherweise elektronisch durchgeführt.

Ferner bietet Ursula Widmer eine Vorlesung zum Thema Informationssicherheit an, welche die rechtlichen Aspekte der Sicherheit von ICT-Infrastrukturen und Netzen und der transportierten und verarbeiteten Informationen.

851-0733-00L Traffic Law / Traffic Commercial Law
W 2 credits 2G S. Scherler

Abstract
Within the scope of the lecture "Traffic Law / Traffic Commercial Law", besides an introduction into the legal basis of the national and international traffic, the main interest will be laid on actual political and economical questions and problems with respect to traffic (e.g. financing of traffic, road pricing, rail reform, air traffic vs. environment law etc.).

Objective
Participants are acquiring a comprehensive summary about the system Traffic Law/Traffic Commercial Law in Switzerland. With practical exercises and subsequent detailed reviews themes and subjects of special interest to participants are being treated more thoroughly.

Content

851-0735-010 Business Law
W 2 credits 2V P. Peyrot

Particularly suitable for students of D-ITET

Abstract
The students shall obtain a basic knowledge about business law. They shall be able to recognize and evaluate issues in the area of business law and suggest possible solutions.

Objective
The students shall obtain the following competence:
- They shall obtain a working knowledge on the legal aspects involved in setting up and managing an enterprise.
- They shall be acquainted with corporate functions as contracting, negotiation, claims management and dispute resolution
- They shall be familiar with the issues of corporate compliance, i.e. the system to ascertain that all legal and ethical rules are observed.
- They shall be able to contribute to the legal management of the company and to discuss legal issues.
- They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

Lecture notes
A comprehensive script will be made available online on the moodle platform.

851-0735-04L Workshop and Lecture Series in Law and Finance
W 2 credits 2S G. Hertig, S. Bechtold

Abstract
The Workshop and Lectures Series in Law & Finance is a joint seminar of ETH Zurich, the University of Zurich and the University of St. Gallen. Each semester, several guest scholars from law, finance and related fields give a lecture and/or discuss their ongoing research. All speakers are internationally well-known experts from Europe, the U.S. and beyond.

Objective
The Lecture and Workshop Series in Law & Finance aims at allowing participants to discuss current financial regulation and corporate governance issues with leading academics.

Content
Participants discuss current Law & Finance issues with guest scholars from Europe and the U.S. In addition, participants write a comment on one of the discussed papers.

Lecture notes
To be discussed papers are posted in advance on the course's web page

Literature
- Viral Acharya et al., Regulating Wall Street (Wiley 2011)

851-0735-09L Workshop & Lecture Series on the Law & Economics of Innovation
W 2 credits 2S S. Bechtold, H. Gersbach, A. Heinemann, G. Hertig

Data: 06.12.2017 12:57 Autumn Semester 2015 Page 575 of 1432
Abstract
This series is a joint project by ETH Zurich and the University of Zurich. It provides an overview of interdisciplinary research on intellectual property, innovation, antitrust and technology policy. Scholars from law, economics, management and related fields give a lecture and/or present their current research. All speakers are internationally well-known experts from Europe, the U.S. and beyond.

Objective
After the workshop and lecture series, participants should be acquainted with interdisciplinary approaches towards intellectual property, innovation, antitrust and technology policy research. They should also have an overview of current topics of international research in these areas.

Content
The workshop and lecture series will present a mix of speakers who represent the wide range of current social science research methods applied to intellectual property, innovation, antitrust policy and technology policy issues. In particular, theoretical models, empirical and experimental research as well as legal research methods will be represented.

Lecture notes
Papers discussed in the workshop and lecture series are posted in advance on the course web page.

851-0735-11L Environmental Regulation: Law and Policy
Number of participants limited to 15. Particularly suitable for students of D-USYS
W 3 credits 1S J. van Zeben

Abstract
The course is fully booked

Objective
The aim of this course is to make students with a technical scientific background aware of the legal and political context of environmental policy in order to place technical solutions in their regulatory context.

Content
Topics covered in lectures:

(1) Environmental Regulation
   a. Perspectives
   b. Regulatory Challenges of Environment Problems
   c. Regulatory Tools
(2) Law: International, European and national laws
   a. International law
   b. European law
   c. National law
(3) Policy: Case studies

Assessment:
(i) Class participation (25%): Students will be expected to contribute to class discussions and prepare short memos on class readings.
(ii) Exam (75%) consisting of three parts:
   a. Policy brief - a maximum of 2 pages (including graphs and tables);
   b. Background document to the policy brief - this document sets out a more detailed and academic overview of the topic (maximum 8 pages including graphs and tables);
   c. Presentation of the policy brief: presentations can use a maximum of 5 slides and can last 7 minutes.

Lecture notes
The course is taught as a small interactive seminar and significant participation is expected from the students. Participation will be capped at 15 in order to maintain the interactive nature of the classes. All classes, readings, and assignments, are in English.

Teaching will take place over two weeks in September and October. The exam date will be in December.

During the second week of the teaching period, students will have individual 30-minute meetings with the lecturer to discuss their project.

An electronic copy of relevant readings will be provided to the students at no cost before the start of the lectures.

No specific pre-existing legal knowledge is required, however all students must have successfully completed Grundzüge des Rechts (851-0708-00 V) or an equivalent course.

The course is (inter)related to materials discussed in Politikwissenschaft: Grundlagen (851-0577-00 V), Ressourcen- und Umweltökonomie (751-1551-00 V), Umweltrecht: Konzepte und Rechtsgebiete (851-0705-01 V), Rechtlicher Umgang mit natürlichen Ressourcen (701-0743-01 V), Environmental Governance (701-1651-00 G), Policy and Economics of Ecosystem Services (701-1653-00 G), International Environmental Politics: Part I (851-0594-00 V).

851-0738-00L Intellectual Property: Introduction
Number of participants limited to 25. Particularly suitable for students of D-ITET, D-MAVT, D-MATL
W 2 credits 2V M. Schweizer

Abstract
The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights). Aspects of competition law are treated insofar as they are relevant for the protection of intellectual creations and source designations. The legal principles are developed based on current cases.
The aim of this course is to enable students at ETH Zurich to recognize which rights may protect their creations, and which rights may be infringed as a result of their activities. Students should learn to assess the risks and opportunities of intellectual property rights in the development and marketing of new products. To put them in this position, they need to know the prerequisites and scope of protection afforded by the various intellectual property rights as well as the practical difficulties involved in the enforcement of intellectual property rights. This knowledge is imparted based on current rulings and cases.

Another goal is to enable the students to participate in the current debate over the goals and desirability of protecting intellectual creations, particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls, patent thickets).

The Role of Intellectual Property in Daily Routine: A Practical Introduction

In recent years, knowledge about intellectual property has become increasingly important for engineers. In both production and distribution as well as in research and development, engineers are increasingly being confronted with questions concerning the patenting of inventions and the utilisation of patent information. With up to 80% of publicly-available technical information being stored in patents only, it is of great importance for engineers to know the basics of the patent system and to be in a position to be able to extract relevant information from the flood of patent information available. This relates to daily work in industry as well as in research, where protecting inventions has gained in importance.

Patents are also an important source of information - from competitors and potential cooperation partners to the development of markets and the risk of coming into conflict with third party IP rights. Respectively, a knowledge of patents has also become a key qualification at a company's strategic level.

The seminar is customised to the needs of engineers. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.

The seminar contains practical exercises on the use and research of patent information. Basic knowledge on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' will be offered, which is coordinated to the needs of students in these degree programs.

Protecting Inventions in Chemistry

The lecture gives students of chemistry-related degree programs an overview of the options to protect inventions and the underlying investments in research and development. The lecture aims to put the participants in a position to be able to use this know-how in their workplace.

Investments in the development of new substances and active component in these sectors are traditionally secured by patents because publicly known inventions, generally chemical substances, may easily be reproduced by others.

In the last years, the know-how about intellectual property has become increasingly important for chemists and engineers. Both in the production process and in the distribution sector, chemists and engineers are increasingly concerned with questions related to patenting inventions and the use of patent information. As more than three-quarters of all publicly available technical information is reportedly available only in patents, it is more and more important for researchers and engineers to be capable of extracting relevant information from the flood of patents.

Patents are not only a measure to protect investments and inventions in chemistry-related sectors but also an important source of information about competitors and potential cooperation partners, about the development of markets and the risks of infringing others' patents. Accordingly, the know-how about patents and patent information has also become a key qualification on the strategic level in companies and in the area of research.

The seminar is customised to the needs of chemists and students of related degree programs. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.
- Special aspects of protecting inventions in chemistry-related sectors, including polymorphs and inventions in the field of nanotechnology.

The seminar contains practical exercises on the use and search of patent information in chemistry-related sectors. Basic know-how on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

For engineering and physics students, the lecture 'The Role of Intellectual Property in daily routine: A Practical Introduction' will be offered, which is coordinated to the needs of students in these degree programs.
Das Kurs bietet eine Vertiefung in folgende Rechtsgebiete:

- Waldrecht - Natur- und Landschaftsschutzrecht - Wasserrecht - Raumplanungsrecht - Umweltschutzrecht - Verfahrensrecht

**Abstract**
Cooperation and fairness in encounters with strangers are puzzling behaviors, since they contradict the law of natural selection. Yet daily experience as well as field and laboratory studies reveal that humans cooperate and behave fairly. This course presents the main theoretical approaches in economics and psychology to understanding cooperation and fairness and reviews relevant experimental studies.

**Objective**
Cooperation and fairness in encounters with strangers are puzzling behaviors, since they contradict the law of natural selection. Notwithstanding, daily experience as well as field and laboratory studies, all reveal that humans do cooperate and behave fairly. This lecture series is intended to present the main theoretical approaches in economics and psychology to understanding cooperation and fairness and to review some of the relevant experimental studies.

**Content**
For more information, see: http://www.sociology.ch/student/programm/lehre/1017/1017.htm

**Prerequisites / notice**
Groups of 2-3 students will write an essay on a topic to be agreed upon during the course meetings. Students will be requested to submit their paper within one month from the last class meeting. The grades will be delivered within two months after the last class meeting.

**Abstract**
This course discusses complex techno-socio-economic systems, their counter-intuitive behaviors, and how their theoretical understanding empowers us to solve some long-standing problems that are currently bothering the world.

**Objective**
Participants should learn to get an overview of the state of the art in the field, to present it in a well understandable way to an interdisciplinary scientific audience, to develop models for open problems, to analyze them, and to defend their results in response to critical questions. In essence, participants should improve their scientific skills and learn to think scientifically about complex dynamical systems.
Content
This course starts with a discussion of the typical and often counter-intuitive features of complex dynamical systems such as self-organization, emergence, (sudden) phase transitions at "tipping points", multi-stability, systemic instability, deterministic chaos, and turbulence. It then discusses phenomena in networked systems such as feedback, side and cascade effects, and the problem of radical uncertainty. The course progresses by demonstrating the relevance of these properties for understanding societal and, at times, global-scale problems such as traffic jams, crowd disasters, breakdowns of cooperation, conflict, social unrests, political revolutions, bubbles and crashes in financial markets, epidemic spreading, and/or "tragedies of the commons" such as environmental exploitation, overfishing, or climate change. Based on this understanding, the course points to possible ways of mitigating technosocio-economic-environmental problems, and what data science may contribute to their solution.

Prerequisites / notice
Mathematical skills can be helpful

851-0252-04L
Behavioral Studies Colloquium

Abstract
This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the macro- and micro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their research ideas in relation to behavioral science. The colloquium also features invited research talks.

Objective
Students know and can apply autonomously up-to-date investigation methods and techniques in the behavioral sciences. They achieve the ability to develop their own ideas in the field and to communicate their ideas in oral presentations and in written papers. The credits will be obtained by a written report of approximately 10 pages.

Content
This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the macro- and micro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their ideas in so far as they have some relation to behavioral science. The possible research areas are wide and may include theoretical as well as empirical approaches in Social Psychology and Research on Higher Education, Sociology, Modeling and Simulation in Sociology, Decision Theory and Behavioral Game Theory, Economics, Research on Learning and Instruction, Cognitive Psychology and Cognitive Science. Ideally the students (from Bachelor, Master, Ph.D. and Post-Doc programs) have started to start work on their thesis or on any other term paper.

Course credit can be obtained either based on a talk in the colloquium plus a written essay, or by writing an essay about a topic related to one of the other talks in the colloquium. Students interested in giving a talk should contact the organizers (Schinazi, Hoelscher) before the first session of the semester. Priority will be given to advanced / doctoral students for oral presentations. The course credits will be obtained by a written report of approximately 10 pages. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.

851-0252-07L
Recent Debates in Social Networks Research
Number of participants limited to 30
W 2 credits 2S C. Stadtfeld, P. Block

Abstract
Social Networks research is a highly interdisciplinary fields. For example, scholars in Sociology, Psychology, Political Sciences, Computer Science, Physics, Mathematics and Statistics contribute to the development of theories and methods. This course aims at understanding, comparing and structuring recent debates in the field of Social Networks.

Objective
Social Networks research is a highly interdisciplinary fields. At the end of this seminar, students will understand and be able to compare different subject-specific approaches to social networks research (e.g., from Sociology, Psychology, Political Sciences, Computer Science, Physics, Mathematics and Statistics). They will be familiar with recent publications in this field and be critically participate in a number of recent debates. Amongst others, these debates touch upon the co-evolution of selection and influence mechanisms, appropriateness of statistical models, generic mechanisms and features of social networks, models for the analysis of dynamic networks.

851-0253-00L
Embodied Cognition
Number of participants limited to 25
W 2 credits 2S K. Stocker

Abstract
This seminar offers an introduction to embodiment. Does the representation of thought and emotion depend upon the sensory and motor system? Highlights: the figurative processing of "go" still evokes voltage changes in foot muscles, conceptualizing time activates the eyes to look along a mental time line, abstract causality might still be grounded in motor control, emotion shows in the way we walk

Objective
Looking at the degree of embodiment in cognition and emotion naturally leads to the question how the mind works. What is the nature of human thoughts and emotions? How deeply are they dependent upon features of our physical body as an agent? Do the sensory and motor system play a physically constitutive role in conceptualizing thought and emotion? We will look at these questions by examining the degree of embodiment in basic thinking types of our mind (space, time, and causality thinking) as well as in abstract thought (e.g., logical thinking) and in emotion processing. As will be discussed, the topic of how the mind works is not only of central importance in the humanities (psychology, linguistics, philosophy, anthropology, education), but is also relevant for parts of the natural and technological sciences (physiology, neuroscience, medicine, computer science, artificial intelligence). Active participation is expected. Each participant can choose a topic for which they will give an oral presentation (about 30 min.) and write a related written report (about 3000 words).

851-0253-01L
Introduction to Cognitive Neuroscience
W 3 credits 2V V. Goel

Abstract
This will be an introductory course in cognitive neuroscience. We will examine both human neurophysiology and cognitive functioning and explore how the latter is underwritten by the former. Topics will include brain anatomy and development, cellular mechanisms, CNS methodologies, visual perception, object recognition, memory, hemispheric specialization, and complex cognition.

Objective
The focus will be on the interplay between neural and cognitive systems. The course will have a bias towards "higher" cognitive functions.

Learning objectives and outcomes: the course will have three basic components: (1) the first component will include basics of brain anatomy and development, functioning of cellular mechanisms, and how cellular mechanisms can be modelled as computational processes; (2) the second component will overview CNS methodologies, with an emphasis on MRI techniques; (3) in the third component we will turn to content topics. These will include visual perception, object recognition, emotion, hemispheric specialization, and complex cognition. By the end of the course the student will be able to identify the major brain structures, they should be able to explain the functioning of neurons, as relating to the action potential, have an understanding of the methodologies used to generate the various types or results reported in the literature, and for each of the content topics, the student should be able to identify the phenomenon, give examples, and discuss one or two of the main theories explaining it.

851-0585-00L
Rational-Choice-Sociology. Theory and Empirical Applications
W 2 credits 2S A. Diekmann

Abstract
Rational-Choice-Theory has become one of sociology’s general theoretical approaches. The seminar concerns itself with major ideas, concepts and questions involved with the development of a theory. The seminar will also include examples of empirical applications from various fields of sociology.

Objective
Attain in-depth knowledge and learn about new aspects of Rational-Choice-Theory and its applications.

Content
In collaboration with Prof. Dr. Norman Braun, Dr. Thomas Hinz, University of Munich, and Dr. Axel Franzen, University of Cologne.

Rational-Choice-Theory (RCT) has become a general theoretical approach in sociology. Recent progress in social sciences and game theory has triggered the theoretical development of RCT. The seminar will be concerned with important new ideas, concepts and questions of theory building. In addition, the seminar will illustrate empirical applications which cover broad areas in sociology: marriage and divorce, fertility, consumer behavior, labor market processes and exchange in social networks.

Data: 06.12.2017 12:57
Autumn Semester 2015
Page 579 of 1432
At the heart of the discourse is the handling of digital goods and intellectual property in society. Digitization and the Internet allow handling of data and information in new ways, and this has implications for society. Political violence needs to be clearly delineated (definitions and typologies).

III. Forms of political terrorism, their origins, effects and possible counter-strategies

The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work, (2) combining perspectives of different scientific disciplines (e.g., sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Objective

Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

They should also be able to explain how systemic instabilities can be understood by changing the perspective from a component-oriented to an interaction- and network-oriented view, and what fundamental implications this has for the proper design and management of complex dynamical systems.

Computational Social Science and Global Systems Science serve to better understand the emerging digital society with its close co-evolution of information and communication technology (ICT) and society. They make current theories of crises and disasters applicable to the problems of global-scale problems, taking a data-based approach that builds on a serious collaboration between the natural, engineering, and social sciences, i.e. an interdisciplinary integration of knowledge.

Prerequisites / notice

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

Prerequisites / notice

A fresh mind, some historical and contemporary knowledge, experience in controlled explanations.

literature

MATLAB kompakt, Wolfgang Schweizer, (Oldenbourg, 2006)

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

Lecture notes

The lecture slides will be presented on the course web page after each lecture.

Number of participants limited to 30

Number of participants limited to 70.

Number of participants limited to 30

Due to a very limited number of possible participants please register early with the assistant at the Chair of Sociology irene.urbanek@soz.gess.ethz.ch.

Doctoral students and post-doctoral students will be given priority.

The seminar will be held in German.

Participants are expected to write a paper or give a presentation.

851-0585-04L Lecture with Computer Exercises: Modelling and Simulating Social Systems with MATLAB

W 3 credits

2S D. Helbing, S. Balietti, O. Woolley

Number of participants limited to 70.

Content

This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

851-0585-41L From Computational Social Science to Global Systems Science

W 3 credits

2S D. Helbing

Particularly suitable for students of D-MAVT, D-INFK, D-ITET, D-MTEC, D-PHYS

Abstract

The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work, (2) combining perspectives of different scientific disciplines (e.g. sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Objective

Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

They should also be able to explain how systemic instabilities can be understood by changing the perspective from a component-oriented to an interaction- and network-oriented view, and what fundamental implications this has for the proper design and management of complex dynamical systems.

Computational Social Science and Global Systems Science serve to better understand the emerging digital society with its close co-evolution of information and communication technology (ICT) and society. They make current theories of crises and disasters applicable to the problems of global-scale problems, taking a data-based approach that builds on a serious collaboration between the natural, engineering, and social sciences, i.e. an interdisciplinary integration of knowledge.

Prerequisites / notice

A fresh mind, some historical and contemporary knowledge, experience in controlled explanations.

Graded essay, own choice of topic according to the syllabus and upon consulting the lecturer. Submission of the essay is 31st January, 2016.

851-0585-34L Political Violence

W 2 credits

1V E. Zimmermann

Number of participants limited to 30

Abstract

I. Political violence needs to be clearly delineated (definitions and typologies)

II. Numerous forms of political violence from protests via internal wars to revolutionary challenges are discussed in search for empirical theory-building

III. Forms of political terrorism, their origins, effects and possible counter-strategies

Recent developments will be supplemented

Objective

The goal is to deliver clear concepts and typologies which help for a better understanding of the various forms of political violence whether in pure form or mixed with other forms of conflict. The focus is on making known a large number of empirical theories.

Literature

Numerous German and English literature will be supplemented and made available online.

Prerequisites / notice

Doctoral students and post-doctoral students will be given priority.

irene.urbanek@soz.gess.ethz.ch.

Due to a very limited number of possible participants please register early with the assistant at the Chair of Sociology

851-0591-00L Digital Sustainability in the Knowledge Society

W 2 credits

2V M. M. Dapp

Particularly suitable for students of D-INFK, D-ITET, D-MATL, D-MAVT, D-MTEC, D-USYS

Abstract

How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on strong intellectual property rights are contrasted with open models like, e.g. Open Source/Content/Access. The course discusses consequences from different models and introduces «digital sustainability» as an alternative vision for society.

Starting from economic and legal basics, we compare proprietary and open/*free* models. Sustainable development as a concept is transferred to digital goods, taking into account the particular nature of digital stuff.

After the lecture, you should (hopefully) be able to

- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- using an example, explain the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the free/open source software model to other digital goods (e.g., open content, open access)
Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. »Digitalization plus Internet« allows for the first time in human kind’s history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. »Cool, so what’s the problem?«

The problem is, that this reality poses a fundamental threat to today’s business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as »knowledge« (the fourth factor of production) will become ever more important in the 21st century. Accordingly, »piracy« and »file-sharing« are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of »intellectual property«, which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to »reading, writing and arithmetics,« this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for »Free Software« exists today, with »GNU/Linux« as its most popular symbol. The movement fights against treating software code as private property but as a cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)... As a »teaser« to the lecture, you are invited to read the essay »ETH Zurich - A Pioneer in Digital Sustainability!«. It can be downloaded from www.essays2030.ethz.ch.

More on teach.digisus.info starting from September. Stay tuned.

**Content**

**Lecture notes**
Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

**Literature**
Content of the following books is covered (PDF's freely available online):

Other recommended books are:

**Prerequisites / notice**
For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.
Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.

**851-0594-03L Institutions and Social Behavior**

**W** 2 credits **1V** T. Voss

Number of participants limited to 30.

For registration, please contact: Irene Urbanek (irene.urbanek@soz.gess.ethz.ch)

**Abstract**
Institutions are constraints or rules which determine the opportunities, beliefs and incentives in a given situation and induce stability in social life. There are two major questions: 1. What are the determinants of the emergence and change of institutions? 2. How can the diversity of institutions be explained? The lecture will give an overview and critical discussion of some answers.

**Objective**
In everyday language and in the social sciences, the term "institutions" is used in a broad and sometimes amorphous way. Using some heuristic perspective of the so-called adaptationist program of social phenomena. Finally, you will be able to discern the benefits and the problems of the evolutionary perspective within various scientific disciplines, especially anthropology, psychology, empirical social research and comparative cultural sciences.

**Literature**

**Prerequisites / notice**

**851-0597-01L Evolutionary Foundations of Social Behavior**

**W** 2 credits **1V** E. Voland

Number of participants limited to 30.

This lecture will deal with the manifestations of the "selfish gene" principle in human social behavior. Cooperation and competition, selfishness and altruism, gender relations and parent-child conflicts are issues, the evolutionary backgrounds of which will be discussed. Special attention will be paid to the costly signaling theory.

**Abstract**
You will receive an in-depth overview of the application of Darwinian theory on behavioral phenomena. This will enable you to approach the heuristic perspective of the so-called adaptationist program of social phenomena. Finally, you will be able to discern the benefits and the problems of the evolutionary perspective within various scientific disciplines, especially anthropology, psychology, empirical social research and comparative cultural sciences.

**Literature**

**Prerequisites / notice**

**227-0802-02L Sociology**

**W** 2 credits **2V** A. Diekmann

Various studies are used to introduce basic sociological concepts, theories and empirical research methods, along with selected sociological topics. The goal of the course is to provide participants with an understanding of working practice in empirical sociology and the central findings of sociological studies.

**Objective**
To learn about methods of empirical social research and key results of classic and modern sociological studies.

Folgende Themen werden behandelt:

Gruppenarbeiten
- Schriftliche Arbeit in Soziologie (Durchführung einer kleinen empirischen Studie, Konstruktion eines Simulationsmodells sozialer Prozesse oder Diskussion einer vorliegenden soziologischen Untersuchung).

### Literature
- M. Pratschke

According to a myth, the ancient Greek philosopher Democrit dissected animals, because he was in search of the seat of the soul. Current science research on the mind-brain relationship has been articulated in various ways. In these lectures, I will explore the scientific and philosophical aspects of this relationship in the context of relevant cultural, historical and technological processes, with a focus on the modern neurosciences, but I will also discuss works of art and literature.

By the end of this lecture, students should be familiar with essential positions in the scientific and philosophical treatment of questions relating the mind to the brain. It should also become clear that some of the most relevant problems in current neurosciences have a long history.

The seminar deals with the designs for a new living in the artistic and social avantgarde movements at the beginning of the 20th century. It focuses on the correlation of the contemporary scientific and technological developments and the conceptions of a 'New Man'. The discipline of psychotechnics together with scientific and technological designs of living and working environments formulated visions of new and enhanced ways of human living and perception. In the seminar, we will examine the utopian visions of life in the avantgarde movements. Touching upon the fields of the life sciences, economics, management, progressive education, architecture, and art we will reflect the diverse relations between science, technology, and human living.

This course is fully booked!

The seminar deals with the designs for a new living in the artistic and social avantgarde movements at the beginning of the 20th century. It focuses on the correlation of the contemporary scientific and technological developments and the conceptions of a 'New Man'. The discipline of psychotechnics together with scientific and technological designs of living and working environments formulated visions of new and enhanced ways of human living and perception. In the seminar, we will examine the utopian visions of life in the avantgarde movements. Touching upon the fields of the life sciences, economics, management, progressive education, architecture, and art we will reflect the diverse relations between science, technology, and human living.

More often than not, classics are known by hearsay; they are quoted, but not read, or re-discovered and re-read selectively, so we can quote them. That holds true for many 'classics' in the history of science, too - texts, that is, which have shaped approaches to, and understandings of, science. The aim of this introductory course is to critically read some of these seminal texts.

This course is suited for all students with an interest in the history of science and knowledge. Conceived as an advanced historiographical introduction to the subject, the course is to explore a selection of "classics" in the history of science - some of them well known, others less so. In this course, we shall be as much concerned with the positions and the perspectives on science that were advanced in these various texts as we shall be concerned with the historical circumstances, political meanings and wider cultural contexts of these perspectives.

Using selected historical and current examples, we will discuss different formats of exhibitions that range from trade fair booths to laboratory exhibitions, exhibitions in art museums as well as in science and natural museums. Being a specific humanistic way of creating knowledge experimentally we will pay particular attention to exhibitions that deal with topics at the intersection of the sciences and the humanities, thus acting as agents in the debate on the Two Cultures.
Parasites have a bad reputation. They settle in with other creatures' bodies, they manipulate and deceive them, they live at the expense of others. Such features are not only of biological but also of social, political, and economic importance. The lecture will track the traces of the parasite through the history of biology and medicine and the fields of political economy and cultural theory.

The course provides insight into the complex and intricate history of the parasite and the various definitions of parasitism. In particular, it will make students aware of the fact that there is no single expert discourse on parasites (such as biology or medicine) which is then transferred to the realm of the social and the political. Instead, it will be considered how and why all these aspects are intertwined when people talk about parasites.

Wonders seem to be perfectly incompatible with science: Superstition and ignorance here, exactness and certitude there. In the seminar we will study this conflictive relation in more detail. Texts will cover a broad historical spectrum ranging from pre-modern cabinets of wonder to the anti-wonder polemics in the 19th century to the current dispute on Intelligent Design.

The course gives an introductionary overview in research questions, theoretical perspectives and empirical results of science and wonder to the anti-wonder polemics in the 19th century to the current dispute on Intelligent Design.

"Environmental Conciousness and Public Relations" shows how to communicate about environment and sustainability successfully. We will discuss new trends in environmental communication with the focus on integral solutions.

The course gives an introductory overview in research questions, theoretical perspectives and empirical results of science communication and environmental communication. They will be illustrated by concrete examples and via lectures from external guests.

"Environmental Conciousness and Public Relations" shows how to communicate about environment and sustainability successfully. We will discuss new trends in environmental communication with the focus on integral solutions.

The course gives an introductory overview in research questions, theoretical perspectives and empirical results of science communication and environmental communication. They will be illustrated by concrete examples and via lectures from external guests.

The course gives an introductory overview in research questions, theoretical perspectives and empirical results of science communication and environmental communication. They will be illustrated by concrete examples and via lectures from external guests.

We will discuss new trends in environmental communication with the focus on integral solutions.
The lecture covers the time from the beginning of urban culture until the mid 19th century. With selected examples it emphasizes on the historical plannings and methods of European cities. Each specific urban development will be presented within a broader historical context.

2G

V. Magnago Lampugnani

The two-semester course offers an introduction to the history and theory of architecture from the industrial revolution up to now. Based on current questions a variety of case studies will be discussed.

Objective

The subject of this lecture course is the history and theory of architecture since the beginning of the 19th century up to today. It examines the architectural answers to the changing technical inventions and social practices. Consequently, the focus will be less on individual architects or buildings than on various themes that determined the architecture of the period.

Content

Sharing. The History of an Attractive Technology Particularly suitable for students D-ARCH, D-BAUG, D-HEST, D-INFK, D-ITET, D-MAVT, D-MATL

Abstract

The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be discussed as a crucial offer and problem of late modernity.

The course wants to develop the students ability to critically read and asses historic texts.

A detailed program and course materials will be made available during the semester on www.tg.ethz.ch.

The course can not be taken by Master students of the D-ARCH, who have already completed it within the Bachelor programme.

051-0331-00L History of Art and Architecture I

W 4 credits 4G L. Schmitt, U. Schulte-Umberg

The lecture conveys historical knowledge about architecture and art as well as methodical knowledge as a preparation for the independent handling of historical sources and scientific literature. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

Objective

Acquisition of basic knowledge of the history of art and architecture, resp. of methodical basic knowledge of historical working.

Content

The history of art and architecture is part of our reality: it confronts us in the historically shaped environment of the city and plays an essential role in the creation of architecture. The historical lectures are therefore part of the fundamental courses of the undergraduate programme in architecture. On the basis of cultural and art-historical research the courses impart knowledge about architecture and art from ancient times to the present. At the same time they sharpen the perception for the conditions and capabilities of building activity in history. Moreover, they convey methodical knowledge and technical language skills and are meant as a preparation for the independent handling of historical sources and scientific literature.

The first one-year course aims at these goals in the form of exemplary epoch representations which through light upon the historical continuities. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

051-0363-00L History of Urban Design I

W 2 credits 2G V. Magnago Lampugnani

The lecture covers the time from the beginning of urban culture until the mid 19th century. With selected examples it emphasizes on the historical plannings and methods of European cities. Each specific urban development will be presented within a broader context.
This course analyzes the history of urban architecture primarily in its existing three dimensional form as a complex human artefact. It also explores the inspirations that prompted the creation of this artefact: philosophical and religious concepts, social conditions, property relationships and the mechanisms that exploit the economics of real estate and the influence of building technology. Intellectual, literary or artistic modes of thought will also be assessed with regard to their impact on urban development. Urbanism has its own distinctive approach as a discipline, but it is also clearly responsive to the influence of related disciplines. Study is made of actual cities and urban expansion plans which are in the process of implementation, as well as unrealized projects and visions of the future. These projects sometimes illustrate ways of thinking that are equal to, or clearer than, actual urban situations.

In the first semester an introduction to the discipline and the methods are given along the thematic issues from the beginning of urban culture until the mid-19th century.

01. Introduction to the discipline and method: The history of urban design as a historical project
02. Athens and Rome in the ancient world: Myth, selfportrayal and speculation
03. From the spirit of equality to the colonial module: Greek and Roman City foundings
04. From the urban ideal to new cities in the Middle Ages and the Renaissance
05. Baroque strategies: The new organisation of Rome under Sixtus V, the production of Versailles under Louis XIV and the invention of St. Petersburg
06. The city between Absolutism and Enlightenment: baroque defence-designs, the European colonization of the American continent and the reconstruction of Lisbon
07. Ideology and speculation after the Glorious Revolution: landscapageardens and urban figurations in England from 1650-1850
08. Between modernization, Grandeur and repression: Embellishment in Paris from 1750-1830
09. The construction of the bourgeois city: Georges-Eugène Haussmann transforms Paris into the capital of the 19th century
10. Architectural insertion and plan for the expansion of the city: From the Berlin of Karl Friedrich Schinkel to James Hobrecht
11. Neoabsolute power, bourgeois self-confidence and Marxian Idealism: The Viennese Ringstrasse and Ildefonso Cerda’s Ensanche for Barcelona

The lectures are accompanied by a script (two semesters of the bachelor studies), that can be purchased at the chair for the history of urban design (HIL D 75.2) at the price of CHF 30.-. The script serves as an auxiliary means to the attended lecture compiling the most important illustrations showed and the names and dates of the buildings and its builders along with a short introductory note.

Further recommended literature to consult is listet within the script.

History of Urban Design from antiquity to the 19th century

851-0724-00L Property Law for Geometers: Land Registry and Geoinformation Law
- Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

Objective Overview of the legal norms of land registry and surveying law.
Content Basic principles of material and formal land registry law, components of the land register, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of the geometr.-er. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.

Lecture notes Abgegebene Unterlagen: Skript in digitaler Form

Literature

Prerequisites / notice Requirements: Property Law (12-722)

851-0705-02L Environmental Law: Topics and Case Studies
- Number of participants limited to 20.

Objective The aim of this workshop is to equip students with legal skills and methods to solve or treat problems and questions of the environmental law and foster the understanding on the possibilities and limits of legal problem-solving. The students choose an inquiry with practical relevance. To this end they work out the legal basis demonstrating a legal correct solution or approach to a solution. In doing so, students will get to know legal methods and research possibilities.

Prerequisites: Environmental Law: Conceptions and Fields (851-0705-01L) offered in spring semester.

Abstract This workshop offers to the students the opportunity to intensify their environmental legal knowledge on the basis of individual topics or cases of their respective programme or professional interest in a guided self-study. They develop a better understanding for the practical application of legal regulations on environmental matters.

Literature

At the beginning of the workshop the students are introduced to the legal methods and sources as well as in the aim and the process of the workshop. The participants will organize themselves in a team of two persons giving themselves an inquiry on topics of the environmental law. It is also possible to choose questions at the interfaces of e.g. zoning law, energy law, transport law. A proposal, which will be presented to the lecturer, as well as an optional Q&A-session in class will facilitate the start. Next the working on topics will follow by self-study. The results will be presented in form of a memo/paper with a minimum of ten pages (excluding graphs and tables). At the end of the workshop, a presentation of ten minutes will be made to the plenum including a question-and-answer session. Class language will be German.

Den Studierenden werden Unterlagen zur juristischen Metoden- und Quellenlehre sowie zum Inhalt und Ablauf des Kurses zu Beginn der Veranstaltung kostenlos abgegeben.

The students will be expected to prepare for and lead the presentations for some of the topics and write a final paper. The results will be presented in form of a memo/paper with a minimum of ten pages (excluding graphs and tables). At the end of the workshop, a presentation of ten minutes will be made to the plenum including a question-and-answer session. Class language will be German.

### 851-0707-00L Space Planning Law and Environment

**Lecture notes**

Die Veranstaltung erfordert die Bereitschaft, sich aktiv und selbständig mit einer selbstgewählten Fragestellung oder einem eigenen Fallbeispiel aus dem Gebiet des Umweltrechts und allenfalls aus Schnittstellengebieten auseinanderzusetzen. Damit die Interaktivität und die Begleitung der Teams gewährleistet werden kann, ist die Teilnehmerzahl auf maximal 16 Personen beschränkt. Es handelt sich um eine Vertiefungsveranstaltung. Der Besuch der Vorlesung "Umweltrecht: Konzepte und Rechtsgebiete" (851-0705-01) ist Voraussetzung.

**Prerequisites / notice**

The seminar is geared towards a mix of students from architecture / planning, engineering, computer science and behavioral science as well as anybody interested in the relation between design and cognition. Designers and an evidence-based design perspective. The seminar is geared towards a mix of students from architecture / planning, engineering, computer science and behavioral science as well as anybody interested in the relation between design and cognition. Architecture students can obtain course credit a written essay / report will be required (details to be specified in the introductory session of the course).

**Content**

- Basic understanding of nature and function of space planning from a legal point of view. Basic knowledge of space planning instruments, relationship between space planning and constitutional law (especially property rights), solving of practical cases.

**Objective**

- Basic understanding of a human's relationship to the environment. Basic knowledge of methods for assessing usability (user testing, cognitive walkthrough, GOMS).

**Content**

- The seminar introduces theory and methods in human-computer interaction and usability. Cognitive Science provides a theoretical framework for designing user interfaces as well as a range of methods for assessing usability (user testing, cognitive walkthrough, GOMS).

**Objective**

- The seminar will provide an opportunity to experience some of the methods in applied group projects.

**Content**

- The seminar will introduce key topics, theories and methodology in human-computer interaction (HCI) and usability. Presentations will cover basics of human-computer interaction and selected topics like mobile interaction, adaptive systems, human error and attention. A focus of the seminar will be on getting to know evaluation techniques in HCI. Students form work groups that first familiarize themselves with a select usability evaluation method (e.g. user testing, GOMS, task analysis, heuristic evaluation, questionnaires or Cognitive Walkthrough). They will then apply the methods to a human-computer interaction setting (e.g. an existing software or hardware interface) and present the method as well as their procedure and results to the plenary. Active participation is vital for the success of the seminar, and students are expected to contribute to presentations of foundational themes, methods and results of their chosen group project. In order to obtain course credit a written essay / report will be required (details to be specified in the introductory session of the course).

**Objective**

- Taking the perspectives of building users (occupants and visitors) is vital for a human-centered design approach. Students will learn about relevant theory and methods in cognitive science and environmental psychology that can be used to understand human behavior in built environments. The foundations of environmental psychology and human spatial cognition will be introduced. A focus of the seminar will be on how people perceive their surroundings, how they orient in a building, how they memorize the environment and how they find their way from A to B. Students will also learn about a range of methods including real-world observation, virtual reality experiments, eye-tracking and behavior simulation for design. Students will reflect on the roles of designers and other stakeholders with respect to human-centered design and an evidence-based design perspective. The seminar is geared towards a mix of students from architecture / planning, engineering, computer science and behavioral science as well as anybody interested in the relation between design and cognition. Architecture students can obtain course credit in "Vertiefungssach" or "Wahltfach".

**Learning outcomes:**

- Understanding the design process from a normative methodological perspective, and descriptive computational, cognitive, and neural perspectives.

- Learning outcomes: The end of the seminar the student should be familiar with these literatures, should be able to discuss relative strengths and weaknesses, and identify what each has contributed to our ability to design, and to our understanding of the design process itself.
Science and Technology

 Particularly suitable for students of D-ARCH, D-HEST, D-MTEC.

Abstract

The seminar is fully booked!

At the beginning of the 20th century, the artistic and social avantgarde movements developed visions of a ‘New Man’ with new modes of perception and within new forms of social life. The seminar deals with the scientific, technological, artistic, pedagogical, and political designs for a new living.

Objective

The seminar deals with the designs for a new living in the artistic and social avantgarde movements at the beginning of the 20th century. It focuses on the correlation of the contemporary scientific and technological developments and the conceptions of a ‘New Man’. The discussion of psychotechnics together with scientific and technological designs of living and working environments formulated visions of new and enhanced ways of human living and perception. In the seminar, we will examine the utopian visions of life in the avantgarde movements. Touching upon the fields of the life sciences, economics, management, pedagogical education, architecture, and art we will reflect the diverse relations between science, technology, and human living.

851-0157-59L  
**A Historical Epistemology of Exhibitions**  
Particularly suitable for students of D-ARCH, D-BAUG.

Abstract

The seminar provides an introduction to exhibitions as epistemic practices. By means of various research approaches and examples from historical and current exhibitions we will discuss how knowledge is created by temporary spatial constellations of exhibited objects and the ways exhibitions act as laboratories of ideas.

Objective

The seminar aims at getting to know the theoretical and practical conditions of exhibitions as temporary forms of knowledge. We will develop criteria to explore the various aspects and processes related to exhibitions, including: installations of exhibits, display cases, transporting devices, exhibition catalogues, exhibition architecture, visitor guidance, spatial arrangements of objects etc.

Using selected historical and current examples, we will discuss different formats of exhibitions that range from trade fair booths to laboratory exhibitions, exhibitions in art museums as well as in science and natural museums. Being a specific humanistic way of creating knowledge experimentally we will pay particular attention to exhibitions that deal with topics at the intersection of the sciences and the humanities, thus acting as agents in the debate on the Two Cultures.

Data: 06.12.2017 12:57 Autumn Semester 2015 Page 588 of 1432
Abstract
The lecture gives engineering students an overview of the basic aspects of intellectual property. The lecture aims to make participants aware of the various methods of protection and to put them in a position to be able to use this knowledge in the workplace.

Objective
In recent years, knowledge about intellectual property has become increasingly important for engineers. In both production and distribution as well as in research and development, engineers are increasingly being confronted with questions concerning the patenting of inventions and the utilisation of patent information. With up to 80% of publicly-available technical information being stored in patents only, it is of great importance for engineers to know the basics of the patent system and to be in a position to be able to extract relevant information from the flood of patent information available. This relates to daily work in industry as well as in research, where protecting inventions has gained in importance.

Patents are also an important source of information - from competitors and potential cooperation partners to the development of markets and the risk of coming into conflict with third party IP rights. Respectively, a knowledge of patents has also become a key qualification at a company’s strategic level.

The seminar is customised to the needs of engineers. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.

The seminar contains practical exercises on the use and research of patent information. Basic knowledge on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

Prerequisites / notice
The lecture is coordinated in particular to the needs of the following degree programs: Agricultural science, architecture, civil engineering, computational science and engineering, computer science, electrical engineering and information technology, environmental engineering, geometric engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics.

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' will be offered, which is coordinated to the needs of students in these degree programs.

851-0724-00L Property Law for Geometers: Land Registry and Geoinformation Law

Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

Objective
Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

Content
Overview of the legal norms of land registry and surveying law.

Haller, Walter/Karlen, Peter, Raumplanung-, Bau- und Umweltrecht, 3.A., Zürich 1999
Häni, Peter, Planungs-, Bau- und besonderes Umweltschutzrecht, 5.A., Bern 2008

051-0363-00L History of Urban Design I W 2 credits 2G 4V V. Magnago Lampugnani
Abstract
The lecture covers the time from the beginning of urban culture until the mid 19th century. With selected examples it emphasizes on the historical plannings and methods of European cities. Each specific urban development will be presented within a broader context.

Objective
In the first semester an introduction to the discipline and the methods are given along the thematic issues from the beginning of urban culture until the mid-19th century.

Content
- 01. Introduction to the discipline and method: The history of urban design as a historical project
- 02. Athens and Rome in the ancient world: Myth, selfportrayal and speculation
- 03. From the spirit of equality to the colonial module: Greek and Roman City foundings
- 04. From the urban ideal to new cities in the Middle Ages and the Renaissance
- 05. Baroque strategies: The new organisation of Rome under Sixtus V, the production of Versailles under Louis XIV and the invention of St. Petersburg
- 06. The city between Absolutism and Enlightenment: baroque defence-designs, the European colonization of the American continent and the reconstruction of Lisbon
- 07. Ideology and speculation after the Glorious Revolution: landscalegardens and urban figurations in England from 1650-1850
- 08. Between modernization, Grandeur and repression: Embellishment in Paris from 1750-1830
- 09. The construction of the bourgeois city: Georges-Eugène Haussmann transforms Paris into the capital of the 19th century
- 10. Architectural insertion and plan for the expansion of the city: From the Berlin of Karl Friedrich Schinkel to James Hobrecht

11. Neobohemian power, bourgeois self-confidence and Marixan Idealism: The Viennese Ringstrasse and Ildefonon Cerdas Ensanche for Barcelona

Lecture notes
The lectures are accompanied by a script (two semesters of the bachelor studies), that can be purchased at the chair for the history of urban design (HIL D 75.2) at the price of CHF 30,-. The script serves as an auxiliary means to the attended lecture compiling the most important illustrations showed and the names and dates of the buildings and its builders along with a short introductory note.

Literature
History of Urban Design from antiquity to the 19th century

051-0331-00L History of Art and Architecture I W 4 credits 4G 8V L. Schmitt, U. Schulte-Umbberg
Abstract
The lecture conveys historical knowledge about architecture and art as well as methodical knowledge as a preparation for the independent handling of historical sources and scientific literature. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

Objective
Acquisition of basic knowledge of the history of art and architecture, resp. of methodical basic knowledge of historical working.

Content

The history of art and architecture is part of our reality: it confronts us in the historically shaped environment of the city and plays an essential role in the creation of architecture. The historical lectures are therefore part of the fundamental courses of the undergraduate programme in architecture. On the basis of cultural and art-historical research the courses impart knowledge about architecture and art from ancient times to the present. At the same time they sharpen the perception for the conditions and capacities of building activity in history. Moreover, they convey methodical knowledge and technical language skills and are meant as a preparation for the independent handling of historical sources and scientific literature.

The first one-year course aims at these goals in the form of exemplary epoch representations which through light upon the historical continuities. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

Further recommended literature to consult is listed within the script.

Verfügung gestellt.
Selbststudium an Hand des Lehrbuchs zum Raumplanungs- und Baurecht. Löschen von drei Aufgaben (praktischen Fällen) mit je genügender Leistung für die Erlangung der KP. Als Lernhilfe werden Anleitungen und insbesondere ein Musterfall mit Musterlösung zur Verfügung gestellt.

Die Veranstaltung erfordert die Bereitschaft, sich aktiv und selbständig mit einer selbstgewählten Fragestellung oder einem eigenen Fallbeispiel aus dem Gebiet des Umweltrechts und allenfalls aus Schmittstellengebieten auseinanderzusetzen. Damit die Interaktivität und die Begleitung der Teams gewährleistet werden kann, ist die Teilnehmerzahl auf maximal 16 Personen beschränkt. Es handelt sich um eine Vertiefungsveranstaltung. Der Besuch der Vorlesung "Umweltrecht: Konzepte und Rechtsgebiete" (851-0705-01) ist Voraussetzung.
Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

### Prerequisites / notice

The course can not be taken by Master students of the D-ARCH, who have already completed it within the Bachelor programme.

**701-0703-00L**  
**Environmental Ethics**  
**W** 2 credits  
**2V** M. Huppenbauer

**Abstract**  
The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

**Objective**  
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and arguments to be found within the field of environmental ethics and will have practised these in small case studies.

**Content**  
- Introduction to general and applied ethics.  
- Overview and discussion of ethical theories relevant to the environment.  
- Familiarisation with various basic standpoints within environmental ethics.  
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.  
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

**Lecture notes**  
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

**Literature**  
- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003  
- John O'Neill et al., Environmental Values, 2008  
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008

**Prerequisites / notice**  
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list. In the part of the course serving as an introduction to general and applied ethics, we shall be using the following textbook: Barbara Bleisch/Markus Huppenbauer: Ethische Entscheidungsfindung. Ein Handbuch für die Praxis, Zürich 2010 (to be published Autumn 2010).

**851-0549-00L**  
**WebClass Introductory Course History of Technology**  
**W** 3 credits  
**2V** D. Gugerli

**Abstract**  
WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

**Objective**  
Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get to know basic theories and practices of the field.

**860-0006-00L**  
**Statistical Data Analysis**  
**W** 3 credits  
**3G** M. Högländer, I. Günther, K. Harttgen

**Abstract**  
This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with statistical software such as Stata.

**Objective**  
- Students have a sound understanding of linear and logit regression  
- know some basics about regression models for multinomial, ordered, or censored response variables, as well as for count data  
- know strategies to test causal hypotheses using regression analysis with experimental and quasi-experimental methods  
- are able to formulate and implement a regression model for a particular research question and a particular type of data  
- are able to critically interpret results of a regression model, in particular, regarding causal inference

**Content**  
The topics covered in the first part of the course are linear and logit regression analysis. Extensions to regression models for ordered, multinomial or censored response variables, as well as for count data will be addressed briefly. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, propensity score matching, and randomized controlled trials.

The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will be enabled to critically read and assess published empirical social science studies.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructor. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of one fourth. Students are assisted in solving the assignments during the exercises session. Support is provided for the analysis software Stata, but students are free to choose R, SPSS or any other software to solve the assignments.
Central Questions in Bioethics

851-0125-52L

**Abstract**

Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decision, principles like "Protect the dignity of the living being!" or "Respect a person's self-determination!? Besides answering such questions, the social, scientific and political processes linked with biotechnologies should be taken into account.

**Objective**

Der Kurs hat das Ziel, einige der wichtigsten bioethischen Fragen zu erforschen.

Es sollen normative Prinzipien identifiziert werden, die oft faktisch bioethischen Entscheidungen zu Grunde liegen. Und es sollen überzeugende Prinzipien ermittelt werden.

Zugleich sollen die Teilnehmer Kenntnisse erwerben über die Entwicklungen in zeitgenössischen Gesellschaften westlichen Typs (mit individuellen Grundrechten, kapitalistischer Marktwirtschaft und systematische wissenschaftlicher Forschung), die mit der Dynamik von Biotechniken zusammenhängen.

**Literature**

1. Dieter Sturma/Bert Heinrichs (Hg.), Handbuch Bioethik, Stuttgart: Metzler 2015.

Philosophy of Biology

851-0300-93L

**Abstract**

The philosophy of biology deals with concepts and problems that occur specifically while dealing with living entities. Accordingly, it covers the historical as well as systematic aspects of concepts like gene or species, or theories explaining diversity or stability, competitive or cooperative action. Another important topic is the role of technology while affording biological objects.

**Objective**

The overarching objective of this seminar is to get an impression of the specificity of biological problems and to develop an appropriate philosophical sensibility. Accordingly, philosophical traditions in biology will be discussed, just as the application of the history of concepts in the context of biology. The seminar reader will consist of contributions of biologists as well as philosophers of biology. Besides the basic concepts in biology such as gene, species, evolution, or diversity, we will be also reflecting on the relationship between technology, experimenting, and biological objects. Depending on the interests of the seminar participants, the examples to be discussed may be chosen from systems biology, molecular or synthetic biology, ecology or else.

Research Ethics

851-0180-00L

**Abstract**

This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

**Objective**

The main goal of this course is to enhance the student’s ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access;
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

851-0148-02L Manifolds and Individuation in Mathematics and Philosophy
Number of participants limited to 40.
Particularly suitable for students of D-BIOL, D-MATH, D-PHYS

T. Böhm

W 3 credits 2S

3 credits 2S

3 credits 2S

Data: 06.12.2017 12:57 Autumn Semester 2015 Page 593 of 1432
Abstract  Manifolds and individuation are concepts which allow to reconsider notorious problems such as the relationship between general and particular, substance and modi, physical processes and persons. They may incorporate heterogeneous elements as needed to overcome traditional categories and classifications, and also describe processes leading to the existence of things.

Objective  The students should become familiar with some conceptual possibilities to recognise and deal with structures across the usual division of subjects. The problem areas are discussed on the basis of texts of various mathematicians and philosophers, with a wide range of applications such as psychology and life sciences.

Objective

Research and development play an important role in chemistry-related technology sectors, such as inorganic chemistry, pharmacy or food chemistry.

Investments in the development of new substances and active component in these sectors are traditionally secured by patents because publicly known inventions, generally chemical substances, may easily be reproduced by others.

In the last years, the know-how about intellectual property has become increasingly important for chemists and engineers. Both in the production process and in the distribution sector, chemists and engineers are increasingly concerned with questions related to patenting inventions and the use of patent information. As more than three-quarters of all publicly available technical information is reportedly available only in patents, it is more and more important for researchers and engineers to be capable of extracting relevant information from the flood of patents.

Patents are not only a measure to protect investments and inventions in chemistry-related sectors but also an important source of information about competitors and potential cooperation partners, about the development of markets and the risks of infringing others' patents. Accordingly, the know-how about patents and patent information has also become a key qualification on the strategic level in companies and in the area of research.

The seminar is customised to the needs of chemists and students of related degree programs. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.
- Special aspects of protecting inventions in chemistry-related sectors, including polymorphs and inventions in the field of nanotechnology.

The seminar contains practical exercises on the use and search of patent information in chemistry-related sectors. Basic know-how on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

Prerequisites / notice

The lecture is coordinated in particular to the needs of the following degree programs: Agricultural science, biotechnology, chemical engineering, chemistry, food science, pharmaceutical sciences.

For engineering and physics students, the lecture 'The Role of Intellectual Property in daily routine: A Practical Introduction' will be offered, which is coordinated to the needs of students in these degree programs.

860-0006-00L Statistical Data Analysis 3 credits 3G M. Höglinger, I. Günter, K. Hartgen

Number of participants limited to 20.

Abstract
This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with statistical software such as Stata.
Objective
- Students have a sound understanding of linear and logit regression
- Students know some basics about regression models for multinomial, ordered, or censored response variables, as well as for count data
- Students know strategies to test causal hypotheses using regression analysis with experimental and quasi-experimental methods
- Students are able to formulate and implement a regression model for a particular research question and a particular type of data
- Students are able to critically interpret results of a regression model, in particular, regarding causal inference

Content
The topics covered in the first part of the course are linear and logit regression analysis. Extensions to regression models for ordered, multinomial or censored response variables, as well as for count data will be addressed briefly. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, propensity score matching, and randomized controlled trials.

The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will be enabled to critically read and assess published empirical social science studies.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of one fourth. Students are assisted in solving the assignments during the exercises session. Support is provided for the analysis software Stata, but students are free to choose R, SPSS or any other software to solve the assignments.

Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decision, principles like "Protect the dignity of the living being!" or "Respect a person's self-determination!? Besides answering such questions, the social, scientific and political processes linked with biotechnologies should be taken into account.

**Literature**

851-0157-56L **Avantgarde-Life: Utopia of the 'New Man' Between Science and Technology**

**Abstract**

The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be addressed in a third part. One important choice is whether a country will rely on public financing of personal health care services or private financing.

**Objective**

The seminar deals with the designs for a new living in the artistic and social avantgarde movements at the beginning of the 20th century. It focuses on the correlation of the contemporary scientific and technological developments and the conceptions of a 'New Man'. The discipline of psychotechnics together with scientific and technological designs of living and working environments formulated visions of new and enhanced ways of human living and perception. In the seminar, we will examine the utopian visions of life in the avantgarde movements. Touching upon the fields of the life sciences, economics, management, progressive education, architecture, and art we will reflect the diverse relations between science, technology, and human living.

**Literature**

- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.
This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference.

**Objective**

- Students are expected to contribute to presentations of foundational themes, methods and results of their chosen group project. In order to obtain course credit a written essay/report will be required.

- The course deals with the basic legal framework for doing e-business as well as using information technology. It discusses a variety of legal concepts and rules to be taken into account in practice, be it when designing and planning new media business models, be it when implementing online projects and undertaking information technology activities.

- The objective is knowing and understanding key concepts relevant for doing e-business, in particularly understanding how e-business is regulated by law nationally and internationally, how contracts are concluded and performed electronically, which rules have to be obeyed in particular in the Internet with regard to third party and own content and client data, the concept of liability applied in e-business and the role of the law in the practical implementation and operation of e-business applications.

Data: 06.12.2017 12:57 Autumn Semester 2015 Page 600 of 1432
At the heart of the discourse is the handling of digital goods and intellectual property in society. Digitization and the Internet allow handling of digital documents, which is being made available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to intellectual property, as it is a central cultural good available to all without private interests. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to intellectual property, as it is a central cultural good available to all without private interests.

In the 21st century, the digital reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become even more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. The core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. It is transferred to digital goods, taking into account the particular nature of digital stuff.

How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on intellectual property rights are contrasted with open models like, e.g., Open Source/Content/Access. The course discusses consequences from different models and introduces «digital sustainability» as an alternative vision for society.

The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become even more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. The core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. It is transferred to digital goods, taking into account the particular nature of digital stuff.
Content of the following books is covered (PDFs freely available online):
Other recommended books are:
1 (general) Chris DiBona et al., Open Sources. Voices from the Open Source Revolution, O'Reilly, 1999.

For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.

851-0585-04L Lecture with Computer Exercises: Modelling and Simulating Social Systems with MATLAB
Number of participants limited to 70.

851-0585-41L From Computational Social Science to Global Systems Science
Number of participants limited to 100.

851-0549-00L WebClass Introductory Course History of Technology
Number of participants limited to 100.

860-0006-00L Statistical Data Analysis
Number of participants limited to 20.
This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with statistical software such as Stata.

**Objective**
- Students have a sound understanding of linear and logit regression
- know some basics about regression models for multinomial, ordered, or censored response variables, as well as for count data
- know some strategies to test causal hypotheses using regression analysis with experimental and quasi-experimental methods
- are able to formulate and implement a regression model for a particular research question and a particular type of data
- are able to critically interpret results of a regression model, in particular, regarding causal inference

**Content**
The topics covered in the first part of the course are linear and logit regression analysis. Extensions to regression models for ordered, multinomial or censored response variables, as well as for count data will be addressed briefly. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, propensity score matching, and randomized controlled trials.

The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will be enabled to critically read and assess published empirical social science studies.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of one fourth. Support is provided for the analysis software Stata, but students are free to choose R, SPSS or any other software to solve the assignments.
The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be discussed as a crucial offer and problem of late modernity.

The course wants to develop the students ability to critically read and asses historic texts.

A detailed program and course materials will be made available during the semester on www.tg.ethz.ch.

Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of configurations of knowledge.

Students are familiar with different relations between literature and technology. They can verbalise and analyse central contentions. The seminar introduces theory and methods in human-computer interaction and usability. Cognitive Science provides a theoretical framework for designing user interfaces as well as a range of methods for assessing usability (user testing, cognitive walkthrough, GOMS).

The seminar will provide an opportunity to experience some of the methods in applied group projects. The seminar will be on getting to know evaluation techniques in HCI. Students form work groups that first familiarize themselves with a select usability evaluation method (e.g. user testing, GOMS, task analysis, heuristic evaluation, questionnaires or Cognitive Walkthrough). They will then apply the methods to a human-computer interaction setting (e.g. an existing software or hardware interface) and present the method as well as their procedure and results to the plenary. Active participation is vital for the success of the seminar, and students are expected to contribute to presentations of foundational themes, methods and results of their chosen group project. In order to obtain course credit a written essay / report will be required (details to be specified in the introductory session of the course).
Simulating Social Systems with MATLAB

Number of participants limited to 70.

Particularly suitable for students of D-MAVT, D-INFK, D-ITET, D-MTEC, D-PHYS.

Content
This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

Lecture notes
The lecture slides will be presented on the course web page after each lecture.

Literature

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

Prerequisites / notice
The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

851-0585-41L From Computational Social Science to Global Systems Science

W 3 credits 2S D. Helbing

Abstract
The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work, (2) combining perspectives of different scientific disciplines (e.g. sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Objective
Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

They should also be able to explain how systemic instabilities can be understood by changing the perspective from a component-oriented to an interaction- and network-oriented view, and what fundamental implications this has for the proper design and complex dynamical systems.

Computational Social Science and Global Systems Science serve to better understand the emerging digital society with its close co-evolution of information and communication technology (ICT) and society. They make current theories of crises and disasters applicable to the solution of global-scale problems, taking a data-based approach that builds on a serious collaboration between the natural, engineering, and social sciences, i.e. an interdisciplinary integration of knowledge.

851-0549-00L WebClass Introductory Course History of Technology

W 3 credits 2V D. Gugerli

Number of participants limited to 100.

Abstract
The seminar is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

Objective
Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

Content
WebClass Einführungskurs Technikgeschichte is eine webgestützte Einführung in die Technikgeschichte. Technikgeschichte untersucht Angebote technischer Entwicklungen, die in bestimmten historischen Kontexten entstanden und von sozialen Gruppen oder ganzen Gesellschaften als Möglichkeit sozialen Wandels wahrgenommen, ausgehandelt und schliesslich genutzt oder vergessen wurden.

851-0735-10L Business Law

W 2 credits 2V P. Peyrot

Number of participants limited to 10.

Particularly suitable for students of D-ITET

Abstract
The students shall obtain a basic knowledge about business law. They shall be able to recognize and evaluate issues in the area of business law and suggest possible solutions.

Objective
The students shall obtain the following competence:
- They shall obtain a working knowledge on the legal aspects involved in setting up and managing an enterprise.
- They shall be acquainted with corporate functions as contracting, negotiation, claims management and dispute resolution.
- They shall be familiar with the issues of corporate compliance, i.e. the system to ascertain that all legal and ethical rules are observed.
- They shall be able to contribute to the legal management of the company and to discuss legal issues.
- They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

Lecture notes
A comprehensive script will be made available online on the moodle platform.

851-0594-00L International Environmental Politics

W 4 credits 2V T. Bernauer

Number of participants limited to 70.

Particularly suitable for students of D-ITET, D-USYS

Abstract
This course focuses on the conditions under which cooperation in international environmental politics emerges and the conditions under which such cooperation and the respective public policies are effective and/or efficient.
The lecture gives engineering students an overview of the basic aspects of intellectual property. The lecture aims to make participants aware of various methods of protection and to put them in a position to be able to use this knowledge in the workplace.

Students from ETH will receive 4 ECTS credit points if they attend classes regularly and obtain a grade of 4.0 or higher for the written exam in the final week of the semester. Students who obtain a grade of less than 4.0 for the end-of-semester test will have a second chance in the first week of the following semester. The rules of the game are defined in detail on the course syllabus. Students who do not participate in the end of semester test will not have access to the repeat exam unless they submit compelling and documented reasons for why they were unable to participate in the first test. Except for language dictionaries, no additional materials and no laptops and mobile phones are allowed during the exam.

The workload for this course is approx. 120 hours (all inclusive).

Kombinatorik, the combination of elements, appears as a method in different disciplines and fields of knowledge: In
A. Kilcher
2V
T. Böhm
3 credits
The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights).
3 credits
The aim of the course is to enable students at ETH Zurich to recognize which rights may protect their creations, and which rights may be
infringed as a result of their activities. Students should learn to assess the risks and opportunities of intellectual property rights in the
development and marketing of new products. To put them in this position, they need to know the prerequisites and scope of protection
afforded by the various intellectual property rights as well as the practical difficulties involved in the enforcement of intellectual property
rights. This knowledge is imparted based on current rulings and cases.

Another goal is to enable the students to participate in the current debate over the goals and desirability of protecting intellectual creations,
particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls,
patent thickets).

On the one hand, the topic of the infinite will be dealt with historically by discussing philosophical texts, but e.g., Kant, Bolzano and Cantor. On the other hand, the topic will be treated from a (non-historical) scientific point of view: the point of view of logic, mathematics, and physics.

To get acquainted with different types of infiniteness; to study what is intriguing or problematic about the infinite; to inquire whether these different types of infiniteness have (important) features in common.

853-0060-00L Current Issues in Security Policy

Abstract
This course provides an overview of the development of the international system and the central security challenges since the end of the Cold War. The focus of this course will be on security issues of the post 9/11 era: new risks, arcs of crises, security strategies and core actors will be presented during the course.

Objective
Participants should gain a solid understanding of current issues in international security policy as well as of the central academic debates.

