1. Experimental techniques, an overview
2. Dynamics of the electron gas
   - First experiments on electron dynamics and lattice heating
   - The finite lifetime of excited states
   - Detection of lifetime effects
   - Dynamical properties of reactions and adsorbents
3. Dynamics of the lattice
   - Phonons
   - Non-thermal melting
4. Dynamics of the spin system
   - Laser induced ultrafast demagnetization
   - Ultrafast spin currents generated by lasers
   - Landau-Lifschitz-Dynamics
   - Laser induced switching
5. Correlated materials

### Lecture notes
Lecture notes will be distributed. Relevant publications will be cited.

Please note that this is an INCOMPLETE list of courses.

The course covers the foundations of semiconductor nanostructures, e.g., materials, band structures, bandgap engineering and doping, optical properties of semiconductors, as well as the advanced processing available on these material, enabled numerous applications (lasers, LEDs and solar cells) as well as the realization of new physical concepts. Systems that will be covered include quantum dots, exciton-polaritons, quantum Hall fluids and graphene-like materials.

Although many lectures will follow the course texts, significant deviations will be distributed as a script. The readings for the course will be selected from several different texts. All of these are available electronically via the ETH library system. You can also order a black-and-white paperback via an “on-demand” system for a pretty reasonable price.

The rich physics of the optical properties of semiconductors, as well as the advanced processing available on these material, enabled numerous applications (lasers, LEDs and solar cells) as well as the realization of new physical concepts. Systems that will be covered include quantum dots, exciton-polaritons, quantum Hall fluids and graphene-like materials.

402-0464-00L Optical Properties of Semiconductors W 8 credits 2V+2U J. Faist, A. Imamoglu

This course presents a comprehensive discussion of optical processes in semiconductors.

The lecture “Introduction to Magnetism” is the regular course on Magnetism for the Master curriculum of the Department of Physics of ETH Zurich. With respect to the similar lecture course in previous semesters we have decided that we need to insist on the fundamental aspects of magnetism -- the Quantum mechanical aspects on one side and the statistical physics aspects on the other, which are often not comprehensively spelled out in conventional lectures on solid state physics. The preliminary Content of the lecture is the following:

- Magnetcism in Atoms (the role of magnetism in classical physics, the quantum mechanics of atoms, exchange interaction)

These three Chapters will be given by A. Vindigni and are an essential introduction to more specialized Topics given in selected lectures, such as the one by R. Allenspach in FS16.

402-0595-00L Semiconductor Nanostructures W 6 credits 2V+1U T. M. Ihn

The course covers the foundations of semiconductor nanostructures, e.g., materials, band structures, bandgap engineering and doping, field-effect transistors. The physics of the quantum Hall effect and of common nanostructures based on two-dimensional electron gases will be discussed, i.e., quantum point contacts, Aharonov-Bohm rings and quantum dots.

402-0535-00L Introduction to Magnetism W 6 credits 2V+1U D. Pescia, A. Vindigni

Atomic paramagnetism and diamagnetism, intra- and inter-atomic exchange, Stoner model, RKKY exchange interaction, Ising and Heisenberg models, the mean field approximation, spin waves, magnetic phase transition, domains and domain walls, dynamical aspects of magnetism. These two chapters will be given by D. Pescia. They will give, for instance, the opportunity of revising with concrete examples the subjects related to spin physics that have been treated at a theoretical level in Quantum Mechanics I and Quantum Mechanics II.

Applications to nanoscale magnetism will be discussed within this fundamental Approach.

The course is taught in English.

402-0541-65L Accelerator-Based Science from Quantum Information to Biophysics W 6 credits 2V+1U G. Aeppli, S. Johnson, J. Mesot

The lecture is suitable for all physics students beyond the bachelor of science degree. Basic knowledge of solid state physics is recommended. Very ambitious students in the third year may be able to follow. The lecture can be chosen as part of the PhD-program. The course is taught in English.
This course gives a survey of current research topics using accelerator-based probes (photons, neutrons, muons) to study problems in condensed matter and biophysics.

The course aims to give students the ability to follow and explain on a conceptual level the ways in which accelerator-based facilities (photons, neutron and muon sources) enable the study of various problems in a wide range of fields, including for example quantum information theory, solid state dynamics in superconductors and low dimensional systems, quantum phase transitions, as well as structural biology.

The course will discuss several current examples of research using accelerator facilities highlighting different technologies and their applications. Specific attention will be given to x-ray spectroscopy and scattering experiments conducted at synchrotrons and x-ray Free Electron Lasers, as well as neutron scattering experiments at spallation sources and muon spin rotation.

Prerequisites / notice

402-0715-00L Low Energy Particle Physics W 6 credits 2V+1U A. S. Antognini, F. Piegna

Objective

The course aims to provide an introduction to selected advanced topics in low energy particle physics with neutrons and muons.

Content

The course will discuss several current examples of research using accelerator facilities highlighting different technologies and their applications. Specific attention will be given to x-ray spectroscopy and scattering experiments conducted at synchrotrons and x-ray Free Electron Lasers, as well as neutron scattering experiments at spallation sources and muon spin rotation.

Literature

Golub, Richardson & Lamoreaux: "Ultra-Cold Neutrons"
Rauch & Werner: "Neutron Interferometry"
Carlile & Willis: "Experimental Neutron Scattering"
Byrne: "Neutrons, Nuclei and Matter"
Klapdor-Kleingrothaus: "Non Accelerator Particle Physics"

Prerequisites / notice

Einführung in die Kern- und Teilchenphysik / Introduction to Nuclear- and Particle-Physics

402-0767-00L Neutrino Physics W 6 credits 2V+1U A. Rubbia

Objective

Theoretical basis and selected experiments to determine the properties of neutrinos and their interactions (mass, spin, helicity, chirality, oscillations, interactions with leptons and quarks).

Content

Introduction to the physics of neutrinos with special consideration of phenomena connected with neutrino masses.

Literature

Prerequisites / notice

402-0883-63L Symmetries in Physics W 6 credits 2V+1U N. Beisert

Objective

The course gives an introduction to symmetry groups in physics. It will explain the relevant mathematical background (finite groups, Lie groups and algebras as well as their representations), and illustrate their important role in modern physics.

Content

The aim of the course is to give a self-contained introduction into finite group theory as well as Lie theory from a physicists point of view. Abstract mathematical constructions will be illustrated with examples from physics.

Prerequisites / notice

402-0898-00L The Physics of Electroweak Symmetry Breaking W 6 credits 2V+1U not available

Abstract

Does not take place this semester.

Objective

The aim is to understand the need of physics beyond the Standard Model, the basic techniques of model building in theories BSM and the elements of collider physics required to analyze their phenomenological implications. After an introduction to the SM and alternative theories of electroweak symmetry breaking, we will investigate these issues in the context of models with warped extra dimensions.

Prerequisites / notice

402-0899-65L Higgs Physics W 6 credits 2V+1U M. Donegà, M. Grazzini

Abstract

The course introduces the theory and phenomenology of the recently discovered Higgs boson. With this course the students will receive a detailed introduction to the physics of the Higgs boson in the Standard Model. They will acquire the necessary theoretical background to understand the main production and decay channels of the Higgs boson at high-energy colliders, and the corresponding experiments

Literature

M. Grazzini, Higgs Physics, Oxford University Press, 2016.
D.O. Caldwell, Current Aspects of Neutrino Physics, Springer.

Prerequisites / notice

Does not take place this semester.
With this course the students will receive a detailed introduction to the physics of the Higgs boson in the Standard Model. They will acquire the necessary theoretical background to understand the main production and decay channels of the Higgs boson at high-energy colliders, and the corresponding experimental signatures.

Theory part:
- the Standard Model and the mass problem: WW scattering and the no-lose theorem
- the Higgs mechanism and its implementation in the Standard Model
- radiative corrections and the screening theorem
- theoretical constraints on the Higgs mass; the hierarchy problem
- Higgs production in e+e- collisions
- Higgs production at hadron colliders
- Higgs decays to fermions and vector bosons
- Higgs differential distributions, rapidity distribution, pt spectrum and jet vetoes
- Higgs properties and beyond the Standard Model perspective

- Outlook: The Higgs sector in weakly coupled and strongly coupled new physics scenarios.

Experimental part:
- Introductory material:
  - reminders of detectors/accelerators
  - reminders of statistics: likelihoods, hypothesis testing
  - reminders of multivariate techniques: Neural Networks, Decision Trees
- Main topics:
  - pre-history (pre-LEP)
  - LEP1: measurements at the Z-pole
  - LEP2: towards the limit mH<114 GeV
  - Tevatron searches
- LHC:
  -- main channels overview
  -- dissect on analysis
  -- combine information from all channels
  -- differential measurements
  -- off-shell measurements
  -- Future:
    -- pseudo-observables / EFT
    -- Beyond Standard Model

Prerequisites / notice

402-0381-64L Hot Topics in Astrophysics

Abstract
The theme we want to discuss this year is: what do we know about the assembly of diffuse baryons into galaxies and stars, from the physics that govern the birth of new stars, out to the dark matter halos onto which baryons are accreted on cosmological timescales.

Specifically, we will focus on the following two -- or, time-permitting, three -- Hot Topics in Astrophysics.

Objective
The goal of this course is to understand some of the phenomena that stand in the forefront of current research in astrophysics, the physical processes behind them, and how these phenomena are observed by state-of-the-art astronomical facilities. These goals will be achieved by communal discussions, led by the students and chaired by the teachers.

Specifically, we will focus on the following two -- or, time-permitting, three -- Hot Topics in Astrophysics.

- major topics:
  - reminders of statistics: likelihoods, hypothesis testing
  - reminders of detectors/accelerators

- Main topics:
  - pre-history (pre-LEP)
  - LEP1: measurements at the Z-pole
  - LEP2: towards the limit mH<114 GeV
  - Tevatron searches

- LHC:
  -- main channels overview
  -- dissect on analysis
  -- combine information from all channels
  -- differential measurements
  -- off-shell measurements
  -- Future:
    -- pseudo-observables / EFT
    -- Beyond Standard Model

Prerequisites: Quantum Field Theory I, Phenomenology of Particle Physics I

402-0353-63L Observational Techniques in Astrophysics

Abstract
The course introduces analysis techniques, the basics of astronomical instruments, real-world observational tools, data reduction strategy and software packages used in astrophysics research. The course will also include discussions of current topics in astrophysics with a focus on active galaxies. The course will include the reduction and analysis of real data from a variety of observatories.

Objective
The goal is to acquaint students with the basics of a range of astrophysical observation techniques including the modern software tools needed to analyze data.

Content
Major topics include:
- Scientific programming and analysis tools
- How to set up your computing environment, data management, catalog generation and the Virtual Observatory, collaborative tools
- Optical imaging and spectroscopy:
  - Basics of observatories (ground vs space), multi-wavelength data, detector types, reduction and analysis strategies for imaging and spectroscopic data, types of spectrographs, interpreting spectra including stellar and galaxy evolution models
  - X-ray, IR and radio astronomy
  - Basics of X-ray and high energy detectors and telescopes, spectral fitting, basics of radio astronomy with 1, 2 and N antennae, interferometric observations, aperture synthesis, source confusion and decomposition
  - Planning of observations and proposal writing.
- Analysis of real-world data
- Various examples from across the spectrum (ground and space-based)

Prerequisites / notice
Astrophysics I is required and Astrophysics II is recommended. Some programming skills in Python or similar languages are necessary.

402-0375-63L Statistical Methods in Cosmology and Astrophysics

Abstract
Statistical methods play a vital role in modern cosmology and astrophysics studies. This course will give an overview of the statistical principles and tools that are used in these fields. Topics covered will include basic probability theory, Bayesian inference, hypothesis testing, sampling and estimators.

Objective
Develop an understanding of basic probability and statistical theory. Gain practical knowledge of statistical methods commonly used in cosmology and astrophysics.

Prerequisites / notice
Credit or current enrollment in Astrophysics I is recommended but not required

376-1791-00L Introductory Course in Neuroscience I

Abstract
The course gives an introduction to the development and anatomical structure of nervous systems. Furthermore, it discusses the basics of cellular neurophysiology and neuropharmacology. Finally, the nervous system is described on a system level with a particular emphasis on the visual system.
Content
1) Neuroanatomy I
2) Neuroanatomy II
3) Neurogenesis
4) Axon guidance
5) Action and language development
6) Circadian rhythms
7) Synaptic plasticity
8) Synaptic transmission
9) Neural circuits in vivo
10) Visual pathways and visual processing
11) Somatosensory system
12) Vestibular system
13) Sleep
14) Learning and Memory, mice and human

Prerequisites / notice
For doctoral students of the Neuroscience Center Zurich (ZNZ).

376-1795-00L Advanced Course in Neurobiology I (Functional Anatomy of the Rodent Brain)
W 2 credits 2V J.M. Fritschy, H. U. Zeilhofer

Abstract
The goal of this Advanced Course in Neurobiology is to provide students with a broader knowledge in several important areas of neurobiology. The course consists of four parts: Part I deals with various topics in developmental neurobiology. Part II is devoted to aspects of signal transduction. Part III focuses on synaptic transmission. Part IV gives deeper insights into systems neuroscience.

Objective
This credit point course is designed for doctoral students who have successfully completed the Introductory Course in Neuroscience at the Neuroscience Center Zürich. The goal is to provide students with a broader and deeper knowledge in several important areas of neurobiology.

Prerequisites / notice

402-0620-00L Current Topics in Accelerator Mass Spectrometry and Their Applications
E- 0 credits 1S M. Christl, S. Willett

Abstract
The seminar is aimed at all students who, during their studies, are confronted with age determination methods based on long-living radionuclides found in nature. Basic methodology, the latest developments, and special examples from a wide range of applications will be discussed.

Introduction into the theoretical background and the practical application of methods of data analysis in meteorology and climatology.

Topics: exploratory methods, hypothesis tests, analysis of climate trends, measuring the skill of climate and forecasting models, analysis of extreme events, principal component analysis and maximum covariance analysis.

The lecture also provides an introduction into R, a programming language and graphics tool frequently used for data analysis in meteorology and climatology. During hands-on computer exercises the student will become familiar with the practical application of the methods.

Lecture notes

- documented view graphs used during the lecture
- exercise sets and solutions
- R-packages with software and example datasets for exercise sessions

All material is made available via the lecture web-page.

Literature

Prerequisites

Atmosphäre, Mathematik IV: Statistik, Anwendungsnahe Programmieren.

701-1235-00L Cloud Microphysics W 4 credits 2V+1U U. Lohmann, B. Sierau

Abstract: Clouds are a fascinating climate phenomenon central to the hydrological cycle and the Earth’s radiation balance. Interactions between cloud particles can result in precipitation, glaciation or evaporation of the cloud depending on its microstructure and microphysical processes. In this course the sought-after topic of ice formation in clouds is studied from a theoretical and empirical perspective.

Objective: Students will gain an appreciation and understanding of the complex processes in clouds and the necessary physical phenomenon that are involved and need to be accounted for in order to study cloud and precipitation formation.

Content: Microstructure of clouds and precipitation, aerosol activation to form cloud droplets, ice crystal nucleation (homogeneous freezing of supercooled aerosol and heterogeneous freezing), precipitation formation

Lecture notes: Powerpoint slides will be made available

Prerequisites / notice: At least one introductory course in Atmospheric Science or Instructor's consent.

701-1221-00L Dynamics of Large-Scale Atmospheric Flow W 4 credits 2V+1U H. Wernli, S. Pfahl

Abstract: Dynamic, synoptic Meteorology

Objective: Understanding the dynamics of large-scale atmospheric flow

Content: Dynamical Meteorology is concerned with the dynamical processes of the earth’s atmosphere. The fundamental equations of motion in the atmosphere will be discussed along with the dynamics and interactions of synoptic system - i.e. the low and high pressure systems that determine our weather. The motion of such systems can be understood in terms of quasi-geostrophic theory. The lecture course provides a derivation of the mathematical basis along with some interpretations and applications of the concept.

Lecture notes: Dynamics of large-scale atmospheric flow

- Pichler H., Dynamik der Atmosphäre, Bibliographisches Institut, 456 pp. 1997

Prerequisites / notice: Physics I, II, Environmental Fluid Dynamics

701-1251-00L Land-Climate Interactions W 3 credits 2G S. I. Seneviratne, E. L. Davin

Abstract: The purpose of this course is to provide fundamental background on the role of land surface processes (vegetation, soil moisture dynamics, land energy and water balances) for the climate system. The course consists of 2 contact hours per week, including 2 computer exercises.

Objective: The students can understand the role of land processes and associated feedbacks for the climate system.

Lecture notes: Powerpoint slides will be made available

Prerequisites / notice: Introductory lectures in atmospheric and climate science

701-1237-00L Solar Ultraviolet Radiation W 1 credit 1V J. Gröbner

Abstract: The lecture will introduce the student to the thematics of solar ultraviolet radiation and its effects on the atmosphere and the biosphere. The lecture will cover the modeling and the measurement of solar ultraviolet radiation. The instruments used for solar radiation measurements will also be introduced.

Objective: The lecture should enable the student to understand the specific problematics related to solar ultraviolet radiation and its interaction with the atmosphere and the biosphere.
1) Einführung in die Problematik  Motivation
   Begriffe (UV-C, UV-B, UV-A,...)
   Einfluss der UV Strahlung auf Biosphäre (Mensch, Tier, Pflanzen)
   Positive und schädliche Effekte
   Wirkungsspektrum, Konzept, Beispiele
   UVIndex:

2) Geschichtlicher Rückblick
   Rayleigh - Himmelsblau
   1907: Dorno, PMOD
   1970: Bener, PMOD
   1980: Berger, Erythemal sunburn meter
   1990- : State of the Art

3) Extraterrestrische UV Strahlung
   Spektrum
   Energieverteilung
   Variabilität (Spektral, zeitlich, relativ zu Totalstrahlung)
   Satellitenmessungen, Übersicht

4) Einfluss der Atmosphäre auf die solare UV Strahlung
   Atmosphärenaufbau
   Beinflussende Parameter (Ozon, Wolken, ...)
   Ozon, Stratosphärisches versus troposphärisches
   Geschichte: Ozondepletion, Polare Ozonlöcher und Einfluss auf die UV Strahlung
   Wolken
   Aerosole
   Rayleighstreuung
   Trends (Ozon, Wolken, Aerosole)
   Radiation Amplification Factor (RAF)

5-6) Strahlungstransfer
   Strahlungsstransfergleichung
   Modellierung, DISORT
   libRadtran, TUV, FASTRT
   Parameter
   Sensitivitätsstudien
   Vergleiche mit Messungen
   3-D Modellierung (MYSTIC)
   Beer-Lambert Gesetz

7) Strahlungsmessungen
   Instrumente zur Strahlungsmessung
   Messgrössen: Irradiance (global, direct, diffus), radiance, aktinischer Fluss
   Horizontale und geneigte Flächen
   Generelle Problematik: Freiluftmessungen...
   Qualitätssicherung

8) Solare UV Strahlungsmessungen
   Problematik: Dynamik, Spektrale Variabilität, Alterung
   Stabilität
   Spezifische Instrumente: Filterradiometer, Spektroradiometer, Dosimetrie
   Übersicht Aufbau und Verwendung

9-10) Solare UV Strahlungsmessgeräte
   Spektroradiometer, Filterradiometer (Breit und schmalbandig)
   Charakterisierung
   Kalibriermethoden (Im Labor, im Feld)
   Qualitätssicherung, Messkampagnen

11-12) Auswerteverfahren
   Atmosphärische Parameter aus Strahlungsmessungen
   Ozon, SO2
   Albedo (Effektiv versus Lokal)
   Aerosol Parameter (AOD, SSA, g, Teilchenverteilungen)
   Zusammenspiel Messungen - Modellierung
   Aktinische UV-Strahlungsfüße und Bestimmung von atmosphärischen Photolysefrequenzen

13) UV Klimatologie
   Trends
   UV Klimatologie durch Messnetze
   UV Klimatologie durch Satellitenmessungen am Beispiel von TOMS
   Modellierung am Beispiel Meteosat-JRC
   UV Rekonstruktionen

14) Aktuelle Forschungen
   Internationale Projekte, Stand der Forschung

---

**Abstract**

**Objective**
The lecture gives an overview on the manifold reactions which occur in the gas phase, in stratospheric aerosol droplets and in polar cloud particles. The focus is on the chemistry of stratospheric ozone and its influence through natural and anthropogenic effects. Especially the intercontinental air traffic and the ozone depletion caused by FCKW CFC in the mid-latitude and the polar regions as well as coupling with the greenhouse effect.

---

701-1233-00L  Stratospheric Chemistry  W  4 credits  2V+1U  T. Peter, A. Stenke

Autumn Semester 2015
Content

Introduction to the chemical family concept: active species, their source gases and reservoir gases. Detailed treatment of the pure oxygen family (odd oxygen) according to the Chapman chemistry. Radical reactions of the oxygen species with nitric oxide, active halogens (chlorine and bromine) and odd hydrogen. Ozone depletion cycles. Methane depletion and ozone production in the lower stratosphere (photo-smog reactions). Heterogeneous chemistry on the background aerosol and its significance for heavy air traffic. Chemistry and dynamics of the ozone hole: Formation of polar stratospheric clouds and chloride activation.

Lecture notes

Documents are provided in the contact hours.

Literature

Prerequisites / notice

Master's Seminar: Atmosphere and Climate 1

Abstract

In this seminar, the process of writing a scientific proposal will be introduced. The essential elements of a proposal, including the peer review process, will be outlined and class exercises will train scientific writing skills. Knowledge exchange between class participants is promoted through the preparation of a master thesis proposal and evaluation of each other's work.

Objective

Training scientific writing skills.

Content

In this seminar, the process of writing a scientific proposal will be introduced. Content
Geogenic and cosmogenic radionuclides (sources, decay chains); stable isotopes in geochemistry (natural abundance, fractionation); geochemical tracers for processes such as erosion, productivity, redox fronts; biomarkers for specific microbial processes.

Lecture notes
Handouts will be provided for every chapter

Literature
A list of relevant books and papers will be provided

Prerequisites / notice
Students should have a basic knowledge of geochemical processes (BSc course on Biogeochemical processes in aquatic systems or equivalent)

Abstract
The course addresses major biogeochemical processes that drive the cycling of different groups of trace elements (heavy metals, redox-sensitive trace elements, chalcophile elements) in the environment, and the chemical methods that are used to study the behavior of these elements in the geosphere.

Objective
The students gain a detailed understanding of the sources and the cycling of trace elements in the terrestrial and aquatic environment. The interaction of environmentally important trace elements with abiotic and biotic geosphere components as well as their abiotically and biotically driven transformations will be discussed. Relevant methods/techniques to study these processes will be presented.

Content
The course deals in-depth with the major biogeochemical processes controlling the cycling of different groups of trace elements (heavy metals, redox-sensitive and chalcophile elements) in the environment. Sources and cycling of trace elements as related to interactions with abiotic and biotic geosphere components, and abiotically and biotically driven transformations will be discussed. The techniques most commonly used to study these processes will be presented as well.

Lecture notes
Selected handouts (lecture notes, literature, exercises) will be distributed during the course.

Prerequisites / notice
Students are expected to be familiar with the concepts of aquatic or soil chemistry covered in the respective classes at the bachelor level.

This lecture is a prerequisite for attending the laboratory course "Trace elements laboratory".

Abstract
We will discuss interfacial processes and mechanisms by which microorganisms and plants interact with their extracellular environment, particularly with mineral surfaces.

Objective
Students will become acquainted with interfacial biogeochemistry of bio-mineral Interactions.

Content
Reactions at mineral surfaces: precipitation, dissolution; redox reactions; photochemistry. Biological surfaces: structure of microbial cell surfaces; adsorption reaction at cell surfaces; structure of plant roots. Microbe / mineral interactions: recognition and chemotaxis, adhesion of microbes at mineral surfaces; enzymatic reactions at the cell/mineral interface; extracellular electron transfer; biomineralization; nutrient acquisition; interactions of nanoparticles with microbes; mineral weathering; microbial effects on contaminant mobility. Plant/mineral interactions: nutrient acquisition; mycorrhizal interactions with mineral surfaces.

Prerequisites / notice
The Lecture will be taught as a 4-day block in February. Exact dates will be announced.

Abstract
The reduction of CO2 emissions is the only option for keeping future climate change within reasonable bounds. In this course, we will discuss a portfolio of options involving the alteration of natural carbon sinks and carbon sequestration. The course includes introductory lectures, presentations from guest speakers from industry and the public sector, and final presentations by the students.

Objective
The goal of this course is to investigate, as a group, a particular set of carbon mitigation/sequestration options and to evaluate their potential, their cost, and their consequences.

Content
From the large number of carbon sequestration/mitigation options, a few options will be selected and then investigated in detail by the students. The results of this research will then be presented to the other students, the involved faculty, and discussed in detail by the whole group.

Lecture notes
None

Literature
Will be identified based on the chosen topic.

Prerequisites / notice
Exam: No final exam. Pass/No-Pass is assigned based on the quality of the presentation and ensuing discussion.

Abstract
Students of this course will discuss current topics from the field of infectious disease biology. From a list of publications, each student chooses some themes that he/she is going to explain and discuss with all other participants and under supervision. The actual topics will change from year to year corresponding to the progress and new results occurring in the field.

Objective
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific papers.

Content
A core set of ∼10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

Lecture notes
Publications and class notes can be downloaded from a web page announced during the lecture.

Literature
Papers will be assigned and downloaded from a web page announced during the lecture.

Abstract
The course provides methods and tools for ecological evaluations dealing with nature conservation or landscape planning. It covers census methods, ecological criteria, indicators, indices and critically appraises objectivity and accuracy of the available methods, tools and procedures. Birds and plants are used as main example guiding through different case studies.

Objective
Students will be able to:
1) critically consider biological data books and local, regional, and national inventories;
2) evaluate the validity of ecological criteria used in decision making processes;
3) critically appraise the handling of ecological data and criteria used in the process of evaluation;
4) perform an ecological evaluation project from the field survey up to the decision making and planning.

Lecture notes
Powerpoint slides are available on the webpage. Additional documents are handed out as copies.

Literature
Basic literature and references are listed on the webpage.
Environmental Governance

To learn and improve on standard and modern methods of genetic data collection. Examples are: use of pyrosequencing, expression

Research Seminar: Ecological Genetics

This course provides training for advanced students (master, doctoral or post-doctoral level) in how to measure and collect genetic diversity data from populations, experiments, field and laboratory. Different DNA/RNA extraction, genotyping and gene expression techniques will be addressed. Choice of topic by demand and/or availability of data.

Landscape Genetics

This six-day winter school aims at teaching advanced Master students, PhD students and postdocs on landscape genetics. It provides both theoretical background as well as hands-on exercises on major topics of contemporary landscape genetics and landscape genomics such as landscape effects on gene flow and adaptive genetic variation in a landscape context.

Experimental Ecology: Evolution and Ecology

Interaction seminar. Student-mediated presentations, guests and discussions on current themes in ecology, evolutionary and population biology.

Human-Environment Systems

Number Title Type ECTS Hours Lecturers

701-1651-00L Environmental Governance W 3 credits 2G E. Lieberherr, G. de Bure
The course addresses environmental policies, focusing on new approaches, which are generally summarized as environmental governance. The course also provides a broader introduction to social science concepts to provide students with tools to analyze environmental policy processes and assess the key features of environmental governance by examining various practical environmental policy examples.

To understand how an environmental problem may (or not) become a policy and explain political processes, using basic concepts and techniques from political science. To analyze the evolution as well as the key elements of environmental governance. To be able to identify the main challenges and opportunities for environmental governance and to critically discuss them with reference to various practical policy examples.

Improvements in environmental quality and sustainable management of natural resources cannot be achieved through technical solutions alone. The quality of the environment and the achievement of sustainable development strongly depend on human behavior and specifically the human uses of nature. To influence human behavior, we rely on public policies and other societal rules, which aim to steer the way humans use natural resources and their effects on the environment. Such steering can take place through government intervention alone. However, this often also involves governance, which includes the interplay between governmental and non-governmental actors, the use of diverse tools such as emission standards or financial incentives to steer actors' behavior and can occur at the local, regional, national or international level.

In this course, we will address both the practical aspects of as well as the scientific debate on environmental governance. The course gives future environmental experts a strong basis to position themselves in the governance debate, which does not preclude government but rather involves a spectrum from government to governance.

Key questions that this course seeks to answer: What are the core characteristics of environmental challenges from a policy perspective? What are key elements of 'environmental governance' and how legitimate and effective are these approaches in addressing persistent environmental challenges?

We will mostly work with readings from the following books:

We recommend that students have (a) Three-years BSc education of a (technical) university; (b) Successfully completed Bachelor introductory course to environmental policy (Entwicklungen nationaler Umweltpolitik (or equivalent)) and (c) Familiarity with key issues in environmental policy and some fundamental knowledge of one social science or humanities discipline (political science, economics, sociology, history, psychology, philosophy).

A detailed course schedule will be made available at the beginning of the semester.

We will mostly work with readings from the following books:

Prerequisites / notice

We recommend that students have (a) Three-years BSc education of a (technical) university; (b) Successfully completed Bachelor introductory course to environmental policy (Entwicklungen nationaler Umweltpolitik (or equivalent)) and (c) Familiarity with key issues in environmental policy and some fundamental knowledge of one social science or humanities discipline (political science, economics, sociology, history, psychology, philosophy).

851-0589-00L Technology and Innovation for Development  W 3 credits  2V  P. Aerni

Abstract

Technological change plays a crucial role in efforts to create a more sustainable future. In this context, policy decision makers must design rules that minimize its risks and maximize its benefits for society at large. The course discusses this challenge from an interdisciplinary perspective taking into account legal, economic, historical, development and environmental aspects.

Objective

- to recognize the challenges and opportunities of technological change in terms of sustainable development
- to become familiar with policy instruments to promote innovation
- to improve understanding of political decision-making processes in the regulation of science & technology
- improved understanding of the role of science and technology in the context of human and societal development

Content

Science and Technology Policy is normally associated with the improvement of national competitiveness; yet, it is also an integral part of effective environmental and development policies. The course will discuss the challenges and opportunities of technological change in terms of sustainable development and show how public policy on the national and the international level is responding to this change.

In this context, students are to become familiar with the basic principles of political economy and New Growth Theory and how such theories help explain political decisions as well as political outcomes in the area of Science, Technology and Innovation. State interventions are either designed to regulate (e.g. environmental regulations, anti-trust law) or facilitate (e.g. intellectual property rights protection, public investment in R&D and technical education, technology transfer) technological change. This will be illustrated by looking at different industries and different national systems of innovation. Subsequently the positive and negative consequences for society and the natural environment will be discussed from a short-term and a long-term perspective.

Lecture notes

Reader with issue-specific articles. E-version is partly available under http://www.ib.ethz.ch/teaching/material/stpp
Literature

Prerequisites / notice

This course is recommended for students participating in the Transdisciplinary Case Study 2016.

701-1543-00L Transdisciplinary Methods and Applications W 3 credits 2G P. Krütli, M. Stauffacher

Abstract

The course deals with transdisciplinary (td) methods, concepts and their applications in the context of case studies and other problem oriented research projects.Td methods are used in research at the science-society interface and when collaborating across scientific disciplines.

Students learn to apply methods within a functional framework. The format of the course is seminar-like, interactive.

Objective

At the end of the course students should:

Know:
- Function, purpose and algorithm of a selected number of transdisciplinary methods

Understand:
- Functional application in case studies and other problem oriented projects

Be able to reflect on:
- Potential, limits, and necessity of transdisciplinary methods

Be prepared for:
- Transdisciplinary Case Study 2016

Content

The lecture is structured as follows:

- Overview of concepts and methods of inter-/transdisciplinary integration of knowledge, values and interests (approx. 20%)
- Analysis of a selected number of transdisciplinary methods focusing problem framing, problem analysis, and impact (approx. 50%)
- Practical application of the methods in a broader project setting (approx. 30%)

Lecture notes

Handouts are provided by the lecturers

Literature

Selected scientific articles and book-chapters

Prerequisites / notice

This course is recommended for students participating in the Transdisciplinary Case Study 2016.

701-1551-00L Sustainability Assessment W 3 credits 2G P. Krütli, C. E. Pohl

Abstract

The course deals with the concepts and methodologies for the analysis and assessment of sustainable development. A special focus is given to the social dimension and to social justice as a guiding principle of sustainability as well as to trade-offs between the three dimensions of sustainability.

The course is seminar-like, interactive.

Objective

At the end of the course students should

Know:
- core concepts of sustainable development, and;
- the concept of social justice - normatively and empirically - as a core element of social sustainability;
- important empirical methods for the analysis and assessment of local / regional sustainability issues.

Understand and reflect on:
- the challenges of trade-offs between the different goals of sustainable development;
- and the respective impacts on individual and societal decision-making.
Students should be able to understand how an environmental problem may (or not) become a policy and explain political processes, using basic concepts and techniques from political science.

In-depth understanding of concepts, insight into current research and experience with methods of Forest Pathology based on selected pathogens.

Objective
To know current biological and ecological research on selected diseases, to be able to comment on it and to understand the methods. To understand the dynamics of selected pathogens and disturbance processes. To be able to diagnose tree diseases and injuries. To know forest protection strategies and to be able to comment on them.

Content
Stress and disease, virulence and resistance, disease diagnosis and damage assessment, tree disease epidemiology, disease management, ecosystem pathology.

Systems (examples): Air pollution and trees, endophytic fungi, mycorrhiza, wood decay, conifer- root rot, Phytophthora diseases, chestnut canker and its hypoviruses, urban trees, complex diseases, emerging diseases

Literature

Lecture notes
No script, the ppt-presentations and specific articles will be made available among others:

Prerequisites / notice
The course is composed of introductory lectures, practical work, discussions and reading. The participants should have basic knowledge in forest pathology (corresponding to the course 701-0563-00 "Wald- und Baumkrankheiten, see teaching book of H. Butin: Tree diseases and disorders, Oxford University Press 1995, 252 pp.").

Environmental Governance
The course addresses environmental policies, focusing on new approaches, which are generally summarized as environmental governance. The course also provides a broader introduction to social science concepts to provide students with tools to analyze environmental policy processes and assesses the key features of environmental governance by examining various practical environmental policy examples.

Objective
To understand how an environmental problem may (or not) become a policy and explain political processes, using basic concepts and techniques from political science.
To analyze the evolution as well as the key elements of environmental governance.
To be able to identify the main challenges and opportunities for environmental governance and to critically discuss them with reference to various practical policy examples.

Lecture notes
Handouts.

Literature
Selected scientific articles & book chapters

Advanced Forest Pathology
In-depth understanding of concepts, insight into current research and experience with methods of Forest Pathology based on selected pathogens.

Objective
To know current biological and ecological research on selected diseases, to be able to comment on it and to understand the methods. To understand the dynamics of selected pathogens and disturbance processes. To be able to diagnose tree diseases and injuries. To know forest protection strategies and to be able to comment on them.

Content
Stress and disease, virulence and resistance, disease diagnosis and damage assessment, tree disease epidemiology, disease management, ecosystem pathology.

Systems (examples): Air pollution and trees, endophytic fungi, mycorrhiza, wood decay, conifer- root rot, Phytophthora diseases, chestnut canker and its hypoviruses, urban trees, complex diseases, emerging diseases

Literature

Stable Isotope Ecology of Terrestrial Ecosystems will be discussed in class. N. Buchmann.

Introduction to design and model assisted sampling theory for finite populations as well as to the infinite population model for forest inventories, E. Baltsavias, further.

D. Mandallaz

Lecture notes

Lecture slides and additional course material will be provided throughout the semester.

Prerequisites / notice

We will mostly work with readings from the following books:

Prerequisites / notice

We recommend that students have (a) Three-years BSc education of a technical university; (b) Successfully completed Bachelor introductory course to environmental policy (Entwicklungen nationaler Umweltpolitik (or equivalent)) and (c) Familiarity with key issues in environmental policy and some fundamental knowledge of one social science or humanities discipline (political science, economics, sociology, history, psychology, philosophy)

701-1671-00L Sampling Techniques for Forest Inventories

W 3 credits 2V D. Mandallaz

Abstract

Introduction to design and model assisted sampling theory for finite populations as well as to the infinite population model for forest inventory. Two-phase two-stage forest inventories with simple or cluster sampling. Small area estimation. Presentation of the Swiss National Inventory.

Objective

Short introduction to Kriging techniques.

Content

Students should have a good understanding of the concepts of general sampling theory in a modern framework. They should also master the specific problems arising in forest inventory and be able, if necessary, to read more specialized books or research papers.

Lecture notes

Sampling techniques for forest inventories. Daniel Mandallaz, Chapman and Hall. A free electronic copy of the book is available. A PDF file containing parts of the book will be mailed to the participants.

Literature

Sampling methods, remote sensing and GIS multisource forest inventory M. Köhl, S. Magnussen, M. Marchetti, 2006, Springer.

Sampling techniques for forest inventories, Daniel Mandallaz, 2007, Chapman and Hall.

Prerequisites / notice

A simulation software will be used throughout the lectures to illustrate the theoretical developments. Upon request a half day field demonstration can be organized at the WSL outside the lecture time. A repetitorium for the exam is also offered.

751-5125-00L Stable Isotope Ecology of Terrestrial Ecosystems

W 2 credits 2G R. A. Werner, N. Buchmann, R. Siegwolf

Abstract

This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to process-oriented ecological research. Topics focus on stable isotopes as tracers. Topics focus on stable isotopes as tracers of processes.

Objective

Students will be familiar with basic and advanced applications of stable isotopes in studies on plants, soils, water and trace gases, know the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small IsotopeProject, practice to search and analyze literature as well as to give an oral presentation.

Content

The analyses of stable isotopes often provide insights into ecophysiological and ecological processes that otherwise would not be available with classical methods only. Stable isotopes proved useful to determine origin of pools and fluxes in ecosystems, to partition composite fluxes and to integrate processes spatially and temporally.

This course will provide an introduction to the applicability of stable isotopes to ecological research questions. Topics will focus on carbon (13C), nitrogen (15N), oxygen (18O) and hydrogen (2H) at natural isotope abundance and tracer levels. Lectures will be supplemented by intensive laboratory sessions, short presentations by students and computer exercises.

Lecture notes

Handouts will be available on the webpage of the course.

Literature

Will be discussed in class.

Prerequisites / notice

This course is based on fundamental knowledge about plant ecophysiology, soil science, and ecology in general. Course will be taught in English.

102-0675-00L Earth Observation

W 4 credits 3G I. Hajnsek, E. Baltisavius, further lecturers

Information:

As of examination session winter 2015, examination block 3 will be implemented in its new structure (i.e. new, Earth Observation will be examined within examination block 3 instead of within examination block 4). As of examination session summer 2015, examination block 4 will be implemented in its new structure. The new structure is valid for those students NOT having taken exams of examination block 3 nor of examination block 4 for the first time. All other students take the exams of examination block 3 as well as of examination block 4 in the present
structure, including repetition where applicable.

### 701-1681-00L  Element Balancing and Soil Functions in Managed Ecosystems

**Abstract**

Applying element balances of agricultural soils and the assessment of soil functions for real applications in computer exercises to design preventive strategies against soil pollution and to support sustainable management of regional agroecosystems also in the context of spatial planning procedures.

**Objective**

The students learn to critical assess changes in land use management on element cycles in agro-ecosystems and to assess soil services (soil functions). You design solutions for chemical problems in soil protection at the regional scale and learn to assess soil functions using different methods.

**Content**

The students apply a regional balance model for Swiss regions in computer exercises and assess major soil functions of agricultural soils. You assess the sustainability of current land use and analyse management options improving nutrient and metal cycling in agro-ecosystems. The students will have the opportunity to calculate specific scenarios regarding land use management and environmental changes. Special focus we be paid on the soil services such as regulation-, production function and soil as habitat, and the assessment of these functions based on soil mapping data.

**Lecture notes**

Literature and Exercises for a case study

**Literature**

Lecture notes will be provided.

**Prerequisites / notice**

The course consists of lectures and computer exercises. The course take place every 2 weeks à 4 hours. recommended prerequisites for attending this course:

- Bodenschutz und Landnutzung
- Biochemistry of Trace Elements
- Angewandte Bodenkunde

### 701-1776-00L  Geographic Data Processing with Python and ArcGIS

**Abstract**

The course gives a general introduction into the geoprocessing framework of ArcGIS and shows how to use python scripts to access and automate geoprocessing tasks. Furthermore, the basics of the programming language Python will be communicated which is required for the implementation of multilevel spatial analysis and dynamic models.

**Objective**

The students learn the basics of geographic data processing based on the programming language Python and ArcGIS (arcpy). They get the ability to implement their own processing sequences and models for geoprocessing.

**Content**

The course communicates a deepend understanding of geoprocessing frameworks arcpy and covers basic language concepts of Python e.g. like control structures, functions and sequences.

**Lecture notes**

Lecture notes, exercises and worked out solutions to them will be provided.

**Literature**

**Prerequisites / notice**

The course will be taught in German. All material will be provided in English. Knowledge of ArcGIS is assumed.

### 701-1682-00L  Dendroecology

**Abstract**

The course dendroecology offers theoretical and practical aspects of dendrochronology. The impact of different environmental influences on tree-ring characteristics will be shown. The students learn various methods to date tree rings and they understand how ecological and environmental processes and patterns can be reconstructed using tree rings.

**Objective**

The students...

- understand, how wood is configured and how tree-ring structures are formed.
- are able to identify and describe different tree-ring structures.
- understand the theoretical and practical aspects of the dating of tree rings.
- know the effects of different abiotic and biotic environmental influences (climate, site, competition, insects, fire, physical-mechanical influences) on trees and tree rings.
- discover a tool for understanding and reconstructing global change processes.
- learn software to date, standardize and analyze tree rings.
- get hands-on experience based on the demonstration of wood (increment cores, stem discs, wedges), sampling in the field, and measuring and dating of tree rings in the tree-ring lab.
- solve R-based exercises (R tutorial will be provided) and answer questions in Moodle.
- work out an independent research question related to a dendroecological topic and write a short literature review based on scientific papers.
Inter- and Transdisciplinary Courses

**Seminar on Transdisciplinary Research for Sustainable Development**

**Number**: 701-0015-00L

**Title**: Seminar on Transdisciplinary Research for Sustainable Development

**Type**: W

**ECTS**: 2 credits

**Hours**: 2S

**Lecturers**: C. E. Pohl, M. Stauffacher

**Abstract**: The seminar is designed for students and researchers (MA, PhD, PostDoc) who use inter- and transdisciplinary elements in their projects. It addresses the challenges of this research: How to integrate disciplines? How (and in what role) to include societal actors? How to bring results to fruition? We discuss these questions based on case studies and theories and on the participant's projects.

**Objective**: The participants understand the specific challenges of inter- and transdisciplinary research in general and in the context of sustainable development in particular. They know methods and concepts to address these challenges and apply them to their research projects.

**Content**: The seminar covers the following topics:

1. Theories and concepts of inter- and transdisciplinary research
2. The specific challenges of inter- and transdisciplinary research
3. Involving stakeholders
4. Collaborating disciplines
5. Exploration of tools and methods
6. Analysing participants' projects to improve inter- and transdisciplinary elements

**Literature**: Literature will be made available to the participants

**Prerequisites / notice**: The seminar is specifically suitable for PhD or PostDoc researchers. It is open to master students (minor "global change and sustainability") and further interested people, who preferably are preparing, or working on, a project/thesis.

**CCES Winter School "Science Meets Practice"**

**Number**: 701-1503-00L

**Title**: CCES Winter School "Science Meets Practice"

**Type**: W

**ECTS**: 4 credits

**Hours**: 9A

**Lecturers**: C. Adler, P. Krüttli, C. E. Pohl, M. Stauffacher

**Abstract**: Increasingly scientists need to interact more with people and institutions outside the scientific community. This requires the capability to understand and critically reflect about scientific activities and consequences for society and environment and to communicate with confidence. The CCES Winter School builds capacity to create and manage forms of interactions beyond scientific boundaries.