Content
The aim of the course is to provide the participants with an overview of international security politics in a globalized world. After dealing with the major changes of the international security environment as compared to the cold war era, we will concentrate on some of the key challenges (international terrorism, proliferation of weapons of mass destruction etc.). The third part of the lecture focuses on security strategies pursued by the ‘Western’ world.

Lecture notes
A reading list will be distributed at the beginning of the spring semester.

Literature
An online learning platform serves as a supplement to the lecture course.

851-0101-47L Science in the Twentieth Century: A Global Perspective WEBCLASS

Abstract
This course studies the 20th century history of those forms of knowledge framed specifically as science and technology, from a global perspective. It explores how exchanges and relationships between different parts of the world contributed to what is understood as science and "development". In doing so, it considers how the concept of science is entangled with structures of power and domination.

Objective
- to critically consider the concepts and knowledge
- to understand how advances in technology and science are historically rooted in European imperial expansion and are connected to global social inequalities in the postcolonial world.
- to understand the historical plurality of forms of knowledge in different parts of the world as well as entanglements between different forms of knowledge
- to systematically reconstruct and reproduce complex arguments (reading-competences)
- to understand, compare and analyse differing approaches to the history of science.
- to enable students to form an educated opinion and participate in discussions on the global history of science and knowledge

851-0125-41L Introduction Into Philosophy of Technology

Abstract
Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to a autonomous philosophy of technology, which had become important also for other philosophical disciplines (e.g. in Heidegger's philosophy).

Objective
The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protokoll is to be written.

851-0549-00L WebClass Introductory Course History of Technology

Number of participants limited to 100.

Abstract
WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced to basic theories and practices of the field.

Objective
Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get to know basic theories and practices of the field.

851-0101-47L  Science in the Twentieth Century: A Global Perspective WEBCLASS
- Suitable for students of D-MAVT, D-MATL

Abstract
This course studies the 20th century history of those forms of knowledge framed specifically as science and technology, from a global perspective. It explores how exchanges and relationships between different parts of the world contributed to what is understood as science and "development." In doing so, it considers how the concept of science is entangled with structures of power and domination.

Objective
- To critically consider the concepts of science and knowledge
- To understand how advances in technology and science are historically rooted in European imperial expansion and are connected to global social inequalities in the postcolonial world.
- To understand the historical plurality of forms of knowledge in different parts of the world as well as entanglements between different forms of knowledge
- To systematically reconstruct and reproduce complex arguments (reading-competences)
- To understand, compare and analyse differing approaches to the history of science.
- To enable students to form an educated opinion and participate in discussions on the global history of science and knowledge

851-0125-51L  Man and Machine
- Suitable for students of D-CHAB, D-HEST, D-MAVT, D-MATL

Abstract
The lecture gives an overview about the different Man-Machine-Relations since the 16th century. Different models of machines will be important here: the clockwork, the steam engine and the computer.

Objective
On the one hand models of machines had a heuristic value in research on man, e.g. in Harvey’s discovery of blood circulation in the 17th century or in brain research in the 20th century. On the other hand these models were always criticised, sometimes polemically, because they are supposedly not adequate for man.

Students should learn about the connections between the history of anthropology and technology and be able at the end of the course to evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

851-0125-52L  Central Questions in Bioethics
- Suitable for students of D-BIOL, D-CHAB, D-HEST, D-MAVT, D-MATL

Abstract
Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decision, principles like "Protect the dignity of the living being!", or "Respect a person's self-determination!? Besides answering such questions, the social, scientific and political processes linked with biotechnologies should be taken into account.

Objective

Literature
1. Dieter Sturma/Bert Heinrichs (Hg.), Handbuch Bioethik, Stuttgart: Metzler 2015.

851-0144-01L  Introduction to the Philosophy of Physics
- Suitable for students of D-MAVT, D-MATL

Abstract
This is an introductory course in different areas and positions in the philosophy of physics. It falls into different parts, including one on the concepts of space and time and one on the reality of structures in physics.

Objective
Students should be able to name and critically evaluate different topics and approaches in the philosophy of physics.

851-0306-05L  Literature and Technology - Simulations, Prototypes, Machines
- Suitable for students of D-ITET, D-MAVT, D-MATL

Abstract
Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of configurations of knowledge.

Objective
Students are familiar with different relations between literature and technology. They can verbalise and analyse central contentions.

Content
Im Seminar lesen wir unter anderem Texte von E.T.A. Hoffmann, Franz Kafka, Georg Kaiser und Max Frisch.

851-0549-12L  Sharing, The History of an Attractive Technology
- Suitable for students of D-ARCH, D-BAUG, D-HEST, D-INFK, D-ITET, D-MAVT, D-MATL

Abstract
The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be discussed as a crucial offer and problem of late modernity.

Objective
The course wants to develop the students ability to critically read and assess historic texts.

Lecture notes
A detailed program and course materials will be made available during the semester on www.tg.ethz.ch.

851-0591-00L  Digital Sustainability in the Knowledge Society
- Suitable for students of D-INFK, D-ITET, D-MAVT

Abstract

Objective

Literature
How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on the four factors of production (land, labor, capital, and entrepreneurship) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means at all costs. The core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetic», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the providers of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)...

As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2030.ethz.ch.

As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2030.ethz.ch.

More on teach.digisus.info starting from September. Stay tuned.

For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45. Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the distribution of material.

For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45. Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the distribution of material.

More on teach.digisus.info starting from September. Stay tuned.
Introduction to Law

Students who have attended or will attend the lecture "Introduction to Law for Civil Engineering and Architecture" or "Introduction to Law" (851-0708-00), cannot register for this course unit.

Abstract
This class introduces students into basic features of the legal system. Fundamental issues of constitutional law, administrative law, private law and the law of the EU are covered.

Objective
Students are able to identify basic structures of the legal system. They understand selected topics of public and private law and are able to apply the fundamentals in more advanced law classes.

Content
Basic concepts of law, sources of law.
Private law: Contract law (particularly contract for work and services), tort law, property law.
Public law: Human rights, administrative law, procurement law, procedural law.
Insights into the law of the EU and into criminal law.

Lecture notes
Jaap Hage, Bram Akkermans (Eds.), Introduction to Law, Cham 2014 (Online Resource ETH Library)

Literature
Further documents will be available online (see https://moodle-app2.let.ethz.ch/course/view.php?id=1596).

Environmental Ethics

Abstract
The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle issues concerning law, sources of law and environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

Objective
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and arguments to be found within the field of environmental ethics and will have practised these in small case studies.

Content
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

Lecture notes
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

In the part of the course serving as an introduction to general and applied ethics, we shall be using the following textbook: Barbara Bleisch/Markus Huppenbauer: Ethische Entscheidungsfindung. Ein Handbuch für die Praxis, Zürich 2010 (to be published Autumn 2010).

Literature
- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003
- John O’Neill et al., Environmental Values, 2008
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008
- vàltó intervenciós témák, mint a jóváhagyás szabályozása, az ökológiai szabadság bevezetése, az alapjogok megvalósítása.

Prerequisites / notice
The procedure for accumulating CP will be explained at the start of term.
I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

Environmental and Science Communication

Abstract
The course gives an introductory overview in research questions, theoretical perspectives and empirical results of science communication and environmental communication. They will be illustrated by concrete examples and via lectures from external guests.

Objective
Goals: Learning to understand structures and processes of environmental and science communication, becoming more sensitive for problems of science public relations, getting an insight into public debates about environmental issues.
Methods: Case studies, invitation of media practitioners and experts, discussions, lectures on key theoretical concepts of communication.
Topics: Concrete communication instruments like media conferences, theoretical perspectives of public relations, basic principles and examples of information campaigns, environment and science as media topics, functions and structures of science communication, relations between science, media and politics.
| Content                                                                 | I. Introduction                                                                 |
|                                                                      | - Topics: Environment, Science, Risks, Media                                     |
|                                                                      | - Forms, Functions, Effects of Public and Mass Communication                     |

Abstract
This lecture series provides students with an overview of the development of international relations since the end of World War II. The first part of the series deals with the development of and changes in Cold War security policy structures. The second part deals with the period after the transformation of 1989/91; the focus here is on current issues in international security policy.

Objective
By the end of the semester, participants of the lecture should have a solid knowledge on the history and theoretical foundations of International Relations since the end of the Second World War.

<td>M. M. Dapp</td>
</tr>
</tbody>
</table>

Abstract
The course offers a historical introduction to modern economic thought. It looks at texts of 'classical economics' as well as 'neo-classical', 20th century texts. In addition, the course addresses some modern contributions in the history of economics - in particular extra-European economic history - and their potential for the enrichment of mainstream economic thought.

Objective
The course is conceptualized as an introduction to the history of economic thought. It acquaints students with the basic tenets of the 'classical economics' through historical accounts of the work of 'worldly philosophers' as well as primary reading of authors such as Adam Smith, David Ricardo and Karl Marx. Further, the course introduces students to 'neo-economics' of the 20th century, again looking at authors of particular significance in the furthenance of economic debates such as John Maynard Keynes, Milton Friedman and Friedrich Hayek. The course, however, takes also a closer look at authors whose work is usually situated beyond conventional economic thought, such as Karl Polanyi. Additionally, the course devotes also time to some extra-European economic thought - drain theory, world system and dependency theory, etc. - and its implications/applications in the history of the 20th century. Finally, a particular attention will be paid to some important contributions in the extra-European history of economics and to specific notions such as 'commodity chains', 'divergencies' and 'modernization'. Combining these various items, the course aims not simply at introducing students to the 'evolution' of economic thought, but more broadly to ongoing academic debates, political and ideological tensions as well as to critical interventions. The ambition of the course is to inspire through a historical approach and to enrich the 'understanding' of economic theory with a questioning of its underlying structures and tenets and, ultimately, to advance critical thinking among students of modern economics.

851-0591-00L    | Digital Sustainability in the Knowledge Society | W    | 2    | 2V    | M. M. Dapp |

Abstract
How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on strong intellectual property rights are contrasted with open models like, e.g. Open Source/Content/Access. The course discusses consequences from different labels and introduces "digital sustainability" as an alternative vision for society.

Objective
At the heart of the course is the handling of digital goods and intellectual property in society. Digitization and the Internet allow handling knowledge in a way, which directly contrasts with the traditional understanding of "intellectual property" and the industries based on it. Starting from economic and legal basics, we compare proprietary and open/free models. Sustainable development as a concept is transferred to digital goods, taking into account the particular nature of digital stuff.

After the lecture, you should (hopefully) be able to:
- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- using an example, explain the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the free/open source software model to other digital goods (e.g., open content, open access)

Content
Realistic technology: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. "Digitization plus Internet" allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?» The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all might. At the core lies the question about the design of property in digital assets. For that, we apply a concept of "intellectual property", which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetics», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Concomitant to the environments of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)...

As a «lesser» to the lecture, you are invited to read the essay "ETH Zurich - A Pioneer in Digital Sustainability!". It can be downloaded from www.essays2030.ethz.ch.

More on teach.digisisu.info starting from September. Stay tuned.

Lecture notes
Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

Literature
Content of the following books is covered (PDFs freely available online):
4. Other recommended books are...
5. Prerequisites / notice
Participants are invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.
During the course, students will learn about different design thinking methods and tools. This will enable them to:

- Rapidly prototype and iteratively test ideas and concepts by using various materials and techniques.
- Engage in collaborative ideation with a multidisciplinary (student) team.
- Generate deep insights through the systematic observation and interaction of key stakeholders.

The seminar deals with the designs for a new living in the artistic and social avantgarde movements at the beginning of the 20th century. It focuses on the correlation of the contemporary scientific and technological developments and the conceptions of a 'New Man'. The discipline of psychotechnics together with scientific and technological designs of living and working environments formulated visions of new and enhanced ways of human living and perception. In the seminar, we will examine the utopian visions of life in the avantgarde movements. Touching upon the fields of the life sciences, economics, management, progressive education, architecture, and art we will reflect the diverse relations between science, technology, and human living.

Abstract

The seminar ist fully booked!

Objective

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

Content

The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work, (2) combining perspectives of different scientific disciplines (e.g. sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Participants of the seminar should understand the globally connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

Lecture notes

The lecture slides will be presented on the course web page after each lecture.

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

Prerequisites / notice

The number of participants is limited to 70.

Abstract

The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work, (2) combining perspectives of different scientific disciplines (e.g. sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

The number of participants is limited to 30.

Interested students are invited to apply for this course by sending a one-page motivation letter until 07.09.2015 to Florian Rittiner (frittiner@ethz.ch).

Additionally please enroll via mystudies. Places will be assigned after the first lecture on the basis of your motivation letter and commitment for the class.

The purpose of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will work in multidisciplinary teams to solve a set of design challenges that are organized as a one-week, a three-week, and a six-week project. The final project will be in collaboration with an external project partner.

During the course, students will learn about different design thinking methods and tools. This will enable them to:
- Generate deep insights through the systematic observation and interaction of key stakeholders.
- Engage in collaborative ideation with a multidisciplinary (student) team.
- Rapidly prototype and iteratively test ideas and concepts by using various materials and techniques.
Objective

The simulation is conducted in collaboration with experts and students during a two days seminar at the University of Geneva.

Students will have the possibility to participate in simulated diplomatic negotiations and to analyse and assess the negotiation logic behind the situations. They should gain insight in the basic information on disarmament issues and on the functioning of the Conference on Disarmament as well as on negotiation techniques in general.

Content

The simulation project is intended for Master's or Doctoral students of the Global Studies Institute (GSI) of the University of Geneva, of the ETH and for interested students of the Geneva Centre for Security Policy (GCSP). The simulation will be in French and English and is conducted by Prof. Calmy-Rey, former President of Switzerland.

In the lectures, students will be provided with basic information on disarmament issues and on the functioning of the Conference on Disarmament as well as on negotiation techniques in general. Students will take the role of negotiators in the simulation (including the heads of the delegations), of keeper of the minutes or of observers and analysts.

Students will co-develop their mandates for the negotiation and be assisted by experts that are specialized in international negotiations as well as in the topic of disarmament. The negotiation tables will be chaired by former diplomats. Representatives of diplomatic missions in Geneva will play the role of the "Capitals" to which the heads of delegations will have to give account of the ongoing negotiations.

More details on the program, timetable, reading lists and performance assessment will be published here: https://chamilo.unige.ch/home/courses/M165/?id_session=0

The simulation will take place on the 26 and 27 November 2015 at the University of Geneva.

Languages: English and French

Note:
The participation in the simulation on 26. and 27. November in Geneva is necessary.
The two hours lectures on the 22. September, 6. and 13. October have to be attended in Zürich via conference call (ETH HG D 16.2). The other lectures during the semester can be attended via Skype.

To get the 3 ECTS, students have to participate at the 2 days simulation in Geneva, attend the 3 mandatory lecture parts via conference call an Zurich and write a report of 5 pages at the end of the course.

(technical note for registration: At this stage all registered students are on the waiting list)

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 615 of 1432
In recent years, knowledge about intellectual property has become increasingly important for engineers. In both production and distribution, engineers are increasingly being confronted with questions concerning the patenting of inventions and the utilisation of patent information. With up to 80% of publicly-available technical information being stored in patents, the importance of engineers knowing the basics of the patent system cannot be overstated. The seminar uses the example of the flood of patent information available. This relates to daily work in industry as well as in research, where protecting inventions has gained in importance.

Patents are also an important source of information - from competitors and potential cooperation partners to the development of markets and the risk of coming into conflict with third party IP rights. Respectively, a knowledge of patents has also become a key qualification at a company's strategic level.

The seminar is customised to the needs of engineers. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.

The seminar contains practical exercises on the use and research of patent information. Basic knowledge on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

The course deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be discussed as a crucial offer and problem of late modernity.

The course wants to develop the students ability to critically read and assesses central contentions.

Weitere Informationen unter https://www.tg.ethz.ch/de/programme/
From Computational Social Science to Global Systems Science

Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events. Computational Social Science and Global Systems Science serve to better understand the emerging digital society with its close co-evolution of information and communication technology (ICT) and society. They make current theories of crises and disasters applicable to the solution of global-scale problems, taking a data-based approach that builds on a serious collaboration between the natural, engineering, and social sciences, i.e. an interdisciplinary integration of knowledge.

Lecture with Computer Exercises: Modelling and Simulating Social Systems with MATLAB

This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

This course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

Central Questions in Bioethics

Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decision, principles like "Protect the dignity of the living being"? or "Respect a person's self-determination"? Besides answering such questions, the social, scientific and political processes linked with biotechnologies should be taken into account.

Introduction to the Philosophy of Physics

This is an introductory course in different areas and positions in the philosophy of physics. It falls into different parts, including one on the concepts of space and time and one on the reality of structures in physics.

Digital Sustainability in the Knowledge Society

Students should be able to name and critically evaluate different topics and approaches in the philosophy of physics.

Particularly suitable for students of D-INFK, D-ITET, D-MAVT, D-MTEC, D-USYS

Particularly suitable for students of D-MAVT, D-INFK, D-ITET, D-MTEC, D-PHYS

Prerequisites / notice

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

Prerequisites / notice

The number of participants is limited to 70.

Lecture notes

The lecture slides will be presented on the course web page after each lecture.

Literature

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

1. Dieter Sturma/Bert Heinrichs (Hg.), Handbuch Bioethik, Stuttgart: Metzler 2015.
This course has a number of objectives: (i) To outline the problem of climate change (ii) to discuss and compare the theoretical economic
- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- using an example, explain the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the free/open source software model to other digital goods (e.g., open content, open access)

In contrast to «reading, writing and arithmetic», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge. Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)...

As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2030.ethz.ch.

More on teach.digisus.info starting from September. Stay tuned.

Lecture notes
Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

Literature
Content of the following books is covered (PDFs freely available online):

Other recommended books are:
1 (general) Chris DiBona et al., Open Sources: Voices from the Open Source Revolution, O'Reilly, 1999.

Prerequisites / notice
For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.

Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the

851-0596-00L Data Manipulation, Deception and Fabrication in the Sciences

Abstract
Particularly suitable for students of D-MAVT, D-MATL

Objective
(1) To be able to recognize and evaluate scientific misconduct and its causes against the background of the competition-oriented systems of modern scientific research.

(2) To get to know methods for uncovering data manipulation and to be able to critically assess them.

Content

Literature

851-0609-05L The Economics of Climate Change

Abstract
Particularly suitable for students of D-ITET, D-MATL, D-MAVT, D-USYS

Objective
Climate change is one of the most pressing issues that governments and the global community have to face. This course outlines the problem of climate change and discusses the economic solutions (both domestic and international) to this problem.

Content
Economics of pollution, Optimal level of greenhouse gases, International Environmental Agreements, Tradable pollution permit markets, ... Carbon Taxes, Technological innovation and R&D, The optimal approach to control Climate change, The future of Climate change policy

|              | Abstract                                    |      |         |       | The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights). Aspects of competition law are treated insofar as they are relevant for the protection of intellectual creations and source designations. The legal principles are developed based on current cases. |
|              | Objective                                   |      |         |       | The aim of this course is to enable students at ETH Zurich to recognize which rights may protect their creations, and which rights may be infringed as a result of their activities. Students should learn to assess the risks and opportunities of intellectual property rights in the development and marketing of new products. To put them in this position, they need to know the prerequisites and scope of protection afforded by the various intellectual property rights as well as the practical difficulties involved in the enforcement of intellectual property rights. This knowledge is imparted based on current rulings and cases. |

|              |                                          |      |         | - Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003  
|              |                                          |      |         | - John O'Neill et al., Environmental Values, 2008  
|              |                                          |      |         | - Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008 |
|              |                                          |      |         | - Marcus Düwell et. al (Hrsg.), Handbuch Ethik. 2, Auflage, Stuttgart (Metzler Verlag), 2006  
|              | Prerequisites / notice                      |      |         |       | The procedure for accumulating CP will be explained at the start of term. I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively. |
| 701-0785-00L | Environmental and Science Communication    | W    | 4       | 2V    | M. Schäfer  |
|              | The course gives an introductory overview in research questions, theoretical perspectives and empirical results of science communication and environmental communication. They will be illustrated by concrete examples and via lectures from external guests. |
|              | Objective                                   |      |         |       | Goals: Learning to understand structures and processes of environmental and science communication, becoming more sensitive for problems of science public relations, getting an insight into public debates about environmental issues.  
|              | Methods: Case studies, invitation of media practitioners and experts, discussions, lectures on key theoretical concepts of communication.  
|              | Topics: Concrete communication instruments like media conferences, theoretical perspectives of public relations, basic principles and examples of information campaigns, environment and science as media topics, functions and structures of science communication, relations between science, media and politics. |
The lecture treats the social intercourse with risks of technical systems. The notion of risk and the perception of risk are discussed by case studies.

Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

Improved ability to assess current problems from a historical perspective and to critically interrogate one's own standpoint.

Knowledge about possibilities for sustainable innovation

Knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)

Evaluation of the risks caused by technology within the societal context

Applied to deal with environmental risks and how they can be used for sustainable innovation.

- Getting acquainted to the extended risk concept
- Evaluation of the risks caused by technology within the societal context
- Knowledge about the mode science and society handle current environmental risks (examples gene- and nanotechnology)
- Knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)
- Risks and technical systems (risk categories, risk perception, risk management)
- Illustration with case studies (nanotechnology)
- Implementation (politics, science, media, etc.)
- Decision making (technology assessment, cost/benefit analysis etc.)
- The role of the media
- prospects for future developments

Copies of slides and selected documents will be distributed

The lecture is held biweekly (for 2 hours). The dates are 21.9., 28.9 (attention, out of schedule) ; 19.10, 2.11, 16.11, 30.11, 14.12
The lecture series provides students with an overview of the development of international relations since the end of World War II. The first part of the series deals with the development of and changes in Cold War security policy structures. The second part deals with the period after the transformation of 1989/91; the focus here is on current issues in international security policy.

By the end of the semester, participants of the lecture should have a solid knowledge on the history and theoretical foundations of International Relations since the end of the Second World War.

Cf. "Diploma Supplement"
The overarching objective of this seminar is to get an impression of the specificity of biological problems and to develop an appropriate philosophical sensibility. Accordingly, philosophical traditions in biology will be discussed, just as the application of the history of concepts in the context of biology. The seminar reader will consist of contributions of biologists as well as philosophers of biology. Besides the basic concepts in biology such as gene, species, evolution, or diversity, we will be also reflecting on the relationship between technology, experimenting, and biological objects. Depending on the interests of the seminar participants, the examples to be discussed may be chosen from systems biology, molecular or synthetic biology, ecology or else.

851-0591-00L Digital Sustainability in the Knowledge Society

W 2 credits 2V M. M. Dapp

Abstract
How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on strong intellectual property rights are contrasted with open models like, e.g., Open Source/Content/Access. The course discusses consequences from different models and introduces «digital sustainability» as an alternative vision for society.

Objective
At the heart of the discourse is the handling of digital goods and intellectual property in society. Digitalization and the Internet allow handling knowledge in a way which directly contrasts with the traditional understanding of "property" and the industries based on it. Starting from economic and legal basics, we compare proprietary and open"free" models. Sustainable development as a concept is transferred to digital goods, taking into account the particular nature of digital stuff.

After the lecture, you should (hopefully) be able to:
- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- using an example, explain the meaning of digital sustainability and argue why it is relevant for a knowledge society

Content
Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. «Digitization plus Internet» allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?» The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all might.

At the core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundreds years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible. Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetics», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)...

As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2030.ethz.ch.

More on teach.digisus.info starting from September. Stay tuned.

Lecture notes
Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

Abstract
This course focuses on the conditions under which cooperation in international environmental politics emerges, and the conditions under which such cooperation and the respective public policies are effective and/or efficient.

Objective
The objectives of this course are to (1) gain an overview of important global and regional environmental problems.

Content
This course deals with how and why international cooperation in environmental politics emerges, and under which circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed; the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

After passing an end-of-semester test (requirement: grade 4.0 or higher) students will receive 4 ECTS credit points. The workload is around 120 hours (meetings, reading assignments, preparation of test).

Literature
See www.ib.ethz.ch (teaching, materials)
Students from ETH will receive 4 ECTS credit points if they attend classes regularly and obtain a grade of 4.0 or higher for the written exam in the final week of the semester. Students who obtain a grade of less than 4.0 for the end-of-semester test will have a second chance in the first week of the following semester. The rules of the game are defined in detail on the course syllabus. Students who do not participate in the end of semester test will not have access to the repeat exam unless they submit compelling and documented reasons for why they were unable to participate in the first test. Except for language dictionaries, no additional materials and no laptops and mobile phones are allowed during the exam.

Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory (http://www.rektorat.ethz.ch/students/admission/auditors/specialstudents_uzh/index_EN; see menu on left side of that webpage for students from other universities).

The workload for this course is approx. 120 hours (all inclusive).

The course focuses on processes and drivers of decision-making on natural resources management issues in developing countries. The aim of this course is to make students with a technical scientific background aware of the legal and political context of environmental policy in order to place technical solutions in their regulatory context. The aim of this course is to equip students with a legal and regulatory skill-set that allows them to translate their technical knowledge into a policy brief directed at legally trained regulators. More generally, it aims to inform students with a technical scientific background of the legal and political context of environmental policy. The focus of the course will be on international and European issues and regulatory frameworks - where relevant, the position of Switzerland within these international networks will also be discussed.

**Objective**
- Analyze politics and design approaches to influence them, looking among others at governance, social organization, legal issues and international development organizations
- Study changes (improvements) in environmental politics over time as the result of the interaction of processes and actors, including within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.
- Analyze the forces, components and processes, which influence the design, the implementation and the outcome of ecological measures
- Identify and appraise ecological aspects in development cooperation, development policies and developing countries' realities
- Characterize concepts, instruments and drivers of environmental politics and understand, how policies are shaped, both at national level and in multilateral negotiations
- Study changes (improvements) in environmental politics over time as the result of the interaction of processes and actors, including international development organizations
- Analyze politics and design approaches to influence them, looking among others at governance, social organization, legal issues and institutions

**Content**
Basic principles of material and formal land registry law, components of the land register, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of the geom-eter. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.

Content

Key issues and basic concepts related to environmental politics are introduced. Then the course predominantly builds on case studies, providing information on the context, specifying problems and potentials, describing processes, illustrating the change management, discussing experiences and outcomes, successes and failures. The analysis of the cases elucidates factors for success and pitfalls in terms of processes, key elements and intervention strategies.

Different cases not only deal with different environmental problems, but also focus on different levels and degrees of formality. This ranges from local interventions with resource user groups as key stakeholders, to country level policies, to multi- and international initiatives and conventions. Linkages and interaction of the different system levels are highlighted. Special emphasis is given to natural resources management.

The cases address the following issues:
- Land use and soil fertility enhancement. From degradation to sustainable use
- Common property resource management (forest and pasture): Collective action and property rights, community-based management
- Ecosystem health (integrated pest management, soil and water conservation)
- Payment for environmental services: Successes in natural resources management
- Climate change and agriculture: Adaptation and mitigation possibilities
- Biodiversity Convention: Implications for conservations and access to generic resources
- Biodiversity as a means for more secure livelihoods: Agroforestry and intercropping
- The Millennium Development Goals: Interactions between poverty and the environment
- Poverty and natural resources management: Poverty reduction strategies, the view of the poor themselves
- Food security: Policies, causes for insecurity, the role of land grabbing
- Biofuels and food security: Did politics misfire?
- Strategy development at global level: IAASTD and World Development Report 2008

Lecture notes

Information concerning the case studies and specific issues illustrated therein will be provided during the course (uploaded on Moodle).

Literature

Prerequisites / notice

The performance assessment will consist of an individual essay to be written by each student based on at least five references in addition to the sources provided in the course. Students can choose from a list of topics. Criteria for assessment will be communicated at the beginning of the course.

701-0743-01L

Law and Natural Resources

W 2 credits 2V N. Dajcar

Abstract

This course teaches the possibilities and limits of the law in order to protect natural resources and landscapes against harm and nuisance. The learning concept is based on the co-ordinated implementation of the relevant legislations. The complexity of the legal situation will be discussed by analysing virtual and real law cases focused on spatial projects and planning. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and argumentations to be found within the field of environmental ethics and will have practised applying them to ecological problems and discussing them in case studies.

Objective

The students know the opportunities and restrictions which are given by the law when using natural resources. They have insights into the complex environmental legal system and their application in concrete cases. The students are able to formulate typical legal questions, to understand the argumentation of courts and to solve simple legal problems with respect to environmental problems.

Content

- Waldrecht - Natur- und Landschaftsschutzrecht - Wasserrecht - Raumplanungsrecht - Umweltschutzrecht - Verfahrensrecht
- Unterrichtssprache: Deutsch

Lecture notes

Den Studierenden werden Unterlagen wie eine Übersicht über den behandelten Stoff auf PP-Folien, typische Gerichtsentscheide, Zeitungsartikel etc. über neue Vorhaben mit Auswirkungen auf die Umwelt und entsprechenden Rechtsfragen abgegeben.

Literature

Environmental Ethics

W 2 credits 2V M. Huppenbauer

Abstract

The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

Objective

On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems.

Content

- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

Lecture notes

Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

In the part of the course serving as an introduction to general and applied ethics, we shall be using the following textbook: Barbara Bleisch/Markus Huppenbauer: Ethische Entscheidungsfundierung. Ein Handbuch für die Praxis, Zürich 2010 (to be published Autumn 2010).
The processes of change, overuse or destruction of the natural environment through humans have historically placed high demands on beyond acquiring basic knowledge about policy analysis, this course teaches students how to analytically address current and concrete. The course gives an introductionary overview in research questions, theoretical perspectives and empirical results of science.

4 credits

W

701-0731-00L Environmental Sociology

Abstract

This introductory class in environmental sociology covers different theoretical approaches but the main focus is on recent empirical research on topics such as environmental behavior, environmental concern, social dilemmas, social norms, environmental justice, and risk perception.

Objective

Basic notion of environmental sociology

Overview on current fields of research in environmental sociology and their relevance for environmental protection

Basic notion of the structure of empirical research papers in social sciences

Content

Das Seminar führt in die Umweltsoziologie ein. Dabei werden verschiedene theoretische Ansätze besprochen (Fokus: Rational Choice). Der Schwerpunkt des Kurses liegt auf aktuellen empirischen Untersuchungen zu Themen wie Umweltverhalten, Umweltbewusstsein, soziale Dilemmata, soziale Normen, Umweltgerechtigkeit und Risikowahrnehmung. Fragen, die uns dabei beispielsweise beschäftigen: Wer belastet die Umwelt besonders stark oder ist besonders starken Umweltbelastungen ausgesetzt? Was beeinflusst das Umweltverhalten der Menschen? Welche Rolle spielen äussere Faktoren (Möglichkeiten, Kosten etc.)? Welchen Einfluss haben soziale Aspekte oder Einstellungen? Wovon hängt es ab, ob eine Technologie als risikoreich eingestuft wird?

Literature

701-0747-00L Environmental Policy of Switzerland I

Abstract

This course presents the basics of policy analysis and the specific characteristics of Swiss environmental policy. Political instruments, actors and processes are addressed both theoretically as well as by means of current Swiss environmental policy examples.

Objective

Beyond acquiring basic knowledge about policy analysis, this course teaches students how to analytically address current and concrete questions of environmental policy. Through exercises the students learn about political science concepts and frameworks as well as real-life political decision-making processes. The well-grounded examination of complex political conflict situations is an important precondition for the entry into the (environmental policy) workforce or a future research career.

Content

The processes of change, overuse or destruction of the natural environment through humans have historically placed high demands on social and political institutions. In the interplay between the environment, society and economy, the environmental policy field encompasses the sum of public measures that have the goal to eliminate, reduce or avoid environmental degradation. The course provides insight into the development of Swiss environmental policy and systematically presents the basics of environmental policy actors, instruments, programs and processes as well as their change over time. A key aspect is the distinction between politics and political science and specifically environmental policy.

Lecture notes

Instead of lecture notes different texts on policy analysis and Swiss environmental policy are made available to the students.

Literature

Prerequisites / notice

The detailed semester program (syllabus) is made available to the students at the beginning of the semester.

701-0785-00L Environmental and Science Communication

Abstract

The course gives an introductory overview in research questions, theoretical perspectives and empirical results of science communication and environmental communication. They will be illustrated by concrete examples and via lectures from external guests.

Objective

Goals: Learning to understand structures and processes of environmental and scientific communication, becoming more sensitive for problems of science public relations, getting an insight into public debates about environmental issues.

Methods: Case studies, invitation of media practitioners and experts, discussions, lectures on key theoretical concepts of communication.

Topics: Concrete communication instruments like media conferences, theoretical perspectives of public relations, basic principles and examples of information campaigns, environment and science as media topics, functions and structures of science communication, relations between science, media and politics.

Content

I. Introduction

- Topics: Environment, Science, Risks, Media

- Forms, Functions, Effects of Public and Mass Communication

II. Stakeholders and their Public Relations Efforts

- Public Relations and Science PR: Theoretical Perspectives, Instruments

III. Science and Environmental Issues in the Media

- Forms and Functions of Science Journalism

- Problems of Selection, Interpretation, Quality

- Media Content Analysis

- Online Communication

IV. Uses and Effects of Science and Environmental Communication

- Extent of Media Use

- Effects on Knowledge, Risk Perceptions, Environmental Attitudes

- Effects on Science itself

Data: 06.12.2017 12:57 Autumn Semester 2015 Page 626 of 1432
Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

**Lecture notes**

Copies of slides and selected documents will be distributed.

**Literature**

**Prerequisites / notice**

### 701-0791-00L Environmental History - Introduction and Overview

<table>

**Abstract**

Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

**Objective**

- Introduction into environmental history; survey of long-term development of human-nature-interrelations; discussion of selected problems.
- Improved ability to assess current problems from a historical perspective and to critically interrogate one's own standpoint.

**Literature**

**Prerequisites / notice**

Die Vorlesung hat einführenden Charakter.

### 701-0985-00L Social Intercourse with Current Environmental Risks

<table>
<thead>
<tr>
<th>W</th>
<th>1 credit</th>
<th>1V</th>
<th>B. Nowack, C. M. Som-Koller</th>
</tr>
</thead>
</table>

**Abstract**

The lecture treats the social intercourse with risks of technical systems. The notion of risk and the perception of risk are discussed by case studies (e.g. nanotechnology) and socio-political instruments for decision-making are presented. Methods are presented that can be applied to deal with environmental risks and how they can be used for sustainable innovation.

**Objective**

- Getting acquainted to the extended risk concept
- Evaluation of the risks caused by technology within the societal context
- Knowledge about the mode science and society handle current environmental risks (examples gene- and nanotechnology)
- Knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)
- Knowledge about possibilities for sustainable innovation

**Content**

- Risks and technical systems (risk categories, risk perception, risk management)
- Illustration with case studies (nanotechnology)
- Implementation (politics, science, media, etc.)
- Decision making (technology assessment, cost/benefit analysis etc.)
- The role of the media
- prospects for future developments

**Lecture notes**

Copies of slides and selected documents will be distributed.

**Prerequisites / notice**

The lecture is held biweekly (for 2 hours). The dates are 21.9., 28.9 (attention, out of schedule) ; 19.10, 2.11, 16.11, 30.11, 14.12

### 860-0006-00L Statistical Data Analysis

<table>
<thead>
<tr>
<th>W</th>
<th>3 credits</th>
<th>3G</th>
<th>M. Höglinger, I. Günther, K. Hartgen</th>
</tr>
</thead>
</table>

**Abstract**

This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with statistical software such as Stata.

**Objective**

- have a sound understanding of linear and logit regression
- know some basics about regression models for multinomial, ordered, or censored response variables, as well as for count data
- know strategies to test causal hypotheses using regression analysis with experimental and quasi-experimental methods
- are able to formulate and implement a regression model for a particular research question and a particular type of data
- are able to critically interpret results of a regression model, in particular, regarding causal inference
The aims of the course are to no script.

This course targets B2/C1 French learners. It is not open to French native speakers.

Materials: Texts will be made available either online (OLAT) or as handouts.

This course is designed for Bachelor and Master students from all disciplines, who wish to improve their English from C1 towards C2 level. Handouts, online resources, and DVDs of a wide range of NZ films (available in the Self-Access Center -- NB: No hobbits!) are provided.

2 credits

The aim is to explore the following questions through texts and film to introduce students to New Zealand and, in a broader sense, to raise awareness of various ways of "reading" texts and film, and to improve skills in planning and writing cohesive essays in which they marshal their views in a convincing and formal manner. Overall, the aims are that students become more discerning readers, improve their awareness of some of the key issues relating to former colonies from early settlement to the present day. Key questions include: What did New Zealand mean to its early settlers? Where did they come from? How did they live? What is the Treaty of Waitangi, and what is its status today? How did New Zealanders see themselves then, and how do they see themselves now?

The course is only open to students who register on-line via the Sprachenzentrum website during the registration period (review the SZ website) and who receive on-line confirmation that they have been accepted on this course.

**Prerequisites / notice**
- Attend regularly throughout the semester
- Attend regularly throughout the semester
- Do at least 2 hours' work a week outside the classroom, including reading and writing
- Complete written assignments during the semester

Additional requirements for Bachelor and Master students and those who wish to receive ETH/D-GESS credit points will be outlined in the first lesson of the semester.

NB: This is Part I of a two-part course. Part 2 runs in the spring semester. Each part can be taken on its own. However, a separate enrolment is required for each part.

**Important note:**
- The course is only open to students who register on-line via the Sprachenzentrum website during the registration period (review the SZ website) and who receive on-line confirmation that they have been accepted on this course.

851-0832-11L Advanced English for Academic Purposes (C1-C2) W 2 credits 2U R. Taylor

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

**Abstract**
This course is designed for Bachelor and Master students from all disciplines, who wish to improve their English from C1 towards C2 level and train their language skills at Mastery level. Special attention is placed on Speaking and Writing.

**Objective**
Participants should have already reached a level of C1 (advanced), as defined in the Council of Europe Global Scale. The course is also open to participants whose level is above C1.

The course aims to train and develop linguistic skills at Mastery level, with a focus on formal and informal lexis, on listening and oral communication skills, increasing fluency, accuracy and complexity of spoken language; writing well-structured descriptive texts and argumentative essays, to fulfill the requirements for study at an English speaking university or follow University Master Courses held in English.

851-0832-10L Advanced English for Academic Purposes (C1-C2) W 2 credits 2U K. A. Lewis

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

**Abstract**
This course is designed for Bachelor and Master students from all disciplines, who wish to improve their English from C1 towards C2 level and train their language skills at Mastery level. Special attention is placed on Speaking and Writing.

**Objective**
Participants should already have reached a level of C1 (advanced), as defined in the Council of Europe Global Scale. The course is also open to participants whose level is above C1.

The course aims to train and develop linguistic skills at Mastery level, with a focus on formal and informal lexis, on listening and oral communication skills, increasing fluency, accuracy and complexity of spoken language; writing well-structured descriptive texts and argumentative essays, with the aim to fulfill the language requirements for study at an English speaking university or follow University Master Courses held in English.

**Content**
The course covers: a review of vocabulary building and extension, including the Academic Word List and formulaic language; input on academic reading, writing and listening comprehension; improvement of grammatical accuracy with web-based practice. Special emphasis is placed on individual speaking, argumentative discourse and group discussions, to enhance fluency and confidence. Topics cover globalization, communication, social issues, health, work and the environment.

Lecture notes
No script.

Literature
Course materials will be provided electronically, prior to the lessons. For additional handouts and materials participants will be expected to make a contribution of about CHF 5.00 at the beginning of the course.

Prerequisites / notice
- Attend regularly throughout the semester;
- Attend regularly throughout the semester;
- Do at least 2 hours' work per week at home, including reading and writing;
- Use the electronic tools provided, such as a Wiki and a virtual library on ILIAS, and engage in web-based activities to practise various linguistic skills;

A language certificate from the Language Center is issued on successful completion of the course; Bachelor and Master students of the ETH will receive D-GESS credits and a mark, awarded electronically at the end of the semester. Details will follow at the beginning of the semester.

The course is only open to students who register on-line via the Sprachenzentrum website (in September 2014, please review the SZ webpage) and who receive on-line confirmation that they have been accepted on this course.

851-0886-00L New Zealand Through Literature and Film (C1-C2) W 2 credits 2U M. Norgate

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

**Abstract**
The course is designed for Bachelor and Master students from all disciplines who wish to gain an insight into New Zealand culture, history, society, and - to a lesser degree - politics through its rich tradition in film and literature, while improving their English language skills further towards C2.

**Objective**
The course is designed for Bachelor and Master students from all disciplines, who wish to gain an insight into New Zealand culture, history, society, and - to a lesser degree - politics through its rich tradition in film and literature, while improving their English language skills further towards C2.

The aim is to explore the following questions through texts and film to introduce students to New Zealand and, in a broader sense, to raise their awareness of some of the key issues relating to former colonies from early settlement to the present day. Key questions include: What did New Zealand mean to its early settlers? Where did they come from? How did they live? What is the Treaty of Waitangi, and what is its status today? How did New Zealanders see themselves then, and how do they see themselves now?

Students will learn the discourse used, and issues under consideration, in the analysis and discussion of poetry, prose, and film. They will become aware of various ways of "reading" texts and film, and will improve their skills in planning and writing cohesive essays in which they marshal their views in a convincing and formal manner. Overall, the aims are that students become more discerning readers, improve their skills in expressing their views in written and spoken form clearly and concisely, and gain an understanding of the importance of literature and film to the development of a uniquely New Zealand identity.

**Content**
The course gives a chronological overview of New Zealand's literary heritage from Maori settlement to the present day, using selected poems, a short novel, short stories, articles, and films. A key focus is the way New Zealanders' notion of their own identity has shifted over the years, as expressed by the country's film-makers and writers working in English, and to a limited degree, in Maori (English translations are provided).

**Lecture notes**
Handouts, online resources, and DVDs of a wide range of NZ films (available in the Self-Access Center -- NB: No hobbits!)

851-0846-01L Spanish: Grammar and Pragmatic Communication (B2.1) W 2 credits 2U M. Iturrizaga Slosiar

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 629 of 1432
We work out some interaction forms focused on observation, presentation and debate. Each student does a presentation of one of the films.

Durante il corso vengono letti e commentati testi narrativi brevi particolarmente significativi sia per il lessico e le strutture linguistiche impiegate sia per i contenuti strettamente collegati a realtà culturali e sociali tipiche per l'Italia. A presentazioni, orali e scritte, salteranno discussioni sui testi e riflessioni sulla costruzione dei racconti e sulle scelte lessicali e sintattiche.

The most important grammatical topic will be the imperfecto and pluscuamperfecto of subjunctive in subordinate structures. Free and directed discussion will be enhanced. We will read diverse text forms from Spanish and Latin American Authors.

The course aims towards integrating grammar and oral/written communication. We will present new grammar topics and will introduce them into the oral practice.

The course aims to expose the student to the oral language in order to help him/her achieve better linguistic and social skills.

The main activity of the course is the visioning of films in Spanish (Spain and Latin America), giving an emphasis on a specific thematic, geopolitcal and cultural spectrum of the Spanish language. It also aims the participant to get familiarized with topics, images, customs, dialogs and vocabulary, carrying out an observation and then an analysis and comment of these elements.

The course aims to introduce a specific problematic in a Spanish-speaking region or country through the cinema, taking into account the geopolitical and cultural spectrum of the Spanish language. It also aims the participant to get familiarized with topics, images, customs, dialogs and vocabulary, carrying out an observation and then an analysis and comment of these elements.

The chosen films can be seen / borrowed from the Selbstlernzentrum (http://www.sprachenzentrum.uzh.ch/slz/index.php).

Important information for ETH students: The enrollment in this course at the Sprachenzentrum does not enrol the student automatically fot the granting of the D-GESS points. Please inform yourself.
Greek Basic Course Part I

**Objective**
Basic knowledge of Greek grammar, vocabulary and of some characteristics of the Greek language and culture.

**Content**
- Practice of oral communication and study of basic vocabulary and grammar; focus on noun and adjective structures, personal and possessive pronouns, active verbs (Present Tense) and the use of adverbs. Initiation to web-based activities in Greek and enhancement of interest and activities in Greek language and culture.
- **Materiale didattico**
  - Extensive vocabulary work (approx. 400 new words); reading of elementary texts; additional practice through speaking only Greek in class;
  - Practice of oral communication and study of basic vocabulary and grammar; focus on noun and adjective structures, personal and possessive pronouns, active verbs (Present Tense) and the use of adverbs. Initiation to web-based activities in Greek and enhancement of interest and activities in Greek language and culture.

**Prerequisites**
- Keines

**Rules**
- Submit all their written work for correction.
- Attend regularly and participate actively in class.
- Submit all their written work for correction.
- Commit themselves to online-activities in the Moodle-LET online-classroom.

**Literature**
- The course book by D. Dimitri & M. Papacheimona, Ellinika tora 1+1 (Greek now 1+1, including 2 audio-CD), units 1-5, Athens 2002, and
- Additional course materials and handouts will be distributed in class.
- A set of 1400 vocabulary cards for the entire coursebook (Ellinika tora 1+1) is available and can be ordered at the beginning of the semester.

**Notices**
- Web-based activities can be accessed via Moodle platform, supported by LET of ETHZ (http://moodle.let.ethz.ch/).
- Additional course materials and handouts will be distributed during the semester.
- Audio-visual materials and handouts (photocopies) will be used. Photocopies will be distributed during the semester.

**Credit Information**
4 credits

**Additional Information**
- The course is only open to students who register online via the Sprachenzentrum-website and who receive online confirmation that they have been accepted on this course. Please note the limited online-registration period!

---

Modern Greek Language III (A2.1)

**Objective**
Improving listening comprehension; writing short essays (about the past and the future, describing events and personal experience). Grammar will focus on verbs (simple past, simple future, subjunctive and imperative; active and passive voice).

**Content**
- Challenging everyday situations; discussion of specific topics (eg. describing pictures and photographs, talking about daily chores);
- Elementary listening comprehension practice (dialogues, talking about events, advertisements); reading comprehension (advertisements, cooking recipies, poems); advanced web-based activities in Greek.

**Lecture notes**

**Swedish II (A2.1)**

Courses are direct continuations of the first part of the Swedish course. Participants should already have reached level A1. The course is the first of a two-part Swedish course, run over two semesters. The aim of the course is to achieve basic language skills in speaking, listening, reading, and writing (Level A1). The focus is based on oral skills.

**Coursebook**

Prerequisites / notice

Regular attendance (max 3 absences), active participation in class and a minimum of 3 hours work outside class is expected per week.

Additional material will be distributed during the lessons. You will be asked to pay CHF 5.00 to cover the cost of photocopies.

The course is only open to students who registered online via the Language Center website and who received an e-mail confirmation that they have been accepted in this course.

Prerequisites / notice

Students are expected to attend regularly and participate actively in class. Completion of this course requires active and continuous participation. Students should be able to dedicate at least 3 hours a week to independent study activities.

The use of the open-source Learning Management System OLAT will be part of the course.

Assessment:
The assessment will embrace
- a portfolio including exercises done throughout the semester
- a final test assessing the different skills trained.

Requirements for the award of 2 ECTS credits and:
- learning achievement assessed and documented as successful
- no more than 3 absences

851-0851-00L  Russian I (A1.1) 
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.unizh.ch).

Abstract
This course is an introduction to Russian language (and culture) for beginners (Level A1.1). The course treats both the Cyrillic alphabet and phonetics and develops a basic vocabulary. In two terms the students acquire a basic knowledge of the most important aspects of Russian grammar.

Objective
The course focuses on speaking, oral communication in easy everyday life situation, and cultural differentiations.

Content
These are the contents of the course: writing and reading the Russian script; welcoming somebody; saying goodbye; presenting oneself; asking for somebody's name; addressing somebody; apologising; indicating one's place and country of origin; indicating one's profession; talking about family; saying how one is; asking for prices; ordering something in a café; talking about activities; numbers 0-400. The course is supported by the learning platform OLAT.

Lecture notes

851-0853-00L  Russian II (A2.1) 
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.unizh.ch).

Abstract
This course is a sequel to the one-year basic course. Students' level should come up to the level of the basic course (two terms, with two lessons per week). In case of doubt please contact the teacher prior to the beginning of the term.

Registration for the course at sprachenzentrum.unizh.ch is obligatory!

Objective
The course focuses on speaking, reading comprehension and auding as well as on cultural competence.

Content
These are the contents of the course: talking about food and meals; indicating quantity; saying that one needs something or has to buy something; making sales talk; naming dishes and cutlery; making invitations; asking for an explanation of an unknown term; uttering congratulations and wishes; describing one's day; naming activities in the present, the past and the future; talking about one's way to the working place. The course is supported by the learning platform OLAT.

Lecture notes

851-0855-00L  Russian III (A2.2+) 
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.unizh.ch).

Abstract
This course the Russian V requires a knowledge which should come up to the level of the four preceding courses (four terms, with two lessons per week). This corresponds to the level A2 of the "European Framework". In case of doubt please contact the teacher prior to the beginning of the term.

Registration for the course at sprachenzentrum.unizh.ch is obligatory!

Objective
The course focuses on speaking, reading comprehension and auding as well as on cultural competence on a A2.2+ level according to the "European Framework".

Content
These are the contents of the course: talking about the weather; naming seasons and months; understanding tourist offers; uttering approval, refusal and indifference; making appointments; talking about holiday plans and arrangements; uttering prohibitions; drawing comparisons; talking about learning; indicating year and date; talking about interests; saying what one is busy with; talking about one's biography; saying what one would like to do; making and asking for recommendations; passing on information; saying how to get to a place; making suggestions. The course is supported by the learning platform OLAT.

Lecture notes

851-0861-00L  Arabic I (A1.1) 
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.unizh.ch).

Abstract
This course forms the first part (level A1) of a five semesters' Arabic course. Its aim is to acquire a basic competence on the level of speaking, hearing skills, and also reading and writing of the Arabic script.

Objective
The participants will be able to adequately respond to selected situations of everyday life. Conversations in everyday life and typical situations while traveling will be taught and exercised. Another important focus is the learning of the Arabic script.

Content
Embedded into communicative situations we will work on the following contents: to greet, to present oneself, to talk about oneself (personal identity, occupation, place of living, etc.), simple telephone calls, to ask for information, to book a room. We will pay special attention to cultural aspects.

Literature
Arabisch Intensiv. Grundstufe. Landesspracheninstitut in der Ruhr-Universität Bochum; Buske Verlag (www.buske.de), 2011

851-0861-01L  Arabic I (A1.1) 
Your course registration is only valid with a simultaneous online registration at the language center
This course aims at acquiring the elementary language competence on the level of speaking, listening and understanding as well as reading and writing of the Arabic script.

**Objective**

The participants are able to behave adequately in regard to language and culture in simple, but important everyday situations. Learning and practicing vocabulary and grammar are tailor-made to acquire sufficient confidence to meet elementary communication needs orally and in writing.

**Content**

The communicative needs which the practical contents and situations are designed to meet relate to: saying hello, asking about somebody’s wellbeing, introducing each other, simple statements about objects and persons, asking for information and services. The participants are expected to do some of their homework on OLAT.

**Lecture notes**

All teaching material besides the reader will be distributed in the lessons and downloaded on OLAT.

**Literature**

Textbook:

Landesspracheninstitut in der Ruhr-Universität Bochum

Jahr: 2011

Auflage: 3., völlig überarb. Aufl

**Prerequisites / notice**

The course is open for students, post-graduate students and staff of both Zurich university and ETH without any knowledge of the Arabic language.

**851-0863-00L Arabic III (A2.1) W 2 credits 2U E. Youssef-Grob**

*Abstract*

Your course registration is only valid with a simultaneous online registration at the language center ([www.sprachenzentrum.uzh.ch](http://www.sprachenzentrum.uzh.ch)).

This course forms the third semester of a five semesters' Arabic curriculum. We will work on the following topics: Talking about one's life, daily routines, comparisons, wishes, orders, eventualities, preferences. Furthermore, we will pay special attention to acquiring a basic vocabulary and work on the Arabic verbal system.

*Objective*

The participants are able to show a culturally and linguistically appropriate behavior in common situations of everyday life. They acquire a basic vocabulary and know the important verbal constructions (present and past tense, imperative, conjunctive).

*Content*

---

**851-0866-02L Arabic Reading Class (B1) W 2 credits 2U U. Göskens**

*Abstract*

Your course registration is only valid with a simultaneous online registration at the language center ([www.sprachenzentrum.uzh.ch](http://www.sprachenzentrum.uzh.ch)).

We read short easy or intermediate level texts in the Arabic original and discuss them in Arabic as far as possible. The texts may be literary or deal with simple scientific topics, giving at any rate insights into the culture and society of the Arabic world. Likewise, we shall practice and deepen the competences gained in the previous classes.

*Objective*

The goal is to attain level B1 of the CEF orally and in writing. The class is about acquiring competences needed to deal with literary and scientific texts as well as gaining grammatical and lexical competences on the basis of original texts. The discussion of texts in the original is designed to encourage oral competence, too.

---

**851-0877-02L Chinese I (A1.1) W 3 credits 4U Q. Hu**

*Abstract*

Your course registration is only valid with a simultaneous online registration at the language center ([www.sprachenzentrum.uzh.ch](http://www.sprachenzentrum.uzh.ch)).

This course is designed for students with a general interest in learning the modern Chinese language or students who are planning to study in China.

*Objective*

The course aims at promoting various everyday communication skills without neglecting their cultural context.

*Content*

Introduction to the modern standard Chinese language (Mandarin) and script, concentrating on basic vocabulary in Pinyin and Chinese characters, elementary grammar and conversation. The main focus will be on colloquial language.

*Literature*

Wir arbeiten mit folgendem Lehrmittel: Zhngguóhuà, shàngcè und Zhngguózì, shxi (Beijing, 2007 mit Audio CD).

---

**851-0879-00L Chinese III (A2.1) W 3 credits 4U Q. Hu**

*Abstract*

Your course registration is only valid with a simultaneous online registration at the language center ([www.sprachenzentrum.uzh.ch](http://www.sprachenzentrum.uzh.ch)).

Building on course Chinese II the students will learn to actively master a vocabulary of 300 words. In addition, the course will teach some of the basic grammatical patterns. Exercises in spoken Chinese covering a number of topics are also part of the course-work. The course aims to bring the participants up to level 2 of the new HSK (standardized international Chinese proficiency test).

*Objective*

The course has the following aims: the participants shall acquire an advanced competence in the field of speaking, listening, reading and writing. They will build up a number of key characters, so that 300 words should be actively mastered by the end of the semester.

Exercises in basic grammatical forms shall give a first understanding of modern Chinese syntax. All the lessons will contain a fair share of conversational practice.
Chinese V (A2.2+)  
2 credits
Training in colloquial Japanese / Reading of common texts in Japanese / Application, consolidation and expansion of the basic vocabulary

G. Gefter

I. Mosimann-Nakanishi

Everyday conversation / Reading simple texts written with Hiragana and Katakana syllabaries / Writing simple texts about everyday topics

Lecture notes

We will be using this textbook: "Japanisch Intensiv Grundkurs", LSI, Buske Verlag

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract

The focus of this course is on the reading of challenging original texts from Japanese media and Japanese contemporary literature. The texts are analyzed and discussed in terms of their content and linguistic features.

Objective

By reading selected original texts, students learn strategies for reading texts analytically. The aim is that they are able to handle Japanese sources independently, using appropriate tools.

851-0890-00L Reading Course Latin: Hannibal ad portas  W  2 credits  2U  C. Utzinger

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract

The general topic of the course is Hannibal. On the basis of didactically prepared texts written by various Latin authors (including Nepos, Livy) this enigmatic figure who stood before the gates of Rome in 215 BC is examined.

Students mostly prepare the texts at home for class discussion. Furthermore, important topics of basic grammar are reviewed (exercises).

Objective

Students gain an understanding of various aspects of a new topic and are able to analyse and contrast these aspects within a wider context.

Participants reactivate, review, and improve their language skills (vocabulary, morphology, morphosyntax) by applying these skills to texts and in exercises (translation competence, text analysis).

851-0900-01L Norwegian I (University of Zürich)  W  3 credits  2U  E. Berg

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: 360256

Number of participants limited to 20.

No simultaneous online registration at the language center necessary.

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract

This language course is an introduction to Norwegian (Bokmål) as well as to the country and its culture.

Objective

By the end of the course, you will have read some easy Norwegian texts, have written your first own texts, and be able to conduct simple conversations.

European Global Scale grading: A2 (basic user)

You are recommended to take part in the tutorial offered for this course.

851-0900-03L Norwegian III (University of Zürich)  W  3 credits  2U  E. Berg

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: 360267

Number of participants limited to 20.

No simultaneous online registration at the language center necessary.

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract

The third part of the Norwegian-course aims at a further development of your active and passive language competence. You will finish the textbook and round it off by an individual assignment on a Norwegian theme.

European Global Scale grading: B2 (independent user)

You will be reading Norwegian literature with ease and discussing various themes both in speech and in writing.

851-0900-04L Norwegian IV (University of Zürich)  W  3 credits  2U  E. Berg

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: 360271

Number of participants limited to 20.

No simultaneous online registration at the language center necessary.

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract

After completing the three semester basic course, the fourth semester will focus on active language competencies. Based on current topics in Norwegian media, you will practice reading, hearing, discussing and writing in Norwegian.

European Global Scale grading: C1 (intermediate user)

Objective

You will master the Norwegian language well enough to be able to discuss and write about complex matters.

Student Research Projects: Practical Research on Learning and Instruction

Course is targeted at advanced students who have taken an interest in gathering practical research experience in the field of Learning and Instruction. In teams of two, students conduct their own research projects (planning, conducting, analyzing, interpreting, and presenting research); thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students’ independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction).

Learning goals include:
- Participants can illustrate and explain basic methods and concepts for research in the fields of Learning and Instruction, e.g. with the help of practical examples.
- Participants can generate testable research questions for a topic relevant in the fields of Learning and Instruction.
- Participants can design and conduct a study that is relevant for answering their research question.
- Participants can summarize and evaluate the main results from a study in the field of learning and instruction, with regard to the research question being asked.

**Title**: Geography Didactics Geography I (University of Zurich)
**Type**: O
**ECTS**: 3 credits
**Hours**: 2G
**Lecturers**: B. Vettiger-Gallusser

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

**UZH Module Code**: 090GG1

Limited number of participants. 
Please write an email for registration no later than September 1 to: barbara.vettiger@ife.uzh.ch

Simultaneous enrolment in Introductory Internship Geography (651-4219-01L), Practice Lessons for Didactics I and II (651-4219-02L) is compulsory.

Mind the enrolment deadlines at UZH:  
http://www.uzh.ch/studies/application/mobilitaet_en.html

**Abstract**: Fundamentals (theory and practice) of specialist subject teaching for high-school geography lessons.

**Objective**: The course introduces students to the practical side of geography teaching. Participants look into the understanding of this school subject over the course of time and learn:
- how to plan their teaching in the context of the valid curricula, including on an interdisciplinary basis.
- how geographical contents can be implemented in didactic and methodological terms so as to ensure that fundamental competences can be imparted to pupils (knowledge, skills, attitudes), with a view to university studies as well.
- how to foster pupils in such a way that they can think independently in terms of spatial competence and can act in a responsible manner.

**Content**: Thematische Schwerpunkte  
- Einführung in die Theorie der Geografiedidaktik.  
- Bildungsauftrag der Geografie an Mittelschulen.  
- Interesse der Lernenden am Geografieunterricht.  
- Unterrichtsgestaltung und -vorbereitung: Sachanalyse, lernzielorientierte Unterrichtsplanung; Didaktische Analyse; Einführung in die Gestaltung von Lernarrangements.  
- Mediendidaktik (Arbeiten mit Bildern und Karten).  
- Planung einer Unterrichtseinheit (Struktur - Prozess - Verlauf).

Lernformen  
Theoretische Konzepte werden präsentiert und an Beispielen diskutiert. Die Studierenden setzen sich mit Methoden aktiv auseinander (z.B. Lernpuzzle, Fallstudie sowie Sozial- und Aktionsformen) und reflektieren dabei ihre eigenen Schulerfahrungen im Fach.

**Prerequisites / notice**: Fachdidaktik I ist gleichzeitig mit dem Einführungspraktikum zu belegen.  
Sie gilt als Voraussetzung für Fachdidaktik II und III, sowie die FWV II und FWV III. Fachdidaktik II findet nur im Sommersemester statt. Fachdidaktik III kann parallel zur Fachdidaktik II im Sommersemester oder parallel zur FWV III (Ringvorlesung und FD-Seminar) im Herbstsemester belegt werden.  

---

**Title**: Examination Didactics  
**Prerequisites**: Successful completion of Geography Didactics of Geography Teaching I, II, III, IV as well as FV I, II, III, Introductory Internship and Internship.

**Type**: O  
**ECTS**: 1 credit

Simultaneous enrolment in Examination Lessons Geography - course 651-2520-00L - is compulsory.

**Content**: Geprüft werden:  
- Interesse der Lernenden am Geografieunterricht.  
- Bildungsauftrag der Geografie an Mittelschulen.  
- Theoretische Konzepte werden präsentiert und an Beispielen diskutiert. Die Studierenden setzen sich mit Methoden aktiv auseinander (z.B. Lernpuzzle, Fallstudie sowie Sozial- und Aktionsformen) und reflektieren dabei ihre eigenen Schulerfahrungen im Fach.

**Prerequisites / notice**: Fachdidaktik Text nach eigener Wahl

---

**Title**: Geography Didactics IV: Mentored Project  
**Prerequisites**: successful participation in Geography Didactics of Geography Teaching I+II+III (651-4239-00L), 651-2500-00L and 651-4118-00L.

**Type**: O  
**ECTS**: 2 credits

**Content**: Mentorierte Arbeit mit Bezug zur Fachdidaktik  
- selbständige, theoriegestützte Auseinandersetzung mit konkreter, praxisbezogener Fragestellung zum Geografieunterricht.  
- selbständige, mentorierte Arbeit zu einem Thema aus der Fachdidaktik mit direktem Bezug zur Lehrpraxis im Fach Geografie (z.B. zu eigenen Übungslektionen oder Praktikum oder zur Unterrichtsforschung).  
- Das Thema wird zu Beginn mit der Mentorin/ dem Mentor festgelegt.

**Prerequisites / notice**: Frühestens parallel zum Fachdidaktik- Modul III zu belegen (Pflicht für ETH-Studierende).

---

**Title**: Geography Didactics of Geography Teaching III (University of Zurich)  
**Prerequisites**:  
- No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

**Type**: O  
**ECTS**: 3 credits

**Content**: Limited number of participants.
Prerequisites: successful participation in Geography Didactics of Geography Teaching I+II (651-4239-00L and 651-2500-00L).

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
The Subject Didactics III course unit comprises two blocks: one "Specialisation" block with key subjects from courses I and II and a block on "Information technology in geography teaching" with specific applications.

Objective
In Subject Didactics III, students take a more in-depth, application-oriented look at geography. Students
- learn about the options for using ICT to design their geography teaching and also the integral furtherance of pupils' IT competence. They plan an IT lesson, hold it and then evaluate it.
- identify the opportunities and limits of illustrating their geography teaching with films, models and experiments.
- look into the significance of the subjective theories for learning success and failure and discuss tuition options for a concept change (geographical case studies).