**Objective**: 1. To acquire knowledge of key aspects of the interplay between science and practice
2. To reflect on and understand the role and consequences of scientific activity in relation to society and environment
3. To develop skills and learn about a systematic application of methods to create and manage interactions between science and society

**Content**: The Winter School provides insights into theoretical and methodological foundations on the challenges of knowledge exchange and dialogue between science and practice. It offers media and knowledge management training for enhancing stakeholder involvement. Selected case examples support group work discussions and analysis. Real stakeholder meetings are organized for testing techniques in view of identifying diverse expectations and needs and working towards solutions. Together the Winter School participants and stakeholders experience and develop ways for better linking environmental science and practice.

**Literature**: Collection of key literature in online reader on BSCW
Prerequisites / notice

The CCES Winter School addresses PhD students and postdocs from environmental and natural sciences, engineering, and social sciences related to sustainable development. Participants are required to apply online providing key information about their interest and PhD project - details and application form can be found here: http://www.cces.ethz.ch/winterschool/

The Winter School runs with a maximum of 25 participants.

The Winter School 2015 is delivered by a diverse group of lecturers and experienced intermediaries.
- Carolina Adler (USYS TdLab, environmental philosophy group, ETH Zurich)
- Claudia Frick (sciencetext, HAFL Zollikofen)
- Martina Mitller (corporate communications, ETH Zurich)
- Patricia Fry (Wissensmanagement Umwelt GmbH)
- Pius Krüttli (USYS TdLab, Natural and Social Science Interface, ETH Zurich)
- Christian Pohl (USYS TdLab, ETH Zürich & td-net, Bern)
- Michael Stauffacher (USYS TdLab, Natural and Social Science Interface, ETH Zurich)

The total time requirement is in the range of 120 hours, equivalent to 4 ECTS. The learning control focuses on 1) active participation, engagement in case examples, and reflection against the background of own projects and experiences, 2) active team involvement in implementing tasks on information, consultation, and co-production of knowledge, including the design and organization of stakeholder meetings. The course is successfully completed by pass (pass/no pass, thus no marks). The language of the Winter School is English. Stakeholder meetings will be in the local language (Swiss German) and translation into English is provided.

There is a participation fee of 400 CHF for the course, which is a contribution to the costs for the two blocks at the seminar venue Propstei Zollikofen, organizational support as well as material for the stakeholder meetings. Travel expenses to the venue are to be borne by the participants.

701-1505-00L

"Global Water Challenges" Engineering for Development (E4D) Winter School

W 4 credits 4G to be announced

Abstract

The E4D winter school 2015 aims at an integrated vision of Global Water Challenges. The programme is designed to present water resources challenges that are of global relevance. Experts will outline the issues and will present their experiences working in different parts of the world. The programme will focus on three main topics: Water & Health, Water & Food, and Water & Energy, but it will also

Objective

The E4D winter school will be composed of 30 graduate students, 15 each from ETH Zurich and from other academic institutions, particularly from developing countries. They will be joined by faculty members and external experts from fields of expertise related to the winter school topic. The Master and PhD students will come from different disciplines related to the E4D topic. During the first week, students will be introduced to fields relevant to the topic at hand through a series of input speeches, lectures and workshops conducted by experts. All participants will stay in a country house eco hotel in Emmental, 2h away from Zurich. During weeks two and three, students will relocate to ETH Zurich and be split into three thematic groups to carry out guided case studies. The case study work will provide them with hands-on opportunities to work in an interdisciplinary and intercultural team and to develop solutions to the chosen topic.
Content

Three case studies will cover the following topics and will be based on modelling solutions in a specific country context:

WATER, SANITATION AND HYGIENE (WASH)

WASH is a UNICEF programme that is central to the millennium development agenda. In 2012, UNICEF expanded its support to WASH in Schools, which aims at providing gender-sensitive and child-friendly sanitation, washing, and water facilities to students. The purpose of this group work is to develop an integrated WASH programme for schools in Bolivia, which would combine water treatment with hygiene awareness, handwashing, sanitation, etc. The group work will include field testing of existing household water treatment systems such as Sodis, gdm-filters, chlorination, and boiling with different types of water, as well as some lab analysis (microbial analysis).

WATER ALLOCATION FOR FOOD AND ECOSYSTEM HEALTH

The Yanqi Basin in Northwest China is an irrigation oasis. Agriculture is the main income of the population, but leads to numerous problems: salinization of soils due to groundwater table rise, increasing salinity of Lake Bosten, a fresh water lake receiving all drainage waters from the basin, diminished river flow in the downstream and die-off of Populus euphratica forests. You are supposed to formulate sustainability goals and find solutions for the allocation of water with regards to quantity and quality in order to have maximum agricultural production under constraints for soil salinity, downstream ecosystem health, lake salinity and lake water level. A MATLAB software is available which allows you to evaluate each course of action. A Pareto front between economic and ecological benefits should be identified and ideas for implementation should be formulated.

EXPLORING THE ENERGY-WATER NEXUS IN THE KAFUE RIVER BASIN

In the Kafue Flats, part of the Zambezi River Basin, the operation of two dams built in the seventies has completely altered the hydrological natural regime of this internationally important wetland. Backwater from downstream Katue Gorges reservoir and releases from upstream thezi Thezi dam have created a permanently inundated area within the flats and reduced floods elsewhere, with large impacts on wildlife, vegetation and their dependent livelihoods. The group work will explore the water-energy nexus in the Flats from a multi-stakeholders perspective, by developing, based on the literature available, a set of indicators representing the main interests in the basin, including the ecosystem, the local population and the main economic sectors (sugar cane plantations and hydropower). Using a simplified model of the systems, several alternative operations of the systems (e.g., prioritizing different objectives) will be analysed to explore the tradeoffs among the interests of different stakeholders and explore options for more balanced and sustainable management.

Prerequisites / notice

The Engineering for Development (E4D) Winter School 2015 will invite 30 Master and PhD students from different disciplines related to the topic of “Global Water Challenges”. Applicants will be selected based on their academic record and previous work experience, as well as their dedication to solving humanity’s grand challenges.

Applicants must send a one-page CV and one-page letter of motivation in PDF format stating their interest in one of the three themes:

Theme 1: Water and Health: Water, Sanitation, and Hygiene (WASH), Bolivia

Theme 2: Water and Food: Water allocation in China

Theme 3: Water and Energy: Exploring the water-energy nexus in the Katue river basin, Zambia

Admission will be for one of these three themes and cannot be altered once accepted.

Please send your full application to catherine.lippuner@si.ehtz.ch (resend your application if you did not receive an acknowledgement of receipt within two days).

Deadline: October 12, 2014
Notification: October 31, 2014

Abstract

This course introduces students to foundational texts that led to the emergence of the environment as a subject of scientific importance, and shaped its relevance to society. Above all, the course seeks to give confidence and raise enthusiasm among students to read more widely around the broad subject of environmental sciences and management both during the course and beyond.

Objective

The course will provide students with opportunities to read, discuss, evaluate and interpret key texts that have shaped the environmental movement and, more specifically, the environmental sciences. Students will gain familiarity with the foundational texts, but also understand the historical context within which their academic and future professional work is based. More directly, the course will encourage debate and discussion of each text that is studied, from both the original context as well as the modern context. In so doing students will be forced to consider and justify the current societal relevance of their work.
Management ist ein Massenberuf der durch klare Aufgaben und entsprechenden Werkzeuge beschrieben werden kann. Die Positionierung

Thereafter, in each week a text (typically a chapter from a book or a paper) considered to be seminal or foundational will be assigned by a course lecturer. The lecturer will introduce the selected text with a brief background of the historical and cultural context in which it was written, with some additional biographical information about the author. He/she will also briefly explain the justification for selecting the particular text.

The students will read the text, with two to four students (depending on class size) being assigned to present it at the next session. Presentation of the text requires the students to prepare by, for example:
- identifying the key points made within the text
- identifying issues of particular personal interest and resonance
- considering the impact of the text at the time of publication, and its importance now
- evaluating the text from the perspective of our current societal and environmental position

Such preparation would be supported by a mid-week tutorial discussion (about 1 hour) with the assigning lecturer.

These students will then present the text (for about 15 minutes) to the rest of the class during the scheduled class session, with the lecturer facilitating the subsequent class discussion (about 45 minutes). Towards the end of the session the presenting students will summarise the emerging points (5 minutes) and the lecturer will finish with a brief discussion of how valuable and interesting the text was (10 minutes). In the remaining 15 minutes the next text will be presented by the assigning lecturer for the following week.

The specific texts selected for discussion will vary, but examples include:

Leopold (1949) A Sand County Almanach
Carson (1962) Silent Spring
Jared Diamond (2005) Collapse

Discussions might also encompass films or other forms of media and communication about nature.

### Literature

The specific texts selected for discussion will vary, but examples include:

### 701-0017-00L

**EAWAG PhD Skills Seminar**

**W 2 credits 2S**

D. R. Johnson, J. Hering

**Abstract**

Purpose is to discuss and teach the professional skills that are needed in science (or future career in science). Course consists of lectures and practical sessions. Course is organized by Eawag scientists.

**Objective**

Purpose is to discuss and teach the professional skills that are needed in science (or future career in science). Course consists of lectures and practical sessions.

**Content**

- Lectures and exercises in:
  - Project management
  - Application of research grants
  - Scientific publishing
  - Reviewing
  - Writing papers
  - Applying jobs
  - Job interviews

**Prerequisites / notice**

The course was designed in close cooperation with practitioneers; e.g. will Mr. S. Baldenweg, mechanical engineer ETH, MBA Insead, share his experience in several guest lectures.

### 701-0763-00L

**Basic Concepts of Management**

**W 2 credits 2V**

R. Schwarzenbach

**Abstract**

This course deals with fundamental and proven management concepts. The lecturers emphasize the practical applicability of concepts. The course was designed in close cooperation with practitioners; e.g. will Mr. S. Baldenweg, mechanical engineer ETH, MBA Insead, share his experience in several guest lectures.

**Objective**

Students:
- will be familiar with basic general management concepts.
- learn about the fundamental concepts of strategy development with practical examples.
- will get to know the basic organisational issues and the essential types of organisations.
- get a rough overview on the concepts of financial management.
- will learn about the strategic positioning of small departments within larger organisations.
- will learn about the fundamental mechanisms for handling change, and will be able to recognise these situations.
- will learn the basic principles of project management and of successful self-management.
- will reflect on customer oriented information representation.

**Content**

Die finanzielle Abbildung von Organisationen und Projekten wird übersichtsweise dargestellt und die stufengerechte Darstellung von Informationen anhand von realen Beispielen besprochen.

**Lecture notes**

Skripten werden elektronisch zur Verfügung gestellt.

**Literature**

- Jared Diamond (2005) Collapse

Discussions might also encompass films or other forms of media and communication about nature.

**851-0180-00L**

Abstract
This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective
The main goal of this course is to enhance the student's ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.

Content
I. Ethics & the Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention); - Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.
Literature

- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

Abstract
Digital and analogue signals and their representation. Combinational and sequential circuits and systems, boolean algebra, K-maps. Finite state machines. Memory and computing building blocks in CMOS technology, programmable logic circuits.

Objective
Provide basic knowledge and methods to understand and to design digital circuits and systems.

Content
Digital and analogue signals and their representation. Boolean Algebra, circuit analysis and synthesis, the MOS transistor, CMOS logic, static and dynamic behaviour, tristate logic, Karnaugh-Maps, hazards, binary nuber systems, coding. Combinational and sequential circuits and systems (boolean algebra, K-maps, etc.). Memory building blocks and memory structures, programmable logic circuits. Finite state machines, architecture of microprocessors.

Lecture notes
Lecture notes for all lessons, assignments and solutions. Textbook: http://www.ife.ee.ethz.ch/education/Digitaltechnik

Literature
Literature will be announced during the lessons.

Abstract
Digital and analogue signals and their representation. Combinational and sequential circuits and systems, boolean algebra, K-maps. Finite state machines. Memory and computing building blocks in CMOS technology, programmable logic circuits.

Objective
Deepen and extend the knowledge from lecture and exercises, usage of design software Quartus II as well as an oscilloscope

Content
The contents of the digital circuits laboratory will deepen and extend the knowledge of the correspondent lecture and exercises. With the help of the logic device design software Quartus II different circuits will be designed and then tested on an evaluation board. You will build up the control for a 7-digit display as well as an adder and you will create different types of latches and flip-flops. At the end of the laboratory a small synthesizer will be programmed that is able to play self-created melodies. At the same time the usage of a modern oscilloscope will be taught in order to analyse the programmed circuits through the digital and analogue inputs.

Abstract
In this lecture we treat problems in applied analysis. The focus lies on the simplest cases of three fundamental types of partial differential equations of second order: the Laplace equation, the heat equation and the wave equation.

Content
1.) Klassifizierung von PDE's
   - linear, quasilinear, nicht-linear
   - elliptisch, parabolisch, hyperbolisch

2.) Quasilineare PDE
   - Methode der Charakteristiken (Beispiele)

3.) Elliptische PDE
   - Bsp: Laplace-Gleichung
   - Harmonische Funktionen, Maximumsprinzip, Mittelwerts-Formel.
   - Methode der Variablenseparation

4.) Parabolische PDE
   - Bsp: Wärmeleitungsgleichung
   - Bsp: Inverse Wärmeleitungsgleichung
   - Methode der Variablenseparation

5.) Hyperbolische PDE
   - Bsp: Wellengleichung
   - Formel von d'Alembert in (1+1)-Dimensionen
   - Methode der Variablenseparation

6.) Green'sche Funktionen
   - Rechnen mit der Dirac-Deltafunktion
   - Idee der Green'schen Funktionen (Beispiele)

7.) Ausblick auf numerische Methoden
   - 5-Punkt-Diskretisierung des Laplace-Operators (Beispiele)

Abstract
The goal of the Physics II class is an introduction to quantum mechanics (lecture given in German)

Objective
Die gegenwärtige Entwicklungen der Ingenieurwissenschaften verlangen, dass auch StudentInnen dieser Fächer die Grundlagen der Quantenmechanik und Festkörperphysik (mit den Bandstrukturen) beherrschen. Es ist das Ziel dieser Vorlesung das Gebiet der Quantenmechanik auf einem Weg einzuführen, der zwar elementar ist, es aber ermöglicht die quantenmechanische Begriffe auf die verschiedenen Situationen anzuwenden.
## Die Grundlagen der Quantenphysik

Der Kurs bietet eine Einführung in die Quantenphysik, einschließlich von Atomphysik, Quantenmechanik, Quantenfeldern und Quanteninformationstechnik. Die Kursinhalte umfassen die Beschreibung von Quantenphänomenen, die Entwicklung der Quantenmechanik und ihre Anwendungen in unterschiedlichen Bereichen der Wissenschaft.

**Objective**

Introduction to mathematical signal processing and system theory.

**Content**

**Lecture notes**

Lecture notes, problem set with solutions.

**227-0013-00L**

**Computer Engineering I**

Prerequisites: Programming skills in high level language, knowledge of digital design.

**Abstract**

The course provides knowledge about structures and models of digital systems (abstract data types finite state automata, dependence and process graphs), abstraction and hierarchy in computer systems, assembler and compiler, control path and data path, I/O, bus systems, memory hierarchy, operating system, pipelineing, speculation techniques, superscalar computer architectures.

**Objective**

Logical and physical structure of computer systems. Introduction to principles in hardware design, datapath and control path, assembler programming, modern architectures (pipelining, speculation techniques, superscalar architectures), memory hierarchy, software concepts.

**Content**

Structures and models of digital systems (abstract data types finite state automata, dependence and process graphs), abstraction and hierarchy in computer systems, assembler and compiler, control path and data path, I/O, bus systems, memory hierarchy, operating system, pipelineing, speculation techniques, superscalar computer architectures.

**Lecture notes**

Theoretical and practical exercises using a simulation-based infrastructure.

**Literature**

**Prerequisites / notice**

--- | --- | --- | --- | --- | ---
227-0077-10L | **Electronic Circuits** | 0 | 4 credits | 2V+1U | Q. Huang

**Abstract**

Introductory lecture on electronic circuits. Transistor fundamentals, analysis and design of transistor based electronic circuits such as amplifiers and filters; A/D- and D/A-converters, function generators, oscillators, PLLs.

**Objective**

Modern, transistor-based electronics has transformed our lives and plays a crucial role in our economy since the 2nd half of last century. The main objective of this course in electronic circuits is to introduce the concept of active device, including operational amplifiers, and their use in amplification, signal conditioning, switching and filtering to students. In addition to gaining experience with typical electronic circuits that are found in common applications, including their own Gruppenarbeit and Fachpraktikum projects, students sharpen their understanding of linear circuits based on nonlinear devices, imperfections of electronic circuits and the concept of design (as opposed to analysis). The course is a prerequisite for higher semester subjects such as analog integrated circuits, RF circuits for wireless communications, A/D and D/A converters and optoelectronics.

<td>Discrete Event Systems</td>
<td>W</td>
<td>6 credits</td>
<td>4G</td>
<td>L. Thiele, L. Vanbever, R. Wattenhofer</td>
</tr>
</tbody>
</table>
Abstract
Introduction to discrete event systems. We start out by studying popular models of discrete event systems. In the second part of the course we analyze discrete event systems from an average-case and from a worst-case perspective. Topics include: Automata and Languages, Specification Models, Stochastic Discrete Event Systems, Worst-Case Event Systems, Verification, Network Calculus.

Objective
Over the past few decades the rapid evolution of computing, communication, and information technologies has brought about the proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans. The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss).

The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems, such as automata and Petri nets. In the second part of the course we analyze discrete event systems. We first examine discrete event systems from an average-case perspective: we model discrete events as stochastic processes, and then apply Markov chains and queuing theory for an understanding of the typical behavior of a system. In the last part of the course we analyze discrete event systems from a worst-case perspective using the theory of online algorithms and adversarial queuing.

Content
1. Introduction
2. Automata and Languages
3. Smarter Automata
4. Specification Models
5. Stochastic Discrete Event Systems
6. Worst-Case Event Systems
7. Network Calculus

227-0112-00L High-Speed Signal Propagation W 6 credits 2V+2U C. Bolognesi

Abstract
Understanding of high-speed signal propagation in microwave cables and integrated circuits and printed circuit boards.

As clock frequencies rise in the GHz domain, there is a need grasp signal propagation to maintain good signal integrity in the face of symbol interference and cross-talk.

The course is of high value to all interested in high-speed analog (RF, microwave) or digital systems.

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 449 of 1434
### 227-0113-00L Power Electronics

**Objective**
Understanding of high-speed signal propagation in interconnects, microwave cables and integrated transmission lines such as microwave integrated circuits and/or printed circuit boards.

**Content**
- Butterworth-, Chebyschev- and Bessel filter approximations: filter synthesis from low-pass filter prototypes.

**Lecture notes**
- Lecture notes and associated exercises including correct answers, simulation program for interactive self-learning including visualization/animation features.
- Prerequisites / notice
Exercises will be held in German, but assistants also speak English.

|----------------|------------------------------------------------------------------------------------------------------------------|

### 227-0121-00L Communication Systems

**Objective**
Introduction into the fundamentals of digital communication systems. Selected examples on the application of the fundamental principles in existing and upcoming communication systems.

**Content**
Covered are the lower three layer of the OSI reference model: the physical, the data link, and the network layer. The basic terms of information theory are introduced. After this, we focus on the methods for the point to point communication, which may be addressed elegantly and coherently in the signal space. Methods for error detection and correction as well as protocols for the retransmission of perturbed data will be covered. Also the medium access for systems with shared medium will be discussed. Finally, algorithms for routing and flow control will be treated.

**Lecture notes**
- Lecture Slides

**Prerequisites / notice**
Exercises will be held in German, but assistants also speak English.

### 227-0122-00L Introduction to Electric Power Transmission: System & Technology

**Objective**
Introduction to theory and technology of electric power systems.

**Content**
Structure of electric power systems, transformer and power line models, analysis of and power flow calculation in basic systems, symmetrical and unsymmetrical three-phase systems, transient current and voltage processes, technology and principle of electric power systems, HVDC and FACTS.

**Lecture notes**
- Lecture script in English, exercises and sample solutions, translation of important vocabulary: english-german.

### 227-0145-00L Solid State Electronics

**Objective**
Understand the fundamental physics behind the mechanical, thermal, electric, magnetic, and optical properties of materials.

**Abstract**
“Solid State Electronics” is an introductory condensed matter physics course covering crystal structure, electron models, classification of metals, semiconductors, and insulators, band structure engineering, thermal and electronic transport in solids, magnetoresistance, and optical properties of solids.

**Lecture notes**
- Website: http://www.iis.ee.ethz.ch/stud_area/vorlesungen/solidstateelectronics.en.html
- Prerequisites / notice
  - Recommended background: Undergraduate physics, mathematics, semiconductor devices

### 227-0166-00L Analog Integrated Circuits

**Objective**
This course provides a foundation in analog integrated circuit design based on bipolar and CMOS technologies.
Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems.

The basic elements, design issues and techniques for analog integrated circuits will be taught in this course.

Objective

To understand the physical and technical principles underlying X-ray imaging, computed tomography, single photon and positron emission tomography, magnetic resonance imaging, ultrasound and Doppler imaging techniques. The mathematical framework is developed to describe image encoding/decoding, point-spread function/modular transfer function, signal-to-noise ratio, contrast behavior for each of the methods. Matlab exercises are used to implement and study basic concepts.

Content

- X-ray imaging
- Computed tomography
- Single photon emission tomography
- Positron emission tomography
- Magnetic resonance imaging
- Ultrasound/Doppler imaging

Man-Technology-Environment Electives ("MTU")

The participants should develop competencies in the structuring of communication, interaction, and management processes.

- at den Beispielen von Kaufverhalten oder ökologischem Verhalten zu beschreiben, wie Normen und Einstellungen Einfluss auf das Verhalten nehmen,
- Die Subjektivität und die Fehlerquellen sozialer Wahrnehmung verstehen,
- Prinzipien der Psychologie der Kommunikation zu nutzen für eine Verbesserung der Kommunikation in Studium und Beruf,
- Merkmale und Strukturen von Gruppen zu identifizieren und mit geeigneten Methoden zu analysieren,
- Die Grundlagen von Konformität und Gehorsam gegenüber Autoritäten zu erkennen,
- Gruppenphänomene wie soziales Faulenzen, Risiko- und Konservatismus-Schub und Gruppendenken entgegenzuwirken,
- Gruppenleistungen und -entscheidungen zu optimieren,
- Führungsstile zu unterscheiden lernen,
- Techniken zur Moderation von interagierenden Gruppen kennen zu lernen.

kein Skript

Literature

Prerequisites / notice

Es werden für D-ITET-Studierende Gruppenarbeiten (6 Kreditpunkte) in Form eines 3-tätigen computer-unterstützten Assessments fachübergreifender Kompetenzen angeboten (Teilnehmerzahl beschränkt auf 12 Studierende). Die Teilnehmenden verfassen Berichte, die benotet werden.

Objective

To learn about methods of empirical social research and key results of classic and modern sociological studies.

Literature

Folgende Themen werden behandelt:

Gruppenarbeiten

- Schriftliche Arbeit in Soziologie (Durchführung einer kleinen empirischen Studie, Konstruktion eines Simulationsmodells sozialer Prozesse oder Diskussion einer vorliegenden soziologischen Untersuchung).

Abstract

Students are introduced to the basics of micromachining and silicon process technology and will learn about the fabrication of microsystems and devices by the combination of unit process steps (process flow).

Objective

Students are able to identify basic structures of the legal system. They understand selected topics of public and private law and are able to apply the fundamentals in more advanced law classes.

Content

- Basic concepts of law, sources of law.
- Private law: Contract law (particularly contract for work and services), tort law, property law.
- Public law: Human rights, administrative law, procurement law, procedural law.
- Insights into the law of the EU and into criminal law.

Prerequisites / notice

- No prerequisites for this course unit.

Literature

Further documents will be available online (see https://moodle-app2.let.ethz.ch/course/view.php?id=1596).

Economic Science Electives

These subjects are particularly suitable for students planning to apply to the Master's Degree Program in Energy Science and Technology (MSc EST) or Management, Technology and Economics (MSc MTEC).

Data: 06.04.2020 13:01   Autumn Semester 2015   Page 452 of 1434
Abstract
Evidence-based management requires valid empirical research. In this course, students will learn the basics of research design, fundamentals of data collection and statistical methods to analyze the data acquired in social science research. Students are expected to apply their knowledge in class discussions and out-of-class assignments.

Objective
- Ability to formulate research questions and designing an appropriate study
- Ability to collect and analyze data using a variety of methods
- Ability to critically assess the quality of empirical research in management
- Applied knowledge of empirical methods through out-of-class assignments

Content
1) Introduction to empirical management research
2) Research designs: exploratory, descriptive, experimental
3) Measurement and scaling
4) Data collection and sampling
5) Data analysis methods
6) Reporting and presenting empirical research

Prerequisites / notice
Assignments and projects: This course includes out-of-class assignments and projects to give students some hands-on experience in conducting empirical research in management. Projects will focus on one particular aspect of empirical research, like the formulation of a research question or the design of a study. Students will have at least one week to work on each assignment. Students are expected to work on these assignments individually. Duplicate answers will receive no credit and will be subject to a disciplinary review. Assignments will be graded and need to be turned-in on time. Exemplary answers to the assignments will be posted online after the submission date for students to review. Some assignments will also be discussed in class.

Class participation: Class participation is encouraged and can greatly improve students’ learning in this class. Class participation will not be graded; however, it will be considered favorably if a student is between grades. Note, however, that quality is more important than quantity. In this spirit, students are expected to attend class regularly and come to class prepared.

363-0503-00L Principles of Microeconomics
W 3 credits 2G M. Filippini

Abstract
The course introduces basic principles, problems and approaches of microeconomics.

Objective
The course includes the following main topics:

Basic principles of demand and supply, market and state in a modern economy, externalities, cost analysis, consumer behaviour, economies of scale and economies of scope, perfect competition, monopoly, oligopoly, monopolistic competition, mathematical treatment of some basic concepts.

Lecture notes
Lecture notes, exercises and reference material can be downloaded from Moodle.

</tr>
</tbody>
</table>
Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Content

- Die Themen für die beiden Prüfungslektionen am Schluss des Praktikums erfährt die Studierenden in der Regel eine Woche vor dem Prüfungstermin. Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie bis am Vortrag um 12 Uhr den beiden Prüfungsexperten (Fachdidaktiker/-in, Departementsvertreter/-in) ein. Die gehaltenen Lektionen werden kriteriumsbasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/der Kandidatin über die gehaltenen Lektionen im Rahmen eines kurzen Kolloquiums.

227-0853-00L Mentored Work Subject Didactics Electrical Engineering and Information Technology
Only for students who enrolled before HS 2011 into TC.

Prerequisites: successful completion of FD I and FD II.

Abstract
In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

Objective
The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Content
Gemäß aktualisierter Ablaufplanung mit Mentor und Betreuer.
Das Fachgebiet richtet sich nach dem aktuellen Unterrichtsprogramm des betreuenden FH/BMS-Dozenten. Die anzuwendende grösse didakt. Methode ist zum Stoff und Programm passend auszuwählen aus
- (Mini-) Leitprogramm
- Gelenktes Entdeckendes Lernen
- Puzzle
- Werkstatt
- Projektarbeit
Zu diesen Themen sind die vorhandenen Manuals aus den ITF zu verwenden, bzw. wo nötig zu adaptieren.

Der abzuleifernde Bericht hat sich an die dortigen Richtlinien zu halten.
Typisch soll die Arbeit bei Einzelarbeit 2 4 Unterrichts-Lektionen abdecken, bei Arbeit zu zweit 4 6 solche Einheiten.

Die Einsatzzeit ist wenn möglich durch Erprobung, zu überprüfen.
Die aus der Erprobung resultierenden Korrekturen sind eingearbeitet.

Eine kurze Anleitung zur mentorierten Arbeit in Fachdidaktik wird zur Verfügung gestellt.
Literature
K. Frey, Allgemeine Didaktik,
FH-Skript bzw. Lehrbuch des Praktikumslehrers.

Die Literatur ist themenspezifisch. Die Studierenden beschaffen sie sich in der Regel selber (siehe Lernziele). In besonderen Fällen wird sie vom Betreuer zur Verfügung gestellt.

Die Arbeit sollte vor Beginn des Praktikums abgeschlossen werden.

Prerequisites / notice

| 151-1061-00L | Subject Didactics I for D-MAVT and D-ITET | O 4 credits | 3G | S. P. Kaufmann, J. Dual, M. Thaler |

Abstract
Didactical methods in mechanical and electrical engineering.

Objective
- The students can plan, conduct and critically reflect single lessons.
- They orient themselves towards the academic goals and take into account existing knowledge, the professional environment and the ambitions of the students.
- They can apply the basic teaching principles meaningfully in their subject and suitably structure the learning phases.
- They can reduce and present complex technical content such that it is in a form suitable for the students to learn.
- They have considered examples of the common conceptual errors encountered by students

Content
- Didactic analysis
- Competences and goals
- Preparation and wrap-up of lessons
- Process and structure of a typical lesson
- Teaching techniques (informative introduction to lessons, Advance Organizer, learning assignments, frontal teaching, questions, assignments, feedback)
- Assignments and short tests
- Media and language competence
- Conceptual change, misconceptions,
- Integration of the subcomponents of a lesson.

Prerequisites / notice
Voraussetzung: Erziehungswissenschaftliche Lehrveranstaltung schon absolviert oder gleichzeitig.

<td>VLSI II: Design of Very Large Scale Integration Circuits</td>
<td>W</td>
<td>7 credits</td>
<td>5G</td>
<td>H. Kaeslin, N. Felber</td>
</tr>
</tbody>
</table>

**Abstract**

This second course in our VLSI series is concerned with how to turn digital netlists into safe, testable and manufacturable mask layout, taking into account various parasitic effects (clock skew, metastability, ground bounce, IR-drop, electromigration, ESD, latchup). Economic aspects and management issues of VLSI projects are also addressed.

**Objective**

Know how to design digital VLSI circuits that are safe, testable, durable, and make economic sense.

**Content**

The second course begins with a thorough discussion of various technical aspects at the circuit and layout level before moving on to economic issues of VLSI. Topics include:

- Limitations of functional design verification, design for test.
- Synchronous clocking disciplines compared, clock skew, clock distribution, input/output timing.
- Synchronization and metastability.
- CMOS transistor-level circuits of gates, flip-flops and random access memories.
- Sinks of energy in CMOS circuits.
- Power estimation and low-power design.
- Current research in low-energy computing.
- Layout parasitics, interconnect delay, static timing analysis.
- Switching currents, ground bounce, IR-drop, power distribution.
- Floorplanning, chip assembly, packaging.
- Layout design at the mask level, physical design verification.
- Electromigration, electrostatic discharge, and latch-up.
- Models of industrial cooperation in microelectronics.
- The caveats of virtual components.
- The cost structures of ASIC development and manufacturing.
- Market requirements, decision criteria, and case studies.
- Yield models.
- Avenues to low-volume fabrication.
- Marketing aspects and case studies.
- Management of VLSI projects.

Exercises are concerned with back-end design (floorplanning, placement, routing, clock and power distribution, layout verification). Industrial CAD tools are being used.

**Prerequisites**

All written documents in English.

**Literature**

**Prerequisites / notice**

Highlight: Students are offered the opportunity to design a circuit of their own which then gets actually fabricated as a microchip! Students who elect to participate in this program register for a term project at the Integrated Systems Laboratory in parallel to attending the VLSI II course.

**Abstract**

Fundamentals in signal processing, detection/estimation, and machine learning.

I. Linear signal representation and approximation: Hilbert spaces, LMMSE estimation, regularization and sparseness.

**Objective**

The course is an introduction to some basic topics in signal processing, detection/estimation theory, and machine learning.

**Content**

**Prerequisites**

- local bachelors: course "Discrete-Time and Statistical Signal Processing" (5. Sem.)
- others: solid basics in linear algebra and probability theory

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 458 of 1434
Wireless access systems support locally constrained wireless connectivity and mobile access to a backbone network (typically the Internet). In this course the student develops a comprehensive understanding of existing and upcoming wireless access technologies (including WIFI, Bluetooth, RFID, NFC, VANET) and related Physical Layer and Medium Access Control Layer problems and opportunities.

The course consists of two tracks. The track "Technology&Systems" is structured as regular lecture. In the introduction we will discuss the challenges and potential of pervasive wireless access and study some fundamentals of short/medium range wireless communications. The main body of this track is devoted to existing and upcoming systems. A comprehensive survey of Ultrawide band (UWB) as the promising transmission technology for pervasive wireless access completes this track. In the track "Simulate&Practice" we form student teams that implement and analyze functional blocks of the physical layer of various advanced wireless access systems based on MATLAB simulations. The track includes combination tasks where different teams combine their functional blocks (e.g. transmitter, receiver) in order to simulate the complete physical layer.

1. Short range wireless communication : fundamental Physical Layer challenges and solutions
2. Wireless Local Area Network (WLAN)
3. Vehicular Networks (VANET)
4. Ultra-Wideband (UWB) technology: fundamental principles, promises and solutions
5. Wireless Body Area Networks (WBAN)
6. Wireless Personal Area Networks (Bluetooth, Zigbee)
7. Radio Frequency Identification (RFID) and Near Field Communication (NFC)

Lecture notes
Lecture Slides and handouts.

Literature
Selected Books

Prerequisites / notice
Requirements: Knowledge of fundamental principles of digital communication systems (e.g. 227-0121-00 G Kommunikationssysteme) is helpful but not mandatory. Lecture is given in English.

Recommended Subjects

These courses are recommended, but you are free to choose courses from any other special field. Please consult your tutor.

<td>Discrete Event Systems</td>
<td>W</td>
<td>6</td>
<td>4G</td>
<td>L. Thiele, L. Vanbever, R. Wattenhofer</td>
</tr>
</tbody>
</table>

Abstract
Introduction to discrete event systems. We start out by studying popular models of discrete event systems. In the second part of the course we analyze discrete event systems from an average-case and from a worst-case perspective. Topics include: Automata and Languages, Specification Models, Stochastic Discrete Event Systems, Worst-Case Event Systems, Verification, Network Calculus.

Objective
Over the past few decades the rapid evolution of computing, communication, and information technologies has brought about the proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans. The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss).

The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems, such as automata and Petri nets. In the second part of the course we analyze discrete event systems. We first examine discrete event systems from an average-case perspective: we model discrete events as stochastic processes, and then apply Markov chains and queuing theory for an understanding of the typical behavior of a system. In the last part of the course we analyze discrete event systems from a worst-case perspective using the theory of online algorithms and adversarial queuing.

Content
1. Introduction
2. Automata and Languages
3. Smarter Automata
4. Specification Models
5. Stochastic Discrete Event Systems
6. Worst-Case Event Systems
7. Network Calculus

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Content</td>
<td>As system clock frequencies continuously rise in the GHz domain, a need urgently develops to understand high-speed signal propagation in order to maintain good signal integrity in the face of phenomena such as inter-symbol interference (ISI) and cross-talk. Concepts such as Scattering parameters (or S-parameters) are key to the characterization of networks over wide bandwidths. At high frequencies, all structures effectively become “transmission lines.” Unless care is taken, it is highly probable that one ends-up with a bad transmission line that causes the designed system to malfunction. Filters will also be considered because it turns out that some of the problems associated by lossy transmission channels (lines, cables, etc) can be corrected by adequate filtering in a process called “equalization.” Transmission line equations of the lossless and lossy TEM-transmission line. Introduction of current and voltage waves. Representation of reflections in the time and frequency domain. Application of the Smith chart. Behavior of low-loss transmission lines. Attenuation and impulse distortion due to skin effect. Transmission line equivalent circuits. Group delay and signal dispersion. Coupled transmission lines. Scattering parameters. Butterworth-, Chebyshev- and Bessel filter approximations: filter synthesis from low-pass filter prototypes.</td>

<tr>
<td>Abstract</td>
<td>The path of an analog signal in the transmitter to the digital world in a communication link and back to the analog world at the receiver is discussed. The lecture covers the fundamentals of all important optical and optoelectronic components in a fiber communication system. This includes the transmitter, the fiber channel and the receiver with the electronic digital signal processing elements. An in-depth understanding on how information is transmitted from source to destination. Also the mathematical framework to describe the important elements will be passed on. Students attending the lecture will further get engaged in critical discussion on societal, economical and environmental aspects related to the on-going exponential growth in the field of communications.</td>

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 461 of 1434
This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers. The way the exam is done allows for the different interests of the two groups.

The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

At the beginning, signal-flow graphs in general and driving-point signal-flow graphs in particular are introduced. We will use them during the whole term to analyze circuits and understand how signals propagate through them. The theory and CMOS implementation of active filters is then discussed in detail using the example of Gm-C filters and active-RC filters. The ideal and nonideal behaviour of opamps, current conveyors, and inductor simulators follows. The link to the practical design of circuits and systems is done with an overview over different quality measures and figures of merit used in scientific literature and datasheets. Finally, an introduction to discrete-time and mixed-domain filters and circuits is given, including sensor read-out amplifiers, correlated double sampling, and chopping, and an introduction to sigma-delta A/D and D/A conversion on a system level.

The base for these lectures are lecture notes and two or three published scientific papers. From these papers we will together develop the technical content.

Some material is protected by password; students from ETHZ who are interested can write to haschmid@ethz.ch to ask for the password even if they do not attend the lecture.

Prerequisites:
Recommended (but not required): Stochastic models and signal processing, Communication Electronics, Analog Integrated Circuits, Transmission Lines and Filters.

Knowledge of the Laplace transform and z transform and their interpretation (transfer functions, poles and zeros, bode diagrams, stability criteria ...) and of the main properties of linear systems is necessary.

### Lecture notes

- **227-0477-00L Acoustics I**
  - **Objective:** Introduction to the fundamentals of acoustics in the area of sound field calculations, measurement of acoustical events, outdoor sound propagation and room acoustics of large and small enclosures.
  - **Abstract:** Introduction to acoustics. Understanding of basic acoustical mechanisms. Survey of the technical literature. Illustration of measurement techniques in the laboratory.
  - **Content:** Fundamentals of acoustics, measuring and analyzing of acoustical events, anatomy and properties of the ear. Outdoor sound propagation, absorption and transmission of sound, room acoustics of large and small enclosures, architectural acoustics, noise and noise control, calculation of sound fields.
  - **Prerequisites / notice:**
    - **Literature:**

- **227-0778-00L Hardware/Software Codesign**
  - **Objective:** The course provides advanced knowledge in the design of complex computer systems, in particular embedded systems. Models and methods are discussed that are fundamental for systems that consist of software and hardware components.
  - **Content:** The course covers the following subjects: (a) Models for describing hardware and software components (specification), (b) Hardware-Software Interfaces (instruction set, hardware and software components, reconfigurable computing, heterogeneous computer architectures, System-on-Chip), (c) Application specific instruction sets, code generation and retargetable compilation, (d) Performance analysis and estimation techniques, (e) System design (hardware-software partitioning and design space exploration).
  - **Prerequisites / notice:**
    - **Literature:**

- **252-0535-00L Machine Learning**
  - **Objective:** Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real world data.
  - **Content:** The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.
  - **Topics covered in the lecture include:**
    - Bayesian theory of optimal decisions
    - Maximum likelihood and Bayesian parameter inference
    - Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
    - Ensemble methods: Bagging and Boosting
    - Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
    - Non parametric density estimation: Parzen windows, nearest neighbour
    - Dimension reduction: principal component analysis (PCA) and beyond
  - **Lecture notes:**
    - **Notice:** No lecture notes, but slides will be made available on the course webpage.
The course provides advanced knowledge in the design of complex computer systems, in particular embedded systems. Models and
risk management and the vulnerability lifecycle of software and networked services are discussed. Threats like denial of service, spam,
and worms, and viruses are studied in-depth. Fundamental security related concepts like identity, availability, authentication and secure
channels are introduced. State of the art technologies like secure shell, network and transport layer security, intrusion detection and
prevention systems, cross-site scripting, secure implementation techniques and more for securing the Internet and web applications are
presented. Several case studies illustrate the dark side of the Internet and explain how to protect against such threats. A hands-on
computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection.

This lecture is intended for students with an interest in securing Internet services and networked devices. Students are assumed to have
knowledge in networking as taught in the Communication Networks lecture. This lecture and the exam are held in English.

Due to recent changes in the Swiss law, ETH requires each student of this course to sign a written declaration that he/she will not use the
information given in this for illegal purposes. This declaration will have to be signed and submitted no later than at the beginning of the second
lesson.

Abstract

The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over

Operating system related security mechanisms to application software systems, such as host based intrusion detection systems. In

Objective

In this lecture, students learn about the security requirements and capabilities that are expected from modern hardware, operating systems

and other software environments. An overview of available technologies, algorithms and standards is given, with which these requirements

can be met.

Content

The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over

operating system related security mechanisms to application software systems such as host based intrusion detection systems. The main

topics covered are: tamper resistant hardware, CPU support for security, protection mechanisms in the kernel, file system security

(permissions / ACLs / network filesystem issues), IPC Security, mechanisms in more modern OS, such as Capabilities and Zones, Libraries

and Software tools for security assurance, etc.

In the second part, the focus is on system design and methodologies for large projects. The main question answered is how to get a large

secure system. Topics include: patch management, common software faults (buffer overflows, etc.), writing secure software (design,

architecture, QA, testing), compiler-supported security, language-supported security (java...), logging and auditing (BSM audit, dtrace, ...

cryptographic support, TCG, secure file systems, dos/windows / windowsXP security issues.

Along the lectures, model cases will be elaborated and evaluated in the exercises.

Network Security

Network Security

W. Perrig

Abstract

This lecture discusses fundamental concepts and technologies in the area of network security. Several case studies illustrate the dark side

of the Internet and explain how to protect against such threats. A hands-on computer lab that accompanies the lecture gives a deep dive on

firewalls, penetration testing and intrusion detection.

Objective

Students are aware of current threats that Internet services and networked devices face and can explain appropriate countermeasures.

Students can identify and assess known vulnerabilities in a software system that is connected to the Internet.

Students know fundamental network security concepts.

Students have an in-depth understanding of important security technologies.

Content

Risk management and the vulnerability lifecycle of software and networked services are discussed. Threats like denial of service, spam,

worms, and viruses are studied in-depth. Fundamental security related concepts like identity, availability, authentication and secure

channels are introduced. State of the art technologies like secure shell, network and transport layer security, intrusion detection and

prevention systems, cross-site scripting, secure implementation techniques and more for securing the Internet and web applications

are presented. Several case studies illustrate the dark side of the Internet and explain how to protect against current threats. A hands-on

computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection.

This lecture is intended for students with an interest in securing Internet services and networked devices. Students are assumed to have

knowledge in networking as taught in the Communication Networks lecture. This lecture and the exam are held in English.

Prerequisites / notice

Knowledge in computer networking and Internet protocols (e.g. course Communication Networks (D-ITET) or Operating Systems and

Networks (D-INFK)).

Due to recent changes in the Swiss law, ETH requires each student of this course to sign a written declaration that he/she will not use the

information given in this for illegal purposes. This declaration will have to be signed and submitted no later than at the beginning of the

second lesson.

Title

Discrete-Time and Statistical Signal Processing

Control Systems

Type

W

W

Content

The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications: discrete-

time linear filters, equalization, DFT, discrete-time stochastic processes, elements of detection theory and estimation theory, LMMSE

estimation and LMMSE filtering, LMS algorithm, Viterbi algorithm.