Content
Inhalt
Fachdidaktik III Block "Vertiefung" (1/2 Semester)
- Planung von Unterrichtseinheiten.
Fachdidaktik III Block "ICT im Geografieunterricht" (1/2 Semester)
- Fachspezifische Einsatzmöglichkeiten, Unterrichtshilfen, konkrete Anwendungen und Resultate an Beispielen kritisch reflektieren.
(Leistungsnachweis).

Lernformen
Theoretische Konzepte werden vorgestellt und an typischen Beispielen aus der Praxis illustriert. Beispiele im IT-Bereich werden von Studierenden selbst erarbeitet ("Werkstatt"), präsentiert und diskutiert.

Lecture notes
Unterlagen werden abgegeben.

Literature
Weitere Literaturangaben.

Prerequisites / notice
Fachdidaktik III kann im Frühlingssemester parallel zu Fachdidaktik II besucht werden, aber erst nach Fachdidaktik I.

The Teaching Internship takes place after successful completion of the didactics courses (I, II incl. practice lessons). The teaching internship takes in 50 lessons: 30 are taught by the students, and the students sit in on 20 lessons. The teaching internship lasts a maximum of 10 weeks.

The Introductory Internship can only be completed together with an accredited internship teacher of ETH Zurich (separate list).

**651-2520-01L** Examination Lesson I Geography

Simultaneous enrolment in "Examination Lesson II Geography" (651-2520-02L) is compulsory.

**Objective**
- to develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle
- to analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

**Content**
Die Studierenden erfahren das Lektionsthema in der Regel 14 Tage vor dem Prüfungstermin. Von der zuständigen Lehrperson erhalten sie Informationen über den Wissensstand der zu unterrichtenden Klasse und können sie vor dem Prüfungstermin besuchen. Sie erstellen eine Vorbereitungsmehraus Anleitung und reichen sie spätestens 2 Tage vor der Prüfung (bis 18 Uhr) den beiden Prüfungsexperten ein.

Die gehaltene Lektion wird kriteriabasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/ der Kandidatin über die gehaltene Lektion im Rahmen eines Kolloquiums (15 min).

**Lecture notes**
Dokument: Schriftliche Vorbereitung für Prüfungslektionen.

**Prerequisites / notice**
Bitte bei der Prüfungsanmeldung den schriftlichen Nachweis erbringen, dass die ganze Ausbildung abgeschlossen ist.

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: 0908P69

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

**Abstract**
The provision of insight into their personal, selected and also theoretically-founded:
- study of tuition elements and the compilation of a personal method profile based on subject-didactics assignments.
- processing of key events/happenings experienced during their teaching or teaching practice period (e.g. specialist content; didactic planning, conducting teaching, interaction with the class or individual pupils; communication with the teacher responsible for the teaching practice) in line with the instructions and the advice given in the guide for practical professional training (IGB UZH).

- Vorgängige Überlegungen (Problemstellung bzw. Vorbereitung einzelner Lektionen) werden schriftlich dokumentiert sowie die Erfahrungen reflektiert, die bei der Umsetzung und Durchführung des Unterrichts gemacht wurden.
- Im Praktikumsjournal sollen fachwissenschaftliche Aspekte, allgemein- und fachdidiaktische Überlegungen, fachlich- pädagogische und didaktische Aspekte sowie konkrete Erfahrungen aus dem Praktikum einbezogen und angemessen miteinander in Verbindung gebracht werden.
- Die Art der Darstellung des Portfolios werden durch die Studierenden bestimmt.
- Das Journal muss bei der Schlussbesprechung des Praktikums vorliegen. Es wird von der Praktikumslehrperson kontrolliert, visiert und Beurteilt, die Beurteilung umfasst auch schriftliche Vorbereitung und mündliche Reflexion des Praktikumslehrpersonen.
- Der Hauptteil des Praktikumsjournals umfasst ca. sechs bis acht Seiten.
- Formal muss das Praktikumsjournal der Struktur einer wissenschaftlichen Arbeit entsprechen (Titelblatt, Inhaltsverzeichnis, Hauptteil, Schlusswort, Literatur- und Materialienangaben).

**Lecture notes**
Anleitung für das Unterrichtspraktikum und die unterrichtspraktischen Übungen:
- Die berufspraktische Ausbildung am IIE LLBM; Wegleitung und Instrumente zur Vorbereitung, Durchführung und Reflexion sowie zur Beratung, Beobachtung und Beurteilung von Unterricht auf der Sekundarstufe II (Version 2012).
- Merkblatt Praktikumsjournal IIE LLBM
- Aufgabenstellungen für die berufspraktische Ausbildung aus der Fachdidaktik Geografie.

**Literature**

Introductory Internship (University of Zürich)

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: 090BPA12

Simultaneous enrolment in Introductory Internship Geography (651-4219-01L), Practice Lessons for Didactics I an II (651-4219-02L) and Geography Didactics I (651-4239-00L) is compulsory.

Abstract
The Introductory Internship belongs to the practical expertise education of the teacher training for Upper Secondary Schools and must be completed at the beginning of studies.

Prerequisites / notice
The Introductory Internship can only be completed together with an accredited internship teacher of ETH Zurich (separate list).

Practice Lessons for Didactics I an II (University of Zürich)

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: 090BPU1

Simultaneous enrolment in Introductory Internship Geography (651-4219-01L), Practice Lessons for Didactics I an II (651-4219-02L) and Geography Didactics I (651-4239-00L) is compulsory.

Abstract
The practice lessons help students to gain first experiences in teaching and to reflect the courses of the teacher training and didactics.

Prerequisites / notice
The Introductory Internship can only be completed together with an accredited internship teacher of ETH Zurich (separate list).

Examination Lesson I Geography

Simultaneous enrolment in “Examination Lesson II Geography” (651-2520-02L) is compulsory.

Abstract
In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter-based and didactic skills they have acquired in the course of their training.

Objective
On the basis of a specified topic, the candidate shows that they are in a position
- to develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle
- to analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

Content
Die Studierenden erfahren das Lektionsthema in der Regel 14 Tage vor dem Prüfungstermin. Von der zuständigen Lehrperson erhalten sie Informationen über den Wissensstand der zu unterrichtenden Klasse und können sie vor dem Prüfungstermin besuchen.
Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie spätestens 2 Tage vor der Prüfung (bis 18 Uhr) den beiden Prüfungsexperten ein.
Die gehaltene Lektion wird kriteriumsbezogen beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/ der Kandidatin über die gehaltene Lektion im Rahmen eines Kolloquiums (15 min).

Dokument: Schriftliche Vorbereitung für Prüfungselektionen.

Prerequisites / notice
Bitte bei der Prüfungsanmeldung den schriftlichen Nachweis erbringen, dass die ganze Ausbildung abgeschlossen ist.
Fundamentals (theory and practice) of specialist subject teaching for high-school geography lessons. The course introduces students to the practical side of geography teaching. Participants look into the understanding of this school subject. They familiarise themselves with questions and forms of cognition-oriented, moderately constructivist tuition. They look at the subject knowledge in its full breadth, on the basis of current approaches to research and with the consideration of specific examples, thereby creating a specialised basis on which to critically examine specialist contents for the school subject of geography, as taught in a variety of educational settings. They get to know how to foster pupils in such a way that they can think independently in terms of spatial competence and can act in a responsible manner.

Thematic Schwerpunkte
- Einführung in die Theorie der Geografiendidaktik.
- Bildungsauftrag der Geografie an Mittelschulen.
- Interesse der Lernenden am Geografieunterricht.
- Unterrichtsgestaltung und -vorbereitung: Sachanalyse, lernzielorientierte Unterrichtsplanung; Didaktische Analyse; Einführung in die Gestaltung von Lernarrangements.
- Mediendidaktik (Arbeiten mit Bildern und Karten).
- Planung einer Unterrichtseinheit (Struktur - Prozess - Verlauf).

Lernformen
Theoretische Konzepte werden präsentiert und an Beispielen diskutiert. Die Studierenden setzen sich mit Methoden aktiv auseinander (z.B. Lernpuzzle, Fallstudie sowie Sozial-und Aktionsformen) und reflektieren dabei ihre eigenen Schülererfahrungen im Fach.

Teaching Internship Geography
Prerequisites: successful participation in Geography Didactics I-III.

Prerequisites / notice
Fachdidaktik I ist gleichzeitig mit dem Einführungspraktikum zu belegen.
Fachdidaktik III kann parallel zur Fachdidaktik II im Sommersemester oder parallel zur FWV III (Ringvorlesung und FD-Seminar) im Herbstsemester belegt werden.

651-2521-00L Teaching Internship Geography ■ O 6 credits 13P B. Vettiger-Gallusser

Teaching Internship Geography for Teaching Diploma in 2 Subjects in One-Step Procedure and Geography as Major Subject.

Abstract
In the final phase of their training, students have to apply and test the insights, abilities and skills they have acquired. They spend 3-5 weeks in an educational institution, during which time they observe 10 lessons and teach 30 lessons independently.

Objective
Die Studierenden können die Bedeutung von Unterrichtsthemen unter verschiedenen Blickwinkeln einschätzen. Sie kennen und beherrschen das unterrichtliche Handwerk. Sie können ein gegebenes Unterrichtsthema für eine Gruppe von Lernenden fachlich und didaktisch korrekt strukturieren und in eine adäquate Lernumgebung umsetzen. Es gelingt ihnen, die Balance zwischen Anleitung und Offenheit zu finden, sodass die Lernenden sowohl über den nötigen Freiraum wie über ausreichend Orientierung verfügen, um aktiv und effektiv flexibel nutzbare (Fach-)Wissen zu erwerben.

Regional Geography: Lecture and Didactic Concept
Arabian Peninsula (University of Zürich)

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
UZH Module Code: GEO781

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract

Participants conduct a critical examination of regional geography in terms of the understanding of the subject and teaching in schools, and its potential for substantiated tuition is established. Regional geography observes delimited partial areas, mapped to different scales, considering thematic and exemplary aspects. Regional geography features in this form on a large number of geography syllabuses. Against this background, the module comprises two parts. A specialist lecture on the subject takes a specific regional example to highlight current, interdisciplinary topics and case studies. The aim here is to compile specialist contextual knowledge about a region. In an accompanying seminar, this contextual knowledge is then put in the correct practical form for teaching in a school, thus ensuring that the teachers are in a position to configure regional geography teaching that has been duly reflected on from the specialist-subject, didactic and pedagogical angle.

Objective

A. Vettiger-Gallusser

Regional Geography: Lecture and Didactic Concept
Asia (University of Zürich)

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
UZH Module Code: GEO786

Mind the enrolment deadlines at UZH:

Abstract

Current approaches to research which are of relevance to society are presented on the basis of examples and critically examined in respect of their significance for a high-school education in the subject of geography.

Objective

- look at the subject knowledge in its full breadth, on the basis of current approaches to research and with the consideration of specific examples, thereby creating a specialised basis on which to critically examine specialist contents for the school subject of geography, as part of a general education, over the course of time.
- see whether and where current topics from the specialist subject (research) can be incorporated in secondary-school tuition.
- familiarise themselves with questions and forms of cognition-oriented, moderately constructivist tuition.
- can reflect on geography teaching in an aware and theory-based manner.

Content

- Einführung in den Umgang mit theoretischen Konzepten zur kritischen Reflexion von Unterrichtsinhalten und -methoden hinsichtlich ihrer Ausrichtung.
- Auseinandersetzung mit Wesen und Inhalt der geographischen Allgemeinbildung, ihren Möglichkeiten und Grenzen (z.B. Ressourcen, Lehrpläne) mit direktem Bezug zur Ringvorlesung.
- Berücksichtigung der Wissensgenese sowie etischer und methodischer Aspekte für die Ausbildung an Maturitätsschulen.
- Disussion von Unterrichtsinhalten und Lernarrangements unter Berücksichtigung der vermittelten Impulse und fachdidaktischer Literatur.

Lernformen:

Die fachwissenschaftlichen Aspekte werden in der Form einer Vorlesung von verschiedenen Dozierenden von der UZH und ETHZ präsentiert.

Im Seminar erfolgt eine kritische Diskussion und Aufarbeitung der exemplarischen Bedeutung der einzelnen Vorlesungsinhalte an Hand von Kurzvorträgen der Studierenden und bestehender Lehr-/Lernmaterialien. Konkrete Umsetzungsbeispiele mit Bezug zu behandelten Themen der Ringvorlesung für den Unterricht als Seminararbeit (Partnerarbeit) werden erstellt.

Lecture notes

Zu jeder Vorlesung werden Folien/Unterlagen abgegeben.

Literature

Wird von den jeweils verantwortlichen Dozierenden zusammengestellt.

Prerequisites / notice

Diese Veranstaltung muss gleichzeitig mit der Veranstaltung 651-4237-02L FWV III mit pädagogischem Fokus: Seminar besucht werden.

Es wird sehr empfohlen, dieses Modul parallel zum Unterrichtspraktikum zu besuchen.
Regional geography observes delimited partial areas, mapped to different scales, considering thematic and exemplary aspects. Regional geography features in this form on a large number of geography syllabuses. Against this background, the module comprises two parts. A specialist lecture on the subject takes a specific regional example to highlight current, interdisciplinary topics and case studies. The aim here is to compile specialist contextual knowledge about a region. In an accompanying seminar, this contextual knowledge is then put in its correct practical form for teaching in a school, thus ensuring that the teachers are in a position to configure regional geography teaching that has been duly reflected on from the specialist-subject, didactic and pedagogical angle.

Learning outcomes:
- Participants conduct a critical examination of regional geography in terms of the understanding of the subject and teaching in schools, and its potential for substantiated tuition is established.

Fachwissenschaftliche Aspekte werden in der Form einer Vorlesung präsentiert. Die Studierenden vertiefen nach jeder Stunde die Inhalte und setzen diese im Hinblick auf die Schulpraxis um. Dabei wird ein elektronisches Lernlangebuch geführt und über eine Lernplattform über die schulpraktische Umsetzung reflektiert. Es werden auch Materialien zusammengestellt.

UZH Module Code: GEO232

Prerequisite: Human Geography II (UZH Module Code: GEO122)

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
Teil GEO232.1:
Das Seminar verfolgt das Ziel, ein tieferes Verständnis für sozialwissenschaftliche Grundlagen der Humangeographie zu gewinnen.
Teil GEO232.2:
In der Vorlesung und den Tutorien werden aktuelle wirtschaftsgeographische Themen behandelt. Demonstriert und erklärt wird insbesondere, wie die Wirtschaft mit Grenzen und Grenzziehungen umgeht.

Objective
- Sie vertiefen ihre theoretischen, empirischen und methodischen Fähigkeiten in folgenden Themenbereichen:
  - Gesellschaft und Raum
  - Gesellschaft und Entwicklung
  - Gesellschaft und natürliche Umwelt/Ressourcen
  - Offenheit und Geschlossenheit in Wirtschaft und Gesellschaft
  - Chancen und Herausforderungen einer globalisierten Weltwirtschaft
  - Sie sind in der Lage, Verknüpfungen zwischen grundlegenden sozial- und wirtschaftswissenschaftlichen Theorien und deren Konkretisierung in der Geographie herzustellen.
  - Sie können die erwähnten Themen mit ausgewähltem Faktenwissen verknüpfen und diskutieren
  - Sie schulen Ihre analytischen und theoretischen Fähigkeiten und können diese in Diskussionen einbringen
  - Sie können die Relevanz von weiterführenden wissenschaftlichen Texten diskutieren und mit einem Ausgangstext verknüpfen
  - Sie sind in der Lage, eine Diskussion über wissenschaftliche Themen zu strukturieren und - mit einfachen Moderationstechniken - zu moderieren

Prerequisites / notice

  - Product costing
  - Management decisions
- Financial Management
  - Financial statement analysis
  - Financial planning
  - Investment decisions

651-0032-00L Geology and Petrography

Abstract
This course gives an overview of the basic concepts of geology and petrography and shows some links to the application of these concepts. The course consists of lectures and exercises in groups. The lectures cover all aspects of the dynamic earth, from the history of the earth, to the formation of rocks, mountains, and oceans, and the degradation processes shaping the uppermost earth's crust.

Objective
This course gives an overview of the basic concepts of geology and petrography and shows some links to the application of these concepts.

Content

Lecture notes
Übungen zum Gesteinsbestimmen und Lesen von geologischen, tektonischen und geotechnischen Karten, einfache Konstruktionen.

Literature
Press, F.; Siever, R.: Allgemeine Geologie, Spektrum Akademischer Verlag, Heidelberg

701-0243-01L Biology III: Essentials of Ecology

Abstract
This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed.

Objective
The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level. The students should learn ecological concepts at these different levels in the context of concrete examples from terrestrial and aquatic ecology. Corresponding methods for studying the systems will be presented.

Content
- Übersicht der aquatischen und terrestrischen Lebensräume mit ihren Bewohnern
- Einfluss von Umweltfaktoren (Temperatur, Strahlung, Wasser, Nährstoffe etc.) auf Organismen; Anpassung an bestimmte Umweltbedingungen
- Populationsdynamik: Ursachen, Beschreibung, Vorhersage und Regulation
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartimente, Stoff- und Energieflusse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

Lecture notes
Unterlagen, Vorlesungsfolien und relevante Literatur sind in der Lehrdokumentenablage abrufbar. Die Unterlagen für die nächste Vorlesung stehen jeweils spätestens am Freitagmorgen zur Verfügung.

Abstract
This course will cover the basic topics in Physics and will show/display/explain with a variety of experiments the most important physical effects. The course will address classical as well as modern physics, and the interplay between basic research and applications.

Objective

Content
Elektromagnetismus: Elektrostatik und Magnetostatik, Strom, Spannung und Widerstand, Maxwell-Gleichungen, elektromagnetische Wellen, elektromagnetische Induktion, elektromagnetische Eigenschaften der Materie.
Thermodynamik: Temperatur und Wärme, Zustandsgleichungen, erster und zweiter Hauptsatz der Wärmemelehre, Entropie, Transportvorgänge.
Quantenphysik und Atomphysik.
Schwingungen und Wellen.
Grundlagen der speziellen Relativitätstheorie.

Einleitung - Was ist Raumplanung (Begriffe)

This course provides basic knowledge on parameter estimation and data processing. The necessary mathematical and statistical methods are developed and are applied to actual examples in geomatics.

Objective

The students are capable of analysing measurements with with appropriate methods. They can optimally extract model parameters from real measurements and are able to analyse and to retrieve additional information from time series. They understand the underlying algorithms of different geodetic analysis tools and processing methods.

Content

Mathematical modeling of engineering problems, general adjustment, minimization principles, propagation of variances, uncertainty of measurements, dealing with heterogeneous measurement types, linear/non linear regression, autocorrelation and colocation

Lecture notes

Parameterestimation and Adjustment
Philipp Limpach
General Adjustment and Collocation
Alain Geiger

Prerequisites / notice

Linear Algebra, Statistics

Geoprocessing and Parameter Estimation

Objective

The students are capable of analysing measurements with with appropriate methods. They can optimally extract model parameters from real measurements and are able to analyse and to retrieve additional information from time series. They understand the underlying algorithms of different geodetic analysis tools and processing methods.

Content

Mathematical modeling of engineering problems, general adjustment, minimization principles, propagation of variances, uncertainty of measurements, dealing with heterogeneous measurement types, linear/non linear regression, autocorrelation and colocation

Lecture notes

Prerequisites / notice

Linear Algebra, Statistics

Cartography I

Objective

Acquire basic knowhow about communication with spatial information by using plans and maps, about the most important design rules and production methods for map graphics. Ability to assess existing products with respect to their content-related and design quality. Ability to design proper plans and well designed legends for basic maps.

Content

Definitions "map" and "cartography", map types, current tasks and situation of cartography, map history, spatial refernce systems, map projections, map conception and workflow planning, map design, analog and digital map production technology, prepress technology, printing technology, topographic maps, map critics.

Lecture notes

Will be distributed module by module

Planning I

Objective

To follow shortly;please note the German description.

Content

Einleitung - Was ist Raumplanung (Begriffe)

Die Raumplanung als staatliche Aufgabe - Raumordnungspolitik

Instrumente der Raumplanung (Richtplanung, Nutzungsplanung)

Problemlösungsverfahren in der Raumplanung - systemtechnisches Vorgehen

Der Schwerpunkt der Vorlesung liegt auf der Erläuterung der Raumplanung als Problemlösungsverfahren. Das dabei vermittelte theoretische Wissen wird direkt an einer konkreten, praxisorientierten Übungsaufgabe umgesetzt.

Geodetic Metrology II

Objective

The students acquire enhanced knowledge regarding the operating mode, the application and the limitations of modern geodetic standard instruments. They will be able to properly select, test and apply these instruments for geodetic tasks with higher accuracy requirements. They will get acquainted with the typical workflow from the preparation of the field works to the digital or plotted plan. Finally, the students will be introduced to specific geodetic tasks related to construction and civil engineering.

Content

- The geomatics workflow
- Propagation of light in the atmosphere
- The modern total station
- Terrestrial Laserscanning
- Digital levels
- Field tests
- Traverses
- Trigonometric leveling
- Precision leveling
- Route planing and transition curves
- Earthworks: Area and cubature

Lecture notes

The slides and documents for enhanced study and further reading will be provided online.

Literature

Abstract
Fundamentals of geoinformation technologies: spatial data modeling, metrics & topology, vector and raster data, thematic data, spatial queries and analysis, spatial databases; labs with GIS software

Objective
Knowing the fundamentals of geoinformation technologies for the realization, application and operation of geographic information systems in engineering projects.

Content
- Einführung GIS & GIScience
- Konzeptionelles Modell & Datenschema
- Vektorgeometrie & Topologie
- Rastergeometry und -algebra
- Thematische Daten
- Räumliche Abfragen & Analysen
- Geodatenbanken

Lecture notes

Literature

Number  Title  Type  ECTS  Hours  Lecturers
851-0703-03L Introduction to Law for Civil Engineering  W  2 credits  2V  G. Hertig

Abstract
This class introduces students to basic features of the legal system. Questions of constitutional and administrative law, contract law, tort law, corporate law, as well as litigation are covered.

Objective
Introduction to fundamental questions of public and private law which serves as a foundation for more advanced law classes.

Content
1. Public Law
   - Constitutional law: sources of law, organization of the state, fundamental rights. Administrative law: administrative decisions, organization of the administration, enforcement of administrative decisions, procedural law, basics of police, environmental and zoning law.

2. Private law

Lecture notes
There will be 'Lecture Notes' (in German) for this course, starting in Fall 2015

Abstract

The aim of the course is to provide the fundamental knowledge about earth observation sensors, techniques and methods for bio/geophysical environmental parameter estimation.

Objective

The aim of the course is to provide the fundamental knowledge about earth observation sensors, techniques and methods for bio/geophysical environmental parameter estimation. Students should know at the end of the course:

1. Basics of measurement principle
2. Fundamentals of image acquisition
3. Basics of the sensor-specific geometries
4. Sensor-specific determination of environmental parameters

Content

Die Lehrveranstaltung gibt einen Einblick in die heutige Erdbearbeitung mit dem folgenden skizzierten Inhalt:

1. Einführung in die Fernerkundung von Luft- und Weltraum gestützten Systemen
2. Einführung in das Elektromagnetische Spektrum
3. Einführung in optische Systeme (optisch und hyperspektral)
4. Einführung in Mikrowellen-Technik (aktiv und passiv)
5. Einführung in atmosphärische Systeme (meteo und chemisch)
6. Einführung in die Techniken und Methoden zur Bestimmung von Umweltparametern
7. Einführung in die Anwendungen zur Bestimmung von Umweltparametern in der Hydrologie, Glaziologie, Forst und Landwirtschaft, Geologie und Topographie

The students know different GIS-based techniques and methods for analysis of landscape and urban areas as well as GIS-based process models and can implement these for quantifying urban qualities in planning processes.

Current topics from planning practice lead to a practical task in the context of sustainable urban development. A systematic approach of choosing suitable planning and analysis methods is shown and implemented on a concrete project. The results of the GIS-based analysis serve for developing possible solutions. Different alternatives are evaluated with selected indicators and discussed.

No script. Handouts will be provided.

GIS-skills would be advantageous.

**Abstract**

Introduction to basic techniques and problems of mathematical optimization.

**Objective**

The goal is to get a good understanding of some of the most important mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems.

**Content**

Topics covered in this course include:

- Linear programming (simplex method, duality theory, shadow prices, ...).
- Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...).

**Literature**

Information about relevant literature will be given in the lecture.

**Prerequisites / notice**

This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture covering similar topics and more.

### Compulsory Electives in Humanities, Social and Political Sciences

**Recommended GESS compulsory elective courses (Type B) for D-BAUG.**

- see GESS Compulsory Electives: Type A: Enhancement of Reflection Capability

- see GESS Compulsory Electives: Language Courses ETH/UZH

### Electives

The entire course programs of ETH Zurich and the University of Zurich are open to the students to individual selection.

### List of Electives Recommended by the Degree Programme

**Abstract**

Geometric structures are useful in many areas, and there is a need to understand their structural properties, and to work with them algorithmically. The lecture addresses theoretical foundations concerning geometric structures. Central objects of interest are triangulations. We study combinatorial (Does a certain object exist?) and algorithmic questions (Can we find a certain object efficiently?)

**Objective**

The goal is to make students familiar with fundamental concepts, techniques and results in combinatorial and computational geometry, so as to enable them to model, analyze, and solve theoretical and practical problems in the area and in various application domains. In particular, we want to prepare students for conducting independent research, for instance, within the scope of a thesis project.

**Content**

Planar and geometric graphs, embeddings and their representation (Whitney's Theorem, canonical orderings, DCEL), polygon triangulations and the art gallery theorem, convexity in Rd, planar convex hull algorithms (Jarvis Wrap, Graham Scan, Chan's Algorithm), point set triangulations, Delaunay triangulations (Lawson flips, lifting map, randomized incremental construction), Voronoi diagrams, the Crossing Lemma and incidence bounds, line arrangements (duality, Zone Theorem, ham-sandwich cuts), 3-SUM hardness, counting planar triangulations.

**Prerequisites / notice**

Prerequisites: The course assumes basic knowledge of discrete mathematics and algorithms, as supplied in the first semesters of bachelor studies at ETH.

**Outlook**

In the following spring semester there is a seminar "Geometry: Combinatorics and Algorithms" that builds on this course. There are ample possibilities for Semester-, Bachelor- and Master Thesis projects in the area.

**Abstract**
The Bachelor Programme concludes with the Bachelor Thesis. This project is supervised by a professor. Writing up the Bachelor Thesis encourages students to show independence and to produce structured work.

**Objective**
Encourages students to show independence, to produce scientifically structured work and to apply engineering working methods.

**Content**
The contents base upon the fundamentals of the Bachelor Programme. Students can choose from different subjects and tasks. The thesis consists of both a written report and an oral presentation.

| 103-0137-00L | Engineering Geodesy                          | O    | 4    | 3G    | A. Wieser, M. Frukacz |
| Abstract   | Introduction to Engineering Geodesy: methods, instruments, and applications. |
| Objective  | The students will be introduced to the methods, instruments and applications in Engineering Geodesy with a focus on end-to-end quality assessment, sensor and multi-sensor-systems, setting out, and monitoring of engineering objects. They will be able to acquire enhanced knowledge and fundamental competences in high-precision angle, distance and height measurements. They will be introduced to aspects of interdisciplinary work in particular related to construction processes and civil engineering. |
| Content    | - Introduction: Definition, methods, and tasks<br> - Planning and realizing geodetic networks<br> - High precision distance, angle and height measurements<br> - Sensors and multi-sensor-systems<br> - Calibration and testing<br> - Engineering Geodesy in construction above and below ground<br> - Tunnel surveying<br> - Building Information Modeling (BIM)<br> - Deformation monitoring: Models, methods, and applications |
| Lecture notes | The slides and additional documents will be provided in electronic form. |
| Prerequisites / notice | Fundamental knowledge in geodetic metrology (applied geodesy), physical geodesy, reference systems, GNSS and parameter estimation is required for this course. This knowledge can for instance been acquired within the appropriate courses of the bachelor studies in Geomatics and Planning. |

| 103-0267-01L | Photogrammetry and 3D Vision Lab             | W    | 3    | 2P    | K. Schindler, J. D. Wegner |
| Prerequisites / notice | It is suggested that students take the course "Photogrammetrie" at bachelor level before this one. |
| Abstract   | The course deals with selected topics of close-range photogrammetry and geometric computer vision, including wide-baseline image matching and reconstruction, dense surface reconstruction, panorama stitching and image indexing; emphasis is put on practical project work. |
| Objective  | The aim of the course is to get to know the methods and practice of close-range photogrammetric reconstruction, and an in-depth understanding of selected topics in modern close-range photogrammetry and computer vision. |
| Content    | This course builds in part on the courses "Photogrammetrie", "Bildverarbeitung" and "Photogrammetrie II" from the Bachelor program. It focuses on the particular challenges of automated close-range photogrammetry. |
| Lecture notes | Presentation slides, necessary publications and complementary learning materials will be provided through a dedicated course web-site. |
| Literature | Recommended textbooks:<br> - T. Luhmann. Nahbereichsphotogrammetrie (also available in English )<br> - R. Hartley and A. Zisserman. Multi-view geometry in computer vision<br> - R. Szeliski. Computer Vision |
| Prerequisites / notice | A recommended prerequisite for taking this course are the Bachelor courses "Photogrammetrie", "Bildverarbeitung" and "Photogrammetrie II". If you have not passed them, please contact the main lecturer of the course before enrolling. The course will include both practical work with commercial software, and programming in Matlab. |

| 103-0767-00L | Engineering Geodesy Lab                       | W    | 4    | 3P    | A. Wieser, S. Conzett |
| Objective  | The students learn to develop, assess and realize concepts and solutions for real-world problems in Engineering Geodesy. They advance the knowledge and skills which they have acquired in relation with geodetic metrology, engineering geodesy. They establish links between these subjects. Particular attention is paid to the selection of appropriate measurement and data processing methods, end-to-end quality control, fulfillment of non-technical criteria, and to the documentation of the work. |
| Content    | Actual real-world problems are chosen for this lab depending on the number, background and experience of the students. If possible the problems are chosen in connection with current research projects within the Geosensors and Engineering Geodesy Group. Examples of such problems are:<br> - high-precision transfer of coordinates and orientation through a long vertical shaft<br> - monitoring of the deformation of an ice-palace<br> - development of a 2D-machine-control-and guidance system<br> - bridge vibration monitoring |
| Lecture notes | Publications and documents are made available as needed depending on the selected tasks. |
### Literature

### Prerequisites / notice
Successful participation in the lab requires knowledge and experiences conveyed within the related course "Engineering Geodesy". Students who have not already passed that course and who are not participating in that course will only be admitted to the lab after discussion with the instructors.

If the timetable of the participants allows it, the 3-hourly lab units will partially be combined to individual full-time units.

### Abstract
- **Project Parameter Estimation**
  - Solving engineering problems with modern methods of parameter estimation for network adjustment in a real-world scenario; choosing adequate mathematical models, suitable data-flow and performing software

- **Basics and Principles of Radar Remote Sensing for Environmental Applications**
  - The course will provide the basics and principles of Radar Remote Sensing (specifically Synthetic Aperture Radar (SAR)) and its imaging techniques for the use of environmental parameter estimation.

- **Property Law for Geometers: Land Registry and Geoinformation Law**
  - Particularly suitable for students of D-ARCH, D-BAUG, D-USYS
  - Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

- **Cadastral Systems**
  - Nature, role and importance of cadastral systems and related concepts such as land administration, land registration and spatial data infrastructures (SDIs).

### Objective
- **Project Parameter Estimation**
  - Learn to solve engineering problems with modern methods of parameter estimation in a real-world scenario.

- **Basics and Principles of Radar Remote Sensing for Environmental Applications**
  - Analysis of the given problem, selection of effective mathematical models, use of appropriate software.

- **Property Law for Geometers: Land Registry and Geoinformation Law**
  - Handouts for each topic will be provided

- **Cadastral Systems**
  - Assignment of tasks; selected documentation

### Prerequisites / notice
- **Project Parameter Estimation**
  - Prerequisite: Statistics and Probability Theory, Geoprocessing and Parameterestimation, Geodetic Reference Systems and Networks

- **Basics and Principles of Radar Remote Sensing for Environmental Applications**
  - First readings for the course:
  - Complete literature listing will be provided during the course.

- **Property Law for Geometers: Land Registry and Geoinformation Law**
  - Pflichtlektüre: Meinrad Huser, Schweizerisches Vermessungsrecht, unter besonderer Berücksichtigung des Geoinformationsrechts und des Grundbucheinrichtung, Beiträge aus dem Institut für schweizerisches und internationales Baurecht der Universität Freiburg/Schweiz, Zürich 2014

- **Cadastral Systems**
  - Pflichtlektüre:

### Prerequisites / notice
- **Project Parameter Estimation**
  - Requirements: Statistics and Probability Theory, Geoprocessing and Parameterestimation, Geodetic Reference Systems and Networks

- **Basics and Principles of Radar Remote Sensing for Environmental Applications**
  - Requirements: Property Law (12-722)
Content
Origins and purposes of cadastral systems
Importance of documentation
Basic concepts of cadastral systems (real estate, legal basis, conceptual principles, property-ownership, property types)
Swiss cadastral system:
- legal basis
- organization
- technical elements
- methods of data acquisition and maintenance
- profession
- quality assurance
Digital revolution, access to data
Benchmarking and evaluation of cadastral systems
International trends, developments and initiatives

Computer Vision
W 6 credits 3V+1U+1A M. Pollefeys, L. Van Gool

Abstract
The goal of this course is to provide students with a good understanding of computer vision and image analysis techniques. The main concepts and techniques will be studied in depth and practical algorithms and approaches will be discussed and explored through the exercises.

Objective
1. To introduce the fundamental problems of computer vision.
2. To introduce the main concepts and techniques used to solve those.
3. To enable participants to implement solutions for reasonably complex problems.
4. To enable participants to make sense of the computer vision literature.

Content
Camera models and calibration, invariant features, Multiple-view geometry, Model fitting, Stereo Matching, Segmentation, 2D Shape matching, Shape from Silhouettes, Optical flow, Structure from motion, Tracking, Object recognition, Object category recognition

Prerequisites / notice
It is recommended that students have taken the Visual Computing lecture or a similar course introducing basic image processing concepts before taking this course.

Major in Space Geodesy and Navigation

Number  Title
103-0187-01L  Space Geodesy
103-0657-01L  Signal Processing, Modeling, Inversion
103-0627-00L  Astro and Gravity Lab
103-0787-00L  Project Parameter Estimation

Abstract
103-0187-01L

Objective
Understanding the major observation techniques in space geodesy as modern methods applied in Earth system monitoring (geometry, rotation and gravity field of the Earth and the atmosphere), in national surveying and navigation.

Content
Overview of GPS, VLBI, Satellite and Lunar Laser Ranging (SLR/LLR), Satellite Radar Altimetry with the basic principles, the instruments and observation equations. Modelling of the station motions and the estimation of station coordinates. Basics of wave propagation in the atmosphere. Signal propagation in the ionosphere and troposphere for the different observation techniques and the determination of atmospheric parameters. Equation of motion of the unperturbed and perturbed satellite orbit. Osculating and mean orbital elements. General and special perturbation theory and the determination of satellite orbits.

Lecture notes
Script M. Rothacher "Space Geodesy"

Prerequisites / notice
Courses corresponding to: Analysis I+II, Geoprocessing and Parameterestimation, Linear Algebra I

Abstract
103-0657-01L
Timeseries analysis, orthogonal decomposition, interpretation of measurements, Parameterestimation and Inversion of analytical and voxel-type models

Objective
Students are able to analyse data in view of specific scientific questions and interpretations. They have basic methodologies at hand to mathematically formulate engineering and scientific problems. Students know terminologies and basic methodologies in order to be able to further study the expert literature.

Content
Timeseries analysis, fourier transformation, DFT, auto-, crosscorrelation, ARMA Interpretation of measurements, Parameterestimation and Inversion of analytical and voxel-type models, resolution, uncertainties

Lecture notes
Lecture notes
Geoprocessing
Alain Geiger

Prerequisites / notice
Courses corresponding to: Analysis I+II, Geoprocessing and Parameterestimation, Linear Algebra I

Abstract
103-0627-00L
Knowledge of up-to-date astro-geodetic methods aiming at the determination of the direction of the local plumb line in terms of astronomical latitude and longitude.

Objective
Knowledge of the astro-geodetic methods aiming at the determination of the direction of the local plumb line in terms of astronomical latitude and longitude.

Content
Earth- and space fixed coordinate systems and their changes in time, basic astronomical calculation procedures, time scales, time keeping, transformations, star catalogues, computation of precise apparent places, relevant methods for the determination of latitude/longitude, CCD technique and astrometry, application of deflections of the vertical as regards the geoid determination.

Lecture notes
div. sources

Prerequisites / notice
The lectures will be given in English in case of need

Abstract
103-0787-00L
Solving engineering problems with modern methods of parameter estimation for network adjustment in a real-world scenario; choosing adequate mathematical models, suitable data-flow and performing software

Objective
Learn to solve engineering problems with modern methods of parameter estimation in a real-world scenario.

Content
Analysis of the given problem, selection of effective mathematical models, use of appropriate software.
Basics and Principles of Radar Remote Sensing for Environmental Applications

Abstract
The course will provide the basics and principles of Radar Remote Sensing (specifically Synthetic Aperture Radar (SAR)) and its imaging techniques for the use of environmental parameter estimation.

Objective
The course should provide an understanding of SAR techniques and the use of the imaging tools for bio/geophysical parameter estimation. At the end of the course the student has the understanding of:
1. SAR basics and principles
2. SAR polarimetry
3. SAR interferometry and their applications
4. environmental parameter estimation from multi-parametric SAR data

Content
The course is giving an introduction into SAR techniques, the interpretation of SAR imaging responses and the use of SAR for different environmental applications. The outline of the course is the following:
1. Introduction into SAR basics and principles
2. Introduction into electromagnetic wave theory
3. Introduction into scattering theory and decomposition techniques
4. Introduction into SAR interferometry
5. Introduction into polarimetric SAR interferometry
6. Introduction into bio/geophysical parameter estimation (classification/segmentation, soil moisture estimation, earthquake and volcano monitoring, forest height inversion, wood biomass estimation etc.)

Lecture notes
Handouts for each topic will be provided.

Literature
First readings for the course:
Complete literature listing will be provided during the course.

Prerequisites / notice
This course in combination with 102-0627-00-G: Applied Radar Remote Sensing for Environmental Parameter Estimation is providing a profound basis for independent data analysis. It is recommended to take both courses together.

Cadastral Systems

Abstract
Nature, role and importance of cadastral systems and related concepts such as land administration, land registration and spatial data infrastructures (SDIs).

Objective
The students will get an understanding of the nature, role and importance of cadastral systems and related concepts such as land administration, land registration and spatial data infrastructures (SDIs). The Swiss cadastral system as well as a range of international approaches both in developed and developing countries will be reviewed.

Content
Origins and purposes of cadastral systems
Importance of documentation
Basic concepts of cadastral systems (real estate, legal basis, conceptual principles, property-ownership, property types)
Swiss cadastral system:
- legal basis
- organization
- technical elements
- methods of data acquisition and maintenance
- profession
- quality assurance
Digital revolution, access to data
Benchmarking and evaluation of cadastral systems
International trends, developments and initiatives

Property Law for Geometers: Land Registry and Geoinformation Law

Abstract
Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

Objective
Overview of the legal norms of land registry and surveying law.

Content
Basic principles of material and formal land registry law, components of the land registry, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of the geometer. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.

Lecture notes
Abgegebene Unterlagen: Skript in digitaler Form

Prerequisites / notice
Requirements: Property Law (12-722)

Geophysical Geodesy

Abstract
The course is an introduction to the concepts of geodesy applied to the seismic cycle and to the monitoring of ground deformation.
Objective

a) Students are introduced to various geodetic techniques and to their most famous applications in Earth Sciences:
b) Students are able to independently conceptualize 1) the inter seismic strain accumulation for an earthquake and 2) inflation of a spherical reservoir (i.e. magma chamber of a volcano) or 3) water level change within aquifer. c) Students are then introduced to news techniques linking seismology and geodesy.

Content

1. Plate Tectonics before Space Geodesy.
4. Space geodetic techniques (VLBI, gravity, etc.)
3. The seismic cycle monitoring (Moment release, seismology, Stress transfer)
5. Presentation of GPS and Applications 1 (positioning, rigid plate motions)
6. GPS networks in the world. Development of tectonic geodesy and Applications 2 (Practical on inter-seismic deformation)
7. Presentation of InSAR, pSAR, etc. Applications to earthquake. Post-seismic deformation.
8. GPS and deformation related to volcanoes (Practical on Mogi source)
9. GPS, Strain, Stress and Plate motion.
10. InSAR applied to subsidence and small deformation.
11. Troposphere sounding. Accuracies of GPS and InSAR.
12. GPS and geodynamics
13. Future of GPS. Future of InSAR.
14. GPS and normal modes?

Lecture notes
Slides. Script in English is planned. PDF of articles cited.

Geology and Geophysics equivalent to Bachelor program at ETH
Math of Bachelor program at ETH

Literature
See webpage

Prerequisites / notice
Pre-Requisite:
Of advantage:
Higher Geodesy Basics; Physical Geodesy and Geodynamics I; Seismotectonics

The grading is based on participation, homework sets, and a final oral presentation. There is no final exam.

The Swiss cadastral system as well as a range of international approaches both in developed and developing countries will be reviewed. |
Explain and apply the model-driven approach based on standards. A possible topic is the design and programming of a bicycle information system that provides the following data sets as a service:

- Bicycle parking spots
- Bicycle Pump Station
- Real-time data "Rent-a-bike"
- Routing-Service

The application makes use of the Zurich open dataset and contributes to the Zurich Open Data community. A possible topic is given below but students may choose their own topic(s). The only requirement is that the application makes use of the Zurich open dataset and contributes to the Zurich Open Data community.

See: https://www.stadt-zuerich.ch/portal/de/index/ogd/daten.html

All data is freely available and part of the Zurich Open Data.

- Quality assurance
- Digital revolution, access to data
- Benchmarking and evaluation of cadastral systems
- International trends, developments and initiatives

851-0724-00L Property Law for Geometers: Land Registry and Geoinformation Law

Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

Abstract
Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

Objective
Overview of the legal norms of land registry and surveying law.

Content
Basic principles of material and formal land registry law, components of the land register, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of the geom-eter. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.

Lecture notes
Abgegebene Unterlagen: Skript in digitaler Form

Pflichtlektüre: Meinrad Huser, Schweizerisches Vermessungsrecht, unter besonderer Berücksichtigung des Geoinformationsrechts und des Grundbuchrechts, Beiträge aus dem Institut für schweizerisches und internationales Baurecht der Universität Freiburg/Schweiz, Zürich 2014

Literature

- Meinrad Huser, Datenschutz bei Geodaten

Prerequisites
Requirements: Property Law (12-722)

103-0258-00L Interoperability of GIS

Content: Transform back and forth (geo-)data with same content but different structure.

Tools: Conceptual schema languages UML and INTERLIS, formats ITF, XML, tools ILI-Checker and awk, and for the semantic transformation UMLT and FME.

Objective
- Explain and apply the model-driven approach based on standards
- Know and use interoperability types
- Know transfer formats and reformat with 1:1 processors
- Explain object-oriented modelling (with graphic and text)
- Know and use communication technologies and OGC Web services
- UML, EBNF, INTERLIS, ITF, XML, awk, FME
- Know and apply appropriate software tools

Content
Semantic interoperability of GIS is in the main part of this lecture and means to transform back and forth (geo-) data with same content but different structure. The reduction of the necessary programming amount to a modest minimum is provided by the system-independent model-driven approach. Its elements reality selection, conceptual modelling, flexible standard formats, 1:1 processors and semantic transformation are presented and used. As generally useful tools are introduced and applied the conceptual schema languages UML and INTERLIS, the flexible transfer formats ITF, XML the ILI-Checker, the efficient reformatting tool awk and for the semantic transformation UMLT and FME.

Prerequisites
Condition for participation: Successful bachelor lecture GIS II

103-0778-00L GIS and Geoinformatics Lab

Independent study project with (mobile) geoinformation technologies. Design and programm and mobile app and contribute it to the "Zurich Open data" portal.

See: https://www.stadt-zuerich.ch/portal/de/index/ogd/daten.html

Objective
Learn how to work with (mobile) geoinformation technologies (including application design and programming) and make a contribution to the Zurich Open Data community. A possible topic is given below but students may choose their own topic(s). The only requirement is that the application makes use of the Zurich open dataset.

Content
A possible topic is the design and programming of a bicycle information system that provides the following data sets as a service:

- Routing-Service
- Real-time data "Rent-a-bike"
- Bicycle Pump Station
- Bicycle parking spots

All data is freely available and part of the Zurich Open Data.

Introduction to the Data Analysis Software R

R is one of the most popular statistical open-source software for data analysis and data modeling. It has proved very useful for a variety of tasks commonly faced by planners, such as data preparation, exploratory analysis, model estimation or graphical display. R is also a programming language providing users with a more flexible and powerful tool for solving more complex problems.

Objective

The aim of this course is to provide participants with an introduction to the statistical open-source software R. Students will learn how to read data from files and write data to files, and how these data can be used to plot graphs and maps. Since R is a command-line software, that is, one has to type in text commands at a prompt, rather than just clicking menus and buttons, students will also learn how to write their own functions.

Content

- Reading data from files
- Creating and handling R objects such as matrices, vectors and arrays
- Plotting data: histograms, boxplots, scattered plots
- Writing data to files
- Reading raster and vector data
- Writing for- and while-loops
- Writing your own functions

Lecture notes

Handouts of the lectures and exercises will be distributed

Download: http://www.irl.ethz.ch/plus/education
The course provides the necessary knowledge to develop models supporting the solution of given planning problems. This is done by K. W. Axhausen.

Spatial development deals with the development and the design of our living space. To meet the expectations, the interests and the plans of the different actors, it is needed a planning approach considering the overview of both the actual and future situation.

The concept of sustainable development in spatial planning leads necessarily to an efficient management of the resources, especially regarding the resource land. The basics of this important discipline will be the subject of this lecture, which is therefore organised in three parts:

- Inner development
- Integrated spatial and infrastructure development
- Cross-border issues in spatial development

The participants know the interdependencies between the assessment of a situation, decision making, knowledge and language. They will understand the most relevant planning methods and will be able to use them in an adequate manner, is required.

In order to solve problems in spatial planning it is necessary to explore actions and to judge them; finally, one has to argue why a certain option should be preferred to others. Assessments of the situation are the basis for the problems to treat. Specific knowledge, represented in an adequate manner, is required.

Only for master students, otherwise a special permission by the lecturer is required.

In order to solve problems in spatial planning it is necessary to explore actions and to judge them; finally, one has to argue why a certain option should be preferred to others. Assessments of the situation are the basis for the problems to treat. Specific knowledge, represented in an adequate manner, is required.

The course is composed of a lecture part, providing the theoretical knowledge, and a applied part, in which students create their own models. This part takes place in form of a tutorial and consists in the development of a computer program. The programming part is closely guided and particularly suitable for students with little programming experience.

The course is composed of a lecture part, providing the theoretical knowledge, and a applied part, in which students create their own models. This part takes place in form of a tutorial and consists in the development of a computer program. The programming part is closely guided and particularly suitable for students with little programming experience.

The course will be held in English and no prior knowledge on R is required.

Further information and the documents for the lecture can be found on the homepage of the Chair of Spatial Development.

Literature available online at http://cran.r-project.org/doc/manuals/R-intro.pdf

References to technical literature will be included in the course script. An additional list of literature will be given during the course.

The slides of the lecture are provided electronically.

The participants know the interdependencies between the assessment of a situation, decision making, knowledge and language. They know the nature of a decision dilemma und maximes, how to deal with it. Especially they learn that the requirement of information for a decision depends upon the preferences of the deciding acteur. They are also familiar with difficulties and pitfalls within these contexts and know what can be done against it.

Assessment of the situation, deciding, language and knowledge are the main parts.

No remarks.

A script in German will be provided for the course. The slides are made available.

References to technical literature will be included in the course script. An additional list of literature will be given during the course.

The course content of the lecture Landscape Planning and Environmental Systems (103-0347-00 V) will be illustrated.

To show the importance of ecosystem services.

Analysis and assessment of the complex interactions between landscape elements.

To identify and measure the characteristics of landscape.

Learn how to use the instrument of GIS appropriately in landscape planning.

- Environmental systems, IUCN Red List, ecological connectivity
- Calculating urban landscape services
- Practice of landscape planning
- Use of GIS in landscape planning
- Modelling
- Landscape analysis
- Landscape metrics

No script. The documentation, consisting of presentation slides are partly handed out and are pro-vided for download on the PLUS website.

Will be named in the lecture.

The entire course programs of ETH Zurich and the University of Zurich are open to the students to individual selection.

Introduction to Economic Policy - A Case Study Approach with Cost Benefit Analysis in Transport

This course was offered as "Transport Systems Evaluation" until HS14.

The course presents cost benefit analysis and related evaluation methods in transport and introduces the survey methods used to derive the monetary values of non-market goods.

Familiarity with the essential methods of project appraisal

Cost-Benefit-Analysis; multi-criteria analysis; European guidelines; stated response methods; transport cost approach and others; Valuation of travel time savings; valuation of traffic safety

Handouts

Management, Marketing, Quality

Transport and administrative policy, international and national regulation, business management of public transport companies, marketing, advertising and pricing; quality management

Comprehension of the transport and administrative policy as well as of the regulation of public transport companies. To develop a full understanding of the three important public transport system operations management processes: (1) Business management; (2) Marketing; (3) Quality control. The course will teach essential working techniques in each of these processes.

(1) Transport and administrative policy: Goals of the state related to public transports, governmental activities in public transport, regulation. (2) Business management in public transport enterprises: goals of public transport companies, goals of the business management; management of public transport on the different management levels, business organization. (3) Marketing, advertising and pricing: Fundamentals and goals; marketing strategies and concepts in public transports; marketing tools; putting marketing into action. (4) Quality control: Quality in transport systems; goals of quality management; structuring quality control measures; collecting quality data in an operating service; use of quality control systems for service optimization.

Course notes will be provided in German. Slides will be made available.

References to technical literature will be included in the course script. An additional list of literature will be given during the course.

Lectures System and Network Planning as well as Systems Dimensioning and Capacity recommended.

Introduction to general scientific working methods and skills in the core fields of geomatics. It includes a literature study, a review of one of the articles, a presentation and a report about the literature study.

Learn how to search for literature, how to write a scientific report, how to present scientific results, and how to critically read and review a scientific article

A list of themes for the literature study are made availabel at the beginning of the semester. A theme can be selected based on a moodle.

Agreement with one of the responsible Professors is necessary

Working on a concrete interdisciplinary task in Geomatics

Promote independent, structured and scientific work in an interdisciplinary context; learn to apply engineering methods; deepen the knowledge in the field of the treated task.

The project work is supervised by a professor. Students can choose from different subjects and tasks.
The project can be carried out in German upon mutual agreement between supervisor and student.

### Geodata Analysis

**J. D. Wegner**

The basics of photogrammetry, its products and applications: the principle of image-based measurement; digital aerial cameras and related sensors; projective geometry; mathematical modeling, calibration and orientation of cameras; photogrammetric reconstruction of points and lines, and stereoscopy; orthophoto generation; digital photogrammetric workstations; recording geometry and flight planning.

**Literature**

**Prerequisites / notice**

Requirements: knowledge of physics, linear algebra and analytical geometry, calculus, least-squares adjustment and statistics, basic programming skills.

**Objective**

- Understanding core methods and algorithms in image processing and computer vision and the underlying signal processing foundations.

**Content**

The following topics will be covered in the course:

- Image segmentation
- Properties of digital images
- Signal processing/Sampling
- Image enhancement
- Image restoration: Spatial domain
- Image restoration: Fourier domain
- Color/Demosaicing
- Image compression
- Feature extraction
- Texture analysis

</tbody>
</table>

**Objective**

- Spatial planning is concerned with the foresighted design of the built and un-built environment. Starting points are spatially relevant problems that need to be explored, clarified and solved. The cornerstone of the course is formed by an independent exploration by the student of two Zurich city quarters that involves investigating specific spatially relevant conditions, recognizing regularities and relevant problems.

**Content**

The self-study course compromises the following readings:

- Lynch, Kevin: «The Image of the City»
- Alexander, Christopher et al.: «A Pattern Language»
- Mikolet, Anne und Pürckhauer, Moritz: «Urban Code»
- «SIDIA - Spatial and Infrastructure Development: An Integrated Approach»

The graded semester performance comprises a condensed paper to be written by the student reflecting both the literature read as well as exemplarily applying the knowledge gained from the literature by independently exploring the two city quarters.

**Landmanagement**  
Enrolment only for MSc students who need this course as additional admission requirement.  
**Abstract**  
Spatial planning on the Commune level with focus on the special land use management. Land re-allocation as an instrument of spatial planning; specific explanations for land re-allocations in rural regions and in construction zones. Land marketing: the view of investors.  
**Objective**  
Getting knowledge in spatial planning and land re-allocation as an interactive process.

252-0846-AAL  
**Computer Science II**  
Enrolment only for MSc students who need this course as additional admission requirement.  
**Abstract**  
Introduction to programming in Java. Procedural foundations of programming and outlook to object oriented programming. Variables, types, assignments, control structures (branch, loop), data structures, algorithms, line graphics, graphical user interface. Writing small programs. Working with a professional programming environment (Eclipse).  
**Objective**  
The students will be able to write simple programs and to modify existing programs.  
**Content**  
This course offers an introduction to variables, control structures (branch, loop), algorithms and data structures, as well as an outlook to modularisation and object oriented techniques. In the exercises students train programming skills (in the programming language JAVA). Students can solve the exercises on their own laptop or in the computer labs at ETH. The software used in this course runs on MS Windows, MacOS X and Linux.

**Linear Algebra and Numerical Analysis**  
Enrolment only for MSc students who need this course as additional admission requirement.  
**Abstract**  
Introduction to Linear Algebra and Numerical Analysis for Engineers. This reading course is based on chapters from the book "Introduction to Linear Algebra" by Gilbert Strang (SIAM 2009), and "A first Course in Numerical Methods" by U. Ascher and C. Greif (SIAM, 2011).  
**Objective**  
To acquire basic knowledge of Linear Algebra and some aspects of related numerical methods and the ability to apply basic algorithms to simple problems.  
**Content**  
* Linear systems of equations: Gaussian elimination, row echelon form, theory about existence and uniqueness of solutions (Strang Ch. 2 and 3.4)  
* Mathematical modelling by linear systems (e.g. networks, trusses) (Strang, parts of Ch. 8)  
* Column space, null space and rank of matrices (Strang 3.2, 3.3)  
* linear combinations, linear (in)dependence, bases, dimension theorem for matrices (Strang 3.5, 3.6)  
* inner product, orthogonality, length in Euclidean space (Strang 4.1, 4.2)  
* Least squares solutions and orthogonalization (Gram-Schmidt and QR) (Strang 4.3, 4.4)  
* Linear mappings, matrix representation and change of basis (Strang Ch. 7)  
* Determinants and diagonalization of matrices (eigenvalues and eigenvectors) (Strang 6.1, 6.2, 6.5, 6.6)  
* Diagonalization applied to linear differential and difference equations. (Strang 6.3)  
* Numerical methods for solving linear systems of equations (Ascher/Greif 5.1, MATLAB Documentation of )  
* Interpolation with polynomials and splines (Ascher/Greif Ch. 10 and 11)

406-0603-AAL Stochastics (Probability and Statistics)
Enrolment only for MSc students who need this course as additional admission requirement.

Abstract
Introduction to basic methods and fundamental concepts of statistics and probability theory for non-mathematicians. The concepts are presented on the basis of some descriptive examples. Learning the statistical program R for applying the acquired concepts will be a central theme.

Objective
The objective of this course is to build a solid fundament in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

Content
From "Statistics for research" (online)
Ch 1: The Role of Statistics
Ch 2: Populations, Samples, and Probability Distributions
Ch 3: Binomial Distributions
Ch 6: Sampling Distribution of Averages
Ch 7: Normal Distributions
Ch 8: Student's t Distribution
Ch 9: Distributions of Two Variables

From "Introductory Statistics with R (online)"
Ch 1: Basics
Ch 2: The R Environment
Ch 4: Descriptive statistics and tables
Ch 5: One- and two-sample tests
Ch 6: Regression and correlation

Literature

Special students and auditors need special permission from the lecturers.
By the end of this lecture, students should be familiar with essential positions in the scientific and philosophical treatment of questions.

**Self-Ownership - Philosophical and Juridical**

2V 3 credits

N. Sieroka

The interdisciplinary lecture series are exclusively addressed to the students of the HPK-M.A. programme. They provide an insight into all the disciplines which participate in the M.A. programme and their specific demands, approaches, problems and techniques. Subsequent to the lectures, there will be an opportunity to discuss difficulties and dunning within the procedures of thesis-writing. The series should provide and secure a substantial, methodological and formal orientation within the disciplines taught in the M.A. program.

Prerequisites / notice

Dates: Thursday, 10-12

**History and Philosophy of Knowledge Master**

This lecture is important as an Introduction to the Master Programme.

Abstract

The lecture series are held by all scientific disciplines involved in the HPK-Master programme and are meant to acquaint the students with the different ambitions, methods and techniques of each discipline. Furthermore, the lectures should serve as a "helpdesk" and "workshop" for all theses written within the M.A. programme.

Objective

The interdisciplinary lecture series are exclusively addressed to the students of the HPK-M.A. programme. They provide an insight into all the disciplines which participate in the M.A. programme and their specific demands, approaches, problems and techniques. Subsequent to the lectures, there will be an opportunity to discuss difficulties and dunning within the procedures of thesis-writing. The series should provide and secure a substantial, methodological and formal orientation within the disciplines taught in the M.A. program.

Prerequisites / notice

Dates: Thursday, 10-12

851-0125-18L  Self-Ownership - Philosophical and Juridical Perspectives | W | 3 credits | 2G | B. Hilmer

Abstract

Rights in Objects are founded by an inalienable Self-Ownership. These ideas are central for personal rights. We speak of my body, my genes, my name, my portrait, my ideas oder ways of expression.

Objective

Participants will make acquaintance with founding texts of the natural rights property concept (John Locke). They will see the connection between inalienable self-ownership, prohibition of slavery, derivative commercial rights and modern personal rights. They will learn about the problems of self-ownership today concerning property in one's body and intellectual property. Critical alternatives to the property paradigm will be discussed.

Participants will have the opportunity to gain access to unfamiliar texts from the philosophical tradition and to see their relevance today. They experience the consequences of a certain use of concepts und orient themselves in current bioethical, juridical and political discussions.

Content

Texts by Locke, Nozick, Christian, Otsuka, Rasmussen, Schneider, Stirmer, Fichte and Forschner. Founding of property right in self-ownership (Locke), revival of this concept in Nozick and his egalitarian critics. Critique of the concept of self-ownership related to property in one's body. Looking back to the personal self-relatedness that comes up again in Intellectual Property and in modern personal rights.

Literature

Text, Seminarplan und Literaturliste in IILIAS Lehrdokumentenablage.

851-0157-00L  Mind and Brain | W | 3 credits | 2V | M. Hagner

Abstract

In the last 2500 years, the mind-brain relationship has been articulated in various ways. In these lectures, I will explore the scientific and philosophical aspects of this relationship in the context of relevant cultural, historical and technological processes, with a focus on the modern neurosciences, but I will also discuss works of art and literature.

Objective

By the end of the lecture, students should be familiar with essential positions in the scientific and philosophical treatment of questions relating the mind to the brain. It should also become clear that some of the most relevant problems in current neurosciences have a long history.

Content

According to a myth, the ancient Greek philosopher Democrit dissected animals, because he was in search of the seat of the soul. Current neuroscientists use neuroimaging techniques like functional magnetic-resonance-tomography in order to localize cognitive and emotional qualities in the brain. Between these two dates lies a history of 2500 years, in which the relationship between the mind and the brain has been defined in various ways. Starting with ancient and medieval theories, the lecture will have its focus on modern theories from the nineteenth century onward. I will discuss essential issues in the history of the neurosciences such as localization theories, the neuron doctrine, reflex theory, theories of emotions, neurocybernetics and the importance of visualizing the brain and its parts, but I will also include works of art and literature.

851-0144-15L  The Beginning of Scientific Enquiry - History and Impact of Presocratic Natural Philosophy | W | 3 credits | 2V | N. Sieroka

Abstract

Several questions and notions introduced by presocratic natural philosophy are still considered important (albeit in historically altered forms, of course). This applies, e.g., to the notion of the infinite, the process character of nature, and atomism. The present lecture discusses both, the origin of these notions and their persistent relevance for later approaches in philosophy.

Objective

By the end of the lecture the students are able to describe and classify different approaches and notions in presocratic philosophy. Moreover, they are able to critically compare and evaluate them in relation to later approaches in natural philosophy.

851-0549-00L  WebClass Introductory Course History of Technology | W | 3 credits | 2V | D. Gugerli

Number of participants limited to 100.

Particularly suitable for students of D-BAUG, D-INFK, D-ITET, D-MATL, D-MAVT

Abstract

WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

Objective

Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get to know basic theories and practices of the field.

Content

Lecture notes

Literature

https://www.tg.ethz.ch/de/programme/
On the one hand models of machines had a heuristical value in research on man, e.g. in Harvey's discovery of blood circulation in the 17th century.

Introduction into Philosophy of Technology
Particularly suitable for students of D-ITET, D-MATL, D-MATV

Abstract
Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to a autonomous philosophy of technology, which had become important also for other philosophical disciplines (e.g. in Heidegger's philosophy).

Objective
The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protocol is to be written.

Living at the Expense of Others. Parasites in the History of Science

Number of participants limited to 80.

Abstract
Parasites have a bad reputation. They settle in with other creatures' bodies, they manipulate and deceive them, they live at the expense of others. Such features are not only of biological but also of social, political, and economic importance. The lecture will track the traces of the parasite through the history of biology and medicine and the fields of political economy and cultural theory.

Objective
The course provides insights into the complex and intricate history of the parasite and the various definitions of parasitism. In particular, it will make students aware of the fact that there is no single expert discourse on parasites (such as biology or medicine) which is then transferred to the realm of the social and the political. Instead, it will be considered how and why all these aspects are intertwined when people talk about parasites.

Writing Between Cultures. German-Jewish Literature

Abstract
German-Jewish literature, which includes famous modern authors from Heine to Kafka, is remarkable because it is a cultural double. This lecture course shows the at once productive and problematical dualistic, transcultural relationship of its history. The key question is how, in this relationship, cultural knowledge is discussed in theoretical, political and literary terms.