Study of concepts and methods for the mathematical description and analysis of dynamical systems. The concept of feedback. Design of

control systems for single input - single output and multivariable systems.

Abstract

The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications. The

two main themes are "linearity" and "probability". In the first part of the course, we deepen our understanding of discrete-time linear filters. In

the second part of the course, we review the basics of probability theory and discrete-time stochastic processes. We then discuss some

basic concepts of detection theory and estimation theory, as well as some practical methods including LMMSE estimation and

LMMSE filtering, the LMS algorithm, and the Viterbi algorithm.

Discrete-time linear systems and the z-transform, Discrete time and continuous time: forth and back, Digital filters, DFT, Elements of

probability theory, Discrete-time stochastic processes, Elements of detection theory and estimation theory, Linear estimation and

filtering, Wiener filter, LMS algorithm, Viterbi algorithm.

### 227-0197-00L Wearable Systems I

**Abstract**

Context recognition in mobile communication systems like mobile phone and wearable computer will be studied using advanced methods from sensor data fusion, pattern recognition, statistics, data mining and machine learning. Context comprises the behavior of individuals and of groups, their activities as well as the local and social environment.

**Objective**

Future mobile systems will act as personal and cooperative assistant by providing the appropriate information and services. The systems consist of a smart phone which communicates with sensors on-body and in the environment. Context comprises user's behavior, his activities, his local and social environment.

In the data path from the sensor level to signal segmentation to the classification of the context, advanced methods of signal processing, pattern recognition and machine learning will be applied. Sensor data generated by crowdsourcing methods are integrated. The validation using MATLAB is followed by implementation and testing on a smart phone.

**Content**

The next generation of mobile communication systems are integrated in our clothes and act as personal and cooperative assistant providing information we need just now (see www.wearable.ethz.ch). Context recognition - what is the situation of the user, his activity, his environment, how is he doing, what are his needs - as the central functionality of mobile systems constitutes the focus of the course.

The main topics of the course include:

- Sensor nets, sensor signal processing, data fusion, time series (segmentation, similarity measures), supervised learning (Bayes Decision Theory, Decision Trees, Random Forest, kNN-Methods, Support Vector Machine, Hidden Markov Models, AdaBoost), clustering (k-means, dbscan, topic models)
- Crowdsourcing

The exercises show concrete design problems like motion and gesture recognition using distributed sensors, detection of activity patterns and identification of the local environment.

Presentations of the PhD students and the visit at the Wearable Computing Lab introduce in current research topics and international research projects.

**Lecture notes**

- Lecture notes for all lessons, assignments and solutions.
- http://www.ife.ee.ethz.ch/education/wearable_systems_1

**Literature**

- Literature will be announced during the lessons.
- No special prerequisites

---

### 227-0377-00L Physics of Failure and Failure Analysis of Electronic Devices and Equipment

**Abstract**

Failures have to be avoided by proper design, material selection and manufacturing. Properties, degradation mechanisms, and expected lifetime of materials are introduced and the basics of failure analysis and analysis equipment are presented. Failures will be demonstrated experimentally and the opportunity is offered to perform a failure analysis with advanced equipment in the laboratory.

**Objective**

Introduction to the degradation and failure mechanisms and causes of electronic components, devices and systems as well as to methods and tools of reliability testing, characterization and failure analysis.

**Content**

- Summary of reliability and failure analysis terminology; physics of failure: materials properties, physical processes and failure mechanisms; failure analysis of ICs, PCBs, opto-electronics, discrete and other components and devices; basics and properties of instruments;
- application in circuit design and reliability analysis

**Lecture notes**

- Comprehensive copy of transparencies

---

### 227-0437-00L Distributed Algorithms

**Abstract**

Models of distributed computations, time space diagrams, virtual time, logical clocks and causality, wave algorithms, parallel and distributed graph traversal, consistent snapshots, mutual exclusion, election and symmetry breaking, distributed termination detection, garbage collection in distributed systems, monitoring distributed systems, global predicates.

**Objective**

Become acquainted with algorithms and algorithms for distributed systems.

**Content**

Verteilte Algorithmen sind Verfahren, die dadurch charakterisiert sind, dass mehre autonome Prozesse gleichzeitig Teile eines gemeinsamen Problems in kooperativer Weise bearbeiten und der dabei erforderliche Informationsaustausch ausschliesslich über Nachrichten erfolgt. Derartige Algorithmen kommen im Rahmen verteilter Systeme zum Einsatz, bei denen kein gemeinsamer Speicher existiert und die Übertragungszeit von Nachrichten i.a. nicht vernachlässigt werden kann. Da dabei kein Prozess eine aktuelle konsistente Sicht des globalen Zustands besitzt, führt dies zu interessanten Problemen.

Im einzelnen werden u.a. folgende Themen behandelt:

- Modellierung von parallelen Algorithmen;
- Modellierung von Graphen;
- Modellierung von Schnapschüssen;
- Modellierung von Ausschluss;
- Modellierung von Symmetriebrechung;
- Modellierung von Garbage-Collection;
- Modellierung von verteilten Systemen;
- Modellierung von globaler Präfiguration;
- Modellierung von verteilten Algorithmen.

### 227-0447-00L Image Analysis and Computer Vision

**Abstract**

**Objective**

Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.
1. **Embedded Control Systems**

   The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

3. **Fault-tolerance (failure models, consensus, agreement), replication (primary copy, 2PC, 3PC, Paxos, quorum systems), shared memory (spin locks, concurrency)**

4. **Abstract**

5. **Objective**

6. **Content**

7. **Prerequisites**

8. **Lecture notes**

### Lecture 227-0555-00L: Fault Tolerance in Distributed Systems

- **W**
- **4 credits**
- **3G**
- **R. Wattenhofer**

#### Abstract

Fault-tolerance (failure models, consensus, agreement), replication (primary copy, 2PC, 3PC, Paxos, quorum systems), shared memory (spin locks, concurrency).

#### Objective

Become acquainted with pertinent technologies and architectures of fault-tolerant distributed systems.

#### Content

We discuss fault-tolerance issues (models, consensus, agreement) as well as replication issues (primary copy, 2PC, 3PC, Paxos, quorum systems, distributed storage) and problems with asynchronous multiprocessing (shared memory, spin locks, concurrency).

#### Prerequisites

- Lecture takes place in the second half of the semester; the lecture is the second part of the lecture "Verteilte Systeme" (Distributed Systems, 252-0213-00L). Students may attend at most one of the two lectures.

### Lecture 227-0627-00L: Applied Computer Architecture

- **W**
- **6 credits**
- **4G**
- **A. Gunzinger**

#### Abstract

This lecture gives an overview of the requirements and the architecture of parallel computer systems, performance, reliability and costs.

#### Objective

Understand the function, the design and the performance modeling of parallel computer systems.

#### Content

The lecture "Applied Computer Architecture" gives technical and corporate insights in the innovative Computer Systems/Architectures (CPU, GPU, FPGA, special processors) and their real implementations and applications. Often the designs have to deal with technical limits.

- Which computer architecture allows the control of the over 1000 magnets at the Swiss Light Source (SLS)?
- Which architecture is behind the alarm center of the Swiss Railway (SBB)?
- Which computer architectures are applied for driver assistance systems?
- Which computer architecture is hidden behind a professional digital audio mixing desk?
- How can data volumes about 30 TB/s, produced by a prostate accelerator, be processed in real time?
- Can the weather forecast also be processed with GPUs?
- How can a good computer architecture be found?
- Which are the driving factors in successful computer architecture design?

### Lecture 151-0593-00L: Embedded Control Systems

- **W**
- **4 credits**
- **6G**
- **J. S. Freudenberg. M. Schmid Daners**

#### Abstract

This course provides a comprehensive overview of embedded control systems. The concepts introduced are implemented and verified on a microprocessor-controlled haptic device.

#### Objective

Familiarize students with main architectural principles and concepts of embedded control systems.

#### Content

An embedded system is a microprocessor used as a component in another piece of technology, such as cell phones or automobiles. In this intensive two-week block course the students are presented the principles of embedded digital control systems using a haptic device as an example for a mechatronic system. A haptic interface allows for a human to interact with a computer through the sense of touch.

- Subjects covered in lectures and practical lab exercises include:
  - The application of C-programming on a microprocessor
  - Digital I/O and serial communication
  - Quadrature decoding for wheel position sensing
  - Queued analog-to-digital conversion to interface with the analog world
  - Pulse width modulation
  - Timer interrupts to create sampling time intervals
  - System dynamics and virtual worlds with haptic feedback
  - Introduction to rapid prototyping

### Lecture 252-1411-00L: Security of Wireless Networks

- **W**
- **5 credits**
- **2V+1U+1A**
- **S. Capkun**

#### Abstract

Core Elements: Wireless communication channel, Wireless network architectures and protocols, Attacks on wireless networks, Protection techniques.

#### Objective

After this course, the students should be able to: describe and classify security goals and attacks in wireless networks; describe security architectures of the following wireless systems and networks: 802.11, GSM/UMTS, RFID, ad hoc/sensor networks; reason about security protocols for wireless network; implement mechanisms to secure 802.11 networks.

227-0147-00L  VLSI II: Design of Very Large Scale Integration
Circuits  

Abstract  
This second course in our VLSI series is concerned with how to turn digital netlists into safe, testable and manufacturable mask layout, taking into account various parasitic effects (clock skew, metastability, ground bounce, IR-drop, electromigration, ESD, latchup). Economic aspects and management issues of VLSI projects are also addressed.

Objective  
The second course begins with a thorough discussion of various technical aspects at the circuit and layout level before moving on to economic issues of VLSI. Topics include:
- Limitations of functional design verification, design for test.
- Synchronous clocking disciplines compared, clock skew, clock distribution, input/output timing.
- Synchronization and metastability.
- CMOS transistor-level circuits of gates, flip-flops and random access memories.
- Sinks of energy in CMOS circuits.
- Power estimation and low-power design.
- Current research in low-energy computing.
- Layout parasitics, interconnect delay, static timing analysis.
- Switching currents, ground bounce, IR-drop, power distribution.
- Floorplanning, chip assembly, packaging.
- Layout design at the mask level, physical design verification.
- Electromigration, electrostatic discharge, and latch-up.
- Models of industrial cooperation in microelectronics.

Prerequisites  
- The caveats of virtual components.
- The cost structures of ASIC development and manufacturing.
- Market requirements, decision criteria, and case studies.
- Yield models.
- Avenues to low-volume fabrication.
- Marketing aspects and case studies.
- Management of VLSI projects.

Content  
Exercises are concerned with back-end design (floorplanning, placement, routing, clock and power distribution, layout verification). Industrial CAD tools are being used.

Lecture notes  
English lecture notes.

227-0301-00L Optical Communication Fundamentals

Abstract  

Objective  

Content  

Lecture notes  

Literature  

Prerequisites / notice  

Further details:
The path of an analog signal in the transmitter to the digital world in a communication link and back to the analog world at the receiver is discussed. The lecture covers the fundamentals of all important optical and optoelectronic components in a fiber communication system. This includes the transmitter, the fiber channel and the receiver with the electronic digital signal processing elements.

An in-depth understanding on how information is transmitted from source to destination. Also the mathematical framework to describe the important elements will be passed on. Students attending the lecture will further get engaged in critical discussion on societal, economical and environmental aspects related to the on-going exponential growth in the field of communications.

* Chapter 1: Introduction: Analog/Digital conversion, The communication channel, Shannon channel capacity, Capacity requirements.

* Chapter 4: The Receiver: Photodiodes, Receiver noise, Detector schemes (direct detection, coherent detection), Bit-error ratios and error estimations.

* Chapter 5: Digital Signal Processing Techniques: Digital signal processing in a coherent receiver, Error detection techniques, Error correction coding.

* Chapter 6: Pulse Shaping and Multiplexing Techniques: WDM/FDM, TDM, OFDM, Nyquist Multiplexing, OCDMA.

* Chapter 7: Optical Amplifiers: Semiconductor Optical Amplifiers, Erbium Doped Fiber Amplifiers, Raman Amplifiers.

Lecture notes are handed out.

Govind P. Agrawal; "Fiber-Optic Communication Systems"; Wiley, 2010

Nano-Optics is the study of optical phenomena and techniques on the nanometer scale. It is an emerging field of study motivated by the rapid advance of nanoscience and technology. It embraces topics such as plasmonics, optical antennas, optical trapping and manipulation, and high-resolution imaging and spectroscopy.

Understanding concepts of light localization and light-matter interactions on the nanoscale.

Starting with an angular spectrum representation of optical fields the role of inhomogeneous evanescent fields is discussed. Among the topics are: theory of strongly focused light, point spread functions, resolution criteria, confocal microscopy, and near-field optical microscopy. Further topics are: optical interactions between nanoparticles, atomic decay rates in inhomogeneous environments, single molecule spectroscopy, light forces and optical trapping, photonic bandgap materials, and theoretical methods in nano-optics.

The important nonlinear optical phenomena are understood and can be classified. The effects can be described mathematical by means of the susceptibilities.

Nonlinear Optics deals with the interaction of light with material, the response of material to light and the mathematical framework to describe the phenomena. As an example we will cover fundamental phenomena such as the refractive index, the electro-optic effect, second harmonic generation, four-wave mixing or soliton propagation and others.

Chapter 1: The Wave Equations in Nonlinear Optics
Chapter 2: Nonlinear Effects - An Overview
Chapter 3: The Nonlinear Optical Susceptibility
Chapter 4: Second Harmonic Generation
Chapter 5: The Electro-Optic Effect and the Electro-Optic Modulator
Chapter 6: Acousto-Optic Effect
Chapter 7: Nonlinear Effects of Third Order
Chapter 8: Nonlinear Effects in Media with Gain

Nanodynamics (or equivalent)
- Physics I+II

Electromagnetic Fields & Bachelor Lectures on Physics.

Neuromorphic Engineering I
This course covers analog circuits with emphasis on neuromorphic engineering: MOS transistors in CMOS technology, static circuits, dynamic circuits, systems (silicon neuron, silicon retina, silicon cochlea) with an introduction to multi-chip systems. The lectures are accompanied by weekly laboratory sessions.

Neuromorphic circuits are inspired by the organizing principles of biological neural circuits. Their computational primitives are based on physics of semiconductor devices. Neuromorphic architectures often rely on collective computation in parallel networks. Adaptation, learning and memory are implemented locally within the individual computational elements. Transistors are often operated in weak inversion (below threshold), where they exhibit exponential I-V characteristics and low currents. These properties lead to the feasibility of high-density, low-power implementations of functions that are computationally intensive in other paradigms. Application domains of neuromorphic circuits include silicon retinas and cochleas for machine vision and audition, real-time emulations of networks of biological neurons, and the development of autonomous robotic systems. This course covers devices in CMOS technology (MOS transistor below and above threshold, floating-gate MOS transistor, phototransducers), static circuits (differential pair, current mirror, transconductance amplifiers, etc.), dynamic circuits (linear and nonlinear filters, adaptive circuits), systems (silicon neuron, silicon retina and cochlea) and an introduction to multi-chip systems that communicate events analogous to spikes. The lectures are accompanied by weekly laboratory sessions on the characterization of neuromorphic circuits, from elementary devices to systems.

S.-C. Liu et al.: Analog VLSI Circuits and Principles; various publications.

Particular: The course is highly recommended for those who intend to take the spring semester course ‘Neuromorphic Engineering II’, that teaches the conception, simulation, and physical layout of such circuits with chip design tools.

Prerequisites: Background in basics of semiconductor physics helpful, but not required.
Abstract
From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles. Intermolecular forces, their macroscopic manifestations, and ways to control such interactions. Self-assembly and directed assembly of 2D and 3D structures.

Objective
Familiarize students with basic science and engineering principles governing the nano domain.

Content
The course addresses basic science and engineering principles ruling the nano domain. We particularly work out the links between topics that are traditionally taught separately. Special emphasis is placed on the emerging field of molecular electronic devices, their working principles, applications, and how they may be assembled. Topics are treated in 2 blocks:

(I) From Quantum to Continuum
From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

(II) Interaction Forces on the Micro and Nano Scale
Intermolecular forces, their macroscopic manifestations, and ways to control such interactions. Self-assembly and directed assembly of 2D and 3D structures.

Abstract
Information Theory, Signal Space Analysis, Baseband Transmission, Passband Transmission, Example und Channel, Data Link Layer, MAC, Example Layer 2, Layer 3, Internet

Objective
Introduction into the fundamentals of digital communication systems. Selected examples on the application of the fundamental principles in existing and upcoming communication systems

Content
Covered are the lower three layer of the OSI reference model: the physical, the data link, and the network layer. The basic terms of information theory are introduced. After this, we focus on the methods for the point to point communication, which may be addressed elegantly and coherently in the signal space. Methods for error detection and correction as well as protocols for the retransmission of perturbed data will be covered. Also the medium access for systems with shared medium will be discussed. Finally, algorithms for routing and flow control will be treated.

A. Schenk

Abstract
The course addresses the physical principles of modern semiconductor devices and the foundations of their modeling and numerical simulation. Necessary basic knowledge on quantum-mechanics, semiconductor physics and device physics is provided. Computer simulations of the most important devices and of interesting physical effects supplement the lectures.

Objective
The course aims at the understanding of the principle physics of modern semiconductor devices, of the foundations in the physical modeling of transport and its numerical simulation. During the course also basic knowledge on quantum-mechanics, semiconductor physics and device physics is provided.

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 469 of 1434
The main topics are: transport models for semiconductor devices (quantum transport, Boltzmann equation, drift-diffusion model, hydrodynamic model), physical characterization of silicon (intrinsic properties, scattering processes), mobility of cold and hot carriers, recombination (Shockley-Read-Hall statistics, Auger recombination), impact ionization, metal-semiconductor contact, metal-insulator-semiconductor structure, and heterojunctions.

The exercises are focussed on the theory and the basic understanding of the operation of special devices, as single-electron transistor, resonant tunneling diode, pn-diode, bipolar transistor, MOSFET, and laser. Numerical simulations of such devices are performed with an advanced simulation package (Sentaurus-Synopsys). This enables to understand the physical effects by means of computer experiments.

The script (in book style) is sufficient. Further reading will be recommended in the lecture.

Prerequisites: Physics I-II, Semiconductor devices (4. semester).

Lecture notes

227-0168-00L  Analog Integrated Circuits

W 6 credits  2V+2U  Q. Huang

Abstract

This course provides a foundation in analog integrated circuit design based on bipolar and CMOS technologies. Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems.

Content

The basic elements, design issues and techniques for analog integrated circuits will be taught in this course.

Review of bipolar and MOS devices and their small-signal equivalent circuit models; Building blocks in analog circuits such as current sources, active load, current mirrors, supply independent biasing etc; Amplifiers: differential amplifiers, cascode amplifier, high gain structures, output stages, gain bandwidth product of op-amps; Stability; Comparators; Second-order effects in analog circuits such as mismatch, noise and offset; A/D and D/A converters; Introduction to switched capacitor circuits.

The exercise sessions aim to reinforce the lecture material by well guided step-by-step design tasks. The circuit simulator SPECTRE is used to facilitate the tasks. There is also an experimental session on op-amp measurements.

Lecture notes

Handouts of presented slides. No script but an accompanying textbook is recommended.

227-0377-00L  Physics of Failure and Failure Analysis of Electronic Devices and Equipment

W 3 credits  2V  U. Sennhauser

Abstract

Knowledge of the Laplace transform and z transform and their interpretation (transfer functions, poles and zeros, bode diagrams, stability criteria …) and of the main properties of linear systems is necessary.

Content

Introduction to solar radiation, physics, technology, characteristics and applications of photovoltaic solar cells. We will use them during the whole term to analyze circuits and understand how signals propagate through them. The theory and CMOS implementation of active Filters is then discussed in detail using the example of gm-C filters and active-RC filters. The ideal and nonideal behaviour of opamps, current conveyors, and inductor simulators follows. The link to the practical design of circuits and systems is done with an overview over different quality measures and figures of merit used in scientific literature and datasheets. Finally, an introduction to discrete-time and mixed-domain filters and circuits is given, including sensor read-out amplifiers, correlated double sampling, and chopping, and an introduction to sigma-delta A/D and D/A conversion on a system level.

Lecture notes

Comprehensive copy of transparencies

227-0468-00L  Analog Signal Processing and Filtering

W 6 credits  2V+2U  H. Schmid

Abstract

This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers.

Objective

This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers. The way the exam is done allows for the different interests of the two groups.

Content

The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

Lecture notes

The base for these lectures are lecture notes and two or three published scientific papers. From these papers we will together develop the technical content.

Details: https://people.ee.ethz.ch/~haschmid/aswiki/

Prerequisites / notice

Some material is protected by password; students from ETHZ who are interested can write to haschmid@ethz.ch to ask for the password even if they do not attend the lecture.

Prerequisites: Recommended (but not required): Stochastic models and signal processing, Communication Electronics, Analog Integrated Circuits, Transmission Lines and Filters.

Knowledge of the Laplace transform and z transform and their interpretation (transfer functions, poles and zeros, bode diagrams, stability criteria …) and of the main properties of linear systems is necessary.

227-0617-00L  Solar Cells

W 4 credits  3G  A. N. Tiwari, S. Bücheler, Y. Romanyuk

Abstract

Physics, technology, characteristics and applications of photovoltaic solar cells.

Objective

Introduction to solar radiation, physics, technology, characteristics and applications of photovoltaic solar cells and systems.

Content

Solar radiation characteristics, physical mechanisms for the light to electrical power conversion, properties of semiconductors for solar cells, processing and properties of conventional Si and GaAs based solar cells, technology and physics of thin film solar cells based on compound semiconductors, other solar cells including organic and dye sensitized cells, problems and new developments for power generation in space, interconnection of cells and solar module design, measurement techniques, system design of photovoltaic plants, system components such as inverters and controllers, engineering procedures with software demonstration, integration in buildings and other specific examples.

Lecture notes

Lecture reprints (in english).

Prerequisites: Basic knowledge of semiconductor properties.
The students shall get acquainted with the most important concepts and techniques for characterization, numerical modeling and built-in reliability of modern power semiconductor devices. This knowledge is intended to provide the future engineer with the theoretical background and tools for the design of dependable power devices and systems.

The characterization of the electronic properties of semiconductors and related materials is fundamental to the manufacture of integrated devices. The first half of the semester focuses on the main methods of numerical optimization with a focus on stochastic methods such as genetic algorithms and compact modeling. Finally, procedures are methods presented to implement efficient built-in reliability programs targeted on power semiconductors. They include failure physics, dedicated failure analysis techniques, accelerated testing, defect screening, and lifetime modeling.

During the laboratory activities, selections of the experimental techniques presented in the lecture are demonstrated on the base of realistic examples. Furthermore, schematic power devices will be simulated by the students with advanced TCAD tools and circuit simulators.

Lecture notes: Handouts to the lecture (approx. 250 pp.)

227-0620-00L Characterization of the Electronic Properties of Materials for Semiconductor Devices

This lecture provides theoretical and experimental knowledge on the techniques for the characterization of the main electronic properties of semiconductors and thin film materials used in microelectronics, with special focus on silicon.

Objective
The characterization of the electronic properties of semiconductor and related materials is fundamental to the manufacture of integrated devices, which fulfill the required specifications. By this lecture, the students shall get acquainted with the main electrical characterization techniques of the electronic properties of semiconductors and thin film materials used in microelectronics, as well as with their physical principles. This knowledge is intended to provide the future engineer with the theoretical background and experimental tools for process control in semiconductor manufacturing, parameter extraction in device simulation, and design of dependable devices.

Content
This lecture consists of a theoretical part (80%) and of laboratory exercises and demonstrations (20%). In the first section of the lecture, methods and procedures are presented for the experimental characterization of relevant electronic parameters in the bare semiconductor (mainly silicon), like resistivity, carrier and doping density, contact resistance, and Schottky barriers. The second section deals with techniques involving basic structures and devices (contact chains, MIS capacitors, diodes, gated diodes, BJTs, MOSFETs) for the characterization of atomic transport, mechanical stress, dielectric thickness, impact ionization, channel mobility, instabilities, defect formation at interfaces and in thin film dielectrics, carrier transport and trapping in thin film dielectrics, quasi-static and dynamic device characteristics. The list of the covered methods includes among others probing, Kelvin measurements, VanderPauw technique, Hall spectroscopy, SIMS, Raman spectroscopy, spreading resistance, scanning probe techniques, static/high-speed I-V, static/high-frequency C-V, open circuit voltage decay, carrier recombination techniques, Zerbst techniques, deep level transient spectroscopy, split C-V, charge pumping, and inverse modeling techniques using TCAD. All methods are presented in conjunction with the proper test structures. During the laboratory activities, a selection of the experimental techniques discussed in the lecture are demonstrated on the base of realistic examples.

227-0627-00L Applied Computer Architecture

This lecture gives an overview of the requirements and the architecture of parallel computer systems, computer performance, and costs.

Objective
Understand the function, the design and the performance modeling of parallel computer systems.

Content
The lecture "Applied Computer Architecture" gives technical and corporate insights in the innovative Computer Systems/Architectures (CPU, GPU, FPGA, special processors) and their real implementations and applications. Often the designs have to deal with technical limits.
- Which computer architecture allows the control of the over 1000 magnets at the Swiss Light Source (SLS)?
- Which architecture is behind the alarm center of the Swiss Railway (SBB)?
- Which computer architectures are applied for driver assistance systems?
- Which computer architecture is hidden behind a professional digital audio mixing desk?
- How can data volumes about 30 TB/s. produced by a proton accelerator, be processed in real time?
- Can the weather forecast also be processed with GPUs?
- How can a good computer architecture be found?
- Which are the driving factors in successful computer architecture design?

Lecture notes: Script and exercises sheets.

Prerequisites / notice: Basics of computer architecture.

227-0659-00L Integrated Systems Seminar

In the "Fachseminar IS" the students learn to communicate topics, ideas or problems of scientific research by listening to more experienced authors and by presenting scientific work in a conference-like situation for a specific audience.

Objective
The seminar aims at instructing graduate and PhD students in the basics of presentation techniques, i.e. "how to give a professional talk". Attendees have the possibility to become acquainted with a current topic by a literature study, and to present the results thereof in a 20 minutes talk in English. The participation at the seminar gives also an overview on current problems in modern nano- and opto-electronics.

Content
- The seminar topics are simulation of nanoelectronic processes and devices, and the optical as well as electrical simulation of optoelectronic devices as lasers, photodiodes, etc.

Lecture notes: Presentation material

227-0707-00L Optimization Methods for Engineers

First half of the semester: Introduction to the main methods of numerical optimization with focus on stochastic methods such as genetic algorithms, evolutionary strategies, etc.

Second half of the semester: Each participant implements a selected optimizer and applies it on a problem of practical interest.
C. Hierold

An introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. This course provides an introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control.

Lecture notes

Prerequisites / notice

227-2037-00L

Physical Modelling and Simulation

Physical modelling plays an important role in the analysis and design of new structures, especially for micro and nano devices where fabrication and measurement are difficult. After the fundamentals of electromagnetics, mechanics, and thermodynamics, an introduction to the main concepts and most widely used codes for physical modelling is given and commercial codes are applied.

Objective

Embedded MEMS Lab

Practical course: Students are introduced to the process steps required for the fabrication of MEMS (Micro Electro Mechanical System) and carry out the fabrication and testing steps in the clean rooms by themselves. Additionally, they learn the requirements for working in clean rooms. Processing and characterization will be documented and analyzed in a final report. Limited access

Objective

Content

A document containing theory, background and practical course content is distributed at the first meeting of the course.

The course will be taught in English.

Lecture notes

Literature

The document provides sufficient information for the participants to successfully participate in the course.

Prerequisites / notice

Participating students are required to attend all scheduled lectures and meetings of the course.

Participating students are required to provide proof that they have personal accident insurance prior to the start of the laboratory portion of the course.

This master's level course is limited to 15 students per semester for safety and efficiency reasons.

If there are more than 15 students registered, we regret to restrict access to this course by the following rules:

Priority 1: master students of the master's program in “Micro and Nanosystems”

Priority 2: master students of the master's program in "Mechanical Engineering" with a specialization in Microsystems and Nanoscale Engineering (MAYT-tutors Profs Daraio, Dual, Hierold, Koumoutsakos, Nelson, Norris, Park, Poulikakos, Pratsinis, Stemmer), who attended the bachelor course "151-0621-00L Microsystems Technology" successfully.

Priority 3: master students, who attended the bachelor course "151-0621-00L Microsystems Technology" successfully.

Priority 4: all other students (PhD, bachelor, master) with a background in silicon or microsystems process technology.

If there are more than 15 students in one of these priority groups than places available, we will decide by drawing lots.

Students will be notified at the first lecture of the course (introductory lecture) as to whether they are able to participate.

The course is offered in autumn and spring semester.

151-0911-00L

Introduction to Plasmonics

This course provides fundamental knowledge of surface plasmon polaritons and discusses their applications in plasmonics.

Does not take place this semester.

Abstract
ECTS
In the course "Drive System II" the power semiconductors are repeated. The creation of converters based on the combination of
Applications of Plasmonics
- Waveguides
- Extraordinary optical transmission
- Enhanced spectroscopy
- Sensing
- Metamaterials

Content
Fundamentals of Plasmonics
- Basic electromagnetic theory
- Optical properties of metals
- Surface plasmon polaritons on surfaces
- Surface plasmon polariton propagation
- Localized surface plasmons

Lecturers
G. Scheuer, C. A. Stulz

Prerequisites / notice
No specific background in economics or management is required.

Abstract
This course focuses on the analysis of innovation as a pervasive process that cut across organizational and functional boundaries. It looks
Content
This course looks at technology and innovation management as a process. Continuously, organizations are faced with a fundamental
decision: they have to allocate resources between well-known tasks that reliably generate positive results; or explore new ways of doing
things, new technologies, products and services. The latter is a high risk choice. Its rewards can be high, but the chances of success is small.

Objective
This course intends to enable all students to:
- understand the core concepts necessary to analyze how innovation happens
- master the most common methods and tools organizations deploy to innovate
- develop the ability to critically evaluate the innovation process, and act upon the main obstacles to innovation

Handouts of the lecture

Knowledge on the worldwide liberalisation of electricity markets, pan-european power trading and the role of power exchanges. Understand the goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Abstract

The electrical power transmission system, the energy management system, requirements of the electrical power transmission (demand, shunts, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.

Objective

The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Content

The electrical power transmission system, the energy management system, requirements of the electrical power transmission (demand oriented, operationally, economically), network planning and network operation, models of N-port network components (line, cables, shunts, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.

227-0567-00L  Design of Power Electronic Systems  W  6 credits  4G  F. Krismer

Abstract

Complete design process: from given specifications to a complete power electronic system; selection / design of suitable passive power components; static and dynamic properties of power semiconductors; optimized EMI filter design; heat sink optimization; additional circuitry, e.g. gate driver; system optimization.

Objective

Basic knowledge of design and optimization of a power electronic system; furthermore, lecture and exercises thoroughly discuss key subjects of power electronics that are important with respect to a practical realization, e.g. how to select suitable power components, how to determine switching losses, calculation of high frequency losses, EMI filter design and realization, thermal considerations.

Content

Complete design process: from given specifications to a complete power electronic system. Selection and / or design of suitable passive power components: specific properties, parasitic components, tolerances, high frequency losses, thermal considerations, reliability. Static and dynamic characteristics of power semiconductors. Optimized design of the EMI filter. Thermal characterization of the converter, optimized heat sink design. Additional circuitry: gate driver, measurement, control. Converter start up: typical sequence of events, circuitry required. Overall system optimization: identifying couplings between different components of the considered power electronic system, optimization targets and issues.

Lecture notes

Lecture notes and complementary exercises including correct answers.

Prerequisites / notice

Prerequisites: Introductory course on power electronics.

227-0731-00L  Power Market I - Portfolio and Risk Management  W  6 credits  4G  D. Reichelt, G. A. Koeppel

Abstract

Portfolio and risk management in the electrical power business, Pan-European power market and trading, futures and forward contracts, hedging, options and derivatives, performance indicators for the risk management, modelling of physical assets, cross-border trading, ancillary services, balancing power market, Swiss market model, strategy development and positioning.

Objective

Content

1. Pan-European power market and trading
   1.1. Power trading
   1.2. Development of the European power markets
   1.3. Energy economics
   1.4. Spot and OTC trading
   1.5. European energy exchange EEX

2. Market model
   2.1. Market place and organisation
   2.2. Balance groups / balancing energy
   2.3. Ancillary services
   2.4. Market for ancillary services
   2.5. Cross-border trading
   2.6. Capacity auctions

3. Portfolio and Risk management
   3.1. Portfolio management 1 (introduction)
   3.2. Forward and futures contracts
   3.3. Risk management 1 (m2m, VaR, hpfc, volatility, cVaR)
   3.4. Risk management 2 (PaRa)
   3.5. Contract valuation (HPFC)
   3.6. Portfolio management 2
      2.8. Risk Management 3 (enterprise wide)

4. Energy & Finance I
   4.1. Options 1 basics
   4.2. Options 2 hedging with options
   4.3. Introduction to derivatives (swaps, cap, floor, collar)
   4.4. Financial modelling of physical assets
   4.5. Trading and hydro power
   4.6. Incentive regulation

5. Strategy
   5.1. Strategic Positioning
   5.2. Development of strategies and examples
   5.3. Cases for team work

Lecture notes

Handouts of the lecture

Prerequisites / notice

1 excursion per semester, 2 case studies, guest speakers for specific topics

Modeling, Characterization and Reliability of Power

Eiichi Ohno: "Introduction to Power Electronics"
M. P. M. Ciappa, A. Horch

The students shall get acquainted with the most important concepts and techniques for characterization, numerical modeling and built-in reliability of modern power semiconductor devices. This knowledge is intended to provide the future engineer with the theoretical background and tools for the design of dependable power devices and systems.

First half of the semester: Introduction to the main methods of numerical optimization with focus on stochastic methods such as genetic algorithms, evolutionary strategies, etc.

Second half of the semester: Each participant implements a selected optimizer and applies it on a problem of practical interest.

Practical examples will illustrate some topics, especially some control software coding using industry standard programming tools based on IEC61131-3.

During the laboratory activities, selections of the experimental techniques presented in the lecture are demonstrated on the base of realistic examples. Furthermore, schematic power devices will be simulated by the students with advanced TCAD tools and circuit simulators.

During the laboratory activities, selections of the experimental techniques presented in the lecture are demonstrated on the base of realistic examples. Furthermore, schematic power devices will be simulated by the students with advanced TCAD tools and circuit simulators.

Further reading
S. K. Ghandi: "Semiconductor Power Devices"
B. J. Baliga: "Physics Modern Power Devices"
B. Murari et al.: "Smart Power ICs"
**Objective**
Numerical optimization is of increasing importance for the development of devices and for the design of numerical methods. The students shall learn to select, improve, and combine appropriate procedures for efficiently solving practical problems.

**Content**
Typical optimization problems and their difficulties are outlined. Well-known deterministic search strategies, combinatorial minimization, and evolutionary algorithms are presented and compared. In engineering, optimization problems are often very complex. Therefore, new techniques based on the generalization and combination of known methods are discussed. To illustrate the procedure, various problems of practical interest are presented and solved with different optimization codes.

**Lecture notes**
PDF file see http://alphard.ethz.ch/hafner/Vorles/lect.htm

**Prerequisites / notice**
Lecture in the first half of the semester, exercises in form of small projects in the second half, presentation of the results in the last week of the semester.

---

### 227-0759-00L

**Title:** International Business Management for Engineers  
**Type:** W  
**ECTS:** 3  
**Hours:** 2V  
**W.: Hofbauer**

**Abstract**
Globalization of markets increases global competition and requires enterprises to continuously improve their performance to sustainably survive. Engineers substantially contribute to the success of an enterprise provided they understand and follow fundamental international market forces, economic basics and operational business management.

**Objective**
The goal of the lecture is to get a basic understanding of international market mechanisms and their consequences for a successful enterprise. Students will learn by practical examples how to analyze international markets, competition as well as customer needs and how they convert into a successful portfolio an enterprise offers to the global market. They will understand the basics of international business management, why efficient organizations and effective business processes are crucial for the successful survival of an enterprise and how all this can be implemented.

**Content**
The first part of the course provides an overview about the development of international markets, the expected challenges and the players in the market. The second part is focusing on the economic aspects of an enterprise, their importance for the long term success and how to effectively manage an international business. Based on these fundamentals the third part of the course explains how an innovative product portfolio of a company can be derived from considering the most important external factors and which consequences in respect of product innovation, competitive product pricing, organization and business processes emerge. Each part of the course includes practical examples to demonstrate the procedure.

**Lecture notes**
A script is provided for this lecture.

**Prerequisites / notice**
The lecture will be held in three blocks each of them on a Saturday. Each block will focus on one of the three main topics of the course. Between the blocks the students will work on specific case studies to deepen the subject matter. About two weeks after the third block a written examination will be conducted.

---

### 151-0563-01L

**Title:** Dynamic Programming and Optimal Control  
**Type:** W  
**ECTS:** 4  
**Hours:** 3G  
**R.: D'Andrea**

**Abstract**
Introduction to Dynamic Programming and Optimal Control.

**Objective**
Covers the fundamental concepts of Dynamic Programming & Optimal Control.

**Content**
Dynamic Programming Algorithm; Deterministic Systems and Shortest Path Problems; Infinite Horizon Problems, Bellman Equation; Deterministic Continuous-Time Optimal Control.

**Literature**

**Prerequisites / notice**
Requirements: Knowledge of advanced calculus, introductory probability theory, and matrix-vector algebra.

**Data:**  
06.04.2020 13:01  
**Autumn Semester 2015**
Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience.

The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information, such as motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems, such as automata and Petri nets. In the second part of the course we analyze discrete event systems. We first examine discrete event systems from an average-case perspective: we model discrete events as stochastic processes, and then apply Markov chains and queuing theory for an understanding of the typical behavior of a system. In the last part of the course we analyze discrete event systems from a worst-case perspective using the theory of online algorithms and adversarial queuing.

Abstract
Introduction to discrete event systems. We start out by studying popular models of discrete event systems. In the second part of the course we analyze discrete event systems from an average-case and from a worst-case perspective. Topics include: Automata and Languages, Specification Models, Stochastic Discrete Event Systems, Worst-Case Event Systems, Verification, Network Calculus.

Objective
Over the past few decades the rapid evolution of computing, communication, and information technologies has brought about the proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans. The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss). In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems, such as automata and Petri nets. In the second part of the course we analyze discrete event systems. We first examine discrete event systems from an average-case perspective: we model discrete events as stochastic processes, and then apply Markov chains and queuing theory for an understanding of the typical behavior of a system. In the last part of the course we analyze discrete event systems from a worst-case perspective using the theory of online algorithms and adversarial queuing.

227-0447-00L | Image Analysis and Computer Vision | W | 6 credits | 3V+1U | G. Székely, O. Göksel, L. Van Gool |

Abstract

Objective
The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

Content
Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.

Abstract
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Objective
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Content
The electrical power transmission system, the energy management system, requirements of the electrical power transmission (demand oriented, operationally, economically), network planning and network operation, models of N-port network components (line, cables, shunts, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.

Control systems (227-0216-00L) or equivalent.

227-0945-00L Cell and Molecular Biology for Engineers I

| Abstract | This course gives an introduction into cellular and molecular biology, specifically for students with a background in engineering. The focus will be on the basic organization of eukaryotic cells, molecular mechanisms and cellular functions. Textbook knowledge will be combined with results from recent research and technological innovations in biology. |
| Objective | After completing this course, engineering students will be able to apply their previous training in the quantitative and physical sciences to modern biology. Students will also learn the principles how biological models are established, and how these models can be tested. |
| Content  | Lectures will include the following topics: DNA, chromosomes, RNA, protein, genetics, gene expression, membrane structure and function, vesicular traffic, cellular communication, energy conversion, cytoskeleton, cell cycle, cellular growth, apoptosis, autophagy, cancer, development and stem cells. In addition, three journal clubs will be held, where one/two publications will be discussed. For each journal club, students (alone or in groups of up to three students) have to write a summary and discussion of the publication. These written documents will be graded, and count as 25% for the final grade. |

Lecture notes
Scripts of all lectures will be available.

Literature

151-0104-00L Uncertainty Quantification for Engineering & Life Sciences

| Abstract | Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploration of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology. |
| Objective | The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures. |
| Content  | Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis. |

Lecture notes
The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature
1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
2. Probability Theory: The Logic of Science by E. T. Jaynes
3. Class Notes

Prerequisites / notice
Fundamentals of Probability, Fundamentals of Computational Modeling

151-0573-00L System Modeling

| Objective | Introduction to system modeling for control. Analysis and optimization of linear and nonlinear systems. Parameter identification. Case studies. |
| Content  | Introduction to generic system modeling approaches for control-oriented models based on first principles and on experimental data. Examples: mechatronic, energy, and process engineering systems. Model parameterization, linearization, order reduction, and balancing. Planning of experiments, estimation techniques for "gray-box" models (linear and nonlinear least-squares methods). The exercises are solved in teams. One larger case study is to be solved. |

Lecture notes
The handouts in English will be sold in the first lecture.

Literature
A list of references is included in the handouts.

151-0601-00L Theory of Robotics and Mechatronics

| Abstract | The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks. |

Lecture notes. Course is supported by WWW-teaching system.
Abstract
This course provides an introduction and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. It's a requirement for the Robotics Vertiefung and for the Masters in Mechatronics and Microsystems.

Objective
Robotics is often viewed from three perspectives: perception (sensing), manipulation (affecting changes in the world), and cognition (intelligence). Robotic systems integrate aspects of all three of these areas. This course provides an introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. This course is a requirement for the Robotics Vertiefung and for the Masters in Mechatronics and Microsystems.

Content
An introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control.

Abstract
Introduction to Dynamic Programming and Optimal Control.

Objective
Covers the fundamental concepts of Dynamic Programming & Optimal Control.

Content
Dynamic Programming Algorithm; Deterministic Systems and Shortest Path Problems; Infinite Horizon Problems, Bellman Equation; Deterministic Continuous-Time Optimal Control.

Literature

Prerequisites / notice
Requirements: Knowledge of advanced calculus, introductory probability theory, and matrix-vector algebra.

Abstract
Rehab. Engineering is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective
Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.

Content
Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces
Literature

Selected Journal Articles and Web Links:

Prerequisites / notice

401-0647-00L Introduction to Mathematical Optimization W 5 credits 2V+1U R. Zenklusen
- Abstract
  Introduction to basic techniques and problems of mathematical optimization.
- Objective
  The goal is to get a good understanding of some of the most important mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems.
- Content
  Topics covered in this course include:
  - Linear programming (simplex method, duality theory, shadow prices, ...).
  - Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...).
- Literature
  Information about relevant literature will be given in the lecture.
- Prerequisites / notice
  This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture covering similar topics and more.

401-3901-00L Mathematical Optimization W 11 credits 4V+2U R. Weismantel
- Abstract
  Mathematical treatment of diverse optimization techniques.
- Objective
  Advanced optimization theory and algorithms.
  1. Linear optimization: The geometry of linear programming, the simplex method for solving linear programming problems, Farkas' Lemma and infeasibility certificates, duality theory of linear programming.
  3. Integer optimization: Ties between linear and integer optimization, total unimodularity, complexity theory, cutting plane theory.
  4. Combinatorial optimization: Network flow problems, structural results and algorithms for matroids, matchings and, more generally, independence systems.
Introduction to the degradation and failure mechanisms and causes of electronic components, devices and systems as well as to methods for modeling, simulation and analysis of biological networks.