Objective
Overview on the history of German-Jewish literature in Germany and Austria between ca. 1822 and 1933
- Discussion of key text of the most important German-Jewish authors (such as Heine, Börne, Herzl, Kafka, Döblin, Kraus, Roth, Wolfskehl, Lasker-Schüler)
- Analysis of theoretical and cultural reflections in German-Jewish literature, art and culture

Content
The deutsch-jüdische Literatur is in kultureller, politischer und ästhetischer Hinsicht ein höchst bemerkenswerter Teil der Moderne: Das Schreiben ihrer Autoren, zu denen die grössten Namen der deutschen und österreichischen Literatur seit 1800 zählen (etwa Heine, Kafka, Döblin, Kraus, Roth, Lasker-Schüler), ist zwischen zwei Kulturen angelegt: der deutschen und der jüdischen. Die Vorlesung entwickelt die Geschicht der deutsch-jüdischen Literatur anhand der produktiven und zugleich konfliktreichen Spannung dieser transkulturellen Verhältnisse. Sie fragt dabei insbesondere, wie in diesem deutsch-jüdischen Zwischenraum kulturelles Wissen theoretisch geformt und reflektiert, politisch verhandelt sowie literarisch umgesetzt wurde.

Literature
Andreas B. Kilcher (Hrsg.): Metzler Lexikon der deutsch-jüdischen Literatur. 2., aktualisierte und erweiterte Auflage, Stuttgart 2012.

Man and Machine
Particularly suitable for students of D-CHAB, D-HEST, D-MATV, D-MATL

Abstract
The lecture gives an overview about the different Man-Machine-Relations since the 16th century. Different modells of machines will be important here: the clockwork, the steam engine and the computer.

Objective
On the one hand models of machines had a heuristic value in research on man, e.g. in Harvey's discovery of blood circulation in the 17th century or in brain research in the 20th century. On the other hand these modells were always criticised, sometimes polemically, because they are supposedly not adequate for man.

Students should learn about the connections between the history of anthropology and technology and be able at the end of the course to evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

What Is Knowledge?

Abstract
The seminar aims at a clarification of the concept of knowledge, as it is built in our experiential relations to the world. An analysis is needed of the difference between knowledge and belief, of the relation between objectivity and knowledge, and of the role of reasons for having knowledge. Additionally, the legitimacy of different types of knowledge claims should be evaluated.

Objective
If things are going well, active students will acquire some knowledge of the arguments pro and con the thesis, that knowledge is justified, true belief. Furthermore, one will gain some insights in the role of reasons for knowledge and in the merits and misgivings of a naturalistic account of knowledge. Finally, one will be a bit more familiar with some elements within the Western tradition of philosophical epistemology (e.g. empiricism, rationalism).

Literature
Particularly suitable for students of D-ITET, D-MATL, D-CHAB

Abstract
The course focuses on writers (such as Henry James, Virginia Woolf, Margaret Atwood, Arthur Miller, Charles Dickens, George Eliot and Oscar Wilde) who by approaching the technique of photography i.e. its optical and chemical procedures have discovered novel modes and methods of representation.

Objective
The course introduces students to what an interdisciplinary approach to literature implies. Students are familiar with the main techniques of photography and relate these to the literary discourse of specifically the 20th century.

Switzerland in the 20th Century: an Economic and Social Overview (UZH)

Abstract
Switzerland in the 20th Century - an Overview. Perspectives from Economic, Social and the History of Technology. Subjects: Switzerland and the World Wars; economic cycles, growth and sectoral development; migration and the labor market; infrastructure, spatial planning and technology; 1968: students', women's and the environmental movement; wealth and its distribution; Switzerland and Europe

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html
ET-H students get a useful survey of crucial topics and processes in Switzerland in the course of the 20th century which had impacts up to the current day. The perspective is an entangled one combining approaches and methods from the economic and social history as well as the history of technology. For MA GPW students, these insights can enable them to better contextualize other courses within the realm of social sciences, the history of knowledge, technology and philosophy.

Although this course connects with the one on the 19th century in the spring semester 2015, it is an independent course and participation requires no previous knowledge about the 19th century.

**Objective**

More informations will follow in the lecture.

**Prerequisites / notice**

Voraussetzungen: Die Bereitschaft, sich auf ein Projekt mit experimentellem Charakter einzulassen. GUTE BEHERRSCHUNG DER DEUTSCHEN SPRACHE.

Die Teilnehmerzahl ist begrenzt. SCHRIFTLICHE ANMELDUNG erforderlich (bis 31. August); uwe.justus.wenzel@nznz.ch

**Abstract**

In which language has God pronounced «Fiat Lux»? Which discourses have dealt with the origins of religions, nations, languages and «races»? Renan questions if the «destiny» of peoples has ever been driven by racial “instinct”. In his Schwarze Hefte (2014-2015), Heidegger speaks about the “metaphysics” of «race». The «origins factory” can be related both to oneself as well as to the others.

Jared Diamond (2005) Collapse

Leopold (1949) A Sand County Almanach
Carson (1962) Silent Spring
Jared Diamond (2005) Collapse

Discussions might also encompass films or other forms of media and communication about nature.

**Number of participants limited to 15.**

In this course themes from theoretical philosophy are discussed which are of particular interest for current MAPGW students. Primary texts will be read together and the work in progress of the participants (essays, theses) will be presented and discussed.
This course is aimed at MAPGW students who are particularly interested in theoretical philosophy. The seminar provides an opportunity to discuss and present one's own research. The participants learn to critically evaluate primary texts and improve their skills in presenting and discussing work in progress.

851-0306-05L Literature and Technology - Simulations, Prototypes, Machines

Objective
This course studies the 20th century history of those forms of knowledge framed specifically as science and technology, from a global perspective. It explores how exchanges and relationships between different parts of the world contributed to what is understood as science and "development". In doing so, it considers how the concept of science is entangled with structures of power and domination.

Abstract
This seminar is dedicated to Thomas Mann’s “Zauberberg”, the great Bildungsroman and “Zeitromann” (Mann) from the author's middle period. Mann himself feared that the novel might be intellectually overburdened with contexts and concepts. The seminar will attempt to elucidate these contexts from the point of view of the history of ideas and knowledge and will take into account current research.

Objective
Students are familiar with different relations between literature and technology. They can verbalise and analyse central contentions.

Content

851-0300-94L Combinatorics: History of a Method Between Mathematics and Literature

Objective
To get acquainted with different types of infinitness; to study what is intriguing or problematic about the infinite; to inquire whether these different types of infinitness have (important) features in common.

Abstract
Combinatorik, die Verknüpfung von Elementen, tritt als ein Verfahren in unterschiedlichen Disziplinen und Bereichen des Wissens auf: In der Mathematik, wo man sie zuerst vermutet, ermöglicht sie die Berechnung von Anzahlen und Wahrscheinlichkeiten. Zugleich spielt die Kombinatorik auch eine grosse Rolle in der Philosophie (als ein Verfahren zur Erzeugung eines enzyklopädischen Wissens), in der Mystik (zur Erlangung ekstatischer Erfahrung) und in der Literatur (als ein experimentelles Schreibverfahren). In dem Seminar werden diese vielfältigen Formen und Funktionen von kombinatorischen Verfahren zwischen mathematischer, philosophischer, mystischer und ästhetischer Verwendung verglichen und analysiert.

851-0144-07L The Infinite in Philosophy and in the Exact Sciences:

Objective
To get acquainted with different types of infinitness; to study what is intriguing or problematic about the infinite; to inquire whether these different types of infinitness have (important) features in common.

Abstract
On the one hand, the topic of the infinite will be dealt with historically by discussing philosophical texts, by e.g., Kant, Bolzano and Cantor. On the other hand, the topic will be treated from a (non-historical) scientific point of view: the point of view of logic, mathematics, and physics.

851-0158-01L Science and Wonder

Objective
Wonders seem to be perfectly incompatible with science: Superstition and ignorance here, exactness and certitude there. In the seminar we will study this conflictive relation in more detail. Texts will cover a broad historical spectrum ranging from pre-modern cabinets of wonder to the anti-wonder polemics in the 19th century to the current dispute on Intelligent Design.

Abstract
On the one hand, the topic of the infinite will be dealt with historically by discussing philosophical texts, by e.g., Kant, Bolzano and Cantor. On the other hand, the topic will be treated from a (non-historical) scientific point of view: the point of view of logic, mathematics, and physics.

851-0101-47L Science in the Twentieth Century: A Global Perspective WEBCLASS

Objective
Particularly suitable for students of D-MAVT, D-MATH.

Abstract
This course studies the 20th century history of those forms of knowledge framed specifically as science and technology, from a global perspective. It explores how exchanges and relationships between different parts of the world contributed to what is understood as science and "development". In doing so, it considers how the concept of science is entangled with structures of power and domination.

Objective
To understand the historical plurality of forms of knowledge in different parts of the world as well as entanglements between different forms of knowledge
- to systematically reconstruct and reproduce complex arguments (reading-competences)
- to understand, compare and analyse differing approaches to the history of science.
- to enable students to form an educated opinion and participate in discussions on the global history of science and knowledge
The seminar is fully booked!

Abstract
At the beginning of the 20th century, the artistic and social avantgarde movements developed visions of a 'New Man' with new modes of perception and within new forms of social life. The seminar deals with the scientific, technological, artistic, pedagogical, and political designs for a new living.

Objective
The seminar deals with the designs for a new living in the artistic and social avantgarde movements at the beginning of the 20th century. It focuses on the correlation of the contemporary scientific and technological developments and the conceptions of a 'New Man'.

Particularly suitable for students of D-ARCH, D-HEST, D-MTEC.

851-0300-92L Institutionalisation of Modernity: "Der Sturm", a German Art & Literary Magazine, Edited by Herwarth W. 3 credits 2S S. S. Leuenberger

Abstract
Based on the contributions published between 1910 and 1932 in "Der Sturm", the seminar gives an overview on the unique diversity of literatures and cultural movements in Berlin between the turn of the century and the Weimar Republic. Besides the reading of literary texts, the lecture focuses on the aesthetic, philosophical and political discourses of the epoch.

Objective
The students will get to know the literature and the art of an epoch during which a specific large town culture emerged in Berlin. The wide range of reading materials deals with the diverse literary movements from the Fin de Siècle until the Neue Sachlichkeit, including Expressionism. Many of the writers and artists presented in the course are bound through their collaboration with the cultural and art journal "Der Sturm", one of the most important publication organs for the promotion of literary Expressionism that offered a forum to modern art representatives from entire Europe. This journal is absolutely exemplary for the epoch, its trends and breaks and therefore requires a closer look. It should become clear how in a time of extreme social and political tensions resulting in nationalistic, imperialist and racist tendencies, a unique form of supranational discussion and exchange emerged that would revolutionize and leave its mark on the art discourse.

851-0125-48L Wisdom, Certainty, Insecurity W 3 credits 2S N. El Kassar

Abstract
Wisdom is widely - maybe even universally, at all times and everywhere - regarded as one of the highest virtues. But what constitutes wisdom? And is wisdom compatible with uncertainty? Does a wise person have to be certain or can she be uncertain? These and related questions will be discussed in the seminar to gain an understanding of what wisdom, certainty and uncertainty are.

Objective
1. Analysis and discussion of different interpretations of the virtue "wisdom".
3. Discussion of the questions what constitutes wisdom today and whether wisdom is a goal of the good life.
4. Examination of the relevance of wisdom in practical and theoretical contexts.

851-0300-93L Philosophy of Biology Particularly suitable for students of D-BIOL, D-USYS W 3 credits 2S A. Schwarz

Abstract
The philosophy of biology deals with concepts and problems that occur specifically while dealing with living entities. Accordingly, it covers the historical as well as systematic aspects of concepts like gene or species, or theories explaining diversity or stability, competitive or cooperative action. Another important topic is the role of technology while affecting biological objects.

Objective
The overarching objective of this seminar is to get an impression of the specificity of biological problems and to develop an appropriate philosophical sensibility. Accordingly, philosophical traditions in biology will be discussed, just as the application of the history of concepts in the context of biology. The seminar reader will consist of contributions of biologists as well as philosophers of biology. Besides the basic considerations in biology such as genus, species, evolution, or diversity, we will see the reflections on the relationship between technology, experimenting, and biological objects. Depending on the interests of the seminar participants, the examples to be discussed may be chosen from systems biology, molecular or synthetic biology, ecology or else.

851-0157-57L Classics in the History of Science: Approaches, History, Contexts W 3 credits 2S N. Guettler, M. Stadler

Abstract
The course is suited for all students with an interest in the history of science and knowledge. Conceived of as an advanced course, the seminar is particularly suitable for students of D-BIOL, D-USYS.

Objective
- Acquiring cultural scientific aspects and perspectives of literature and literary history: alterity, ethnicity, gender constructions, social differences, religion, etc.
- Critical analysis of recent research positions and research questions
- Training genre oriented circumvention of literature and its social functions in historical contexts
- Developing genre typological and narratological foundations
- Independent balancing and writing of ones own research ideas

Content

851-0325-01L Censorship, Caricature and System Criticism: Knowledge of Diversity in the Work of Oskar Panizza W 3 credits 2S N. Leuenberger

Abstract
The seminar is dedicated to the texts of scandal author Oskar Panizza. Especially the dogmas and beliefs of the Christian churches caused in this perception the grievances in society. Other the subject regimented categories such as ethnicity and gender are denounced by Panizza and discussed in his writings in many ways.

Objective
- Acquiring cultural scientific aspects and perspectives of literature and literary history: alterity, ethnicity, gender constructions, social differences, religion, etc.
- Critical analysis of recent research positions and research questions
- Training genre oriented circumvention of literature and its social functions in historical contexts
- Developing genre typological and narratological foundations
- Independent balancing and writing of ones own research ideas

Content
Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decision, principles like "Protect the dignity of the living being!", or "Respect a person's self-determination"? Besides answering such questions, the social, scientific and political processes linked with biotechnologies should be taken into account.

The seminar provides an introduction to exhibitions as epistemic practices. By means of various research approaches and examples from historical and current exhibitions we will discuss how knowledge is created by temporary spatial constellations of exhibited objects and the ways exhibitions act as laboratories of ideas.

Using selected historical and current examples, we will discuss different formats of exhibitions that range from trade fair booths to laboratory exhibitions, exhibitions in art museums as well as in science and natural museums. Being a specific humanistic way of creating knowledge experimentally we will pay particular attention to exhibitions that deal with topics at the intersection of the sciences and the laboratory exhibitions, exhibitions in art museums as well as in science and natural museums. Being a specific humanistic way of creating knowledge experimentally we will pay particular attention to exhibitions that deal with topics at the intersection of the sciences and the humanities, thus acting as agents in the debate on the Two Cultures.

A detailed program and course materials will be made available during the semester on www.tg.ethz.ch.

Lecture notes

The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be discussed as a crucial offer and problem of late modernity.

The course wants to develop the students ability to critically read and asses historic texts.

Biotechniken zusammenhängen.

Es sollen normative Prinzipien identifiziert werden, die oft faktisch bioethischen Entscheidungen zu Grunde liegen. Und es sollen überzeugende Prinzipien ermittelt werden.

Zugleich sollen die Teilnehmer Kenntnisse erwerben über die Entwicklungen in zeitgenössischen Gesellschaften westlichen Typs (mit individuellen Grundrechten, kapitalistischer Marktwirtschaft und systematische wissenschaftlicher Forschung), die mit der Dynamik von Biotechniken zusammenhängen.

1. Dieter Sturma/Bert Heinrichs (Hg.), Handbuch Bioethik, Stuttgart: Metzler 2015.

The course provides an introduction to exhibitions as epistemic practices. By means of various research approaches and examples from historical and current exhibitions we will discuss how knowledge is created by temporary spatial constellations of exhibited objects and the ways exhibitions act as laboratories of ideas.

The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be discussed as a crucial offer and problem of late modernity.

The course wants to develop the students ability to critically read and asses historic texts.

A detailed program and course materials will be made available during the semester on www.tg.ethz.ch.

Lecture notes

Objective: The difference between the natural sciences and the humanities is often characterized in terms of their relation to history: here rigorous method & transhistorical laws, there historically conditioned, and hence relative, understanding. But the discrepancy between transhistorical immanity and historical constitution figures also within both disciplines. We will discuss precisely this discrepancy.

Content: - reflect on the ideal of scientific rigor, as well as the historical constitution of all knowledge; - question the paradigm of historicity with regard to both the natural sciences and the humanities; - critical reading of theoretical and literary texts that deal with the tension between scientificity and historicity.

Um deren Verhältnis konkret zu fassen, werden wir die folgenden Oppositionen freiliegen und untereinander vergleichen: das reine und das geschichtliche Denken in der Philosophie und Wissenschaftstheorie; die ästhetische Immanenz und historische Bedingtheit literarischer Welten; die Objektivität des Gesetzes und die Historizität der Modellbildung in der Naturbeschreibung. Diese Oppositionen verfolgen wir nicht nur anhand von theoretischen Texten. Wir werden auch literarische Texte heranziehen, und zwar in der Hoffnung, dass die darin erzählten Geschichten den beweglosen Gegensatz zwischen zeitloser Immanenz ("Es ist so, weil die Natur der Sache so ist!") und historischem Bedingtheit ("Die Sache ist so, weil sie so geworden ist!") dynamisieren, rekonfigurieren, verwandeln.

Prerequisites / notice: Readings in German and English, discussions in class in German.

### Major Courses

### Essays

*In each subject of the master reading lists are handed out. The books on these lists are the subject of the tutorials one has to attend with the teachers*
This paper aims at the differentiation of one topic in the current seminar in the history of technology and has to connect its topic with the current seminar's discussions.

### Objective
Writing this essay intends to become acquainted with methods, tools, and concepts relevant for the students' master thesis.

### Abstract
This is the outcome of an individual teaching and learning process during several terms and draws upon representative books and articles in history of technology. It has to consider the state of the art in the field.

Master Colloquium: Research Colloquium for Ph.D. Students and Members of Staff
Only for History and Philosophy of Knowledge MSc.

Abstract
This colloquium is devoted to the introduction into the theory and practice of scientific work.

Objective
Key problems of research projects will be discussed. Participants will learn to know arguments and ideas dealing with systematic problems in philosophy.

Prerequisites / notice
Papers presented may be in English or German. Students receive 1 credit point for submitting a brief, written commentary on one of the presentations (approx. 5 pages).

MegaColloquium: Colloquium for Master and Ph.D. Students

Abstract
Colloquium for master and doctoral students preparing a thesis in the history of technology.

Objective
Goals: to identify, discuss, and resolve methodological problems that emerge while elaborating a master or doctoral thesis.

Prerequisites / notice
Only for History and Philosophy of Knowledge MSc. Students and Members of Staff

Research Colloquium History of Knowledge (HS 2015)
Only for MAGPW students, D-GESS PhD and D-ARCH PhD students.

Abstract
The colloquium of the ZGW focuses on present developments, debates and perspectives in the field of history of knowledge. On the second and fourth date there will be public events in the Cabaret Voltaire. Check the program on www.zgw.ethz.ch.

Objective
The colloquium deals with the general problems, questions and methods of the interdisciplinary research field "The History of Knowledge". Knowledge has become one of the existential conditions of modern societies and it increasingly determines their dynamics. Therefore, it is getting more and more relevant to develop a differentiated analysis of the epistemic, social and cultural constraints of the production, circulation and the decay of knowledge. In addition, the colloquium asks after the cultural and ethical resonances of knowledge not only within science but also in relation to art, literature, technology, everyday life, and so on.

Prerequisites / notice
Short notice about program changes are possible and will be communicated through the ZGW newsletter. Please register with www.zgw.ethz.ch/de/newsletter.html

Credit points can be gained by regular attending and by writing an essay. In addition to the five colloquia there will be a deepening seminar on offer (lecturer K. Espahangizi).

Free childcare available.

> Master Thesis

The work on the master-thesis is supervised by one of the teachers that are allowed to offer tutorials for it, named in the Leitfaden.

| Objective |
A student is only permitted to commence the Master thesis if
a. the Bachelor degree programme has been completed
b. any additional requirements for admission to the degree programme have been fulfilled
c. all credits have been acquired in the categories basic courses and major courses and at least 6 credits have been acquired in the category research colloquium

Abstract
The Master's thesis gives a thorough historical, philological or philosophical analysis of a topic related to the experimental or formal sciences or to technology. It incorporates the relevant research literature on this topic as well as first attempts at original research.

### ECTS

European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
Students understand mathematics as a language for modeling and as a tool for solving practical problems in natural sciences. They can analyze models, describe solutions qualitatively or calculate them explicitly if need be. They can solve examples as well as their practical applications manually and using computer algebra systems.

Students can analyze models, describe solutions qualitatively or calculate them explicitly if need be. They can solve examples as well as their practical applications manually and using computer algebra systems.

Certain sections of the text-book must be studied by self-instruction.

The text-book “Biology” (Campbell, Reece) (10th edition) is the basis of the course.

The structure of the course is largely identical with that of the text-book.

None.

Mathematics I is an introduction to one- and multidimensional calculus and linear algebra emphasizing on applications.

Students understand mathematics as a language for modeling and as a tool for solving practical problems in natural sciences.

Certain sections of the text-book must be studied by self-instruction.

The course is designed to provide an understanding of the basic principles and concepts of general and inorganic chemistry.

The course provides an introduction to the basics of molecular- and cell biology and genetics.

The course is designed to provide an understanding of the basic principles and concepts of general and inorganic chemistry.

The course is divided into several chapters:

1. Basic principles of Evolution.
2. Chemistry of Life: Water; Carbon and molecular diversity; biomolecules
3. The cell: structure; membrane structure and function, cell cycle
4. Metabolism: Respiration; Photosynthesis; Fermentation
5. Inheritance: meiosis and sexual reproduction; Mendelian genetics, chromosomal basis of inheritance, molecular basis of inheritance, from gene to protein, regulation of gene expression; genomes and their evolution

The course is designed to provide an understanding of the basic principles and concepts of general and inorganic chemistry.

The course deals with a number of basic chemistry concepts. These include (amongst others) chemical reactions, energy transfer during chemical reactions, properties of ionic and covalent bonds, Lewis structures, properties of solutions, kinetics, thermodynamics, acid-base equilibria, electrochemistry and properties of metal complexes.

- Stationäre Lösungen
- Lineare DGL 1. Ordnung
- Trennung der Variablen

Lineare Algebra
- Erste Arithmetische Aspekte
- Matrizenrechnung
- Eigenwerte / -vektoren
- Quadratische LGS und Determinante

In Ergänzung zu den Vorlesungskapiteln der Lehrveranstaltungen fassen wir wichtige Sachverhalte, Formeln und weitere Ausführungen jeweils in einem Vademecum zusammen. Die pdfs finden Sie unter Lernmaterial > Dokumente.

Dabei gilt:
* Die Skripte ersetzen nicht die Vorlesung und/oder die Übungen!
* Ohne den Besuch der Lehrveranstaltungen verlieren die Ausführungen ihren Mehrwert.
* Details entwickeln wir in den Vorlesungen und den Übungen, um die hier bestehenden Lücken zu schliessen.
* Prüfungsrelevant ist, was wir in der Vorlesung und in den Übungen behandeln.

## Übungen und Prüfungen ##
+ Die Übungsaufgaben (inkl. Multiple-Choice) sind ein wichtiger Bestandteil der Lehrveranstaltung.
+ Es wird erwartet, dass Sie mindestens 75 % der wöchentlichen Serien bearbeiten und zur Korrektur einreichen.
+ Der Prüfungsstoff ist eine Auswahl von Themen aus Vorlesung und Übungen. Für eine erfolgreiche Prüfung ist die konzentrierte Bearbeitung der Aufgaben unerlässlich.

## Einschreibung in die Übungen ##
Die Einschreibung in die Übungsgruppen erfolgt online.
Alle unter http://www.mystudies.ethz.ch/ für die Vorlesung Eingeschriebenen erhalten rechtzeitig per Email einen personalisierten Link zur Einschreibung. Behalten Sie diesen Link.

## Zugang Übungsserien ##
Erfolgt auch online.
Alle unter http://www.mystudies.ethz.ch/ für die Vorlesung Eingeschriebenen erhalten rechtzeitig per Email einen 2. personalisierten Link. Behalten Sie auch diesen Link.

252-0852-00L Foundations of Computer Science
4 credits
2V+2U
J. Hromkovic, H.J. Böckenhauer, M. Dahinden, L. E. Fässler, D. Komm

Abstract
Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects.

The following topics are covered: modeling and simulations, introduction to programming, visualizing multi-dimensional data, introduction matrices, managing data with lists and tables and with relational databases, universal methods for algorithm design.
The students learn to
- understand the role of computer science in science,
- to control computer and automate processes of problem solving by programming,
- choose and apply appropriate tools from computer science,
- process and analyze real-world data from their subject of study,
- handle the complexity of real-world data,
- know universal methods for algorithm design.

Objective

Content

Lecture notes

Prerequisites / notice

This course is based on application-oriented learning. The students spend most of their time working through projects with data from natural science and discussing their results with teaching assistants. To learn the computer science basics there are electronic tutorials available.

376-0003-00L Introduction to Health Sciences and Technology I

Abstract

Objective

Content

- Health: biomedical model and classification of diseases, salutogenesis and ICF, prevention and rehabilitation, therapy, epidemiology.
- Technology: measurement technology, automatic control engineering.
- Science: ethics, literature search, study design, tests, data analysis, data presentation.

Abstract

Objective

The goal of this lecture series is to enable the students to (i) identify the principal functional requirements for a medical device, (ii) to understand the mechanical properties of natural tissues and synthetic biomaterials, (iii) to apply this information and a basic knowledge of mechanics in the calculation of implant performance, (iv) to develop a plan for the pre-clinical evaluation and regulation of a new device.
1. Introduction to Medical Technology
2. Design Process
3. Mechanics
4. Mechanics of Materials
5. Tissue Mechanics
6. Prostheses: Biomechanics and Design
7. Prostheses: Biomaterials, Surfaces and Wear
8. Allografts: Heart Valves
9. Preclinical Evaluation
10. Regulatory Affairs (MepV, FDA, CE)
11. Intellectual Property
12. Group Work and Presentation

Biocompatible Materials
W 4 credits 3G K. Maniura, J. Möller, M. Zenobi-Wong

Abstract
Introduction to molecules used for biomaterials, molecular interactions between different materials and biological systems (molecules, cells, tissues). The concept of biocompatibility is discussed and important techniques from biomaterials research and development are introduced.

Objective
The class consists of three parts:
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Content
Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.

In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

Lecture notes
Handouts can be accessed online.

Prerequisites / notice

227-0385-10L
Biomedical Imaging
W 6 credits 5G S. Kozorke, U. Moser, K. P. Prüssmann, M. Rudin

Abstract
Introduction and analysis of medical imaging technology including X-ray procedures, computed tomography, nuclear imaging techniques using single photon and positron emission tomography, magnetic resonance imaging and ultrasound imaging techniques.

Objective
To understand the physical and technical principles underlying X-ray imaging, computed tomography, single photon and positron emission tomography, magnetic resonance imaging, ultrasound and Doppler imaging techniques. The mathematical framework is developed to describe image encoding/decoding, point-spread function/modular transfer function, signal-to-noise ratio, contrast behavior for each of the methods. Matlab exercises are used to implement and study basic concepts.

Content
- X-ray imaging
- Computed tomography
- Single photon emission tomography
- Positron emission tomography
- Magnetic resonance imaging
- Ultrasound/Doppler imaging

Lecture notes
Lecture notes and handouts.

Introduction to Materials Science for Engineers

376-0130-00L Laboratory Course in Exercise Physiology

W 3 credits 4P C. Spengler, B. Wilms
Number of participants limited to 36.

Abstract
Conduct physical performance tests and measurements that are typically used to assess performance of athletes and/or patients and that deepens the understanding of physiological processes in response to physical exertion.

Objective
Gain hands-on experience in exercise physiology and consolidate knowledge on physiological adaptations to different types and degrees of physical activity and climatic influences. Learn fundamental assessment techniques of the muscular system, the cardio-respiratory system and of whole-body performance, learn scientifically correct data analysis and interpretation of results. Insight into today's Sports Medicine.

Content
- Laboratory course: Various exercise tests assessing human performance and assessments of physiological responses to activity (examples are VO2max-test, Conconi-Tests, Determination of anaerobic threshold, Cooper-Test, 1-repetition maximum test, lactate minimum test), dynamometry, mechanography, body composition etc.). Insight into measurements in Sports Medicine.

Lecture notes
Tutorial on Laboratory Experiments in Exercise Physiology
(Editor: Exercise Physiology Lab)

Literature
- Schmidt/Lang/Heckmann: Physiologie des Menschen, Springer-Verlag, Heidelberg
- Kenney/Wilmore/Costill: Physiology of Sport and Exercise, Human Kinetics

Prerequisites / notice
- Prerequisite: Anatomy and physiology classes and lab course in physiology successfully completed (BWS students please contact C. M. Spengler)
- Desirable: Exercise Physiology Lecture (concomitantly or passed; is selection criterion in case of more applications than lab spaces)

376-1033-00L History of Sports

W 2 credits 2V M. Gisler

Abstract
Comprehension for development and changes of sports from the ancient world to the presence. Description of sports in services of national idea, from education and health promotion from the middle of the 18th century till this day.

Objective
Understanding for the development and adaptation of sports from the ancient world to present times.

Content

Lecture notes
Ein Skript für die aktuelle Veranstaltung wird abgegeben.

Literature

376-1107-00L Sport Pedagogy

W 2 credits 2V D. Seiler Hubler

Abstract
Central aspects of Sport related pedagogy will be handled in these lectures. These aspects cover, amongst others, the subject and tasks of Sport related pedagogy. Furthermore, the general and sports relevant foundations of Sport related pedagogy will be covered.

Objective
To gain basic knowledge of sports pedagogy and to recognize starting points for applied sports pedagogical intervention in schools.

Content
Inhaltliche Schwerpunkte der Vorlesung sind:
- Einführung in die Sportpädagogik
- Bedeutung des Sports im Kindes- und Jugendalter
- Leistungssport im Kindes- und Jugendalter
- Pädagogische Perspektiven des Sportunterrichts in der Schule
- Ein zeitgemäßer Schulsport
- Bewegungskulturelle Bildung; Bewegungserziehung, Spielerziehung

Lecture notes
Unterrichtsmaterialien zu den einzelnen Veranstaltungen werden den Studierenden zur Verfügung gestellt.

376-1111-00L Health and Posture I

W 2 credits 2G

Abstract
Analysis of posture: Development of the functionally correct posture
Perception, measurement
Observation of body sections: statics, norm, constitution

Objective
Analysis of posture: Development of the functionally correct posture
Perception, measurement
Observation of body sections: statics, norm, constitution
Sport and social change: developments and trends

Consolidated findings of movement sciences concerning wear, overstraining and regeneration of the musculoskeletal system form an important basis for an ergonomic working environment. The following topics are covered: Muscle fatigue during the 8-hour day, use of the computer mouse, backaches, Tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, measuring procedures.

**Prerequisites / notice**
- Group dynamics in sport
- Introduction to sport psychology
- Cognition in sports: mental rehearsal and mental training
- Emotions and stress
- Motivation: goal-setting in sports
- Career and career transition in elite sport
- Coach-Athlete-Interaction
- Psychological aspects of sport-injury rehabilitation

**Lecture notes**
Unterrichtsmaterialien zu den einzelnen Veranstaltungen werden den Studierenden zur Verfügung gestellt.

### Content
The lecture deals with problems of tumor epidemiology (causes, mortality, incidence). Cancer is delineated as a multi-step process. Classes of chemical compounds that induce cancer are discussed as well as the reactive metabolites that may be built from. Covalent binding to DNA is discussed and different types of mutations resulting thereof. A selection of proto-oncogenes and tumor suppressor genes is presented. Their function will be discussed as well as the changes which are found in these genes in tumor cells, starting from single nucleotide exchanges up to large deletions. The reason for genetic predisposition to cancer will be discussed as well as cancer relevant aspects of cell cycle regulation. Phenomenons like angiogenesis and metastasis are presented as well as the mechanisms that protect the genome from mutagenic damage. Further subjects address old and new strategies of cancer treatment. Personalised cancer treatment.

### Lecture notes
Handouts with reproductions of all presented transparencies will be distributed.

### Literature

### Prerequisites / notice
The lecture requires an active participation of the students. All students will participate in individual or group work focussing on specific subject of the lecture. Students will have ample time for preparation during lecture time.

**Abstract**

- To develop basics for a differentiate analyses of sports (model)
- To develop a profile of requirements for specific sports
- To observe athletes in case studies, make judgments and conclusion

**Objective**

- To develop the basics of talent training in theory and practice
- To observe athletes in case studies, make judgments and conclusion

**Content**

- Das Modell der Sportartenanalyse
- Die Relevanz der einzelnen Leistungsmerkmale
- Das Modell der Wettkampfanalyse
- Folgerungen für das Training und Coaching in der Sportart

**Lecture notes**

Die Anmeldung wird 4 Wochen vor Semesterbeginn veröffentlicht.

### 376-1717-00L Practical Basics in Sports and Exercise Therapy
- **W 2 credits 2V**
- **B. Spörri Kälín, B. S. Wirth Gasser**

**Abstract**
Possible from the 5th semester on.

**Requirement:** Introduction to Exercise Therapy passed.

**Objective**
Impart knowledge of practical basics of Sports and Exercise Therapy

**Content**
Communication/Conversation with patients
Psychoeducation: Relaxation
Anatomy in vivo

**Lecture notes**
Skript will be on lern-platform

**Prerequisites / notice**
The courses "Introduction in Sports and Exercise Therapy" has been completed successfully.

### 376-1722-00L Spinal Cord Injury and Exercise
- **W 2 credits 2V**
- **C. Perret**

**Abstract**
Intensive discussion concerning complications of a spinal cord injury and their consequences on trainability and exercise performance of persons sitting in a wheelchair. Overview on the clinical application of exercise testing as well as on the implementation of sport scientific findings to optimise performance of spinal cord injured subjects in rehabilitation and elite sports.

**Objective**
Knowledge of the pathophysiology and the concomitant complications of a spinal cord injury and the consequences for physical exercise and trainability during rehabilitation as well as in recreational and elite sport.

**Content**
The following issues will be discussed: Epidemiology and etiology of spinal cord injury; complications and consequences of spinal cord injury; trainability/exercise physiology and spinal cord injury; history and organisation of wheelchair sports; elite sport and spinal cord injury.

### 529-0731-00L Nucleic Acids and Carbohydrates
- **W 6 credits 3G**
- **D. Hilvert, P. A. Kast, S. J. Sturla, H. Wennemers**

**Abstract**
Structure, function and chemistry of nucleic acids and carbohydrates, DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNA; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

**Objective**
Structure, function and chemistry of nucleic acids and carbohydrates, DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNA; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

**Content**
Structure, function and chemistry of nucleic acids and carbohydrates, DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNA; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

**Lecture notes**
No script

**Literature**
Mainly based on recent original literature, a detailed list will be distributed during the first lecture

### 529-1023-00L Physical Chemistry I (for Biology and Pharmacy)
- **W 3 credits 2V+1U**
- **R. Riek, H. P. Lüthi**

**Abstract**

**Objective**
Understanding the fundamental thermodynamical properties of chemical and biological systems.

**Content**

**Lecture notes**
In process, will be distributed at the beginning of the first lecture

**Literature**

**Prerequisites / notice**
Prerequisite: mathematics I-IV, functions of multiple variables, partial derivatives.

### 535-0230-00L Medicinal Chemistry I
- **W 2 credits 2V**
- **J. Hall**

**Abstract**
The lectures give an overview of selected drugs and the molecular mechanisms underlying their therapeutic effects in disease. The historical and modern-day methods by which these drugs were discovered and developed are described. Structure-function relationships and the biophysical rules underlying ligand-target interactions will be discussed and illustrated with examples.

**Objective**
Basic understanding of therapeutic agents with respect to molecular, pharmacological and pharmaceutical properties.

**Content**
Molecular mechanisms of action of drugs. Structure function and biophysical basis of ligand-target interactions

**Lecture notes**
Will be provided in parts before each individual lecture.
Prerequisites / notice
Requirements: Knowledge of physical and organic chemistry, biochemistry and biology.
Attendance of Medicinal Chemistry II in the spring semester.

Literature

535-0421-00L Galenical Pharmacy I W 2 credits 2G J.C. Leroux, B. A. Gander
Abstract
Principles and technologies for the manufacturing of dosage forms and drug delivery systems. Knowledge of pharm. excipients, materials, containers, liquid and semi-solid dosage forms, their production, function, quality and application. Comprehension of molecular interactions in solution and colloidial systems. Comprehension of interfacial phenomena and stabilization measures in dosage forms.

Objective
Knowledge of the most important pharmaceutical excipients, materials, containers, liquid and semi-solid dosage forms, of their production, function, quality, stability and application. Comprehension of the molecular interactions in solution and colloidial systems. Comprehension of interfacial phenomena and stabilization measures in disperse dosage forms.

Content
Introduction and overview of important fundamentals, principles and technologies for the development and manufacturing of dosage forms and drug delivery systems. Overview of the most important pharmaceutical excipients and polymers, their structure, properties and processing; importance of materials properties for containers. Pharmaceutical solvents, fundamentals of solubility and solubilization of drugs. Water treatment processes, sterilization techniques and quality requirements of pharmaceutical water. Parenteral dosage forms and liquid ophthalmics. Surfactants, micel formation and colloidial systems. Liquid suspensions and emulsions, Stabilization measures in dosage forms.

535-0521-00L Pharmacology and Toxicology I W 2 credits 2V U. Quitterer
Abstract
The two-semester lecture course will provide a detailed understanding of the fundamentals of drug action and the mechanisms of action and therapeutic use of the important classes of drugs. The lectures are intended for students of pharmaceutical sciences.

Objective
The lectures will provide a comprehensive survey of pharmacology and toxicology. Special emphasis is placed on the interrelationship between pharmacological, pathophysiological and clinical aspects.

Content
Topics include disease-relevant macroscopic, microscopic, pathobiochemical and functional disturbances of specific organs and organ systems. The lectures integrate disease pathology with mechanisms of drug action, usage, metabolism, pharmacokinetics, side effects, toxicity, contraindications and dosage of relevant drug classes. Basic principles of clinical pharmacology and pharmacotherapy will be covered.

Lecture notes
Für jede Vorlesung wird ein Skript abgegeben, das eine Zusammenfassung mit den wichtigsten Stichpunkten beinhaltet.

</table>

**Abstract**

The aim of the lecture course is to provide a solid overview of the science and issues in gene technology and genome science. Topics: Antibody phage technology, protein modification technology, genome projects, genome sequencing, transcriptomics, proteomics and SNP technology. The course is suited for advanced undergraduate and early graduate students in pharmaceutical sciences or related fields.

**Objective**

The course will provide a solid overview of the science and issues in gene technology and genome science.

**Content**

1. **Antibody phage technology**
   - The antibody molecule
   - V genes, CDRs, basics of antibody engineering
   - Principles of phage display
     - Phagemid and phage vectors
     - Antibody libraries
     - Phage display selection methodologies
     - Other phage libraries (peptides, globular proteins, enzymes)
     - Alternative screening/selecdion methodologies
     - DNA-encoded chemical libraries

2. **Proteins: chemical modification and detection of biomolecular interactions**
   - Homo- and hetero-dimerization of proteins
   - Chemical modifications of proteins
   - Radioactive labeling of proteins
   - Kinetic association and dissociation constants
   - Affinity constant: definition and its experimental measurement

3. **Genomics: Applications to Human Biology**
   - Protein cloning and expression
   - Functional Genomics
   - Sequencing genomes and novel sequencing methods
   - Genetic disorders: discovery and pharmaceutical implications
   - Transcriptomics
   - Proteomics
   - Principles of Cancer
   - Principles of Vaccine Development
   - Principles of Gene Therapy

4. **Pharmaceuticals: Focus on Discovery**
   - Chemical Libraries
   - Protein Therapeutics
   - Consideration on pharmacokinetics and half-life extension

**Lecture notes**

Skript "Gene Technology" by Prof. Dario Neri

**Abstract**

Concepts of modern genetics and genomics, including principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

**Objective**

This course focuses on the concepts of classical and modern genetics and genomics.

**Content**

The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

**Lecture notes**

Scripts and additional material will be provided during the semester.

**Prerequisites / notice**

This course is a co-production of the University of Zurich and ETH Zurich, and will be taught in English. The course takes place on Monday afternoon at ETH Hoenggerberg, and on Tuesday morning at UniZH Irchel.

### Immunology I

**Abstract**

Introduction into structural and functional aspects of the immune system.

**Objective**

Basic knowledge of the mechanisms and the regulation of an immune response.

**Content**

- Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histoincompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

**Lecture notes**

Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien"

**Literature**

**Prerequisites / notice**

Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

Autumn Semester 2015

Page 692 of 1432
Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry.

The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.

Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular transport and targeting; vesicular trafficking and phagocytosis; post-transcriptional regulation of gene expression.

Methods of Biological Analysis

Principles of the most important separation techniques and the interpretation of molecular spectra.

Knowledge of the necessary basics and the possibilities of application of the relevant spectroscopical and separation methods in analytical chemistry.

Methods of Biological Analysis

This lecture is the first part of a one-year course. It offers insights into the fundamentals and applications of Food Microbiology. Contents mandatory: "Biochemistry", M. Loessner

**Abstract**

Topics include the structure-function relationship of proteins / nucleic acids, protein folding, enzymatic catalysis, cellular pathways involved in bioenergetics and the biosynthesis and breakdown of amino acids, glycerols, nucleotides, fatty acids and phospholipids, and steroids. There will also be a discussion of DNA replication and repair, transcription, and translation.

**Lecture notes**

none

**Literature**

**Prerequisites / notice**

Some of the lectures are given in the English language.

---

**752-2120-00L Consumer Behaviour I**

**Objective**

Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

**Abstract**

Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

---

**752-4005-00L Food Microbiology I**

**Abstract**

This lecture is the first part of a one-year course. It offers insights into the fundamentals and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts and molds present in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

**Objective**

The lecture offers insights into the basics, practical consequences and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts, molds and protozoa in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

**Content**

1. History of Food Microbiology
   1.1. Short synopsis of foodborne microorganisms
   1.2. Spoilage of Foods
   1.3. Foodborne Disease
   1.4. Food Preservation
   1.5. VIP's of Food Microbiology
2. Overview of Microorganisms in Foods
   2.1 Origin of foodborne Microorganisms
   2.2. Bacteria
   2.3. Yeasts
   2.4. Molds
3. Microbial Spoilage of Foods
   3.1. Intrinsic and Extrinsic Parameters
   3.2. Meats, Seafoods, Eggs
   3.3. Milk and Milk Products
   3.4. Vegetable and Fruit Products
   3.5. Miscellaneous (baked goods, nuts, spices, ready-to-eat products)
   3.6. Drinks and Canned Foods
4. Foodborne Disease
   4.1. Significance and Transmission of Foodborne pathogens
   4.2. Staphylococcus aureus
   4.3. Gram-positive Spoerformers (Bacillus & Clostridium)
   4.4. Listeria monocytogenes
   4.5. Salmonella, Shigella, Escherichia coli
   4.6. Vibrio, Yersinia, Campylobacter
   4.7. Brucella, Mycobacterium, Aeromonas, Plesiomonas
   4.8. Parasites
   4.9. Viruses and Bacteriophages
   4.10. Mycotoxins
   4.11. Bioactive Amines
   4.12. Miscellaneous (Antibiotic-resistant Bacteria, Biofilms)

**Lecture notes**

Electronic copies of the presentation slides (PDF) will be made available for download.

**Literature**

Recommendations will be given in the first lecture.

---

**752-6001-00L Introduction to Nutritional Science**

**Objective**

To introduce the students to the both macro- and micronutrients in relation to food and metabolism.

**Content**

This course introduces basic concepts of micro- and macronutrient nutrition. Micronutrients studied include fat-soluble and water-soluble vitamins, minerals and trace elements. Macronutrients include proteins, fat and carbohydrates. Special attention is given to nutrient digestion, bioavailability, metabolism and excretion with some focus on energy metabolism.

**Lecture notes**

There is no script. Powerpoint presentations will be made available.

**752-6301-00L Selected Topics in Physiology Related to Nutrition**

**Abstract**

Gives the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand.
Objective

Some basic knowledge in physiology is recommended for this course, which revisits important physiological topics, emphasizing their relation to nutrition. The aim is to give the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand. For students with a background in medicine, pharmacy or biology, the course is useful as a review of previously acquired knowledge. Major topics are basic neuroanatomy and neurophysiology; general endocrinology; the physiology of taste and smell; nutrient digestion and absorption; intermediary metabolism and energy homeostasis; and some aspects of cardiovascular physiology and water balance.

752-6403-00L Nutrition and Performance W 2 credits 2V S. Mettler, M. B. Zimmermann

Abstract

The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

Objective

To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Content

The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

Lecture notes

Lecture slides and required handouts will be available on the ETH website.

Literature

Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

Prerequisites / notice

General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English

It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

853-0033-00L Leadership I W 3 credits 2V F. Kernic

Abstract

The lectures "Leadership I" (WS) and "Leadership II" (SS) have been designed as a two-semester lecture series, but may also be followed independently of one another or in reverse order. "Leadership I" covers the following fields: leadership basics, leadership theories and leadership styles, the concept of leadership responsibility and the role of communication in practical leadership.

Objective

The aim of this lecture is to give students an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organisation, context and situation. They should be informed about the evolution of the understanding of mankind in relation to working processes and its impact on organizations and the understanding of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate adequately in specific situations.

Prerequisites / notice

The 1-hour written exam will take place during the last lecture in the semester.

| 851-0242-06L | Cognitively Activating Instructions in MINT Subjects W | 2 credits | 2S | R. Schumacher |
| Number of participants limited to 30. |
| Abstract | This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance. |
| Objective | - Get to know cognitively activating instructions in MINT subjects 
- Get information about recent literature on learning and instruction |
| Prerequisites / notice | Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht. |

| 851-0242-07L | Human Intelligence W | 1 credit | 1S | E. Stern, P. Edelsbrunner, B. Rütsche |
| Number of participants limited to 30. |
| Abstract | The focus will be on the book “Intelligenz: Grosse Unterschiede und ihre Folgen” by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed. |
| Objective | - Understanding of research methods used in the empirical human sciences 
- Getting to know intelligence tests 
- Understanding findings relevant for education |

| 851-0242-08L | Research Methods in Educational Science W | 1 credit | 1S | P. Edelsbrunner, B. Rütsche, E. Stern, E. Ziegler |
| Number of participants limited to 30. |
| Abstract | Literature from the learning sciences is critically discussed with a focus on research methods. At the first meeting, working groups will be assembled and two further meetings will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work. |
| Objective | - Understand research methods used in the empirical educational sciences 
- Understand and critically examine information from scientific journals and media 
- Understand pedagogically relevant findings from the empirical educational sciences |

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 696 of 1432
Objective
- Students know how to prepare, conduct and reflect a single lesson based on educational requirements.
- Students take the learning goals as a starting point considering previous knowledge as well as the professional environment and the ambitions of the learners.
- Students apply the basic teaching techniques of their subject area in a sensible way and know how to appropriately arrange the phases of learning.
- Students know how to simplify and present complex technical contents of their subject area.

376-8008-00L Teaching Internship Including Examination Lessons

Health Sciences and Technologie
Only for Health Sciences and Technology TC students.

Objective
- Students know how to prepare, conduct and reflect a single lesson based on educational requirements.
- Students take the learning goals as a starting point considering previous knowledge as well as the professional environment and the ambitions of the learners.
- Students apply the basic teaching techniques of their subject area in a sensible way and know how to appropriately arrange the phases of learning.
- Students know how to simplify and present complex technical contents of their subject area.

Abstract
The teaching internship can just be visited if all other courses of TC are completed.
Repetition of the teaching internship is excluded even if the examination lessons are to be repeated.

Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils' work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Abstract
The mentored paper is designed to bring together the findings from the FD1 and the FD2. By using various teaching techniques and methods a semester plan, which is based on various curricula will be elaborated for a given topic.

Objective
1. The students have planned a curriculum for a semester course.
2. Students reflect on formative and summative ways such a teaching unit to examine and implement parts of it.
3. The students have implemented parts of the semester curriculum.
4. The students deal with the question to what extend teaching techniques, teaching methods but also sequences of self-study must be involved in the planning.

Health Sciences and Technology TC - Key for Type

| O  | Compulsory                        | E- | Recommended, not eligible for credits |
| W+ | Eligible for credits and recommended | Z  | Courses outside the curriculum |

ECTS European Credit Transfer and Accumulation System
Special students and auditors need special permission from the lecturers.
What is translational science and what is it not?

After completing this course, students will be able to understand:

Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication)

How to measure success?

Outcome variables

Improving the translational process

Challenges of communication?

How independent is translational science?

Academic boundary conditions vs. industrial influences

Positive and negative examples will be illustrated by distinguished guest speakers.

Contemporary Problems of Neural Control of Movement

For MSc Major "Human Movement Science and Sport" only.

Abstract

Students read, present and discuss seminal papers in the field of Neural Control of Movement and Motor Learning.

Objective

The goal of this course is to nurture and develop independent thinking which is a vital component of personal and professional development. Students will critically evaluate academic papers, present logical arguments, source reliable information and design thought experiments to solve problems relevant to the neural control of behavior.

Prerequisites / notice

Students are required to have successfully completed the course "Neural control of movement and motor learning" and to have basic knowledge of applied statistics. Self-study material will be available at the beginning of the course and statistical knowledge will be tested (central element) in the second course week (open book). Passing this test is a requirement for continuing the course. Students will be required to write essays, give presentations and participate in discussions on a regular basis. Assessment will be made on the basis of the complete aforementioned practical work.

Advanced Topics in Exercise Physiology

Abstract

In this course, students read, present and discuss seminal publications in the area of exercise physiology. The focus lies on critical analysis of scientific content, conceptual as well as ethical aspects of publications. Students are trained in the most common scientific presentation techniques such as oral and poster presentations.

Objective

Students gain further knowledge and a deeper understanding of concepts in exercise physiology. Emphasis is put on critical analysis and discussion of scientific publications as well as on improving scientific presentation skills.

Literature

Material will be provided in moodle.

Prerequisites / notice

Successful completion of the Exercise Physiology Course.

Physical Activities and Health

Abstract

This course introduces/explores the complex relationship between physical activity, sedentary behavior and health. It will discuss the evolution of current physical activity recommendations. It will examine the current evidence base that has informed physical activity recommendations and that identified physical activity as a key modifiable lifestyle behavior contributing to disease and mortality.

Objective

On completion of this course students will be able to demonstrate:

1. knowledge of and critical awareness of the role of physical activity and sedentary behavior in the maintenance of health and the aetiology, prevention and treatment of disease.

2. thorough knowledge and critical awareness of current recommendations for physical activity, and current prevalence and trends of physical activity and associated diseases

3. awareness of current national and international physical activity policies and how these impact on global challenges

Content

Introduction to Physical Activity for Health, including sedentary behavior

Physical activity epidemiology; concepts principles and approaches

Physical activity and all cause morbidity and mortality

Physical activity and chronic disease; Coronary heart disease, diabetes, bone health, cancer and obesity

Physical activity and brain health

Physical activity and sedentary behavior recommendations

Population prevalence of physical activity and sedentary behavior

Physical activity policies

Physical activity assessment

Literature

Core texts for this course are:

Selective journal articles from relevant journals such as Journal of Physical Activity and Health and Journal of Aging and Physical Activity
Clinical and Movement Biomechanics  
**Prerequisites / notice**  
From the BSc-course the following book is recommended: ‘Essentials of strength training and conditioning’ T. Baechle, R. Earle (3rd Edition)

### Overview

- **Abilities and Competencies**
  - Measurement and modeling of the human movement during daily activities and in a clinical environment.
  - The students are able to analyse the human movement from a technical point of view, to process the data and perform modeling with a focus towards clinical application.
  - This course includes ethical considerations, measurement techniques, clinical testing, accessing movement data and analysis as well as modeling with regards to human movement.

- **Objective**
  - The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

- **Content**
  - To understand the physical and technical principles underlying X-ray imaging, computed tomography, single photon and positron emission tomography, magnetic resonance imaging, ultrasound and Doppler imaging techniques. The mathematical framework is developed to describe image encoding/decoding, point-spread function/modular transfer function, signal-to-noise ratio, contrast behavior for each of the methods. Matlab exercises are used to implement and study basic concepts.

- **Prerequisites / notice**
  - No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

### Literature

- **Abstract**
  - Number of participants limited to 60.
  - Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty. Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

- **Lecture notes**
  - The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

- **Bibliography**
  - 1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
  - 2. Probability Theory: The Logic of Science by E. T. Jaynes
  - 3. Class Notes

### Notice

- **Prerequisites / notice**
  - New course. Not to be confused with 227-0385-00L of Fall 2014.
  - Introduction and analysis of medical imaging technology including X-ray procedures, computed tomography, nuclear imaging techniques using single photon and positron emission tomography, magnetic resonance imaging and ultrasound imaging techniques.

- **Objective**
  - To understand the physical and technical principles underlying X-ray imaging, computed tomography, single photon and positron emission tomography, magnetic resonance imaging, ultrasound and Doppler imaging techniques. The mathematical framework is developed to describe image encoding/decoding, point-spread function/modular transfer function, signal-to-noise ratio, contrast behavior for each of the methods. Matlab exercises are used to implement and study basic concepts.

- **Content**
  - - X-ray imaging
  - - Computed tomography
  - - Single photon emission tomography
  - - Positron emission tomography
  - - Magnetic resonance imaging
  - - Ultrasound/Doppler imaging
  - Lecture notes and handouts

- **Literature**
  - Webb A, Smith N.B. Introduction to Medical Imaging: Physics, Engineering and Clinical Applications; Cambridge University Press 2011

### Prerequisites / notice

- **Analysis, Linear Algebra, Physics, Basics of Signal Theory, Basic skills in Matlab programming**

### New course

- **New course. Not to be confused with 227-0385-00L of Fall 2014.**

### Objective

- **Objective**
  - Introduction into selected topics of biomedical engineering as well as their relationship with physics and physiology. The focus is on learning the concepts that govern common medical instruments and the most important organs from an engineering point of view. In addition, the most recent achievements and trends of the field of biomedical engineering are also outlined.

- **Content**
  - Introduction into selected topics of biomedical engineering as well as their relationship with physics and physiology. The course provides an overview of the various topics of the different tracks of the biomedical engineering master course and helps orienting the students in selecting their specialized classes and project locations.

- **Literature**
  - Webb A, Smith N.B. Introduction to Medical Imaging: Physics, Engineering and Clinical Applications; Cambridge University Press 2011

### Notice

- **Prerequisites / notice**
This course provides theory-grounded knowledge and practice-driven skills for founding, financing, and growing new technology ventures. Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding.

- Strategic choices for work design
- Example Flexible working arrangements
- Strategic choices for work design

The course language is English.

Course notes:
- Course material Script, computer demonstrations, exercises and problem solutions
- Prerequisites: Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.

Work Design and Organizational Change

Good work design is crucial for individual and company effectiveness and a core element to be considered in organizational change. Meaning of work, organization-technology interaction, and uncertainty management are discussed with respect to work design and sustainable organizational change. As course project, students learn and apply a method for analyzing and designing work in business settings.

- Know effects of work design on competence, motivation, and well-being
- Understand links between design of individual jobs and work processes
- Know basic processes involved in systematic organizational change
- Understand the interaction between organization and technology and its impact on organizational change
- Understand relevance of work design for company performance and strategy
- Know and apply methods for analyzing and designing work

Work Design and Organizational Change

- Work design: From Adam Smith to job crafting
- Effects of work design on performance and well-being
- Approaches to analyzing and designing work
- Modes of organizational change and change methods
- Balancing stability and flexibility in organizations as design criterion
- The organization-technology interaction and its impact on work design and organizational change
- Example Flexible working arrangements
- Strategic choices for work design

The course includes the completion of a course project to be conducted in groups of four students. The project entails applying a particular method for analyzing and designing work processes and is carried out by means of interviews and observations in companies chosen by the students.

- Strategic choices for work design
- Example Flexible working arrangements
- Strategic choices for work design

The course language is English.

Prerequisites:
- Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.
- Numerical methods and linear algebra

Technology Entrepreneurship

Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding.

- The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.
- Image processing and analysis concepts
- The basic concepts of computer vision
- Linear and non-linear filters
- 3D data analysis and object tracking

The course language is English.

Prerequisites:
- Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.
- Numerical methods and linear algebra

Laboratory Course in Exercise Physiology

Number of participants limited to 36.

- Conduct physical performance tests and measurements that are typically used to assess performance of athletes and/or patients and that deepen the understanding of physiological processes in response to physical exertion.
- Gain hands-on experience in exercise physiology and consolidate knowledge on physiological adaptations to different types and degrees of physical activity and climatic influences.
- Laboratory course: Various exercise tests assessing human performance and assessments of physiological responses to activity (examples are VO2max-test, Conconi-Tests, Determination of anaerobic threshold, Cooper-Test, 1-repetition maximum test, lactate minimum test, dynamometry, mechanography, body composition etc.). Insight into measurements in Sports Medicine.

Laboratory Experiment in Exercise Physiology

(Editors: Exercise Physiology Lab)

Insight into measurements in Sports Medicine.
### Overview of Course Content

- **Movement and Sport Biomechanics**:
  - **Objective**: Students are able to describe the human body as a mechanical system. They analyse and describe human movement according to the laws of mechanics.
  - **Content**: Movement- and sports biomechanics deals with the attributes of the human body and their link to mechanics. The course includes topics such as functional anatomy, biomechanics of daily activities (gait, running, etc.) and looks at movement in sport from a mechanical point of view. Furthermore, simple reflections on the loading analysis of joints in various situations are discussed. Additionally, questions covering the statics and dynamics of rigid bodies, and inverse dynamics, relevant to biomechanics are investigated.

- **Exercise Physiology**: This course provides an overview over molecular and systemic aspects of neuromuscular, cardiovascular and respiratory adaptations to acute and chronic exercise as well as the interactions of the different systems influencing factors, e.g. genetics, gender, age, altitude/depth, heat/cold, with respect to performance and health.

- **History of Sports**:
  - **Objective**: The aim of this course is to understand molecular and systemic aspects of neuromuscular, cardiovascular and respiratory adaptations to acute and chronic exercise as well as the interaction of the different systems regarding health-relevant aspects and performance in healthy people and persons with selected diseases. Furthermore, students will understand the influence of genetics, gender, age, altitude/depth, heat and cold on the named factors.
  - **Content**: History of Exercise Physiology, research methods, fibertype heterogeneity and its functional significance, neural control of muscle force, molecular and cellular mechanisms of muscle adaptation to resistance, endurance and stretching exercise, interindividual variability in the response to training, cardiorespiratory and metabolic responses to acute and chronic exercise, sex differences relevant to exercise performance, exercise in hot and cold environment, children and adolescents in sport and exercise, exercise at altitude and depth, aging and exercise performance, exercise for health, exercise in the context of disease.

- **Sport Pedagogy**: Central aspects of Sport related pedagogy will be handled in these lectures. These aspects cover, amongst others, the subject and tasks of Sport related pedagogy. Furthermore, the general and sports relevant foundations of Sport related pedagogy will be covered.

- **Sociology of Sport**: These lectures deal with the current changes in society and sport and provide an overview of the many different problems and perspectives of sport sociology.

---

- **Exercise Physiology: Nutrition, Energy, and Human Performance** by William D. McArdle, Frank I. Katch, Victor L. Katch
- **Exercise Physiology Lecture**
  - Selected materials for the lecture are available under www.LSSFB.ch --> Lehre
A detailed program with additional references will be delivered at the beginning of the lecture.

**376-1117-00L**  
**Sport Psychology**  
**W** 2 credits  
**H. Gubelmann**

**Abstract**  
This lecture is intended as an introduction to sport psychology and imparts knowledge on selected areas of the subject.

**Objective**  
Students are given insight into different work areas of sport psychology. In order to understand what «sport psychology» is, it is necessary to explain the essence and tasks of sport psychology and what it relates to, and to work out an underlying basis for key topics, such as cognition and emotions. Students' expertise is furthered by presenting and providing more in-depth treatment of additional topics of sport psychology. Selected intervention forms are intended to provide insight into applied sport psychology and ensure that mental processes and their impact in sport can be recognised. Case studies and practical exercises (e.g. objective training) are intended to prompt students to reflect to a greater extent on the forms in which sport psychology can be applied in their practice of sports and to integrate these in their teaching.

**Content**  
- Main Topics
  - Introduction to sport psychology
  - Cognitions in sports: mental rehearsal and mental training
  - Emotions and stress
  - Motivation: goal-setting in sports
  - Career and career transition in elite sport
  - Coach-Athlete-Interaction
  - Psychological aspects of sport-injury rehabilitation
  - Group dynamics in sport

**Lecture notes**  
Unterrichtsmaterialien zu den einzelnen Veranstaltungen werden den Studierenden zur Verfügung gestellt.

**376-1177-00L**  
**Human Factors I**  
**W** 2 credits  
**M. Menozzi Jäckli, R. Boutellier, R. Huang, M. Siegrist**

**Abstract**  
Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people's satisfaction & overall performance.

**Objective**  
The goal of the lecture is to empower students in better understanding the applied theories, principles, and methods in various applications. Students are expected to learn about how to enable an efficient and qualitatively high standing interaction between human and the environment, considering costs, benefits, health, and safety as well. Thus, an ergonomic design and evaluation process of products, tasks, and environments may be promoted in different disciplines. The goal is achieved in addressing a broad variety of topics and embedding the discussion in macroscopic factors such as the behavior of consumers and objectives of economy.

**Content**  
- Physiological, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

**Literature**  

---

**376-1179-00L**  
**Applications of Cybernetics in Ergonomics**  
**W** 1 credit  
**M. Menozzi Jäckli, Y.Y. Hedinger Huang, R. Huang**

**Abstract**  
Cybernetics systems have been studied and applied in various research fields, such as applications in the ergonomics domain. Research interests include the man-machine interaction (MMI) topic which involving the performance in multi-model interactions, quantification in gestalt principles in product development; or the information processing matter.

**Objective**  
To learn and practice cybernetics principles in interface designs and product development.

**Content**  
- Fitt's law applied in manipulation tasks
- Hick-Hyman law applied in design of the driver assistance systems - Vigilance applied in quality inspection
- Accommodation/vergence crosslink function
- Cross-link models in neurobiology- the ocular motor control system
- Human performance in optimization of production lines

**376-1219-00L**  
**Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions**  
**W** 3 credits  
**R. Riener, R. Gassert, L. Marchal Crespo**

**Abstract**  
Rehab. Engineering is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

**Objective**  
Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.
Content
Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces

Trauma biomechanics in an interdisciplinary research field investigating the biomechanics of injuries and related subjects such as prevention. The lecture provides an introduction to the basic principles of trauma biomechanics. This lecture serves as an introduction to the field of trauma biomechanics. Emphasis is placed on the interdisciplinary nature of impact biomechanics, which uses the combination of fundamental engineering principles and advanced medical technologies to develop injury prevention measures. Topics include: accident statistics and accident reconstruction, biomechanical response of the human to impact loading, injury mechanisms and injury criteria, test methods (including crash tests), computer simulations using multi-body and finite element modelling techniques, aspects of passive safety of vehicles (focusing on restraint systems and vehicle compatibility). Real world examples mainly from automobile safety are used to augment lecture material.