We will start with an introduction into the basic units, functions and design principles that are relevant for biology at the level of individual cells. Making extensive use of example systems, the course will then focus on methods and algorithms that allow for the investigation of biological networks with increasing detail. These include (i) graph theoretical approaches for revealing large-scale network organization, (ii) probabilistic (Bayesian) network representations, (iii) structural network analysis based on reaction stoichiometries, (iv) qualitative methods for dynamic modeling and simulation (Boolean and piece-wise linear approaches), (v) mechanistic modeling using ordinary differential equations (ODEs) and finally (vi) stochastic simulation methods.

Virtual Reality can not only be used for the visualization of 3D objects, but also offers a wide application field for small and medium technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding.

The goal of the lecture is to provide a deeper knowledge of today's VR environments that are used in business processes. The technical background, the algorithms, and the applied methods are explained more in detail. Finally, future tasks of VR will be discussed and an outlook on ongoing international research is given.

Visualization, Simulation and Interaction - Virtual Reality II

This course offers the fundamentals in theory and practice of entrepreneurship in new technology ventures. Main topics covered are success factors in the creation of new firms, including founding, financing and growing a venture.

The handout is available in German and English.

This course provides theory-grounded knowledge and practice-driven skills for founding, financing, and growing new technology ventures. A critical understanding of dos and don'ts is provided through highlighting and discussing real life examples and cases.

The lecture provides deeper knowledge on the possible applications of virtual reality, its basic technology, and future research fields. The goal is to provide a strong knowledge on Virtual Reality for a possible future use in business processes.

Abstract

The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training. The lecture will be thought on two afternoons. Some exercises will be built into the lecture.

Objective

Knowledge on structure and content of a scientific text. The course further is arranged to stimulate a discussion on how to properly write a legible scientific text versus writing an interesting novel. We will further discuss the practice of proper citing and critically reflect on recent plagiarism allegations.

Content

* Topic 1: Structure of a Scientific Text (The Title, the author list, the abstract, State-of-the Art, the "in this paper" paragraph, the scientific part, the summary, Equations, Figures).

Abstract
This course provides a foundation in analog integrated circuit design based on bipolar and CMOS technologies.

Objective
Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems.

Content
- Review of bipolar and MOS devices and their small-signal equivalent circuit models
- Building blocks in analog circuits such as current sources, active load, current mirrors, supply independent biasing etc
- Amplifiers: differential amplifiers, cascode amplifier, high gain structures, output stages, gain bandwidth product of op-amps
- Stability
- Comparators
- Second-order effects in analog circuits such as mismatch, noise and offset
- A/D and D/A converters
- Introduction to switched capacitor circuits

Lecture notes
Handouts of slides. No script but an accompanying textbook is recommended.

Abstract
Understanding of the fundamental phenomena and principles connected with the occurrence of extensive electric field strengths. This knowledge is applied to the dimensioning of high-voltage equipment. Methods of computer-modeling in use today are presented and applied within a workshop in the framework of the exercises.

Objective
The students know the fundamental phenomena and principles connected with the occurrence of extensive electric field strengths. They comprehend the different mechanisms leading to the failure of insulation systems and are able to apply failure criteria on the dimensioning of high voltage components. They have the ability to identify of weak spots in insulation systems and to name possibilities for improvement. Further they know the different insulation systems and their dimensioning in practice.

Content
- discussion of the field equations relevant for high voltage engineering.
- analytical and numerical solutions/solving of this equations, as well as the derivation of the important equivalent circuits for the description of the fields and losses in insulations
- introduction to kinetic theory of gases
- mechanisms of the breakdown in gaseous, liquid and solid insulations, as well as insulation systems
- methods for the mathematical determination of the electric withstand of gaseous, liquid and solid insulations
- application of the expertise on high voltage components
- excursions to manufacturers of high voltage components
- exercise to learn on computer-modeling in high voltage engineering

## Additional Information

- **151-0123-00L** Experimental Methods for Engineers
  - Type: W
  - ECTS: 4
  - Hours: 2V+2U
  - Lecturers: T. Rösgen, R. S. Abhari, K. Boulouchos, D. J. Norris

---

**Data:** 06.04.2020 13:01  **Autumn Semester 2015**  **Page 486 of 1434**
### Content

**Objective**

- Introduction to various aspects of measurement techniques, with particular emphasis on thermo-fluidic applications.
- Understanding of various sensing technologies and analysis procedures.
- Exposure to typical experiments, diagnostics hardware, data acquisition and processing.
- Study of applications in the laboratory.
- Fundamentals of scientific documentation & reporting.
- In-class introduction to representative measurement techniques in the research areas of the participating institutes (fluid dynamics, energy technology, process engineering)
- Student participation in 8-10 laboratory experiments (study groups of 3-5 students, dependent on the number of course participants and available experiments)

**Lecture notes**

- Presentations, handouts and instructions are provided for each experiment.
- A final exam evaluates the acquired knowledge individually.

**Literature**

- Theory of combustion with numerical applications
- Nuclear Energy Conversion
- Fundamentals of radiative heat transfer for high-temperature applications. Examples are combustion and solar thermal/thermochemical conversion.
- Nuclear physics of fission and chain reaction. Thermodynamics of nuclear reactors. Design of the reactor core. Introduction into the dynamic behaviour of nuclear reactors. Overview on types of nuclear reactors, differences between thermal reactors and fast breeders. Construction and operation of nuclear power plants with pressurized and boiling water reactors, role and function of the most important safety systems, special features of the energy conversion. Development tendencies of reactor technology.

**Prerequisites / notice**

- Basic understanding in the following areas:
  - fluid mechanics, thermodynamics, heat and mass transfer
  - electrical engineering / electronics
  - numerical data analysis and processing (e.g. using MATLAB)

---

**151-0163-00L Nuclear Energy Conversion**

**Abstract**

The course presents an overview of measurement tasks in engineering environments. Different concepts for the acquisition and processing of typical measurement quantities are introduced. Following an initial in-class introduction, laboratory exercises from different application areas (especially in thermofluidics and process engineering) are attended by students in small groups.

**Objective**

- Introduction to various aspects of measurement techniques, with particular emphasis on thermo-fluidic applications.
- Understanding of various sensing technologies and analysis procedures.
- Exposure to typical experiments, diagnostics hardware, data acquisition and processing.
- Study of applications in the laboratory.
- Fundamentals of scientific documentation & reporting.

**Content**

- In-class introduction to representative measurement techniques in the research areas of the participating institutes (fluid dynamics, energy technology, process engineering)
- Student participation in 8-10 laboratory experiments (study groups of 3-5 students, dependent on the number of course participants and available experiments)

**Lecture notes**

- Presentations, handouts and instructions are provided for each experiment.

**Literature**

- Theory of combustion with numerical applications
- Nuclear Energy Conversion
- Fundamentals of radiative heat transfer for high-temperature applications. Examples are combustion and solar thermal/thermochemical conversion.
- Nuclear physics of fission and chain reaction. Thermodynamics of nuclear reactors. Design of the reactor core. Introduction into the dynamic behaviour of nuclear reactors. Overview on types of nuclear reactors, differences between thermal reactors and fast breeders. Construction and operation of nuclear power plants with pressurized and boiling water reactors, role and function of the most important safety systems, special features of the energy conversion. Development tendencies of reactor technology.

**Prerequisites / notice**

- Basic understanding in the following areas:
  - fluid mechanics, thermodynamics, heat and mass transfer
  - electrical engineering / electronics
  - numerical data analysis and processing (e.g. using MATLAB)

---

**151-0185-00L Radiation Heat Transfer**

**Abstract**

Advanced course in radiation heat transfer

**Objective**

- Fundamentals of radiative heat transfer for high-temperature applications. Examples are combustion and solar thermal/thermochemical processes, and other applications in the field of energy conversion and material processing.

**Content**

**Lecture notes**

- Copy of the slides presented.

**Literature**

- Theory and Modeling of Reactive Flows
- The course first reviews the governing equations and combustion chemistry, setting the ground for the analysis of homogeneous gas-phase mixtures, laminar diffusion and premixed flames. Catalytic combustion and its coupling with homogeneous combustion are dealt in detail, and turbulent combustion modeling approaches are presented. Available numerical codes will be used for modeling.

**Objective**

- Theory of combustion with numerical applications

**Content**

- Theory of combustion with numerical applications

**Lecture notes**

- Handouts
### Prerequisites / notice

#### 151-0216-00L Wind Energy

**Abstract**
The objective of this course is to introduce the students to the fundamentals, technologies, modern day application, and economics of wind energy. These subjects are introduced through a discussion of the basic principles of wind energy generation and conversion, and a detailed description of the broad range of relevant technical, economic and environmental topics.

**Objective**
The objective of this course is to introduce the students to the fundamentals, technologies, modern day application, and economics of wind energy.

**Content**
This mechanical engineering course focuses on the technical aspects of wind turbines; non-technical issues are not within the scope of this technically oriented course. On completion of this course, the student shall be able to conduct the preliminary aerodynamic and structural design of the wind turbine blades. The student shall also be more aware of the broad context of drivetrains, dynamics and control, electrical systems, and meteorology, relevant to all types of wind turbines.

#### 151-0251-00L IC-Engines and Propulsion Systems I

**Abstract**
Introduction to basic concepts, operating maps and work processes of internal combustion engines. Thermodynamic analysis and design, scavenging methods, heat transfer mechanisms, turbulent flow field in combustion chambers, turbocharging. Energy systemic role of IC engines: conventional and electrified vehicle propulsion systems and decentralized power generation.

**Objective**
The students learn the basic concepts of an internal combustion engine by means of the topics mentioned in the abstract. This knowledge is applied in several calculation exercises and two lab exercises at the engine test bench. The students get an insight in alternative power train systems.

**Lecture notes**
***in English***

**Literature**

#### 151-0293-00L Combustion and Reactive Processes in Energy and Materials Technology

**Abstract**
The students should become familiar with the fundamentals and with application examples of chemically reactive processes in energy conversion (combustion engines in particular) as well as the synthesis of new materials.

**Objective**
The students should become familiar with the fundamentals and with application examples of chemically reactive processes in energy conversion (combustion engines in particular) as well as the synthesis of new materials. The lecture is part of the focus "Energy, Flows & Processes" on the Bachelor level and is recommended as a basis for a future Master in the area of energy. It is also a facultative lecture on Master level in Energy Science and Technology and Process Engineering.

**Content**

**Lecture notes**
HANDOUTS are EXCLUSIVELY IN GERMAN ONLY, however recommendations for English text books will be provided.

**Literature**

#### 151-0567-00L Engine Systems

**Abstract**
Introduction to current and future engine systems and their control systems

**Objective**
Introduction to methods of control and optimization of dynamic systems. Application to real engines. Understand the structure and behavior of drive train systems and their quantitative descriptions.

**Content**
Physical description and mathematical models of components and subsystems (mixture formation, load control, supercharging, emissions, drive train components, etc.).

**Lecture notes**
Introduction to Modeling and Control of Internal Combustion Engine Systems

Guzzella Lino, Onder Christopher H.

ISBN: 978-3-642-10774-0

**Prerequisites / notice**
Combined homework and testbench exercise (air-to-fuel-ratio control or idle-speed control) in groups

#### 151-0569-00L Vehicle Propulsion Systems

**Abstract**
Introduction to current and future propulsion systems and the electronic control of their longitudinal behavior

**Objective**
Introduction to methods of system optimization and controller design for vehicles. Understanding the structure and working principles of conventional and new propulsion systems. Quantitative descriptions of propulsion systems.

**Content**
Understanding of physical phenomena and mathematical models of components and subsystems (manual, automatic and continuously variable transmissions, energy storage systems, electric drive trains, batteries, hybrid systems, fuel cells, road/wheel interaction, automatic braking systems, etc.).

Presentation of mathematical methods, CAE tools and case studies for the model-based design and control of propulsion systems with the goal of minimizing fuel consumption and emissions.

**Lecture notes**
Vehicle Propulsion Systems --
Introduction to Modeling and Optimization

Guzzella Lino, Scarretta Antonio

ISBN: 978-3-642-35912-5

**Prerequisites / notice**
Lectures of Dr. Ch. Onder are also possible to be held in German

#### 227-0247-00L Power Electronic Systems I

**Abstract**
Basics of the switching behavior, gate drive and snubber circuits of power semiconductors are discussed. Soft-switching and resonant DC/DC converters are analyzed in detail and high frequency loss mechanisms of magnetic components are explained. Space vector modulation of three-phase inverters is introduced and the main power components are designed for typical industry applications.

**Objective**
Detailed understanding of the principle of operation and modulation of advanced power electronics converter systems, especially of zero voltage switching and zero current switching non-isolated and isolated DC/DC converter systems and three-phase voltage DC link inverter systems. Furthermore, the course should convey knowledge on the switching frequency related losses of power semiconductors and inductive power components and introduce the concept of space vector calculus which provides a basis for the comprehensive discussion of three-phase PWM converters systems in the lecture Power Electronic Systems II.

---

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 488 of 1434
Basics of the switching behavior and gate drive circuits of power semiconductor devices and auxiliary circuits for minimizing the switching losses are explained. Furthermore, zero voltage switching, zero current switching, and resonant DC/DC converters are discussed in detail; the operating behavior of isolated full-bridge DC/DC converters is detailed for different secondary side rectifier topologies; high frequency loss mechanisms of magnetic components of converter circuits are explained and approximate calculation methods are presented; the concept of space vector calculus for analyzing three-phase systems is introduced; finally, phase-oriented and space vector modulation of three-phase inverter systems are discussed related to voltage DC link inverter systems and the design of the main power components based on analytical calculations is explained.

Lecture notes
Lecture notes and associated exercises including correct answers, simulation program for interactive self-learning including visualization/animation features.

Prerequisites / notice
Prerequisites: Introductory course on power electronics.

227-0523-00L  Railway Systems I

Abstract
Basic characteristics of railway vehicles and their interfaces with the railway infrastructure:
- Transportation tasks and vehicle types
- Running dynamics
- Mechanical part of rail vehicles
- Brakes
- Traction chain and auxiliary supply
- Railway power supply
- Signalling systems
- Traffic control and maintenance

Objective
- Overview of the technical characteristics of railway systems
- Know-how about the design and construction principles of rail vehicles
- Interrelationship between different fields of engineering sciences (mechanics, electro and information technology, transport systems)
- Understanding tasks and opportunities of engineers working in an environment which has strong economical and political boundaries
- Insight into the activities of the railway vehicle industry and railway operators in Switzerland
- Motivation of young engineers to start a career in the railway industry or with railway operators

Content
EST I (Frühjahrsemester) - Begriffen, Grundlagen, Merkmale

1 Einführung:
1.1 Geschichte und Struktur des Bahnsystems
1.2 Fahrdynamik
2 Vollbahnfahrzeuge:
2.3 Mechanik: Kasten, Drehgestelle, Lauftechnik, Adhäsion
2.2 Bremsen
2.3 Traktionsantriebssysteme
2.4 Hilfsbetriebe und Komfortanlagen
2.5 Steuerung und Regelung

3 Infrastruktur:
3.1 Fahrweg
3.2 Bahnstromversorgung
3.3 Sicherungsanlagen

4 Betrieb:
4.1 Interoperabilität, Normen und Zulassung
4.2 RAMS, LCC
4.3 Anwendungsbeflisse

Voraussichtlich ein oder zwei Gastreferate

Geplante Exkursionen:
- Betriebszentrale SBB, Zürich Flughafen
- Reparatur und Unterhalt, SBB Zürich Altstetten
- Fahrzeugfertigung, Stadler Bussnang

Abgabe der Unterlagen (gegen eine Schutzgebühr) zu Beginn des Semesters. Rechtzeitig eingeschriebene Teilnehmer können die Unterlagen auf Wunsch und gegen eine Zusatzgebühr auch in Farbe beziehen.

Lecture notes
Abgabe der Unterlagen (gegen eine Schutzgebühr) zu Beginn des Semesters. Rechtzeitig eingeschriebene Teilnehmer können die Unterlagen auf Wunsch und gegen eine Zusatzgebühr auch in Farbe beziehen.

Prerequisites / notice
Dr. Markus Meyer, Emkamatik GmbH

Voraussichtlich ein oder zwei Gastvorträge von anderen Referenten.

EST I (Herbstsemester) kann als in sich geschlossene einsemestrige Vorlesung besucht werden. EST II (Frühjahrsemester) dient der weiteren Vertiefung der Fahrzeugtechnik und der Integration in die Bahninfrastruktur.

227-0526-00L  Power System Analysis

Abstract
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Objective
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Content
The electrical power transmission system, the energy management system, requirements of the electrical power transmission (demand oriented, operationally, economically), network planning and network operation, models of N-port network components (line, cables, shutins, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.

Lecture notes
Lecture notes. Course is supported by WWW-teaching system.

227-0731-00L  Power Market I - Portfolio and Risk Management

Abstract
Portfolio and risk management in the electrical power business, Pan-European power market and trading, futures and forward contracts, hedging, options and derivatives, performance indicators for the risk management, modelling of physical assets, cross-border trading, ancillary services, balancing power market, Swiss market model, strategy development and positioning.
The goal of the lecture is to get a basic understanding of international market mechanisms and their consequences for a successful enterprise. Students know the potential and limitations of renewable energy technologies. Scenarios for the development of world primary energy consumption, energy intensity and economic development. Energy conversion chains, methods for the assessment of energy chains. Potential and technology of renewable energies: Biomass (heat, electricity, biofuels), solar energy (low temp. heat, solar thermal and photovoltaic electricity, solar chemistry). Wind and ocean energy, heat pumps, geothermal energy, energy from waste. CO2 sequestration. Scenarios for the development of world primary energy consumption are introduced. Students know the potential and limitations of renewable energies for reducing CO2 emissions, and their contribution towards a future sustainable energy system that respects climate protection goals.

Prerequisites / notice
1 excursion per semester, 2 case studies, guest speakers for specific topics

International Business Management for Engineers

Objective
The goal of the lecture is to get a basic understanding of international market mechanisms and their consequences for a successful enterprise. Students learn by practical examples how to analyze international markets, competition as well as customer needs and how to convert into a successful portfolio an enterprise offers to the global market. They will understand the basics of international business management, why efficient organizations and effective business processes are crucial for the successful survival of an enterprise and how all this can be implemented.

Content
The first part of the course provides an overview about the development of international markets, the expected challenges and the players in the market. The second part is focusing on the economic aspects of an enterprise, their importance for the long term success and how to effectively manage an international business. Based on these fundamentals the third part of the course explains how an innovative product portfolio of a company can be derived from considering the most important external factors and which consequences in respect of product innovation, competitive product pricing, organization and business processes emerge. Each part of the course includes practical examples to demonstrate the procedure.

Literature
Prerequisites / notice
Fundamentals of chemistry and physics are a prerequisite for this course.
Topics are available to carry out a Project Work (Semesterarbeit) on the contents of this course.

Abstract
This course deepens students' knowledge of environmental, economic, and social assessment methodologies and their various applications.

Objective
This course has the aim of deepening students' knowledge of the environmental, economic and social assessment methodologies and their various applications.

Content
Part I (Advanced Environmental Assessments)
- Inventory database developments, transparency, data quality, data completeness, and data exchange formats, uncertainties
- Software tools (MFA, LCA)
- Allocation (multinput processes and recycling)
- Hybrid LCA methods.
- Consequential and marginal analysis
- Impact assessment of waterborne chemical emissions, sum parameters, mixture toxicity
- Spatial differentiation in Life Cycle Assessment
- Workplace and indoor exposure in Risk and Life Cycle Assessment
- Subjectivity in environmental assessments
- Case Studies

Part II (Implementation of Environmental and other Sustainability Goals):
- Sustainability problems of the current economic system and its measuring units;
- The structure of a management system, and elements to integrate environmental management (ISO 14001) and social management (SA8000 as well as ISO 26000), especially into strategy development, planning, controlling and communication;
- Sustainability Opportunities and Innovation
- The concept of 'Continuous Improvement'
- Life Cycle Costing, Life Cycle Management
- environmental performance measurement of an organisation, including 'organisational LCA' (Ecobalance), based on practical examples of companies and new concepts
- single score env. assessment methods (Swiss ecopoints)
- stakeholder management and sustainability oriented communication
- an intro into sustainability issues of supply chain management

Students will get small exercises related to course issues.

Lecture notes
Part I: (-)
Part II: Documents will be available on Ilias
Part III Lab: (-)

Literature
Will be made available in class.

Prerequisites / notice
This course should only be elected by students of environmental engineering with the Major in ESD, Air Quality Control and Waste Management. All other students should take the individual courses in Advanced Environmental Assessment and/or Implementation of Environmental goals (with or without exercise and lab).

Basic knowledge of environmental assessment tools is a prerequisite for this class. Students who have not yet had classwork in this topic are required to read an appropriate textbook before or at the beginning of this course (e.g. Baumann&Tillman, The Hitchhiker's Guide to LCA: An Orientation in Life Cycle Assessment Methodology and Applications, Studentlitteratur, Lund, 2004).

151-0360-00L Procedures for the Analysis of Structures W 4 credits 2V+1U G. Kress

Abstract
Basic theories for structure integrity calculations are presented with focus on strength, stability, fatigue and elasto-plastic structural analysis.
Theories and models for one dimensional and planar structures are presented based on energy theorems.

Objective
Basic principles applied in structural mechanics. Introduction to the theories of planar structures. Development of an understanding of the relationship between material properties, structural theories and design criteria.

Inhalt:
1. Basic problem of continuum mechanics and energy principles: structural theories, homogenization theories; finite elements; fracture mechanics.
3. Strength of material theories and material properties: ductile behaviour, plasticity, von Mises, Tresca, principal stress criterion; brittle behaviour; viscoplastic behaviour, creep resistance.
4. Structural design: fatigue and dynamic structural analysis.

Lecture notes
yes

151-0524-00L Continuum Mechanics 1 W 4 credits 2V+1U E. Mazza

Abstract
The lectures deals with constitutive models that are relevant for design and calculation of structures. These include anisotropic linear elasticity, linear viscoelasticity, plasticity, viscoplasticity. Homogenization theories and laminate theory are presented. Theoretical models are complemented by examples of engineering applications and experiments.
The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern plant and apparatus design; materials in the process industries, mechanical design and design rules of main components.

**Objective**

Familiarize students with main architectural principles and concepts of embedded control systems.

**Abstract**

This course provides a comprehensive overview of embedded control systems. The concepts introduced are implemented and verified on a microprocessor-controlled haptic device.

**Objective**

Familiarize students with main architectural principles and concepts of embedded control systems.

**Content**

An embedded system is used as a component in another piece of technology, such as cell phones or automobiles. In this intensive two-week block course the students are presented the principles of embedded digital control systems using a haptic device as an example for a mechatronic system. A haptic interface allows for a human to interact with a computer through the sense of touch.

Subjects covered in lectures and practical lab exercises include:
- The application of C-programming on a microprocessor
- Digital I/O and serial communication
- Quadrature decoding for wheel position sensing
- Queued analog-to-digital conversion to interface with the analog world
- Pulse width modulation
- Timer interrupts to create sampling time intervals
- System dynamics and virtual worlds with haptic feedback
- Introduction to rapid prototyping

**Literature**

The handouts in English will be sold in the first lecture. A list of references is included in the handouts.

**Prerequisites / notice**

Lecture notes, lab instructions, supplemental material

This course is restricted to 33 students due to limited lab infrastructure. Interested students please contact Marianne Schmid (E-Mail: schmid@idsc.mavt.ethz.ch)

After your reservation has been confirmed please register online at www.mystudies.ethz.ch.

Detailed information can be found on the course website http://www.idsc.ethz.ch/education/lectures/embedded-control-systems.html

---

**Course:** System Modeling

**Objective**

Introduction to system modeling for control. Analysis and optimization of linear and nonlinear systems. Parameter identification. Case studies.

**Content**

Introduction to generic system modeling approaches for control-oriented models based on first principles and on experimental data. Examples: mechatronic, energy, and process engineering systems. Model scaling, linearization, order reduction, and balancing. Planning of experiments, estimation techniques for "gray-box" models (linear and nonlinear least-squares methods). The exercises are solved in teams. One larger case study is to be solved.

**Literature**

The handouts in English will be sold in the first lecture. A list of references is included in the handouts.

**Prerequisites / notice**

Lecture notes, lab instructions, supplemental material

---

**Course:** Embedded Control Systems

**Objective**

Understand the limits and the potential of corporate sustainability for sustainable development

---

**Course:** Rate-Controlled Separations in Fine Chemistry

**Objective**

The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life science processes in particular, fine chemistry and biotechnology.

**Content**

The class covers separation techniques that are central in the purification and downstream processing of chemicals and bio- pharmaceuticals. Examples from both areas illustrate the utility of the methods: 1) Liquid-liquid extraction; 2) Adsorption and chromatography; 3) Membrane processes; 4) Crystallization and precipitation.

**Literature**

Recommendations for text books will be covered in the class

**Prerequisites / notice**

Requirements: Thermal separation Processes I (151-0926-00) and Modelling and mathematical methods in process and chemical engineering (151-0940-00)

---

**Course:** Process Design and Safety

**Objective**

The goal of the lecture is to expound design characteristics of systems for process engineering applications.

**Content**

Fundamentals of plant and apparatus design; materials in the process industries, mechanical design and design rules of main components; pumps and fans; piping and armatures, safety in process industry

**Literature**

Script is available, english slides will be distributed

---

**Course:** Corporate Sustainability

**Objective**

Develop critical thinking skills that are useful for corporate sustainability (argumentation, communication, evaluative judgment)

---

**Course:** Anisotrope Elastizität, Linearelastisches und linearkviskoses Stoffverhalten, Viskoelastizität, mikro-makro Modellierung, Laminattheorie, Plastizität, Viscoelastizität, Beispiele aus der Ingenieuranwendung, Vergleich mit Experimenten.

---

**Course:** Corporate Sustainability

**Objective**

Understand the limits and the potential of corporate sustainability for sustainable development

---

Data: 06.04.2020 13:01 Autumn Semester 2015
Content
Overview of the grand sustainability challenges of Water, Energy, Mobility, and Food
Business implications of sustainable development, in particular for corporate strategy, marketing & leadership, technology & innovation, and financial markets.

Critical thinking skills for corporate sustainability

In-depth case study of concrete corporate sustainability challenge in the group project phase, such as: How to deal with environmental pressure groups? How to use the strengths of business to solve pressing sustainability problems? How to catalyze radical innovations for sustainability? How to invest money in a sustainable way?

Lecture notes
Presentation slides will be distributed prior to lectures.

Literature
Literature recommendations will be distributed during the lecture

Abstract
Relationship between economy and environment, market failure, external effects and public goods, contingent valuation, internalisation of externalities; economics of non-renewable resources, economics of renewable resources, cost-benefit analysis, sustainability, and international aspects of resource and environmental economics.

Objective
Understanding of the basic issues and methods in resource and environmental economics; ability to solve typical problems in the field using the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Topics are:
- Introduction to resource and environmental economics
- Importance of resource and environmental economics
- Main issues of resource and environmental economics
- Optimal price development: the Hotelling-rule
- Utilitarianism
- Fairness according to Rawls
- Economic growth and environment
- Externallities in the environmental sphere
- Governmental internalisation of externalities
- Private internalisation of externalities: the Coase theorem
- Free rider problem and public goods
- Types of public policy
- Efficient level of pollution
- Tax vs. permits
- Command and Control Instruments
- Empirical data on non-renewable natural resources
- Effects of exploration and Backstop-technology
- Effects of different types of markets.
- Biological growth function
- Optimal depletion of renewable resources
- Social inefficiency as result of over-use of open-access resources
- Cost-benefit analysis and the environment
- Measuring environmental benefit
- Measuring costs
- Concept of sustainability
- Technological feasibility
- Conflicts sustainability / optimality
- Indicators of sustainability
- Problem of climate change
- Cost and benefit of climate change
- Climate change as international ecological externality
- International climate policy: Kyoto protocol
- Implementation of the Kyoto protocol in Switzerland
- Economic and natural environment, welfare concepts and market failure, external effects and public goods, measuring externalities and contingent valuation, internalising external effects and environmental policy, economics of non-renewable resources, renewable resources, cost-benefit-analysis, sustainability issues, international aspects of resource and environmental problems, selected examples and case studies.

Abstract
This course encompasses the theoretical principles of chemical process simulation, as well as its practical application in process analysis and optimization. The techniques for simulating stationary and dynamic processes are presented, and illustrated with case studies. Commercial software packages are presented as a key engineering tool for solving process flowsheeting and simulation problems.

Objective
This course aims to develop the competency of chemical engineers in process flowsheeting and simulation. Specifically, students will develop the following skills:
- Deep understanding of chemical engineering fundamentals: the acquisition of new concepts and the application of previous knowledge in the area of chemical process systems and their mechanisms are crucial to intelligently simulate and evaluate processes.
- Modeling of general chemical processes and processes: students have to be able to identify the boundaries of the system to be studied and develop the set of relevant mathematical relations, which describe the process behavior.
- Mathematical reasoning and computational skills: the familiarization with mathematical algorithms and computational tools is essential to be capable of achieving rapid and reliable solutions to simulation and optimization problems. Hence, students will learn the mathematical principles necessary for process simulation and optimization, as well as the structure and application of process simulation software. Thus, they will be able develop criteria to correctly use commercial software packages and critically evaluate their results.
Overview of process simulation and flowsheeting
- Definition and fundamentals
- Classification: stationary (steady-state) versus dynamic (transient state) systems
- Fields of application
- Case studies

Process modeling
- Modeling strategies of process systems
- Mass conservation
- Species balance
- Energy conservation
- Momentum balance
- Multiphase-systems: equilibrium & non-equilibrium models
- Process system model

Process simulation
- Process specification
- Introduction to process specification
- Classification of mathematical models: AMS, DOE, DAE, PDE
- Model validation
- Software tools
- Solution methods for process flowsheeting
- Simultaneous methods
- Sequential methods
- Dynamic simulation
- Numerical solution: explicit and implicit methods
- Continuous-discrete simulation: handling of discontinuities

Commercial software for simulation: Aspen Plus
- Thermodynamic property methods
- Reaction and reactors
- Separation / columns
- Convergence & debugging

A basic understanding of material and energy balances, thermodynamic property methods and typical unit operations (e.g., reactors, flash separations, distillation/absorption columns etc.) is required.

Overview of the geological formation processes and the global distribution of mineral resources (metals, energy resources, bulk materials

Abstract
The lecture Energy and Transportation imparts profound knowledge of energy- and environment-related difficulties of the intersection of energy and transportation with focus on the motorized individual traffic. The students gain the ability to approach energy- and environment-related problems with special consideration of the demand side, and to evaluate possible solutions.

Objective
The main objectives of this lecture are:
(i) The students gain profound knowledge of energy- and environment-related difficulties of the intersection of energy and transportation, and learn strategies to cope with these difficulties.
(ii) The students are able to approach energy- and environment-related problems with special consideration of the demand side, and to evaluate possible solutions.

Content
The lecture Energy and Transportation deals with the intersection of energy and transportation with focus on the motorized individual traffic.

Main topics are:
(i) Fundamentals of energy use in the transportation sector, today's present state and future developments.
(ii) Technical potentials for the reduction of greenhouse gas (GHG) emissions and the dependence on fossil fuels: Evaluation of (a) alternative fuels, and (b) alternative propulsion systems.
(iii) The relevance of demand on efforts to reduce GHG emissions and the dependence on fossil fuels.
(iv) Strategies and measures for influencing the demand side.

► Multidisciplinary Courses
The listed courses are specially recommended. Beyond these, the students are free to choose individually from the entire course offer of ETH Zürich, ETH Lausanne and the Universities of Zürich and St. Gallen.

Abstract
The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training. The lecture will be thought on two afternoons. Some exercises will be built into the lecture.

Objective
Knowledge on structure and content of a scientific text. The course further is arranged to stimulate a discussion on how to properly write a legible scientific text versus writing an interesting novel. We will further discuss the practice of properly citing and critically reflect on recent plagiarism allegations.

Content
* Topic 1: Structure of a Scientific Text (The Title, the author list, the abstract, State-of-the Art, the "in this paper" paragraph, the scientific part, the summary, Equations, Figures).
* Topic 2: Power Point Presentations.
* Topic 3: Citation Rules and Citation Software.
* Topic 4: Guidelines for Research Integrity.

Literature
ETH "Citation Etiquette", see www.plagiate.ethz.ch.

Prerequisites / notice
Students should already have a Bachelor degree and plan to do either a semester project or a master thesis in the immediate future.

227-1671-00L | Semester Project | O | 8 credits | 20A | Professors |

Abstract
The semester project is designed to train the students in solving specific problems from the field of Energy Science & Technology. This project uses the technical and social skills acquired during the master's program. The semester project is advised by a professor and must be approved in advance by the tutor.

Objective
see above

Only students who fulfill the following criteria are allowed to begin with their master thesis:

a. successful completion of the bachelor programme;

b. fulfilling of any additional requirements necessary to gain admission to the master programme.

Registration in myStudies required!

Abstract
The master program in Energy Science and Technology culminates in a six months research project which addresses a scientific research questions on one's chosen area of specialization. The masters thesis is supervised by a program-affiliated faculty member and the topic must be approved in advance by the tutor.

Objective

### Chemistry I

**Number**: 529-2001-02L  
**Title**: Chemistry I  
**ECTS**: 4 credits  
**Hours**: 2V+2U  
**Lecturers**: W. Uhlig, J. E. E. Buschmann, S. Canonica, P. Funck, E. C. Meister, R. Verel

**Abstract**: General Chemistry I: Chemical bond and molecular structure, chemical thermodynamics, chemical equilibrium.

**Objective**: Introduction to general and inorganic chemistry. Basics of the composition and the change of the material world. Introduction to the thermodynamically controlled physico-chemical processes. Macroscopic phenomena and their explanation through atomic and molecular properties. Using the theories to solve qualitatively and quantitatively chemical and ecologically relevant problems.

**Content**:
1. Stoichiometry
2. Atoms and Elements (Quantenmechanical Model of the Atom)
3. Chemical Bonding
4. Thermodynamics
5. Chemical Kinetics
6. Chemical Equilibrium (Acids and Bases, Solubility Equilibria)

**Lecture notes**: ca. 360 Seiten mit vielen Figuren und durchgerechneten Beispielen.

**Literature**:
- Brown, LeMay, Bursten CHEMIE (deutsch)
- Housecroft and Constable, CHEMISTRY (englisch)
- Oxtoby, Gillis, Nachtrieb, MODERN CHEMISTRY (englisch)

### Mathematics I

**Number**: 401-0251-00L  
**Title**: Mathematics I  
**ECTS**: 6 credits  
**Hours**: 4V+2U  
**Lecturers**: A. Cannas da Silva

**Abstract**: This course covers mathematical concepts and techniques necessary to model, solve and discuss scientific problems - notably through ordinary differential equations.

**Objective**: Mathematics is of ever increasing importance to the Natural Sciences and Engineering. The key is the so-called mathematical modelling cycle, i.e. the translation of problems from outside of mathematics into mathematics, the study of the mathematical problems (often with the help of high level mathematical software packages) and the interpretation of the results in the original environment.

The goal of Mathematics I and II is to provide the mathematical foundations relevant for this paradigm. Differential equations are by far the most important tool for modelling and are therefore a main focus of both of these courses.

**Content**:
2. Linear Algebra and Complex Numbers: systems of linear equations, Gauss-Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, cartesian and polar forms for complex numbers, complex powers, complex roots, fundamental theorem of algebra.
3. Ordinary Differential Equations: separable ordinary differential equations (ODEs), integration by substitution, 1st and 2nd order linear ODEs, homogeneous systems of linear ODEs with constant coefficients, introduction to 2-dimensional dynamical systems.

**Literature**:
- Bretscher, O.: Linear Algebra with Applications (Pearson Prentice Hall).

**Prerequisites / notice**: Prerequisites: familiarity with the basic notions from Calculus, in particular those of function and derivative.

**Assistance**: Mondays 12-13, Tuesdays 17-19, Wednesdays 17-19, in Room HG E 41.

### General Biology I

**Number**: 551-0001-00L  
**Title**: General Biology I  
**ECTS**: 3 credits  
**Hours**: 3V  
**Lecturers**: U. Sauer, A. Widmer

**Abstract**: Basics of structure, formation and function of cells and biomacromolecules, principles of metabolism, as well as basic classical and molecular genetics and evolutionary biology. First in a series of two lectures given over two semesters for students of agricultural and food sciences, as well as of environmental sciences.

**Objective**: The understanding of some basic principles of biology: the hierarchy of the structural levels of biological organisation, with particular emphasis on the cell and its functions, as well as metabolism, inheritance and evolution.
Unterlagen, Vorlesungsfolien und relevante Literatur sind in der Lehrdokumentenablage abrufbar. Die Unterlagen für die nächste

Overview of the Earth as a system, with emphasis on plate tectonic theory and the geological rock-cycle. Provides a basic introduction to

This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed.

The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level.

The students should learn ecological concepts at these different levels in the context of concrete examples from terrestrial and aquatic ecology. Corresponding methods for studying the systems will be presented.

A further aim of the lecture is that students achieve an understanding of biodiversity, why it is threatened and how it can be managed.

- Überblick der aquatischen und terrestrischen Lebensräume mit ihren Bewohnern
- Einfuss von Umweltfaktoren (Temperatur, Strahlung, Wasser, Nährstoffe etc.) auf Organismen; Anpassung an bestimmte Umweltbedingungen
- Populationsdynamik: Ursachen, Beschreibung, Vorhersage und Regulation
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartimente, Stoff- und Energieflüsse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

Lecture notes
Unterlagen, Vorlesungsfolien und relevante Literatur sind in der Lehrdokumentenablage abrufbar. Die Unterlagen für die nächste Vorlesung stehen jeweils spätestens am Freitagmorgen zur Verfügung.

651-3001-00L Dynamic Earth I

Alternate for 701-0025-00 Erd- und Produktionssysteme

Biology III: Essentials of Ecology

O 3 credits 2V S. Güsewell, C. Vorburger

Abstract
This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed.

Objective
The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level.

Content
- Understanding basic geographical and geophysical processes
- Overview of the Earth as a system, with emphasis on plate tectonic theory and the geological rock-cycle. Provides a basic introduction to crystals and minerals and different rock-types. Lectures include processes in the Earth's interior, physics of the earth, planetology, introduction to magmatic, metamorphic and sedimentary rocks. Exercises are conducted in small groups to provide more in depth understanding of concepts and content of the lectures.

Lecture notes
werden abgegeben.

Literature

Prerequisites / notice
Exercises and short excursions in small groups (10-15 students) will be lead by student assistants. Specific topics in earth sciences will be discussed using examples and case studies. Hand samples of the major rock types will be described and interpreted. Short excursions in the region of Zurich will permit direct experience with earth science processes (e.g. earth surface processes) and recognition of earth science problems and solutions relevant for modern society (e.g. building materials, water resources). Working in small groups will allow for discussion and examination of actual earth science themes.

Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects. The following topics are covered: publishing over the internet, processing and visualizing time series, visualizing multi-dimensional data, managing data with lists and tables and with relational databases, introduction to macro programming, universal methods for algorithm design.

The students learn to
- choose and apply appropriate tools from computer science,
- process and analyze real-world data from their subject of study,
- handle the complexity of real-world data,
- know universal methods for algorithm design.

1. Simulation and Modeling
2. Visualizing multidimensional data
3. Data management with lists and tables
4. Data management with a relational database
5. Introduction to macro programming
6. Introduction to programming with Python

All materials for the lecture are available at www.evim.ethz.ch

The students spend most of their time working through electronic tutorials and discussing their results with teaching assistants.

The central aim is to provide an individual experience of the physical phenomena and the basic principles of the experiment. By conducting simple physical experiments the student will learn how to properly use physical instruments and how to evaluate the results correctly.

This laboratory course aims to provide basic knowledge of
- the setup of a physics experiment,
- the use of measurement instruments,
- various measuring techniques,
- the analysis or measurement errors,
- and the interpretation of the measured quantities.

Fehlerrechnung, 9 ausgewählte Versuche zu folgenden Themen:

Die Auswahl der Versuche kann zwischen den verschiedenen Studiengängen variieren.

Anleitungen zum Physikalischen Praktikum

The general courses in Earth Sciences are offered in the 3rd and 4th semester. Out of 40 offered credits, 35 credits have to be acquired.

To understand, qualitatively and semi-quantitatively, crystal and mineral formation, the interdependence between crystals structure, chemical composition and physical properties. This dependence is especially the case for the structural dependence of optical anisotropy and the elastic properties of the minerals as well as for the growth of crystals and their defect structures.

Qualitatives und teilweise quantitatives Verständnis für den Aufbau von Kristallen und Mineralien, für die Zusammenhänge zwischen chemischer Zusammensetzung, Kristallstruktur und physikalischen Eigenschaften, für das Wachstum von Kristallen sowie wichtiger identifikationsrelevanter makroskopischer Eigenschaften; selbständige Identifikation der rund 70 wichtigsten Mineralarten.

Symmetrien und Ordnung, Punktruppen, Translationsgruppen, Raumgruppen.
- einfache Strukturtypen, dichte Kugelpackungen, Strukturbestimmende Faktoren
- Chemisch Bindungen, Beziehungen zwischen Struktur und Eigenschaften eine Kristalls.
- Grundlagen von Thermodynamik und Computersimulationen in der Kristallographie.
- Einführung in die Mineralogie und Mineralisystematik.
- Praktikum in Mineralbestimmen aufgrund makroskopischer Eigenschaften.

651-3321-00L Interpretation of Geological Maps I

Abstract
Introduction to reading and construction of simple geologic maps.
Construction of geological cross-sections.
Introduction to Lambert projection and Schmidt net (i.e., stereoplots).

Objective
This course is mainly a hands-on-training, where students solve exercises under supervision.
To improve the ability to understand geological structures in three dimensions and visualize them.

Content
Learn how to read and interpret geological maps, as well as drawing geological cross-sections.
Learn the handling of the Schmidt net, so that students can later plot their own field data.
strike lines, symbols
true and apparent thickness of geological units
true and apparent dip
V-rule
3-Point-Problems
unconformities
faults
introduction to the Lambert projection
folds
magmatic structures

Lecture notes
Exercises and instructions are handed out and are available online in Moodle.

Literature
Semester literature can be found in the ERDW-library.

Prerequisites / notice
This course is not a prerequisite, but nevertheless extremely helpful for the Terrainkurs II.

651-3323-00L Earth and Climate History

Abstract
The goal of the course is to give the students a perception of the major aspects of planetary history and to add to their curiosity about methods which can be applied in the investigations of more specific problems and to planetary features.

Objective

Content
Frühe Geschichte der Erde, der Litho-, Atmo- und Biosphäre; Phanerozoische Platten und Terranes; Entwicklung des Lebens im Phanerozökon, Mesozoische Anoxia, Kreide-Tertiär-Grenze, Tertiäre Abkühlung, Messian-Salinitätskrise, Hominidenentwicklung, Quartäre Klimaschwankungen.

44444 Examination Block 1

Number Title Type ECTS Hours Lecturers
402-0063-00L Physics II O 5 credits 3V+1U A. Vaterlaus

Abstract
Introduction to the "way of thinking" and the methodology in Physics, with the help of demonstration experiments. The Chapters treated are Electromagnetism, Refraction and Diffraction of Waves, Elements of Quantum Mechanics with applications to Spectroscopy, Thermodynamics, Phase Transitions, Transport Phenomena. Whenever possible, examples relevant to the students' main field of study are given.

Objective
Introduction to the scientific methodology. The student should develop his/her capability to turn physical observations into mathematical models, and to solve the latter.