Autumn Semester 2015
Page 705 of 1432
Prerequisites / notice
General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English

It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

► Major in Human Health, Nutrition and Environment

►► Compulsory Courses

<table>

Abstract
Writing of a review paper of scientific quality on a topic in the domain of Human Health, Nutrition and Environment based on critical evaluation of scientific literature.

Objective
- Acquisition of knowledge in the field of the review paper
- Assessment of original literature as well as synthesis and analysis of the findings
- Practising of academic writing in English
- Giving an oral presentation with discussion on the topic of the review paper

Content
Topics are offered in the domains of the major 'Human Health, Nutrition and Environment' covering 'Public Health', 'Infectious Diseases', 'Nutrition and Health' and 'Environment and Health'.

Lecture notes
Guidelines will be handed out in the beginning.

Literature
Literature will be identified based on the topic chosen.

376-0300-00L

| Number         | Translational Science for Health and Medicine                         | O    | 3    | 2G    | J. Goldhahn, C. Wolfrum         |

Abstract
Translational science is a cross disciplinary scientific research that is motivated by the need for practical applications that help people. The course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key features into their future projects.

Objective
After completing this course, students will be able to understand:
- Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication)

Content
What is translational science and what is it not?
- How to identify need?
- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
- How to measure success?
- Outcome variables
- Improving the translational process
- Challenges of communication?
- How independent is translational science?
- Academic boundary conditions vs. industrial influences

Positive and negative examples will be illustrated by distinguished guest speakers.

Abstract
The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented.

Objective
Students are able
- to evaluate the scientific evidence on the effects of diet on human health
- to describe the role of nutritional factors in the prevention of chronic diseases
- to assess the nutritional status of a population (Switzerland taken as an example)
- to put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic
Module: Infectious Diseases

**Number** 551-0223-00L

**Title** Immunology III

**Type** W

**ECTS** 4 credits

**Hours** 2V

**Lecturers** M. Kopf, M. Bachmann, J. Kisielow, A. Lanzavecchia, S. R. Leibundgut, A. Oxnium, R. Spörri

**Abstract**
This course provides a detailed understanding of:
- development of T and B cells
- the dynamics of an immune response during acute and chronic infection
- mechanisms of immunopathology
- modern vaccination strategies
- Key experimental results will be shown to help understanding how immunological textbook knowledge has evolved.

**Objective**
Obtain a detailed understanding of:
- the development, activation, and differentiation of different types of T cells and their effector mechanisms during immune responses,
- Recognition of pathogenic microorganisms by the host cells and molecular events thereafter,
- events and signals for maturation of naïve B cells to antibody producing plasma cells and memory B cells.
- Optimization of B cell responses by intelligent design of new vaccines

**Content**
- Development and selection of CD4 and CD8 T cells, natural killer T cells (NKT), and regulatory T cells (Treg)
- Differentiation, characterization, and function of CD4 T cell subsets such as Th1, Th2, and Th17
- Overview of cytokines and their effector function
- Co-stimulation (signals 1-3)
- Dendritic cells
- Evolution of the "Danger" concept
- Cells expressing Pattern Recognition Receptors and their downstream signals
- T cell function and dysfunction in acute and chronic viral infections

**Literature**
Documents of the lectures are available for download at: https://moodle-app2.let.ethz.ch/course/view.php?id=998

**Prerequisites / notice**
Immunology I and II

---

**Number** 551-1171-00L

**Title** Immunology: from Milestones to Current Topics

**Type** W

**ECTS** 4 credits

**Hours** 2S

**Lecturers** B. Ludewig, M. Kopf, A. Oxnium, University lecturers

**Abstract**
Milestones in Immunology: on old concepts and modern experiments

**Objective**
The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptual framework and critical technological advances. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

**Content**
Milestones and current topics of innate immunity, antigen presentation, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunology.

**Lecture notes**
Original and review articles will be distributed by the lecturer.

**Literature**
Literaturunterlagen werden vor Beginn des Kurses auf folgender website zugänglich sein: Moodle Course https://moodle-app2.let.ethz.ch/course/view.php?id=1002

---

**Number** 636-0017-00L

**Title** Molecular Evolution, Phylogenetics and Phylodynamics

**Type** W

**ECTS** 4 credits

**Hours** 3G

**Lecturers** T. Stadler

**Abstract**
The aim of the course is to provide up-to-date knowledge on how we can obtain an understanding of the evolution and population dynamics of organisms based on their genetic sequencing data, employing key concepts from molecular evolution, phylogenetics, and phylodynamics. Throughout the course, we tie the models and methods closely with applications, mainly in the field of epidemiology and evolution.
Objective
Attendees will learn what information is contained in genetic sequencing data and how this information is extracted from the sequencing data. The main concepts introduced are:

* models in molecular evolution
* phylogenetic & phylodynamic inference
* maximum likelihood and Bayesian statistics
* stochastic processes

Attendees will apply these concepts to a number of applications yielding biological insight into:

* epidemiology
* pathogen evolution
* macroevolution of species

Content
The course consists of three parts. We first introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Second, we employ these evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phylodynamics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades.

Lecture notes
Slides of the lecture will be available online.

Literature
The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:

* Yang, Z. 2006. Computational Molecular Evolution.
* Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST.

Prerequisites / notice
Basic knowledge in linear algebra, analysis, and statistics.

701-0283-01L Seminar in Evolutionary Ecology of Infectious Diseases

Objective
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

Content
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

Lecture notes
Publications and class notes can be downloaded from a web page announced during the lecture.

752-4009-00L Molecular Biology of Foodborne Pathogens

Abstract
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks.

Content
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks?

Lecture notes
Electronic copies of the presentation slides (PDF) will be made available for download to registered students.

Literature
Recommendations will be given in the first lecture.

Prerequisites / notice
Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until 11:15 h), with no break.

Module: Nutrition and Health

Number Title Type ECTS Hours Lecturers
752-2122-00L Food and Consumer Behaviour W 2 credits 2V M. Siegrist, C. Hartmann, V. Visschers

Abstract
This course focuses on food consumer behavior, consumer's decision-making processes and consumer's attitudes towards food products.

Objective
The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

752-5103-00L Functional Microorganisms in Foods W 3 credits 2G C. Lacroix, T. de Wouters, L. Meile, C. Schwab

Abstract
This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

Objective
To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.
This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.

- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.

- Legal and Protection Issues Related Functional Foods

- Industrial Biotechnology of Flavor and Taste Development

- Safety of Food Starter Cultures and Probiotics

Students will be required to complete a group project on food products and ingredients with of from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Lecture notes
Copy of the power point slides from lectures will be provided.

Literature
A list of references will be given at the beginning of the course for the different topics presented during this course.

The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. Natural processes, anthropogenic pollution, legislation of groundwater and surface water and of drinking water as well as water treatment will be discussed for industrialized and developing countries.

The goal of this lecture is to give an overview over the whole path of drinking water from the source to the tap and understand the involved physical, chemical and biological processes which determine the drinking water quality.

The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.

Handouts will be distributed

Translational science is a cross disciplinary scientific research that is motivated by the need for practical applications that help people. The course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key features into their future projects.

After completing this course, students will be able to understand:

Abstract

Many disciplines are meeting at the nanoscale, from physics, chemistry to engineering, from the life sciences to medicine. The course will prepare students to communicate more effectively across disciplinary boundaries, and will provide them with deep insights into the various frontiers.

Objective

Building upon advanced technologies to create, visualize, analyze and manipulate nano-structures, as well as to probe their nano-

chemistry, nano-mechanics and other properties within manmade and living systems, many exciting discoveries are currently made. They change the way we do science and result in so many new technologies.

The goal of the course is to give Master and Graduate students from all interested departments an overview of what nanotechnology is all about, from analytical techniques to nanosystems, from physics to biology. Students will start to appreciate the extent to which scientific communities are meeting at the nanoscale. They will learn about the specific challenges and what is currently sizzling in the respective fields, and learn the vocabulary that is necessary to communicate effectively across departmental boundaries.

Each lecturer will first give an overview of the state-of-the art in his/her field, and then describe the research highlights in his/her own research group. While preparing their Final Projects and discussing them in front of the class, the students will deepen their understanding of how to apply a range of new technologies to solve specific scientific problems and technical challenges. Exposure to the different frontiers will also improve their ability to conduct effective nanoscale research, recognize the broader significance of their work and to start collaborations.

Content

Starting with the fabrication and analysis of nanoparticles and nanostructured materials that enable a variety of scientific and technical applications, we will transition to discussing biological nanosystems, how they work and what bioinspired engineering principles can be derived, to finally discussing biomedical applications and potential health risk issues. Scientific aspects as well as the many of the emerging technologies will be covered that start impacting so many aspects of our lives. This includes new phenomena in physics, advanced materials, novel technologies and new methods to address major medical challenges.

Lecture notes

All the enrolled students will get access to a password protected website where they can find pdf files of the lecture notes, and typically 1-2 journal articles per lecture that cover selected topics.

Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions

Abstract

Rehab. Engineering is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective

Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.
Content

Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
- Rehabilitation and use of kinesthetic and tactile function
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
- Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
- Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces

Literature

Introductory Books:

Selected Journal Articles and Web Links:

VideoTact, ForeThought Development, LLC. http://my.execpc.com/?dwysocki/videotac.html

Prerequisites / notice

Target Group:
- Students of higher semesters and PhD students of
- D-MAVT, D-ITET, D-INFK, D-HEST
- Biomedical Engineering, Robotics, Systems and Control
- Medical Faculty, University of Zurich

Students of other departments, faculties, courses are also welcome
The objectives of the course are to expose students to the fundamental aspects of the emerging field of microrobotics. This includes a focus on the physical laws that predominate at the microscale, technologies for fabricating small devices, bio-inspired design, and applications of the field.

Abstract

- Materials and fabrication methods
- Low Reynolds number flows
- Electrostatics

Objective

- Introduction to bioengineering approaches for the treatment of common pathogenic conditions of these systems.
- Introduction to cell function at the cellular level.
- Biofluidics. Heat and mass transport processes within the human body and relation to biomedical technologies.

Content

- Introduction to bioengineering approaches for the treatment of common pathogenic conditions of these systems.
- Introduction to cell metabolism, cellular energy transport, and cellular thermodynamics.

Prerequisites

- Basic concepts of mathematical analysis and linear algebra.
- The computer exercises are based on Linux and C.

Literature

- See teaching document repository.
- Lecture notes and references therein.

Prerequisites / notice

The statistical package R will be used in the exercises.

If you are unfamiliar with R, I highly recommend the online R course etutorR.

Abstract
The lecture introduces the physical and technical know-how of X-ray tomographic microscopy. Several X-ray imaging techniques (absorption-, phase- and darkfield contrast) will be discussed and their use in daily research, in particular biology, is presented. The course discusses the aspects of quantitative evaluation of tomographic data sets like segmentation, morphometry and statistics.

Objective
Introduction to the basic concepts of X-ray tomographic imaging, image analysis and data quantification at the micro and nano scale with particular emphasis on biological applications.

Content
Synchrotron-based X-ray micro- and nano-tomography is today a powerful technique for non-destructive, high-resolution investigations of a broad range of materials. The high-brilliance and high-coherence of third generation synchrotron radiation facilities allow quantitative, three-dimensional imaging at the micro and nanometer scale and extend the traditional absorption imaging technique to edge-enhanced and phase-sensitive measurements, which are particularly suited for investigating biological samples.

The lecture includes a general introduction to the principles of tomographic imaging from image formation to image reconstruction. It provides the physical and engineering basics to understand how imaging beamlines at synchrotron facilities work, looks into the recently developed phase contrast methods, and explores the first applications of X-ray nano-tomographic experiments.

The course finally provides the necessary background to understand the quantitative evaluation of tomographic data, from basic image analysis to complex morphometrical computations and 3D visualization, keeping the focus on biomedical applications.

227-0969-00L Methods & Models for FMRI Data Analysis
W 6 credits 3V K. E. Stephan

Abstract
This course teaches methods and models for FMRI data analysis, covering all aspects of statistical parametric mapping (SPM), incl. preprocessing, the general linear model, statistical inference, multiple comparison corrections, event-related designs, and Dynamic Causal Modelling (DCM), a Bayesian framework for identification of nonlinear neuronal systems from neurophysiological data.

Objective
To obtain in-depth knowledge of the theoretical foundations of SPM and DCM and of their application to empirical FMRI data.

Content
This course teaches state-of-the-art methods and models for FMRI data analysis. It covers all aspects of statistical parametric mapping (SPM), incl. preprocessing, the general linear model, frequentist and Bayesian inference, multiple comparison corrections, and event-related designs, and Dynamic Causal Modelling (DCM), a Bayesian framework for identification of nonlinear neuronal systems from neurophysiological data. A particular emphasis of the course will be on methodological questions arising in the context of studies in psychiatry, neurology and neuroeconomics.
Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people's satisfaction & overall performance.

### Objective

The goal of the lecture is to empower students in better understanding the applied theories, principles, and methods in various applications. Students are expected to learn about how to enable an efficient and qualitatively high standing interaction between human and the environment, considering costs, benefits, health, and safety as well. Thus, an ergonomic design and evaluation process of products, tasks, and environments may be promoted in different disciplines. The goal is achieved in addressing a broad variety of topics and embedding the discussion in macroscopic factors such as the behavior of consumers and objectives of economy.

### Content

- Physiological, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

**Abstract**

Cybernetics systems have been studied and applied in various research fields, such as applications in the ergonomics domain. Research interests include the man-machine interaction (MMI) topic which involving the performance in multi-modal interactions, quantification in gestalt principles in product development; or the information processing matter.

**Objective**

To learn and practice cybernetics principles in interface designs and product development.

**Content**

- Fitt's law applied in manipulation tasks
- Hick-Hyman law applied in design of the driver assistance systems - Vigilance applied in quality inspection
- Accommodation/vergence crosslink function
- Cross-link models in neurobiology - the ocular motor control system
- Human performance in optimization of production lines

**Abstract**

Virtual Reality has the potential to support medical training and therapy. This lecture will derive the technical principles of multi-modal (audiovisual, haptic, tactile etc.) input devices, displays and rendering techniques. Examples are presented in the fields of surgical training, intra-operative augmentation, and rehabilitation. The lecture is accompanied by practical courses and excursions.

**Objective**

Provide theoretical and practical knowledge of new principles and applications of multi-modal simulation and interface technologies in medical education, therapy, and rehabilitation.

**Content**

Virtual Reality has the potential to provide descriptive and practical information for medical training and therapy while relieving the patient and/or the physician. Multi-modal interactions between the user and the virtual environment facilitate the generation of high-fidelity sensory impressions, by using not only visual and auditory modalities, but also kinesthetic, tactile, and even olfactory feedback. On the basis of the existing physiological constraints, this lecture will derive the technical requirements and principles of multi-modal input devices, displays, and rendering techniques. Several examples are presented that are currently being developed or already applied for surgical training, intra-operative augmentation, and rehabilitation. The lecture will be accompanied by several practical courses on graphical and haptic display devices as well as excursions to facilities equipped with large-scale VR equipment.

**Target Group:**

Students of higher semesters and PhD students of
- D-HEST, D-MAVT, D-ITET, D-INFK, D-PHYS
- Robotics, Systems and Control Master
- Biomedical Engineering/Movement Science and Sport
- Medical Faculty, University of Zurich

**Prerequisites / notice**

Students of other departments, faculties, courses are also welcome!

**Literature**

**Micro/Nanotechnology and Microfluidics for Biomedical Applications**

**Abstract**

This course is an introduction to techniques in micro/nanotechnology and to microfluidics. It reviews how many familiar devices are built and can be used for research and biomedical applications. Transistors for DNA sequencing, beakers for patterning proteins, hard-disk technology for biosensing and scanning microfluidics for analyzing tissue sections are just a few examples of the covered topics.

**Objective**

The main objective of the course is to introduce micro/nanotechnology and microfluidics to students having a background in the life sciences. The course should familiarize the students with the techniques used in micro/nanotechnology and show them how micro/nanotechnology pervades throughout life sciences. Microfluidics will be emphasized due to their increasing importance in research and medical applications. The second objective is to have life students less intimidated by micro/nanotechnology and make them able to link instruments and techniques to specific problems that they might have in their projects/studies. The course is accompanied by several practical courses on graphical and haptic display devices as well as excursions.

**Content**

Mostly formal lectures (2 × 45 min), with a 2 hour visit and introduction to cleanroom and micro/nanotechnology instruments, last 3 sessions would be dedicated to the presentation and evaluation of projects by students.

**Prerequisites / notice**

Students of higher semesters and PhD students of D-HEST, D-MAVT, D-ITET, D-INFK, D-PHYS

**376-1504-00L**

</thead>
</table>

**Abstract**

This course focuses on the emerging, interdisciplinary field of physical human-robot interaction, bringing together themes from robotics, real-time control, human factors, haptics, virtual environments, interaction design and other fields to enable the development of human-oriented robotic systems.
Objective

The objective of this course is to give an introduction to the fundamentals of physical human robot interaction, through lectures on the underlying theoretical/mechatronics aspects and application fields, in combination with a hands-on lab tutorial. The course will guide students through the design and evaluation process of such systems.

By the end of this course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and design safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the defined design requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement and test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) investigate and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

Content

This course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neurophysiology and psychophysics, principles of human-robot interaction systems (kinematics, mechanical transmissions, robot sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance and force-control, haptic rendering basics and issues in device design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical-human-robot interaction, laboratory sessions and lab visits.

Students will attend laboratory sessions where they will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://eduhaptics.org/index.php/HapticDevices/HapticPaddles), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, damping, time delays, sampling rate, sensor quantization, etc.) during rendering of different mechanical properties.

Lecture notes

Will be distributed through the document repository before the lectures.

376-1622-00L Practical Methods in Tissue Engineering  W 5 credits 4P K. Würzt-Kozak, M. Zenobi-Wong

Abstract

The goal of this course is to teach MSc students the necessary skills for doing research in the fields of tissue engineering and regenerative medicine.

Objective

Practical exercises and demonstrations on topics including sterile cell culture, light microscopy and histology, protein and gene expression analysis, and viability assays are covered. The advantages of 3D cell cultures will be discussed and practical work on manufacturing and evaluating hydrogels and scaffolds for tissue engineering will be performed in small groups. In addition to practical lab work, the course will teach skills in data acquisition/analysis.

376-1651-00L Clinical and Movement Biomechanics  W 4 credits 3G S. Lorenzetti, R. List, N. Singh
Abstract
Measurement and modeling of the human movement during daily activities and in a clinical environment.

Objective
The students are able to analyse the human movement from a technical point of view, to process the data and perform modeling with a focus towards clinical application.

Content
This course includes ethical considerations, measurement techniques, clinical testing, accessing movement data and analysis as well as modeling with regards to human movement.

376-1985-00L

Trauma Biomechanics

W 4 credits 2V+1U

K. U. Schmitt, M. H. Muser

Abstract
Trauma biomechanics in an interdisciplinary research field investigating the biomechanics of injuries and related subjects such as prevention. The lecture provides an introduction to the basic principles of trauma biomechanics.

Objective
Introduction to the basic principles of trauma biomechanics.

Content
This course serves as an introduction to the field of trauma biomechanics. Emphasis is placed on the interdisciplinary nature of impact biomechanics, which uses the combination of fundamental engineering principles and advanced medical technologies to develop injury prevention measures. Topics include: accident statistics and accident reconstruction, biomechanical response of the human to impact loading, injury mechanisms and injury criteria, test methods (including crash tests), computer simulations using multi-body and finite element modeling techniques, aspects of passive safety of vehicles (focusing on restraint systems and vehicle compatibility), Real world examples mainly from automobile safety are used to augment lecture material.

402-0674-00L

Physics in Medical Research: From Atoms to Cells

W 6 credits 2V+1U

B. K. R. Müller

Abstract
Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.

Objective
The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

Content
As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxide and organic surfaces are introduced.

Literature
The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinetic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantitatively describe these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

535-0423-00L

Drug Delivery and Drug Targeting

W 2 credits 2V

J. C. Leroux, D. Brambilla

Abstract
The students gain an overview on current principles, methodologies and systems for controlled delivery and targeting of drugs. This enables the students to understand and evaluate the field in terms of scientific criteria.

Objective
The students dispose of an overview on current principles and systems for the controlled delivery and targeting of drugs. This focus of the course lies on developing a capacity to understand the involved technologies and methods, as well as an appreciation of the chances and constraints of their therapeutic usage, with prime attention on anticancer drugs, therapeutic peptides, proteins, nucleic acids and vaccines.

Content
The course covers the following topics: drug targeting and delivery principles, pharmacokinetics, macromolecular drug carriers, liposomes, micelles, micro/nanoparticles, gels and implants, administration of vaccines, delivery of active agents in tissue engineering, targeting at the gastrointestinal level, synthetic carriers for nucleic acid drugs, ophthalmic devices and novel trends in transdermal and nasal drug delivery.

Lecture notes
Selected lecture notes, documents and supporting material will be directly provided or may be downloaded using

http://www.galenik.ethz.ch/teaching/drug_del_drug_targ

Literature
The website also displays additional information on peroral delivery systems, transdermal systems and systems for alternative routes (nasal, pulmonary) of delivery. These fields are covered in detail in the course Galenische Pharmazie II (Galenical Pharmacy II).

Immunology I

W 3 credits 2V

A. Oxenius, M. Kopf

Abstract
Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

Further references will be provided in the course.
Translational science is a cross-disciplinary scientific research that is motivated by the need for practical applications that help people. The scripts and additional material will be provided during the semester. Please contact Dr. Alicia Smith for assistance with the learning.

After completing this course, students will be able to understand:

**ECTS**

Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien".

The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry.

The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

**Content**

Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.

Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular transport and targeting; vesicular trafficking and phagocytosis; post-transcriptional regulation of gene expression.

**Literature**

Kuby, Immunology, 7th edition, Freeman + Co., New York, 2009

Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

**Prerequisites / notice**

To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English.

**551-0319-00L** Cellular Biochemistry (Part I)  
**W** 3 credits  **2V**  
U. Kutay, C. M. Azzalin, B. Kornmann, M. Peter

**Abstract**

Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

**Objective**

The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. **Abstract**

Translational science is a cross-disciplinary scientific research that is motivated by the need for practical applications that help people. The course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key features into their future projects.

**Objective**

After completing this course, students will be able to understand:

Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication).
Content
What is translational science and what is it not?
How to identify need?
- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
How to measure success?
- Outcome variables

Challenges of communication?
- How independent is translational science?
- Academic boundary conditions vs. industrial influences
Positive and negative examples will be illustrated by distinguished guest speakers.

This course provides a detailed understanding of
- development of T and B cells
- the dynamics of an immune response during acute and chronic infection
- mechanisms of immunopathology
- modern vaccination strategies
Key experimental results will be shown to help understanding how immunological text book knowledge has evolved.

Objective
Obtain a detailed understanding of
- the development, activation, and differentiation of different types of T cells and their effector mechanisms during immune responses,
- Recognition of pathogenic microorganisms by the host cells and molecular events thereafter.
- events and signals for maturation of naive B cells to antibody producing plasma cells and memory B cells.
- Optimization of B cell responses by intelligent design of new vaccines

Content
- Development and selection of CD4 and CD8 T cells, natural killer T cells (NKT), and regulatory T cells (Treg)
- NK T cells and responses to lipid antigens
- Differentiation, characterization, and function of CD4 T cell subsets such as Th1, Th2, and Th17
- Overview of cytokines and their effector function
- Co-stimulation (signals 1-3)
- Dendritic cells
- Evolution of the "Danger" concept
- Cells expressing Pattern Recognition Receptors and their downstream signals
- T cell function and dysfunction in acute and chronic viral infections

Literature
Documents of the lectures are available for download at: https://moodle-app2.let.ethz.ch/course/view.php?id=998

Prerequisites / notice
Immunology I and II

551-0317-00L | Immunology I          | W    | 3     | 2V    | A. Oxenius, M. Kopf                          |

Abstract
Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

Objective
Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

Content
- Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histoincompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

Literature

Prerequisites / notice
Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a “Sessionsprüfung”.

551-0512-00L | Current Topics in Molecular and Cellular Neurobiology | W    | 2     | 1S    | U. Suter                                       |

Number of participants limited to 8.
Abstract
The course is a literature seminar or "journal club". Each Friday a student, or a member of the Suter Lab in the Institute of Molecular Health Sciences, will present a paper from the recent literature.

Objective
The course introduces you to recent developments in the fields of cellular and molecular neurobiology. It also supports you to develop your skills in critically reading the scientific literature. You should be able to grasp what the authors wanted to learn i.e. their goals, why the authors chose the experimental approach they used, the strengths and weaknesses of the experiments and the data presented, and how the work fits into the wider literature in the field. You will present one paper yourself, which provides you with practice in public speaking.

Content
You will present one paper yourself. Give an introduction to the field of the paper, then show and comment on the main results (all the papers we present are available online, so you can show original figures with a beamer). Finish with a summary of the main points and a discussion of their significance.

You are expected to take part in the discussion and to ask questions. To prepare for this you should read all the papers beforehand (they will be announced a week in advance of the presentation).

Lecture notes
Presentations will be made available after the seminars.

Literature
We cover a range of themes related to development and neurobiology. Before starting your preparations, check with Jorge Pereira (jorge.pereira@biol.ethz.ch), who helps you with finding an appropriate paper.

Prerequisites / notice
You must attend at least 80% of the journal clubs, and give a presentation of your own. At the end of the semester there will be a 30 minute oral exam on the material presented during the semester. The grade will be based on the exam (45%), your presentation (45%), and a contribution based on your active participation in discussion of other presentations (10%).

551-0571-00L From DNA to Diversity (University of Zurich) W 2 credits 2V A. Hajnal, D. Bopp, E. Hafen

Abstract
Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

Objective
The evolution of the various body-plans is investigated by means of comparison of developmentally essential control genes of molecularly analysed model organisms.

Content
By the end of this module, each student should be able to
- recognize the universal principles underlying the development of different animal body plans.
- explain how the genes encoding the molecular toolkit have evolved to create animal diversity.
- relate changes in gene structure or function to evolutionary changes in animal development.

Key skills:
By the end of this module, each student should be able to
- present and discuss a relevant evolutionary topic in an oral presentation
- select and integrate key concepts in animal evolution from primary literature
- participate in discussions on topics presented by others

551-1003-00L Methods of Biological Analysis W 3 credits 3G R. Aebersold, M. Badertscher, K. Weis

Abstract
Principles of the most important separation techniques and the interpretation of molecular spectra.

Objective
Knowledge of the necessary basics and the possibilities of application of the relevant spectroscopical and separation methods in analytical chemistry.

Content

Lecture notes
A comprehensive script is available in the HCI-Shop. A summary of the part "Spektroskopie" defines the relevant material for the exam.

Literature
Prerequisites:
- Pretsch E., Bühlmann P., Badertscher M., Spektroskopische Daten zur Strukturaufklärung organischer Verbindungen, fünfte Auflage, Springer-Verlag, Berlin 2010;
- K. Cammann, Instrumentelle Analytische Chemie, Verfahren, Anwendungen, Qualitätssicherung, Spektrum Akademischer Verlag, Heidelberg, 2001;
- Pretsch 2001; 2006.

551-1105-00L Glycobiology W 4 credits 2V M. Aebi, T. Hennek

Abstract
Structural principles, nomenclature and different classes of glycosylation. The different pathways of N- and O-linked protein glycosylation and glycolipid biosynthesis in prokaryotes and eukaryotes are discussed. Specific glycan binding proteins and their role in deciphering the glycan code are presented. The role of glycans in infectious diseases, antigen mimicry and autoimmunity are discussed.

Objective
Detailed knowledge in 1) the different areas of prokaryotic and eukaryotic glycobiology, in particular in the biosynthesis of glycoproteins and glycolipids, 2) the cellular machinery required for these pathways, 3) the principles of carbohydrate/protein interaction, 4) the function of lectins, 5) the role of glycans in infectious disease.

Content
Structure and linkages; analytical approaches; N-linked protein glycosylation (ER, Golgi); glycan-assisted protein folding and quality control; O-linked protein glycosylation; glucosaminoglycans; glycolipids; prokaryotic glycosylation pathways; lectins; glycans and infectious disease

Lecture notes
handouts

Literature
The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells, and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptional framework and critical technological advances. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

Content
Milestones in Immunology: an old concepts and modern experiments

Objective
The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics. For each particular problem studied, we will work out how the various methods work and what their capabilities/limits are. The problem areas range from microbial metabolism to cancer cell metabolism and from metabolic networks to regulation networks in populations and single cells. Key methods to be covered are various modeling approaches, metabolic flux analyses, metabolomics and other omics.

Lecture notes
Script and original publications will be supplied during the course.

Prerequisites / notice
The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

551-1130-00L Current Research Topics in Cellular Biochemistry

Abstract
Introduction, presentation, evaluation, critical discussion and written analysis of recent scientific articles in the research area of cellular biochemistry.

Objective
The goal of the course is to train students in critical analysis of current research. Analysis by individual students will be assessed in oral and written form. The students will be able to introduce, present, evaluate, critically discuss and write about recent scientific articles in the research area of cellular biochemistry.

Content
The course is composed of seminar lectures on specific topics, followed by discussions of scientific papers relevant to these topics. The students will work in small groups under the supervision of a tutor. Each group prepares and presents a lecture, and leads a critical discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

Lecture notes
Original and review articles will be distributed by the lecturer.

Literature
Literaturunterlagen werden vor Beginn des Kurses auf folgender website zugänglich sein: Moodle Course https://moodle-app2.let.ethz.ch/course/view.php?id=1002

Prerequisites / notice
The course will be taught in English.

551-1323-00L Fundamentals of Biology II: Biochemistry and Molecular Biology

Abstract
The course provides an introduction to Biochemistry / Molecular Biology with some emphasis on chemical and biophysical aspects.

Objective
Topics include the structure-function relationship of proteins / nucleic acids, protein folding, enzymatic catalysis, cellular pathways involved in bioenergetics and the biosynthesis and breakdown of amino acids, glycan, nucleotides, fatty acids and phospholipids, and steroids. There will also be a discussion of DNA replication and repair, transcription, and translation.

Lecture notes
none

Literature

Prerequisites / notice
Some of the lectures are given in the English language.

636-0003-00L Biological Engineering and Biotechnology

Abstract
Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.

Module Code: BIO708

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Prerequisites
Knowledge of important viral and non-viral vector systems.
Knowledge of application in human diseases.
Knowledge of limiting factors.

University lecturers

B. Ludewig, C. M. Azzalin, V. Korkhov, M. Kopf, A. Oxenius, U. Sauer, N. Zamboni, M. Zampieri

W. C. M. Azzalin, V. Korkhov, M. Kopf, A. Oxenius

E. Weber-Ban

Autoren: Berg/Tymoczko/Stryer, 8th edition, Palgrave Macmillan, International edition (the English version will be preordered at the Polybuchhandlung)

Attendees will learn what information is contained in genetic sequencing data and how this information is extracted from the sequencing data. The main concepts introduced are:

- models in molecular evolution
- phylogenetic & phylodynamic inference
- maximum likelihood and Bayesian statistics
- stochastic processes

Attendees will apply these concepts to a number of applications yielding biological insight into:

- epidemiology
- pathogen evolution
- macroevolution of species

The course consists of three parts. We first introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Second, we employ these evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phylodynamics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades.

Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until 11:15 h), with no break.

The aim of the course is to provide an understanding of the evolution and population dynamics of microorganisms based on their genetic sequencing data, employing key concepts from molecular evolution, phylogenetics and phylodynamics. Throughout the course, we tie the models and methods closely with applications, mainly in the field of epidemiology and evolution.

Objective

Attendees will apply these concepts to a number of applications yielding biological insight into:

- epidemiology
- pathogen evolution
- macroevolution of species

The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:

* Yang, Z. 2006. Computational Molecular Evolution.
* Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST.

Basic knowledge in linear algebra, analysis, and statistics.
The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented.

After completing this course, students will be able to understand:
- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
- How to measure success?
- Outcome variables
- Improving the translational process
- Challenges of communication?
- How independent is translational science?
- Academic boundary conditions vs. industrial influences

Positive and negative examples will be illustrated by distinguished guest speakers.

#### Abstract
Translational science is a cross disciplinary scientific research that is motivated by the need for practical applications that help people. The course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key features into their future projects.

#### Objective
- What is translational science and what is it not?
- How to identify needs?
- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
- How to measure success?
- Outcome variables
- Improving the translational process

#### Abstract
The course covers the development of the nervous system (NS) with a focus on neurogenesis and migration, axon growth, synapse formation, mol. & cell. mechanisms, and diseases of the developing NS.

#### Objective
The aim is to give a deepened insight on the normal development, of the nervous system based on molecular, cellular and biochemical approaches.

#### Content
The main focus is on the development of the NS: Early development of the NS, cellular processes, nerve fiber growth, building of synapses and neuronal networks.

#### Lecture notes
Must be downloaded from OLAT: https://www.olat.uzh.ch/olat/dmz/as BIO344

#### Literature
The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on OLAT.

#### Prerequisites / notice
None. Bring something to write and your student ID

#### Abstract
The course covers the structure, plasticity and regeneration of the adult nervous system (NS) with focus on: sensory systems, cognitive functions, learning and memory, molecular and cellular mechanisms, animal models, and diseases of the NS.

#### Objective
The aim is to give a deepened insight into the structure, plasticity and regeneration of the nervous system based on molecular, cellular and biochemical approaches.

#### Content
The main focus is on the structure, plasticity and regeneration of the NS: biology of the adult nervous system; structural plasticity of the adult nervous system, regeneration and repair: networks and nerve fibers, regeneration, pathological loss of cells.

#### Lecture notes
ETH students: Lecture notes will be provided on Moodle https://moodle-app2.let.ethz.ch/course/view.php?id=694
Password will be provided at the beginning of the lecture.

UZH students: Lecture notes will be provided on OLAT: https://www.olat.uzh.ch/olat/dmz/

### Abstract
Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

### Objective
The course will teach fundamental concepts of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

### Content
Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

### Lecture notes
The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

### Literature
1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
2. Probability Theory: The Logic of Science by E. T. Jaynes

### Abstract

### Objective
Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.

### Content
The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

### Lecture notes
Course material Script, computer demonstrations, exercises and problem solutions

### Prerequisites / notice
Prerequisites: Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C. The course language is English.

### Abstract
This lecture uses the concepts from dynamical systems (Course: "Computable Chaos in Dynamical Systems") for the description of salient phenomena in complex examples from population dynamics, neuroinformatics and system biology. A particular focus is on the concept of limit cycle solutions and their coupling.

### Objective
Applying concepts from nonlinear dynamics to biological systems. Combining theoretical modeling with supporting computer simulations.

### Abstract
The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

### Objective
Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monologies of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

### Content
This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

Thirteen major areas of research have been selected, which cover the key concepts that have led to our current ideas of how the nervous system is built and functions. We will read both original papers and explore the conceptual the links between them and discuss the ‘sociology’ of science, the pursuit of basic science questions over a century of research.”

---

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 723 of 1432
Objectives

It is a commonplace that scientists rarely cite literature that is older than 10 years and when they do, they usually cite one paper that serves as the representative for a larger body of work that has long since been incorporated anonymously in textbooks. Worse than that, many authors have not even read the papers they cite in their own publications. This course, Foundations of Neuroscience is one antidote.

Thirteen major areas of research have been selected, which cover the key concepts that have led to our current ideas of how the nervous system is built and functions. Unusually, we will explore these areas of research by reading the original publications, instead of reading someone else's digested summary from a textbook or review. By doing this, we will learn how the discoveries were made, what instrumentation was used, how the scientists interpreted their own findings, and how their work, often over many decades and by many different scientists, linked together to generate the current view of mechanism and structure. We will also explore the personalities of the scientists and the context in which they made their seminal discoveries. To give one concrete example, in 1890 Roy and Sherrington showed that there was a neural activity-dependent regulation of blood flow in the brain. One hundred years later, Ogawa discovered that they could use Nuclear Magnetic Resonance (NMR) to measure a blood oxygen-level dependent (BOLD) signal, which they showed was neural activity-dependent. This discovery led to the development of human functional Magnetic Resonance Imaging (fMRI), which has revolutionized neuropsychology and neuropsychiatry. We will read both these original papers and explore the conceptual links between them and discuss the sociology of science. In this way, the pursuit of basic science questions over a century of research, led to an explosion in applications. We will also explore the personalities of the scientists and the context in which they made their seminal discoveries. Each week the course members will be given original papers to read for homework, they will have to write a short abstract for each paper. We will then meet weekly with the course leader (KACM) and an assistant for an hour-or-so long interactive seminar. An intimate knowledge of the papers will be assumed so that the discussion does not center simply on an exposition of the contents of the papers. Assessment will be done continuously as the individual students are asked to explain a figure, technique, or concept.

Contents

- Consciousness: From Philosophy to Neuroscience
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human performance in optimization of production lines
- Human performance in designing the driver assistance systems
- Human space and functional anthropometry
- Instrumentation was used, how the scientists interpreted their own findings, and how their work, often over many decades and by many different scientists, linked together to generate the current view of mechanism and structure.

Prerequisites / notice

We display articles pertaining to the issues we cover in the class on the course's webpage.

Literature

We display articles pertaining to the issues we cover in the class on the course's webpage.

Objective

The course's goal is to give an overview of the contemporary state of consciousness research, with emphasis on the contributions brought by modern cognitive neuroscience. We aim to clarify concepts, explain their philosophical and scientific backgrounds, and to present experimental protocols that shed light on a variety of consciousness related issues. By doing this, we will learn how the discoveries were made, what instrumentation was used, how the scientists interpreted their own findings, and how their work, often over many decades and by many different scientists, linked together to generate the current view of mechanism and structure. We will also explore the personalities of the scientists and the context in which they made their seminal discoveries. Each week the course members will be given original papers to read for homework, they will have to write a short abstract for each paper. We will then meet weekly with the course leader (KACM) and an assistant for an hour-or-so long interactive seminar. An intimate knowledge of the papers will be assumed so that the discussion does not center simply on an exposition of the contents of the papers. Assessment will be done continuously as the individual students are asked to explain a figure, technique, or concept.
Objective
To give an introduction to the fundamentals of physical human robot interaction, through lectures on the

376-1504-00L  Physical Human Robot Interaction (pHRI)  W  4 credits  2V+2U  R. Gassert, O. Lamberty, R. Rienner
Number of participants limited to 26.

Abstract
This course focuses on the emerging, interdisciplinary field of physical human-robot interaction, bringing together themes from robotics, real-time control, human factors, haptics, virtual environments, interaction design and other fields to enable the development of human-oriented robotic systems.

Objective
The objective of this course is to give an introduction to fundamentals of physical human robot interaction, through lectures on the underlying theoretical/mechanical aspects and application fields, in combination with a hands-on lab project. The course will guide students through the design and evaluation process of such systems.

By the end of this course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and design safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the defined design requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) investigate and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

Content
This course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neurophysiology, principles of human-robot interaction systems (kinematics, mechanical transmissions, robot sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance and force control, haptic rendering basics and issues in device design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical human-robot interaction, laboratory sessions and lab visits.

Students will attend periodic laboratory sessions where they will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://edu.haptics.org/index.php/HapticDevices/HapticPaddles), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, damping, time delays, sampling rate, sensor quantization, etc.) during rendering of different mechanical properties.

Lecture notes
Will be distributed through the document repository before the lectures.

Mathematics I covers mathematical concepts and techniques necessary to model, solve and discuss scientific problems - notably through differential equations.

Main focus of Mathematics II: multivariable calculus and partial differential equations.

Mathematics is of ever increasing importance to the Natural Sciences and Engineering. The key is the so-called mathematical modelling, i.e. the translation of problems from outside of mathematics into mathematics, the study of the mathematical problems (often with the help of high level mathematical software packages) and the interpretation of the results in the original environment.

The goal of Mathematics I and II is to provide the mathematical foundations relevant for this paradigm. Differential equations are by far the most important tool for modelling and are therefore a main focus of both of these courses.

1. Linear Algebra and Complex Numbers:
   systems of linear equations, Gauss-Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, cartesian and polar forms for complex numbers, complex powers, complex roots, fundamental theorem of algebra.

2. Single-Variable Calculus:
   review of differentiation, linearisation, Taylor polynomials, maxima and minima, antiderivative, fundamental theorem of calculus, integration methods, improper integrals.

3. Ordinary Differential Equations:
   separable ordinary differential equations (ODEs), integration by substitution, 1st and 2nd order linear ODEs, homogeneous systems of linear ODEs with constant coefficients, introduction to 2-dimensional dynamical systems.

4. Multivariable Differential Calculus:
   functions of several variables, partial differentiation, curves and surfaces in space, scalar and vector fields, gradient, curl and divergence.

5. Multivariable Integral Calculus:
   multiple integrals, line and surface integrals, work and flow, Green, Gauss and Stokes theorems, applications.

6. Partial Differential Equations:
   separation of variables, Fourier series, heat equation, wave equation, Laplace equation, Fourier transform.

Abstract
6-months research study with topics from the chosen major within the field of Health Sciences and Technology. In general, it includes the study of existing literature, the specification of the research question, the choice of the methodological approach, the collection, analysis and interpretation of data, and the written and oral reporting of the findings.

Objective
The students shall demonstrate their ability to carry out a structured, scientific piece of work independently.

Prerequisites / notice
The Master Thesis can only be started after the Bachelor Degree was obtained and/or master admission requirements have been fulfilled.

Course Units for Additional Admission Requirements
The courses below are only for MSc students with additional admission requirements.

Abstract
This course discusses the quantisation of fields in order to introduce a coherent formalism for the combination of quantum mechanics and special relativity.

- Relativistic quantum mechanics
- Quantisation of bosonic and fermionic fields
- Interactions in perturbation theory
- Scattering processes and decays
- Radiative corrections

Objective
The goal of this course is to provide a solid introduction to the formalism, the techniques, and important physical applications of quantum field theory. Furthermore it prepares students for the advanced course in quantum field theory (Quantum Field Theory II), and for work on research projects in theoretical physics, particle physics, and condensed-matter physics.

Abstract
Low energy particle physics provides complementary information to high energy physics with colliders. In this lecture, we will concentrate on selected experiments, using mainly neutrons and muons, which have significantly improved our understanding of particle physics today.

Objective
The course aims to provide an introduction to selected advanced topics in low energy particle physics with neutrons and muons.

Content
Low energy particle physics provides complementary information to high energy physics with colliders. At the Large Hadron Collider one directly searches for new particles at energies up to the TeV range. In a complementary way, low energy particle physics indirectly probes the existence of such particles and provides constraints for "new physics", making use of precision and high intensities.

Besides the sensitivity to effects related with new physics (e.g. lepton flavor violation, symmetry violations, CPT tests, search for electric dipole moments, new low mass exchange bosons etc.), low energy physics provides the best test of QED (electron g-2), the best tests of bound-state QED (atomic physics and exotic atoms), precise determinations of fundamental constants, information about the CKM matrix, precise information on the weak and strong force even in the non-perturbative regime etc.

In this lecture, we will concentrate on selected experiments, using mainly neutrons and muons, which have significantly improved our understanding of particle physics today. Starting from a general introduction on high intensity/high precision particle physics and the main characteristics of muons and neutrons and their production, we will then focus on the discussion of fundamental problems and ground-breaking experiments:

- Production and characteristics of muon and neutron beams
- Ultracold neutron production
- Measurement of the neutron lifetime and electric dipole moment
- The neutron in the gravitational field and its electric charge
- Muon and neutron decay correlations
- Lepton flavour violations with muons to search for new physics
- What atomic physics can do for particle physics and vice versa
- Laser experiments at accelerators
- From myonic hydrogen to the proton structure and bound-state QED
- From piconic hydrogen to the strong interaction and effective field theories
- etc.

### Lecture notes
- Slides are handed out regularly, see www.physik.uzh.ch/lectures/empp/
- See lecture home page: http://ihp-lx2.ethz.ch/AstroTeilchen/

### Literature
- A. Rubbia
- D.O. Caldwell, Current Aspects of Neutrino Physics, Springer.

### Objective
- To gain familiarity with the formalism of lattice field theories and their numerical simulation methods.
- To understand the theoretical background and the computational tools, like Monte Carlo simulations, used for the quantitative study of quarks and gluons.
- To explain the relevant mathematical background (finite groups, Lie groups and algebras as well as their representations), and illustrate their important role in modern physics.

### Content
- Basics: Bethe-Bloch, radiation length, nucl. interaction length, fixed-target vs. collider, principles of measurements: energy- and momentum-conservation, etc
- Physics and layout of accelerators
- Charged particle tracking and vertexing
- Calorimetry
- Particle identification
- Analysis methods: invariant and missing mass, jet algorithms, b-tagging
- Special detectors: extended airshowers, emulsions, cryogenic detectors for dark matter detection
- MC simulations (GEANT), trigger, readout, electronics
- Examples of modern experiments
- Equivalence principle
- Tidal force and spacetime
- Special Relativity
- Lorentzian metric
- Energy-momentum tensor, field equations, Newtonian limit, Post-Newtonian approximation, Schwarzschild solution, Mercury’s perihelion precession, light deflection
- Basic understanding of general relativity, its mathematical foundations, and some of the interesting phenomena it predicts.

### Objective
- To gain familiarity with the formalism of lattice field theories and their numerical simulation methods.
- To understand the theoretical background and the computational tools, like Monte Carlo simulations, used for the quantitative study of quarks and gluons.
- To explain the relevant mathematical background (finite groups, Lie groups and algebras as well as their representations), and illustrate their important role in modern physics.

### Content

The aim is to understand the need of physics beyond the Standard Model, the basic techniques of model building in theories BSM and the elements of collider physics required to analyze their phenomenological implications. After an introduction to the SM and alternative theories of electroweak symmetry breaking, we will investigate these issues in the context of models with warped extra dimensions.

After the course the student should have a good knowledge of some of the most relevant theories beyond the Standard Model and have the techniques to understand those theories that have not been surveyed in the course. He or she should be able to compute the constraints on any model of new physics, its successes explaining current experimental data and its main phenomenological implications at colliders.

The former title of this course unit was "The Physics Beyond the Standard Model". If you already got credits for "The Physics Beyond the Standard Model" (402-0898-00L), you cannot get credits for "The Physics of Electroweak Symmetry Breaking" (402-0898-00L).

- The Higgs mechanism and its implementation in the Standard Model
- radiative corrections and the screening theorem
- theoretical constraints on the Higgs mass; the hierarchy problem
- Higgs production in e+e- collisions
- Higgs production at hadron colliders
- Higgs decays to fermions and vector bosons
- Higgs differential distributions, rapidity distribution, pt spectrum and jet vetoes
- Higgs properties and beyond the Standard Model perspective
- Outlook: The Higgs sector in weakly coupled and strongly coupled new physics scenarios.

Experimental part:
- reminders of detectors/accelerators
- reminders of statistics: likelihoods, hypothesis testing
- reminders of multivariate techniques: Neural Networks, Decision Trees
- Main topics:
  - pre-history (pre-LEP)
  - LEP1: measurements at the Z-pole
  - LEP2: towards the limit mH<114 GeV
  - TeVatron searches
  - LHC:
    -- main channels overview
    -- dissect on analysis
    -- combine information from all channels
    -- differential measurements
    -- off-shell measurements
  - Future:
    -- pseudo-observables / EFT
    -- Beyond Standard Model
- Higgs Hunter's Guide
(by S.Dawson, J. Gunion, H. Haber and G. Kane)

Prerequisites:
- Quantum Field Theory I, Phenomenology of Particle Physics I
- reminders of detectors/accelerators
- reminders of statistics: likelihoods, hypothesis testing
- reminders of multivariate techniques: Neural Networks, Decision Trees

- Main topics:
  - pre-history (pre-LEP)
  - LEP1: measurements at the Z-pole
  - LEP2: towards the limit mH<114 GeV
  - TeVatron searches
  - LHC:
    -- main channels overview
    -- dissect on analysis
    -- combine information from all channels
    -- differential measurements

  - Future:
    -- pseudo-observables / EFT
    -- Beyond Standard Model
- Higgs Hunter's Guide
(by S.Dawson, J. Gunion, H. Haber and G. Kane)

Prerequisites:
- Quantum Field Theory I, Phenomenology of Particle Physics I

This is the first of two courses, introducing particle accelerators from a theoretical point of view and covers state-of-the-art modeling techniques. It emphasizes the multidisciplinary aspect of the field, both in methodology (numerical and computational methods) and with regard to applications such as medical, industrial, material research and particle physics.

You understand the building blocks of particle accelerators. Modern analysis tools allows you to model state-of-the-art particle accelerators. In some of the exercises you will be confronted with next generation machines. We will develop a Python simulation tool (AccelEGOrator) that reflects the theory from the lecture.

Here is the rough plan of the topics, however the actual pace may vary relative to this plan.

- Particle Accelerators an Overview
- Relativity for Accelerator Physicists
- Building Blocks of Particle Accelerators
- Lie Algebraic Structure of Classical Mechanics and Applications to Particle Accelerators
- Symplectic Maps & Analysis of Maps
- Particle Tracking
- Linear & Circular Machines
- Cyclotrons
- Free Electron Lasers
- Collective effects in linear approximation
- Preview of Particle Accelerator Physics and Modeling II

During the semester break participating students stay for 4 weeks at CERN and perform experimental work relevant to our particle physics. Knowledge acquired on basics of perturbative QCD, both of theoretical and experimental nature. Ability to perform simple calculations of perturbative QCD, as well as to understand modern publications on theoretical and experimental aspects of perturbative QCD.

Students learn, by doing, the needed skills to perform a small particle physics experiment: setup, problem solving, data taking, analysis, interpretation and presentation in a written report of publication quality.

This course unit is an alternative if no suitable “Proseminar Theoretical Physics” is available or if the proseminar is already overbooked.

The aim is to lead students from a reasonable knowledge of advanced calculus, basic knowledge of general topology and solid knowledge of linear algebra to fundamental knowledge of differentiable manifolds and their basic tools. Riemannian geometry, some basic Lie theory, and de Rham cohomology will be developed as applications.

The course is an introduction to differential and riemannian geometry.

The course is an introduction to differential and riemannian geometry.

A guided self-study of original papers and of advanced textbooks in theoretical physics. Within the general topic, determined each semester, participants give a presentation on a particular subject and deliver a written report.

This course unit is an alternative if no suitable “Proseminar Theoretical Physics” is available or if the proseminar is already overbooked.

**Abstract**

Foundations of information systems from a user's viewpoint. The focus is on structured data: relational databases, the data language SQL, designing relational databases. Additional topics: Information Retrieval (searching documents), and estimating their relevance and authority with respect to free-text queries; XML as a format for data exchange; Characteristics and processing of "Big Data"

**Objective**

Following the course should enable students to

1. answer non-trivial queries on existing relational databases by formulating (entry-level) SQL statements, as well as to add new database content and to update or delete existing content,

2. formalize facts as perceived in the real world in terms of the entity-relationship model, and derive a set of normalized relations (tables) which define the structure of a relational database

3. explain how a database management system (DBMS) essentially works and what kind of services it provides

4. understand how a web search engine such as Google basically works

5. know and apply the core concepts to structure and query XML-documents

6. list the characteristics of "Big Data" and know the basics of processing "Big Data"

**Content**

Die Lehrveranstaltung vermittelt Grundlagen und Konzepte von Informationssystemen aus der Sicht eines Anwenders.

Im Zentrum stehen relationale Datenbanksysteme, die Abfrage- und Datenmanipulationssprache SQL, sowie der Entwurf bzw. die Strukturierung relationaler Datenbanken. Dieser Stoff wird auch in praktischen Übungen vertieft.

Weitere Themen sind der Umgang mit unstrukturierten und semistrukurierten Daten, die Integration von Daten aus verschiedenen autonomen Informationssystemen, sowie eine Übersicht der Architektur von Datenbanksystemen.

**Inhalt:**

1. Einleitung.
2. Das Relationenmodell.
3. Die Abfrage- und Datenmanipulationssprache SQL
5. Architektur relationaler Datenbanksysteme.

**Literature**

Vorlesungsunterlagen (PowerPoint Folien, teilweise auch zusätzlicher Text) werden auf der Web-Site publiziert. Der Kauf eines Buches wird nicht vorausgesetzt.

**Abstract**

The course covers the fundamental concepts of computer programming with a focus on systematic algorithmic problem solving. Teached language is C++. No programming experience is required.

**Objective**

Primary educational objective is to learn programming with C++. When successfully attended the course, students have a good command of the mechanisms to construct a program. They know the fundamental control and data structures and understand how an algorithmic problem is mapped to a computer program. They have an idea of what happens "behind the scenes" when a program is translated and executed.

Secondary goals are an algorithmic computational thinking, understanding the possibilities and limits of programming and to impart the way of thinking of a computer scientist.

**Content**

The course covers fundamental data types, expressions and statements, (Limits of) computer arithmetic, control statements, functions, arrays, structural types and pointers. The part on object orientation deals with classes, inheritance and polymorphy, simple dynamic data types are introduced as examples, in general, the concepts provided in the course are motivated and illustrated with algorithms and applications.

**Lecture notes**

A script written in English will be provided during the semester. The script and slides will be made available for download on the course web page.

**Literature**

Byrne Stroustrup: Einführung in die Programmierung mit C++, Pearson Studium, 2010

**Prerequisites / notice**

From AS 2013, an admission to the exam does not any more formally require an attending of the recitation sessions. Handing in solutions to the weekly exercise sheets is thus not mandatory, but we strongly recommend it.

Examination is a one hour-long written test.
Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects. The following topics are covered: publishing over the internet, processing and visualizing time series, visualizing multi-dimensional data, managing data with lists and tables and with relational databases, introduction to macro programming, universal methods for algorithm design.

The goal of this lecture is an algorithmically oriented introduction to programming. This lecture is an introduction to programming based on the language C++. We cover fundamental types, control statements, functions, arrays, and classes. The concepts will be motivated and illustrated through algorithms and applications.

All materials for the lecture are available at www.evim.ethz.ch

Als Lernsprachen werden Pascal und Matlab verwendet.

The students learn to
- choose and apply appropriate tools from computer science,
- process and analyze real-world data from their subject of study,
- handle the complexity of real-world data,
- know universal methods for algorithm design.

The students spend most of their time working through electronic tutorials and discussing their results with teaching assistants.

Abstract

The unit "Computer Science in Secondary School Mathematics" addresses key contributions of computer science to general education, the tight relations between the algorithmic and the mathematical way of thinking, and the thoughtful choice of computer science topics for high school mathematics classes.

Objective

The general goal of the course consists in presenting ways to teach fundamentals of computer science, which are closely related to contents and methods of mathematics. After attending the course unit, a mathematics teacher is able to teach selected fundamentals of computer science in mathematics classes.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

Content

The main topics of the course unit "Computer Science in Secondary School Mathematics" represent a scientific and didactic added value for mathematics classes.

The course covers the didactics of logic, of cryptography, of finite state automata, of computability and of the introduction to programming. The students develop the understanding of fundamental scientific concepts such as algorithm, program, complexity, determinism, computation, automata, verification, testing, security of a cryptosystem and secure communication. They reflect on ways to embed them into a scientifically sound and didactically sustainable mathematics course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

Literature

Lectures

252-0860-00L Discrete Mathematics Z 4 credits 2V+1U A. Steger, E. Welzl

Foundations of Discrete Mathematics; combinatorics (elementary counting), graph theory (paths, walks, euler circuits, matchings, trees, planar graphs), algebra (modular arithmetic, groups, fields), applications (network flows, cryptography, coding theory).

251-0100-00L Computer Science Colloquium E- 0 credits 2K Lecturers

Invited talks, covering the entire scope of computer science. External Listeners are welcome at no charge. A detailed schedule is published at the beginning of each semester.

**Data: 06.12.2017 12:57 Autumn Semester 2015 Page 739 of 1432**
This lecture gives an introduction to theoretical computer science, presenting the basic concepts and methods of computer science in its historical context. We present computer science as an interdisciplinary science which, on the one hand, investigates the border between the possible and the impossible and the quantitative laws of information processing, and, on the other hand, designs, analyzes, verifies, and implements computer systems.

The main topics of the lecture are:
- alphabets, words, languages, measuring the information content of words, representation of algorithmic tasks
- finite automata, regular and context-free grammars
- Turing machines and computability
- complexity theory and NP-completeness
- design of algorithms for hard problems

Lecture notes
The lecture is covered in detail by the textbook "Theoretical Computer Science".

Basic literature:

Further reading:

More exercises and examples in:
6. A. Asteroth, Ch. Baier: Theoretische Informatik

During the semester, two non-obligatory test exams will be offered.

252-0061-00L Systems Programming and Computer Architecture O 8 credits 4V+2U+1A T. Roscoe

Abstract
Introduction to computer architecture and system programming:
Instruction sets, storage hierarchies, runtime structures with an emphasis on computers as engines for the execution of compiled programs. Interaction between system software and the hardware. Problems that arise from the final representation, performance measurement and tuning, and program portability issues are covered.

Objective
The objective is to allow students to understand all aspects of the execution of compiled (C) programs on modern architectures -- the instruction set, the storage resources (registers, stack, memory), input/output, the impact of compiler decisions, and the interaction between the operating system and hardware. Two main themes are correctness issues (esp. those that arise from the finite representation of data) and performance issues (incl. measurement and tuning issues). The interface to the operating system is discussed to prepare for subsequent classes on more advanced systems topics.

The two key goals are:
1) To equip students with a thorough understanding of how to write correct programs that run fast on modern computer, and
2) How to write correct and efficient low-level systems code.

This course does not cover how to design or build a processor or computer.

Content
This course provides an overview of "computers" as a platform for the execution of (compiled) computer programs. This course provides a programmer's view of how computer systems execute programs, store information, and communicate. The course introduces the major computer architecture structures that have direct influence on the execution of programs (processors with registers, caches, other levels of the memory hierarchy, supervisor/kernel mode, and I/O structures) and covers implementation and representation issues only to the extent that they are necessary to understand the structure and operation of a computer system.

The course attempts to expose students to the practical issues that affect performance, portability, security, robustness, and extensibility. This course provides a foundation for subsequent courses on operating systems, networks, compilers and many other courses that require an understanding of the system-level issues. Topics covered include: machine-level code and its generation by optimizing compilers, address translation, input and output, event handlers, performance evaluation and optimization (with a focus on the practical aspects of data collection and analysis).

Literature
The course is based in part on "Computer Systems: A Programmer's Perspective" (2nd Edition) by R. Bryant and D. O'Hallaron, with some additional material.

Prerequisites / notice
252-0024-00L Parallel Programming,
252-0014-00L Digital Circuits

401-0613-00L Probability and Statistics O 6 credits 3V+2U P. Embrechts

Abstract
Basic concepts from probability and statistics:
- introduction to probability theory
- short introduction to basic concepts and methods from statistics
Objective

a) ability to understand the covered methods from probability theory and to apply them in other contexts
b) probabilistic thinking and stochastic modelling
c) ability to perform basic statistical tests and to interpret the results

Content

Basic concepts from probability and statistics with special emphasis on the topics needed in computer science

The conceptual goals are

- the laws of randomness and probabilistic thinking (thinking in probabilities)
- understanding and intuition for stochastic modelling
- simple and basic methods from statistics

The contents of the course encompasses

- an introduction to probability theory: basic concepts (probability space, probability measure), independence, random variables, discrete and continuous distributions, conditional probability, expectation and variance, limit theorems

- methods from statistics: parameter estimation, maximum likelihood and moment methods, tests, confidence intervals

Lecture notes

Lecture notes for the course (in German) will be made available electronically at the beginning of the course.

401-0663-00L Numerical Methods for CSE O 7 credits 4V+2U R. Hiptmair

Abstract

The course gives an introduction into fundamental techniques and algorithms of numerical mathematics which play a central role in numerical simulations in science and technology. The courses focuses on fundamental ideas and algorithmic aspects of numerical methods. The exercises involve actual implementation of numerical methods.

Objective

* Knowledge of the fundamental algorithms in numerical mathematics
* Knowledge of the essential terms in numerical mathematics and the techniques used for the analysis of numerical algorithms
* Ability to choose the appropriate numerical method for concrete problems
* Ability to interpret numerical results
* Ability to implement numerical algorithms efficiently

Content

1. Direct Methods for linear systems of equations
2. Iteration Methods
3. Iterative Methods for non-linear systems of equations
4. Krylov methods for linear systems of equations
5. Approximation of Functions
6. Least Squares Techniques
7. Filtering Algorithms
8. Numerical Quadrature
9. Clustering Techniques
10. Numerical Linear Algebra
11. Single Step Methods for ODEs
12. Stiff Integrators
13. Structure Preserving Integrators

Lecture notes

Lecture slides will be made available to participants.

Literature

M. Hanke-Bourgeois “Grundlagen der Numerischen Mathematik und des wissenschaftlichen Rechnens”, BG Teubner, 2002
C. Moler, Numerical computing with MATLAB, SIAM, 2004

Prerequisites / notice

The course will be accompanied by programming exercises relying on the high level programming language MATLAB. A brief introduction to Matlab will be given during the first week.

Compensatory Courses

**Compensatory major courses count as compensatory courses.**

<td>This course uses compilers as example to expose modern software development techniques. The course introduces the students to the fundamentals of compiler construction. Students will implement a simple yet complete compiler for an object-oriented programming language for a realistic target machine. Students will learn the use of appropriate tools (parser generators); the implementation language is Java. Throughout the course, students learn to apply their knowledge of theory (automata, grammars, stack machines, program transformation) and well-known programming techniques (module definitions, design patterns, frameworks, software reuse) in a software project. Specific topics: Compiler organization. Lexical analysis. Top-down parsing via recursive descent, table-driven parsers, bottom-up parsing. Symboltables, semantic checking. Code generation for a simple RISC machine: expression evaluation, straight line code, conditionals, loops, procedure calls, simple register allocation techniques. Storage allocation on the stack, parameter passing, runtime storage management, heaps. Special topics as time permits: introduction to global dataflow and its application to register allocation, instruction scheduling.</td>

252-0213-00L Distributed Systems O 8 credits 6G+1A F. Mattern, R. Wattenhofer
Distributed control algorithms (mutual exclusion, logical clocks), communication models (RPC, synchronous/asynchronous communication, broadcast, events, tuple spaces), middleware, service- and resource-oriented architectures (SOAP, REST), security, fault-tolerance (failure models, consensus), replication (primary copy, 2PC, 3PC, Paxos, quorum systems), shared memory (spin locks, concurrency).

Become acquainted with pertinent technologies and architectures of distributed systems.

We present the characteristics and concepts of distributed systems, and discuss distributed control algorithms (flooding, mutual exclusion, logical clocks), communications models (remote procedure call, client-server models, synchronous and asynchronous communication), abstract communication principles (broadcast, events, tuple spaces), name services, communication middleware for open systems (e.g., REST, SOAP), infrastructure for ad hoc networking (JINI), cloud computing, and mechanisms for security and safety. Having a distributed system may permit getting away with failures and malfunctions of parts of the system. We discuss fault-tolerance issues (models, consensus, agreement) as well as replication issues (primary copy, 2PC, 3PC, Paxos, quorum systems, distributed storage) and problems with asynchronous multiprocessing (shared memory, spin locks, concurrency). To get familiar with message passing communication, some of the exercises will be devoted to a practical lab where participants will develop software for a mobile platform (smartphones).

### Major in Computational Science

The lecture 151-0107-20L High Performance Computing for Science and Engineering I in the autumn semester can only together with the lecture 401-0686-10L High Performance Computing for Science and Engineering II in the spring semester be accredited as compulsory course.

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 742 of 1432
The growing popularity of open-source projects provides a fertile ground for creative software developers to demonstrate and hone their design and implementation skills. This course is an opportunity to take part in leading-edge software construction and gain academic credit for it. The EiffelStudio environment (in 2006, 2 million lines of open-source code) provides a rich basis of potential extensions and new developments. The course is not structured as a traditional set of lectures but is laboratory-style: students choose a project and meet regularly with assistants to report progress and obtain guidance. The results produced should meet standards of quality software engineering; the best developments are candidate for inclusion in actual software releases. This is an opportunity to learn by doing and to encounter the challenges of large, production-grade software development.

252-3110-00L Human Computer Interaction

**Content**

The course provides an introduction to the field of human-computer interaction, emphasising the central role of the user in system design. Through detailed case studies, students will be introduced to different methods used to analyse the user experience and shown how these can inform the design of new interfaces, systems and technologies.

**Abstract**

The course will introduce students to various methods of analysing the user experience, showing how these can be used at different stages of system development from requirements analysis through to usability testing. Students will get experience of designing and carrying out user studies as well as analysing results. The course will also cover the basic principles of interaction design. Practical exercises related to touch and gesture-based interaction will be used to reinforce the concepts introduced in the lecture. To get students to further think beyond traditional system design, we will discuss issues related to ambient information and awareness.

**Objective**

The goal of the course is that students should understand the principles of user-centred design and be able to apply these in practice.

**Content**

Prerequisites:
- Basics of computer architecture.

Prerequisites / notice
- Script and exercises sheets.
- Solve programming problems from previous ACM Programming Contests (see http://acm.uva.es/problemset/); learn and use efficient programming methods and algorithms.

**Literature**

252-4101-00L Applied Computer Architecture

**Abstract**

Solve programming problems from previous ACM Programming Contests (see http://acm.uva.es/problemset/); learn and use efficient programming methods and algorithms.

**Objective**

The course provides an introduction to the field of human-computer interaction, emphasising the central role of the user in system design. Through detailed case studies, students will be introduced to different methods used to analyse the user experience and shown how these can inform the design of new interfaces, systems and technologies.

**Content**

- Introduction to HPC for scientists and engineers
- Dataset creation and management
- Numerical methods for modern biology
- Application of high-performance computing in science and engineering
- Parallel algorithm design and implementation
- Performance analysis and optimization
- Case studies in high-performance computing
- Final project and presentation

**Objective**

- Understand the function, the design and the performance modeling of parallel computer systems.
- Know which computer architecture is hidden behind a professional digital audio mixing desk.
- Know which computer architectures are applied for driver assistance systems.
- Know which architecture is behind the alarm center of the Swiss Railway (SBB).
- Know which computer architectures are applied for driver assistance systems.
- Know which computer architecture allows the control of the over 1000 magnets at the Swiss Light Source (SLS).
- Know which computer architecture is behind the alarm center of the Swiss Railway (SBB).
- Know which computer architecture is hidden behind a professional digital audio mixing desk.
- Know how can data volumes about 30 TB/s, produced by a proton accelerator, be processed in real time.
- Know if the weather forecast can also be processed with GPUs.
- Know how a good computer architecture be found.
- Know which are the driving factors in successful computer architecture design.

**Literature**

Abstract
The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

Objective
Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the moneculures of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

Content
This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

Abstract
The course is an introduction to research in software engineering, based on reading and presenting high quality research papers in the field. The instructor may choose a variety of topics or one topic that is explored through several papers.

Objective
The main goals of this seminar are 1) learning how to read and understand a recent research paper in computer science; and 2) learning how to present a technical topic in computer science to an audience of peers.

Content
The focus of the course this year is on reliability of high-performance programs.

Compulsory Electives in Humanities, Social and Political Sciences

Abstract
The Bachelor thesis is the final requirement of the BSc program and is supervised by one of the D-INFK professors. The thesis encourages students to show and produce a scientifically structured work.

Objective
In their Bsc thesis students should demonstrate their ability to carry out independent, structured scientific work.

Prerequisites / notice
The supervisor of the thesis defines the task, start and end date. A written report will be prepared on the scientific studies carried out, followed by a final presentation. The thesis must be handed in within 6 months.

**Objective**

- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

**Prerequisites / notice**

Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

**851-0242-07L | Human Intelligence**

**Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).**

**Abstract**

The focus will be on the book “Intelligenz: Grosse Unterschiede und ihre Folgen” by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

**Objective**

- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

**851-0242-08L | Research Methods in Educational Science**

**Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).**

**Abstract**

Literature from the learning sciences is critically discussed with a focus on research methods. At the first meeting, working groups will be assembled and two further meetings will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

**Objective**

- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

<td>4 credits</td>
<td>3G</td>
<td>G. Serafini, J. Hromkovic</td>
</tr>
</tbody>
</table>

**Abstract**

The unit "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The course deals with the thoughtful choice of educational contents for computer science classes, which takes into account its comprehensibility for different age groups as well as didactic approaches suitable for a successful knowledge transfer.

**Objective**

The general objective of the course consists in highlighting the tight connection between the mathematical and algorithmic way of thinking and the approaches adopted by engineering disciplines, and in reflecting on teaching approaches for sustainable computer science teaching activities.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.
Content
The course "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The chosen topics support the young learners in developing a unique and indispensable way of thinking, in enhancing their understanding of our world as well as in achieving university education entrance qualifications.

The main topics of the course unit "Subject Didactics of Computer Science I" are the didactics of finite state automata, of formal languages and of the introduction to programming. The unit focuses on contents of computer science that contribute to general education. This involves the understanding of fundamental scientific concepts such as algorithm, complexity, determinism, computation, automata, verification, testing and programming language as well as the way to embed them into a scientifically sound and didactically sustainable computer science course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

Lecture notes
Unterlagen und Folien werden zur Verfügung gestellt.

Literature

271-0122-00L  Teaching Internship Including Examination Lessons in Computer Science O  4 credits  9P  J. Hromkovic, G. Serafini

Abstract
Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.

Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Content
Teaching Internship Computer Science for TC and Teaching Diploma Computer Science as Minor Subject.

Repetition of the Teaching Internship is excluded even if Examination Lessons are to be repeated.

271-0103-00L  Mentored Work Subject Didactics Computer Science A  2 credits  4A  J. Hromkovic, G. Serafini

Abstract
In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse on certain topics from a subject-based and pedagogical angle.

Objective
The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle at least potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Content
Thematische Schwerpunkte
Die Gegenstände der mentorierten Arbeit in Fachdidaktik stammen in der Regel aus dem gymnasialen Unterricht.

Lernformen

Literature
Die Literatur ist themenspezifisch. Die Studierenden beschaffen sie in der Regel selber (siehe Lernziele). In besonderen Fällen wird sie vom Betreuer zur Verfügung gestellt.

Prerequisites / notice
Die Arbeit sollte vor Beginn des Praktikums abgeschlossen werden.

**Autumn Semester 2015**  
**Page 747 of 1432**
After this course students will know fundamental techniques from probabilistic combinatorics for designing randomized algorithms and will be able to apply them to solve typical problems in these areas.

Randomized Algorithms are algorithms that "flip coins" to take certain decisions. This concept extends the classical model of deterministic algorithms and has become very popular and useful within the last twenty years. In many cases, randomized algorithms are faster, simpler or just more elegant than deterministic ones. In the course, we will discuss basic principles and techniques and derive from them a number of randomized methods for problems in different areas.

Outline:
- Introduction to classical game theoretic concepts,
- Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity,
- The cost difference between an optimum under central control and an equilibrium under selfish agents, known as the "price of anarchy".
- Auction-like mechanisms and algorithms that "direct" the actions of selfish agents into a certain desired equilibrium situation.
- Selected current research topics of Algorithmic Game Theory, such as Web-Search Based Keyword Auctions, or Information Cascading in Social Networks

In teams of two, participants in this seminar conduct their own research project. Each team is advised by one of the researchers serving as lectures in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students` independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction). The course "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The course deals with the thoughtful choice of educational contents for computer science classes, which takes into account its comprehensibility for different age groups as well as didactic approaches suitable for a successful knowledge transfer.

The general objective of the course consists in highlighting the tight connection between the mathematical and algorithmic way of thinking and the approaches adopted by engineering disciplines, and in reflecting on teaching approaches for sustainable computer science teaching activities.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

The course "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The chosen topics support the young learners in developing a unique and indispensable way of thinking, in enhancing their understanding of our world as well as in achieving university education entrance qualifications.

The main topics of the course unit "Subject Didactics of Computer Science I" are the didactics of finite state automata, of formal languages and of the introduction to programming. The unit focuses on contents of computer science that contribute to general education. This involves the understanding of fundamental scientific concepts such as algorithm, complexity, determinism, computation, automata, verification, testing and programming language as well as the way to embed them into a scientifically and didactically sustainable computer science course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

Introductory Practical in Computer Science
6ECTS
J. Hromkovic

The course Professional Exercises offers the opportunity for additional school-relevant activities. Wird von der Praktikumslehrperson bestimmt.

During the introductory teaching practice, the students sit in on five lessons given by the teacher responsible for their teaching practice, and In the course Professional Exercises the students achieve additional school-relevant experiences. The students carry out individually

O 2 credits

9P

Achievement of additional school-relevant experiences. The students carry out individually specified, practice related projects, in which they support, document or reflect on learning processes.

The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Thematic Schwerpunkte
Die Gegenstände der mentorierten Arbeit in Fachdidaktik stammen in der Regel aus dem gymnasialen Unterricht.

Lernformen

Die Literatur ist themenspezifisch. Die Studierenden beschaffen sie sich in der Regel selber (siehe Lernziele). In besonderen Fällen wird sie vom Betreuer zur Verfügung gestellt.

лиз

Objective
Right at the start of their training, students acquire initial experience with the observation of teaching, the establishment of concepts for teaching and the implementation of teaching. This early confrontation with the complexity of everything that teaching involves helps students decide whether they wish to and, indeed, ought to, continue with their teaching practice. It forms a basis for the subsequent pedagogical and subject-didactics training.

Title
Teaching Internship in Computer Science

Abstract
The teaching practice takes in 50 lessons: 30 are taught by the students, and the students sit in on 20 lessons. The teaching practice lasts 10 weeks. It gives students the opportunity to implement the contents of their subject didactics training in the classroom. Students also conduct work assignments in parallel to their teaching practice.

Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics in their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They acquire the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Data Retrieval

W 4 credits 2V+1U T. Hofmann

Introduction to information retrieval with a focus on text documents and images. Main topics comprise extraction of characteristic features from documents, index structures, retrieval models, search algorithms, benchmarking, and feedback mechanisms. Searching the web, images and XML collections demonstrate recent applications of information retrieval and their implementation.

Randomized Algorithms and Probabilistic Methods

W 7 credits 3V+2U+1A A. Steger

Las Vegas & Monte Carlo algorithms; inequalities of Markov, Chebyshev, Chernoff; negative correlation; Markov chains: convergence, rapidly mixing; generating functions; Examples include: min cut, median, balls and bins, routing in hypercubes, 3SAT, card shuffling, random walks

After this course students will know fundamental techniques from probabilistic combinatorics for designing randomized algorithms and will be able to apply them to solve typical problems in these areas.

Randomized Algorithms are algorithms that "flip coins" to take certain decisions. This concept extends the classical model of deterministic algorithms and has become very popular and useful within the last twenty years. In many cases, randomized algorithms are faster, simpler or just more elegant than deterministic ones. In the course, we will discuss basic principles and techniques and derive from them a number of randomized methods for problems in different areas.

Randomized Algorithms and Probabilistic Methods

Yes

Machine Learning

W 6 credits 3V+2U J. M. Buhmann

Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensible to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real world data.

Topics covered in the lecture include:

- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non parametric density estimation: Parzen windows, nearest neighbour
- Dimension reduction: principal component analysis (PCA) and beyond

No lecture notes, but slides will be made available on the course webpage.

Solid basic knowledge in analysis, statistics and numerical methods for CSE. Experience in programming for solving the project tasks.

Algorithmic Game Theory

W 7 credits 3V+2U+1A P. Widmayer

Game theory provides a formal model to study the behavior and interaction of self-interested users and programs in large-scale distributed computer systems without central control. The course discusses algorithmic aspects of game theory.

Learning the basic concepts of game theory and mechanism design, acquiring the computational paradigm of self-interested agents, and using these concepts in the computational and algorithmic setting.
The Internet is a typical example of a large-scale distributed computer system without central control, with users that are typically only interested in their own good. For instance, they are interested in getting high bandwidth for themselves, but don't care about others, and the same is true for computational load or download rates. Game theory provides a particularly well-suited model for the behaviour and interaction of such selfish users and programs. Classical game theory dates back to the 1930s and typically does not consider algorithmic aspects at all. Only a few years back, algorithms and game theory have been considered together, in an attempt to reconcile selfish behavior of independent agents with the common good.

This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.

Outline:
- Introduction to classical game theoretic concepts.
- Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity.
- The cost difference between an optimum under central control and an equilibrium under selfish agents, known as the "price of anarchy".
- Auction-like mechanisms and algorithms that "direct" the actions of selfish agents into a certain desired equilibrium situation.
- Selected current research topics of Algorithmic Game Theory, such as Web-Search Based Keyword Auctions, or Information Cascading in Social Networks

Prerequisites / notice
Audience: Although this is a Computer Science course, we encourage the participation from all students who are interested in this topic.

Requirements: You should enjoy precise mathematical reasoning. You need to have passed a course on algorithms and complexity. No knowledge of game theory is required.

Several copies of both books are available in the Computer Science library.

Systems Programming and Computer Architecture
O
8 credits
4V+2U+1A
T. Roscoe
Abstract
Introduction to computer architecture and system programming:

Instruction sets, storage hierarchies, runtime structures with an emphasis on computers as engines for the execution of compiled programs. Interaction between system software and the hardware. Problems that arise from the final representation, performance measurement and tuning, and program portability issues are covered.

Objective
The objective is to allow students to understand all aspects of the execution of compiled (C) programs on modern architectures—the instruction set, the storage resources (registers, stack, memory), input/output, the impact of compiler decisions, and the interaction between the operating system and hardware. Two main themes are correctness issues (esp. those that arise from the finite representation of data) and performance issues (incl. measurement and tuning issues). The interface to the operating system is discussed to prepare for subsequent classes on more advanced systems topics.

The two key goals are:

1) To equip students with a thorough understanding of how to write correct programs that run fast on modern computer, and
2) How to write correct and efficient low-level systems code.

This course does not cover how to design or build a processor or computer.

Content
This course provides an overview of "computers" as a platform for the execution of (compiled) computer programs. This course provides a programmer's view of how computer systems execute programs, store information, and communicate. The course introduces the major computer architecture structures that have direct influence on the execution of programs (processors with registers, caches, other levels of the memory hierarchy, supervisor/kernel mode, and I/O structures) and covers implementation and representation issues only to the extend that they are necessary to understand the structure and operation of a computer system.

The course attempts to expose students to the practical issues that affect performance, portability, security, robustness, and extensibility. This course provides a foundation for subsequent courses on operating systems, networks, compilers and many other courses that require an understanding of the system-level issues. Topics covered include: machine-level code and its generation by optimizing compilers, address translation, input and output, trap/event handlers, performance evaluation and optimization (with a focus on the practical aspects of data collection and analysis).

Literature
The course is based in part on "Computer Systems: A Programmer's Perspective" (2nd Edition) by R. Bryant and D. O'Hallaron, with some additional material.

--- | --- | --- | --- | --- | ---
272-0101-00L | Subject Didactics of Computer Science I | O | 4 | 3G | G. Serafini, J. Hromkovic

Abstract
Simultaneous enrolment in Introductory Practical in Computer Science - course 272-0201-00L - is compulsory.

The unit "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The course deals with the thoughtful choice of educational contents for computer science classes, which takes into account its comprehensibility for different age groups as well as didactic approaches suitable for a successful knowledge transfer.
The general objective of the course consists in highlighting the tight connection between the mathematical and algorithmic way of thinking and the approaches adopted by engineering disciplines, and in reflecting on teaching approaches for sustainable computer science teaching activities.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

The objective is for the students:

- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

The course "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The chosen topics support the young learners in developing a unique and indispensable way of thinking, in enhancing their understanding of our world as well as in achieving university education entrance qualifications.

The main topics of the course unit "Subject Didactics of Computer Science I" are the didactics of finite state automata, of formal languages and of the introduction to programming. The unit focuses on contents of computer science that contribute to general education. This involves the understanding of fundamental scientific concepts such as algorithm, complexity, determinism, computation, automata, verification, testing and programming language as well as the way to embed them into a scientifically sound and didactically sustainable computer science course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

The objective is for the students:

- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a subject-based and pedagogical angle.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

### Computational Biology

**Type**: 6 credits

Students learn how to solve algorithmic problems given by a textual description (understanding problem setting, finding appropriate modeling, choosing suitable algorithms, and implementing them). Knowledge of basic algorithms and data structures is assumed; moreover advanced material and usage of standard libraries for combinatorial algorithms are introduced in tutorials.

**Objective**

The objective of this course is to learn how to solve algorithmic problems given by a textual description. This includes appropriate problem modeling, choice of suitable (combinatorial) algorithms, and implementing them (using C/C++, STL, CGAL, and BGL).

**Literature**

### Advanced Systems Lab

**Type**: 6 credits

The goal of this course is to teach students how to evaluate the performance of complex computer and software systems. Accordingly, the methodology to carry out experiments and measurements is studied. Furthermore, the modeling of systems with the help of queuing network systems is explained.

**Objective**

The goal of this course is to teach students how to evaluate the performance of complex computer and software systems.

### Literature

**Data:** 06.12.2017 12:57

**Autumn Semester 2015**

**Page 758 of 1432**
The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.

Topics covered in the lecture include:

- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher’s LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non parametric density estimation: Parzen windows, nearest neighbour
- Dimension reduction: principal component analysis (PCA) and beyond

Lecture notes
No lecture notes, but slides will be made available on the course webpage.

Literature

Prerequisites
Solid basic knowledge in analysis, statistics and numerical methods for CSE. Experience in programming for solving the project tasks.

Abstract
This course covers some of the fundamental concepts of computer graphics, namely 3D object representations and generation of photorealistic images from digital representations of 3D scenes.

Objective
At the end of the course the students will be able to build a rendering system. The students will study the basic principles of rendering and image synthesis. In addition, the course is intended to stimulate the students’ curiosity to explore the field of computer graphics in subsequent courses or on their own.

Content
This course covers fundamental concepts of modern computer graphics. Students will learn about 3D object representations and the details of how to generate photorealistic images from digital representations of 3D scenes. Starting with an introduction to 3D shape modeling and representation, texture mapping and ray-tracing, we will move on to acceleration structures, the physics of light transport, appearance modeling and global illumination principles and algorithms. We will end with an overview of modern image-based image synthesis techniques, covering topics such as lightfields and depth-image based rendering.

Lecture notes
No

Prerequisites
Prerequisites: Fundamentals of calculus and linear algebra, basic concepts of algorithms and data structures, programming skills in C++, Visual Computing course recommended.

The programming assignments will be in C++. This will not be taught in the class.

263-5001-00L Introduction to Finite Elements and Sparse Linear System Solving W 4 credits 2V+1U P. Arbenz, T. Kaman

Abstract
The finite element (FE) method is the method of choice for (approximately) solving partial differential equations on complicated domains. In the first third of the lecture, we give an introduction to the method. The rest of the lecture will be devoted to methods for solving the large sparse linear systems of equation that a typical for the FE method. We will consider direct and iterative methods.

Objective
Students will know the most important direct and iterative solvers for sparse linear systems. They will be able to determine which solver to choose in particular situations.

Content
I. THE FINITE ELEMENT METHOD

(1) Introduction, model problems.

(2) 1D problems. Piecewise polynomials in 1D.

(3) 2D problems. Triangulations. Piecewise polynomials in 2D.

(4) Variational formulations. Galerkin finite element method.

(5) Implementation aspects.

II. DIRECT SOLUTION METHODS

(6) LU and Cholesky decomposition.

(7) Sparse matrices.

(8) Fill-reducing orderings.

III. ITERATIVE SOLUTION METHODS

(9) Stationary iterative methods, preconditioning.

(10) Preconditioned conjugate gradient method (PCG).

(11) Incomplete factorization preconditioning.

(12) Multigrid preconditioning.

(13) Nonsymmetric problems (GMRES, BiCGstab).

(14) Indefinite problems (SYMMLQ, MINRES).
Prerequisites / notice

Prerequisites: Linear Algebra, Analysis, Computational Science.
The exercises are made with Matlab.

263-5150-00L Scientific Databases

Abstract

Scientific databases share many aspects with classical DBs, but have additional specific aspects. We will review Relational DBs, Object Oriented DBs, Knowledge DBs, textual DBs and the Semantic Web. All these topics will be studied from the point of view of the scientific applications (Bioinformatics, Physics, Chemistry, Health, Engineering) A toy SDB will be used for exercises.

Objective

The goals of this course are to:

(a) Familiarize the students with how existing DBs can be used for scientific applications.
(b) Recognize the areas where SciDBs differ and require additional features compared to classical DBs.
(c) Be able to understand more easily SciDBs, improve existing ones or design/create new ones.
(d) Familiarize the students with at least two examples of SciDBs.

Content

1) Introduction, State of the problem, course structure, exercises, why Scientific DBs (SDBs) do not fit exactly the classical DB area.
2) Relational DB used for scientific data, pros/cons
   Introduction to RDB, limitations of the model, basics of SQL, handling of metadata, examples of scientific use of RDBs.
3) Object Oriented DB. Rich/structured objects are very appealing in SDB. OODB primitives and environments. OODB searching.
4) Knowledge bases, key-value stores, ontologies, workflow-based architectures. WASA.
5) MapReduce / Hadoop
6) Storing and sharing mathematical objects, Open Math, its relation with OODB and Knowledge bases. Also the problem of chemical formula representation.
7) SGML and XML, human-readable databases, genomic databases.
   Advantages of human-readable databases (the huge initial success of genomic databases).
9) An ideal scenario (and the design of a toy system with most of the desired features for exploration and exercises).
11) Functional testing, Verifiers, Consistency, Short-circuit testing, Recovery and Automatic recovery, Backup (incremental) methods.
12) Performance and space issues, various uses of compression, concurrency control. Hardware issues, clusters, Cloud computing, Crowd-sourcing.
13) Guest speaker: Ioannis Xenarios (UniProtKB/Swiss-Prot).

Literature

Several papers and online articles will be made available.

151-0104-00L Uncertainty Quantification for Engineering & Life Sciences

Number of participants limited to 60.

Abstract

Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective

The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Content

Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes

The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature

Prerequisites: Linear Algebra, Analysis, Computational Science.
The exercises are made with Matlab.
The goals of the course are, firstly, to give students a broader perspective on OS design than that provided by knowledge of Unix or Windows, building on the material in a standard undergraduate operating systems class, and secondly, to provide them with practical experience in dealing directly with the concurrency, resource management, and abstraction problems confronting OS designers and implementers.

Objective
This course is intended to give students a thorough understanding of design and implementation issues for modern operating systems. We will cover key design issues in implementing an operating system, such as memory management, scheduling, protection, inter-process communication, device drivers, and file systems. The course consists of lectures, project work, and a written examination. Project work will be performed in small groups, where students will implement major components of a microkernel-based operating system. The final assessment will be a combination of project and examination grades.

Content
The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over operating system related security mechanisms to application software systems, such as host based intrusion detection systems. The main topics covered are: tamper resistant hardware, CPU support for security, protection mechanisms in the kernel, file system security (permissions / ACLs / network filesystem issues), IPC Security, mechanisms in more modern OS, such as Capabilities and Zones, Libraries and Software tools for security assurance, etc.

Along the lectures, model cases will be elaborated and evaluated in the exercises.

Abstract
This seminar covers advanced topics in computer graphics, such as modeling, rendering, animation, real-time graphics, physical simulation, and computational photography. Each time the course is offered, a collection of research papers is selected and each student presents one paper to the class and leads a discussion about the paper and related topics. All students read the papers and participate in the discussion.

Objective
The goal is to get an in-depth understanding of actual problems and research topics in the field of computer graphics as well as improve presentations and critical analysis skills.

Content
This seminar covers advanced topics in computer graphics, including both seminal research papers as well as the latest research results. Each time the course is offered, a collection of research papers are selected covering topics such as modeling, rendering, animation, real-time graphics, physical simulation, and computational photography. Each student presents one paper to the class and leads a discussion about the paper and related topics.

Abstract
The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over operating system related security mechanisms to application software systems, such as host based intrusion detection systems. In the second part, the focus is on system design and methodologies for large projects.

Objective
In this lecture, students learn about the security requirements and capabilities that are expected from modern hardware, operating systems and other software environments. An overview of available technologies, algorithms and standards is given, with which these requirements can be met.

Content
The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over operating system related security mechanisms to application software systems such as host based intrusion detection systems. The main topics covered are: tamper resistant hardware, CPU support for security, protection mechanisms in the kernel, file system security (permissions / ACLs / network filesystem issues), IPC Security, mechanisms in more modern OS, such as Capabilities and Zones, Libraries and Software tools for security assurance, etc.

In the second part, the focus is on system design and methodologies for large projects. The main question answered is how to get a large secure system. Topics include: patch management, common software faults (buffer overflows, etc.), writing secure software (design, architecture, QA, testing), compiler-supported security, language-supported security (java...), logging and auditing (BSM audit, dtrace, ...), cryptographic support, TCG, secure file systems, dos/windows/ windowsXP security issues.

Along the lectures, model cases will be elaborated and evaluated in the exercises.

Abstract
Models of distributed computations, time space diagrams, virtual time, logical clocks and causality, wave algorithms, parallel and distributed graph traversal, consistent snapshots, mutual exclusion, election and symmetry breaking, distributed termination detection, garbage collection in distributed systems, monitoring distributed systems, global predicates.

Objective
Become acquainted with models and algorithms for distributed systems.
Verteilte Algorithmen sind Verfahren, die dadurch charakterisiert sind, dass mehrere autonome Prozesse gleichzeitig Teile eines gemeinsamen Problems in kooperativer Weise bearbeiten und der dabei erforderliche Informationsaustausch ausschließlich über Nachrichten erfolgt. Derartige Algorithmen kommen im Rahmen verteilter Systeme zum Einsatz, bei denen kein gemeinsamer Speicher existiert und die Übertragungszeit von Nachrichten i.a. nicht vernachlässigt werden kann. Da dabei kein Prozess eine aktuelle konsistente Sicht des globalen Zustands besitzt, führt dies zu interessanten Problemen.

Im einzelnen werden u.a. folgende Themen behandelt:
- Modelle verteilter Berechnungen;
- Raum-Zeit Diagramme;
- Virtuelle Zeit;
- Logische Uhren und Kausalität;
- Wellenalgorithmen;
- Verteilte parallele Graphtraversierung;
- Berechnung konsistenter Schnappschüsse;
- Wechselseitiger Ausschluss;
- Election und Symmetriebrechung;
- Verteilte Terminierung;
- Garbage-Collection in verteilten Systemen;
- Beobachten verteilter Systeme;
- Berechnung globaler Prädikate.

**Abstract**
This course involves the participation in a substantial development and/or evaluation project involving distributed systems technology. There are projects available in a wide range of areas: from web services to ubiquitous computing including wireless networks, ad-hoc networks, RFID, and distributed applications on smartphones.

**Objective**
Gain hands-on-experience with real products and the latest technology in distributed systems.

**Content**
Each participant will be required to give a presentation of about 30 mins followed by a discussion on an assigned topic. In addition, each participant will be assigned as a buddy on another paper which means that they must read the paper and be prepared to start of the discussion on the paper with some comments and questions. Students also have to submit a 2-page summary of the paper that they present. Grading will depend on the quality of the talk, the report, and also active participation during the seminar.

**252-3001-00L Advanced Topics in Information Systems**
Number of participants limited to 16.

**Abstract**
This seminar course will discuss research topics in the area of information systems. We will read recent research papers on a selected topic, and present/discuss them in class.

**Objective**
The goal is to introduce students to current research, and to enable them to read, understand, and present scientific papers.

**Content**

In addition, each participant will be assigned as a buddy on another paper which means that they must read the paper and be prepared to start of the discussion on the paper with some comments and questions. Students also have to submit a 2-page summary of the paper that they present. Grading will depend on the quality of the talk, the report, and also active participation during the seminar.

**252-0463-00L Security Engineering**

**Abstract**
Security engineering is an evolving discipline that unifies two important areas: software engineering and security. Software Engineering addresses the development and application of methods for systematically developing, operating, and maintaining, complex, high-quality software.

**Objective**
Security, on the other hand, is concerned with assuring and verifying properties of a system that relate to confidentiality, integrity, and availability of data.

The goal of this class is to survey engineering techniques for developing secure systems. We will examine concepts, methods, and tools that can be applied within the different activities of the software development process, in order to improve the security of the resulting systems.

**Topics covered include**
- security requirements & risk analysis,
- system modeling and model-based development methods,
- implementation-level security, and
- evaluation criteria for the development of secure systems.
Security engineering is an evolving discipline that unifies two important areas: software engineering and security. Software Engineering addresses the development and application of methods for systematically developing, operating, and maintaining, complex, high-quality software. Security, on the other hand, is concerned with assuring and verifying properties of a system that relate to confidentiality, integrity, and availability of data.

The goal of this class is to survey engineering techniques for developing secure systems. We will examine concepts, methods, and tools that can be applied within the different activities of the software development process, in order to improve the security of the resulting systems.

Topics covered include:
* security requirements & risk analysis,
* system modeling and model-based development methods,
* implementation-level security, and
* evaluation criteria for the development of secure systems

Modules taught:
1. Introduction
   - Introduction of Infsec group and speakers
   - Security meets SW engineering: an introduction
   - The activities of SW engineering, and where security fits in
   - Overview of this class
2. Requirements Engineering: Security Requirements and some Analysis
   - overview: functional and non-functional requirements
   - use cases, misuse cases, sequence diagrams
   - safety and security
   - FMEA, FTA, attack trees
3. Modeling in the design activities
   - structure, behavior, and data flow
   - class diagrams, statecharts
4. Model-driven security for access control (design)
   - SecureUML as a language for access control
   - Combining Design Modeling Languages with SecureUML
   - Semantics, i.e., what does it all mean,
   - Generation
   - Examples and experience
5. Model-driven security (Part II)
   - Continuation of above topics
6. Security patterns (design and implementation)
7. Implementation-level security
   - Buffer overflows
   - Input checking
   - Injection attacks
8. Testing
   - overview
   - model-based testing
   - testing security properties
9. Risk analysis and management 1 (project management)
   - "risk": assets, threats, vulnerabilities, risk
   - risk assessment: quantitative and qualitative
   - safeguards
   - generic risk analysis procedure
   - The OCTAVE approach
10. Risk analysis: IT baseline protection
    - Overview
    - Example
11. Evaluation criteria
    - CMM
    - systems security engineering CMM
    - common criteria
12. Guest lecture
    - TBA

Literature
- Further relevant books and journal/conference articles will be announced in the lecture.

Prerequisites / notice
Prerequisite: Class on Information Security
The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over operating system related security mechanisms to application software systems such as host based intrusion detection systems. The main topics covered are: tamper resistant hardware, CPU support for security, protection mechanisms in the kernel, file system security (permissions / ACLs / network filesystem issues), IPC Security, mechanisms in more modern OS, such as Capabilities and Zones, Libraries and Software tools for security assurance, etc.

In the second part, the focus is on system design and methodologies for large projects. The main question answered is how to get a large secure system. Topics include: patch management, common software faults (buffer overflows, etc.), writing secure software (design, architecture, GA, testing), compiler-supported security, language-supported security (java...), logging and auditing (BSM audit, dtrace, ...), cryptographic support, TCG, secure file systems, dos/windows/ windowsXP security issues.

Along the lectures, model cases will be elaborated and evaluated in the exercises.

**Abstract**
Hands-on course on applied aspects of information security. Applied information security, operating system security, OS hardening, computer forensics, web application security, project work, design, implementation, and configuration of security mechanisms, risk analysis, system review.

**Objective**
The Applied Security Laboratory addresses four major topics: operating system security (hardening, vulnerability scanning, access control, logging), application security with an emphasis on web applications (web server setup, common web exploits, authentication, session handling, code security), computer forensics, and risk analysis and risk management.

**Content**
The students will study a number of topics in a hands-on fashion and carry out experiments in order to better understand the need for secure implementation and configuration of IT systems and to assess the effectiveness and impact of security measures. This part is based on a book and virtual machines that include example applications, questions, and answers.

The students will also complete an independent project: based on a set of functional requirements, they will design and implement a prototypical IT system. In addition, they will conduct a thorough security analysis and devise appropriate security measures for their systems. Finally, they will carry out a technical and conceptual review of another system. All project work will be performed in teams and must be properly documented.

**Lecture notes**

**Literature**
Recommended reading includes:
- Various: OWASP Guide to Building Secure Web Applications, available online
- O'Reilly, Loukides: Unix Power Tools, O'Reilly & Associates.
- Frisch: Essential System Administration, O'Reilly & Associates.
- NIST: Risk Management Guide for Information Technology Systems, available online as PDF
- BSI: IT-Grundschutzhandbuch, available online

**Prerequisites / notice**
- The lab covers a variety of different techniques. Thus, participating students should have a solid foundation in the following areas: information security, operating system administration (especially Unix/Linux), and networking. Students are also expected to have a basic understanding of HTML, PHP, JavaScript, and MySQL because several examples are implemented in these languages.
- Students must be prepared to spend more than three hours per week to complete the lab assignments and the project. This applies particularly to students who do not meet the recommended requirements given above. Successful participants of the course receive 8 credits as compensation for their effort.
- All participants must sign the lab's charter and usage policy during the introduction lecture.

**Abstract**
After this course, the students should be able to: describe and classify security goals and attacks in wireless networks; describe security architectures of the following wireless systems and networks: 802.11, GSM/UMTS, RFID, ad hoc/sensor networks; reason about security protocols for wireless network; implement mechanisms to secure 802.11 networks.

**Abstract**
The "computer-aided modelling and reasoning" lab is a hands-on course about using an interactive theorem prover to construct formal models of algorithms, protocols, and programming languages and to reason about their properties. The lab has two parts: The first introduces various modelling and proof techniques. The second part consists of a project in which the students apply these techniques.

**Objective**
The students learn to effectively use a theorem prover to create unambiguous models and rigorously analyse them. They learn how to write precise and concise specifications, to exploit the proof assistant as a tool for checking and analysing such models and for taming their complexity, and to extract certified executable implementations from such specifications.

**Content**
The "computer-aided modelling and reasoning" lab is a hands-on course about using an interactive theorem prover to construct formal models of algorithms, protocols, and programming languages and to reason about their properties. The focus is on applying logical methods to concrete problems supported by a theorem prover. The course will demonstrate the challenges of formal rigor, but also the benefits of machine support in modelling, proving, and validating.

The lab will have two parts: The first part introduces basic and advanced modelling techniques (functional programs, inductive definitions, modules), the associated proof techniques (term rewriting, resolution, induction, proof automation), and compilation of the models to certified executable code. In the second part, the students work in teams of two on a project assignment in which they apply these techniques; they build a formal model and prove its desired properties. The project lies in the area of programming languages, model checking, or information security.
The seminar covers various topics in information security, including network security, cryptography and security protocols. The participants will deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous machine learning algorithms on real-world data.

### Objective
Students have an in-depth understanding of important security technologies. Students know how to configure a real firewall and know some penetration testing tools from their own experience.

### Content
Risk management and the vulnerability lifecycle of software and networked services are discussed. Threats like denial of service, spam, worms, and viruses are studied in depth. Fundamental security related concepts like identity, availability, authentication and secure channels are introduced. State of the art technologies like secure shell, network and transport layer security, intrusion detection and prevention systems, cross-site scripting, secure implementation techniques and more for securing the Internet and web applications are presented. Several case studies illustrate the dark side of the Internet and explain how to protect against current threats. A hands-on computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection.

This lecture is intended for students with an interest in securing Internet services and networked devices. Students are assumed to have knowledge in networking as taught in the Communication Networks lecture. This lecture and the exam are held in English.

### Prerequisites / notice
Due to recent changes in the Swiss law, ETH requires each student of this course to sign a written declaration that he/she will not use the information given in this for illegal purposes. This declaration will have to be signed and submitted no later than at the beginning of the second lesson.

#### Seminar Information Security

<td>D. Basin, S. Capkun, A. Perrig</td>
</tr>
</tbody>
</table>

**Abstract**
The seminar covers various topics in information security: security protocols (models, specification & verification), trust management, access control, non-interference, side-channel attacks, identity-based cryptography, host-based attack detection, anomaly detection in backbone networks, key-management for sensor networks.

**Objective**
The main goals of the seminar are the independent study of scientific literature and assessment of its contributions as well as learning and practicing presentation techniques.

**Content**
The seminar covers various topics in information security, including network security, cryptography and security protocols. The participants are expected to read a scientific paper and present it in a 35-40 min talk. At the beginning of the semester a short introduction to presentation techniques will be given.

**Selected Topics**
- security protocols: models, specification & verification
- trust management, access control and non-interference
- side-channel attacks
- identity-based cryptography
- host-based attack detection
- anomaly detection in backbone networks
- key-management for sensor networks

**Literature**
The reading list will be published on the course webpage.

**Abstract**
Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

**Objective**
Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real-world data.

**Content**
The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.

**Topics covered in the lecture include:**
- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non-parametric density estimation: Parzen windows, nearest neighbour
- Dimension reduction: principal component analysis (PCA) and beyond

**Lecture notes**
No lecture notes, but slides will be made available on the course webpage.

**Literature**
### Prerequisites / notice
Solid basic knowledge in analysis, statistics and numerical methods for CSE. Experience in programming for solving the project tasks.

### Abstract
Subject of the class are engineering techniques for developing secure systems. We examine concepts, methods and tools, applied within the different activities of the SW development process to improve security of the system. Topics: security requirements & risk analysis, system modeling & model-based development methods, implementation-level security, and evaluation criteria for secure systems.

### Objective
Security engineering is an evolving discipline that unifies two important areas: software engineering and security. Software Engineering addresses the development and application of methods for systematically developing, operating, and maintaining, complex, high-quality software.

Security, on the other hand, is concerned with assuring and verifying properties of a system that relate to confidentiality, integrity, and availability of data.

The goal of this class is to survey engineering techniques for developing secure systems. We will examine concepts, methods, and tools that can be applied within the different activities of the software development process, in order to improve the security of the resulting systems.

Topics covered include:
- security requirements & risk analysis,
- system modeling and model-based development methods,
- implementation-level security, and
- evaluation criteria for the development of secure systems

### Content
Security engineering is an evolving discipline that unifies two important areas: software engineering and security. Software Engineering addresses the development and application of methods for systematically developing, operating, and maintaining, complex, high-quality software.

Security, on the other hand, is concerned with assuring and verifying properties of a system that relate to confidentiality, integrity, and availability of data.

The goal of this class is to survey engineering techniques for developing secure systems. We will examine concepts, methods, and tools that can be applied within the different activities of the software development process, in order to improve the security of the resulting systems.

Topics covered include:
- security requirements & risk analysis,
- system modeling and model-based development methods,
- implementation-level security, and
- evaluation criteria for the development of secure systems

### Modules taught:
1. **Introduction**
   - Introduction of Infsec group and speakers
   - Security meets SW engineering: an introduction
   - The activities of SW engineering, and where security fits in
   - Overview of this class

2. **Requirements Engineering: Security Requirements and some Analysis**
   - overview: functional and non-functional requirements
   - use cases, misuse cases, sequence diagrams
   - safety and security
   - FMEA, FTA, attack trees

3. **Modeling in the design activities**
   - structure, behavior, and data flow
   - class diagrams, statecharts

4. **Model-driven security for access control (design)**
   - SecureUML as a language for access control
   - Combining Design Modeling Languages with SecureUML
   - Semantics, i.e., what does it all mean,
   - Generation
   - Examples and experience

5. **Model-driven security (Part II)**
   - Continuation of above topics

6. **Security patterns (design and implementation)**

7. **Implementation-level security**
   - Buffer overflows
   - Input checking
   - Injection attacks

8. **Testing**
   - overview
   - model-based testing
   - testing security properties

9. **Risk analysis and management 1 (project management)**
   - "risk": assets, threats, vulnerabilities, risk
   - risk assessment: quantitative and qualitative
   - safeguards
   - generic risk analysis procedure
   - The OCTAVE approach

10. **Risk analysis: IT baseline protection**
    - Overview
    - Example

11. **Evaluation criteria**
    - CMMI
    - systems security engineering CMM
    - common criteria

12. **Guest lecture**
    - TBA
Information Retrieval

Students will be introduced to a variety of novel information services and architectures developed for mobile environments in order to gain an in-depth understanding of managing, indexing, and retrieving documents with text, image, and XML content. Knowledge about basic search and retrieval algorithms on the web, benchmarking of search algorithms, and relevance feedback methods.

Prerequisites / notice

Prerequisite: Class on Information Security

263-3010-00L Big Data

One of the key challenges of the information society is to turn data into information, information into knowledge, and knowledge into value. To turn data into value in this way involves collecting large volumes of data, possibly from many and diverse data sources, processing the data fast, and applying complex operations to the data.

Objective

One of the key challenges of the information society is to turn data into information, information into knowledge, and knowledge into value. To turn data into value in this way involves collecting large volumes of data, possibly from many and diverse data sources, processing the data fast, and applying complex operations to the data. This combination of requirements is typically referred to as Big Data and it has led to a completely new way to do business (e.g., develop new products and business models) and do science (sometimes referred to as data-driven science or the “fourth paradigm”). Unfortunately, big data grows faster than our ability to process the data so that new architectures and approaches for processing Big Data are needed.

Content

The goal of this course is to give an overview of Big Data technologies. All aspects are covered: data formats and models, programming languages, optimization techniques, systems, and applications.

Literature

Papers from scientific conferences and journals. References will be given as part of the course material during the semester.

(d) Familiarize the students with at least two examples of SciDBs.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Prerequisite: Class on Information Security

- Further relevant books and journal/conference articles will be announced in the lecture.

Autumn Semester 2015
1) Introduction, Statement of the problem, course structure, exercises, why Scientific DBs (SDBs) do not fit exactly the classical DB area. Hierarchy: File systems, data bases, knowledge bases and variations. Efficiency issues and how they differ from classical DB.

2) Relational DB used for scientific data, pros/cons
Introduction to RDB, limitations of the model, basics of SQL, handling of metadata, examples of scientific use of RDBs.

3) Object Oriented DB. Rich/structured objects are very appealing in SDB. OODB primitives and environments. OODB searching, Space and access time efficiency of OODBs.

4) Knowledge bases, key-value stores, ontologies, workflow-based architectures. WASA.

5) MapReduce / Hadoop

6) Storing and sharing mathematical objects, Open Math, its relation with OODB and Knowledge bases. Also the problem of chemical formula representation.

9) An ideal scenario (and the design of a toy system with most of the desired features for exploration and exercises).

11) Functional testing, Verifiers, Consistency, Short-circuit testing, Recovery and Automatic recovery, Backup (incremental) methods.

12) Performance and space issues, various uses of compression, concurrency control. Hardware issues, clusters, Cloud computing, Crowd-sourcing.

13) Guest speaker: Ioannis Xenarios (UniProtKB/Swiss-Prot).

Literature
Several papers and online articles will be made available.
There is no single textbook for this course.
A significant amount of material will be delivered in the lectures making lecture attendance highly recommended.

263-5200-00L Data Mining: Learning from Large Data Sets  W 4 credits 2V+1U  A. Krause
Abstract
Many scientific and commercial applications require insights from massive, high-dimensional data sets. This course introduces principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course both covers theoretical foundations and practical applications.

Objective
Many scientific and commercial applications require us to obtain insights from massive, high-dimensional data sets. In this graduate-level course, we will study principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course will both cover theoretical foundations and practical applications.

Content
Topics covered:
- Dealing with large data (Data centers; Map-Reduce/Hadoop; Amazon Mechanical Turk)
- Fast nearest neighbor methods (Shingling, locality sensitive hashing)
- Online learning (Online optimization and regret minimization, online convex programming, applications to large-scale Support Vector Machines)
- Multi-armed bandits (exploration-exploitation tradeoffs, applications to online advertising and relevance feedback)
- Active learning (uncertainty sampling, pool-based methods, label complexity)
- Dimension reduction (random projections, nonlinear methods)
- Data streams (Sketches, coresets, applications to online clustering)
- Recommender systems

Prerequisites / notice
Prerequisites: Solid basic knowledge in statistics, algorithms and programming. Background in machine learning is helpful but not required.

263-5210-00L Probabilistic Artificial Intelligence  W 4 credits 2V+1U  A. Krause
Abstract
This course introduces core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet.

Objective
How can we build systems that perform well in uncertain environments and unforeseen situations? How can we develop systems that exhibit “intelligent” behavior, without prescribing explicit rules? How can we build systems that learn from experience in order to improve their performance? We will study core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet. The course is designed for upper-level undergraduate and graduate students.

Content
Topics covered:
- Search (BFS, DFS, A*), constraint satisfaction and optimization
- Tutorial in logic (propositional, first-order)
- Probability
- Bayesian Networks (models, exact and approximate inference, learning) - Temporal models (Hidden Markov Models, Dynamic Bayesian Networks)
- Probabilistic planning (MDPs, POMDPs)
- Reinforcement learning
- Combining logic and probability

Prerequisites / notice
Solid basic knowledge in statistics, algorithms and programming
After successfully taking this course, students will have a theoretical and practical understanding of:

Each participant will be required to give a presentation of about 30 mins followed by a discussion on an assigned topic. In addition, each participant will be assigned as a buddy on another paper which means that they must read the paper and be prepared to start of the discussion on the paper with some comments and questions. Students also have to submit a 2-page summary of the paper that they present. Grading will depend on the quality of the talk, the report, and also active participation during the seminar.

## Focus Core Courses Software Engineering

### 252-0237-00L Concepts of Object-Oriented Programming

**Title:** Concepts of Object-Oriented Programming  
**Type:** W  
**ECTS:** 6 credits  
**Hours:** 3V+2U  
**Lecturers:** P. Müller

**Abstract:** Course that focuses on an in-depth understanding of object-oriented programming and compares designs of object-oriented programming languages. Topics include different flavors of type systems, inheritance models, encapsulation in the presence of aliasing, object and class initialization, program correctness, reflection.

**Objective:** After this course, students will:
- Have a deep understanding of advanced concepts of object-oriented programming and their support through various language features.
- Be able to understand language concepts on a semantic level and be able to compare and evaluate language designs.
- Be able to learn new languages more rapidly.
- Be aware of many subtle problems of object-oriented programming and know how to avoid them.

**Content:** The main goal of this course is to convey a deep understanding of the key concepts of sequential object-oriented programming and their support in different programming languages. This is achieved by studying how important challenges are addressed through language features and programming idioms. In particular, the course discusses alternative language designs by contrasting solutions in languages such as C++, C#, Eiffel, Java, Python, and Scala. The course also introduces novel ideas from research languages that may influence the design of future mainstream languages.

The topics discussed in the course include among others:
- The pros and cons of different flavors of type systems (for instance, static vs. dynamic typing, nominal vs. structural, syntactic vs. behavioral typing)
- The key problems of single and multiple inheritance and how different languages address them
- Generic type systems, in particular, Java generics, C# generics, and C++ templates
- The situations in which object-oriented programming does not provide encapsulation, and how to avoid them
- The pitfalls of object initialization, exemplified by a research type system that prevents null pointer dereferencing
- How to maintain the consistency of data structures

**Literature**
- Will be announced in the lecture.

**Prerequisites:** Mastering at least one object-oriented programming language (this course will NOT provide an introduction to object-oriented programming); programming experience

### 252-0239-00L Software Verification

**Title:** Software Verification  
**Type:** W  
**ECTS:** 6 credits  
**Hours:** 3V+2U  
**Lecturers:** B. Meyer, C. A. Furia, S. Nanz

**Abstract:** This course surveys some of the main approaches to software verification, including axiomatic semantics, abstract interpretation, model checking, and testing.

**Objective:** After successfully taking this course, students will have a theoretical and practical understanding of:
- * The principles behind fundamental software verification techniques, including Hoare-style axiomatic semantics, abstract interpretation, model checking, and testing.
- * Application of the principles to the construction of verification tools, in particular program provers.
- * Research challenges in these areas.

**Content:** The idea of software verification has been around for decades, but only recently have the techniques become mature enough to be implemented and be applicable in practice. Progress has been made possible by the convergence of different techniques, originally developed in isolation.

This course embraces this diversity of approaches, by surveying some of the main ideas, techniques, and results in software verification. These include in particular:

* Axiomatic semantics, which provides a foundation of program correctness proofs by supplying a rigorous semantics of programs.
* Abstract interpretation, which provides a general framework to express and design static techniques for program analysis.
* Model checking, which provides efficient techniques for the exhaustive exploration of state-based models of programs and reactive systems.
* Testing, which provides the counterpart to exhaustive techniques by defining dynamic analyses to detect programming mistakes and correct them.

To demonstrate some of the techniques in practice, the course will offer a practical project requiring the application of verification tools to illustrative examples.
Literature

Axiomatic semantics:

Abstract interpretation:

* Neil D. Jones, Flemming Nielson: Abstract Interpretation: a Semantic-Based Tool for Program Analysis

Model checking and real-time:

Testing:

263-2800-00L Design of Parallel and High-Performance Computing

W 7 credits 3V+2U+1A  T. Hoefler, M. Püschel

Abstract

Advanced topics in parallel / concurrent programming.

Objective

Understand concurrency paradigms and models from a higher perspective and acquire skills for designing, structuring and developing possibly large concurrent software systems. Become able to distinguish parallelism in problem space and in machine space. Become familiar with important technical concepts and with concurrency folklore.

Focus Elective Courses Software Engineering

Number Title Type ECTS Hours Lecturers

252-0273-01L Distributed Software Engineering Laboratory W 8 credits 2V+2U+3A  B. Meyer, P. Kolb, D. M. Nordio

Abstract

The Distributed Software Engineering Laboratory introduces the software engineering principles and techniques appropriate for the increasingly prevalent style of modern software development, involving teams spread across teams, companies and countries.

Objective

The course involves a distributed project conducted in cooperation with student teams from other universities.

Content

Modern software development is increasingly “distributed”: projects are developed by different groups collaborating across teams, companies, countries, timezones. This setup radically alters the assumptions underlying many of the traditional views of software engineering.

The Distributed Software Engineering Laboratory introduces the principles and techniques for this new paradigm. In line with the “distributed” nature of the topic, the project is performed in collaboration with student teams from other universities in various countries. This course provides students with a clear view of distributed software development, enabling them to participate successfully in distributed projects, and also helping them to devise their own career strategies in the context of the continued trend towards outsourcing.

Lecture notes

The exercise sessions usually start at 9am.

Prerequisites / notice

The course page includes the full set of slides and links to supplementary documentation.

Prerequisites: Basic understanding of programming.

252-0286-00L System Construction

W 4 credits 2V+1U  F. O. Friedrich

Abstract

Main goal is teaching knowledge and skills needed for building custom operating systems and runtime environments. Relevant topics are studied at the example of sufficiently simple systems that have been built at our Institute in the past, ranging from purpose-oriented single processor real-time systems up to generic system kernels on multi-core hardware.

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 770 of 1432
The seminar is an opportunity to become familiar with current research in software engineering and more generally with the methods and challenges of scientific research.

Each student will be asked to study some papers from the recent software engineering literature and review them. This is an exercise in critical review and analysis. Active participation is required (a presentation of a paper as well as participation in discussions).

This seminar is an opportunity to become familiar with current research in software engineering and more generally with the methods and challenges of scientific research.
The aim of this seminar is to introduce students to recent research results in the area of programming languages and software engineering. To accomplish that, students will study and present research papers in the area as well as participate in paper discussions. The papers will span topics in both theory and practice, including papers on program verification, program analysis, testing, programming language design, and development tools.

The publications to be presented will be announced on the seminar home page at least one week before the first session.

Organizational note: the seminar will meet only when there is a scheduled presentation. Please consult the seminar's home page for information.

| 252-1407-00L | Algorithmic Game Theory | W | 7 credits | 3V+2U+1A | P. Widmayer |
| **Abstract** | Game theory provides a formal model to study the behavior and interaction of self-interested users and programs in large-scale distributed computer systems without central control. The course discusses algorithmic aspects of game theory. |
| **Objective** | Learning the basic concepts of game theory and mechanism design, acquiring the computational paradigm of self-interested agents, and using these concepts in the computational and algorithmic setting. |
| **Content** | The Internet is a typical example of a large-scale distributed computer system without central control, with users that are typically only interested in their own good. For instance, they are interested in getting high bandwidth for themselves, but don't care about others, and the same is true for computational load or download rates. Game theory provides a particularly well-suited model for the behaviour and interaction of such selfish users and programs. Classical game theory dates back to the 1930s and typically does not consider algorithmic aspects at all. Only a few years back, algorithms and game theory have been considered together, in an attempt to reconcile selfish behavior of independent agents with the common good. |
| **This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.** |
| **Outline:** | - Introduction to classical game theoretic concepts. - Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity, - The cost difference between an optimum under central control and an equilibrium under selfish agents, known as the "price of anarchy". - Auction-like mechanisms and algorithms that "direct" the actions of selfish agents into a certain desired equilibrium situation. - Selected current research topics of Algorithmic Game Theory, such as Web-Search Based Keyword Auctions, or Information Cascading in Social Networks. |
| **Lecture notes** | No lecture notes. |

### Prerequisites / notice

Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real world data.

#### Objective

1. To introduce the fundamental problems of computer vision.
2. To introduce the main concepts and techniques used to solve these.
3. To enable participants to implement solutions for reasonably complex problems.
4. To enable participants to make sense of the computer vision literature.

#### Content

Camera models and calibration, invariant features, Multiple-view geometry, Model fitting, Stereo matching, Segmentation, 2D Shape matching, Shape from Silhouettes, Optical flow, Structure from motion, Tracking, Object recognition, Object category recognition

#### Literature

#### Prerequisites / notice

Solid basic knowledge in analysis, statistics and numerical methods for CSE. Experience in programming for solving the project tasks.

**Abstract**
This lecture provides an introduction to physically-based animation in computer graphics and gives an overview of fundamental methods and algorithms. The practical exercises include three assignments which are to be solved in small groups. In an additional course project, topics from the lecture will be implemented into a 3D game or a comparable application.

**Objective**
This lecture provides an introduction to physically-based animation in computer graphics and gives an overview of fundamental methods and algorithms. The practical exercises include three assignments which are to be solved in small groups. In an additional course project, topics from the lecture will be implemented into a 3D game or a comparable application.

**Content**
The lecture covers topics in physically-based modeling, such as particle systems, mass-spring models, finite difference and finite element methods. These approaches are used to represent and simulate deformable objects or fluids with applications in animated movies, 3D games and medical systems. Furthermore, the lecture covers topics such as rigid body dynamics, collision detection, and character animation.

**Prerequisites /notice**
Fundamentals of calculus and physics, basic concepts of algorithms and data structures, basic programming skills in C++. Knowledge on numerical mathematics as well as ordinary and partial differential equations is an asset, but not required.

| 252-5703-00L | Multimedia Communications | W    | 4 credits | 2V+1U | A. Smolic |

**Abstract**
After a summary of fundamentals in signal processing and information theory, an introduction to processing and coding of different types of multimedia is given.

**Objective**
Understanding principles of multimedia communications and getting an illustrative overview of available and emerging technology.

**Content**
After a summary of fundamentals in signal processing and information theory, an introduction to processing and coding of different types of multimedia is given. This starts with speech (PCM, vocoder, CELP etc.), continues over audio (MP3, AAC etc.), still images (JPEG etc.), video (MPEG-2, MPEG-4, H.264/AVC, HEVC etc.), and interactive graphics (MPEG-4), to emerging and future multimedia content such as 3D video, free viewpoint video, high dynamic range video. Algorithms as well as human perception will be addressed.

**Content**
- Fundamentals of information theory
- Fundamentals of signal processing and coding
- Speech processing and coding
- Audio processing and coding
- Still image processing and coding
- Video processing and coding
- Emerging multimedia (3D video, free viewpoint video, HDR, HFR)

**Prerequisites /notice**
Prerequisites: Solid basic knowledge in statistics, algorithms and programming. Background in machine learning is helpful but not required.

| 263-5200-00L | Data Mining: Learning from Large Data Sets | W    | 4 credits | 2V+1U | A. Krause |

**Abstract**
Many scientific and commercial applications require insights from massive, high-dimensional data sets. This course introduces principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course both covers theoretical foundations and practical applications.

**Objective**
Many scientific and commercial applications require us to obtain insights from massive, high-dimensional data sets. In this graduate-level course, we will study principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course will both cover theoretical foundations and practical applications.

**Content**
Topics covered:
- Dealing with large data (Data centers; Map-Reduce/Hadoop; Amazon Mechanical Turk)
- Fast nearest neighbor methods (Shingling, locality sensitive hashing)
- Online learning (Online optimization and regret minimization, online convex programming, applications to large-scale Support Vector Machines)
- Multi-armed bandits (exploration-exploitation tradeoffs, applications to online advertising and relevance feedback)
- Active learning (uncertainty sampling, pool-based methods, label complexity)
- Dimension reduction (random projections, nonlinear methods)
- Data streams (Sketches, coresets, applications to online clustering)
- Recommender systems

**Prerequisites /notice**
Prerequisites: Solid basic knowledge in statistics, algorithms and programming. Background in machine learning is helpful but not required.

| 263-5210-00L | Probabilistic Artificial Intelligence | W    | 4 credits | 2V+1U | A. Krause |

**Abstract**
This course introduces core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet.

**Objective**
How can we build systems that perform well in uncertain environments and unforeseen situations? How can we develop systems that exhibit "intelligent" behavior, without prescribing explicit rules? How can we build systems that learn from experience in order to improve their performance? We will study core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet. The course is designed for upper-level undergraduate and graduate students.

**Content**
Topics covered:
- Search (BFS, DFS, A*), constraint satisfaction and optimization
- Tutorial in logic (propositional, first-order)
- Probability
- Bayesian Networks (models, exact and approximative inference, learning) - Temporal models (Hidden Markov Models, Dynamic Bayesian Networks)
- Probabilistic planning (MDPs, POMDPs)
- Reinforcement learning
- Combining logic and probability

**Prerequisites /notice**
Solid basic knowledge in statistics, algorithms and programming

| 252-0527-00L | Probabilistic Graphical Models for Image Analysis | W    | 4 credits | 3G    |

**Abstract**
This course will focus on the algorithms for inference and learning with statistical models. We use a framework called probabilistic graphical models which include Bayesian Networks and Markov Random Fields.

**Objective**
We will use examples from traditional vision problems such as image registration and image segmentation, as well as recent problems such as object recognition.

**Literature**
Students will be introduced to probabilistic graphical models and will learn how to apply them to problems in image analysis and understanding. The focus will be to study various algorithms for inference and parameter learning.

**Notice**
Will be announced during the lecture.

Seminar Visual Computing

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 775 of 1432
The lecture covers the role of ICT for sustainable energy usage. Concepts of the emerging smart grid are outlined and approaches to

**Abstract**
This is a general chemistry course aimed at first year undergraduate students in the Department of Mechanical and Process Engineering (D-MAVT).

**Objective**
The aims of the course are as follows:
1) To provide a thorough understanding of the basic principles of chemistry and its application.
2) To develop an understanding of the atomic and molecular nature of matter and of the chemical reactions that describe their transformations.
3) To emphasize areas considered most relevant in an engineering context.

**Content**
electronic structure of atoms, chemical bonding, molecular shape and bonding theory, gases, thermodynamics, chemical thermodynamics, chemical kinetics, equilibria, solutions and intermolecular forces, redox and electrochemistry.

**Literature**
The course is based on “Chemistry the Central Science” by Brown, LeMay, Bursten, Murphy and Woodward. Pearson, 12th Edition (international edition).

| 051-0757-00L      | Building Process I             | W    | 2    | 2G          | S. Menz               |

**Abstract**
The building process is the main focus of this lecture series. The process is understood as a sequence of criteria in time. Topics: Acquisition and Building legislation, building economics and facility management, the people involved and their work, construction and planning organization.

**Objective**
Process thinking and a glance at our foreign neighbours complete the series.

**Content**
Alongside a discussion of the basic principles, trends and terminologies, a closer look will be taken at each topic using case studies that investigate current structures as well as those relevant in terms of architecture and urban design. Active participation as well as interdisciplinary and process-oriented thinking on the part of students is a prerequisite.

**Literature**
The building process is the main focus of this lecture series. The process is understood as a sequence of criteria in time. These criteria are divided into acquisition and building legislation, building economics and facility management, the people involved and their work, construction and planning organization. Process thinking and a glance at our foreign neighbours complete the series.

| 066-0411-00L      | Structural Design I            | W    | 2    | 2V          | P. Block, J. Schwartz |

**Abstract**
The course is an introduction to structural design using graphical methods and structural models, with a focus on a creative approach rather than repetitive calculations. Cable and membrane structures, arch and shell structures and combined arch and cable systems will be used to demonstrate these methods.

**Objective**
The objective is to encourage students to develop an intuitive understanding of the relationship between the shape of a structure, the load it needs to carry and the forces in it.

To achieve this, the teaching is based on graphic statics, which allow the visualization of internal and external forces in structural systems, therefore illustrating the relationship between shape (form) and stress (force) in load bearing elements. This understanding is directly applied to the students' design projects, in which issues of statics and design overlap.

**Content**
After a general introduction of basic concepts, structural systems such as cable and arch structures will be analyzed with the help of graphic statics. The students will learn to understand the flow of forces in a structural system in relation to the system's form. They will be able to modify this force flow and give dimension to the structural components.

All concepts, approaches and methods will be introduced in the weekly lectures and practiced in subsequent exercises.

Sacha Menz (Hrsg.), Drei Bücher über den Bauprozess, vdf Hochschulverlag an der ETH Zürich, 2009

| 151-1633-00L      | Energy Conversion              | W    | 4    | 3G          | H. G. Park            |

**Abstract**
Fundamentals of Thermal Sciences in association with Energy Conversion

**Objective**
To become acquainted and familiarized with basic principles of fundamental thermal sciences (Thermodynamics, Heat Transfer, etc.) as well as their linkage to energy conversion technologies.

**Content**
Thermodynamics (first and second laws), Heat Transfer (conduction/convection/radiation), Technical Applications

**Lecture notes**
Slides will be distributed by e-mail every week.

**Literature**
1. Introduction to Thermodynamics and Heat Transfer, 2nd ed. by Cengel, Y. A., McGraw Hill;
2. Fundamentals of Engineering Thermodynamics, 6th ed. by Moran & Shapiro, Wiley

**Prerequisites / notice**
This course is intended for students outside of D-MAVT.

| 401-0203-00L      | Mathematics                    | W    | 4    | 2V+1U       | C. Busch              |

**Abstract**
This course gives an introduction to the following subjects:
linear algebra (systems of linear equations, matrices), calculus, multivariable calculus, differential equations.