Content
Elektromagnetismus, Elektromagnetische Wellen, Wellenoptik, Strahlenoptik, Quantenoptik, Quantenmechanik, Thermische Eigenschaften, Transportphänomene, Wärmestrahlung

651-3341-00L Lithosphere

Prerequisite: successful completion of Dynamic Earth I and II is mandatory.
Abstract
Comprehensive understanding of role and evolution of oceanic and continental lithosphere in global plate tectonics and evolution of earth.

Objective
Understanding principles of theoretical and experimental geothermics and fundamentals of mantle and lithosphere rheologies.

Content

Lecture notes
Detailed scriptum in digital form and additional learning module (www.lead.ethz.ch) available on intranet.

Literature
see list in scriptum.

Prerequisites / notice
PPT-files of each lecture may be played back for rehearsal on www.lead.ethz.ch.

701-0023-00L Atmosphere O 3 credits 2V H. Wernli, T. Peter

Abstract
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

Objective
Understanding of basic physical and chemical processes in the atmosphere. Understanding of mechanisms of and interactions between: weather - climate, atmosphere - ocean - continents, troposphere - stratosphere. Understanding of environmentally relevant structures and processes on vastly differing scales. Basis for the modelling of complex interrelations in the atmosphere.

Content
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

Lecture notes
Written information will be supplied.

701-0401-00L Hydrosphere O 3 credits 2V P. Bayer, R. Kipfer

Abstract
Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

Objective
Understanding principles of theoretical and experimental geothermics and fundamentals of mantle and lithosphere rheologies.

Content
Topics of the course.
- Physical properties of water (i.e. density and equation of state)
- global water resources
- Exchange at boundaries
- energy (thermal & kinetic), gas exchange
- Mixing and transport processes in open waters
- vertical stratification, large scale transport
- turbulence and mixing
- mixing and exchange processes in rivers
- Groundwater and its dynamics
- ground water as part of the terrestrial water cycle
- ground water hydraulics, Darcy's law
- aquifers and their properties
- hydrochemistry and tracer
- ground water use
- Case studies
- 1. Water as resource, 2. Water and climate

Lecture notes
In addition to the suggested literature handouts are distributed.

Literature
Suggested literature.

Prerequisites / notice
The case studies and the analysis of the questions and problems are integral part of the course.

### Major in Geology

**Advisor of the major in Geology is Prof. Stefano Bernasconi**

### Major in Geology: Core Courses

From the offered core courses in autumn and spring semester, 27 credits have to be acquired.
651-3501-00L Isotope Geochemistry and Isotope Geology W+ 3 credits 2G S. BERNASCONI, D. VANCE

Abstract
The course focuses on the most important systems of radioactive and stable isotopes used in geochemistry and geology. Applications of isotope geochemistry for solving fundamental geological problems are discussed on the basis of case studies.

Objective
Development of a basic knowledge and understanding of the applications of the most important systems of stable and radiogenic isotopes.

Content
The following methods will be discussed in detail: the radioactive-radiogenic systems Rb-Sr, Sm-Nd, U-Th-Pb and K-Ar, as well as the stable isotope systems of oxygen, carbon, nitrogen, sulfur and hydrogen.

We will discuss how these methods are used in the following research fields: geochemistry of the earth, age dating, paleotemperature reconstructions, evolution of the crust and mantle reservoirs, sediment diagenesis, fluid rock interactions, hydrothermal activity, paleoceanography, biogeochemical cycles.

Lecture notes
Available

Literature
- Dickin A. P., Radiogenic Isotope Geology, (2005), Cambridge University Press

Prerequisites / notice
- Vorstellung der Dozierenden mit Fallstudie aus der persönlichen Berufspraxis (CH, RK, WL, FS)

651-3502-00L Metamorphism W+ 3 credits 3G M. W. SCHMIDT

Abstract
Understanding of the principles governing (chemical) reactions in metamorphic processes and resulting (physical) properties of metamorphic rocks s.l.. Recognition of metamorphic minerals and rocks (e.g. Gesteinsbestimmung)

Literature

Prerequisites / notice
Geochemie I: (Bachelor course)

651-3505-00L Mineral Resources W+ 3 credits 2V C. A. HEINRICH, R. KÜNDIG, W. LEU, F. SCHENKER

Abstract
Overview of the geological formation processes and the global distribution of mineral resources (metals, energy resources, bulk materials and industrial minerals), their economic importance, as well as the political and environmental aspects of responsible resource extraction and site rehabilitation.

Objective

Content
- Vorstellung der Dozierenden mit Fallstudie aus der persönlichen Berufspraxis (CH, RK, WL, FS)
- Resourcen der Welt und Bedeutung für die Schweiz (RK)
- Metallische Erzlagerstätten - Einführung (CH)
- Metallische Erzlagerstätten - Magmatische Prozesse Test 1 (CH)
- Ozeanische Hydrothermalsysteme, Oberflächenenergie und Atmosphärenentwicklung (CH)
- Metallische Erzlagerstätten - Magmatisch-hydrothermale Systeme Test 2 (CH)
- Energieerohstoffe - Einführung; Bildungsprozesse Petroleum und Erdgas (WL)
- Energieerohstoffe - Oel und Gas (WL)
- Energieerohstoffe - Kohle und CO2-Entsorgung Test 3 (WL/RK)
- Nichtmetallische Rohstoffe - Baustoffe (RK)
- Nichtmetallische Rohstoffe - Erden (RK/FS)
- Nichtmetallische Rohstoffe - Industriemineralien Test 4 (FS)
- Industriemineralien und nachhaltige Nutzung von Rohstoffen der Erde (FS)

Lecture notes
Kursnotizen werden in den Stunden verteilt

Literature

Prerequisites / notice

651-3521-00L Tectonics W+ 3 credits 2V J.P. BURG, E. KISLING

Abstract
Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wrenching tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales. Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alp-Himalaya orogenic system.

Objective
Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wrenching tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales.

Assessment of mechanisms responsible for plate movements (the Earth as a heat transfer machine, dynamics of earth mantle, plate driving forces) and subsequent large-scale structures (oceanic basins and cycle of the oceanic lithosphere, convergence and mountain systems and continental growth, etc) through theoretical and experimental information.

Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alp-Himalaya orogenic system.

Content

Lecture notes
Detailed scriptum in digital form and additional learning moduls (www.lead.ethz.ch) available on the intranet.
This course provides the basics of quaternary geology and an overview of the aspects of the hydrogeology of quaternary sediments and karst within Switzerland.

Introduction to Engineering Geology

This introductory course starts from a description of the behavior and phenomena of soils and rocks under near surface loading conditions and their geotechnical properties. Lab and field methods for the characterization of soils, rocks and rock masses are introduced. Finally practical aspects of ground engineering, including tunneling and landslide hazards are presented.

Understanding the basic geotechnical and geomechanical properties and processes of rocks and soils. Understanding the interaction of rock and soil masses with technical systems. Understanding the fundamentals of geological hazards.

Introduction to generation of climatological maps. Analysis of synoptic scale patterns of air pressure and temperature advection on the surface and one upper air level. (Hydrostatic) Conclusions about vertical stratification of the atmosphere. Elementary prognostic interpretation. Inclusion of special actually weather phenomenon.

This course provides the basics of quaternary geology and an overview of the aspects of the hydrogeology of quaternary sediments and karst within Switzerland.

Erforschungs geschichte und Gliederung des Quartärs, Klimaentwicklung.

Understanding the interaction of the quaternary aquifers and apply fundamental hydrogeological techniques.

Prerequisites / notice

Voraussetzung erfolgreicher Abschluss von 701-0401-00 Hydrophäre

Prerequisites:

- Familiarize with the concepts for characterization of fractured and karst aquifers
- Understand the types of landscape and the forming quaternary sediments.
- Get insight into the role of the quaternary aquifers and apply fundamental hydrogeological techniques.
- Learn about the risk exposure of aquifers and ways to protect them.
- Familiarize with the concepts for characterization of fractured and karst aquifers

Literature

Earth Science Mapping Exercises II

Exercises and instructions are handed out.

Requirement: Earth science mapping exercises I

Data: 06.04.2020 13:01
Autumn Semester 2015
Page 503 of 1434
Overview and understanding of the most important geophysical methods. Proposed solutions to assess and observe problems relevant to exploration and environmental geophysics in soil, ice and lithosphere at different scales. Getting familiar with measuring- and interpretation procedures. Pointing out the possibilities and limitations of geophysical methods.

Available through eDoZ/ILIAS.

**** Major in Geology: Compulsory Laboratory Courses

These practical courses are mandatory for the BSc-specializations "geology" and "geophysics"

**** Major in Geology: Electives

From the offered elective courses in autumn and spring semester 8 credits must be acquired. Primarily courses from the core courses of BSc Earth Sciences have to be selected. Other elective courses from the ETH and University of Zurich are possible, however they must be granted by an advisor of geology (Professor W. Winkler). Courses of the paleontology of the University of Zurich (further offer under www.palinst.uzh.ch).

651-3597-00L Seminar I for Bachelorstudents

W+ 2 credits 2S W. Schatz, J. D. Rickli

In this seminar, students learn to search effectively for scientific knowledge and how to present scientific results orally and in written form to different audiences.

Students are able to held scientific presentations.

Students can plan and present a scientific poster.

Students can search scientific publications in an effective and efficient manner.

Auftreten vor Publikum
(Gestik, Haltung, Sprechen und Sprache, Hemmungen abbauen)
Medieneinsatz
(Powerpoint Standard für wissenschaftliche Präsentationen, Stärken und Gefahren von Präsentationen mit Powerpoint; Einsatz von Text, Graphiken, Ton, Video, Animationen etc.)
Beantwortung von Fragen: das Nach-Dem-Vortrag, Umgang mit Fragen, Verhalten in kritischen Situationen
Tipps zum Zeitmanagement
Kriterien für Bewertung von Vorträgen anwenden können und konstruktives Feedback geben können
(Was ist gut? Warum? Was ist nicht so gut? Warum nicht und wie wäre es besser?)
Strukturieren, Reduzieren, Fokussieren, Präzisieren. Gliederung und Aufbau eines Posters
Technische Anforderungen (Software, Drucken …)
Posterpräsentation
Effizientes Suchen nach wissenschaftlichen Publikationen (Bibliotheken, Datenbanken, search tools…)
Analyse von wissenschaftlichen Artikeln (Aufbau, Struktur, Beurteilung der Qualität…)

651-3501-00L Isotope Geochemistry and Isotope Geology

W 3 credits 2G S. Bernasconi, D. Vance

The course focuses on the most important systems of radioactive and stable isotopes used in geochemistry and geology. Applications of isotope geochemistry for solving fundamental geological problems are discussed on the basis of case studies.

Development of a basic knowledge and understanding of the applications of the most important systems of stable and radiogenic isotopes.

The following methods will be discussed in detail: the radioactive-radiogenic systems Rb-Sr, Sm-Nd, U-Th-Pb and K-Ar, as well as the stable isotope systems of oxygen, carbon, nitrogen, sulfur and hydrogen.

We will discuss how these methods are used in the following research fields: geochemistry of the earth, age dating, palaeotemperature reconstructions, evolution of the crust and mantle reservoirs, sediment diagenesis, fluid rock interactions, hydrothermal activity, paleoceanography, biogeochemical cycles.

Lecture notes

Prerequisites:

- Geochemie I: (Bachelor course)

651-3503-00L Metamorphism

W 3 credits 3G M. W. Schmidt

Understanding the principles governing (chemical) reactions in metamorphic processes and resulting (physical) properties of metamorphic rocks s.l.. Recognition of metamorphic minerals and rocks (e.g. Gesteinsbestimmung)

- Become familiar with the processes that formed the landscapes during the last 2 Mio. years.
- Understand the types of landscape and the forming quaternary sediments.
- Get insight into the role of the quaternary aquifers and apply fundamental hydrogeological techniques.
- Learn about the risk exposure of aquifers and ways to protect
- Familiarize with the concepts for characterization of fractured and karst aquifers

651-3523-00L Hydrogeology and Quaternary Geology

W 3 credits 2G M. Klepikova, P. Haldimann

This course provides the basics of quaternary geology and an overview of the aspects of the hydrogeology of quaternary sediments and karst within Switzerland.

- Become familiar with the processes that formed the landscapes during the last 2 Mio. years.
- Understand the types of landscape and the forming quaternary sediments.
- Get insight into the role of the quaternary aquifers and apply fundamental hydrogeological techniques.
- Learn about the risk exposure of aquifers and ways to protect
- Familiarize with the concepts for characterization of fractured and karst aquifers
Content

Lecture notes
Während der Vorlesung werden die wichtigsten Daten und Fakten auf Blättern abgegeben und im Internet zum Download bereitgestellt.

Literature
Scandinavian University Press, Oslo.

Prerequisites / notice
Voraussetzung erfolgreicher Abschluss von 701-0401-00 Hydrospäre

Primary core courses of the BSc Earth Sciences majors should be chosen.

651-3561-00L  Cryosphere  W  3 credits  2V  M. Funk, M. Huss, K. Steffen

Abstract
This course introduces the different parts of the cryosphere - snow, glaciers, sea ice, permafrost - and their role in the climate system. A significant physical aspect is the focus in each part. Those completing the course are able to describe the dynamics of cryosphere components both formally and using examples.

Objective
Students are able:
- to qualitatively describe the main components of the cryosphere and their role in the climate system
- to formally describe the relevant physical processes which determine the state of cryosphere components

Content
- Introduction into the different components of the Cryosphere: Snow, glaciers, sea ice and permafrost, and their roles in the climate system.
- Each part is use to emphasized on one specific physical aspect: material qualities of ice, mass balance and dynamics of glaciers and energy balance of sea ice.

Lecture notes
handouts will be distributed during the teaching semester

651-3527-00L  Earth Science Mapping Exercises II  W  2 credits  2P  J.P. Burg

Abstract
Reading and interpretation of geological and climatological maps.

Objective
Reading and interpretation of geological and climatological maps.

Content
Advanced analysis of geological maps and construction of geological sections. Special points: normal faults of the Rheintal graben, Bull Lake West (USA), Val de Ruz, Helvetic nappes of the Säntis area. Reconstruction of the geological history of the map areas. References to the Geology of Switzerland.

Introduction to generation of climatological maps. Analysis of synoptic scale patterns of air pressure and temperature advection on the surface and one upper air level. (Hydrostatic) Conclusions about vertical stratification of the atmosphere. Elementary prognostic interpretation. Inclusion of special actually weather phenomenon.

Lecture notes
Exercises and instructions are handed out.

Prerequisites / notice
Requirement: Earth science mapping exercises I

651-3525-00L  Introduction to Engineering Geology  W  3 credits  3G  S. Löw

Abstract
This introductory course starts from a descriptions of the behavior and phenomena of soils and rocks under near surface loading conditions and their key geotechnical properties. Lab and field methods for the characterization of soils, rocks and rock masses are introduced. Finally practical aspects of ground engineering, including tunneling and landslide hazards are presented.

Objective
Understanding the basic geotechnical and geomechanical properties and processes of rocks and soils. Understanding the interaction of rock and soil masses with technical systems. Understanding the fundamentals of geological hazards.

🔔 Major in Geophysics
Advisor of the major geophysics is Prof. Taras Gerya.

🔔 Major in Geophysics: Core Courses
From the offered core courses in autumn and spring semester, 27 credits have to be acquired.

Number  Title  Type  ECTS  Hours  Lecturers
651-3541-00L  Exploration and Environmental Geophysics  W+  4 credits  3V  F. Broggini, J. Doetsch
### Abstract
Overview and understanding of the most important geophysical methods: Potential field methods (Gravimetrics and Magnetics), Electrical and electromagnetic methods, Refraction and reflection seismics, Georadar. Discussion of survey design, sources and receivers and data processing.

### Objective
Overview and understanding of the most important geophysical methods. Proposed solutions to assess and observe problems relevant to exploration and environmental geophysics in soil, ice and lithosphere at different scales. Getting familiar with measuring- and interpretation procedures. Pointing out the possibilities and limitations of geophysical methods.

### Content

### Lecture notes
Available through eDoz/ILIAS.

### Major in Geophysics: Compulsory Laboratory Courses
This practical course is compulsory for the BSc-specialization "geophysics".

### Major in Climate and Water: Electives
Advisor of the BSc-major "Climate and Water" is Dr. Erich Fischer, Institute for climate and atmosphere (IAC).

### Major in Climate and Water: Core Courses
14 credits have to be acquired of the offered core courses from autumn and spring semester.

**Lecture notes**
handouts will be distributed during the teaching semester
Abstract
The lecture provides an introduction to atmospheric chemistry at bachelor level. It introduces the kinetics of gas phase and heterogeneous reactions on aerosols and in clouds and explains the chemical and physical mechanisms responsible for global (e.g. stratospheric ozone depletion) as well as regional (e.g. urban air pollution) environmental problems.

Objective
The students will understand the basics of gas phase and heterogeneous reactions and will know the most relevant atmospheric chemical processes taking place in the gas phase as well as between different phases including aerosols and clouds.
The students will also acquire a good understanding of atmospheric environmental problems including air pollution, stratospheric ozone destruction and changes in the oxidative capacity of the global atmosphere.

Content
- Origin and properties of the atmosphere: structure, large scale dynamics, UV radiation
- Thermodynamics and kinetics of gas phase reactions: enthalpy and free energy of reactions, rate laws, mechanisms of bimolecular and termolecular reactions.
- Tropospheric photochemistry: Photolysis reactions, photochemical O3 formation, role and budget of H0X, dry and wet deposition
- Aerosols and clouds: chemical properties, primary and secondary aerosol sources
- Multiphase chemistry: heterogeneous kinetics, solubility and hygroscopicity, N2O5 chemistry, SO2 oxidation, secondary organic aerosols
- Air quality: role of planetary boundary layer, summer versus winter-smog, environmental problems, legislation, long-term trends
- Stratospheric chemistry: Chapman cycle, Brewer-Dobson circulation, catalytic ozone destruction cycles, polar ozone hole, Montreal protocol
- Global aspects: global budgets of ozone, methane, CO and NOx, air quality - climate interactions

Lecture notes
Vorlesungsmaterialien (Folien) werden laufend während des Semesters jeweils min. 2 Tage vor der Vorlesung zur Verfügung gestellt.

Prerequisites / notice
Attendance of the lecture "Atmosphäre" LV 701-0023-00L or equivalent is a pre-requisite.

701-0475-00L Atmospheric Physics W+ 3 credits 2G U. Lohmann, A. A. Mansah

Abstract
This course covers the basics of atmospheric physics, which consist of: cloud and precipitation formation, thermodynamics, aerosol physics, radiation as well as the impact of aerosols and clouds on climate and artificial weather modification.

Objective
Students are able
- to explain the mechanisms of cloud and precipitation formation using knowledge of humidity processes and thermodynamics.
- to evaluate the significance of clouds and aerosol particles for climate and artificial weather modification.

Content
Moist processes/thermodynamics; aerosol physics; cloud formation; precipitation processes, storms; importance of aerosols and clouds for climate and weather modification, clouds and precipitation

Lecture notes
Powerpoint slides and script will be made available

Literature
Rogers and Yau, A Short Course in Cloud Physics, Pergamon Press, 1989;
Wallace and Hobbs, Atmospheric Science: An Introductory Survey, Elsevier, 2006

Prerequisites / notice
50% of the time we use the concept of "flipped classroom" (en.wikipedia.org/wiki/Flipped_classroom), which we introduce at the beginning.

We offer a lab tour, in which we demonstrate with some instruments how some of the processes, that are discussed in the lectures, are measured.

There is an additional tutorial right after each lecture to give you the chance to ask further questions and discuss the exercises. The participation is recommended but voluntary.

701-0461-00L Numerical Methods in Environmental Sciences W+ 3 credits 2G C. Schär, O. Fuhrer

Abstract
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Objective
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Content
Classification of numerical problems, introduction to finite-difference methods, time integration schemes, non-linearity, conservative numerical techniques, an overview of spectral and finite-element methods. Examples and exercises from a diverse cross-section of Environmental Science.

Three obligatory exercises, each two hours in length, are incorporated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

Lecture notes
Is provided (CHF 10.- per copy).

Literature
List of literature is provided.

Prerequisites / notice
Die Vorlesung verlangt Vorkenntnisse in Linearer Algebra, Analysis und Physik (z.B. komplexe Zahlen, Beschreibung von ebenen Wellen, einfache gewöhnliche Differentialgleichungen)

701-0473-00L Weather Systems W+ 3 credits 2G M. A. Sprenger, C. Grams

Abstract
This lecture introduces the theoretical principles and the observational and analytical methods of atmospheric dynamics. Based on these principles, the following aspects are discussed: the energetics of the global circulation, the basic synoptic- and meso-scale flow phenomena, in particular the dynamics of extratropical cyclones, and the influence of mountains on the atmospheric flow.

Objective
The students are able to
- explain up-to-date meteorological observation techniques and the basic methods of theoretical atmospheric dynamics
- to discuss the mathematical basis of atmospheric dynamics, based on selected atmospheric flow phenomena
- to explain the basic dynamics of the global circulation and of synoptic- and meso-scale flow features
- to explain how mountains influence the atmospheric flow on different scales

Content
Satellite observations; analysis of vertical soundings; geostrophic and thermal wind; cyclones at mid-latitude; global circulation; north-atlantic oscillation; atmospheric blocking situations; Eulerian and Lagrangian perspective; potential vorticity; Alpine dynamics (storms, orographic wind); planetary boundary layer

Major in Climate and Water: Electives
In addition to the mandatory seminar for Bachelor Students: Atmosphere and Climate (course nr. 701-0459-00 in autumn semester) another 22 credits must be acquired from the offered elective courses during the 5th and 6th semester. The choice of other courses has to be granted by the advisor (Dr. Erich Fischer).

Number Title Type ECTS Hours Lecturers
701-0459-00L Seminar for Bachelor Students: Atmosphere and Climate O 2 credits 2S R. Knutti, E. M. Fischer, O. Stebler

Abstract
In this seminar all students in the realm of atmospheric and climate science convene to train presentation techniques (talks, posters) by means of classic and modern scientific articles.
In this seminar all students in the realm of atmospheric and climate science convene to train presentation techniques (talks, posters) by means of classic and modern scientific articles.

The students gain general knowledge of the factors resulting in air pollution and the techniques used for air pollution control. The students can identify major air pollution sources and understand the methods for measurement, data collection and analysis. The students can evaluate possible control methods and equipment, design a control system and estimate the efficiency and cost.

The students know the different techniques of air pollution control and their scientific basements. They are able to incorporate goals concerning the air quality into their engineering work.

Fluxes of pollutants and their environmental impact
- physical and chemical processes leading to emission of pollutants
  - mass and energy of processes
- Emission measurement techniques and concepts
- quantification of emissions from individual and aggregated sources
- extent and development of the emissions (Switzerland and global)
- propagation and transport of pollutants (transmission)
- meteorological parameters influencing air pollution dispersion
- deterministic and stochastic models, describing the air pollution dispersion
- dispersion models (Gaussian model, box model, receptor model)
- measurement concepts for ambient air (immission level)
- extent and development of ambient air mixing ratios
- goal and instrument of air pollution control

Part 2 Air Pollution Control Technologies
- The reduction of the formation of pollutants is done by modifying the processes (pro-cess-integrated measures) and by different engineering operations for the cleaning of waste gas (downstream pollution control). It will be demonstrated, that the variety of these procedures can be traced back on the application of a few basic principles of physical chemistry.
  - Procedures for the removal of particles (inertial separator, filtration, electrostatic precipitators, scrubbers) with their different mechanisms (field forces, impaction and diffusion processes) and the modelling of these mechanisms.
  - Procedures for the removal of gaseous pollutants and the description of the driving forces involved, as well as the equilibrium and the kinetics of the relevant processes (absorption, adsorption as well as thermal, catalytic and biological conversions).
  - Discussion of the technical possibilities to solve the actual air pollution problems.

The courses, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-6215-00L "Using R for Data Analysis and Graphics (Part I)" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

**Objective**
- This course can only be offered to a limited number of students, however, in any case for everybody having to attend it compulsory. We beg you to sign in to this course early.

**Content**
- 1 week: course organisation and presentation of the institute
- 2nd and 3rd week: introduction to oral presentation technique
- 4th week: introduction to poster presentation technique
- 11th week: poster design
- 14th week: concluding poster presentation

**Literature**
Documents are offered via the course's web page.

### Course Units

#### 401-0649-00L Applied Statistical Regression

**Abstract**
This course provides a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning "good practice" that can be applied in every student's own projects and daily work life.

**Objective**
- The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.
- The course starts with the basics of linear regression modeling, and then proceeds to parameter estimation, tests and confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, categorical input variables, shrinkage and general modeling strategies.

**Content**
- The third last of the course is dedicated to an introduction into generalized linear regression models: this includes logistic regression for binary response variables, Poisson regression for count data, cumulative logit models for ordered, and multinomial regression for categorical response variables.

**Lecture notes**
A script will be available.

**Literature**
- Draper & Smith (1998): Applied Regression Analysis
- Fox (2008): Applied Regression Analysis and GLMs
- Faraway (2005): Linear Models with R
- Montgomery et al. (2006): Introduction to Linear Regression Analysis

**Prerequisites / notice**
The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

---

### Course Units

#### 401-6215-00L Using R for Data Analysis and Graphics (Part I)

**Abstract**
The course provides the first part an introduction to the statistical software R for scientists. Topics covered are data generation and selection, graphical and basic statistical functions, creating simple functions, basic types of objects.

**Objective**
- The students will be able to use the software R for simple data analysis.
The course provides the first part of an introduction to the statistical software R for scientists. R is free software that contains a huge collection of functions with focus on statistics and graphics. If one wants to use R one has to learn the programming language R - on very rudimentary level. The course aims to facilitate this by providing a basic introduction to R.

Part I of the course covers the following topics:
- What is R?
- R Basics: reading and writing data from/to files, creating vectors & matrices, selecting elements of dataframes, vectors and matrices, arithmetics;
- Types of data: numeric, character, logical and categorical data, missing values;
- Simple (statistical) functions: summary, mean, var, etc., simple statistical tests;
- Writing simple functions;
- Introduction to graphics: scatter-, boxplots and other high-level plotting functions, embellishing plots by title, axis labels, etc., adding elements (lines, points) to existing plots.

The course focuses on practical work at the computer. We will make use of the graphical user interface RStudio: www.rstudio.org

Note: Part I of UsingR is complemented and extended by Part II, which is offered during the second part of the semester and which can be taken independently from Part I.

Lecture notes
An Introduction to R. http://stat.ethz.ch/CRAN/doc/contrib/Lam-IntroductionToR_LHL.pdf

Prerequisites / notice
The course resources will be provided via the Moodle web learning platform
Please login (with your ETH (or other University) username+password) at https://moodle-app21.etihz.ch/enrol/users.php?id=1145

Choose the course "Using R for Data Analysis and Graphics" and follow the instructions for registration.

701-0535-00L Environmental Soil Physics/Vadose Zone Hydrology W 3 credits 2G+2U D. Or

Abstract
The course provides theoretical and practical foundations for understanding and characterizing physical and transport properties of soils/near-surface earth materials, and quantifying hydrological processes and fluxes of mass and energy at multiple scales. Emphasis is given to land-atmosphere interactions, the role of plants on hydrological cycles, and biophysical processes in soils.

Objective
Students are able to
- characterize quantitative knowledge needed to measure and parameterize structural, flow and transport properties of partially-saturated porous media;
- quantify driving forces and resulting fluxes of water, solute, and heat in soils.
- apply modern measurement methods and analytical tools for hydrological data collection
- conduct and interpret a limited number of experimental studies
- explain links between physical processes in the vadose-zone and major societal and environmental challenges.

Content
Weeks 1 to 3: Physical Properties of Soils and Other Porous Media Units and dimensions, definitions and basic mass-volume relationships between the solid, liquid and gaseous phases; soil texture; particle size distributions; surface area; soil structure. Soil colloids and clay behavior

Soil Water Content and its Measurement - Definitions; measurement methods - gravimetric, neutron scattering, gamma attenuation; and time domain reflectometry; soil water storage and water balance.

Weeks 4 to 5: Soil Water Retention and Potential (Hydrostatics) - The energy state of soil water; total water potential and its components; properties of water (molecular, surface tension, and capillary rise); modern aspects of capillarity in porous media; units and calculations and measurement of equilibrium soil water potential components; soil water characteristic curves definitions and measurements; parametric models; hysteresis. Modern aspects of capillarity

Demo-Lab: Laboratory methods for determination of soil water characteristic curve (SWC), sensor pairing

Lab #1: Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.

Part 2 - Unsaturated steady state flow; unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximate solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties.
Midterm exam

Lab #2: Measurement of vertical infiltration into dry soil column - Green-Ampt, and Philip's approximations; infiltration rates and wetting front propagation.

Part 3 - Use of Hydrus model for simulation of unsaturated flow

Week 10 to 11: Energy Balance and Land Atmosphere Interactions - Radiation and energy balance; evapotranspiration definitions and estimation; transpiration, plant development and transpiration coefficients small and large scale influences on hydrological cycle; surface evaporation.

Week 12 to 13: Solute Transport in Soils Transport mechanisms of solutes in porous media; breakthrough curves; convection-dispersion eq.; solutions for pulse and step solute application; parameter estimation; salt balance.

Lab #3: Miscible displacement and breakthrough curves for a conservative tracer through a column; data analysis and transport parameter estimation.

Additional topics:
Temperature and Heat Flow in Porous Media - Soil thermal properties; steady state heat flow; nonsteady heat flow; estimation of thermal properties; engineering applications.

Lecture notes
Biological Processes in the Vadose Zone An overview of below-ground biological activity (plant roots, microbial, etc.); interplay between physical and biological processes. Focus on soil-atmosphere gaseous exchange; and challenges for bio- and phytoremediation.
Classnotes on website: Vadose Zone Hydrology, by Or D., J.M. Wraith, and M. Tuller (available at the beginning of the semester)
http://www.step.ethz.ch/education/active-courses/vadose-zone-hydrology

701-0479-00L Environmental Fluid Dynamics W 3 credits 2G H. Wernli, M. Croci-Maspoli

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 511 of 1434
Abstract
This course covers the basic physical concepts and mathematical equations used to describe environmental fluid systems on the rotating Earth. Fundamental concepts (e.g. vorticity dynamics and waves) are formally introduced, applied quantitatively and illustrated using examples. Exercises help to deepen knowledge of the material.

Objective
Students are able
- to name the bases, concepts and methods of environmental fluid dynamics.
- to understand and discuss the components of the basic physical equations in fluid dynamics
- to apply basic mathematical equations to simple problems of environmental fluid dynamics

Content
Basic physical terminology and mathematical laws:
Continuum hypothesis, forces, constitutive laws, state equations and basic principles of thermodynamics, kinematics, laws of mass and momentum on rotating earth.
Concepts and illustrative flow systems: vorticity dynamics, boundary layers, instability, turbulence - with respect to environmental fluid systems.
Scale analysis: dimensionless variables and dynamical similarity, simplification of the fluid system, e.g. shallow water assumption, geostrophic flow.
Waves in environmental fluid systems.

Lecture notes
In English language

Literature
Will be presented in class.

102-0455-01L Groundwater I W 3 credits 2G M. Willmann
Abstract
The course provides an introduction into quantitative analysis of groundwater flow and transport. It is focussed on formulating flow and transport problems in groundwater, which are to be solved analytically or numerically.

Objective
a) Students understand the basic concepts of flow and contaminant transport processes and boundary conditions in groundwater.

b) Students are able to formulate simple practical flow and transport problems.

c) Students are able to understand and apply simple analytical solutions to simple flow and transport problems.

d) Students are able to use simple numerical codes to adequately solve simple flow (and transport) problems.

Content
Introduction, aquifers, groundwater use, sustainability, porosity.

Properties of porous media.
Exercises: Groundwater use, porosity, grain size analysis.

Flow properties, Darcy's law, filter.

Flow equations, stream function.
Exercises: Darcy's law.

Analytical solutions, confined aquifers, steady-state flow.
Exercises: Head isolines.

Use of superposition principles, transient flow, freee surface flow.
Exercises: Analytical solutions to flow problems.

Finite difference solutions to flow problems I.
Exercises: Analytical solutions to flow problems.

Finite difference solutions to flow problems II.
Exercises: Finite difference formulations to flow problems.

Transport processes.
Exercises: Computer workshop using PMWIN.

Analytical solutions to transport problems I.
Exercises: Computer workshop using PMWIN.

Analytical solutions to transport problems II.
Exercises: Analytical solutions to transport problems.

Path lines, groundwater protection.
Exercises: Analytical solutions to transport problems.

Groundwater remediation, groundwater management.
Exercises: Groundwater remediation.

Field Trips, Laboratory and Block Courses
The Practical Training in Atmosphere and Climate takes place in Spring Semester.

Electives
Courses can be chosen from the complete offerings of the ETH Zurich and University of Zurich.
Risks to life and human assets result when settlement areas and infrastructure overlap regions where natural hazard processes occur. This course utilizes case studies to teach how a future natural hazards-specialist should analyze, assess and manage risks.

Concepts will be explained step-by-step through a set of case studies, and applied in lab by the students. The following principal steps are used when coping with natural hazard-risks. At each step, students will learn and apply the following skills:

- Risk analysis - What can happen?
  - Characterize the processes and environmental measures that lead to a natural hazard and integrate modeling results of these processes.
  - Identify threats to human life and assets exposed to natural hazards and estimate possible drawbacks or damages.

- Risk assessment - What are the acceptable levels of risk?
  - Apply principles to determine acceptable risks to human life and assets in order to identify locations which should receive added protection.
  - Explain causes for conflicts between risk perception and risk analysis.

- Risk management - What steps should be taken to manage risks?
  - Explain how various hazard mitigation approaches reduce risk.
  - Describe hazard scenarios as a base for adequate dimensioning of control measures.
  - Identify the best alternative from a set of thinkable measures based on an evaluation scheme.
  - Explain the principles of risk-governance.

The course consists of the following blocks:

1) Einführung ins Vorgehenskonzept (1W)
2) Risikoanalyse (6W + Exkursion) mit:
   - Systemabgrenzung
   - Gefahrenbeurteilung
   - Expositions- und Folgenanalyse
3) Risikobewertung (2W)
4) Risikomanagement (2W + Exkursion)
5) Abschlussbesprechung (1W)

Choice of courses from the complete offerings of ETH and UZH.

**Social Sciences**

Recommended GESS compulsory elective courses (Type B) for D-ERDW.

see GESS Compulsory Electives: Type A: Enhancement of Reflection Capability

see GESS Compulsory Electives: Language Courses ETH/UZH

**Bachelor Seminar**

The Bachelor Seminar (651-3698-00L) takes place in spring semester.

**Bachelor Thesis**

The Bachelor Thesis and Bachelor-Seminar are offered once per year in the 6th semester, in the spring.

**Complementary Courses**

The Complementary Courses take place in Spring Semester.

Abstract

Objective
- Advanced knowledge in optical mineralogy
- Application of methods to determine minerals in thin sections
- Identification and characterisation of metamorphic minerals
- Description of rocks. Derive correct petrographic rock name, based on modal abundance and microstructure/texture
- Interpretation of rock fabric/microstructure, parageneses and mineral reactions

Content
- Repetition of principal optical properties and of microscopic methods to identify minerals. Emphasis on interpretation of interference figures.
- Study typical metamorphic rocks in thin sections
- Description and interpretation of parageneses and texture/microstructures. Study the age relationship of crystallisation and deformation.
- Estimation of metamorphic grade
- Quantification: To determine percentage of rock components
- Scientific documentation: Descriptions, drawings, photomicrography using different kinds of illumination and using plane- and circular-polarised light.

Lecture notes
handouts with additional information on theory and for exercises, in English.

Literature
- Nesse, W.D.: Introduction to optical mineralogy. 3. Ed. (2004). Figures from this book will be used in lectures. Besides the theory, this book describes all optical properties of important minerals. Petrographers working on varying types of silicate rocks should have a look at this book.

Prerequisites / notice
- Number of participants 24.

Other microscopy courses at department D-ERDW are on:
- magmatic rocks, following this course in second half of semester (P. Ulmer, IGP; Inst. for Geochemistry and Petrology)
- sedimentary rocks (Geol. Institute)
- ore minerals (reflected light microscopy, Th. Driesner, IGP)
- microstructures, deformed rocks (Geol. Institute)

Abstract
This course provides basic knowledge in microscopy of igneous rocks. Apart from the identification of common igneous minerals in thin sections, mineral assemblages, textures and structures will be investigated and the results of microscopy will be combined with igneous phase equilibria to understand generation, differentiation and emplacement of igneous rocks.

Objective
The principal goal of this course is to acquire expertise in:
(1) optical determination of minerals in igneous rocks using the polarizing microscope
(2) Identification of igneous rocks basing on modal mineralogy, structure and texture;
(3) Interpretation of textures and structures and associated igneous processes;
(4) Application of igneous phase diagrams to natural rocks.

Content
This practical course bases on the course 'Microscopy of metamorphic rocks' (P. Nievergelt), that is taught immediately before this course, where basic knowledge in optical mineralogy and the use of the polarizing microscope is acquired. In this course, the most important (common) igneous minerals and rocks are studied in thin sections under the polarizing microscope. Mineral assemblages, structures, textures and crystalization sequences are determined and utilized to understand the generation, differentiation and emplacement of igneous rocks. In addition, we will apply igneous phase equilibria that have been introduced in other lectures (such as magmatism and volcanism at ETH/Uni Zurich or an equivalent igneous petrology course) to natural rock samples in order to constrain qualitatively parental magma compositions and crystallization conditions.

Lecture notes
Basis of the optical determinations of (igneous) minerals using the polarizing microscope are the tables of Tröger ('Optische Bestimmung der gesteinsbildenden Minerale', Optical determination of rock-forming minerals, 1982) that are available in sufficient volumes in the class room.

Literature
There are several good textbooks on the subject of 'mineralogy in thin sections' that I can suggest upon request.

Prerequisites / notice
This course does not include an introduction in optical mineralogy and the use of a polarizing microscope and, therefore, bases on the course 'Microscopy of metamorphic rocks' taught by P. Nievergelt immediately before this course where these basic principles are provided. Alternatively, e.g. for external students, an equivalent course is required to follow this practical course.

Other microscopy courses taught at ETH Zurich at the D-ERDW are:
- Microscopy of metamorphic rocks (P. Nievergelt, required for this course)
- Microscopy of sedimentary rocks (W. Winkler & Blaesi)
- Reflected light microscopy and ore deposits practical (T. Driesner)
- Microstructures (deformation structures, B. Cordnonnier)
Sediment Analysis

Upon successful completion of this course students are able to:

- Microscopy of carbonate (1st half of semester) and siliciclastic rocks (2nd half) rocks as well as siliceous, phosphatic and evaporitic sediments.
- Description of grains and cement/matrix, texture, classification of the main sedimentary rocks. Discussion and interpretation of the environment of sedimentation. Diagenetic Processes.
- English textbooks recommended.

Part B: Methods

**Abstract**

Introduction to reflected light microscopy. Use of the microscope. Identification of opaque minerals through the used of tables. Description of textures and paragenetic sequences.

**Objective**

Given Participants should attend in parallel with Ore Deposits I (651-4037-00L).

**Content**

Recognition of the most important ore minerals in polished section, interpretation of mineral textures in geological context

**Lecture notes**

To be handed out in class

**Prerequisites / notice**

Credits and mark based on independent description of selected sample(s) towards the end of the course

**Literature**

Selected handouts will be made available in the lecture

**Prerequisites / notice**

The earlier attendance of other MSc microscopy courses (e.g. magmatic and metamorphic rocks) is not required if during the BSc a general course on microscopy of rocks was completed.

**Number of participants limited to 60.**

The course offers a series of basic methods useful for the analysis of sediments. It is also offered to apply these methods on material collected for the students Master or PhD projects.

For the various analytical methods English texts are available from text books and scientific publications.

Knowledge of the basic architecture and spatial data handling capabilities of geographic information systems.

Theoretical introduction to the architecture, modules, spatial data types and spatial data handling functions of geographic information systems (GIS). Application of data modeling principles and geoprocessing capabilities using ArcGIS: Data design and modeling, data acquisition, data integration, spatial analysis of vector and raster data, particular functions for digital terrain modeling and hydrology, map generation and 3D-visualization.

Introduction to Geographic Information Systems, Tutorial: Introduction to ArcGIS Desktop

- Introduction to the architecture and data processing capabilities of geographic information systems (GIS). Practical application of spatial data modeling and geoprocessing functions to a selected project from the earth sciences.
- Knowledge of the basic architecture and spatial data handling capabilities of geographic information systems.
- Theoretical introduction to the architecture, modules, spatial data types and spatial data handling functions of geographic information systems (GIS). Application of data modeling principles and geoprocessing capabilities using ArcGIS: Data design and modeling, data acquisition, data integration, spatial analysis of vector and raster data, particular functions for digital terrain modeling and hydrology, map generation and 3D-visualization.

**Objective**

- Aims, usefulness and theoretical background of methods for sediment analysis.
- Practical work in analytical chemistry for Earth science students.
- Knowledge of some analytical methods used in Earth sciences.
- Introduction to analytical chemistry and atom physics.
- X-ray diffraction (XRD), X-ray fluorescence analysis (XRF), Electron Probe Microanalysis (EPMA), Laser ablation inductively coupled plasma mass spectroscopy (LA-ICP-MS), Mass spectroscopy for light isotopes.
- Short handouts for each analytical method.
- For the various analytical methods English texts are available from text books and scientific publications.

- and various journal papers

It is desirable but not excluding that the students bring their own material (Master or PhD project) for some of the analytical methods.

**Objective**

- Qualitative and quantitative phase analysis of crystalline powders (e.g. with Rietveld analysis)
- - communicate the results in a scientific report.
- - carry out a qualitative and quantitative mineralogical analysis independently,
- - describe the principle of X-ray diffraction analysis
- - critically assess the data,
- - communicate the results in a scientific report.
- - Fundamental principles of X-ray diffraction
- - Setup and operation of X-ray diffractometers
- - Interpretation of powder diffraction data

- Selected handouts will be made available in the lecture

**Content**

**Literature**

- and various journal papers
At the end of this course, the students should be able to:

Introduction to Matlab

This course gives a tool to describe and interpret microstructures of deformed rocks. It begins with the definition of fabric elements and classification of cleavages. The second part deals with the relation between fabric, microstructure and deformation mechanisms. Finally will be examined the microstructures of high strain zones and the tools to quantify fabric and microstructure.

Prerequisites / notice

The course includes a high portion of practical exercises in sample preparation as well as measurement and evaluation of X-ray powder diffraction data. Own sample will be analysed qualitatively and quantitatively. Knowledge in mineralogy of this system is essential. The lecture course is limited to 12 participants.

### Restricted Choice Modules Geology

The modern discipline of Rock Physics serves as a bridge between traditional Rock Mechanics and traditional Rock Physical Property measurement. Through understanding the physics of the process, we strive to better understand other related fields such as structural geology and geophysics.

Objective
The objective of this course is to introduce Rock Physics as a laboratory and interpretive tool.

Content
The course will consists of regular classes, with a small number of laboratory demonstrations made on an ad-hoc basis (depending on equipment and research objective schedules at the Rock Deformation Laboratory). The course will cover measurements of physical properties of rock such as density, porosity, permeability and elastic wave velocity, and will introduce the concept of seismic seismic anisotropy etc. Later we will cover rock deformation in the brittle field, earthquake physics and triggering. Finally we will discuss scale effects as we move from small scale laboratory environment to the scale of the geophysical investigation.

Abstract
Sediments preserved a record of past landscapes. This courses focuses on understanding the processes that modify sedimentary landscapes with time and how we can read this changes in the sedimentary record.
### Objective
The students learn basic concepts of modern sedimentology and stratigraphy in the context of sequence stratigraphy and sea level change. They discuss the advantages and pitfalls of the method and look beyond. In particular we pay attention to introducing the importance of considering entire sediment routing systems and understanding their functioning.

### Content
Details on the program will be handed out during the first lecture.

We will attribute the papers for presentation on the 26th, so please be here on that day!

### Literature
The sedimentary record of sea-level change
Angela Coe, the Open University.
Cambridge University Press

### Prerequisites / notice
The grading of students is based on in-class exercises and end-semester examination.

Abstract
Reconstruction of time scales is critical for all Quaternary studies in both Geology and Archeology. Various methods are applied depending on the time range of interest and the archive studied. In this lecture we focus on the six methods that are most frequently used for dating Quaternary sediments and landforms.

Objective
Students will be made familiar with the details of the six dating methods through lectures on basic principles, analysis of case studies, solving of problem sets for age calculation and visits to dating laboratories. At the end of the course students will:
1. understand the fundamental principles of the most frequently used dating methods for Quaternary studies.
2. be able to calculate an age based on data of the six methods studied.
3. choose which dating method (or combination of methods) is suitable for a certain field problem.
4. critically read and evaluate the application of dating methods in scientific publications.

Content
1. Introduction: Time scales for the Quaternary, Isotopes and decay
2. Radiocarbon dating: principles and applications
3. Cosmogenic nuclides: 3He,10Be, 14C, 21Ne, 26Cl, 36Cl
4. U-series disequilibrium dating
5. Luminescence dating
6. K/Ar and Ar/Ar dating of lava flows and ash layers
7. Cs-137 and Pb-210 (soil, sediments, ice core)
8. Summary and comparison of results from several dating methods at specific sites

Prerequisites / notice
Visit to radiocarbon lab, cosmoregenic nuclide lab, noble gas lab, accelerator (AMS) facility.
Required attending the lecture, visiting laboratories, handing back solutions for problem sets (Exercises)

Abstract
Overview of the most important earth surface processes and landforms in cold regions (regions with glaciers and intense frost) with emphasis on high-mountain aspects. Discussion of present research challenges.

Objective
Knowledge of the most prominent climate-related geomorphological processes and phenomena in high-mountain regions, understanding of primary research challenges.

Content
- Erosion and sedimentation by glaciers as a function of topography, englacial temperature, sediment balance, sliding and melt water runoff.
- Processes and landforms in regions of seasonal and perennial frost (frost weathering, rock falls, debris cones/talus, solifluction, permafrost creep/rock glaciers, debris flows).

Literature
- Glacial and periglacial geomorphodynamics in high-mountain regions. Ca. 100 pages.
- Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

Lecture notes
- Required attending the lecture, visiting laboratories, handing back solutions for problem sets (Exercises)
- Notices in accordance with the corresponding module directly at UZH.

Basin Analysis

<td>3</td>
<td>2G</td>
<td>K. Ueda, T. I. Eglinton</td>
</tr>
</tbody>
</table>

Abstract
The course discusses the formation and development of different basin types as part of lithosphere geodynamics. It introduces conceptual models and governing physics, with practical application to the study of basin evolution. Techniques for the analysis of subsidence and thermal history are demonstrated. Organic matter, petroleum play, and their biogeochemical investigation are examined.

Objective
Based on the introductory education and practical training during this course, each participant should be able to choose and apply approaches and techniques to own problems of basin analysis, and should be versed to expand their knowledge independently. In particular, each participant should:
- Develop an intuitive understanding for origin, dynamics, and temporal evolution of basins in a geological / geodynamic context;
- Acquire the necessary theoretical foundation to describe basin evolution quantitatively;
- Be familiar with geological and geophysical methods that are applied to obtain information about rock properties, structural geometry, and thermal and subsidence history of basins;
- Understand the burial and maturation of organic matter in basins, the development of petroleum play, and be acquainted with geochemical methods to study the evolution of biogenic carbon.
The following topics are covered:

- Introduction; classification schemes and types of basins; heat conduction; geotherms;
- The lithosphere; isostasy; rifts and basins due to lithospheric stretching; uniform extension model; modifications to the uniform stretching model; dynamics of rifting.
- Elasticity of the lithosphere; flexural compensation; geometry and analytical description of loads and the resulting deflection; foreland basins; their anatomy;
- Reconstruction of basin evolution; borehole data; porosity loss and decompaction; backstripping; subsidence curves; thermal history and its reconstruction;
- Petroleum play concept; organic production; source rock prediction and depositional environment; petroleum generation, expulsion, migration, alteration; reservoir and traps;
- Carbon cycle; maturation of organic matter; geochemistry of biogenic carbon; biomarkers; analytical techniques
- Overview of other basin types: effects of mantle dynamics, strike-slip basins.

Each week of the course is split into lectures and corresponding practicals, in which the concepts are applied to simplified problems.

Grading of the semester performance is based on submitted practicals (50%) and a final exam (50%). The exam will take place in the time slot of the last practical (18.12.).

Lecture notes are provided online during the course. They summarize the current subjects week by week, and provide the essential theoretical background.

ISBN 978-0-470-67376-8

Recommended, but not required (available in library).

Supplementary:

Familiarity with MATLAB is advantageous, but not required.

**651-4243-00L**  
**Seismic Stratigraphy and Facies**  
**W**  
**2 credits**  
**3G**  
**G. Eberli**

**Abstract**  
Introduction into seismic interpretation for solving geological and environmental problems. A special focus is given to the seismic facies analysis and seismic sequence stratigraphy. In addition, the seismic attributes are explained, which are important for the analysis of paleogeomorphology and structural deformation.

**Objective**
1. Acquire techniques for a comprehensive interpretation of seismic sections for solving geologic, tectonic, stratigraphic and environmental problems
2. Correlation of seismic facies to lithologic facies in different sedimentary systems
3. Recognition of structural elements and faults on seismic sections.
4. Learning the techniques of 3D seismic data interpretation
5. Reconstruction of sedimentary history using seismic stratigraphy and facies analysis and core information.

**Content**
The four day course consists of lectures that are accompanied by a variety of exercises.

**Day 1:**  
Introduction seismic facies analysis with exercise  
Seismic resolution  
Factors controlling sedimentation  
Exercise: Seismic section in Straits of Florida

**Day 2:**  
Seismic attributes and seismic geomorphology  
Siliciclastic deltas, shelves and turbidite systems, 2D-3D  
Exercise: Seismic section Tarragon Basin  
Seismic facies carbonates  
Exercise: Seismic section platform margin Great Bahama Bank  
Deepwater environments, including cold-water coral habitats

**Day 3:**  
Seismic facies of mixed systems with exercises  
Faults and structures on seismic sections  
Exercise: Seismic section Golf von Mexiko

**Day 4:**  
Telling ages on seismic section  
Seismic stratigraphy and sequence stratigraphy  
Exercise: Sequence analysis Straits of Andros  
Final discussion
Lecture notes
An original script (110 pages) designed for the class will be distributed at the beginning of the course.

Books Seismic Facies:

Books Seismic Stratigraphy:

Schlager, W., 1992, Sedimentology and sequence stratigraphy of reefs and carbonate platforms: AAPG Cont. Education course notes #34, pp71.

Abstract
The course will cover basic physical theory related to mineral and rock magnetism, measurement techniques, and applications in earth and soil sciences, climatology and biophysics.

Objective
There are two objectives in this course: (1) to acquire an understanding of the physical theory behind the origin of magnetism in a mineral or rock; and (2) to learn how material magnetic properties can be used to study environmental and geologic systems and processes.

Content
1. Fundamentals of magnetism
2. Magnetic mineralogy
3. Measurement techniques
4. Time
5. Special Topics: Magnetoclimatology, mass transport, pollution monitoring, biophysics, magnetic properties of nanoscale materials

Lecture notes
Available on-line

</tr>
</tbody>
</table>

Abstract
The course will introduce students to the general principles of Geothermics and is suitable for students who have a basic knowledge of Geoscience or Environmental Science (equivalent of a Bachelor degree).

Objective
To provide students with a broad understanding of the systems used to exploit geothermal energy in diverse settings.
Content

The course will begin with an overview of heat generation and the thermal structure of the Earth. The basic theory describing the flow of heat in the shallow crust will be covered, as will be the methods used to measure it. Petrophysical parameters of relevance to Geothermics, such as thermal conductivity, heat capacity and radiogenic heat productivity, are described together with the laboratory and borehole measurement techniques used to estimate their values. The focus will then shift towards the exploitation of geothermal heat at various depths and temperatures, ranging from electricity and heat production in various types of deep geothermal systems (including high and medium temperature hydrothermal systems, and Engineered Geothermal Systems at depths of 5 km or more), to ground-source heat pumps installed in boreholes at depths of a few tens to hundreds of meters for heating domestic houses.

The subjects covered are as follows:

Week 1: Introduction. Earth’s thermal structure. Conductive heat flow
Week 3: Temperature measurement. Hydrothermal reservoirs & well productivity
Week 4: Hydrological characterisation of reservoirs. Drilling. Optimised systems
Week 5: Petrothermal or Engineered Geothermal Systems
Week 6: Low-enthalpy systems 1
Week 7: Low-enthalpy systems 2.

Lecture notes

The script for each class will be available for download from the Ilias website no later than 1 day before the class.

Abstract

Seismic tomography is the science of interpreting seismic measurements (seismograms) to derive information about the structure of the Earth. The subject of this course is the formal relationship existing between a seismic measurement and the nature of the Earth, or of certain regions of the Earth, and the ways to use it, to gain information about the Earth.

Abstract

This course is a general introduction to the methods of seismic hazard analysis. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties.

Objective

This course is a general introduction to the methods of seismic hazard analysis.

Content

In the course it is explained how the disciplines of seismology, geology, strong-motion geophysics, and earthquake engineering contribute to the evaluation of seismic hazard. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties. The course includes the discussion related to Intensity and macroseismic scales, historical seismicity and earthquake catalogues, ground motion parameters used in earthquake engineering, definitions of the seismic source, ground motion attenuation, site effects and microzonation, and the use of numerical tools to estimate ground motion parameters, both in a deterministic and probabilistic sense.

During the course recent earthquakes and their impacts are discussed and related to existing hazard assessments for the areas of interest.
The course is an introduction to the concepts of geodesy applied to the seismic cycle and to the monitoring of ground deformation.

- **Abstract**

  This course teaches earthquake source theory, covering the moment-tensor representation of earthquakes treated as point-sources, the kinematic characterization of extended-fault ruptures, and the dynamics of earthquake rupture. Fault mechanics and fault-zone structure as well as implication of rupture dynamics for near-source ground-motion prediction will complement the material.

- **Objective**

  The aim of the course is to gain a thorough understanding of the physical processed (and their mathematical description) leading to and governing earthquake source ruptures. Simplified earthquake-source representations will be used to motivate the study of the complexity of the dynamic rupture process, its fundamental aspects in terms of fracture mechanics and friction, and its implications for ground-motions (and hence seismic hazard).

- **Content**

  The course is sub-divided in two parts:

  **FIRST PART**
  - Introduction: Definition of earthquake, faults, elastic rebound theory, source parameters definition.
  - Numerical simulation of shear dynamic rupture: Fault representation methods, elastodynamic coupled to frictional sliding.
  - Earthquakes on extended faults: Kinematic earthquake characterization, kinematic source inversion

  **SECOND PART**
  - Earthquake source dynamics: Introduction to Linear Elastic Fractures mechanics, the state of stress and friction models,
  - Numerical simulation of shear dynamic rupture: Fault representation methods, elastodynamic coupled to frictional sliding.
  - Identifying source-dominant ground motion phenomena
  - Numerical exercise to model earthquake rupture dynamic

- **Literature**

  - Principles of Seismology by A. Udias, Cambridge University Press (January 13, 2000) ($140): easier to understand than Aki & Richards, less comprehensive
  - An Introduction to Seismology, Earthquakes and Earth Structure by S. Stein and M. Wyssession, Blackwell Science; 1st edition (September 2002) ($96), very nice and comprehensive, not very theoretical

- **Prerequisites / notice**

  The course will be evaluated in four parts, from a two hours final exam at the end of the course, a final presentation which will be based on a paper-study from the relevant recent literature, a writing report of a computer exercise and homework delivered during the course. The course will be worth 3 credit points, and a satisfactory total grade (4 or better averaged from the four evaluation parts) is needed to obtain 3 CPs. The final writing exam has a weight of 40% and the other three has a weight of 60% (each contributing 20 ) of the total grade.

  The course will be given entirely in English.

  Course pre-requisites: standard "higher maths for physicists" (i.e. linear algebra, calculus, ODE's, PDE's, Fourier-Transforms, some probability theory); useful but not mandatory courses would be "Inverse Theory in Geophysics" and general geophysics courses (i.e. seismo-tectonics, seismic waves, introduction to geophysics).

  **Glaciology**
This course introduces the different parts of the cryosphere - snow, glaciers, sea ice, permafrost - and their role in the climate system. A significant physical aspect is the focus in each part. Those completing the course are able to describe the dynamics of cryosphere components both formally and using examples.

**Objective**: Students are able
- to qualitatively describe the main components of the cryosphere and their role in the climate system
- to formally describe the relevant physical processes which determine the state of cryosphere components

**Content**: Introduction into the different components of the Cryosphere: Snow, glaciers, sea ice and permafrost, and their roles in the climate system. Each part is use to emphasized on one specific physical aspect: material qualities of ice, mass balance and dynamics of glaciers and energy balance of sea ice.

**Lecture notes**: Handouts will be distributed during the teaching semester

---

### Applied Glaciology

**Type**: W
**ECTS**: 3 credits
**Hours**: 2G
**Lecturers**: M. Funk, A. Bauder

**Abstract**: We will explain the fundamentals of physics of glaciers which are necessary for treating applied problems. We will go into climate-glacier interactions, flow of glaciers, lake ice and hydrology of glaciers.

**Objective**: To understand the fundamental physical processes in glaciology.

**Content**: Basics in physical glaciology
- Dynamics of glaciers: deformation of glacier ice, role of water in glacier motion, reaction of glaciers to climate changes, glacier calving, surges
- Ice falls, ice avalanches
- Glacier floods
- Lake ice and bearing capacity

**Lecture notes**: Handouts are available

**Literature**: Relevant Literatur wird während der Vorlesung angegeben.

**Prerequisites / notice**: Für aktuelle Fallbeispiele werden risikobasierte Massnahmen bei glaziologischen Naturgefahren diskutiert.

**Voraussetzungen**: Es werden Grundkenntnisse in Mechanik und Physik vorausgesetzt.

---

### Physics of Glaciers

**Type**: W
**ECTS**: 3 credits
**Hours**: 3G
**Lecturers**: M. Lüthi, G. Jouvet, F. T. Walter

**Abstract**: Application of basic physical concepts to glaciers and ice caps. Understanding glaciers and ice sheets with simple physical concepts.

**Objective**: The course outlines the physical principles governing the gravity-driven motion of glacier ice. This is applied to understand the response of glaciers and ice sheets to changes in their environment. Polar ice caps, ice streams and mountain glaciers and their recent rapid changes are discussed.

**Content**: The dynamics of glaciers and polar ice sheets is the key requisite to understand their history and their future evolution. We will take a closer look at ice deformation, basal motion, heat flow and glacier hydraulics. The specific dynamics of tide water and calving glaciers is investigated, as is the reaction of glaciers to changes in mass balance (and therefore climate).

**Lecture notes**: http://people.ee.ethz.ch/~luethim/teaching.html

**Prerequisites / notice**: Good high school mathematics and physics knowledge required.

---

### Quantification and Modeling of the Cryosphere: Dynamic Processes (University of Zurich)

**Type**: W
**ECTS**: 3 credits
**Hours**: 1V

**Lecturers**: University lecturers

**Abstract**: Overview of the most important earth surface processes and landforms in cold regions (regions with glaciers and intense frost) with emphasis on high-altitude processes. Discussion of present research challenges.

**Objective**: Knowledge of the most prominent climate-related geomorphological processes and phenomena in high-mountain regions, understanding of primary research challenges.

**Content**: Erosion and sedimentation by glaciers as a function of topography, englacial temperature, sediment balance, sliding and melt water runoff. Processes and landforms in regions of seasonal and perennial frost (frost weathering, rock falls, debris cones/talus, solifluction, permafrost creep/rock glaciers, debris flows).

**Lecture notes**: Glacial and periglacial geomorphodynamics in high-mountain regions. Ca. 100 pages. Literature references in skript

**Prerequisites / notice**: Basic knowledge about geomorphology and glaciers/permafrost from corresponding courses at ETH/UZH or from the related lecture notes

---

### Seminar in Glaciology

**Type**: W
**ECTS**: 3 credits
**Hours**: 2S
**Lecturers**: A. Bauder

**Abstract**: Studium aktueller und klassischer Arbeiten der glaziologischen Forschung

**Content**: Studium aktueller und klassischer Arbeiten der glaziologischen Forschung benötigte Unterrichten werden im Verlauf der Veranstaltung abgegeben

---

### Palaeontology

**Number**: 651-1380-00L
**Title**: Paleontological Excursions (University of Zurich)

**Abstract**: No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

**ECTS**: 1 credit
**Hours**: 1P

**Lecturers**: University lecturers
### Objective
Besuch von Fossilvorkommen im In- und Ausland, um die Erhaltung der Fossilien, die fazielle Ausbildung und die Stratigraphie der fossilführenden Schichten kennenzulernen und zu diskutieren sowie gegebenenfalls Fossilien zu sammeln.

### Content

### Basics of Palaeobotany (University of Zurich)
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: BIO280

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

### Abstract
The course "Basics in Palaeobotany" gives an overview on the evolution and palaeobiology of plants and their relevance for the reconstruction of past environments.

### Objective
On successful completion of the module, the students should be able to explain how plants are preserved in the fossil record, to describe the morphology of plant mega fossils, and of spores and pollen. They can describe how plant fossils can be used for reconstructing palaeoenvironments. Students should be able to explain the interactions between evolution of plants, climate and physical environment and they will be able to integrate the dimension of geological time into their understanding of biological events.

### Content
- Preservation of plants in the fossil record.
- First evidence for plants on Earth
- The conquest of the continents by plants
- Major adaptation and innovations leading to the present plant diversity
- The evolution and morphology of the major plant groups
- Plant associations through geological time and their palaeogeographic and stratigraphic relevance
- Mass extinctions and the fossil plant record
- Interaction between past vegetation and climate
- The relevance of plant microfossils for reconstruction of palaeoclimate and palaeoecology

**Abstract**

This course introduces students to the methods used in characterising, developing or monitoring geotechnical engineering project sites. Measurements, tools and analyses are described that are relevant to determining the geologic conditions at a site as well as deformations that occur under natural or construction conditions.

**Objective**

This course aims to introduce the general procedures taken during an engineering geological site investigation. Students who complete the course should be able to design a site investigation program of measurements based on information from initial desk studies, and to analyse, integrate and interpret data from the measurement program.

**Content**

The methods that are routinely employed in site investigations will be described focusing on their applicability in different geologic environments. The limitations of the data in constraining the parameters of interest will be addressed together with problems of interpretation and cost-versus-information value. Specific topics addressed include drilling, coring, sampling, borehole testing, geophysical methods used in engineering geology, satellite, air- and ground-based surface and displacement monitoring (photogrammetry, LIDAR and Radar), and in-situ deformation measurement methods.

**Lecture notes**

Lecture notes will be available for download 1-2 days before each class.

**Literature**

Online (ETH): http://www.icevirtuallibrary.com/content/book/100017

Supplemental literature will be suggested and made available during the course.

### Engineering Geology Integration

Courses for this Module take place in spring semester.

Prerequisites: successful participation in all 3 compulsory modules of the Major in Engineering Geology (Fundamentals, Methods and Integration).

The Industrial Internship of the Eng Geol Major should take place in the second MSc year after consultation with Dr. Björn Oddsson. Detailed regulations of this practical are published on the Eng Geol Website.
The industry practical is supervised both from the industry partner and ETH and consists of technically and/or scientifically challenging work in the engineering geology domain. The regular duration of the practical is 2.5 month. The practical is is pre-defined in a work plan and concluded with a report written by the student.

Objective The goals of the industry practical are to become familiar with technical, economic, legal and communication issues of real-life work in private industry or technical administration.

Geophysical Data Processing
Type

The course presents fundamental digital signal processing and filter theory with a focus on geophysical applications.

Content Analog-digital conversion: dynamic range and resolution; Dirac-impulse, step function; Laplace transformation; Z-transformation; Differential equations of linear time-invariant systems; Examples: seismometer and RC-filter; Impulse response and transfer function; Frequency selective filters: example Butterworth filters; Digital filters: impulse invariance and bilinear transformation; Inverse filters; Response spectra.

Lecture notes Lecture notes will be made available for download from the website of the course.

Literature Literature follows no single book. A list of relevant texts will be given in class.

Prerequisites / Students must bring their own laptop in class for Matlab exercises.

Numerical Modelling I and II: Theory and Applications

In this 13-week sequence, students learn how to write programs from scratch to solve partial differential equations that are useful for Earth science applications. Programming will be done in MATLAB and will use the finite-difference method and marker-in-cell technique. The course will emphasise a hands-on learning approach rather than extensive theory.

Objective The goal of this course is for students to learn how to program numerical applications from scratch. By the end of the course, students should be able to write state-of-the-art MATLAB codes that solve systems of partial-differential equations relevant to Earth and Planetary Science applications using finite-difference method and marker-in-cell technique. Applications include Poisson equation, buoyancy driven variable viscosity flow, heat diffusion and advection, and state-of-the-art thermomechanical code programming. The emphasis will be on commonality, i.e., using a similar approach to solve different applications, and modularity, i.e., re-use of code in different programs. The course will emphasise a hands-on learning approach rather than extensive theory, and will begin with an introduction to programming in MATLAB.

Content A provisional week-by-week schedule (subject to change) is as follows:

Week 1: Introduction to the finite difference approximation to differential equations. Introduction to programming in Matlab. Solving of 1D Poisson equation.
Week 3: Solving momentum and continuity equations in case of constant viscosity with stream function/vorticity formulation. Weeks 4-8: Staggered grid for formulating momentum and continuity equations. Indexing of unknowns. Solving momentum and continuity equations in case of constant viscosity using pressure-velocity formulation with staggered grid.
Week 6: Solving 2D heat conservation equation in case of constant thermal conductivity with explicit and implicit approaches. Week 6: Solving 2D heat conservation equation in case of variable thermal conductivity with implicit approach. Temperature advection with markers. Creating thermomechanical code by combining mechanical solution for 2D buoyancy driven flow with heat diffusion and advection based on marker-in-cell approach.
Week 11: Subgrid diffusion of temperature. Implementing subgrid diffusion to the thermomechanical code.
Week 12: Implementation of radioactive, adiabatic and shear heating to the thermomechanical code.
Week 13: Implementation of temperature-, pressure- and strain rate-dependent viscosity, temperature- and pressure-dependent density and temperature-dependent thermal conductivity to the thermomechanical code. Final project description.

GRADING will be based on weekly programming homeworks (50%) and a term project (50%) to develop an application of their choice to a more advanced level.
The course will guide students in learning about solutions of partial differential equations arising in connection with various physical problems. Special attention will be paid to the solutions of Laplace's equation in spherical and cylindrical coordinates. In addition the basics of vector calculus will be discussed in order to support Geophysical Fluid Dynamics and Potential Field Theory courses.

**Exercise:** Analysing strain rate tensor for solid body rotation.

---

**Theory:** Deformation and stresses. Definition of stress, strain and strain-rate tensors. Deviatoric stresses. Mean stress as a dynamic (nonhystostatic) pressure. Stress and strain rate invariants.

**Exercise:** Analysing strain rate tensor for solid body rotation.

**Restricted Choice Modules Geophysics**

---

**Seismology**

---

**Abstract**
The course is a general introduction to the theory of seismic wave propagation.

**Objective**
The course is a general introduction to the theory of seismic wave propagation.
The course explains the principles and assumptions used in seismology. It provides the tools to solve basic seismological problems. The course includes the theorems in dynamic elasticity, the formulation with potentials, Greens function, elastic waves from point dislocation sources, moment tensors, 1D, 2D, and 3D wave propagation problems, reflection and transmission at plane boundaries, and surface waves in a vertically heterogeneous medium.

**Seismotectonics**

**W** 3 credits 2G  J. D. Zechar, A. P. Rinaldi

**Abstract**

If you’re interested in knowing more about the relationship between seismology and plate tectonics, this is the course for you. (If you’re not that interested, but yr program of study requires that you complete this course, this is also the course for you.)

**Objective**

By the conclusion of this course, we hope that you:

- have a solid understanding of stress and strain and tensor representations;
- have a feeling for what rheology is and why it is important;
- have a more sophisticated understanding of the relationship b/w plate tectonics and eqks;
- understand eqk source representations of varying complexity;
- understand eqks in the context of different tectonic settings;
- understand why we can't predict eqks; and
- understand that “modern science is... a set of research directions rather than a collection of nuggets of established truth.”

**Content**

To begin our series of 14 meetings, we will review fundamentals of continuum mechanics and tensor analysis; our goal is to help you understand deformation from the scale of conchoclast in the classroom to the scale of plate tectonics. We will try to ensure that several ways to appropriately represent an earthquake source; we'll present these in order of increasing sophistication. We'll discuss a currently-popular theory to explain earthquake triggering. We'll talk about the conceptual connections between earthquakes and tectonic deformation. You will enjoy (at least) two computer exercises.

- Discussed: stress and deformation in the Earth; stress and strain tensors; rheology and failure criteria; fault stresses, friction and effects of fluids; stable and unstable sliding; earthquake focal mechanisms; relationship between stress fields and focal mechanisms; seismic moment and moment tensors; relationship between moment- and deformation tensors; crustal deformation from seismic, geologic, and geodetic observations; earthquake stress drop, scaling, and source parameters; earthquake induced stress changes; global earthquake distribution; current global earthquake activity; different seismotectonic regions; examples of earthquake activity in different tectonic settings, such as in subduction zones, California, the Mediterranean, and in Switzerland.

**Lecture notes**

TBA.

**Literature**

**Prerequisites / notice**

You should have at least a foggy recollection of calculus.

**Engineering Seismology**

**W** 3 credits 2G  D. Fäh, J. Burjáněk

**Abstract**

This course is a general introduction to the methods of seismic hazard analysis. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties.

**Objective**

This course is a general introduction to the methods of seismic hazard analysis.

**Content**

In the course it is explained how the disciplines of seismology, geology, strong-motion geophysics, and earthquake engineering contribute to the evaluation of seismic hazard. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties. The course includes the discussion related to Intensity and macroseismic scales, historical seismicity and earthquake catalogues, ground motion parameters used in earthquake engineering, definitions of the seismic source, ground motion attenuation, site effects and microzonation, and the use of numerical tools to estimate ground motion parameters, both in a deterministic and probabilistic sense.

During the course recent earthquakes and their impacts are discussed and related to existing hazard assessments for the areas of interest.

**Physics of the Earth's Interior**

Courses for the Module Physics of the Earth's Interior take place in Spring Semester.

**Abstract**

This course aims to give a physical understanding of the formation, structure, dynamics and evolution of planetary bodies in our solar system and also apply it to ongoing discoveries regarding planets around other stars.

**Objective**

The goal of this course is to enable students to understand current knowledge and uncertainties regarding the formation, structure, dynamics and evolution of planets and moons in our solar system, as well as ongoing discoveries regarding planets around other stars. Students will practice making quantitative calculations relevant to various aspects of these topics through weekly homeworks.

The following gives an overview of the course content and approximate schedule (subject to change).

Geotectonic Environments and Deep Global Cycles

L. Tajcmanová

Ore Deposits I

Lecturers

The course will give an introduction to phase petrology and its application to magmatic and metamorphic systems. Further, the course will give an introduction to thermobarometry of mineral assemblages. The origin and interpretation of microstructures and chemical zonation in rocks will be discussed. We will also touch kinetics of rock forming processes and the role of fluids during the lectures. The specific topics will involve:

- Mineral reactions and chemical equilibrium in metamorphic and magmatic rocks, recalculation of rock and mineral analyses, mineral modes, P-T-X relations.

The course includes a high portion of practical exercises in sample preparation as well as measurement and evaluation of X-ray powder diffraction data.

Own sample will be analysed qualitatively and quantitatively. Knowledge in mineralogy of this system is essential.

The lecture course is limited to 12 participants.

PETROLOGY AND VOLCANOLOGY

X-ray Powder Diffraction

M. Plötze

Abstract

This course addresses master students interested in integral view of processes operating in various tectonic environments, most specifically divergent and convergent plate margins.
This block course in will comprise 4 half-day lectures and a series of practical exercises from selection of a mineral property to discovery of 3P, C. Bühler. Teaching, case-studies and excursions (e.g. raw-material industry).

Students will learn to understand the use of non-metallic mineral resources from a geological and mineralogical point of view as well as from industrial, technical and strategical (political) point of view. Environmental aspects on the worldwide use of non-metallic mineral resources are discussed. A special focus will be given on the situation in Switzerland.

Course “Applied mineralogy and non-metallic resources I” (autumn/winter semester):

Non-metallic resources. Occurrences, geology, extraction, properties, fabrication and use. Industrial aspects, (new) technologies, market, stock, situation, reserves & resources, trends and development, environmental aspects, law.

Chapters: e.g. coal/ carbon (coal, graphite, diamond, fullerene); oil/gas (oil- and tarsands, oil-shists); phosphates/nitrates; aluminum (bauxite, corundum); salt; carbonates; titanium; clay and clay minerals; sulphur; gypsum/anhydrite; fluoride; asbestos; talc; micas; rare earth elements.

Course “Applied mineralogy and non-metallic resources II” (fall/summer semester):

Chapters: e.g. Stone industry - technical aspects of building stones, properties, weathering, treatment, quarries, products, Crushed stones - quarries, products, planning, environment, Gravel an sand - reservoirs/reserves, environment (protection/law), alternative products (substitution). Cement and concrete (geological resources, prospection, fabrication, environment).

Lecture notes
Will be given according to the lessons. Partially based on e-learning programs.

Literature

Abstract
Global mineral economics and the strategies of mineral exploration -- including geological, geochemical and geophysical methods, but also non-geological factors such as organisational, political and environmental aspects. Changing external lecturers.

Objective
Practical understanding of the procedure of exploring a mineral prospect, based on geological analysis, exploration by drilling, resource calculation of tonnage and grade as a basis for economic evaluation for reporting to investors.

Content
This block course will comprise 4 half-day lectures and a series of practical exercises from selection of a mineral property to discovery of non-metallic mineral resources and their valuation. Teams are formed as Limited Partnership companies that have to select and bid for a mineral property offered during an auction. Each company has the same nominal budget. The highest bidder purchases the selected property, others need to purchase the remaining properties during an auction. Justification for selecting the property is justified in a report. The companies must interpret the geological of their mineral property to prepare a diamond drill program to discover and, eventually, delineate the mineral resources. This drill program is presented in a report prior to drilling. Drilling in the tri-dimensional matrix of the property is simulated using the software FOREUR, until budget lapse. The companies must select drill intervals for chemical analysis to document the extent and composition of the discovered mineralization. Portions of the mineral rights can be traded for capital between the companies. An estimate of the tonnage and grade of the discovered resource is prepared using geometric methods and GIS software (ex. ArcGIS). The ground value of the resource is estimated by a computation of the Net Smelter Return at current metal prices. The results of the exploration program are presented in a comprehensive report.

Lecture notes
Handouts for background information and a computer simulation program for the case-study exercise will be provided. Participants must bring a Windows-based laptop computer.

Prerequisites / notice
Prerequisites: Knowledge of mineral deposit-type characteristics is useful (orogenic gold, Cu-Zn VMS, Ni-Cu-PGE); at least "Ressourcenwirtschaft. Technologische Konsorten in der Chancen- und Risikomanagement-Praxis" completed.

651-4221-00L Numerical Modelling of Ore Forming Hydrothermal Processes W 3 credits 2G T. Driesner, D. Zezin

Abstract
Introduction to computer tools for the simulation of hydrothermal processes. This includes fluid flow modelling and thermodynamic modelling of hydrothermal reactions. The computer programs are handed out to the students and can be run on normal PCs. No programming knowledge is necessary.

Objective
Learn how to use the simulation programs HYDROTHERM and HCh to explore how hydrothermal systems work.

Content
Introduction to computer tools for the simulation of hydrothermal processes: HYDROTHERM for fluid flow simulations, HCh for thermodynamic modeling. While learning the respective computer programs is an essential part of the course, the emphasis will be on using these tools to learn how the physics and chemistry of hydrothermal system actually work.

Lecture notes
Computer programs and course material will be distributed during the course.

Literature

651-4069-00L Fluid and Melt Inclusions: Theory and Practice W 3 credits 3P T. Driesner, C. A. Heinrich

Abstract
Block course involving lectures, exercises and practical application of inclusion petrography, microthermometry, Raman and LA-ICP-MS microanalysis

Does not take place this semester.
Objective
Practical ability to carry out a meaningful fluid or melt inclusion study in the fields of geochemistry, petrology or resource geology, involving problem definition, research planning, quantitative measurements using a combination of techniques, critical interpretation and correct documentation of results.

Lecture notes
Handouts with extensive list of primary literature available

Objective
To understand the formation and evolution of the solar system from a geochemical perspective

Content
The sun and solid objects in the solar system (planets, comets, asteroids, meteorites, interplanetary dust) are discussed with a geochemical perspective. What does their present-day composition tell us about the origin and evolution of the solar system? The lecture first introduces the basic facts of the terrestrial and giant planets, as well as comets and asteroids, as mainly gained from modern planetary missions. The chemical and isotopic composition of meteorites, being the most primitive material available for study, is a further major topic.

Abstract
This course will introduce some of the main quantitative methods available for the quantitative treatment of geochemical data, as well as the main modelling tools. Emphasis will both be on conceptual understanding of these methods as well as on their practical application, using key software packages to analyse real geochemical datasets.

Objective
Development of a basic knowledge and understanding of the main tools available for the quantitative analysis of geochemical data.

Content
The following approaches will be discussed in detail: major and trace element modelling of magmas, with application to igneous systems; methods and statistics for calculation of isochrons and model ages; reservoir dynamics and one-dimensional modelling of ocean chemistry; modelling speciation in aqueous (hydrothermal, fresh water sea water) fluids.

Lecture notes
Slides of lectures will be available.

Prerequisites / notice
Pre-requisite: Geochemistry (651-3400-00L), Isotope Geochemistry and Geochronology (651-3501-00L).

Abstract
This course aims to present and discuss advanced topics in geochemistry based on the critical reading of research papers. Themes will vary from year to year and suggestions from students are welcome. The format of the course will be: one or more lectures introducing a theme, followed by a presentation of one or more papers by a student or group of students.

Objective
The goal of the course is discuss topics in advanced geochemistry which were not covered in other general and specialized geochemistry courses. In addition, we aim at training the student's ability to critically evaluate research papers and to summarize the findings concisely in an oral presentation.

Content
Themes will vary from year to year and suggestions from students are welcome. Some possible topics are:
- Organic geochemistry.
- Isotope geochemistry of organic matter: carbon, hydrogen and nitrogen.
- Multiply-substituted isotopologues.
- Mass-independent fractionations.
- Mass transfer and isotopes in modern and ancient ocean-floor hydrothermal systems and subduction zone environments.
- Noble gas geochemistry: terrestrial and extraterrestrial applications

Lecture notes
None

Objective
The purpose of this lecture is to provide a comprehensive overview of: a) the different radiometric methods in Geology, the different dating tasks and the constraints put by the complexity of natural systems, including dating by cosmogenic nuclides, b) the various analytical tools available today for radiometric dating, their advantages and disadvantages, c) the use of noble gases in Geochemistry and d) detailed description of case studies, as examples of approach of a number of geological problems and interpretation of the data.
Content: The content of this lecture is summarised as follows:

- Ion microprobes - U-Pb SHRIMP dating (zircon, sphene, rutile, monazite)
- Dating metamorphic rocks
- Combined geochronology and petrology subduction and exhumation rates
- Tracing the timing of mantle and crustal events via zircon-dating in mantle xenoliths: Two case studies: South Namibia, Kilbourne Hole (New Mexico)

Giuditta Fellin:
- Fission track dating (two hours lecture)
- U-Th/He dating
- Visit of the laboratories

Henner Busemann:
- Noble gas geo- and cosmochemistry
- Surface exposure dating with cosogenic nuclides
- Carbon-14 dating and U-Th-He thermochronology
- Visit of the radiogenic and noble gas isotope laboratories of IGMR

Albrecht von Quadt:
- Analytical tools and applications to radiogenic isotopes (basics about TIMS, LA-ICP-MS-MC)
- Dating magmatic rocks and ore deposits (porphyry, epithermal Cu-Au-(Mo) deposits)
- U-Pb, Re-Os, Pb-Pb methods - Hf tracing of zircons
- Geochronology and geochemistry of magmatic systems

Marcel Guillong:
- LA-ICP-MS as the method of choice for dating, in comparison to other methods (Ion-probe, TIMS, ...)
- Data reduction in LA-ICP-MS: from measured counts per seconds to the final age of a sample, with hands on example.
- The challenge to date very young Zircons, with an example from Kos.

Ben Ellis:
- Ar-Ar dating techniques
- Ar-Ar dating of volcanic rocks

Lecture notes
Script (for part of the lecture), partly power point presentations (in the web) and partly copies of power point transparencies.

<td>Abstract</td>
<td>The course &quot;Climate history and palaeoclimatology gives an overview on climate through geological time and it provides insight into methods and tools used in paleoclimatic research. The student will have an understanding of evolution of climate and its major forcing factors -orbital, atmosphere chemistry, tectonics-through geological time. He or she will understand interaction between life and climate and he or she will be familiar with the use of most common geochemical climate &quot;proxies&quot;, he or she will be able to evaluate quality of marine and terrestrial sedimentary palaeoclimatic archives. The student will be able to estimate rates of changes in climate history and to recognize feedbacks between the biosphere and climate.</td>

Content

Climate system and earth history - climate forcing factors and feedback mechanisms of the geosphere, biosphere, and hydrosphere.

Geological time, stratigraphy, geological archives, climate archives, paleoclimate proxies

Climate through geological time: "lessons from the past"

Cretaceous greenhouse climate

The Late Paleocene Thermal Maximum (PETM)

Cenozoic Cooling

Onset and Intensification of Southern Hemisphere Glaciation

Onset and Intensification of Northern Hemisphere Glaciation

Pliocene warmth

Glacial and Interglacials

Millennial-scale climate variability during glaciations

The last deglaciation(s)

The Younger Dryas

Holocene climate - climate and societies

651-4010-00L Planetary Physics and Chemistry W 3 credits 2G P. Tackley

Abstract

This course aims to give a physical understanding of the formation, structure, dynamics and evolution of planetary bodies in our solar system and also apply it to ongoing discoveries regarding planets around other stars.

Objective

The goal of this course is to enable students to understand current knowledge and uncertainties regarding the formation, structure, dynamics and evolution of planets and moons in our solar system, as well as ongoing discoveries regarding planets around other stars. Students will practice making quantitative calculations relevant to various aspects of these topics through weekly homeworks.

The following gives an overview of the course content and approximate schedule (subject to change).

This colloquium comprises geophysical research presentations by invited leading scientists from Europe and overseas, advanced ETH Ph.D. students, new and established ETH scientists with specific new work to be shared with the institute. Topics cover the field of geophysics and related disciplines, to be delivered at the level of a well-informed M.Sc. graduate/early Ph.D. student.

Attendees of this colloquium obtain a broad overview over active and frontier research areas in geophysics as well as opened questions. Invited speakers typically present recent work: Attendees following this colloquium for multiple terms will thus be able to trace new research directions, trends, potentially diminishing research areas, controversies and resolutions thereof, and thus build a solid overview of state and direction of geophysical research. Moreover, the diverse content and delivery style shall help attendees in gaining experience in how to successfully present research results.

Introduction to Scanning Electron Microscopy

- Functional principles and operation modes of a scanning electron microscope. Methods and application fields for imaging (SE, BSE, FSE, AE, CL), X-ray spectroscopy (EDX), X-ray diffraction (EBSD, Channeling, Orientation Imaging), and electron diffraction (EBSD).

Methods for sample preparation

Practical exercises.

Prerequisites / notice

Full day block course after the end of HS

Prerequisite: Analytical methods in Petrology and Geology (651-4055-00L).

Max. 8 participants (incl. PhD students and external participants).

- Restricted attendance. Register with E. Reusser.

A comprehensive understanding of the interaction of electrons with condensed matter and details on the instrumentation and methods designed to use these probes in the structural and chemical analysis of various materials.

A comprehensive understanding of the interaction of electrons with condensed matter and details on the instrumentation and methods designed to use these probes in the structural and chemical analysis of various materials.

This course provides a general introduction into electron microscopy of organic and inorganic materials. In the first part, the basics of transmission- and scanning electron microscopy are presented. The second part includes the most important aspects of specimen preparation, imaging, and image processing. In the third part, recent applications in materials science, solid state physics, structural biology, and medical or biological imaging will be reported.

A comprehensive understanding of the most important geophysical methods: Potential field methods (Gravimetrics and Magnetics), Electrical and electromagnetic methods, Refraction and reflection seismics, Georadar. Discussion of diffusion design, sources and receivers and data processing.

Overview and understanding of the most important geophysical methods. Proposed solutions to assess and observe problems relevant to exploration and environmental geophysics in soil, ice and lithosphere at different scales. Getting familiar with measuring- and interpretation procedures. Pointing out the possibilities and limitations of geophysical methods.

Available through eDoz/ILIAS.

Additional material will be provided by the lecturers.

Overview of the most common experimental methods employed in petrology to determine thermodynamic and physical properties and phase equilibria of minerals, mineral assemblages, magmas and fluids. The basic principals of low, moderate, high and ultra-high pressure devices are discussed combined with an introduction into the synthesis of starting materials and the evaluation of run products.

1 credit

3 credits

1 credit

1 credit

3 credits
Objective
This course shall provide the basics of experimental petrology. The principal goals are the acquisition of basic knowledge about experimental equipment employed in petrology and the design and setup of an experimental study targeted to obtain quantitative data on phase relations, thermodynamic, kinetic and rheologic properties of earth materials as well as the examination, analysis and evaluation of experiments. At the end of the course, the participants should be able to evaluate experimental data independently and design appropriate experiments on their own.

Content
The course ‘Experimental methods in petrology’ covers the following subjects:

1. Introduction and historical summary of experimental petrology
2. Experimental methods at ambient pressure (1 bar) with practical exercise to determine the free energy of formation of wustite (FeO)
3. Experimental buffering techniques (phase rule, buffering of partial pressures of gases and supercritical fluids, buffering of mixed volatile phases at elevated pressures, buffering of activities and solid-solid solutions in solid phases
4. Experimental methods at moderate pressures: externally (cold seal) and internally (IHPV) heated gas-pressure apparatus with practical demonstration/exercise
5. High-pressure solid-media experimental techniques (piston cylinders)
6. Ultra-high-pressure experimental techniques (multi-anvil apparatus, diamond-anvil-cells (DAC))
7. Evaluation of petrologic experiments (preparation of run products, analytical and spectroscopic methods of examination and quantification)

Lecture notes
The practical work in the laboratories are conducted (with the exception of exercise #1) on a small research project where the various techniques and equipment are demonstrated and the practical use is trained.

Lecture notes
A summary of the material presented in the lectures are distributed weekly.

Literature
Currently, there is no comprehensive book available that summarizes the most important aspects of experimental petrology; publications relating to individual subjects are referred during the lectures.

Prerequisites / notice
This course addresses to a public (master and PhD students) that is interested in an introduction to experimental research in petrology, but does not require basic knowledge in experimental methods. However, basic knowledge in petrology and physical chemistry (thermodynamics) is required to follow the course.