**Objective**
Basic mathematical knowledge for engineers. Mathematics as a tool to solve engineering problems.

**Content**
This course gives an introduction to the following subjects:
linear algebra (systems of linear equations, matrices), calculus, multivariable calculus, differential equations.

**Literature**
Tom M. Apostol, Calculus, Volume 1, One-Variable Calculus with an Introduction to Linear Algebra, 2nd Edition, Wiley
Tom M. Apostol, Multi-Variable Calculus and Linear Algebra with Applications, 2nd Edition, Wiley
The students will acquire knowledge in the following fields:
- Fundamentals of heat transport in (porous) materials
- Super-insulating materials and systems (including insulating nano-materials)
- Materials for retrofitting of buildings
- Introduction to durability problems of building facades
- Glazing, windows and glazed facades
- Materials for photovoltaic devices and solar thermal collector technology and their integration into buildings
- Materials for energy storage (thermal, electrical) and for decentralized energy generation
- Embodied energy of building materials. Introduction to LCA analysis for building materials
- Integrated building envelope solutions, multi-functional and adaptive facades, smart façade concepts

The abstracts of the students’ contributions are found in the lecture notes.

Objective
- Sustainable building construction, high performance materials for energy efficient buildings, focus on next generation building materials, sustainable construction, glazing, energy integration, production processes
- Principles of heat and mass transport, hygro-thermal performance, durability of the building envelope and interaction with indoor and outdoor climates, applications.
- The students will acquire knowledge in the following fields:
- The students will acquire knowledge in the following fields:
- Renewable energy technologies for reducing CO2 emissions, and their contribution towards a future sustainable energy system that respects climate protection goals.
- Scenarios for world energy demand and CO2 emissions, implications for climate. Methods for the assessment of energy chains. Potential and technology of renewable energies: Biomass (heat, electricity, biofuels), solar energy (low temp. heat, solar thermal and photovoltaic electricity, solar chemistry). Wind and ocean energy, heat pumps, geothermal energy, energy from waste. CO2 sequestration.
- Scenarios for the development of world primary energy consumption are introduced. Students know the potential and limitations of renewable energies for reducing CO2 emissions, and their contribution towards a future sustainable energy system that respects climate protection goals.

Lecture notes
Lecture notes will be distributed during the course.

Prerequisites / notice
Fundamentals of chemistry and physics are a prerequisite for this course.

Topics are available to carry out a Project Work (Semesterarbeit) on the contents of this course.

Objective
- This course focuses on the analysis of innovation as a pervasive process that cut across organizational and functional boundaries. It looks at the sources of innovation, at the tools and techniques that organizations deploy to routinely innovate, and the strategic implications of technical change.
- This course intends to enable all students to:
- understand the core concepts necessary to analyze how innovation happens
- master the most common methods and tools organizations deploy to innovate
- develop the ability to critically evaluate the innovation process, and act upon the main obstacles to innovation

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 780 of 1432
This course looks at technology and innovation management as a process. Continuously, organizations are faced with a fundamental decision: they have to allocate resources between well-known tasks that reliably generate positive results; or explore new ways of doing things, new technologies, products and services. The latter is a high risk choice. Its rewards can be high, but the chances of success is small.

How do firms organize to take these decisions? What kind of management skills are necessary to take them? What kind of tools and methods are deployed to sustain managerial decision-making in highly volatile environments? These are the central questions on which this course focuses, relying on a combination of lectures, case-based discussion, guest speakers, simulations and group work.

Lecture notes
Slides will be available on the TIMGROUP website.

Literature
Readings will be available on the TIMGROUP website.

Prerequisites / notice
No specific background in economics or management is required.

</tbody>
</table>

**Abstract**

In the framework of this course we will look at a broad spectrum of novel energy conversion processes which are not based on the heat-power-conversion. Especially the production of electrical energy without using mechanical work will be covered.

**Objective**

This course deals with novel energy conversion and storage systems such as fuel cells and micro-fuel cells, batteries, hydrogen production and storage, plasmonics and photovoltaics. The focus of the course is on the physics and basic understanding of those systems as well as their real-world applications.

**Content**

Part 1: Fundamentals:
- Thermodynamic overview and exergy analysis;
- Thermodynamics of multi-component-systems (mixtures) and phase equilibrium;
- Electrochemistry;

Part 2: Novel energy conversion and storage systems:
- batteries and accumulators;
- fuel cells and micro fuel cells (fundamentals, fabrication, modelling, and applications);
- hydrogen production and storage, Fuel reforming;
- Plasmonics and photovoltaics.

Lecture notes available (ca. 200 pages in English)

**Prerequisites / notice**

The course will be given in English:

1. Weekly exercises, each includes 1 or 2 questions which should be solved and returned at the specified due dates. Exercises count as 15% of the final grade.
2. One programming mini-project which should be finished at the specified due date. It counts as 5% of the final grade.
3. Final exam: Written exam during the regular examination session. It counts as 80% of the final grade.

**Abstract**

The methods of fluid dynamics play an important role in the description of a chain of events, involving the release, spreading and dilution of dangerous fluids in the environment.

Tunnel ventilation systems and strategies are studied, which must meet severe requirements during normal operation and in emergency situations (tunnel fires etc.).

**Objective**

Generally applicable methods in fluid dynamics and gas dynamics are illustrated and practiced using selected current examples.

**Content**

Often experts fall back on the methodology of fluid dynamics when involved in the construction of environmentally friendly processing and incineration facilities, as well as when choosing safe transport and storage options for dangerous materials. As a result of accidents, but also in normal operations, dangerous gases and liquids may escape and be transported further by wind or flowing water.

There are many possible forms that the resulting damage may take, including fire and explosion when flammable substances are mixed. The topics covered include: Emissions of liquids and gases from containers and pipelines, evaporation from pools and vaporization of gases kept under pressure, the spread and dilution of waste gas plumes in the wind, deflagration and detonation of inflammable gases, fireballs in gases held under pressure, pollution and exhaust gases in tunnels (tunnel fires etc.).

**Prerequisites / notice**

Requirements: successful attendance at lectures "Fluidodynamik I und II", "Thermodynamik I und II"

**Abstract**

Advanced course in radiation heat transfer

Fundamentals of radiative heat transfer for high-temperature applications. Examples are combustion and solar thermal/thermochemical processes, and other applications in the field of energy conversion and material processing.
This year the UN Conference in Paris will shape future world objectives to tackle climate change.

### Acoustics I

**Objective**
- Fundamentals of acoustics, measuring and analyzing of acoustical events, anatomy and properties of the ear.
- Outdoor sound propagation.

**Content**
- Absorbing, Emitting and Scattering Media.
- Extinction, Absorption, and Scattering Coefficient.
- Optical thickness.

**Lecture notes**
Copy of the slides presented.

**Literature**

### Fluid Dynamics II

**Abstract**
- Two-dimensional irrotational (potential) flows: stream function and potential, singularity method, unsteady flow, aerodynamic concepts.
- Vorticity dynamics: vorticity and circulation, vorticity equation, vortex theorems of Helmholtz and Kelvin.
- Compressible flows: isentropic flow along stream tube, normal and oblique shocks, Laval nozzle, Prandtl-Meyer expansion, viscous effects.

**Objective**
- Expand basic knowledge of fluid dynamics.
- Concepts, phenomena and quantitative description of irrotational (potential), rotational, and one-dimensional compressible flows.

**Content**
- Two-dimensional irrotational (potential) flows: stream function and potential, complex notation, vortex theorems of Helmholtz and Kelvin.
- Compressible flows: isentropic flow along stream tube, normal and oblique shocks, Laval nozzle, Prandtl-Meyer expansion, viscous effects.

**Lecture notes**
Lecture notes are available (in German).

**Literature**

### Introduction to Mathematical Optimization

**Abstract**
- Introduction to basic techniques and problems of mathematical optimization.

**Objective**
- The goal is to get a good understanding of some of the most important mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems.

**Content**
- Topics covered in this course include:
  - Linear programming (simplex method, duality theory, shadow prices, ...).
  - Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...).

**Literature**
- Relevant chapters (corresponding to lecture notes) from the textbook

### Infrastructure Maintenance Processes

**Abstract**
- This course provides an introduction to:
  - how to model the changes in infrastructure objects over time,
  - how to monitor these changes and assess the benefits of monitoring,
  - how to intervene to improve infrastructure performance and assess the benefits of interventions, and
  - how to model the changes in stakeholders interests over time.

**Objective**
- to provide the basic information and tools to be used to make decisions with respect to existing infrastructure Deterioration

**Content**
- Manifest and latent processes, modeling Monitoring
- Non-destructive and destructive techniques, evaluation of benefits of monitoring Intervention
- Types of intervention, evaluation of benefits of intervention Benefits
- Modeling of stakeholder benefits over time

**Lecture notes**
All necessary materials (e.g. transparencies and hand-outs) will be handed out at the beginning of each class.

**Literature**
- Appropriate reading material will be assigned when necessary.

### An Introduction to Sustainable Development in the Built Environment

**Abstract**
- This year the UN Conference in Paris will shape future world objectives to tackle climate change.
- This course provides an introduction to the notion of sustainable development when applied to our built environment

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 783 of 1432
At the end of the semester, the students have an understanding of the term of sustainable development, its history, the current political and scientific discourses and its relevance for our built environment.

In order to address current challenges of climate change mitigation and resource depletion, students will learn a holistic approach of sustainable development. Ecological, economical and social constraints will be presented and students will learn about methods for argumentation and tools for assessment (i.e. life cycle assessment).

For this purpose an overview of sustainable development is presented with an introduction to the history of sustainability and its today definition as well as the role of cities, urbanisation and material resources (i.e. energy, construction material) in social economic and environmental aspects.

The course aims to promote an integral view and understanding of sustainability and describing different spheres (social/cultural, ecological, economical, and institutional) that influence our built environment.

Students will acquire critical knowledge and understand the role of involved stakeholders, their motivations and constraints, learn how to evaluate challenges, identify deficits and define strategies to promote a more sustainable construction.

After the course students should be able to define the relevance of specific local, regional or territorial aspects to achieve coherent and applicable solutions toward sustainable development.

The course offers an environmental, socio-economic and socio-technical perspective focussing on buildings, cities and their transition to resilience with sustainable development. Students will learn on theory and application of current scientific pathways towards sustainable development.

The following topics give an overview of the themes that are to be worked on during the lecture.

- Overview on the history and emergence of sustainable development
- Overview on the current understanding and definition of sustainable development
- Case Study 1: Sustainable construction, the role of construction industry (national/international)
- Case Study 2: Cities, forms of settlements
- Case Study 3: Material resources, scenarios, energy, construction materials, urban metabolism
- Case Study 4: Buildings, heating/cooling, consumers, prosumers and other stakeholder, cooperations
- Method 1: Life cycle assessment (planning, construction, operation/use, deconstruction)
- Method 2: Economics for sustainable construction
- Method 3: Construction, flexibility, modularity
- Synthesis 1: Climate Change mitigation and adaptation in cities
- Synthesis 2: Transition to sustainable development

A list of the basic literature will be offered on a specific online platform, that could be used by all students attending the lectures.

<tr>
<td>Content</td>
<td>The course provides the necessary knowledge to develop models supporting the solution of given planning problems. Examples of such planning problems are the estimation of traffic volumes, prediction of estimated utilization of new public transport lines, and evaluation of effects (e.g. change in emissions of a city) triggered by building new infrastructure and changes to operational regulations. The course is composed of a lecture part, providing the theoretical knowledge, and a applied part, in which students create their own models. This part takes place in form of a tutorial and consists in the development of a computer program. The programming part is closely guided and particularly suitable for students with little programming experience.</td>

**Objective**
Understand the limits and the potential of corporate sustainability for sustainable development.

Develop critical thinking skills that are useful for corporate sustainability (argumentation, communication, evaluative judgment).

**Content**
Overview of the grand sustainability challenges of Water, Energy, Mobility, and Food.

Business implications of sustainable development, in particular for corporate strategy, marketing & leadership, technology & innovation, and financial markets.

Critical thinking skills for corporate sustainability.

**Lecture notes**
Presentation slides will be distributed prior to lectures.

**Literature**
Literature recommendations will be distributed during the lecture.

**063-1357-00L**
**Corporate Sustainability**

**Abstract**
We introduce the concept of corporate sustainability; discuss its implications focusing on strategy, technology, and financial markets; and offer e-modules to train relevant critical thinking skills. With this input, students explore the practical challenges of corporate sustainability in a group project, focusing on one of the four sustainability challenges of water, energy, mobility, and food.

**Objective**
Understand the limits and the potential of corporate sustainability for sustainable development.

Develop critical thinking skills that are useful for corporate sustainability (argumentation, communication, evaluative judgment).

**Content**

**101-0517-01L**
**Project Management: Pre-tender to Contract Execution**

**Abstract**
This course will provide a comprehensive overview and understanding of the techniques, processes, tools and terminology to manage the Project Triangle (time, cost, quality) and to organize, analyze, control and report a complex project from Pre-Tender stage to Contract signature and Notice to Proceed. This is part 1 of a 3 part course, see notice below.

**Objective**
Upon successful completion of this course students will have the understanding of the Project Management duties and responsibilities from the Pre-Tender stage of a project to Contract Execution.

- Project scope definition and project organization
- Technical specification proposals
- Work Breakdown Structure
- Estimating
- Schedule development
- Interface management
- Resource and cost integration
- Risk and opportunity identification and quantification
- Contract review and analysis
- Project life cycle
- Contract Execution - Project Manager Check List

**Lecture notes**
The slides will either be distributed at the beginning of the class, or made available online (via Moodle) prior to class. A copy of the appropriate chapter of the script, the assignment and any other assigned reading materials will be available via Moodle.

**Literature**
Appropriate reading material (e.g., chapters out of certain textbooks or trade articles) will be assigned when necessary and made available via Moodle.

**Autumn Semester 2015**
**Page 785 of 1432**
This is part 1 of a 3 part course. Part 2 will take the student through Project Execution of complex Projects. Part 3 will take the student through advanced topics in Project Management.

The students will be randomly assigned to teams of 3 max. Students will be graded as a team based on the Project Proposal report and the final oral presentation of the Project Proposal. The Project Proposal will consist of an accumulation of the homework assignments.

**101-0187-00L Structural Reliability and Risk Analysis**

**W 3 credits 2G 8 B. Sudret**

**Abstract**

Structural reliability aims at quantifying the probability of failure of systems due to uncertainties in their design, manufacturing and environmental conditions. Risk analysis combines this information with the consequences of failure in view of optimal decision making. The course presents the underlying probabilistic modelling and computational methods for reliability and risk assessment.

**Objective**

The goal of this course is to provide the students with a thorough understanding of the key concepts behind structural reliability and risk analysis. After this course the students will have refreshed their knowledge of probability theory and statistics to model uncertainties in view of engineering applications. They will be able to analyze the reliability of a structure and to use risk assessment methods for decision making under uncertain conditions. They will be aware of the state-of-the-art computational methods and software in this field.

**Content**

Engineers are confronted every day to decision making under limited amount of information and uncertain conditions. When designing new structures and systems, the design codes such as SIA or Euro-codes usually provide a framework that guarantees safety and reliability. However the level of safety is not quantified explicitly, which does not allow the analyst to properly choose between design variants and evaluate a total cost in case of failure. In contrast, the framework of risk analysis allows one to incorporate the uncertainty in decision making.

The first part of the course is a reminder on probability theory that is used as a main tool for reliability and risk analysis. Classical concepts such as random variables and vectors, dependence and correlation are recalled. Basic statistical inference methods used for building a probabilistic model from the available data, e.g. the maximum likelihood method, are presented.

The second part is related to structural reliability analysis, i.e. methods that allow one to compute probabilities of failure of a given system with respect to prescribed criteria. The framework of reliability analysis is first set up. Reliability indices are introduced together with the first order-second moment method (FORM) and the first order reliability method (FORM). Methods based on Monte Carlo simulation are then reviewed and illustrated through various examples. By-products of reliability analysis such as sensitivity measures and partial safety coefficients are derived and their links to structural design codes is shown. The reliability of structural systems is also introduced as well as the methods used to reassess existing structures based on new information.

The third part of the course addresses risk assessment methods. Techniques for the identification of hazard scenarios and their representation by fault trees and event trees are described. Risk is defined with respect to the concept of expected utility in the framework of decision making. Elements of Bayesian decision making, i.e. pre-, post- and pre-post risk assessment methods are presented. Bayesian networks are introduced as a generic numerical tool for solving such problems. The course also includes a tutorial using a software dedicated to real world structural reliability analysis.

**051-0723-15L Information Architecture and Future Cities: Smart Cities**

**W 2 credits 1V G. Schmitt**

**Abstract**

What are SMART CITIES and how do they emerge? What is the role of architects and urban designers in this process? How do data turn into information as a building material for the future city? The course covers concepts, methods and techniques in design, simulation and communication of cities. The goal is to learn principles and preconditions for the design of sustainable and smart cities.

**Objective**

Students gain insight into the next generation of design processes for architects and urban designers, and into concepts of the Information Architecture of SMART CITIES, including the influence of Big Data. They learn about the expanded roles of information and of architecture: Information and simulation in architecture as means to make the invisible visible, and architecture as a metaphor and ordering system to structure the immense amounts of data of the Information Society. The seminar is highly interactive and discusses visionary case studies in Europe and Asia and new techniques in Big Data informed smart urban design. Apart from learning about and experiencing Information Architecture and SMART CITIES, the course also introduces research and management skills that will distinguish the future ETH architect. An iBook and the edX Massive Open Online Course (MOOC) Future Cities support the course.

**Content**

SMART CITIES - What will happen when cities change from static configurations into responsive and dynamic structures? What does it mean for buildings that undergo the same changes? What is the impact on architectural and urban design education? How can citizens influence this development? The SMART CITIES course will answer these questions and supply you with the necessary skills and knowledge to understand and design such dynamic structures. The intelligent use of data and information are at the core of this course. Data and information are new building materials of future cities. Citizens produce increasing amounts of data in their daily life, with stationary sensors and mobile smartphones. Using those data, citizens begin to influence the design of future cities and the re-design of existing ones. The course will be a first step towards the emerging citizen design science and cognitive design computing. Those will be the next generation of participatory design and design computing.

**Lecture notes**

iBook INFORMATION CITIES

**Literature**

The necessary texts will be found on the Chair's website at: http://www.ia.arch.ethz.ch. We specifically recommend the consultation of the Future Cities Website at: http://www.futurecities.ethz.ch during the entire course. The iBook INFORMATION CITIES is available in the iBooks Store for free.

**Prerequisites / notice**

Interactive seminar including 3 exercises

---

**051-0725-15L Digital Urban Visualization. People as Flows**

**W 2 credits 2U G. Schmitt**

**Abstract**

We examine patterns of crowd-flows in an extraordinary urbanisation phenomena: festivals. The course participants will learn how to program simulations using Processing/Java. Previous programming knowledge is not necessary. Furthermore they will gain insights into other analysis methods and learn about their significance, strengths and weaknesses.

**Objective**

We will look at those patterns from two sides. One being the view of a planner asking to find bottlenecks or the ideal place for amenities and the other being the view of visitors. We will program different behaviors that should compete against each other in order to compare their different strategies. As a case study we will use the Caliente Festival in Zurich.

For deepening the learnt in a semester thesis we offer to optimise the created simulations to make them available in interactive web apps. Additionally they could be converted into interactive web apps.

**Literature**

http://www.ia.arch.ethz.ch

**Prerequisites / notice**

No programming skills are required.

---

**701-1346-00L Carbon Mitigation**

**W 3 credits 2G N. Gruber**

**Abstract**

The reduction of CO2 emissions is the only option for keeping future climate change within reasonable bounds. In this course, we will discuss a portfolio of options involving the alteration of natural carbon sinks and carbon sequestration. The course includes introductory lectures, presentations from guest speakers from industry and the public sector, and final presentations by the students.
The goal of this course is to investigate, as a group, a particular set of carbon mitigation/sequestration options and to evaluate their potential, their cost, and their consequences. From the large number of carbon sequestration/mitigation options, a few options will be selected and then investigated in detail by the students. The results of this research will then be presented to the other students, the involved faculty, and discussed in detail by the whole group.

**Abstract**

During the integrated design studio students work on a selected integrated architectural / urban design project, considering both energy- and climate systems (HVAC) as well architectural and urban design in a specific site context. The objective is to follow an integrated design process to achieve synergistic solutions.

**Objective**

The integrated design studio enables students to identify site specific energy demand and potentials, develop integrated energy and climate systems on both the urban and building scale and evaluate their interactions and impact on building design and operation.

**Content**

During the studio students will work in groups on a contemporary integrated design project (urban and / or building scale) executing an integrated design process from the analysis of site potentials, the identification of demands, the development of an urban scale energy concept and a matching building energy- and HVAC-systems concept. Input lectures from academics and professionals will highlight specific topics relevant to the task. The projects will be presented by the student groups and discussed with internal and external reviewers at midterm and at the final presentations.

**Abstract**

Structural Design I:
- Introduction to the design of structures, by means of graphic statics and structural models, focusing on cable, membrane, as well as arched and shell structures.
- Structural Design II:
  - Determination of internal forces and description of structural behavior of mixed arches and cable structures, of truss systems, beams, slabs and frames using method of graphical statics.

**Objective**

Structural Design I:
- Using graphical methods, students are taught to understand and generate the flow of forces through a structural system in relation to its form, and to dimension its components
- Structural Design II:
  - Awareness of the most important structural systems. Understanding of the interplay of load and form. Estimation of the inner forces and dimensioning of elements.
Content

Structural Design I:
The students learn to determine the internal forces and understand the structural behavior of cable, arch, and combined arch-cable structures, but are also introduced to three-dimensional membrane and shell structures. By means of graphical design methods, such as graphic statics, students are taught to analyse the flow of forces through structural systems in relation to their form and to dimension the components of the systems.

Structural Design II:
Determination of internal forces and description of structural behaviour of mixed arches and cable structures, of truss systems, beams, slabs, panels and frames using method of graphical statics as well as dimensioning of these structural systems. Structural behaviour of columns. Discussion of reference buildings and illustration of interplay of structural system and architectural intention.

Introduction to fundamental concepts of modern programming and operational skills for developing high-quality programs, including large programs as in industry. The course introduces software engineering principles with an object-oriented approach based on Design by Contract as present in Eiffel. For the second time we offer a supporting MOOC (online) version with more exercises and a hint system.
Objective
Many people can write programs. The "Introduction to Programming" course goes beyond that basic goal: it teaches the fundamental concepts and skills necessary to perform programming at a professional level. As a result of successfully completing the course, students master the fundamental control structures, data structures, reasoning patterns and programming language mechanisms characterizing modern programming, as well as the fundamental rules of producing high-quality software. They have the necessary programming background for later courses introducing programming skills in specialized application areas.

Content
Basics of object-oriented programming. Objects and classes. Pre- and postconditions, class invariants, Design by Contract. Fundamental control structures. Assignment and References. Basic hardware concepts. Fundamental data structures and algorithms. Recursion. Inheritance and deferred classes, introduction into event-driven design and concurrent programming. Basic concepts of Software Engineering such as the software process, specification and documentation, reuse and quality assurance.

Lecture notes
The lecture slides are available for download on the course page.

Literature
Bertrand Meyer: Touch of Class: Learning to Program Well Using Objects and Contracts, Springer Verlag, 2009; new printing, 2012. This is the official textbook for the course. See http://www.polybuchhandlung.ch/100/con_liste.asp

Prerequisites / notice
The course uses an "Outside-In" approach enabling students, right from the beginning, to use an advanced graphical library and produce significant applications. Students then learn step by step how the library is built, as a source of imitation and inspiration.

The course covers not only basic concepts of programming but also some advanced topics seldom encountered in introductory courses, such as recursion, undecidability, event-driven programming, multiple inheritance and others.

252-0847-00L Computer Science W 5 credits 2V+2U B. Gärtner

Abstract
This lecture is an introduction to programming based on the language C++. We cover fundamental types, control statements, functions, arrays, and classes. The concepts will be motivated and illustrated through algorithms and applications.

Objective
The goal of this lecture is an algorithmically oriented introduction to programming.

Content
This lecture is an introduction to programming based on the language C++. We cover fundamental types, control statements, functions, arrays, and classes. The concepts will be motivated and illustrated through algorithms and applications.

Lecture notes
Lecture notes in English and Handouts in German will be distributed electronically along with the course.

Literature

327-0103-00L Introduction to Materials Science W 3 credits 3G L. Heyderman, M. Niederberger, P. Uggowitzer

Abstract
Fundamental knowledge and understanding of the atomistic and macroscopic concepts of material science.

Objective
Basic concepts in materials science.

Content
Atomic structure
Crystal structure, perfection - imperfection
Diffusion
Mechanical and thermal properties
Phase diagrams
Kinetics
Structural materials
Electric, magnetic and optical properties of materials
Materials selection criteria

Literature
James F. Shackelford
Introduction to Materials Science for Engineers

327-0301-00L Materials Science I W 3 credits 3G J. F. Löftler, A. R. Studart, P. Uggowitzer

Abstract
Basic concepts of metal physics, ceramics, polymers and their technology.

Objective
Based on the lecture 'Introduction to Materials Science' this lecture aims to give a detailed understanding of important aspects of materials science, with special emphasis on metallic and ceramic materials.

Content
Thermodynamics and phase diagrams, crystal interfaces and microstructure, diffusional transformations in solids, and diffusionless transformations will be presented for metallic alloys.

For metals see:
http://www.metphys.mat.ethz.ch/education/courses/mat_wiss1/details

For ceramics see:
http://www.complex.mat.ethz.ch/education/lectures.html

Autumn Semester 2015
Ceramics:
- diverse CEN ISO Standards given in the slides.
- Barsoum MW: Fundamentals of Ceramics.

- "Brevieral Ceramics" published by the "Verband der Keramischen Industrie e.V.", ISBN 3-924158-77-0. partly its contents may be found in the internet @ http://www.keramverband.de/brevier_engl/brevier.htm or on our homepage
- Silicon-Based Structural Ceramics (Ceramic Transactions), Stephen C. Danforth (Editor), Brian W. Sheldon, American Ceramic Society, 2003.
- Thommy Ekström and Mats Nygren, SiAlON Ceramics J Am Cer Soc Volume 75 Page 259 - February 1992
- In the first part of the lecture the bases are obtained for metals. In the second part the basics of cermics will be presented.
- The lecture will be generally in German.

401-2303-00L Complex Analysis W 6 credits 3V+2U R. Pandharipande
Abstract Complex functions of one variable, Cauchy-Riemann equations, Cauchy theorem and integral formula, singularities, residue theorem, index of closed curves, analytic continuation, special functions, conformal mappings, Riemann mapping theorem.
Objective Working Knowledge with functions of one complex variables; in particular applications of the residue theorem
Th. Gamelin: Complex Analysis, Springer 2001

401-2333-00L Methods of Mathematical Physics I W 6 credits 3V+2U G. Felder
Abstract Introduction to single-particle quantum mechanics. Familiarity with basic ideas and concepts (quantisation, operator formalism, Dirac-notation, symmetries, perturbation theory) and generic examples and applications (bound states, tunneling, scattering states, in one- and three-dimensional settings). Ability to solve simple problems.

402-0205-00L Quantum Mechanics I W 10 credits 3V+2U G. Blatter
Abstract Introduction to non-relativistic single-particle quantum mechanics. In particular, the basic concepts of quantum mechanics, such as the quantisation of classical systems, wave functions and the description of observables as operators on a Hilbert space, and the formulation of symmetries will be discussed. Basic phenomena will be analysed and illustrated by generic examples.
Objective Keywords: Schrödinger equation, basic formalism of quantum mechanics (states, operators, commutators, measuring process), symmetries (translations, rotations), quantum mechanics in one dimension, dimensionally symmetric problems in dimensions three, scattering theory, density matrices, Schrödinger-, Heisenberg-, Dirac-pictures, time reversal, perturbation theory, variational techniques, spin, addition of angular momenta, relation between QM and classical physics.
Content Lecture notes Deutsch

402-0255-00L Introduction to Solid State Physics W 10 credits 3V+2U K. Ensslin
Abstract The course provides an introduction to solid state physics, covering several topics that are later discussed in more detail in other more specialized lectures. The central topics are: solids and their lattice structures; interatomic bindings; lattice dynamics, electronic properties of insulators, metals, semiconductors, transport properties, magnetism, superconductivity.
Objective Introduction to Solid State Physics.
Content The course provides an introduction to solid state physics, covering several topics that are later discussed in more detail in other more specialized lectures. The central topics are: solids and their lattice structures; interatomic bindings; lattice dynamics, thermal properties of insulators; metals (classical and quantum mechanical description of electronic states, thermal and transport properties of metals); semiconductors (bandstructure and n/p-type doping); magnetism, superconductivity.
Lecture notes A Manuscript is distributed.
Literature Ibach & Lüth, Festkörperphysik
C. Kittel, Festkörperphysik
Ashcroft & Mermin, Festkörperphysik
W. Känzig, Kondensierte Materie
This introductory course will develop basic concepts in astrophysics as applied to the understanding of the physics of planets, stars, galaxies, and the Universe.

The course provides an overview of fundamental concepts and physical processes in astrophysics with the dual goals of: i) illustrating physical principles through a variety of astrophysical applications; and ii) providing an overview of research topics in astrophysics.

The course covers the foundations of semiconductor nanostructures, e.g., materials, band structures, bandgap engineering and doping, field-effect transistors. The physics of the quantum Hall effect and of common nanostructures based on two-dimensional electron gases will be discussed, i.e., quantum point contacts, Aharonov-Bohm rings and quantum dots.

At the end of the lecture the student should understand four key phenomena of electron transport in semiconductor nanostructures:

1. The integer quantum Hall effect
2. Conductance quantization in quantum point contacts
3. the Aharonov-Bohm effect
4. Coulomb blockade in quantum dots

The course is taught in English.

The course is suitable for all physics students beyond the bachelor of science degree. Basic knowledge of solid state physics is recommended. Very ambitioned students in the third year may be able to follow. The lecture can be chosen as part of the PhD-program.

The lecture notes and supplementary books can be recommended:

Prerequisites / notice

The course is taught in English.

Lecture notes

Literature

In addition to the lecture notes, the following supplementary books can be recommended:

Lecture notes

Literature

In addition to the lecture notes, the following supplementary books can be recommended:

Analytical Chemistry I W 3 credits 3G D. Günther, M.O. Ebert, R. Zenobi

Abstract
Introduction into the most important spectroscopical methods and their applications to gain structural information.

Objective
Knowledge about the necessary theoretical background of spectroscopical methods and their practical applications

Content
Application oriented basics of organic and inorganic instrumental analysis and of the empirical employment of structure elucidation methods:
- Mass spectrometry: Ionization methods, mass separation, isotope signals, rules of fragmentation, rearrangements.
- NMR spectroscopy: Experimental basics, chemical shift, spin-spin coupling.
- IR spectroscopy: Revisiting topics like harmonic oscillator, normal vibrations, coupled oscillating systems (in accordance to the basics of the related lecture in physical chemistry); sample preparation, acquisition techniques, law of Lambert and Beer, interpretation of IR spectra.
- Raman spectroscopy.
- UV/VIS spectroscopy: Basics, interpretation of electron spectra. Circular dichroism (CD) and optical rotation dispersion (ORD).

Lecture notes
Script will be for the production price

Literature
- M. Heilbrunner, H. Meier, B. Zeeh, Spectroskopische Methoden der organischen Chemie, 5, überarbeitete Auflage, Thieme, Stuttgart, 1995

Prerequisites / notice
Exercises are integrated in the lectures. In addition, attendance in the lecture 529-0289-00 "Instrumental analysis of organic compounds" (4th semester) is recommended.

Fundamentals of Biology IA W 5 credits 5G M. Aebi, E. Hafen

Abstract
The course provides an introduction to the basics of molecular- and cell biology and genetics.

Objective
Introduction to modern biology and to principal biological concepts.

Content
The course is divided into several chapters:
1. Basic principles of Evolution.
2. Chemistry of Life: Water; Carbon and molecular diversity; biomolecules
3. The cell: structure; membrane structure and function, cell cycle
4. Metabolism: Respiration; Photosynthesis; Fermentation
5. Inheritance: meiosis and sexual reproduction; Mendelian genetics, chromosomal basis of inheritance, molecular basis of inheritance, from gene to protein, regulation of gene expression; genomes and their evolution

Lecture notes
None.

Literature
The text-book "Biology" (Campbell, Reece) (10th edition) is the basis of the course.

Prerequisites / notice
Certain sections of the text-book must be studied by self-instruction.

Inorganic Chemistry I W 3 credits 2v+1u A. Mezzetti

Abstract
Complexes of the transition metals: structure, bonding, spectroscopic properties, and synthesis.

Objective
Introduction to the binding theory in complexes of the transition metals. Interpretation of structure, bonding, and spectroscopic properties.

General synthetic strategies.

Content
The chemical bond (overview). Symmetry and group theory. The chemical bond of coordination compounds (Valence Bond Theory, Crystal Field Theory, Molecular Orbital Theory (sigma- and pi-bonding)). pi-Accepting ligands (CO, NO, olefins, dioxygen, dihydrogen, phosphines and phosphites).

Lecture notes
Can be bought at the HCI-shop

Literature

Organic Chemistry I W 3 credits 2v+1u F. Diederich, C. Schaack

Abstract
Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetalts, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

Objective
Acquisition of a basic repertoire of synthetic methods including important reactions of aldehydes, ketones, carboxylic acids and carboxylic acid derivatives, as well as eliminations and fragmentations. Particular emphasis is placed on the understanding of reaction mechanisms and the correlation between structure and reactivity. A deeper understanding of the concepts presented during the lecture is reached by solving the problems handed out each time and discussed one week later in the exercise class. The topics covered range from different nucleophiles and of carboxylic acid derivatives. Aldol reactions.

Content
Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

Lecture notes
A pdf file of the printed lecture notes is provided online. Supplementary material may be provided online.

Literature
No set textbooks. Optional literature will be proposed at the beginning of the class and in the lecture notes.

Atmosphere W 3 credits 2V H. Wernli, T. Peter

Abstract
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

Objective
Understanding of basic physical and chemical processes in the atmosphere. Understanding of mechanisms of and interactions between: weather - climate; atmosphere - ocean - continents; troposphere - stratosphere. Understanding of environmentally relevant structures and processes on vastly differing scales. Basis for the modelling of complex interrelations in the atmosphere.

Content
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

Lecture notes
Written information will be supplied.

Literature

Introduction to Evolutionary Biology W 2 credits 2V G. Velicer, S. Wielgoss

Abstract
This course introduces important questions about the evolutionary processes involved in the generation and maintenance of biological diversity across all domains of life and how evolutionary science investigates these questions. These topics are important for understanding a number of evolutionary problems in the basic and applied sciences.

Objective
This course introduces important questions about the evolutionary processes involved in the generation and maintenance of biological diversity across all domains of life and how evolutionary science investigates these questions. These topics are important for understanding a number of evolutionary problems in the basic and applied sciences.
Content

Topics likely to be covered in this course include research methods in evolutionary biology, adaptation, evolution of sex, evolutionary transitions, human evolution, infectious disease evolution, life history evolution, macroevolution, mechanisms of evolution, phylogenetic analysis, population dynamics, population genetics, social evolution, speciation and types of selection.

Literature

Textbook:
Evolutionary Analysis
Scott Freeman and Jon Herron

Prerequisites / notice

The exam is based on lecture and textbook.

Suggested reading: M. A. Sprenger, Topics of the course.
Lecturers

The teaching laboratory offers an insight into different aspects of Inorganic Chemistry, including solid state chemistry, organometallic... A. A. Mensah

Students are able... to explain the mechanisms of cloud and precipitation formation using knowledge of humidity processes and thermodynamics.

Content

Moist processes/thermodynamics; aerosol physics; cloud formation; precipitation processes, storms; importance of aerosols and clouds for climate and weather modification, clouds and precipitation

Lecture notes

Powerpoint slides and script will be made available

Literature

Rogers and Yau, A Short Course in Cloud Physics, Pergamon Press, 1989; Wallace and Hobbs, Atmospheric Science: An Introductory Survey, Elsevier, 2006

Prerequisites / notice

50% of the time we use the concept of "flipped classroom" (en.wikipedia.org/wiki/Flipped_classroom), which we introduce at the beginning.

We offer a lab tour, in which we demonstrate with some instruments how some of the processes, that are discussed in the lectures, are measured.

There is a additional tutorial right after each lecture to give you the chance to ask further questions and discuss the exercises. The participation is recommended but voluntary.

The course is divided into several chapters:

**Mathematical Foundations I: Analysis A**

- **Lecturers**: E. Hafen
- **Hours**: 18P
- **ECTS**: 6V+3U
- **Prerequisites**: None.

Students are accustomed to scientific work and they get to know one specific research field.

### 5. Semester

#### Laboratory Courses, Semester Papers, Proseminars, Field Trips

Further Laboratory Courses arising upon specific written request by the students and permission by the Director of studies.

#### Bachelor Thesis

Encourages students to show independence, to produce scientifically structured work and to apply engineering working methods.

### Biochemical-Physical Direction

#### 1. Semester (Biochemical-Physical Direction)

#### Compulsory Subjects First Year Examinations

Lecture notes: A manual is distributed in the teaching laboratory.

Prerequisites:
- Practical Course General Chemistry (1. Semester, 529-0011-04)
- Practical Course Inorg. and Org. Chemistry I (2. Sem., 529-0020)
- Attendance of Course Inorg. Chemistry (3. Sem., 529-0121)

If necessary, access priority will be settled according to the results of the first-year examinations.
### Literature
- K. Koenigsberger: Analysis I, Springer-Verlag
- R. Courant: Introduction to Calculus and Analysis, Springer-Verlag
- V. Zörch: Mathematical Analysis I, Springer Verlag 2009

  http://www.springerlink.com/content/q67803/?p=091fa378aadef4cf8b2b2145fe2c0ee40&pi=4

### 401-0231-10L  Analysis I  W  8 credits  7G  A. Iozzi
**Abstract**
- Calculus of one variable: Real and complex numbers, vectors, functions, limits, sequences, series, power series, differentiation and integration in one variable, real to ordinary differential equations
**Objective**
- Einführung in die Grundlagen der Analysis
**Lecture notes**
- Christian Blatter: Ingenieur-Analyse (Kapitel 1-3)

### 529-0001-00L  Introduction to Computer Science  O  4 credits  2V+2U  P. H. Hünenberger
**Abstract**
- Introduction to UNIX, data representation, introduction to C++ programming, errors, algorithms, computer architecture, sorting and searching, databases, numerical algorithms, types of algorithms, simulation, data communication & networks, chemical structures, operating systems, programming languages, software engineering.
**Objective**
- Discuss fundamentals of computer architecture, languages, algorithms and programming with an eye to their application in the area of chemistry, biology and material science.
**Content**
- Minimal introduction to UNIX, Data representation and processing, algorithms and programming in C++, Errors, programming guidelines, efficiency, computer architecture, algorithms for sorting and searching, databases, numerical algorithms, types of algorithms, simulation, data communication & networks, chemical structures, operating systems, programming languages, style, software engineering.
**Lecture notes**
- Available (in English), distributed at first lecture
**Literature**
- See: www.csms.ethz.ch/education/infol
**Prerequisites / notice**
- Since the exercises on the computer do convey and test essentially different skills as those being conveyed during the lectures and tested at the written exam, the results of the exercises are taken into account when evaluating the results of the exam.

### Additional First Year Compulsory Subjects

#### Number  Title  Type  ECTS  Hours  Lecturers
529-0011-04L  Practical Course General Chemistry  ■  O  8 credits  12P  H. V. Schönberg, E. C. Meister

*Information about the practical course will be given on the first day.*
Abstract
Qualitative analysis (determination of cations and anions), acid-base-equilibria (pH-values, titrations, buffer), precipitation equilibria (gravimetry, potentiometry, conductivity), redox reactions (syntheses, redox-titrations, galvanic elements), metal complexes (syntheses, complexometric titration) analysis of measured values, states of aggregation (vapour pressure, conductivity, calorimetry)

Objective
Qualitative analysis (simple cation and anion separation process, determination of cations and anions), acid-base-equilibria (strengths of acids and bases, pH- and pKa-values, titrations, buffer systems, Kjeldahl determination), precipitation equilibria (gravimetry, potentiometry, conductivity), oxidation state and redox behaviour (syntheses), redox-titrations, galvanic elements, metal complexes (syntheses of complexes, ligand exchange reactions, complexometric titration) analysis of measured values (measuring error, average value, error analysis), states of aggregation (vapour pressure), characteristics of electrolytes (conductivity measurements), thermodynamics (calorimetry)

Content
The general aim for the students of the practical course in general chemistry is an introduction in the scientific work and to get familiar with simple experimental procedures in a chemical laboratory. In general, first experiences with the principal reaction behaviour of a variety of different substances will be made. The chemical characteristics of these will be elucidated by a series of quantitative experiments alongside with the corresponding qualitative analyses. In order to get an overview of classes of substances as well as some general phenomena in chemistry suitable experiments have been chosen. In the second part of the practical course, i.e. physical chemistry, the behaviour of substances in their states of aggregation as well as changes of selected physical values will be recorded and discussed.

Lecture notes

| Content | ## Examples of partial differential equations
- Classification of PDEs
- Superposition principle

## One-dimensional wave equation
- D'Alembert's formula
- Duhamel's principle

## Fourier series
- Representation of piecewise continuous functions via Fourier series
- Examples and applications

## Separation of variables
- Resolution of wave and heat equation
- Homogeneous and inhomogeneous boundary conditions, Dirichlet and Neumann boundary conditions

## Laplace equation
- Resolution of the Laplace equation on rectangle, disk and annulus
- Poisson formula
- Mean value theorem and maximum principle

## Fourier transform
- Derivation and Definition
- Inverse Fourier transformation and inversion formula
- Interpretation and properties of the Fourier transform
- Resolution of the heat equation

## Laplace transform
- Definition, motivation and properties
- Inverse Laplace transform of rational functions
- Application to ordinary differential equations

Lecture notes
There are available some Lecture Notes in English and also in German of the Professor. These can be found following the links provided under the tab 'Lernmaterialien'.

Literature
2) Y. Pinchover and J. Rubinstein, An Introduction to Partial Differential Equations, Cambridge University Press
3) E. Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons (only Chapters 1,2,6,11)

Prerequisites / notice
It is required a minimal background of: 1) multivariables functions (Riemann integrals in two or three variables, change of variables in the integrals through the Jacobian, partial derivatives, differentiability, Jacobian) 2) numerical and functional sequences and series, basic knowledge of ordinary differential equations.

401-0353-00L | Analysis III | W | 4 credits | 2V+1U | P. S. Jossen |
| Abstract | In this lecture we treat problems in applied analysis. The focus lies on the simplest cases of three fundamental types of partial differential equations of second order: the Laplace equation, the heat equation and the wave equation. |
The concepts and tools in physics, as well as the methods of an experimental science are taught. The student should learn to identify, analyze, and solve physical problems in his/her own field of science.

### Prerequisites / Literature

**Prerequisites:**
- Mathematics I & II

**Literature**
- Erwin Kreyszig, "Advanced Engineering Mathematics", John Wiley & Sons, Kap. 8, 11, 16 (very good book, can be used as a reference)
- Norbert Hungerbühler, "Einführung in die partiellen Differentialgleichungen"; vdf Hochschulverlag AG an der ETH Zürich.
- G. Felder: Parallele Differenzialgleichungen.
- http://www.math.ethz.ch/~felder/Teaching/PDG

### Content

**1.) Klassifizierung von PDE's**
- linear, quasilinear, nicht-linear
- elliptisch, parabolisch, hyperbolisch

**2.) Quasilineare PDE**
- Methode der Charakteristika (Beispiele)

**3.) Elliptische PDE**
- Bsp: Laplace-Gleichung
- Harmonische Funktionen, Maximumprinzip, Mittelwerts-Formel
- Methode der Variablenseparation

**4.) Parabolische PDE**
- Bsp: Wärmeleitungsgleichung
- Bsp: Inverse Wärmeleitungsgleichung
- Methode der Variablenseparation

**5.) Hyperbolische PDE**
- Bsp: Wellengleichung
- Formeln von d'Alembert in (1+1)-Dimensionen
- Methode der Variablenseparation

**6.) Green'sche Funktionen**
- Rechnen mit der Dirac-Deltafunktion
- Idee der Green'schen Funktionen (Beispiele)

**7.) Ausblick auf numerische Methoden**
- 5-Punkt- Diskretisierung des Laplace-Operators (Beispiele)

### Abstract

Introduction to the concepts and tools in physics with the help of demonstration experiments: mechanics of point-like and ridged bodies, periodic motion and mechanical waves.

### Objective

- Acquire knowledge of the basic principles regarding the physics of classical mechanics and thermodynamics.
- Skills in solving physics problems.

### Lecture notes

- Voraussetzungen:
  - Mathematik I und II
  - Allgemeine Chemie I und II
  - Physikalische Chemie I

### Literature

- Norbert Hungerbühler, "Einführung in die partiellen Differentialgleichungen"; vdf Hochschulverlag AG an der ETH Zürich.
- G. Felder: Parallele Differenzialgleichungen.
- http://www.math.ethz.ch/~felder/Teaching/PDG

### Prerequisites / notice

**Prerequisites:**
- Analysis I and II, Fourier series (Complex Analysis)

### Content

**529-0422-00L Organic Chemistry I**
- Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enaminic, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

**Objective**

- Acquisition of a basic repertoire of synthetic methods including important reactions of aldehydes, ketones, carboxylic acids and carboxylic acid derivatives, as well as eliminations and fragmentations. Particular emphasis is placed on understanding of reaction mechanisms and the correlation between structure and reactivity. A deeper understanding of the concepts presented during the lecture is reached by solving the problems handed out each time and discussed one week later in the exercise class.
The goal of this lecture is an algorithmically oriented introduction to programming. E. Hafen
W. Gärtner
Lecture notes in English and Handouts in German will be distributed electronically along with the course.

The lectures are presented in the Powerpoint format. These are available on the WEB for ETH students over the nethz (Moodle). Some
Complexes of the transition metals: structure, bonding, spectroscopic properties, and synthesis.
Introduction into the most important spectroscopical methods and their applications to gain structural information.

Script will be for the production price

Fundamentals of Biology II: Cell Biology
W 5 credits
5V
E. Hafen, U. Kutay, J. Matos, G. Schertler, U. Suter, S. Werner

Abstract
The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students
have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry,
microbiology, pharmacological sciences, molecular biology, and others.

Objective
The focus is animal cells and the development of multicellular organisms with a clear emphasis on the molecular basis of cellular structures
and phenomena. The topics include biological membranes, the cytoskeleton, protein sorting, energy metabolism, cell cycle and division,
viruses, extracellular matrix, cell signaling, embryonic development and cancer research.

Content
The lectures are presented in the Powerpoint format. These are available on the WEB for ETH students over the nethz (Moodle). Some
lectures are available on the ETH WEB site in a live format (Livestream) at the above WEB site.

(paperback).

Prerequisites / notice
Some of the lectures are given in the English language. Certain sections of the text-book must be studied by self-instruction.

Introduction to Bioinformatics: Concepts and Applications

W. Gruissem, K. Bärenfaller, A. Callisch, G. Capitani, J. Fütterer, M. Robinson, A. Wagner

Abstract
Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.

Objective
Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.

Content
Bioinformatics I will cover the following topics:
- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

Mathematics III: Partial Differential Equations

401-0373-00L

W. Da Lio

Abstract

Objective
The main objective is that the students get a basic knowledge of the classical tools to solve explicitly linear partial differential equations.

Content
## Examples of partial differential equations
- Classification of PDEs
- Superposition principle

## One-dimensional wave equation
- D'Alembert's formula
- Duhamel's principle

## Fourier series
- Representation of piecewise continuous functions via Fourier series
- Examples and applications

## Separation of variables
- Resolution of wave and heat equation
- Homogeneous and inhomogeneous boundary conditions, Dirichlet and Neumann boundary conditions

## Laplace equation
- Resolution of the Laplace equation on rectangle, disk and annulus
- Poisson formula
- Mean value theorem and maximum principle

## Fourier transform
- Derivation and Definition
- Inverse Fourier transformation and inversion formula
- Interpretation and properties of the Fourier transform
- Resolution of the heat equation

## Laplace transform
- Definition, motivation and properties
- Inverse Laplace transform of rational functions
- Application to ordinary differential equations

Lecture notes
There are available some Lecture Notes in English and also in German of the Professor. These can be found following the links provided under the tab 'Lernmaterialien'.

Literature
2) Y. Pinchover and J. Rubinstein, An Introduction to Partial Differential Equations, Cambridge University Press
3) E. Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons (only Chapters 1,2,6,11)

Prerequisites / notice
It is required a minimal background of: 1) multivariables functions (Riemann integrals in two or three variables, change of variables in the integrals through the Jacobian, partial derivatives, differentiability, Jacobian) 2) numerical and functional sequences and series, basic knowledge of ordinary differential equations.

<td>This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed. The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level. The students should learn ecological concepts at these different levels in the context of concrete examples from terrestrial and aquatic ecology. Corresponding methods for studying the systems will be presented. A further aim of the lecture is that students achieve an understanding of biodiversity, why it is threatened and how it can be managed.</td>

**Course Introduction**

This course introduces important questions about the evolutionary processes involved in the generation and maintenance of biological diversity across all domains of life and how evolutionary science investigates these questions. The topics likely to be covered in this course include research methods in evolutionary biology, adaptation, evolution of sex, evolutionary transitions, human evolution, infectious disease evolution, and the evolution of microbiomes. The exam is based on lecture and textbook.

**Content**

- Evolutionary Analysis
- Population dynamics
- Population genetics
- Social evolution
- Speciation and types of selection

**Prerequisites / notice**

The exam is based on lecture and textbook.

---

### 701-0245-00L Introduction to Evolutionary Biology

**W**  2 credits  2V  
**Objective**
This course introduces important questions about the evolutionary processes involved in the generation and maintenance of biological diversity across all domains of life and how evolutionary science investigates these questions.

**Content**
Topics likely to be covered in this course include research methods in evolutionary biology, adaptation, evolution of sex, evolutionary transitions, human evolution, infectious disease evolution, and the evolution of microbiomes.

**Lecture notes**
Underlagen, Vorlesungsfolien und relevante Literatur sind in der Lehrdokumentenablage abrufbar. Die Unterlagen für die nächste Vorlesung stehen jeweils spätestens am Freitagmorgen zur Verfügung.

**Literature**
- Bohle 1995. Limnische Systeme. Springer, ca. Fr. 50.-

**Prerequisites / notice**

The exam is based on lecture and textbook.

---

### 701-0023-00L Atmosphere

**W**  3 credits  2V  
**Objective**
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

**Content**
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

**Literature**
- Scott Freeman and Jon Herron, Evolutionary Analysis, 4th edition, English.

**Prerequisites / notice**

Written information will be supplied.

---

### 701-0501-00L Pedosphere

**W**  3 credits  2V  
**Objective**
Introduction to the formation and properties of soils as a function of parent rock, landscape position, climate, and soil organisms. Complex relationships between soil forming processes, physical and chemical soil properties, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

**Content**
Definition of the pedosphere, soil functions, rocks as parent materials, minerals and weathering, soil organisms, soil organic matter, physical and chemical properties of soils, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

**Literature**
- Scott Freeman and Jon Herron, Evolutionary Analysis, 4th edition, English.

**Prerequisites / notice**

Written information will be supplied.

---

### 701-0401-00L Hydrosphere

**W**  3 credits  2V  
**Objective**
Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

**Literature**
- Scott Freeman and Jon Herron, Evolutionary Analysis, 4th edition, English.

**Prerequisites / notice**

Written information will be supplied.

---

**Data: 06.12.2017 12:57  Autumn Semester 2015  Page 804 of 1432**
### Topics of the course.
- Physical properties of water (i.e. density and equation of state)
- Global water resources
- Exchange at boundaries
- Energy (thermal & kinetic), gas exchange
- Mixing and transport processes in open waters
- Vertical stratification, large scale transport
- Turbulence and mixing
- Mixing and exchange processes in rivers
- Groundwater and its dynamics
- Ground water as part of the terrestrial water cycle
- Ground water hydraulics, Darcy’s law
- Aquifers and their properties
- Hydrochemistry and tracer
- Ground water use

### Case studies
- 1. Water as resource, 2. Water and climate

### Literature
Suggested literature.
- Park, Ch., 2001, The Environment, Routledge

### Prerequisites / notice
The case studies and the analysis of the questions and problems are integral part of the course.

### 701-0255-00L Biochemistry

#### Abstract
Building on the biology courses in the 1st and 2nd semesters, this course covers basic biochemical knowledge in the areas of enzymology and metabolism. Those completing the course are able to describe and understand fundamental cellular metabolic processes.

#### Objective
Students are able to understand
- The structure and function of biological macromolecules
- The kinetic bases of enzyme reactions
- Thermodynamic and mechanistic basics of relevant metabolic processes

Students are able to describe the relevant metabolic reactions in detail

#### Content
Introduction, basics, composition of cells, biochemical units, repetition of relevant organic chemistry
Structure and function of proteins
Carbohydrates
Lipids and biological membranes
Enzymes and enzyme kinetics
Catalytic strategies
Metabolism: Basic concepts and design. Repetition of basic thermodynamics
Glycolysis, fermentation
The citric acid cycle
Oxidative phosphorylation
Fatty acid metabolism

Lecture notes
Horton et al. (Pearson) serves as lecture notes.

### 701-0423-00L Chemistry of Aquatic Systems

#### Abstract
This course gives an introduction to chemical processes occurring in aquatic systems and shows applications to various systems. The following topics are treated: acid-base reactions and carbonate system, solubility of solids and weathering, redox reactions, complexation of metals, reactions at the solid/water interface, applications to lakes, rivers, and groundwater.

#### Objective
Understanding of chemical processes in aquatic systems. Quantitative application of chemical equilibria to processes in natural waters.

Evaluation of analytical data from aquatic systems.

#### Content
Introduction to the chemistry of aquatic systems. Regulation of the composition of natural waters by chemical, geochemical and biological processes. Quantitative application of chemical equilibria to processes in natural waters. The following topics are treated: acid-base reactions, carbonate system; solubility of solid phases and weathering; complexation of metals and metal cycling in natural waters; redox reactions; reactions at the interface solid phase-water; applications to lakes, rivers, groundwater.

Lecture notes
Script is distributed.

#### Literature

### 701-0461-00L Numerical Methods in Environmental Sciences

#### Abstract
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

#### Objective
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

#### Content
Classification of numerical problems, introduction to finite-difference methods, time integration schemes, non-linearity, conservative numerical techniques, an overview of spectral and finite-element methods. Examples and exercises from a diverse cross-section of Environmental Science.

#### Lecture notes
Three obligatory exercises, each two hours in length, are integrated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

#### Literature
Is provided (CHF 10.- per copy).

#### Prerequisites / notice
Die Vorlesung verlangt Vorkenntnisse in Linearer Algebra, Analysis und Physik (z.B. komplexe Zahlen, Beschreibung von ebenen Wellen, einfache gewöhnliche Differentialgleichungen)

### 252-0021-00L Introduction to Programming

#### Abstract
Introduction to fundamental concepts of modern programming and operational skills for developing high-quality programs, including large programs as in industry. The course introduces software engineering principles with an object-oriented approach based on Design by Contract as present in Eiffel. For the second time we offer a supporting MOOC (online) version with more exercises and a hint system.

#### Lecture notes
Is provided (CHF 10.- per copy).
Objective

Many people can write programs. The "Introduction to Programming" course goes beyond that basic goal: it teaches the fundamental concepts and skills necessary to perform programming at a professional level. As a result of successfully completing the course, students master the fundamental control structures, data structures, reasoning patterns and programming language mechanisms characterizing modern programming, as well as the fundamental rules of producing high-quality software. They have the necessary programming background for later courses introducing programming skills in specialized application areas.

Content

Basics of object-oriented programming. Objects and classes. Pre- and postconditions, class invariants, Design by Contract. Fundamental control structures. Assignment and References. Basic hardware concepts. Fundamental data structures and algorithms. Recursion. Inheritance and deferred classes, introduction into event-driven design and concurrent programming. Basic concepts of Software Engineering such as the software process, specification and documentation, reuse and quality assurance.

Lecture notes

Textbook: "Touch of Class" (see under "Literatur")

The lecture slides are available for download on the course page.

Literature

Bertrand Meyer: Touch of Class: Learning to Program Well Using Objects and Contracts, Springer Verlag, 2009; new printing, 2012. This is the official textbook for the course. See http://www.polybuchhandlung.ch/100/con_liste.asp

Prerequisites / notice

The course uses an "Outside-In" approach enabling students, right from the beginning, to use an advanced graphical library and produce significant applications. Students then learn step by step how the library is built, as a source of imitation and inspiration.

The course covers not only basic concepts of programming but also some advanced topics seldom encountered in introductory courses, such as recursion, undecidability, event-driven programming, multiple inheritance and others.

5. Semester (Biochemical-Physical Direction)

Laboratory Courses, Semester Papers, Proseminars, Field Trips

Laboratory Courses arising upon specific written request by the students and permission by the Director of studies.

Abstract

It completes the Bachelor program and consists of a scientific project carried out independently.

Objective

Encourages students to show independence, to produce scientifically structured work and to apply engineering working methods.

Second and Third Year Additional Subjects

For the Bachelor in Interdisciplinary Sciences students can in principle choose from all subjects taught at the Bachelor level at ETH Zurich.

At the beginning of the 2. year an individual study program is established for every student in discussion with the Director of Studies in interdisciplinary sciences. For details see Programme Regulations 2010.

Other Electives ETH

Further combinations of Compulsory elective subjects arising upon specific written request by the students and permission by the Director of studies.

Course Catalogue of ETH

Compulsory Electives in Humanities, Social and Political Sciences

Recommended GESS compulsory elective courses (Type B) for D-CHAB.

Elective Courses

European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
Interdisciplinary Sciences Master

For the Master in Interdisciplinary Sciences students can in principle choose from all subjects taught at the Master level at ETH Zurich.

At the beginning of the Master studies an individual study program is established for every student in discussion with the Director of Studies in interdisciplinary sciences. For details see Programme Regulations 2007.

▶ Majors

The students can choose from all Majors as provided by the following list: http://www.chab.ethz.ch/lehre/in_msc/index_EN

Furthermore it is also possible to create an individual Majors as specified in Art. 19 paragraph 3 of the Programme Regulations.

▶ General Courses

Selection of courses of ETH, according individual curriculum.

▶ Proseminars, Laboratory Courses, Research Projects and Sem. Papers

Abstract

In the Master thesis students prove their ability to independent, structured and scientific working. The Master thesis is usually carried out in a core or optional subject area as chosen by the student.

Objective

In the Master Thesis students prove their ability to independent, structured and scientific working.

**Abstract**

**Chemistry I:** Chemical bond and molecular structure, chemical thermodynamics, chemical equilibrium.

**Mathematics I:** This course covers mathematical concepts and techniques necessary to model, solve and discuss scientific problems - notably through ordinary differential equations.

**General Biology I:** Basics of structure, formation and function of cells and biomacromolecules, principles of metabolism, as well as basic classical and molecular genetics and evolutionary biology. First in a series of two lectures given over two semesters for students of agricultural and food sciences, as well as of environmental sciences.

**Objective**

**Introduction to general and inorganic chemistry. Basics of the composition and the change of the material world. Introduction to the thermodynamically controlled physico-chemical processes. Macroscopic phenomena and their explanation through atomic and molecular properties. Using the theories to solve qualitatively and quantitatively chemical and ecologically relevant problems.**

**Introduction to general and inorganic chemistry. Basics of the composition and the change of the material world. Introduction to the thermodynamically controlled physico-chemical processes. Macroscopic phenomena and their explanation through atomic and molecular properties. Using the theories to solve qualitatively and quantitatively chemical and ecologically relevant problems.**

**Introduction to general and inorganic chemistry. Basics of the composition and the change of the material world. Introduction to the thermodynamically controlled physico-chemical processes. Macroscopic phenomena and their explanation through atomic and molecular properties. Using the theories to solve qualitatively and quantitatively chemical and ecologically relevant problems.**

**Introduction to general and inorganic chemistry. Basics of the composition and the change of the material world. Introduction to the thermodynamically controlled physico-chemical processes. Macroscopic phenomena and their explanation through atomic and molecular properties. Using the theories to solve qualitatively and quantitatively chemical and ecologically relevant problems.**

**Mathematics I:** Mathematics is of ever increasing importance to the Natural Sciences and Engineering. The key is the so-called mathematical modelling cycle, i.e. the translation of problems from outside of mathematics into mathematics, the study of the mathematical problems (often with the help of high level mathematical software packages) and the interpretation of the results in the original environment.

**General Biology I:** The understanding of some basic principles of biology: the hierarchy of the structural levels of biological organisation, with particular emphasis on the cell and its functions, as well as metabolism, inheritance and evolution.

**Content**

1. **Stoichiometry**

2. **Atoms and Elements (Quantenmechanical Model of the Atom)**

3. **Chemical Bonding**

4. **Thermodynamics**

5. **Chemical Kinetics**

6. **Chemical Equilibrium (Acids and Bases, Solubility Equilibria)**

**Lecture notes**

ca. 360 Seiten mit vielen Figuren und durchgerechneten Beispielen.

**Literature**

Weiterführende Literatur:

- Brown, LeMay, Bursten CHEMIE (deutsch)
- Housecroft and Constable, CHEMISTRY (englisch)
- Oxtoby, Gillis, Nachtrieb, MODERN CHEMISTRY (englisch)

- Bretscher, O.: Linear Algebra with Applications (Pearson Prentice Hall).

**Prerequisites / notice**

- Prerequisites: familiarity with the basic notions from Calculus, in particular those of function and derivative.

**Assistance:**

- Mondays 12-13, Tuesdays 17-19, Wednesdays 17-19, in Room HG E 41.
The structure and function of biomacromolecules; basics of metabolism; cell biology; membrane structure and function; basic energetics of cellular processes; respiration, photosynthesis; cell cycle, meiosis and sexual life cycles; Mendelian and molecular genetics; animal reproduction and behavior; sensory and motor mechanisms; population biology and evolution; principles of phylogeny.

The Campbell Chapters 1-4 (10th edition) under the heading “The role of chemistry in biology” are expected. We will treat the following Campbell chapters:

5 Biochemistry Biological Macromolecules and Lipids
7 Cell biology Cell Structure and Function
8 Cell biology Cell Membranes
10 Cell biology Cellular Respiration: An Introduction to Metabolism
10 Cell biology Cellular Respiration
11 Cell biology Photosynthesis
12 Cell Biology Mitosis
13 The Genetic Basis of Life Sexual Life Cycles and Meiosis
14 The Genetic Basis of Life Mendelian Genetics
15 The Genetic Basis of Life Linkage and Chromosomes
20 The Genetic Basis of Life The Evolution of Genomes
21 Evolution How Evolution Works
22 Evolution Phylogenetic Reconstruction
23 Evolution Microevolution
24 Evolution Species and Speciation
25 Evolution Macroevolution

Lecture notes no script

Literature

Prerequisites / notice
The lecture is the first in a series of two lectures given over two semesters for students with biology as a basic subject.