<td>In this course, both classic and computer-based drawing and illustration-techniques are presented. We begin with sketches with the pencil and continue with Indian ink which we use for drawings using hatchings and dots. Finally, one drawing is carried out in detail with a pencil. This drawing will then be scanned and processed in PhotoShop. The emphasis is on practicing the methods.</td>
<td>The most important drawing techniques common applied in science -accurate observation -basic knowledge in image processing with PhotoShop</td>
<td>We offer the opportunity to develop drawing skills which can be applied for scientific studies and publications. We emphasis the reproduction of natural objects with and without interpretations. Technical and 3D-drawings as well as descriptive geometry are not dealt with in this course.</td>
<td>Recommended: Fischer, H. W. (1999): Naturwissenschaftliches Zeichnen und Illustrieren, Beringeria 3: 203 S., Würzburg.</td>

Palaeontological Colloquium (University of Zurich) E- 0 credits 1K University lecturers

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
UZH Module Code: BIO571

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Objective
Spezielle Vertiefung paläontologischer Kenntnisse.

Content
Vorträge von Institutsangehörigen und eingeladenen Gästen aus dem In- und Ausland über aktuelle Themen aus dem Gesamtgebiet der Paläontologie (Paläobotanik, Paläozoologie und Mikropaläontologie) mit anschliessender Diskussion.

Physics of Glaciers W 3 credits 3G M. Lüthi, G. Jouvet, F. T. Walter

Application of basic physical concepts to glaciers and ice caps. Understanding glaciers and ice sheets with simple physical concepts. Topics include the reaction of glaciers to the climate, ice rheology, temperature in glaciers and ice sheets, glacier hydrology, basal motion and calving glaciers. A special focus is the current development of Greenland and Antarctica.

Objective
The course outlines the physical principles governing the gravity-driven motion of glacier ice. This is applied to understand the response of glaciers and ice sheets to changes in their environment. Polar ice caps, ice streams and mountain glaciers and their recent rapid changes are discussed.

Content
The dynamics of glaciers and polar ice sheets is the key requisite to understand their history and their future evolution. We will take a closer look at ice deformation, basal motion, heat flow and glacier hydraulics. The specific dynamics of tide water and calving glaciers is investigated, as is the reaction of glaciers to changes in mass balance (and therefore climate).

Semester Paper in Paleontology (University of Zurich) W 3 credits 7A University lecturers

Does not take place this semester.
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Seminar Geochemistry and Petrology E- 0 credits 2S O. Bachmann, M. Schönächler, C. A. Heinrich, M. W. Schmidt, D. Vance

Seminar with external and occasional internal speakers addressing current research topics. Changing programs announced via D-ERDW homepage (Veranstaltungskalender)

Objective
Presentations on isotope geochemistry, cosmochemistry, fluid processes, economic geology, petrology, mineralogy and experimental studies. Mostly international speakers provide students, department members and interested guests with insight into current research topics in these fields.

Content
Wöchentliches Seminar mit Fachvorträgen eingeladener oder interner Wissenschafter, vornehmlich zu Themen der Geochemie, Isotopengeologie, Hydrothermalgeochemie, Lagerstättenbildung, Petrologie, Mineralogie und experimentelle Studien.

Seminar in Applied and Environmental Geophysics E- 0 credits 1S H. Maurer, J. Robertson

Seminar in Seismology E- 0 credits 1S S. Wiemer, D. Fäh, D. Giardini

Short seminars on a variety of popular topics in Seismology. The seminars present current problems and research activities in the seismological community.

Objective
Understanding of a broad scope of current problems and state-of-the-art practice in seismology.

Research Seminar Structural Geology and Tectonics E- Dr 0 credits 1S N. Mancktelow, J.P. Burg, M. Frehner

A seminar series with both invited speakers from both inside and outside the ETH.

Objective
The seminar series provides an opportunity to convey the latest research results to students and staff.

Content
Informal seminars with both internal and external speakers on current topics in Structural Geology, Tectonics and Rock Physics. The current program is available at: http://www.geology.ethz.ch/sgt/seminar/sgt_seminar.htm

Tunnelling I W 3 credits 2G G. Anagnostou, E. Pimentel

Basic aspects of design and analysis of underground structures. Conventional tunnel construction methods. Auxiliary measures (ground improvement and drainage, forepoling, face reinforcement); Numerical analysis methods.

Objective
Basic aspects of design and analysis of underground structures. Conventional tunnel construction methods. Auxiliary measures (ground improvement and drainage, forepoling, face reinforcement); Numerical analysis methods.

### Humangeography III (Geographies of Difference) (Universität Zürich)

**W 5 credits 1G+2S**

**University lecturers**

**Abstract**

**Objective**
- Sie vertiefen ihre theoretischen, empirischen und methodischen Fähigkeiten in folgenden Themenbereichen:
  - Gesellschaft und Raum
  - Gesellschaft und Entwicklung
  - Gesellschaft und natürliche Umwelt/Ressourcen
  - Offenheit und Geschlossenheit in Wirtschaft und Gesellschaft
  - Chancen und Herausforderungen einer globalisierten Weltwirtschaft
- Sie sind in der Lage, Verknüpfungen zwischen grundlegenden sozial- und wirtschaftswissenschaftlichen Theorien und deren Konkretisierung in der Geographie herzustellen.
- Sie können die erwähnten Themen mit ausgewähltem Faktenwissen verknüpfen und diskutieren
- Sie schulen Ihre analytischen und theoretischen Fähigkeiten und können diese in Diskussionen einbringen
- Sie können die Relevanz von weiterführenden wissenschaftlichen Texten diskutieren und mit einem Ausgangsstext verknüpfen
- Sie sind in der Lage, eine Diskussion über wissenschaftliche Themen zu strukturieren und - mit einfachen Moderationstechniken - zu moderieren

**Prerequisites / notice**
Besuch von GEO122.
Das Modul bietet eine kurze Einführung in einige Komponenten und Prozesse des hydrologischen Kreislaufes. Dabei werden einzelne Wasserspeicher (Schnee-, Boden und Grundwasser) und Flüsse zwischen den Speichern (Verdunstung, Niederschlag und Abfluss) betrachtet. Übungen ergänzen die Vorlesung.

651-4088-01L Physical Geography I (Fundamentals and Spheres) (University of Zürich)
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
UZH Module Code: GEO111

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

651-4121-00L Introduction to Cartography and Visualization (University of Zürich)
Does not take place this semester.
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH, course moved to spring semester.

UZH Module Code: GEO975

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

651-1617-00L Geophysical Fluid Dynamics and Numerical Modelling Seminar

651-4931-00L Heat and Mass Transfers in Magmatology
Heat and mass transfers in the crust control many aspects of the differentiation of our planet, including (1) type of volcanic eruptions we should expect at the surface of our planet, (2) the volcanic/plutonic ratio in the crust, and (3) how volcanic degassing occurs, with important consequences on the climate response following volcanic eruptions.

Objective The goal of this class is to learn about the modern methods and ideas on heat and mass transfers in magmatology through recently published papers and computer softwares. The class will allow students to explore some of the most challenging concepts in this field, and become familiar with state-of-the-art techniques to model these processes.

Content The class will focus mostly on reading recent literature on topics of interests, and will contain some computer exercises to allow students to work by themselves on some well-defined problems.

651-1091-02L Geological Colloquium
Invited speakers from the entire range of Earth Sciences. Selected themes in sedimentology, tectonics, paläontology, geophysics, mineralogy, paleoclimate and engineering geology on a regional and global scale.

Objective According to variable program.

Literature No

Prerequisites / notice The presentations are held in German. Membership of the Geological Society in Zurich is not required.

Compulsory Electives in Humanities, Social and Political Sciences

Recommended GESS compulsory elective courses (Type B) for D-ERDW.

see GESS Compulsory Electives: Type A: Enhancement of Reflection Capability

see GESS Compulsory Electives: Language Courses ETH/UZH

MSc Project Proposal

The MSc Project Proposal is only offered in autumn semester, a registration in spring semester is subject to special approval by the study director.

All students writing the MSc Project Proposal must attend an introductory lecture on "Conduct as a Scientist" by Prof. Tapio Schneider held in autumn semester.

Abstract The main objectives of the Master Project Proposal are to help students organize ideas, material and objectives for their Master Thesis, and to begin development of communication skills.

Objective The main objectives of the Master Project Proposal are to demonstrate the following abilities:
- to formulate a scientific question
- to present scientific approach to solve the problem
- to interpret, discuss and communicate scientific results in written form
- to gain experience in writing a scientific proposal

Prerequisites / notice All students writing the MSc Project Proposal must attend an introductory lecture on "Conduct as a Scientist" by Prof. Tapio Schneider held in autumn semester.

Master Thesis

The main purpose of the Master Project Proposal is to help students organize ideas, material and objectives for their Master Thesis, and to begin development of communication skills.
### Course Units for Additional Admission Requirements

**Abstract**

Enrolment only for MSc students who need this course as additional admission requirement.

**Objective**

The objective of this course is to build a solid fundament in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

**Content**

1. From "Statistics for research" (online)
   - Ch 1: The Role of Statistics
   - Ch 2: Populations, Samples, and Probability Distributions
   - Ch 3: Binomial Distributions
   - Ch 6: Sampling Distribution of Averages
   - Ch 7: Normal Distributions
   - Ch 8: Student's t Distribution
   - Ch 8: Distributions of Two Variables

From "Introductory Statistics with R (online)"

1. Ch 1: Basics
2. Ch 2: The R Environment
3. Ch 3: Probability and distributions
4. Ch 4: Descriptive statistics and tables
5. Ch 5: One- and two-sample tests
6. Ch 6: Regression and correlation

Abstract

This course looks into scientific theories and also empirical studies on human learning and relates them to the school.

Objective

Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

Content

Thematische Schwerpunkte:

Lernen als Verhaltensänderung und im Informationsverarbeitungsprozess: Die menschliche Gedächtnisfunktion unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzerwerb unter besonderer Berücksichtigung des Wissenstransfers; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen.

Lernformen:

Prerequisites / notice

This lecture is only apt for students who intend to enrol in the programs "Lehrdiplom" or "Didaktisches Zertifikat". It is about learning in childhood and adolescence.

| 851-0240-16L| Current Research on MINT Learning | W    | 1    | 1K    | E. Stern, P. Greutmann, E. Hafen, J. Hromkovic, N. Hungerbühler, A. Togni, A. Vaterlaus |
|             |                                  |      |      |       |                          |

Abstract

This colloquium focuses on the presentation of research projects conducted by the professorships participating in the competence center EducETH which concern learning in the STEM subjects. STEM stands for science, technology, engineering, and mathematics. Doctoral students and postdoctoral researchers will present their current projects and theoretical and methodological aspects will be discussed.

Objective

Participants are exemplarily introduced to different research methods used in research on learning and instruction and learn to weigh advantages and disadvantages of these approaches.

| 851-0238-01L| Support and Diagnosis of Knowledge Acquisition Processes (EW3) | W    | 3    | 3S    | L. Schalk, S. Hofer     |
|             | Enrolment only possible with matriculation in Teaching Diploma, except for students of Sport Teaching Diploma, who complete the sport-specific course unit EW3. |      |      |       |                          |

Abstract

In this seminar students learn advanced techniques to support and to diagnose knowledge acquisition processes in school.

Objective

The main goals are:

1. You have a deep understanding about the cognitive mechanisms of knowledge acquisition.
2. You have a basic understanding about psychological test theory and can appropriately administer tests.
3. You know various techniques of formative assessment and can apply these to uncover students’ misconceptions.

Prerequisites / notice

Für eine reibungslose Semesterplanung wird um persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

</tbody>
</table>

Abstract

Specialist aspects of biology are covered from the angle of imparting these to pupils, their historical development, and their significance for the subject, the individual and society.

Objective

After successfully completing the module, students should be in a position:

- to call up more in-depth specialist knowledge of biology, covering a wide range of topics, and to impart this to others.
- to explain biological concepts and principles, as well as the way they fit together.
- to analyse controversial topics and to give factual explanations for these.
- to conduct more in-depth work on a research topic and to compile a tuition unit based on this topic
- to prepare tuition units involving complex learning matter at a high specialist level which are suitably tailored to the recipients, and to teach these in a manner conducive to learning.
Demanding biological topics are dealt with under consideration of the special needs of persons involved in teaching. The module comprises the parts:

1) Lecture (Tues. 08.00-09.45 hrs)
2) Colloquium (every second Tues. 10.15-12.00 hrs., begins on first lecture day)
3) Seminar with presentation (every second Tues. 10.15-12.00 hrs., begins in second lecture week)
4) Semester thesis in a research group (3.5 weeks)

Performance Assessment:
Performance is assessed during the course of the entire modul, with a final test. Active participation in the colloquia and group seminars is required. The thesis report and an oral presentation have to be completed.

The Specialized Biology Course with an Educational Focus (12 CP) can be acknowledged, in agreement with the advisor of the respective elective major, as one of the two obligatory research projects (each 15 CP). In such a case, additional 3 CP must be obtained in another course.

In case of overbooking of the course, students enrolled in the Teaching Diploma in Biology will have priority for registration.

The course is organized jointly with the University of Zurich (Fachbereich Biologie) and is held at the Life Science Zurich Learning Center of the ETH Zurich and the University of Zurich.

551-0963-02L  
Specialized Biology Course with an Educational Focus II: Teaching Diploma  
W 6 credits 13A  E. Hafen, J. Egli, M. Zwicky

**Abstract**
Specialized aspects of biology are dealt with under the viewpoint of their presentation, their historical development, their significance for the field, the individual and society.

**Objective**
The goal is to promote the ability to understand biological concepts, principles and their interrelationships and to communicate specialist knowledge to various groups of recipients in an understandable manner.

**Content**
Demanding biological topics are dealt with under consideration of the special needs of persons involved in teaching. The module:

1) Lecture (Tues. 08.00-09.45 hrs)
2) Colloquium (every second Tues. 10.15-12.00 hrs., begins on first lecture day)
3) Seminar with presentation (every second Tues. 10.15-12.00 hrs., begins in second lecture week)
4) Semester thesis in a research group (3.5 weeks)

**Lecture notes**
None.

**Literature**
Specific references will be made available for the individual projects.

**Prerequisites / notice**
The program of this course represents one half (6 CP) of that of the Specialized Biology Course with an Educational Focus (551-0963-00, 12 CP).

### Subject Didactics

<td>W</td>
<td>2 credits</td>
<td>2U</td>
<td>P. Faller</td>
</tr>
</tbody>
</table>

**Abstract**
Students conduct a series of "classical" biological school experiments and therefore gain practice and experience in this area.

**Objective**
Implementation of Subject Didactics I and II with the focus on conducting biological experiments in schools. This includes finding, testing and further developing suitable protocols for different subject areas of school biology. Working out how to didactically embed the experiments in lessons.

Students can perform, off the cuff, 12 school experiments (which they have tested themselves), from the different subject areas, and conduct these correctly in technical terms. They can incorporate these experiments in their tuition in a didactically meaningful manner.

**Content**
2. Die Studierenden führen alle ausgearbeiteten Experimente selber durch.

**Lecture notes**
Hand out of course material.

**Prerequisites / notice**
Der Teil biologische Experimente findet im Rahmen von 7 Halbtagen statt.

**Abstract**
Simultaneous enrolment in Introductory Internship Biology
- course 551-0968-00L - is compulsory.

**Objective**
- Students can discuss and put into practice in their teaching work the conditions and objectives set out in the regulations governing the school-leaving examination (Matura), the framework curriculum and the conditions and objectives specified by their school.
- They are in a position to select learning objectives and formulate these on the basis of the target level model. They can plan and prepare lessons and can also develop appropriate learning assignments.
- Students can reconstruct specialist contents in didactic terms and develop teaching modules suitable for the different levels from these on the basis of the subject structure and learner requirements.
- They can reduce the complexity of subject-based specialist contents and present them in such a way that they are comprehensible and meaningful for learners.
- They can select appropriate media for their work (e.g. school books) and use these. They can employ appropriate experiments.
- The students can use different forms of examination for monitoring performance.
- Students are in a position to implement and discuss the concepts of biology teaching and learning on the basis of specific topics covered in school biology.

Prerequisites / notice

Der Chemieunterricht am Gymnasium soll einerseits dem zukünftigen Nichtnaturwissenschaftler ein grundlegendes Rüstzeug an chemischen Kenntnissen und Fähigkeiten für den Alltag an die Hand geben, andererseits aber auch auf ein naturwissenschaftlich orientiertes Hochschulstudium vorbereiten können. Diese beiden Anforderungen sind im Unterricht gleichermaßen zu berücksichtigen.

Da viele Lerninhalte zudem zwingend sequentiell und einander benützend strukturiert sind, ist dem logischen und aus Schülerperspektive nachvollziehbaren Aufbau des Unterrichts besonderes Augenmerk zu schenken. Dies bedingt eine besonders feine Abstimmung von fachlichen Inhalten unterschiedlichen Niveaus und der für ihre Vermittlung eingesetzten didaktischen Methoden und Techniken auf die kognitive Leistungsfähigkeit der Lernenden.

Anhand der Diskussion ausgearbeiteter und bewährter Beispiele, aber auch durch selbständiges Proben und mit Hilfe selbst zu erstellender kleiner Unterrichtsbausteine soll die zukünftige Lehrkraft befähigt werden, einen den spezifischen Rahmenbedingungen angepassten eigenen Unterricht zu konzipieren und durchzuführen, der diesem hohen Qualitätsanspruch genügen kann.

402-0091-00L Teaching science in Higher Education ■ W 2 credits 1V G. Schiltz

Abstract

This course imparts fundamental didactic concepts that are relevant to teaching science in a Higher Education context.

Objective

Students are able to characterize and to discuss the model of outcomes based education. Students are able to transfer the basic concepts of this model (ILO, TLA, assessment, constructive alignment) to science education. (bitte das Buch in der Auflage von 2011 vor dem ersten Treffen erwerben!)

Abstract

The energy and related environmental problems, the physics principles of using energy and the various real and hypothetical options are discussed from a physicist’s point of view. The lecture is intended for students of all ages with an interest in a rational approach to the energy problem of the 21st century.

Objective

Scientists and espially physicists are often confronted with questions related to the problems of energy and the environment. The lecture tries to address the physical principles of today’s and tomorrow energy use and the resulting global consequences for the world climate.

Content

Introduction: energy types, energy carriers, energy density and energy usage. How much energy does a human needs/uses?

Energy conservation and the first and second law of thermodynamics

Fossil fuels (our stored energy resources) and their use.

Burning fossil fuels and the physics of the greenhouse effect.

physics basics of nuclear fission and fusion energy

controlled nuclear fission energy today, the different types of nuclear power plants, uranium requirements and resources, natural and artificial radioactivity and the related waste problems from the nuclear fuel cycle.

Nuclear reactor accidents and the consequences, a comparison with risks from other energy using methods.

The problems with nuclear fusion and the ITER project.

Nuclear fusion and fission: “exotic” ideas.

Hydrogen as an energy carrier: ideas and limits of a hydrogen economy.

new clean renewable energy sources and their physical limits (wind, solar, geothermal etc)

Energy perspectives for the next 100 years and some final remarks

Further information is available from the lecturer via email: mamohr@ethz.ch

Simultaneous enrolment in Introductory Internship Physics - course 402-0092-00L - is compulsory for Teaching Diploma Physic

Objective

Die Studierenden verfügen über fachdidaktisches Grundwissen für den Physikunterricht an einer Mittelschule. Sie können eigene Lektionen unter Berücksichtigung der vielfältigen Rahmenbedingungen planen, durchführen und evaluiieren. Sie reflektieren ihren Unterricht und sind bestrebt, ihn didaktisch und pädagogisch weiter zu entwickeln.

Die Studierenden kennen die Einsatzzmöglichkeiten, Chancen und Schwierigkeiten verschiedener Unterrichtsmethoden und Hilfsmittel. Sie können die Eignung von Unterrichtsformen im Hinblick auf eine Lernsituation beurteilen. Sie bemühen sich in ihrem Unterricht, geeignete Methoden und Medien angesagt an die Klasse und das Thema einzusetzen.

Content

Thematische Schwerpunkte
Fachspezifisches; Sachstrukturen der gängigen Unterrichtsthemen, Alltagsbezüge, Fehlvorstellungen, Demonstrations- und Schülerexperimente, Arbeitsmittel zu physikalischen Themen des Grundlagen- und Schwerpunktunterrichts
Einsatz verschiedener Unterrichtsmaterialien: Experimente, Computer, Taschenrechner, Video, Simulation Unterrichtsformen: Lernaufgabe, Werkstatt, Puzzle, Projekt, Gruppenarbeit, Praktikum
Lernformen
Interaktive Lehr-Lernveranstaltung mit Vorträgen und Demonstrationen des Dozenten, studentischer Einzel- und Kleingruppenarbeit, kurzen Präsentationen der Studierenden, Vertiefung der Inhalte durch Bearbeitung von Aufträgen ausserhalb der Kontaktstunden

402-0091-00L Teaching science in Higher Education Teaching W 2 credits 1V G. Schiltz

Abstract

This course imparts fundamental didactic concepts that are relevant to teaching science in a Higher Education context.

Objective

Students are able to characterize and to discuss the model of outcomes based education. Students are able to transfer the basic concepts of this model (ILO, TLA, assessment, constructive alignment) to science education.

The lecture series, spread over two terms, deals with the leading concepts of (military) strategy and theories of war from antiquity to the present. It focuses in particular on the backgrounds of these concepts, their implementation as well as their significance for subsequent conceptual thinking. The participants know the classical conceptions of strategy and war theory from antiquity to the present against their specific background. They recognize aspects, which are useful for the understanding of modern/current conflicts. They are capable of analyzing critically original texts and modern scholarly works in the field of strategic studies. The lecture series introduces the basic concepts of strategy and war theory and wants to present the variety of asymmetric warfare throughout history. It critically highlights in particular Sun Tzu, Machiavelli, Jomini, Clausewitz, Moltke, Mahan, Corbett, Douhet, Fuller, Liddell Hart, Swetchin, Tuchatschevsky, Mao and Che Guevara, etc. (see program). If appropriate, a specific Swiss view is being applied. The lecture series is structured along the lines of the concept of "Military Revolution" and starts with the formation of modern, European armed forces after the Oranian Army reform in the 17th century. Based on the "Military Revolution" approach, the lecture examines the structural changes regarding the armed forces and the development of warfare from the 18th to the 20th century. Special emphasis will be put on how the battlefield was revolutionized due to the Napoleonic wars, the industrialization in the 19th century, the First World War, the mechanization and totalization during the Second World War and the period of the Cold War.

The lecture is supported by a virtual learning environment containing relevant documents (presentations and texts) and information to further literature.

Military Psychology and Pedagogy I (without Exercises)

Abstract
Examine the fundamentals of the two sciences and establish links with military life. Discuss various schools of thought in psychology and focus on content and process theories of motivation. Explore characteristics of pedagogical thinking and discuss the values of military education with reference to the young adult serving in the armed forces.

Objective
- Becoming acquainted with basic psychological views of human behaviour and experience
- Knowing content- and process theories of motivation and being able to transfer them to the military context
- Knowing the possibilities and limitations of military education and deriving consequences

Content
Overall, the objective is to become acquainted with the basics of both scientific areas and to make references to military practice. Military psychology is a branch of applied psychology; consequently selected aspects of psychological principles will be covered. Military pedagogy hasn't yet established itself firmly as an independent scientific discipline, it nevertheless can draw on a deep-seated tradition in Switzerland. Thus, the great importance that has been attached to the discussion of education in Swiss society and academia will be taken into account. Subjects:
- History of military psychology
- Psychological images of humanity (psychoanalysis, behaviourism, behavioural biology, humanistic psychology, cognitivism)
- Motivational theories
- Defence-, service-, operational- and combat motivation
- Swiss military pedagogy
- Education as defining feature of pedagogic thinking and acting

Literature
- Stadelmann, J.: Führung unter Belastung, Huber, Frauenfeld 1998 (provided as pdf)
- Education as defining feature of pedagogic thinking and acting
- Swiss military pedagogy
- Motivational theories
- Psychological images of humanity (psychoanalysis, behaviourism, behavioural biology, humanistic psychology, cognitivism)
- History of military psychology
- Motivational theories
- Education as defining feature of pedagogic thinking and acting

Military Business Administration II - Case Examples

Abstract
The elective course Military Business Administration II builds on the mandatory course Military Business Administration I and adds to it. It deals with in-depth case studies from international security and economic policy with a special emphasis on the economic and practical relevance of these issues for the Swiss Armed Forces.

Objective
Students who are intrinsically interested in business-related issues will be provided with a big picture that transcends the micro view of business administration. Students learn how to integrate security and resource-related issues into a global economic analysis and how to derive relevant consequences, particularly economic ones, for Switzerland.
The program of the course is organized into 14 units of 90 minutes each. The units combine the elements of lecture (where analytical concepts are taught) and application (where these concepts are applied). Additionally, guest lecturers will hold talks on selected issues.

- Swiss economic autarchy - madness or option?
- Global resource positions and world trade: Implications for the Swiss Armed Forces I
- Global resource positions and world trade: Implications for the Swiss Armed Forces II
- Economic causes of military instability
- Aggressive emerging economies: Economic growth and rearmament
- The process of an arms deal
- Costs and financing of a military conflict
- Economic analysis of terrorism
- Economic analysis of cyberwar
- Economic analysis of the present GSOA initiative: Compulsory military service vs. voluntary militia
- Global arms production and international arms trade
- The privatisation of military security
- Standardisation and interoperability: Does NATO membership increase Swiss military efficiency
- Written exam

Lecture notes
As this course has been completely redesigned and is being offered for the first time in the fall semester of 2013, a script is not yet available. However, the lecturer will distribute all necessary course material in time and directly to the students, either in the classroom or by uploading files to a public server.

Literature
The Lecturer will distribute all necessary literature directly to the students by disseminating pdf files or citing links to online references.

Prerequisites / notice
Exam "Military Business Administration I" passed successfully or profound basic knowledge of business administration and economics. The course is open to external participants.

853-0064-00L Military Sociology I Z 3 credits 2V T. Szvircsev Tresch

Abstract
Beside of the most important terms of sociology, demographic changes and the related value and structure change will be analysed. The second part focuses on organizational sociology. Thirdly, the course examines to which extent armed forces can be considered as organizations like any other and to which extent they constitute a special case from an organizational and normative point of view.

Objective
Recognize and explain current changes (social change) in modern society (individualisation, pluralisation); describe demographic changes in Switzerland; explain the structures of societies; define issues and fields of research in modern military sociology and explain the foundations of organisational sociology; explain the military in terms of organisational sociology and identify specific traits of the military as an organisation.

Content
Societal change; organizations as societal phenomena; aims, structures, environments of organizations; specifics of the military as an organization; impacts of technological and societal changes on the armed forces in modern societies.

Literature
A reader with a set of texts will be handed out.

- Yemen: A Failed State?
  Particularly suitable for students of D-ARCH, D-BAUG, D-HEST, D-INFK, D-ITET, D-MAVT, D-MATL

**Objective**

1. Examine the concept of failed state within the International relations literature.
2. Take a closer look at Yemen(s) political history(ies), its/their political and social structures, and power dynamics.
3. Introduce the concept of the 'cunning state' and its exploitation of the discourse of failed state
This seminar looks at the concept of failed states and how useful it can be in describing the situation in a country like Yemen. It will also take a closer look at Yemen(s) political history(ies) and its/their political and social structures. Students are expected to write a paper and make a presentation.

**853-0725-00L**

**History Part One: Europe**  
W 3 credits 2V M. Mühlheim

**Abstract**  
Using concrete regional examples, this lecture offers a survey and analysis of the crucial historical transformations that engendered "modernity" in Europe from the late 18th to the mid 20th centuries.

**Objective**  
At the end of this lecture course, students can: (a) highlight the most important changes in the "long nineteenth century" in Europe (b) explain their long-term effects; and (c) relate these changes to global developments.

**Content**  
The thematic foci include: the economic and social consequences of the industrial revolution, the genesis of political ideologies and social movements, shifts in gender roles, colonialism and imperialism, as well as the emergence of consumerism and a "leisure society."

**Lecture notes**  
Power Point Slides and handouts will be made available at https://ilias-app2.let.ethz.ch/goto.php?target=crs_85655&client_id=ilias_lda in the course of the semester.

**Literature**  
Mandatory and further reading will be made available at https://ilias-app2.let.ethz.ch/goto.php?target=crs_85655&client_id=ilias_lda.

**051-0363-00L**

**History of Urban Design I**  
W 2 credits 2G V. Magnago Lampugnani

**Abstract**  
The lecture covers the time from the beginning of urban culture until the mid 19th century. With selected examples it emphasizes on the historical plannings and methods of European cities. Each specific urban development will be presented within a broader context.

**Objective**  
This course analyzes the history of urban architecture primarily in its existing three dimensional form as a complex human artefact. It also explores the inspirations that prompted the creation of this artefact: philosophical and religious concepts, social conditions, property relationships and the mechanisms that exploit the economics of real estate and the influence of building technology. Intellectual, literary or artistic modes of thought will also be assessed with regard to their impact on urban development. Urbanism has its own distinctive approach as a discipline, but it is also clearly responsive to the influence of related disciplines. Study is made of actual cities and urban expansion plans which are in the process of implementation, as well as unrealized projects and visions of the future. These projects sometimes illustrate ways of thinking that are equal to, or clearer than, actual urban situations.

**Content**  
In the first semester an introduction to the discipline and the methods are given along the thematic issues from the beginning of urban culture until the mid-19th century.

1. Introduction to the discipline and method: The history of urban design as a historical project
2. Athens and Rome in the ancient world: Myth, self-portrayal and speculation
3. From the spirit of equality to the colonial module: Greek and Roman City foundings
4. From the urban ideal to new cities in the cities of Austria and the Renaissance
5. Baroque strategies: The new organisation of Rome under Sixtus V, the production of Versailles under Louis XIV and the invention of St. Petersburg
6. The city between Absolutism and Enlightenment: baroque defence-designs, the European colonization of the American continent and the reconstruction of Lisbon
7. Ideology and speculation after the Glorious Revolution: landscapes and urban figurations in England from 1650-1850
8. Between modernization, Grandeur and repression: Embellishment in Paris from 1750-1830
9. The construction of the bourgeois city: Georges-Eugène Haussmann transforms Paris into the capital of the 19th century
10. Architectural insertion and plan for the expansion of the city: From the Berlin of Karl Friedrich Schinkel to James Hobrecht
11. Neoabsolute power, bourgeois self-confidence and Marxian Idealism: The Viennese Ringstrasse and Idefonso Cerdas Ensanche for Barcelona

**Lecture notes**  
The lectures are accompanied by a script (two semesters of the bachelor studies), that can be purchased at the chair for the history of urban design (HIL D 75.2) at the price of CHF 30.-. The script serves as an auxiliary means to the attended lecture compiling the most important illustrations showed and the names and dates of the buildings and its builders along with a short introductory note.

**Literature**  
Further recommended literature to consult is listed within the script.

**051-0331-00L**

**History of Art and Architecture I**  
W 4 credits 4G L. Schmitt, U. Schulte-Umberg

**Abstract**  
The lecture conveys historical knowledge about architecture and art as well as methodical knowledge as a preparation for the independent handling of historical sources and scientific literature. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

**Objective**  
Acquaintment of basic knowledge of the history of art and architecture, resp. of methodical basic knowledge of historical working. The history of art and architecture is part of our reality: it confronts us in the historically shaped environment of the city and plays an essential role in the creation of architecture. The historical lectures are therefore part of the fundamental courses of the undergraduate programme in architecture. On the basis of cultural and art-historical research the courses impart knowledge about architecture and art from ancient times to the present. At the same time they sharpen the perception for the conditions and capabilities of building activity in history. Moreover, they convey methodical knowledge and technical language skills and are meant as a preparation for the independent handling of historical sources and scientific literature.

The first one-year course aims at these goals in the form of exemplary epoch representations which through light upon the historical continuities. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

**Content**  
3 Skripte sind auf der Professur, HIL C 70.5-8, erhältlich:

- Architektur der Klassischen Antike, Fr. 15.-
- Renaissance und Barock, Fr. 15.-
- Aufklärung bis Moderne, Fr. 15.-

**Lecture notes**  
- Zu beziehen am Dienstag und Donnerstag

**Prerequisites**  
The course can not be taken by Master students of the D-ARCH, who have already completed it within the Bachelor programme.
Abstract
The two-semester course offers an introduction to the history and theory of architecture from the industrial revolution up to now. Based on current questions a variety of case studies will be discussed.

Objective
The aim is to give an overview on crucial events, works of art, buildings and theories since the beginning of the 19th century up to today. The course should enhance the comprehension of historical and theoretical issues, and allow the students to localize their own practice within a broader historical context.

Content
The subject of this lecture course is the history and theory of architecture since the beginning of the 19th century up to now. It examines the architectural answers to the changing technical inventions and social practices. Consequently, the focus will be on individual architects or buildings than on various themes that determined the architecture of the period.

701-0791-00L
Environmental History - Introduction and Overview
Number of participants limited to 100.

Abstract
Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

Objective
Introduction into environmental history; survey of long-term development of human-nature-interrelations; discussion of selected problems.

Improved ability to assess current problems from a historical perspective and to critically interrogate one's own standpoint.

Lecture notes
Course material is provided on OLAT.

Literature

Prerequisites / notice
Students are asked to write an exam during the second last session (11.12.2015).

851-0300-95L
Writing Between Cultures. German-Jewish Literature and Cultural Knowledge 1822-1933

Abstract
German-Jewish literature, which includes famous modern authors from Heine to Kafka, is remarkable because it is a cultural double. This lecture course shows the at once productive and problematical dual, transcultural relationship of its history. The key question is how, in this relationship, cultural knowledge is discussed in theoretical, political and literary terms.

Objective
Overview on the German-Jewish literature in Germany and Austria between ca. 1822 and 1933
- Discussion of key text of the most important German-Jewish authors (such as Heine, Börne, Herzl, Kafka, Döblin, Kraus, Roth, Wolfskehl, Lasker-Schüler)
- Analysis of theoretical and cultural reflections in German-Jewish literature, art and culture
- Answer to the general question: how cultural knowledge was theorized and discussed in (Jewish) modernity

Content

851-0300-92L
Institutionalisation of Modernity: "Der Sturm", a German Art & Literary Magazine, Edited by Herwarth

Abstract
Based on the contributions published between 1910 and 1932 in "Der Sturm", the seminar gives an overview on the unique diversity of literary and cultural movements in Berlin between the turn of the century and the Weimar Republic. Besides the reading of literary texts, the lecture focuses on the aesthetic, philosophical and political discourses of the epoch.

Objective
The students will get to know the literature and the art of an epoch during which a specific large town culture emerged in Berlin. The wide range of reading materials deals with the diverse literary movements from the Fin de Siècle until the Neue Sachlichkeit, including Expressionism. Many of the writers and artists presented in the course are bound through their collaboration with the cultural and art journal "Der Sturm", one of the most important publication organs that offered a forum to modern art representatives from entire Europe. This journal is absolutely exemplary for the epoch, its trends and breaks and therefore requires a closer look. It should become clear how in a time of extreme social and political tensions resulting in nationalist, imperialist and racist tendencies, a unique form of supranational discussion and exchange emerged that would revolutionize and leave its mark on the art discourse.

Content
- Discussion of key text of the most important German-Jewish authors (such as Heine, Börne, Herzl, Kafka, Döblin, Kraus, Roth, Lasker-Schüler), is between two Kulturen angelegt: der deutschen und der jüdischen. Die Vorlesung entwickelt die Geschichte der deutsch-jüdischen Literatur anhand der produktiven und zugleich konfliktreichen Spannung dieses transkulturellen Verhältnisses. Sie fragt dabei insbesondere, wie in diesem deutsch-jüdischen Zwischenraum kulturelles Wissen theoretisch geformt und reflektiert, politisch verhandelt sowie literarisch umgesetzt wurde.

Literature

851-0306-05L
Literature and Technology - Simulations, Prototypes, Machines

Abstract
This seminar is dedicated to Thomas Mann's "Zauberberg", the great Bildungsroman und Zeitroman (Mann) from the author's middle period. Mann himself feared that the novel might be intellectually overburdened with contexts and concepts. The seminar will attempt to elucidate these contexts from the point of view of the history of ideas and knowledge and will take into account current research.

Objective
- Students familiarise themselves with different relations between literature and technology. They can verbalise and analyse central contentions.
- The aim is to give an overview on crucial events, works of art, buildings and theories since the beginning of the 19th century up to today. The course should enhance the comprehension of historical and theoretical issues, and allow the students to localize their own practice within a broader historical context.

Content
Knowledge of Diversity in the Work of Oskar Panizza

Literature
Andreas B. Kilcher (Hrsg.); Metzler Lexikon der deutsch-jüdischen Literatur. 2., aktualisierte und erweiterte Auflage, Stuttgart 2012.
Number of participants limited to 25.

Abstract
The seminar is dedicated to the texts of scandal author Oskar Panizza. Especially the dogmas and beliefs of the Christian churches caused in this perception the grievances in society. Other the subject regimented categories such as ethnicity and gender are denounced by Panizza and discussed in his writings in many ways.

Objective
- Acquiring cultural scientific aspects and perspectives of literature and literary history: alterity, ethnicity, gender constructions, social differences, religion, etc.
- Critical analysis of recent research positions and research questions
- Training problem oriented circumvention of literature and its social functions in historical contexts
- Developing genre typologial and narratological foundations
- Independent balancing writing and writing of oncoming ideas

Content

Literature
- critical reading of theoretical and literary texts that deal with the tension between scientificity and historicity.
- question the paradigm of historicity with regard to both the natural sciences and the humanities;
- analyzing photography and relate these to the literary discourse of specifically the 20th century.

851-0300-94L Combinatorics: History of a Method Between Mathematics and Literature
Particularly suitable for students of D-MATH
W 3 credits
A. Klicher

Abstract
Combinatorics is a procedure shared by various disciplines. In mathematics it concerns the calculation of quanta and probabilities, in philosophy the creation of encyclopedic literature, in mysticism the achievement of ecstatic experience, in literature, finally, experimental writing. This course investigates these different forms of combinatorics.

Objective
- comparative understanding of combinatorics as a translational and transdisciplinary procedure to generate knowledge
- cultural and epistic history of combinatorics since the medieval ages
- combinatorics in theology, mysticism and occultism
- combinatorics in philosophy and the natural sciences
- combinatorics in literature and literary theory

Content
Kombinatorik, die Verknüpfung von Elementen, tritt als ein Verfahren in unterschiedlichen Disziplinen und Bereichen des Wissens auf: In der Mathematik, wo man sie zuerst vermutet, ermöglicht sie die Berechnung von Anzahlen und Wahrscheinlichkeiten. Zugleich spielt die Kombinatorik auch eine grosse Rolle in der Philosophie (als ein Verfahren zur Erzeugung eines enzyklopädischen Wissens), in der Mystik (zur Erlangung ekstatischer Erfahrung) und in der Literatur (als ein experimentelles Schreibverfahren). In dem Seminar werden die vielfältigen Funktionen von kombinatorischen Verfahren zwischen mathematischer, philosophischer, mystischer und ästhetischer Anwendung verglichen und analysiert.

851-0300-96L Literature and Photography
Does not take place this semester.
W 3 credits
2G

Abstract
The course focuses on writers (such as Henry James, Virginia Woolf, Arthur Miller, Charles Dickens, George Elliot and Oscar Wilde) who by approaching the technique of photography i.e. its optical and chemical procedures have discovered novel modes and methods of representation.

Objective
The course introduces students to what an interdisciplinary approach to literature implies. Students are familiar with the main techniques of photography and relate these to the literary discourse of specifically the 20th century.

851-0300-97L Return of Religions, 'Religious turn', Postsecularity: On the Contemporary Prominence of Religions
W 2 credits
D. Weidner

Abstract
Facing the recent return of religion in the public sphere, we discuss concepts of the relation of religion and modernity: the classical theories of secularization and the actual discussion of the post-secular, anthropology of religion, political theology, psychoanalytic and postcolonial theories of religion.

Objective
- The students get familiar with different theories of religion and of the relation of religion and modernity in particular. They discuss the conceptual and epistemological implications of these theories and understand the problems of determining religion, especially under modern conditions. They reflect on the differences and even conflicts between different approaches and face their respective ideas about modernity. The course thus also aims to deepen the self understanding of our modern standpoint in relation both to one's own religious identity and history and to the religion of 'Others'.

851-0300-98L History and/or "Rigorous" Science?
W 3 credits
C. Janey

Abstract
The difference between the natural sciences and the humanities is often characterized in terms of their relation to history: here rigorous method & transhistorisitc concepts, there historically conditioned, and hence relative, understanding. But the discrepancy between transhistorical immanence and historical constitution figures also within both disciplines. We will discuss precisely this discrepancy.

Objective
- reflect on the ideal of scientific rigor, as well as the historical constitution of all knowledge;
- question the paradigm of historicity with regard to both the natural sciences and the humanities;
- critical reading of theoretical and literary texts that deal with the tension between scientificity and historicity.

Writing for Others - Science and Public
F. Kretzen
1 credit
ECTS

Content
We will look at a number of essays and texts on that subject. We will also read Sadie Smith's highly entertaining novel "White Teeth" which has a very elaborate not to say artificial plot. One line of the story is about the geneticist Marcus Challen and the "Future Mouse" he designed.

Literature
Recommended Reading: Sadie Smith: White Teeth; Emile Zola: The Experimental Novel

---

**Data: 06.04.2020 13:01**

**Autumn Semester 2015**
Content

This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their ideas in so far as they have some relation to behavioral science. The possible research areas are wide and may include theoretical as well as empirical approaches in Social Psychology and Research on Higher Education, Sociology, Modelling and Simulation in Sociology, Decision Theory and Behavioral Game Theory, Economics, Research on Learning and Instruction, Cognitive Psychology and Cognitive Science. Ideally the students (from Bachelor, Master, Ph.D. and Post-Doc programs) have started to start work on their thesis or on any other term paper.

Course credit can be obtained either based on a talk in the colloquium plus a written essay, or by writing an essay about a topic related to one of the other talks in the course. Students interested in giving a talk should contact the course organizers (Schinazi, Hoelscher) before the first session of the semester. Priority will be given to advanced / doctoral students for oral presentations. The course credit will be obtained by a written report of approximately 10 pages. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.

851-0609-05L The Economics of Climate Change W 3 credits 2V

Does not take place this semester.

Particularly suitable for students of D-TET, D-MATL, D-MAVT, D-USYS

Abstract

Climate change is one of the most pressing issues that governments and the global community have to face. This course outlines the problem of climate change and discusses the economic solutions (both domestic and international) to this problem.

Objective

This course has a number of objectives: (i) To outline the problem of climate change (ii) to discuss and compare the theoretical economic solutions to combating climate change (iii) to present existing climate change mitigation actions in an economic context and (iv) to outline possible future climate policy issues.

Content

Economics of pollution, Optimal level of greenhouse gases, International Environmental Agreements, Tradable pollution permit markets, : Carbon Taxes, Technological innovation and R&D, The optimal approach to control Climate change, The future of Climate change policy

Literature

Required reading: Perman et al. (2003), Natural Resource and Environmental Economics, Pearson Addison Wesley.

Also, Journal articles will be cited

Prerequisites / notice

Prerequisites: The course relies heavily on the concepts and techniques used in basic game theory. Therefore prior knowledge is recommended

851-0626-01L International Aid and Development W 2 credits 2V I. Günther

Does not take place this semester.

Prerequisites: Basic knowledge of economics

Abstract

The course gives economic and empirical foundations for a sound understanding of the instruments, prospects and limitations of international development aid.

Objective

Students have a theoretically and empirically sound understanding of the prospects and limitations of international development aid. Students are able to critically discuss the various aid instruments of bi- and multilateral donors and NGOs.