Abstract
This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed.

Objective
The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level.

Content
- Übersicht der aquatischen und terrestriellen Lebensräume mit ihren Bewohnern
- Einfluss von Umweltfaktoren (Temperatur, Strahlung, Wasser, Nährstoffe etc.) auf Organismen; Anpassung an bestimmte Umweltbedingungen
- Populationsdynamik: Ursachen, Beschreibung, Vorhersage und Regulation
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartimente, Stoff- und Energieflüsse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

Lecture notes Unterlagen, Vorlesungsmaterial und relevante Literatur sind in der Lehrdokumentenablage abrufbar. Die Unterlagen für die nächste Vorlesung stehen jeweils spätestens am Freitagmorgen zur Verfügung.

Literature
Generelle Ökologie:

Aquatische Ökologie:
Lampert & Sommer 1999. Limnökologie. Thieme, 2. Aufl., ca. Fr. 55.-;

Naturschutzbiologie:

701-0025-00L Earth and Natural Production Systems O 5 credits 4V C. Schär, E. Frossard, C. Garcia, M. Sonneveld, B. Wehrli, S. Willett

Abstract
The lecture provides a science-based exploration of key aspects of our planet: from its formation, to its properties and resources (minerals, soils, climate, water, vegetation), to agricultural production.

Objective
Overview and understanding of key aspects of planet earth and its role for agricultural production, including consideration of current challenges such as climate change, water crises, deforestation, north-south conflict and biodiversity.

Content
- Origin of the planetary system, composition of the earth and the atmosphere, formation of continents and oceans, biogeochemical cycles, plate tectonics and earthquakes, erosion, climate, water cycle, surface waters, vegetation, forests and crops, food production including related worldwide ecological and economical interactions.

Lecture notes Scripts provided by each teaching person.

Prerequisites / notice
Further information: https://moodle-app2.let.ethz.ch/course/info.php?id=1682

701-0757-00L Principles of Economics O 3 credits 2G R. Schubert

Abstract
This course covers the bases for understanding micro- and macroeconomic issues and theories. Participants are given the tools to argue in economic and political terms and to evaluate the corresponding measures. Group and individual exercises deepen the knowledge gained.

Objective
Students are able to
- describe fundamental micro- and macroeconomic issues and theories.
- apply suitable economic arguments to a given theme.
- evaluate economic measures.

Content
Supply and demand behaviour of firm and households; market equilibrium and taxation; national income and indicators; inflation; unemployment; growth; macroeconomics policies

Lecture notes available on electronic platform
Laboratory Course: Elementary Chemical Techniques

This practical course provides an introduction to laboratory techniques. The experiments cover a wide range of techniques, including analytical and synthetic techniques (e.g., investigation of soil and water samples or the preparation of simple compounds). Furthermore, handling of gaseous substances is practised.

Objective

This course is intended to provide an overview of experimental chemical methods. The handling of chemicals and proper laboratory techniques represent the main learning targets. Furthermore, the description and recording of laboratory processes is an essential part of this course.
The classification and analysis of natural and artificial compounds is a key subject of this course. It provides an introduction to elementary laboratory techniques, and the experiments cover a wide range of analytic and synthetic tasks:

Selected samples (e.g. soil and water) will be analysed with various methods, such as titrations, spectroscopy or ion chromatography. The chemistry of aqueous solutions (acid-base equilibria and solvatation or precipitation processes) is studied.

Furthermore, the preparation and handling of environmentally relevant gaseous species like carbon dioxide or nitrogen oxides is a central subject of the Praktikum.

Lecture notes
The script will be published on the web.
Details will be provided on the first day of the semester.

Literature
A thorough study of all script materials is requested before the course starts.

751-0001-00L Introduction to the Study Program E- 0 credits 1V Lecturers
Abstract
Technical and organizational guidance to Freshmen.

Objective
Support to Freshmen in Agricultural Science and Food Sciences

Content
Information on:
Program structure, regulations, bachelor thesis, project work, practice and the importance of first year basics.
Organization: department, institutes, professorships and research, students' associations.

701-0071-00L Microbiology O 2 credits 2V M. Ackermann, M. Schuppler, J. Vorholt-Zambelli
Abstract
Teaching of basic knowledge in microbiology with main focus on Microbial Cell Structure and Function, Molecular Genetics, Microbial Growth, Metabolic Diversity, Phylogeny and Taxonomy, Prokaryotic Diversity, Human-Microbe Interactions, Biotechnology.

Objective
Teaching of basic knowledge in microbiology.

Content

Lecture notes
Wird von den jeweiligen Dozenten ausgegeben.
### Biochemistry

**Abstract**  
Building on the biology courses in the 1st and 2nd semesters, this course covers basic biochemical knowledge in the areas of enzymology and metabolism. Those completing the course are able to describe and understand fundamental cellular metabolic processes.

**Objective**  
Students are able to understand  
- the structure and function of biological macromolecules  
- the kinetic bases of enzyme reactions  
- thermodynamic and mechanistic basics of relevant metabolic processes  
Students are able to describe the relevant metabolic reactions in detail

**Content**  
- Introduction, basics, composition of cells, biochemical units, repetition of relevant organic chemistry  
- Structure and function of proteins  
- Carbohydrates  
- Lipids and biological membranes  
- Enzymes and enzyme kinetics  
- Catalytic strategies  
- Metabolism: Basic concepts and design. Repetition of basic thermodynamics  
- Glycolysis, fermentation  
- The citric acid cycle  
- Oxidative phosphorylation  
- Fatty acid metabolism

**Lecture notes**  
Horton et al. (Pearson) serves as lecture notes.

**Prerequisites / notice**  
Basic knowledge in biology and chemistry is a precondition.

### Physiology and Anatomy I

**Abstract**  
Imparts a basic understanding of physiology and anatomy in man, focusing on the interrelations between morphology and function of the human organism. This is fostered by discussing all subjects from a functional point of view. One major topic of the lecture is food intake and digestion with its correlated chemosensory, endocrine and metabolic processes.

**Objective**  
At the end of the course the students understand the basic functions of the organ systems and functionally important morphological features. One focus of the course is on aspects related to nutrition and overweight including the resulting diseases.

### Organic Chemistry

**Abstract**  
Introduction to Isomerism.  
Reaction mechanisms in organic chemistry (substitutions, additions, eliminations condensations)  
Biosynthesis of Terpenes.

**Objective**  
The students are able to differentiate between structural and stereoisomers.  
The students know the basic reaction mechanisms in organic chemistry. They are able to understand and formulate simple biochemical reactions.  
They know the basics of the biosynthesis of terpenes.

**Content**  
- Isomerism (structural isoemrs, stereoisomers).  
- Descriptive chemistry of natural products (glycerides, peptides, saccharides).  
- Reaction mechanisms (substitutions, additions, eliminations, condensations).  
- The citric acid cycle, the glyoxylate cycle.

**Literature**  
Carsten Schmuck, Basisbuch Organische Chemie, Pearson

**Prerequisites / notice**  
Der Stoff der Basischemie wird vorausgesetzt.

Relationship between economy and environment, market failure, external effects and public goods, contingent valuation, internalisation of externalities; economics of non-renewable resources, economics of renewable resources, cost-benefit analysis, sustainability, and international aspects of resource and environmental economics.
Objective
Understanding of the basic issues and methods in resource and environmental economics; ability to solve typical problems in the field using the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Topics are:
- Introduction to resource and environmental economics
- Importance of resource and environmental economics
- Main issues of resource and environmental economics
- Normative basis
- Utilitarianism
- Fairness according to Rawls
- Economic growth and environment
- Externalities in the environmental sphere
- Governmental internalisation of externalities
- Private internalisation of externalities: the Coase theorem
- Free rider problem and public goods
- Types of public policy
- Efficient level of pollution
- Tax vs. permits
- Command and Control Instruments
- Empirical data on non-renewable natural resources
- Optimal price development: the Hotelling-rule
- Effects of exploration and Backstop-technology
- Effects of different types of markets.
- Biological growth function
- Optimal depletion of renewable resources
- Social inefficiency as result of over-use of open-access resources
- Cost-benefit analysis and the environment
- Measuring environmental benefit
- Measuring costs
- Concept of sustainability
- Technological feasibility
- Conflicts sustainability / optimality
- Indicators of sustainability
- Problem of climate change
- Cost and benefit of climate change
- Climate change as international ecological externality
- International climate policy: Kyoto protocol
- Implementation of the Kyoto protocol in Switzerland

Content
Economy and natural environment, welfare concepts and market failure, external effects and public goods, measuring externalities and contingent valuation, internalising external effects and environmental policy, economics of non-renewable resources, renewable resources, cost-benefit-analysis, sustainability issues, international aspects of resource and environmental problems, selected examples and case studies.

Abstract
The central aim is to provide an individual experience of the physical phenomena and the basic principles of the experiment. By conducting simple physical experiments the student will learn how to properly use physical instruments and how to evaluate the results correctly.

Objective
This laboratory course aims to provide basic knowledge of:
- the setup of a physics experiment,
- the use of measurement instruments,
- various measuring techniques,
- the analysis or measurement errors,
- and the interpretation of the measured quantities.

Abstract
Basic principles of the handling of microorganisms (MO) - Detection of MO in the environment - Foodmicrobiology - Morphology and diagnostics of MO - Morphology and physiology of fungi - Antimicrobial agents - Microbial genetics - Bacterial physiology and interactions - Microbial pest control

Objective
The students are familiar with the laboratory work with microorganisms. Specific emphasis is put on the isolation and maintenance of pure cultures and the required hygiene measures. The students know the practical, clinical and ecological importance of microorganisms.

Content
In an introductory part students are made familiar with the handling and cultivation of microorganisms (MO). Afterwards, the students detect MO in the environment and use MO for the conservation of food. This part is then followed by a practical introduction on routine diagnostics of MO and experiments with antimicrobial agents. The part on diagnostics is complemented by an overview over the morphology and physiology of fungi. On experiments on plant-bacteria-interactions - a current research topic at the Institute of Microbiology - the students experience the interaction of of MO with higher organisms. Some simple experiments demonstrate the importance of MO in molecular genetics. The course ends with an example of applied microbiology i.e. an experiment on microbial pest control.

Lecture notes
A detailed script of approx. 100 pp. and other relevant documents are available at https://moodle-app2.let.ethz.ch/course/view.php?id=1646 at latest 1 week before the beginning of the practical course.
To understand the basic principles of analytical chemistry. To get acquainted with the principles and applications of important routine methods of instrumental food analysis (UV/VIS, IR, AAS, GC, HPLC).

**Abstract**

To understand the basic principles of analytical chemistry. To get acquainted with the principles and applications of important routine methods of instrumental food analysis (UV/VIS, IR, AAS, GC, HPLC).

**Objective**

**Abstract**

Basic information for understanding biotechnology applied to food processing will be presented. This will include a presentation of the physiology of important productive microorganisms used in food fermentations, closely related to applications in biotechnology; microbial kinetics, and design and operation of bioreactors; and application of modern molecular tools for food biotechnology.

**Objective**

The main goal for this course is to provide students with basic information for understanding biotechnology applied to food processing. For the students, the aim will be:

- To understand the important role of microbial physiology and molecular tools for food biotechnology;
- To understand basic principles of fermentation biotechnology; with particular emphasis on food applications.

**Content**

Biotechnology has been defined as any technique that uses living organisms, or substances from those organisms, to make or modify a product, to improve plants or animals, or to develop microorganisms for specific uses. In this course, basic knowledge for understanding biotechnology as applied to food processing will be presented. This course builds on the application of principles learned from other basic courses in the Bachelor program, especially microbiology and microbial metabolism, molecular biology, biochemistry, physics, and engineering. Students will learn about the physiology of important productive microorganisms (lactic acid bacteria, bifidobacteria, propionibacteria and fungi) used in food fermentations, closely related to applications in biotechnology. Microbial kinetics, and design and operation of bioreactors used for both research and industrial scale production of traditional foods and modern food ingredients will be emphasized. This part will be illustrated by examples of food fermentation processes, representative of specific challenges. Finally, the application of modern molecular tools to food biotechnology will be discussed.

**Lecture notes**

A complete course document and/or a copy of the power point slides from each lecture will be provided.

**Abstract**

This course introduces basic concepts of micro- and macronutrient nutrition. Macronutrients studied include fat-soluble and water-soluble vitamins, minerals and trace elements. Macronutrients include proteins, fat and carbohydrates. Special attention is given to nutrient digestion, bioavailability, metabolism and excretion with some focus on energy metabolism.

**Objective**

To introduce the students to the both macro- and micronutrients in relation to food and metabolism.

**Content**

The course is divided into two parts. The lectures on micronutrients are given by Prof. Zimmermann and the lectures on macronutrients are given by Prof. Wolfrum. Prof. Zimmermann discusses the micronutrients, including fat-soluble vitamins, water-soluble vitamins, minerals and trace elements. Prof. Wolfrum introduces basic nutritional aspects of proteins, fats, carbohydrates and energy metabolism. The nutrients are discussed in relation to digestion, absorption and metabolism. Special aspects of homeostasis and homeorhesis are emphasized.

**Abstract**

For students of the study programme Biology BSc the course can only be selected as 4th concept course.

**Objective**

This lecture is the first part of a one-year course. It offers insights into the fundamentals and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts and molds present in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms. Students will learn about the physiology of important productive microorganisms (lactic acid bacteria, bifidobacteria, propionibacteria and fungi) used in food fermentations, closely related to applications in biotechnology. Microbial kinetics, and design and operation of bioreactors used for both research and industrial scale production of traditional foods and modern food ingredients will be emphasized. | 551-0317-00L| Immunology I                                | W    | 3 credits | 2V   | A. Oxenius, M. Kopf     |
| Abstract     | Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response. |
| Objective    | Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response. |
| Content      | - Introduction and historical background  
|              | - Innate and adaptive immunity, Cells and organs of the immune system  
|              | - B cells and antibodies  
|              | - Generation of diversity  
|              | - Antigen presentation and Major Histoincompatibility (MHC) antigens  
|              | - Thymus and T cell selection  
|              | - Autoimmunity  
|              | - Cytotoxic T cells and NK cells  
|              | - Th1 and Th2 cells, regulatory T cells  
|              | - Allergies  
|              | - Hypersensitivities  
|              | - Vaccines, immune-therapeutic interventions |
| Lecture notes| Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien" |
| Prerequisites / notice | Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung" |

| 751-1307-00L| Managerial Economics Agri-Food Chain: Strategic Concepts | W | 2 credits | 2G | B. Höltscchi, M. Weber |
| Abstract     | Learn and exercise strategic concepts in the Agri-Food chain, i.e. theories of economics based decision making combined with entrepreneurial practice. |
| Objective    | The main objectiv is to understand strategic decisions along the value chain in the Agri-Food Chain. |
| Content      | - Basics of strategy & strategic concepts  
|              | - Classic process of strategy process  
|              | - Selected alternative processes  
|              | - Case studies |
| Lecture notes| Dokuments will be distributed per lecture. |
| Literature   | Lombriser Roman & Aplanalp Peter: Strategisches Management |

| 752-2120-00L| Consumer Behaviour I                        | W    | 2 credits | 2V   | M. Siegrist, C. Keller, B. S. Sütterlin |
| Abstract    | Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individuadal determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior |
To get acquainted with the principles and applications of mass spectrometry in food analytics.

R. Mezzenga

4 credits

To familiarize with the structure, properties and reactivity of food constituents. To understand the relationship between the multiple chemical reactions and the quality of food.

Lecture notes

The lectures are supplemented with handouts.

Literature

Food Chemistry II

3G

W+ 3 credits

2V

L. Nyström, M. Erzinger

Objectives

Teaching of basic experimental knowledge for detection and identification of relevant microorganisms in food.

Various practical experiments were accompanied by theoretical introductions to the different topics. The students become acquainted with state-of-the-art methods with focus on modern molecular techniques for the rapid detection of food borne pathogens.

Objective

Registration only after having attended the course Lebensmittel-Mikrobiologie I (752-4005-00L).

Abstract

Teaching of basic experimental knowledge for detection and identification of relevant microorganisms in food. Various practical experiments were accompanied by theoretical introductions to the different topics. The students become acquainted with state-of-the-art methods with focus on modern molecular techniques for the rapid detection of food borne pathogens.

Objective

Teaching of basic experimental knowledge for detection and identification of relevant microorganisms in food.

Content

Descriptive chemistry of food constituents (proteins, lipids, carbohydrates, plant phenolics, flavour compounds). Reactions which affect the colour, flavour, texture, and the nutritional value of food raw materials and food products during processing, storage and preparation in a positive or in a negative way (e.g. lipid oxidation, Maillard reaction, enzymatic browning). Links to food analysis, food processing, and nutrition.

The lectures Food Chemistry I and Food Chemistry II constitute a unit.

Food Analysis II

W+ 1 credit

1V

L. Nyström, M. Erzinger

Objectives

To get acquainted with the principles and applications of mass spectrometry in food analytics.

Objective

To get acquainted with the structure, properties and applications of mass spectrometry in food analytics.

Content

Main focus: Mass spectrometry, applications of mass spectrometry (MS).

Lecture notes

The lectures are supplemented with handouts.

Food Process Engineering II

W+ 3 credits

3G

E. J. Windhab

Objectives

To procure students with the basics of mechanical process engineering with main focus on technical unit operations used in the food industry.

Content

Training in mechanical unit operations and understanding of their application in food processing.

Lecture notes

Lecture and exercises

Literature

Script and slides, online available

Prerequisites / notice

Voraussetzungen: Vorlesung in VTI, sowie physikalische und mathematische Grundkenntnisse

Food Materials Science

W+ 4 credits

3G

R. Mezzenga

Objectives

Principles of soft condensed matter applied to food polymers, surfactants and colloids

Content

Understanding the fundamental physical principles ruling the self-assembly, aggregation, processing and structure-properties relationship in food systems constituted by polysaccharides (polymers), proteins (colloids) and lipids (surfactants).

Lecture notes

Wird am Praktikumsschluß abgegeben.

Literature

- F. Löffler, J. Raasch, Grundlagen der Mechanischen Verfahrentechnik, Vieweg Verlag
- W. Langhans: Mechanische Verfahrenstechnik Band 1 & 2, Springer Verlag
- Süssmuth et al.: "Mikrobiologisch-Biochemisches Praktikum" (Thieme)

Physiology and Anatomy III

W 3 credits

W. Langhans

Objectives

Imparts a basic understanding of physiology and anatomy in man, focusing on the interrelations between morphology and function of the human organism. This is fostered by discussing all subjects from a functional point of view. One major topic of the lecture is food intake and digestion with its correlated chemosensory, endocrine and metabolic processes.

Content

At the end of the course the students understand the basic functions of the organ systems and functionally important morphological features. One focus of the course is on aspects related to nutrition and overweight including the resulting diseases.

Bachelor Thesis

0 15 credits

64D

Lecturers

The Bachelor Thesis completes the Bachelor programme and consists of a scientific project carried out independently under the tutorship of a lecturer at D-HEST.
Objective
The Bachelor Thesis aims at fostering the student's ability to independent, structured and scientific working and at deepening their knowledge in a specific field.

**Abstract**
This course looks into scientific theories and also empirical studies on human learning and relates them to the school.

**Objective**
Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

**Content**
Thematic Schwerpunkte:
Lernen als Verhaltensänderung und als Informationsverarbeitung: Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzerwerb unter besonderer Berücksichtigung des Wissenswissens; Lernen durch Instruktion und Erklärungen: Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen

Lernformen:

**Lecture notes**

**Abstract**
This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

**Objective**
- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

**Prerequisites / notice**
Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

**Abstract**
The focus will be on the book "Intelligenz: Grosse Unterschiede und ihre Folgen" by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

**Objective**
- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

**Abstract**
Literature from the learning sciences is critically discussed with a focus on research methods. At the first meeting, working groups will be assembled and two further meetings will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

**Objective**
- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

Page 819 of 1432
In this class, students will learn concepts and skills for coping with psychosocial demands of teaching

Students possess theoretical knowledge and practical competences to be able to cope with the psychosocial demands of teaching.

(1) They know the basic rules of negotiation and conflict management (e.g., mediation) and can apply them in the school context (e.g., in conversations with parents).

(2) They can apply diverse techniques of classroom management (e.g., prevention of disciplinary problems in the classroom) and know relevant authorities for further information (e.g., legal conditions).

<td>13P</td>
<td>G. Kaufmann</td>
</tr>
</tbody>
</table>

The teaching internship can just be visited if all other courses of TC are completed.

Repetition of the teaching internship is excluded even if the examination lessons are to be repeated.

Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Die Themen für die beiden Prüfungslektionen am Schluss des Praktikums erfahren die Studierenden in der Regel eine Woche vor dem Prüfungstermin. Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie bis am Vortrag um 12 Uhr den beiden Prüfungsexperten (Fachdidaktiker/-in, Departementsvertreter/-in) ein. Die gehaltenen Lektionen werden kriteriumsgebunden erfolgskontrolliert. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/der Kandidatin über die gehaltenen Lektionen im Rahmen eines kurzen Kolloquiums.

</thead>
<tbody>
<tr>
<td><strong>Abstract</strong></td>
<td>In Physics of Food Colloids the principles of colloid science will applied to the aggregation of food material such as proteins, polysaccharides, and emulsifiers. Mixtures of such raw material determine the appearance and performance of our daily food. Examples of colloidal laws at work will link food colloid science to the manufacturing and processing of food.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Objective</strong></td>
<td>The aggregation of food raw material determine to appearance and performance of a complex food system as far as nutritional aspects. The underlying colloidal laws are reflecting the structure of the individual raw material (length scale, character of the interacting forces). Once those concepts are appreciated the aggregation of most food systems falls into recognizable patterns that can be used to modify and structure exiting food or to design new products. The application and use of those concepts are discussed in light of common food production.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Content</strong></td>
<td>Lectures will be given on interfacial tension (4h), protein aggregation in bulk and interfaces (4h), Pickering emulsions (2h), polysaccharides (2h), aggregation of complex mixtures (4h), foams (2h), and the use of light scattering in investigation complex food structures (6h). Most chapters include some hand-ons examples of the gain knowledge to common food products.</td>

To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in food and functional food products. This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Principles of the Swiss food law, introduction to the principles of the EU, international organisations and international contracts.

General introduction into the EU and in the area of food safety (Directorate General SANCO, regulation on food safety), legislative procedure in the EU, introduction into the relevant bilateral agreements CH-EU, introduction into international organisations (e.g. Codex Alimentarius), general principles of the Swiss food law and the most important regulations as well as the most important legal procedures, legal settlement and the duties and responsibilities of the Food control authorities.

Molecular Biology of Foodborne Pathogens

Two major topics of the course are I. Enzymes in Food Sciences and II. Molecular Gastronomy.

I. To understand use of enzymes in food processing and analysis.
II. To explain the physicochemical features of ingredients and reactions applied in molecular gastronomy.

I. Enzymes in foods: the use of added enzymes in food processing, control and/or utilization of endogenous enzymes, production of enzyme preparations for food use, and chemical analysis of food components by enzymatic methods.
II. Case studies in modern molecular gastronomy: phenomena, chemicals, reactions and techniques applied.

The course is open to Masters or PhD level students. For Masters level participants, a strict prerequisite is (a) previously taken and passed “Introduction to Molecular Toxicology” (752-1300) and/or (b) previous courses supporting equivalent knowledge plus permission from the instructor. Please contact the instructor before the start of the class, explaining the basis of your previous knowledge other than the Introduction course, to request special permission.

If you would like to take "Special Topics in Toxicology", do not register at the same time for "Advanced Topics in Toxicology". It is only possible to take one, and it is only possible to take the advanced level after completing this course.

**Data**: 06.12.2017 12:57  Autumn Semester 2015  Page 824 of 1432
This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.

- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.

- Legal and Protection Issues Related Functional Foods

- Industrial Biotechnology of Flavor and Taste Development

- Safety of Food Starter Cultures and Probiotics

Students will be required to complete a group project on food products and ingredients with or of from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Lecture notes
Copy of the power point slides from lectures will be provided.

Literature
A list of references will be given at the beginning of the course for the different topics presented during this course.

Abstract
This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning "good practice" that can be applied in every student's own projects and daily work life.

Objective
The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.
The course starts with the basics of linear regression modeling, and then proceeds to parameter estimation, tests and confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, categorical input variables, shrinkage and general modeling strategies.

The last third of the course is dedicated to an introduction into generalized linear regression models: this includes logistic regression for binary response variables, Poisson regression for count data, cumulative logit models for ordered, and multinomial regression for categorical response variables.

A script will be available.

Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries.

The course will provide knowledge and biological background on genetically modified organisms (GMO) and food produced with the help of GMO, especially on the molecular basis of GMO constructions with emphasis on genetically modified food in Switzerland and the EU.

Criteria of rationale food safety and health assessment in agriculture and food consumption will be elaborated.

Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries.

The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-3822-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

Abstract
Lecture type course with an interdisciplinary approach for the evaluation of nutritional aspects of changes in food composition due to processing.

Objective
Students should be able to:
- describe and compare the major concepts /criteria used for the evaluation of the nutritional quality of food
- apply these criteria when assessing the effects of selected processing technologies on nutritional quality.
- evaluate recent formulation strategies aimed to achieve additional physiological benefits for targeted population groups (i.e. functional foods).

Content
The course gives inputs on compositional changes in food due to processing (with focus on thermal/chilling, enzymatic, chemical, emerging technologies) or new formulation strategies. Possible evaluation methods for these changes (e.g. nutritional profile) will be addressed.

Lecture notes
There is no script. Powerpoint presentations and relevant scientific articles will be available on-line for students. A selection of recommended readings will be given at the beginning of the course.

Prerequisites / notice
The course is open to Master and MAS students in food and science and nutrition or related. Basic knowledge of food chemistry and nutrition is expected, as well as an understanding of food processing.

Abstract
The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented.

Objective
Students are able:
- to evaluate the scientific evidence on the effects of diet on human health
- to describe the role of nutritional factors in the prevention of chronic diseases
- to assess the nutritional status of a population (Switzerland taken as an example)
- to put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic
The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Switzerland taken as an example, the health risks associated with our nutritional habits will be evaluated. Finally, examples of preventive measures addressing individuals but also the society in relation to the obesity epidemic and other threats to health are discussed.

**752-6402-00L**

**Nutrigenomics**

W+ 3 credits 2V G. Vergères

**Abstract**

Nutrigenomics - toward personalized nutrition?

Breakthroughs in biology recently led nutrition scientists to apply modern tools (genomics, transcriptomics, proteomics, metabolomics, genetics, epigenetics) to the analysis of the interactions of food with humans. The lecture presents these tools and illustrates their application in selected topics relevant to human nutrition and food sciences.

**Objective**

- Overall understanding of the transdisciplinary research being conducted under the term nutrigenomics.
- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics

**Content**

- For the content of the script see section "Skript" below

- The lecture is completed by an optional project entitled ‘Personalized Nutrition’ in which the students have the opportunity to receive a personalized nutritional guidance that is based on their own genetic makeup. The scientific literature on which the genetic tests are based is presented by the students during the lecture.

**Lecture notes**

The script is composed of circa 450 slides (ca 18 slides/lecture) organized in 9 modules

Module A
From biochemical nutrition research to nutrigenomics

Module B
Nutritional genomics

Module C
Nutrigenetics

Module D
Nutri-epigenomics

Module E
Transcriptomics in nutrition research

Module F
Proteomics in nutrition research

Module G
Metabolomics in nutrition research

Module H
Nutritional systems biology

Module I
Individualized nutrition - opportunities and challenges

**Literature**

No extra reading requested. Most slides in the lecture are referenced with web addresses.

**Prerequisites / notice**

Basic training in biochemistry, molecular biology, physiology, and human nutrition. Interest in interdisciplinary sciences linking molecular biology to human health. Interest in the application of analytical laboratory methods to the understanding of human biology, in particular nutrition.

**752-1301-00L**

**Special Topics in Toxicology**

W 2 credits 2G S. J. Sturla

**Abstract**

Journal-club style course involving student presentations and active discussion of recent publications and modern experimental strategies. The focus is on chemical, biochemical, and nutritional aspects of selected topics in Toxicology, with a new group of topics addressed each semester.

**Objective**

- to stimulate student interest and provide advanced knowledge of current research in Toxicology and its related sciences
- to develop skills in critical evaluation of scientific literature, oral presentation and questioning
- to understand modern experimental techniques and research approaches relevant in toxicology

**Content**

The journal-club style course involves student presentations and active discussion of recent publications. The primary focus is on chemical, biochemical, and nutritional aspects of selected current topics in Toxicology. Participants are masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Biochemistry, Pharmaceutical Sciences, etc.).

**Literature**

A selection of approximately 20 papers from recent primary scientific literature.

**Prerequisites / notice**

The course is open to Masters or PhD level students.

For Masters level participants, a strict prerequisite is (a) previously taken and passed “Introduction to Molecular Toxicology” (752-1300) and/or (b) previous courses supporting equivalent knowledge plus permission from the instructor. Please contact the instructor before the start of the class, explaining the basis of your previous knowledge other than the Introduction course, to request special permission.

If you would like to take “Special Topics in Toxicology”, do not register at the same time for “Advanced Topics in Toxicology”. It is only possible to take one, and it is only possible to take the advanced level after completing this course.

752-6403-00L Nutrition and Performance  W+ 2 credits  2V  S. Mettler, M. B. Zimmermann

Abstract
The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

Objective
To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Content
The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

Lecture notes
Lecture slides and required handouts will be available on the ETH website.

Literature
Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

Prerequisites / notice
General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemical knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English
It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

752-5111-00L Gene Technology in Foods  W 3 credits  2V  L. Meile

Abstract
This course will increase basic knowledge on biotechnological constructions and application of genetically modified organisms (GMO) which are used worldwide in food production systems. The course discusses health issues, the legislation frame and food safety aspects of GMO applications in agriculture, food production and consumption in Switzerland and EU-countries.

Objective
This course will provide knowledge and biological background on genetically modified organisms (GMO) and food produced with the help of GMO, especially on the molecular basis of GMO constructions with emphasis on genetically modified food in Switzerland and the EU. Criteria of rational food safety and health assessment in agriculture and food consumption will be elaborated.

Content
Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries.

Lecture notes
Copies of slides from lectures will be provided

Literature
Actual publications from literature will be provided

Prerequisites / notice
Good knowledge in biology, especially in microbiology and molecular biology are prerequisites. Some contents will be provided by registered students who will individually or as a group present an actual publication.

752-1302-00L Advanced Topics in Toxicology  W 2 credits  2G  S. J. Sturla

Abstract
Journal-club style course that involves student presentations of selected topics in Toxicology on the basis of current primary research and review papers.

Objective
The goals are to stimulate student interest and provide advanced knowledge of current research in the interdisciplinary area of Food and Nutrition Toxicology and its related sciences. The student should develop skills in the critical evaluation of scientific literature, oral presentation and questioning, and understanding modern experimental techniques in Molecular Toxicology.

Content
The journal-club style course involves student presentations of recent publications. The primary focus is on chemical and biochemical aspects of selected topics in Toxicology. Participants are generally masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Pharmaceutical Sciences, etc.), and strong knowledge of organic chemistry and biochemistry are prerequisite. Selected course topics change every semester.

Prerequisites / notice
Participants are required to have completed previously "Special Topics in Toxicology" (752-1301-00L). Both courses are run concurrently every semester. It is only possible to register for one course at a time. Do not register for "Advanced Topics in Toxicology" until after you have completed "Special Topics in Toxicology"

Major in Human Health, Nutrition and Environment

Definition of modules see study guide Food Science

Disciplinary Subjects
Disciplinary courses: Module Public Health plus one additional module (Infectious Diseases or Nutrition and Health or Environment and Health). A minimum of 10 CP per module have to be obtained

Number  Title  Type  ECTS  Hours  Lecturers
401-0629-00L  Applied Biostatistics  W  4 credits  3G  M. Müller

Abstract
Principles and main methods in biostatistics with emphasis on practical aspects. Experimental and observational studies. Regression and analysis of variance. Introduction into survival analysis.

Objective
Getting an overview of the problems and statistical methods used in health sciences. Practise in using the software R to analyze data and interpreting the results.

Content

Lecture notes

Literature

Prerequisites / notice
The statistical package R will be used in the exercises. If you are unfamiliar with R, I highly recommend the online R course etutorR.
This course provides a detailed understanding of:
- development of T and B cells
- the dynamics of an immune response during acute and chronic infection
- mechanisms of immunopathology
- modern vaccination strategies

Key experimental results will be shown to help understanding how immunological text book knowledge has evolved.

The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The natural water cycle is influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.

Milestones and current topics of innate immunity, antigen presentatino, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunology.

The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Handouts will be distributed.

The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

The course provides detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganisms or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks.
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks?

Electronic copies of the presentation slides (PDF) will be made available for download to registered students. Recommendations will be given in the first lecture. Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until 11:15 h), with no break.

To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.

The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

To be provided by the individual lecturers, at their discretion.

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented.

Students are able:
- to evaluate the scientific evidence on the effects of diet on human health
- to describe the role of nutritional factors in the prevention of chronic diseases
- to assess the nutritional status of a population (Switzerland taken as an example)
- to put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Switzerland taken as an example, the health risks associated with our nutritional habits will be evaluated. Finally, examples of preventive measures addressing individuals but also the society in relation to the obesity epidemic and other threats to health are discussed.

The module "public health concepts" offers an introduction to key principles of public health. Students get acquainted with the concepts and methods of epidemiology. Students also learn to use epidemiological data for prevention and health promotion purposes. Public health concepts and intervention strategies are presented, using examples from infectious and chronic diseases.

At the end of this module students are able:
- to interpret the results of epidemiological studies
- to critically assess scientific literature
- to know the definition, dimensions and determinants of health
- to plan public health interventions and health promotion projects

Concepts of descriptive and analytical epidemiology, study designs, measures of effect, confounding and bias, screening, surveillance, definition of health and health promotion, health dimensions and health determinants, prevention strategies, public health interventions, public health action cycle, epidemiology and prevention of infectious and chronic diseases (HIV, Tuberculosis, Obesity, Public health nutrition).

Handouts are provided to students in the classroom.

The language of the course is English.

This module gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, kidney disease, arthritis and food allergies.

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, kidney disease, obesity etc. is presented. Switzerland taken as an example, the health risks associated with our nutritional habits will be evaluated. Finally, examples of preventive measures addressing individuals but also the society in relation to the obesity epidemic and other threats to health are discussed.

The module "public health concepts" offers an introduction to key principles of public health. Students get acquainted with the concepts and methods of epidemiology. Students also learn to use epidemiological data for prevention and health promotion purposes. Public health concepts and intervention strategies are presented, using examples from infectious and chronic diseases.

At the end of this module students are able:
- to interpret the results of epidemiological studies
- to critically assess scientific literature
- to know the definition, dimensions and determinants of health
- to plan public health interventions and health promotion projects

Concepts of descriptive and analytical epidemiology, study designs, measures of effect, confounding and bias, screening, surveillance, definition of health and health promotion, health dimensions and health determinants, prevention strategies, public health interventions, public health action cycle, epidemiology and prevention of infectious and chronic diseases (HIV, Tuberculosis, Obesity, Public health nutrition).

Handouts are provided to students in the classroom.

The language of the course is English.
Abstract
Nutrigenomics - toward personalized nutrition?
Breakthroughs in biology recently led nutrition scientists to apply modern tools (genomics, transcriptomics, proteomics, metabolomics, genetics, epigenetics) to the analysis of the interactions of food with humans. The lecture presents these tools and illustrates their application in selected topics relevant to human nutrition and food sciences.

Objective
- Overall understanding of the transdisciplinary research being conducted under the term nutrigenomics.
- Overall understanding of the omics technologies used in nutrigenomics and their applications to human nutrition and food science.
- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics

Content
- For the content of the script see section "Skript" below
- The lecture is completed by an optional project entitled 'Personalized Nutrition' in which the students have the opportunity to receive a personalized nutritional guidance that is based on their own genetic makeup. The scientific literature on which the genetic tests are based is presented by the students during the lecture.

Lecture notes
The script is composed of circa 450 slides (ca 18 slides/lecture) organized in 9 modules

Module A
From biochemical nutrition research to nutrigenomics

Module B
Nutritional genomics

Module C
Nutrigenetics

Module D
Nuti-epigenomics

Module E
Transcriptomics in nutrition research

Module F
Proteomics in nutrition research

Module G
Metabolomics in nutrition research

Module H
Nutritional systems biology

Module I
Individualized nutrition - opportunities and challenges

Literature
No extra reading requested. Most slides in the lecture are referenced with web addresses.

Prerequisites / notice
Basic training in biochemistry, molecular biology, physiology, and human nutrition. Interest in interdisciplinary sciences linking molecular biology to human health. Interest in the application of analytical laboratory methods to the understanding of human biology, in particular nutrition.

Methodology Subjects
Methodical courses are equivalent to the module Term Paper and Seminar. Missing CPs can be obtained from the major programs Food Processing, Food Quality and Safety, or Nutrition and Health.

Table: Methodology Subjects

Abstract
Writing of a review paper of scientific quality on a topic in the domain of Human Health, Nutrition and Environment based on critical evaluation of scientific literature.

Objective
- Acquisition of knowledge in the field of the review paper
- Assessment of original literature as well as synthesis and analysis of the findings
- Practising of academic writing in English
- Giving an oral presentation with discussion on the topic of the review paper

Content
Topics are offered in the domains of the major 'Human Health, Nutrition and Environment' covering 'Public Health', 'Infectious Diseases', 'Nutrition and Health' and 'Environment and Health'.

Lecture notes
Guidelines will be handed out in the beginning.

Literature
Literature will be identified based on the topic chosen.

Optional Subjects
Choice of a module not yet selected as a disciplinary course. Choice between Infectious Diseases, Nutrition and Health, and Environment and Health.

Table: Optional Subjects

Abstract
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks.

Content
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks?

Lecture notes
Electronic copies of the presentation slides (PDF) will be made available for download to registered students.

Literature
Recommendations will be given in the first lecture

Prerequisites / notice
Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until 11:15 h), with no break.
The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptual framework and critical technological advances. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

Milestones and current topics of innate immunity, antigen presentation, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunology.

Original and review articles will be distributed by the lecturer.

Documents of the lectures are available for download at:
https://moodle-app2.let.ethz.ch/course/view.php?id=1002

551-0223-00L Immunology III

Abstract
This course provides a detailed understanding of
- development of T and B cells
- the dynamics of a immune response during acute and chronic infection
- mechanisms of immunopathology
- modern vaccination strategies

Key experimental results will be shown to help understanding how immunological text book knowledge has evolved.

Objective
Obtain a detailed understanding of
- the development, activation, and differentiation of different types of T cells and their effector mechanisms during immune responses,
- recognition of pathogenic microorganisms by the host cells and molecular events thereafter,
- events and signals for maturation of naive B cells to antibody producing plasma cells and memory B cells.
- Optimization of B cell responses by intelligent design of new vaccines

Content
- Development and selection of CD4 and CD8 T cells, natural killer T cells (NKT), and regulatory T cells (Treg)
- NK T cells and responses to lipid antigens
- Differentiation, characterization, and function of CD4 T cell subsets such as Th1, Th2, and Th17
- Overview of cytokines and their effector function
- Co-stimulation (signals 1-3)
- Dendritic cells
- Evolution of the "Danger" concept
- Cells expressing Pattern Recognition Receptors and their downstream signals
- T cell function and dysfunction in acute and chronic viral infections

Literature
Documents of the lectures are available for download at:
https://moodle-app2.let.ethz.ch/course/view.php?id=998

Prerequisites / notice
Immunology I and II

701-0263-01L Seminar in Evolutionary Ecology of Infectious Diseases

Abstract
Students of this course will discuss current topics from the field of infectious disease biology. From a list of publications, each student chooses some themes that he/she is going to explain and discuss with all other participants and under supervision. The actual topics will change from year to year corresponding to the progress and new results occurring in the field.

Objective
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

Content
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

Lecture notes
Publications and class notes can be downloaded from a web page announced during the lecture.

Literature

Prerequisites / notice
Immunology I and II

752-6101-00L Nutrition and Chronic Disease (HS)

Abstract
To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Objective
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic diseases, as well as the progression of complications of the chronic diseases.

Content
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Lecture notes
There is no script. Powerpoint presentations will be made available on-line to students.

Literature
To be provided by the individual lecturers, at their discretion.

Prerequisites / notice
No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

752-6402-00L Nutrigenomics

Abstract
Nutrigenomics - toward personalized nutrition?
Breakthroughs in biology recently led nutrition scientists to apply modern tools (genomics, transcriptomics, proteomics, metabolomics, genetics, epigenetics) to the analysis of the interactions of food with humans. The lecture presents these tools and illustrates their application in selected topics relevant to human nutrition and food sciences.

Objective
- Overall understanding of the transdisciplinary research being conducted under the term nutrigenomics.
- Overall understating of the omics technologies used in nutrigenomics and their applications to human nutrition and food science.
- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics

Content
- For the content of the script see section "Skript" below
- The lecture is completed by an optional project entitled 'Personalized Nutrition' in which the students have the opportunity to receive a personalized nutritional guidance that is based on their own genetic makeup. The scientific literature on which the genetic tests are based is presented by the students during the lecture.
The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards food products, and food consumer behavior.

This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. To understand the principles, roles and mechanisms of microorganisms to produce food with high quality, safety and potential health benefits for consumers.

Students will be required to complete a group project on food products and ingredients with from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Basic training in biochemistry, molecular biology, physiology, and human nutrition. Interest in interdisciplinary sciences linking molecular biology to human health. Interest in the application of analytical laboratory methods to the understanding of human biology, in particular nutrition.

752-5103-00L Functional Microorganisms in Foods W 3 credits 2G C. Lacroix, T. de Wouters, L. Meile, C. Schwab

Abstract This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

Objective To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

Content This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- Legal and Protection Issues Related Functional Foods
- Industrial Biotechnology of Flavor and Taste Development
- Safety of Food Starter Cultures and Probiotics

Students will be required to complete a group project on food products and ingredients with from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Lecture notes Copy of the power point slides from lectures will be provided.

752-2122-00L Food and Consumer Behaviour W 2 credits 2V M. Siegrist, C. Hartmann, V. Visschers

Abstract This course focuses on consumer behavior, consumer's decision-making processes and consumer's attitudes towards food products.

Objective The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

Lecture notes Handouts will be distributed

701-1341-00L Water Resources and Drinking Water W 3 credits 2G S. Hug, M. Berg, F. Hammes, U. von Gunten

Abstract The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. Natural processes, anthropogenic pollution, legislation of groundwater and surface water and of drinking water as well as water treatment will be discussed for industrialized and developing countries.

Objective The goal of this lecture is to give an overview over the whole path of drinking water from the source to the tap and understand the involved physical, chemical and biological processes which determine the drinking water quality.

Content The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.

Lecture notes Handouts will be distributed

636-0017-00L Molecular Evolution, Phylogenetics and Phylodynamics W 4 credits 3G T. Stadler

Abstract

Objective

Content

Lecture notes Handouts will be distributed

Literature A list of references will be given at the beginning of the course for the different topics presented during this course.
The handouts for the lectures will be distributed at the beginning of every lecture unit. In the wine lectures the treated subjects will be:

- 2 credits
- Copies of slides from lectures will be provided
- Slides of the lecture will be available online.

This integration course will discuss new applications of microorganisms with functional properties in food and functional food products.

Gene Technology in Foods

2V Hours
This course will increase basic knowledge on biotechnological constructions and application of genetically modified organisms (GMO) which are used worldwide in food production systems. The course discusses health issues, the legislation frame and food safety aspects of GMO applications in agriculture, food production and consumption in Switzerland and EU-countries.

Abstract
This course will provide knowledge and biological background on genetically modified foods and GMO produced with the help of GMO, especially on the molecular basis of GMO constructions with emphasis on genetically modified food in Switzerland and the EU. Criteria of rationale food safety of health assessment in agriculture and food consumption will be elaborated.

Objective
Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries.

Content
Copies of slides from lectures will be provided.

Lecture notes
Actual publications from literature will be provided

Literature
Some contents will be provided by registred students who will individually or as a group present an actual publication.

Prerequisites / notice
Good knowledge in biology, especially in microbiology and molecular biology are prerequisites.

Minors
Basic knowledge in linear algebra, analysis, and statistics.

Food Biotechnology

Basic knowledge in linear algebra, analysis, and statistics.

Food Biotechnology

- 2 credits
- Attendees will learn what information is contained in genetic sequencing data and how this information is extracted from the sequencing data. The main concepts introduced are:
  - models in molecular evolution
  - phylogenetic & phylodynamic inference
  - maximum likelihood and Bayesian statistics
  - stochastic processes
  - epidemiology
  - pathogen evolution
  - macroevolution of species

Content
The course consists of three parts. We first introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Second, we employ these evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phyldynamics.

To understand the process cycle and control of beer, wine and distillate production.

Beer Production:
Processes in the brewhouse, malting, diacetylmanagement.

Wine Production:
Where is the origin of the microorganisms for winemaking? What are dry yeasts? What is the meaning of spontaneous alcoholic fermentation? What is a "pied de cuve? What is the influence of wine yeasts on the aroma of the wines? What is the role of glycerol in wine? What is the optimal fermentation temperature? What do we understand under the name biogenic amines? What is the reason for the occurrence of stuck fermentation? What is the meaning of "Böckser"? What is untypical ageing of wines? Which is the influence of Brettanomyces bruxellensis yeasts on wine quality - the wine "spaniodgerl"? Is the task of malolactic fermentation (BSA)? What do we understand under Lindton? What are the reasons for vinage taint? Diacetylmanagement in wine? Where does the mice taint origin? Which are desired and which are undesired yeasts and bacteria? How can we determine the genotype of grape varieties? What do we understand under layer taint (Zapfen)? Which wine bottle closures are on the market? - a quality analysis. What happens during the filtration process? What is the role of gentechnology in winemaking?

Destillates:
Composition of a distillery. What is pre-run, middle-run and post-run? What are quality parameters by spirits.

Lecture notes
The lecture notes will be distributed at the beginning of every lecture unit. Attendees will know the contents of exams in self controls in form of multiple choice questions.

Literature
Actual publications from literature will be provided

Prerequisites / notice
Sound knowledges in microbiology, molecular genetics, biochemistry and physiology in fermentd beverages are required.

The course is balanced between presentation of economics concepts and illustration by case-studies. The lecture titles include:

- **Food and Agricultural Trade Policy**
  - M. Siegrist

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Switzerland taken as an example, the health risks associated with our nutritional habits will be evaluated. Finally, examples of preventive measures addressing individuals but also the society in relation to the obesity epidemic and other threats to health are discussed.

### Safety and Quality in Agri-Food Chain

Food Toxicology

752-2314-00L  
**Physics of Food Colloids**  
*W* 3 credits  2V  P. A. Fischer, R. Mezzenga

**Abstract**
In Physics of Food Colloids the principles of colloid science will applied to the aggregation of food material such as proteins, polysaccharides, and emulsifiers. Mixtures of such raw material determine the appearance and performance of our daily food. Examples of colloidal laws at work will link food colloid science to the manufacturing and processing of food.

**Objective**
The aggregation of food raw material determine to appearance and performance of a complex food system as far as nutritional aspects. The underlying colloidal laws are reflecting the structure of the individual raw material (length scale, character of the interacting forces). Once those concepts are appreciated the aggregation of most food systems falls into recognizable patterns that can be used to modify and structure exiting food or to design new products. The application and use of those concepts are discussed in light of common food production.

**Content**
Lectures will be given on general introduction (4h), fluid dynamics (4h), complex flow behavior (4h), influence of temperature (2h), rheometers (4h), rheological tests (6h) and structure and rheology of complex fluids (4h).

**Lecture notes**
Notes will be handed out during the lectures.

**Literature**
Provided in the lecture notes.

752-1300-00L  
**Introduction to Molecular Toxicology**  
*W* 2 credits  2G  S. J. Sturla

**Abstract**
Journal-club style course involving student presentations and active discussion and critique of recent publications and modern experimental strategies. The focus is on chemical, biochemical, and nutritional aspects of selected topics in Toxicology, with a new group of topics addressed each semester.

**Objective**
- To stimulate student interest and provide advanced knowledge of current research in Toxicology and its related sciences.
- To develop skills in critical evaluation of scientific literature, oral presentation and questioning.
- To understand modern experimental techniques and research approaches relevant to toxicology.

**Content**
The journal-club style course involves student presentations and active discussion of recent publications. The primary focus is on chemical, biochemical, and nutritional aspects of selected current topics in Toxicology. Participants are masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Biochemistry, Pharmaceutical Sciences, etc.).

**Literature**
A selection of approximately 20 papers from recent primary scientific literature.

**Prerequisites / notice**
The course is open to Masters or PhD level students. For Masters level participants, a strict prerequisite is (a) previously taken and passed "Introduction to Molecular Toxicology" (752-1300) and/or (b) previous courses supporting equivalent knowledge plus permission from the instructor. Please contact the instructor before the start of the class, explaining the basis of your previous knowledge other than the Introduction course, to request special permission.

If you would like to take "Special Topics in Toxicology", do not register at the same time for "Advanced Topics in Toxicology". It is only possible to take one, and it is only possible to take the advanced level after completing this course.

752-1301-00L  
**Special Topics in Toxicology**  
*W* 2 credits  2G  S. J. Sturla

**Abstract**

752-1302-00L  
**Advanced Topics in Toxicology**  
*W* 2 credits  2G  S. J. Sturla

**Abstract**
Journal-club style course that involves student presentations of selected topics in Toxicology on the basis of current primary research and review papers.

**Objective**
The goals are to stimulate student interest and provide advanced knowledge of current research in the interdisciplinary area of Food and Nutrition Toxicology and its related sciences. The student should develop skills in the critical evaluation of scientific literature, oral presentation and questioning, and understanding modern experimental techniques in Molecular Toxicology.

**Content**
The journal-club style course involves student presentations of recent publications. The primary focus is on chemical and biochemical aspects of selected topics in Toxicology. Participants are generally masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Pharmaceutical Sciences, etc.), and strong knowledge of organic chemistry and biochemistry are prerequisite. Selected course topics change every semester.

**Prerequisites / notice**
Participants are required to have completed previously "Special Topics in Toxicology" (752-1301-00L). Both courses are run concurrently every semester. It is only possible to register for one course at a time. Do not register for "Advanced Topics in Toxicology" until after you have completed "Special Topics in Toxicology".

529-0047-00L  
**Risk Assessment of Chemicals**  
*W* 7 credits  6A  C. Bogdal, C. A. Baumel, K. Hungerbühler

**Abstract**
Projects on chemical assessment with the focus on the analysis and assessment of basic substance data for selected chemical classes; analysis and modelling of technical processes; characterisation of environmental and health risks. Risk assessment on the basis of quality and protection goals. Estimation of model and parameter uncertainty. Precaution and safety measures.

**Objective**
Project thesis (report) on chemicals assessment; time frame totals ca. 80 hours.

**Content**
Projects on chemical assessment with the focus on the following aspects:

- Analysis and assessment of basic substance data for selected chemical classes: physical chemical properties, environmental behaviour (distribution, persistence), human and eco-toxicity (biochemical metabolism, effect mechanisms), safety.
- Analysis and modelling of technical processes determining chemical release into the environment; e.g., chemicals applications.
- Characterisation of environmental and health risks on the basis of exposure and effect models, QSARs from environmental chemistry, toxicology and methods of risk analysis.
- Risk assessment on the basis of quality and safety goals. Estimation of the model and data uncertainty.
- Demonstration of possibilities and limits of precaution and safety measures (technical, organisational, concerning personnel) including effectiveness and efficiency.

Project teaching; time frame totals ca. 80 hours.

**Lecture notes**
See recommended literature.
The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Students are able - to evaluate the scientific evidence on the effects of diet on human health - to describe the role of nutritional factors in the prevention of chronic diseases - to assess the nutritional status of a population (Switzerland taken as an example) - to put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Students are able - to evaluate the scientific evidence on the effects of diet on human health - to describe the role of nutritional factors in the prevention of chronic diseases - to assess the nutritional status of a population (Switzerland taken as an example) - to put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic

The main goal for this course is to provide students with topics on current research in Food Science and related fields from which the student can choose to elaborate and present a more extended topic through literature studies.

The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods. The molecular basis of foodborne diseases, with focus on interactions of the microbiogram or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks.

Electronic copies of the presentation slides (PDF) will be made available for download to registered students.

Co-operation with chemical companies.

### Abstract

The MAS ETH in Architecture and Digital Fabrication is an interdisciplinary education programme initiated by the National Centre of Competence in Research (NCCR) Digital Fabrication and the ETH Zurich. The focus lies upon the methods and techniques of digital design and fabrication and their significance for future building culture.

### Objective

The NCCR Digital Fabrication is an ambitious initiative that brings together leading researchers in the disciplines of architecture, engineering, robotics, material and computer sciences. As the main education platform for this NCCR, the MAS ETH in Architecture and Digital Fabrication will benefit from direct exchange with its investigators and immediate access to cutting edge research and innovation. In the NCCR's unique robotic fabrication facilities, the students will also have the opportunity to research digital design and construction processes, and to implement these directly in large-scale prototypes.

The MAS ETH in Architecture and Digital Fabrication is conceived as a 12 months full-time programme targeted at university graduates with excellent design skills and technical knowledge. The teaching language of the programme will be English. The programme begins on the 14th of September 2015. Applications will be accepted until the 30th of April 2015.

Participants will develop competence in complex design and production challenges and will be able to take leading positions in the field of architecture, construction, or the extended design and production industries.

Detailed information on the programme and the inscription form can be found on our website: www.dfab.ch/mas.

### Content

The MAS Digital Fabrication is a 1 year full-time programme and is structured as a series of teaching modules with an independent master thesis.

Lessons within the modules are given in the form of lectures, practical workshops, and projects as the main modus for developing skills. Learning will be supported through one on one mentoring in studio, group critiques, symposia, and excursions.

### Prerequisites / notice

A Master's degree in architecture or engineering acknowledged by ETH, or equivalent educational qualifications (i.e. a bachelor's degree and a minimum of two years professional experience in a directly related field). Additional critical requirements are proof of creative design skills and technological capabilities. Qualification will be assessed from application documents and skills will be evaluated through portfolio review.

### Key for Type

- **O**: Compulsory
- **W+**: Eligible for credits and recommended
- **W**: Eligible for credits
- **E-**: Recommended, not eligible for credits
- **Z**: Courses outside the curriculum
- **Dr**: Suitable for doctorate

**Abstract**

A fundamental theoretical and practical introduction to the application of information technologies in architecture. The MAS program CAAD is a yearly full time program, consisting of eight 4-weekly instruction modules with practical exercises and a concluding individual Masterthesis.

**Objective**

Development of new design methods, new construction forms, media architectures, narrative infrastructures, global models. Parametric and generative CAD systems, procedural, object-oriented and agent-based programming, introduction to JAVA/Processing, introduction to diverse computer-controlled machines with practical examples, development of machine-compatible building constructions, development of electronics for automated tasks, implementation of radio networks.

### Registration only through the NADEL administration office.

#### Abstract
The course gives an introduction into the development challenges of resource-dependent economies from regulating extraction and extractive companies to promoting local linkages and managing revenues. It explores how international cooperation can support sustainable development outcomes.

#### Objective
The course gives an introduction into the development challenges of resource-dependent economies from regulating extraction and extractive companies to promoting local linkages and managing revenues. It explores how international cooperation can support sustainable development outcomes.

<tr>
<td><strong>Abstract</strong></td>
<td>Nutrigenomics - toward personalized nutrition?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Breakthroughs in biology recently led nutrition scientists to apply modern tools (genomics, transcriptomics, proteomics, metabolomics, genetics, epigenetics) to the analysis of the interactions of food with humans. The lecture presents these tools and illustrates their application in selected topics relevant to human nutrition and food sciences.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Objective</strong></td>
<td>- Overall understanding of the transdisciplinary research being conducted under the term nutrigenomics. - Ability to critically evaluate the potential and risks associated with the field of nutrigenomics.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Content</strong></td>
<td>- For the content of the script see section &quot;Skript&quot; below - The lecture is completed by an optional project entitled 'Personalized Nutrition' in which the students have the opportunity to receive a personalized nutritional guidance that is based on their own genetic makeup. The scientific literature on which the genetic tests are based is presented by the students during the lecture.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>

<tr>
<td><strong>Abstract</strong></td>
<td>Lecture type course with an interdisciplinary approach for the evaluation of nutritional aspects of changes in food composition due to processing.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Objective</strong></td>
<td>Students should be able to - describe and compare the major concepts /criteria used for the evaluation of the nutritional quality of food - apply these criteria when assessing the effects of selected processing technologies on nutritional quality. - evaluate recent formulation strategies aimed to achieve additional physiological benefits for targeted population groups (i.e. functional foods).</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Content</strong></td>
<td>The course gives inputs on compositional changes in food due to processing (with focus on thermal/chilling, enzymatic, chemical, emerging technologies) or new formulation strategies. Possible evaluation methods for these changes (e.g. nutritional profile) will be addressed.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Lecture notes</strong></td>
<td>There is no script. Powerpoint presentations and relevant scientific articles will be available on-line for students. A selection of recommended readings will be given at the beginning of the course.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Prerequisites / notice</strong></td>
<td>The course is open to Master and MAS students in food and science and nutrition or related. Basic knowledge of food chemistry and nutrition is expected, as well as an understanding of food processing.</td>

<tr>
<td><strong>Abstract</strong></td>
<td>Gives the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Some basic knowledge in physiology is recommended for this course, which revisits important physiological topics, emphasizing their relation to nutrition. The aim is to give the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand. For students with a background in medicine, pharmacy or biology, the course is useful as a review of previously acquired knowledge. Major topics are basic neuroanatomy and neurophysiology; general endocrinology; the physiology of taste and smell; nutrient digestion and absorption; intermediary metabolism and energy homeostasis; and some aspects of cardiovascular physiology and water balance.

**766-6205-00L Nutrient Analysis in Foods**

**Objective**
Knowing analytical methods to determine macro- and micronutrient content in foods. Critical evaluation of analytical results and interpretation in relation to nutritional value of meals.

**Content**
The practical course nutrient analysis in foods includes the preparation and chemical analysis of meals from different types of diets. The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

**Prerequisites / notice**
A script and lecture slides are handed out before the start.

**Language:** English

**Objective**
To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

**Content**
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

**Prerequisites / notice**
No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernahrung I+II) is strongly advised.

**Language:** English

**Ectives**

---|---|---|---|---|---
752-2122-00L | Food and Consumer Behaviour | W | 2 credits | 2V | M. Siegrist, C. Hartmann, V. Visschers

**Abstract**
This course focuses on food consumer behavior, consumer's decision-making processes and consumer's attitudes towards food products.

**Objective**
The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

**Number** | **Title** | **Type** | **ECTS** | **Hours** | **Lecturers**
---|---|---|---|---|---
752-0801-00L | Food Law and Legislation | W | 1 credit | 1V | C. Spinner, E. Zbinden Kaessner

**Abstract**
Principles of the Swiss food law, introduction to the principles of the EU, international organisations and international contracts. 

**Objective**
Overview about the general principles, institutions and execution of the Swiss food legislation. Knowledge about the principles and the structure of the EU in general and in the area of food safety, overview on the bilateral agreements CH-EU as well as on the most important international organisations (Codex Alimentarius and WTO) and their influence on the Swiss regulations on food safety.

**Prerequisites / notice**
Copies of the presentations will be handed out.

**Language:** English

**Number** | **Title** | **Type** | **ECTS** | **Hours** | **Lecturers**
---|---|---|---|---|---
752-5103-00L | Functional Microorganisms in Foods | W | 3 credits | 2G | C. Lacroix, T. de Wouters, L. Meile, C. Schwab

**Abstract**
Documents about Codex Alimentarius, the EU as well as the Swiss food law and some regulations will be handed out.

**Objective**
Qualifications: General knowledge of the food sciences. The lecture will be held in German.
At the end of this module students are able:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.

- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.

- Legal and Protection Issues Related Functional Foods

- Industrial Biotechnology of Flavor and Taste Development

- Safety of Food Starter Cultures and Probiotics

Lecture notes

Students will be required to complete a group project on food products and ingredients with or from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Lecture notes

Copy of the power point slides from lectures will be provided.

Literature

A list of references will be given at the beginning of the course for the different topics presented during this course.

752-5111-00L Gene Technology in Foods

W 3 credits 2V L. Meile

Abstract

This course will increase basic knowledge on biotechnological constructions and application of genetically modified organisms (GMO) which are used worldwide in food production systems. The course addresses health issues, the legislation frame and food safety aspects of GMO applications in agriculture, food production and consumption in Switzerland and EU-countries.

Objective

This course will provide knowledge and biological background on genetically modified organisms (GMO) and food produced with the help of GMO, especially on the molecular basis of GMO constructions with emphasis on genetically modified food in Switzerland and the EU.

Content

Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries

Lecture notes

Copies of slides from lectures will be provided

Literature

Actual publications from literature will be provided

Prerequisites / notice

Good knowledge in biology, especially in microbiology and molecular biology are prerequisites.

Some contents will be provided by registered students who will individually or as a group present an actual publication.

551-0317-00L Immunology I

W 3 credits 2V A. Oxenius, M. Kopf

Abstract

Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

Objective

Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

Content

- Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histoincompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

Lecture notes

Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien"

Literature

Prerequisites / notice

Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

752-6151-00L Public Health Concepts

W+ 3 credits 2V R. Heusser

Abstract

The module "public health concepts" offers an introduction to key principles of public health. Students get acquainted with the concepts and methods of epidemiology. Students also learn to use epidemiological data for prevention and health promotion purposes. Public health concepts and intervention strategies are presented, using examples from infectious and chronic diseases.

Objective

At the end of this module students are able:
- to interpret the results of epidemiological studies
- to critically assess scientific literature
- to know the definition, dimensions and determinants of health
- to plan public health interventions and health promotion projects

Content

Concepts of descriptive and analytical epidemiology, study designs, measures of effect, confounding and bias, screening, surveillance, definition of health and health promotion, health dimensions and health determinants, prevention strategies, public health interventions, public health action cycle, epidemiology and prevention of infectious and chronic diseases (HIV, Tuberculosis, Obesity, Public health nutrition).

Lecture notes

Handouts are provided to students in the classroom.

Language of the course is english

Master Thesis

Number Title Type ECTS Hours Lecturers

Data: 06.12.2017 12:57  Autumn Semester 2015  Page 849 of 1432
Abstract
The study program is completed with the Master thesis, an independent scientific work. Topics are selected within the domains of the MAS program. The work is supervised by a lecturer of the MAS program.

Objective
The Master thesis must demonstrate the student's ability to independent, structured and scientific working.

Abstract

The MAS program “Competency in the Building Process” provides graduates of the program with a thorough understanding of the complexities of a project, instilling them with an increased capacity to assess the consequences of their actions and decisions. Upon successful completion of the studies, graduates are qualified to assume the complex duties of an overall project leader in building projects.

Objective