Content

Introduction to the Determinants of Underdevelopment; History of Aid; Aid and Development: Theories and Empirics; Political Economy of Aid; Experience and Impact of Aid; New Instruments of Aid: e.g. Micro-Finance, Budget-Support; Fair-Trade.

Literature

Articles and book abstracts will be uploaded to a course website.

151-0757-00L Environmental Management W 2 credits 2G R. Züst

An environmental management system has the objective to continuously improve the environmental performance of the activities, products and services of a company. The company has to introduce different management procedures. The goal of this lecture is to provide basics and specific procedure to implement the environmental dimension in the planning and decision making processes of an organisation.

Objective

Overview on environmental management and environmental management systems, general methods and principles.

Content

Introduction to environmental management / environmental management systems, energy and material flows; economical and ecological problems in industry; characterisation of an enterprise (incl. management handbook); structur and contents of an environmental management system; overview on the ISO 14001 ff. series; methods for environmental evaluation and assessment; integrated management systems; planning methodology and life-cycle-design design; planning exampl

Lecture notes

Information about environmental management and environmental management systems will be provided by a CD or mail.

Literature

A list with literatures and links will be provided

Prerequisites / notice

Delivery of a case study, worked out in groups. Language: Teaching in English on request.

860-0006-00L Statistical Data Analysis ■ W 3 credits 3G M. Höglinger, I. Günther, K. Harttgen

Number of participants limited to 20.

Abstract

This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with statistical software such as Stata.

Objective

Students - have a sound understanding of linear and logit regression - know some basics about regression models for multinomial, ordered, or censored response variables, as well as for count data - know strategies to test causal hypotheses using regression analysis with experimental and quasi-experimental methods - are able to formulate and implement a regression model for a particular research question and a particular type of data - are able to critically interpret results of a regression model, in particular, regarding causal inference

Content

The topics covered in the first part of the course are linear and logit regression analysis. Extensions to regression models for ordered, multinomial or censored response variables, as well as for count data, will be addressed briefly. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, propensity score matching, and randomized controlled trials.

The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will be enabled to critically read and assess published empirical social science studies.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of one fourth. Students are assisted in solving the assignments during the exercises session. Support is provided for the analysis software Stata, but students are free to choose R, SPSS or any other software to solve the assignments.

363-1027-00L Introduction to Health Economics and Policy W 3 credits 2V W. Mimra

Health expenditures constitute about 10% of GDP in OECD countries. Extensive government intervention is a typical feature in health markets. Risk factors to health have been changing with growing importance of lifestyle factors such as smoking, obesity and lack of physical activity. This course gives an introduction to the economic concepts and empirical findings in health economics.

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 560 of 1434
**Objective**
Introduce students without prior economics background to the main concepts of health economics and policy to enhance students understanding of how health care institutions and markets function.

**Content**
The course gives an introduction to the economic concepts and empirical findings in health economics to enhance students understanding of how health care institutions and markets function. First, the three important decisions made by individuals will be analyzed: What determines the health behaviors, like the intensity of preventive measures like sport, that an individual undertakes? What types and amount of personal health care services does an individual demand? How much health insurance coverage will be purchased?

In a second part, the major participants on the supply side of health care markets - physicians, hospitals, nurses and pharmaceutical manufacturers - will be discussed. E.g., how important are financial incentives in the choice of medicine as a career, specialty choice and practice location? What does it mean and imply that a physician is an agent for a patient? How do pharmaceutical firms decide on investments in new products and how can public policy encourage pharmaceutical innovation?

The choices made by societies about how health care services are financed and about the types of organizations that supply health care will be addressed in a third part. One important choice is whether a country will rely on public financing of personal health care services or encourage private health insurance markets. How could and should a public health insurance system be designed? What health care services should be included or excluded from a public system? Another important choice is whether a society relies on government provision of health care services, private provision by not-for-profit or for-profit organizations or some combination. The advantages and disadvantages of the alternatives will be discussed to provide a framework for analyzing specific types of health care systems.

**Literature**

---

**Objective**
Understand the limits and the potential of corporate sustainability for sustainable development

**Content**
I aim to introduce students to the concepts and tools of modern finance and to make them understand the limits of these tools, and the many problems met by the theory in practice. I will put this course in the context of the on-going financial crises in the US, Europe, Japan and China, which provide fantastic opportunities to make the students question the status quo and develop novel solutions.

In-depth case study of concrete corporate sustainability challenge in the group project phase, such as: How to deal with environmental pressure groups? How to use the strengths of business to solve pressing sustainability problems? How to catalyze radical innovations for sustainability? How to invest money in a sustainable way?

**Literature**
Presentation slides will be distributed prior to lectures.

---

**Objective**
Understand the limits and the potential of corporate sustainability for sustainable development

**Content**
Overview of the grand sustainability challenges of Water, Energy, Mobility, and Food

- Business implications of sustainable development, in particular for corporate strategy, marketing & leadership, technology & innovation, and financial markets.
- Critical thinking skills for corporate sustainability

**Literature**
Lecture notes, exercises and reference material can be downloaded from Moodle.

---

**Objective**
The course introduces basic principles, problems and approaches of microeconomics.

**Content**
The course includes the following main topics:
- Basic principles of demand and supply, market and state in a modern economy, externalities, cost analysis, consumer behaviour, economies of scale and economies of scope, perfect competition, monopoly, oligopoly, monopolistic competition, mathematical treatment of some basic concepts.

**Literature**
Presentation slides will be distributed during the lecture

---

**Objective**
The course explains the key concepts and mechanisms of financial economics, their depth and then stresses how and why the theories and models fail and how this is impacting investment strategies and even a global view of citizenship, given the present developing crises in the US since 2007 and in Europe since 2010.

- Development of the concepts and tools to understand these risks and master them.
- Working knowledge of the main concepts and tools in finance (Portfolio theory, asset pricing, options, real options, bonds, interest rates, inflation, exchange rates)
- Strong emphasis on challenging assumptions and developing a systemic understanding of financial markets and their many dimensional risks

**Literature**
Lecture notes, exercises and reference material can be downloaded from Moodle.

---
Content

1- The Financial Crises: what is really happening? Historical perspective and what can be expected in the next decade(s). Bubbles and crashes. The illusion of the perpetual money machine.

2- Risks in financial markets
   -What is risk?
   -Measuring risks of financial assets
   -Introduction to three different concepts of probability
   -History of financial markets, diversification, market risks

3- Introduction to financial risks and its management.
   -Relationship between risk and return
   -Portfolio theory: the concept of diversification and optimal allocation
   -How to price assets: the Capital Asset Pricing Model
   -How to price assets: the Arbitrage Pricing Theory, the factor models and beyond

4- Financial markets: role and efficiency
   -What is an efficient market?
   -Financial markets as valuation engines: exogeneity versus endogeneity (reflexivity)
   -Deviations from efficiency, puzzles and anomalies in the financial markets
   -Financial bubbles, crashes, systemic instabilities

5- An introduction to Options and derivatives
   -Calls, Puts and Shares and other derivatives
   -Financial alchemy with options (options are building blocs of any possible cash flow)
   -Determination of option value; concept of risk hedging

6- Valuation and using options
   -a first simple option valuation model
   -the Binomial method for valuing options
   -the Black-scholes model and formula
   -practical examples and implementation
   -Realized prices deviate from these theories: volatility smile and real option trading
   -How to imperfectly hedge with real markets?

7- Real options
   -The value of follow-on investment opportunities
   -The timing option
   -The abandonment option
   -Flexible production
   -conceptual aspects and extensions

8- Government bonds and their valuation
   -Relationship between bonds and interest rates
   -Real and nominal rates of interest
   -Term structure and Yields to maturity
   -Explaining the term structure
   -Different models of the term structure

9- Managing international risks
   -The foreign exchange market
   -Relations between exchanges rates and interest rates, inflation, and other economic variables
   -Hedging currency risks
   -Currency speculation
   -Exchange risk and international investment decisions

Lecture notes

Lecture slides will be available on the site of the lecture

751-1501-01L Development Economics II W 2 credits 2V A. C. Crole-Rees, U. Egger

Abstract
The course

Objective
The objectives of this course are to: understand the role of agriculture in the development process; learn about the relevant actors, the small-scale farmers, and how to integrate them into economic development and to be able to derive sound policy measures.

Content
Development economics II is a follow-up of "Development economics I".

The main topic is the role of agriculture and in the development process. The main features of this sector will be presented. In many developing countries that are at the beginning of economic development the largest share of the population is often involved in agriculture. In agriculture the production factor land is more important than in other sectors. Agriculture together with fisheries is the only sector that produces food. Food can either be produced locally or imported.

Farmers, even small-scale farmers, are integrated in the monetary world. Trade is very important for growth, food security and environment conservation.

The following topics will be tackled: role of agriculture in economic development, definition of sustainability, role of the various stakeholders in the agricultural sector.

Lecture notes
PPT and selected articles. A monograph is also distributed.

Literature

Prerequisites / notice
Prerequisite: Attendance of introductory micro- and macroeconomics classes. Development economics I & II are one unit.

Abstract
The course focuses on processes and drivers of decision-making on natural resources management issues in developing countries. It gives insights into the relevance of ecological aspects in developing countries. It covers concepts, instruments, processes and actors in environmental politics at the example of specific environmental challenges of global importance.

Objective
After completion of the module, students will be able to:
- Identify and appraise ecological aspects in development cooperation, development policies and developing countries’ realities
- Analyze the forces, components and processes, which influence the design, the implementation and the outcome of ecological measures
- Characterize concepts, instruments and drivers of environmental politics and understand, how policies are shaped, both at national level and in multilateral negotiations
- Study changes (improvements) in environmental politics over time as the result of the interaction of processes and actors, including international development organizations
- Analyze politics and design approaches to influence them, looking among others at governance, social organization, legal issues and institutions

Content
Key issues and basic concepts related to environmental politics are introduced. Then the course predominantly builds on case studies, providing information on the context, specifying problems and potentials, describing processes, illustrating the change management, discussing experiences and outcomes, successes and failures. The analysis of the cases elucidates factors for success and pitfalls in terms of processes, key elements and intervention strategies.

Different cases not only deal with different environmental problems, but also focus on different levels and degrees of formality. This ranges from local interventions with resource user groups as key stakeholders, to country level policies, to multi- and international initiatives and conventions. Linkages and interaction of the different system levels are highlighted. Special emphasis is given to natural resources management.

The cases address the following issues:
- Land use and soil fertility enhancement: From degradation to sustainable use
- Common property resource management (forest and pasture): Collective action and property rights, community-based management
- Ecosystem health (integrated pest management, soil and water conservation)
- Payment for environmental services: Successes in natural resources management
- Climate change and agriculture: Adaptation and mitigation possibilities
- Biodiversity Convention: Implications for conservations and access to genetic resources
- Biodiversity as a means for more secure livelihoods: Agroforestry and intercropping
- The Millennium Development Goals: Interactions between poverty and the environment
- Poverty and natural resources management: Poverty reduction strategies, the view of the poor themselves
- Food security: Policies, causes for insecurity, the role of land grabbing
- Biofuels and food security: Did politics misfire?
- Strategy development at global level: IAASTD and World Development Report 2008

Lecture notes
Information concerning the case studies and specific issues illustrated therein will be provided during the course (uploaded on Moodle).

Literature

Prerequisites / notice
The performance assessment will consist of an individual essay to be written by each student based on at least five references in addition to the sources provided in the course. Students can choose from a list of topics. Criteria for assessment will be communicated at the beginning of the course.

Environmental Policy of Switzerland I

<table>
<thead>
<tr>
<th>W</th>
<th>3 credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>2V</td>
<td>E. Lieberherr</td>
</tr>
</tbody>
</table>

Abstract
This course presents the basics of policy analysis and the specific characteristics of Swiss environmental policy. Political instruments, actors and processes are addressed both theoretically as well as by means of current Swiss environmental policy examples.

Objective
Beyond acquiring basic knowledge about policy analysis, this course teaches students how to analytically address current and concrete questions of environmental policy. Through exercises the students learn about political science concepts and frameworks as well as real-life political decision making processes. The well-grounded examination of complex political conflict situations is an important precondition for the entry into the (environmental policy) workforce or a future research career.

Content
The processes of change, overuse or destruction of the natural environment through humans have historically placed high demands on social and political institutions. In the interplay between the environment, society and economy, the environmental policy field encompasses the sum of public measures that have the goal to eliminate, reduce or avoid environmental degradation. The course provides insight into the development of Swiss environmental policy and systematically presents the basics of environmental policy actors, instruments, programs and processes as well as their change over time. A key aspect is the distinction between politics and political science and specifically environmental policy.

Lecture notes
Instead of lecture notes different texts on policy analysis and Swiss environmental policy are made available to the students.

Literature

Prerequisites / notice
The detailed semester program (syllabus) is made available to the students at the beginning of the semester.
The simulation project is intended for Master's or Doctoral students of the Global Studies Institute (GSI) of the University of Geneva, of the
M. Ambühl
Type
Social Intercourse with Current Environmental Risks

Objective
- Getting acquainted to the extended risk concept
- Evaluation of the risks caused by technology within the societal context
- Knowledge about the mode science and society handle current environmental risks (examples gene- and nanotechnology)
- Knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)

Content
- Risks and technical systems (risk categories, risk perception, risk management)
- Illustration with case studies (nanotechnology)
- Implementation (politics, science, media, etc.)
- Decision making (technology assessment, cost/benefit analysis etc.)
- The role of the media
- prospects for future developments

Lecture notes
Copies of slides and selected documents will be distributed

Prerequisites / notice
The lecture is held biweekly (for 2 hours). The dates are 21.9., 28.9. (attention, out of schedule) ; 19.10; 2.11, 16.11, 30.11, 14.12

363-1050-00L
Conference of Disarmament: Simulation of Negotiations

Abstract
The Global Studies Institute (University of Geneva) is organizing a simulation seminar on nuclear disarmament in collaboration with the Chair of Negotiation and Conflict Management (ETH), experts from the United Nations Institute for Disarmament Research and the Geneva Center for Security Policy.

Objective
Students will have the possibility to participate in simulated diplomatic negotiations and to analyse and assess the negotiation logic behind the situations. They should gain insight in the basic information on disarmament issues and on the functioning of the Conference on Disarmament as well as on negotiation techniques in general.

Content
Students will co-develop their mandates for the negotiation and be assisted by experts that are specialized in international negotiations as well as in the topic of disarmament. The negotiation tables will be chaired by former diplomats. Representatives of diplomatic missions in Geneva will play the role of the "Capitals" to which the heads of delegations will have to give account of the ongoing negotiations.

Lecture dates
Dates/Time/Location (GE = University of Geneva)

22 Sept. | ETH HG D 22 | 10:15-12:00 | Introduction
29 Sept. | GE Uni Mail Salle 1170 | 10:15-12:00 | Introduction to Negotiation Techniques (Dr. Vitalij Butenko and Dr. Sibylle Zürcher, ETH)
6 Oct. | ETH HG D 16.2 | 10:15-12:00 | Distribution of the roles, composition of the negotiation tables, preparation of mandates for the HA (humanitarian approach)
13 Oct. | ETH HG D 22 | 10:15-12:00 | Preparation of the mandates for the FMCT (Fissile Material Cut-off Treaty)
20 Oct. | GE Uni Mail Salle 1170 | 10:15-12:00 | No session; Students deepen and summarize their mandates on one page (A4)
27 Oct. | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the Mandates I (FMCT)
10 Nov. | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the Mandates II (HA)
17 Nov. | GE Uni Mail Salle 1170 | 10:15-12:00 | Preparation Meeting
26 & 27 Nov. | GE Salles 407 et 408 | 10:00-18:00 | Simulation at Uni Dufour
1 Dec. | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the results

Note:
The participation in the simulation on 26. and 27. November in Geneva is necessary.
The two hours lectures on the 22. September, 6. and 13. October have to be attended in Zürich via conference call (ETH HG D 16.2).
The other lectures during the semester can be attended via Skype.
To get the 3 ECTS, students have to participate at the 2 days simulation In Geneva, attend the 3 mandatory lecture parts via conference call an Zürich and write a report of 5 pages at the end of the course.

(Data: 06.04.2020 13:01)

Autumn Semester 2015
Page 565 of 1434
If things are going well, active students will acquire some knowledge of the arguments pro and con the thesis, that knowledge is justified, true belief. Furthermore, one will gain some insights in the role of reasons for knowledge and in the merits and misgivings of a naturalistic account of knowledge. Finally, one will be a bit more familiar with some elements within the Western tradition of philosophical epistemology (e.g. empiricism, rationalism).

Participants will have the opportunity to gain access to unfamiliar texts from the philosophical tradition and to see their relevance today. They experience the consequences of a certain use of concepts and orient themselves in current bioethical, juridical and political discussions.

The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protocol is to be written.

Wisdom is widely - maybe even universally, at all times and everywhere - regarded as one of the highest virtues. But what constitutes wisdom? And is wisdom compatible with uncertainty? Does a wise person have to be certain or can she be uncertain? These and related questions will be discussed in the seminar to gain an understanding of what wisdom, certainty and uncertainty are.

4. Examination of the relevance of wisdom in practical and theoretical contexts.

Wisdom, Certainty, Insecurity
W 3 credits
Objective
1. Analysis and discussion of different interpretations of the virtue "wisdom".
3. Discussion of the questions what constitutes wisdom today and whether wisdom is a goal of the good life.
4. Examination of the relevance of wisdom in practical and theoretical contexts.

Wisdom, Certainty, Insecurity

Abstract

This is an introductory course in different areas and positions in the philosophy of physics. It falls into different parts, including one on the concepts of space and time and one on the reality of structures in physics.

Objective

Students should be able to name and critically evaluate different topics and approaches and in the philosophy of physics.

Abstract

On the one hand, the topic of the infinite will be dealt with historically by discussing philosophical texts, by e.g., Kant, Bolzano and Cantor. On the other hand, the topic will be treated from a (non-historical) scientific point of view: the point of view of logic, mathematics, and physics.

Objective

To get acquainted with different types of infinitness; to study what is intriguing or problematic about the infinite; to inquire whether these different types of infinitness have (important) features in common.

Abstract

Several questions and notions introduced by presocratic natural philosophy are still considered important (albeit in historically altered forms, of course). This applies, e.g., to the notion of the infinite, the process character of nature, and atomism. The present lecture discusses both, the origin of these notions and their persistent relevance for later approaches in philosophy.

Objective

By the end of the lecture the students are able to describe and classify different approaches and notions in presocratic philosophy. Moreover, they are able to critically compare and evaluate them in relation to later approaches in natural philosophy.

Abstract

Manifolds and individuation are concepts which allow to reconsider notorious problems such as the relationship between general and particular, substance and modi, physical processes and persons. They may incorporate heterogeneous elements as needed to overcome traditional categories and classifications, and also describe processes leading to the existence of things.

Objective

The students should become familiar with some conceptual possibilities to recognise and deal with structures across the usual division of subjects. The problem areas are discussed on the basis of texts of various mathematicians and philosophers, with a wide range of applications such as psychology and life sciences.

Abstract

This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective

The main goal of this course is to enhance the student's ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry
---------------------------------------
Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not ...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...: Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)
----------------------------------------------------------
Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks;
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access;
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

851-0300-93L Philosophy of Biology W 3 credits 2S A. Schwarz
Particularly suitable for students of D-BIOL, D-USYS

Abstract
The philosophy of biology deals with concepts and problems that occur specifically while dealing with living entities. Accordingly, it covers the historical as well as systematic aspects of concepts like gene or species, or theories explaining diversity or stability, competitive or cooperative action. Another important topic is the role of technology while affording biological objects.
The overarching objective of this seminar is to get an impression of the specificity of biological problems and to develop an appropriate philosophical sensibility. Accordingly, philosophical traditions in biology will be discussed, just as the application of the history of concepts in the context of biology. The seminar reader will consist of contributions of biologists as well as philosophers of biology. Besides the basic concepts in biology such as gene, species, evolution, or diversity, we will also reflect on the relationship between technology, experimenting, and biological objects. Depending on the interests of the seminar participants, the examples to be discussed may be chosen from systems biology, molecular or synthetic biology, ecology or else.

**701-0701-00L Philosophy of Science**

**Abstract**
The lecture explores various strands in philosophy of science in a critical way, focusing on the notion of rationality in science, especially with regards to environmental research. It addresses the significance and limits of empirical, mathematical and logical methods, as well as problems and ethical issues raised by the use of science in society.

**Objective**
Students learn to engage with problems in the philosophy of science and to relate them to natural and environmental sciences, thus developing their skills in critical thinking about science and its use. They know the most important positions in philosophy of science and the objections they face. They can identify, structure and discuss issues raised by the use of science in society.

**Content**
1. Core differences between classical Greek and modern conceptions of science.
2. Classic positions in the philosophy of science in the 20th century: logical empiricism and critical rationalism (Popper); the analysis of scientific concepts and explanations.
3. Objections to logical empiricism and critical rationalism, and further developments: What is the difference between the natural sciences, the social sciences and the arts and humanities? What is progress in science (Kuhn, Fleck, Feyerabend)? Is scientific knowledge relativistic? What is the role of experiments and computer simulations?
4. Issues raised by the use of science in society: The relation between basic and applied research; inter- and transdisciplinary; ethics and accountability of science.

**Lecture notes**
A reader will be available for students.

**Literature**
A list of introductory literature and handbooks will be distributed to the students.

**Prerequisites / notice**
The optional exercises accompany the lecture and offer the opportunity for an in-depth discussion of selected texts from the reader.

---

**701-0701-01L Philosophy of Science: Exercises**

**Abstract**
The exercises in philosophy of science serve to develop skills in critical thinking by discussing seminal texts about the rationality of science. Topics discussed include the significance and limits of empirical, mathematical and logical methods, as well as problems and ethical issues raised by the use of science in society.

**Objective**
Students can engage with problems in the philosophy of science and to relate them to natural and environmental sciences. They learn to analyze and summarize philosophical texts. In this way, they develop their skills in critical thinking with a focus on the rationality of science.

**Content**
The optional exercises accompany the lecture and serve to develop skills in critical thinking with a focus on the rationality of science, based on discussing seminal texts. The texts cover important positions in the phrasing of science and their critics. Topics discussed include the significance and limits of empirical, mathematical and logical methods, as well as problems and ethical issues raised by the use of science in society.

**Lecture notes**
A reader will be available for students.

**Literature**
A list of literature will be distributed to the students together with the reader.

**Prerequisites / notice**
Students that want to subscribe for this course also have to subscribe for the lecture "Wissenschaftsphilosophie". Credit points are given for preparing a structure and a summary of one of the texts.

---

**701-0703-00L Environmental Ethics**

**Abstract**
The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

**Objective**
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of ethical positions and arguments to be found within the field of environmental ethics and will have practised these in small case studies.

**Content**
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

**Lecture notes**
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

**Literature**
- Angelika Krebs (Hrsg.), Naturethik: Grundzüge der gegenwärtigen tier- und ökothischen Diskussion 1997
- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003
- John O’Neill et al., Environmental Values, 2008
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008

**Generel introductions:**
- Marcus Düwell et. al (Hrsg.), Handbuch Ethik, 2. Auflage, Stuttgart (Metzler Verlag), 2006
- Johann S. Acht et. al. (Hrsg.), Grundkurs Ethik 1. Grundlagen, Paderborn (mentis) 2008

**Prerequisites / notice**
The procedure for accumulating CP will be explained at the start of term.

I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

---

This course covers the basic questions, concepts, theories, methods, and empirical findings of political science.
This course offers a comprehensive examination of the role of international organizations (IOs) in world politics. Besides teaching the basic theories and methods that are necessary for studying IOs, this course considers the application of those theories and methods to a range of special institutions.

The first part of this course offers an introduction and will seek to explain how, if at all, IOs obtain some measure of authority in international affairs, i.e., why states delegate certain tasks to IOs instead of dealing unilaterally or multilaterally outside of an institutional context. The second part of the course focuses on the impact and effectiveness of international institutions. We assess whether and how IOs influence state compliance with agreements, and whether IOs socialize states to behave in certain ways. The third and final part of the course examines a special set of IOs: international alliances and international regimes, i.e., explicit principles, norms, rules, and decision-making procedures that define expected behavior in a specific problem field.

The workload for this course is approx. 120 hours (all inclusive).

Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory (http://www.rektorat.ethz.ch/students/admission/auditors/specialstudents_uzh/index_EN; see menu on left side of that webpage for students from other universities). Students from ETH will receive 4 ECTS credit points if they attend classes regularly and obtain a grade of 4.0 or higher for the written exam in the final week of the semester. Students who obtain a grade of less than 4.0 for the end-of-semester test will have a second chance in the final week of the following semester. The rules of the game are defined in detail in the course syllabus. Students who do not participate in the end of semester test will not have access to the repeat exam unless they submit compelling and documented reasons for why they were unable to participate in the first test. Except for language dictionaries, no additional materials and no laptops and mobile phones are allowed during the exam.

Students attending this course and passing the required tests (one in the middle, the other at the end of the semester) will obtain 4 ECTS credit points.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

### Literature

Diamond, Jared. 2012. 'The World Until Yesterday; What Can We Learn from Traditional Societies?' New York: Viking.

### Prerequisites / notice

The 2-hour course (5-7 p.m.) will be held as a series of lectures. The course materials will be available in form of an electronic Reader at the beginning of the semester.

The class will be taught in English.

Students will be asked to give a (a) presentation (15 Minutes) or write a review paper based on a article selected from the electronic script, and (b) they will have to pass a written test at the end of the course in order to obtain 3 credit points in the ECTS System. In the final mark (a) will have a weight of 40% and (b) 60%.

| Swiss Foreign Policy | Students should acquire a sound understanding of Swiss foreign policy and the relevant academic and political debates associated with it.
After introducing the field of Foreign Policy Analysis, this course will first deal with the historical foundations and the conceptual development of Swiss foreign policy. The focus will be on Switzerland’s different reactions to the new international orders after 1918, 1945, and 1989 as well as on the significance of the 9/11 terrorist attacks and the global financial and debt crises since 2009 for Swiss foreign policy. We will also discuss the extent to which the Ukraine crisis and the annexation of Crimea by Russia mark a watershed in the international order - and how Switzerland should respond to these challenges. Subsequently, key determinants of Swiss foreign policy will be analyzed, with specific attention on neutrality, direct democracy, and the special case paradigm. Finally, the discussion will center on current challenges and issues such as Swiss-EU relations, the Ukraine crisis and the OSCE engagement, Switzerland’s role in the UN, Swiss peacebuilding efforts, Swiss policy in the Middle East, and development cooperation. |

### Content
The first hour will consist of a lecture; in the second hour, we will deepen and discuss the respective issues together with guest speakers from the Swiss foreign ministry, including Secretary of State Rossier.

Students will receive a handout of slides accompanying the lectures.

A reading list will be handed out at the beginning of the semester.

The course will be supported by an e-learning environment.

### Prerequisites / notice
The course will be supported by a virtual classroom. If you have any questions, please contact Lukas Meyer, lukas.meyer@sipo.gess.ethz.ch.

Students acquire the contextual knowledge for analyzing public policies. They learn why and how public policies and laws are developed, designed, and implemented at national and international levels. The seminar covers the theory, development, and core policy fields of European integration as well as structures and processes of the EU as a decision- and policy-making system.

**Objective**

Developing an understanding for causes of war and their development over the last 500 years. Knowledge of fundamental concepts in research on causes of war.

**853-0302-00L European Integration: Seminar**

**W 4 credits 3S F. Schimmelfennig**

**Abstract**
The seminar covers the theory, development, and core policy fields of European integration as well as structures and processes of the EU as a decision- and policy-making system.

**Objective**
The seminar is designed to help students understand the European Union as a particular kind of political system that differs both from the nation-state and from other international organizations. It imparts basic knowledge on the development, institutions, procedures, and policies of the EU and provides an introduction to major approaches to integration theory and political science research on the EU.

**Content**
1. Introduction
2. Development of European integration
3. Integration theories
4. Deepening
5. Widening and differentiation
6. Attitudes and public opinion
7. The institutions of the EU
8. Legislation and adjudication in the EU
9. Democracy in the European Union
10. Internal market and monetary union
11. Foreign and security policy
12. Justice and home affairs
13. EEA, Switzerland, and Neighbourhood Policy

**Literature**

- Basislektüre

**Prerequisites / notice**

- Die Leistungskontrolle findet durch eine Seminarpräsentation und einen schriftlichen Schlussessay statt.
- Priority for ISTP MSc students.

**853-0060-00L Current Issues in Security Policy**

**W 3 credits 2V A. Wenger, O. Thranert**

**Abstract**
This course provides an overview of the development of the international system and the central security challenges since the end of the Cold War. The focus of this course will be on security issues of the post 9/11 era: new risks, arcs of crises, security strategies and core actors will be presented during the course.

**Objective**
Participants should gain a solid understanding of current issues in international security policy as well as of the central academic debates.

**Content**
The aim of the course is to provide the participants with an overview of international security politics in a globalized world. After dealing with the major changes of the international security environment as compared to the cold war era, we will concentrate on some of the key challenges (international terrorism, proliferation of weapons of mass destruction etc.). The third part of the lecture focuses on security strategies pursued by the ‘Western’ world.

**Lecture notes**

- Participants are expected to study the compulsory texts provided at the beginning of the semester via the online platform Moodle.

**Literature**

- An online learning platform serves as a supplement to the lecture course.

**853-0033-00L Leadership I**

**W 3 credits 2V F. Kernic**

**Abstract**
The lectures "Leadership I" (WS) and “Leadership II” (SS) have been designed as a two-semester lecture series, but may also be followed independently of one another or in reverse order. "Leadership I" covers the following fields: leadership basics, leadership theories and leadership styles, the concept of leadership responsibility and the role of communication in practical leadership.

**Objective**
The aim of this lecture is to give students an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organisation, context and situation. They should be informed about the evolution of the understanding of mankind in relation to working processes and its impact on organizations and the understanding of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate adequately in specific situations.

**Prerequisites / notice**

- The 1-hour written exam will take place during the last lecture in the semester.

**860-0001-00L Public Institutions and Policy-Making Processes**

**W 6 credits 3G T. Bernauer, S. Bechtold, F. Schimmelfennig**

**Abstract**
Students acquire the contextual knowledge for analyzing public policies. They learn why and how public policies and laws are developed, designed, and implemented at national and international levels.

**Objective**
Public policies result from decision-making processes that take place within formal institutions of the state (parliament, government, public administration, courts). That is, policies are shaped by the characteristics of decision-making processes and the characteristics of public institutions and related actors (e.g. interest groups). In this course, students acquire the contextual knowledge for analyzing public policies. They learn why and how public policies and laws are developed, designed, and implemented at national and international levels. The course is organized in three modules. The first module (Stefan Bechtold) examines basic concepts and the role of law, law-making, and law enforcement in modern societies. The second module (Thomas Bernauer) deals with the functioning of legislatures, governments, and interest groups. The third module (Frank Schimmelfennig) focuses on the European Union and international organisations.

**Content**

- Schedule:
  - W1: (no class because of ISTP cornerstone course)
  - W2: Bechtold, Bernauer: Introduction
  - W3: Bechtold: Why do we need laws and why do people and other actors (e.g. firms) usually obey the law?
  - W4: Bechtold: How is the law enforced, and when do laws fail to influence the behavior of individuals and other actors (e.g. firms)?
  - W5: Bechtold: Courts as policy-makers
  - W6: Bernauer: How are parliaments (legislatures) elected, how do they work, and how do their characteristics and processes affect policy-making?
  - W7: Bernauer: Why do forms of government differ and how does this affect policy-making? Why and in what respect are public administrations efficient/effective, and why sometimes not?
  - W8: Bernauer: How do interest groups and social movements affect policy-making?
  - W9: Schimmelfennig: Governance beyond the state: why and how states create international institutions.
  - W11: Schimmelfennig: Governance in the European Union: policy-making and policy enforcement.
  - W12: Schimmelfennig: The international diffusion of policies: how states learn from each other.
  - W13: study week, Q&A meeting
  - W14: End of semester test
  - End of January: deadline for review essay

**Lecture notes**

- Reading materials will be distributed to the students before the semester starts.
This is a Master level course. The course is capped at 25 students, with ISTP Master students having priority.

### Psychology, Pedagogics

| 851-0252-01L| Human-Computer Interaction: Cognition and Usability Number of participants limited to 20. | W    | 3    | 2S    | C. Hölscher, I. Barisc, S. Ognjanovic |
|             | This seminar introduces theory and methods in human-computer interaction and usability. Cognitive Science provides a theoretical framework for designing user interfaces as well as a range of methods for assessing usability (user testing, cognitive walkthrough, GOMS). The seminar will provide an opportunity to experience some of the methods in applied group projects. |      |      |       |                            |
| Abstract    | This seminar will introduce key topics, theories and methodology in human-computer interaction (HCI) and usability. Presentations will cover basics of human-computer interaction and selected topics like mobile interaction, adaptive systems, human error and attention. A focus of the seminar will be on getting to know evaluation techniques in HCI. Students form work groups that first familiarize themselves with a select usability evaluation method (e.g. user testing, GOMS, task analysis, heuristic evaluation, questionnaires or Cognitive Walkthrough). They will then apply the methods to a human-computer interaction setting (e.g. an existing software or hardware interface) and present the method as well as their procedure and results to the plenary. Active participation is vital for the success of the seminar, and students are expected to contribute to presentations of foundational themes, methods and results of their chosen group project. In order to obtain course credit a written essay / report will be required (details to be specified in the introductory session of the course). |      |      |       |                            |

|             | This project-oriented seminar investigates contributions of cognitive science to architectural design with an emphasis on orientation and navigation in complex buildings and urban settings. It includes theories on spatial memory and decision-making as well as hands-on observations of behavior in real and virtual reality. |      |      |       |                            |
| Abstract    | How can behavioral and cognitive science inform architecture? This project-oriented seminar investigates contributions of cognitive science to architectural design with an emphasis on orientation and navigation in complex buildings and urban settings. It includes theories on spatial memory and decision-making as well as hands-on observations of behavior in real and virtual reality. |      |      |       |                            |
| Objective   | Taking the perspectives of building users (occupants and visitors) is vital for a human-centered design approach. Students will learn about relevant theory and methods in cognitive science and environmental psychology that can be used to understand human behavior in built environments. The foundations of environmental psychology and human spatial cognition will be introduced. A focus of the seminar will be on how people perceive their surroundings, how they orient in a building, how they memorize the environment and how they find their way from A to B. Students will also learn about a range of methods including real-world observation, virtual reality experiments, eye-tracking and behavior simulation for design. Students will reflect on the roles of designers and other stakeholders with respect to human-centered design and an evidence-based design perspective. The seminar is geared towards a mix of students from architecture / planning, engineering, computer science and behavioral science as well as anybody interested in the relation between design and cognition. Architecture students can obtain course credit in “Vertiefungsfach” or “Wahlfach” |      |      |       |                            |

|             | This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their research ideas in relation to behavioral science. The colloquium also features invited research talks. |      |      |       |                            |
| Abstract    | Students know and can apply autonomously up-to-date investigation methods and techniques in the behavioral sciences. They achieve the ability to develop their own ideas in the field and to communicate their ideas in oral presentations and in written papers. The credits will be obtained by a written report of approximately 10 pages. |      |      |       |                            |
Content

This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their ideas in so far as they have some relation to behavioral science. The possible research areas are wide and may include theoretical as well as empirical approaches in Social Psychology and Research on Higher Education, Sociology, Modelling and Simulation in Sociology, Decision Theory and Behavioral Game Theory, Economics, Research on Learning and Instruction, Cognitive Psychology and Cognitive Science. Ideally the students (from Bachelor, Master, Ph.D. and Post-Doc programs) have started to start work on their thesis or on any other term paper.

Course credit can be obtained either based on a talk in the colloquium plus a written essay, or by writing an essay about a topic related to one of the other talks in the course. Students interested in giving a talk should contact the course organizers (Schinazi, Hoelscher) before the first session of the semester. Priority will be given to advanced / doctoral students for oral presentations. The course credits will be obtained by a written report of approximately 10 pages. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.

<td></td>
</tr>
<tr>
<td>Abstract</td>
<td>The lectures provide an overview of the foundations of cognitive science and investigate processes of human cognition, especially perception, learning, memory and reasoning. This includes a comparison of cognitive processes in humans and technical systems, especially with respect to knowledge acquisition, knowledge representation and usage in information processing tasks.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>Cognitive Science views human cognition as information processing and provides an inter-disciplinary integration of approaches from cognitive psychology, informatics (e.g., artificial intelligence), neuroscience and anthropology among others. The lectures provide an overview of basic mechanisms of human information processing and various application domains. A focus will be on matters of knowledge acquisition, representation and usage in humans and machines. Models of human perception, reasoning, memory and learning are presented and students will learn about experimental methods of investigating and understanding human cognitive processes and representation structures.</td>

<td>Embodied Cognition</td>
<td>2</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Number of participants limited to 25</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Abstract</td>
<td>This seminar offers an introduction to embodiment. Does the representation of thought and emotion depend upon the sensory and motor system? Highlights: the figurative processing of “go” still evokes voltage changes in foot muscles, conceptualizing time activates the eyes to look along a mental time line, abstract causality might still be grounded in motor control, emotion shows in the way we walk</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>Looking at the degree of embodiment in cognition and emotion naturally leads to the question how the mind works. What is the nature of human thoughts and emotions? How deeply are they dependent upon features of our physical body as an agent? Do the sensory and motor system play a physically constitutive role in conceptualizing thought and emotion? We will look at these questions by examining the degree of embodiment in basic thinking types of our mind (space, time, and causality thinking) as well as in abstract thought (e.g., logical thinking) and in emotion processing. As will be discussed, the topic of how the mind works is not only of central importance in the humanities (psychology, linguistics, philosophy, anthropology, education), but is also relevant for parts of the natural and technological sciences (physiology, neuroscience, medicine, computer science, artificial intelligence). Active participation is expected. Each participant can choose a topic for which they will give an oral presentation (about 30 min.) and write a related written report (about 3000 words).</td>

</tr>
<tr>
<td>Abstract</td>
<td>This will be a seminar on design processes. We will review the body of work directed at understanding design processes from the 1950s to the present time. The students will be expected to prepare for and lead the presentations for some of the topics and write a final paper.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>Designing artifacts is a critically important, if not unique, human cognitive activity. While we have engaged in design activity since we have been human, it has only been an object of study for the past 50 years. The initial focus during the 1960s was on &quot;design methodologies.&quot; This body of work, motivated by large, technically sophisticated, geographically dispersed projects like the Polaris missile project, sought to develop an analytic, mathematically based, teachable doctrine about the design process that would serve the same role for design as the &quot;scientific method&quot; served for science. During the 1980s interest shifted from a normative approach to a descriptive approach, focusing on the cognitive and computational processes of designers. More recently, several researchers are using neuropsychological methodologies to understand the design process. Learning objectives: to understand the design process from a normative methodological perspective, and descriptive computational, cognitive, and neural perspectives. Learning outcomes: By the end of the seminar the student should be familiar with these literatures, should be able to discuss relative strengths and weaknesses, and identify what each has contributed to our ability to design, and to our understanding of the design process itself.</td>

Psychological Aspects of Risk Management and Technology

Using uncertainty management by organizations and individuals as conceptual framework, risk management and risk implications of new technologies are treated. Three components of risk management (risk identification/evaluation, risk mitigation, risk communication) and underlying psychological and organizational processes are discussed, using company case studies to promote in-depth understanding.

Objective
- understand basic components of risk management in organizations
- know and apply methods for risk identification/evaluation, risk mitigation, risk communication
- know psychological foundations of risk perception, decision-making under risk, and risk communication
- know organizational principles for managing uncertainty
- apply theoretical foundations to applied issues such as safety management, regulatory activities, and technology design and implementation in different domains (e.g. transport systems, IT, insurance)

Content
The syllabus includes the following topics:

- Elements of risk management
  - risk identification and evaluation
  - risk mitigation
  - risk communication

- Psychological and organizational concepts relevant in risk management
- decision-making under uncertainty
- risk perception
- resilient organizational processes for managing uncertainty

- Case studies on different elements of risk management (e.g., rule making, training, managing project risks, automation)

- Group projects related to company case studies

Lecture notes
There is no script, but slides will be made available before the lectures.

Literature
There are texts for each of the course topics made available before the lectures.

Prerequisites / notice
The course is restricted to 40 participants who will work closely with the lecturers on case studies prepared by the lecturers on topics relevant in their own companies (Swiss Re, Skyguide, Swiscom).

Law

Students who have attended or will attend the lecture "Introduction to Law for Civil Engineering and Architecture" or "Introduction to Law" (851-0708-00) cannot register for this course unit.

Particularly suitable for students of D-MAVT, D-MATL

This class introduces students into basic features of the legal system. Fundamental issues of constitutional law, administrative law, private law and the law of the EU are covered.

Objective
- Students are able to describe the areas, concepts, theories, methods and findings of psychology.
- differentiate scientific psychology from "everyday" psychology.
- structure the conclusions and significance of an experiment according to a theory of psychology.
- formulate a problem for psychological investigation.
- apply basic forms of psychological experiment.

Content
Einführung in die psychologische Forschung und Modellbildung unter besonderer Berücksichtigung der kognitiven Psychologie und des psychologischen Experimentes. Themen sind u.a.: Wahrnehmung; Lernen und Entwicklung; Denken und Problemlösen; Kognitive Sozialpsychologie; Risiko und Entscheidung.

Number Title Type ECTS Hours Lecturers
851-0703-00L Introduction to Law W 2 credits 2V O. Streiff Gnöpff

Particularly suitable for students of D-MAVT, D-MATL

This course provides an introduction to psychological research and modelling, focusing on cognitive psychology and the psychological experiment. Participants learn to formulate problems for psychological investigation and apply basic forms of psychological experiment.

Objective
- Students are able to identify basic structures of the legal system. They understand selected topics of public and private law and are able to apply the fundamentals in more advanced law classes.

Content
Basic concepts of law, sources of law.
Private law: Contract law (particularly contract for work and services), tort law, property law.
Public law: Human rights, administrative law, procurement law, procedural law.
Insights into the law of the EU and into criminal law.

Lecture notes
Jaap Hage, Bram Akkermans (Eds.), Introduction to Law, Cham 2014 (Online Resource ETH Library)

Further documents will be available online (see https://moodle-app2.let.ethz.ch/course/view.php?id=1596).

Prerequisites: Environmental Law: Conceptions and Fields (851-0705-01L) offered in spring semester.
This workshop offers to the students the opportunity to intensify their environmental legal knowledge on the basis of individual topics or cases of their respective programme or professional interest in a guided self-study. They develop a better understanding for the practical application of legal regulations on environmental matters.

The aim of this workshop is to equip students with legal skills and methods to solve or treat problems and questions of the environmental law and foster the understanding on the possibilities and limits of legal problem-solving. The students choose an inquiry with practical relevance. To this end they work out the legal basis demonstrating a legal correct solution or approach to a solution. In doing so, students will get to know legal methods and research possibilities.

At the beginning of the workshop the students are introduced to the legal methods and sources as well as in the aim and the process of the workshop. The participants will organize themselves in a team of two persons giving themselves an inquiry on topics of the environmental law. It is also possible to choose questions at the interfaces of e.g. zoning law, energy law, transport law. A proposal, which will be presented to the lecturer, as well as an optional Q&A-session in class will facilitate the start. Next the working on topics will follow by self-study. The results will be presented in form of a memo/paper with a maximum of ten pages (excluding graphs and tables). At the end of the workshop, a presentation of ten minutes will be made to the plenum including a question-and-answer session. Class language will be German.

Den Studierenden werden Unterlagen zur juristischen Methoden- und Quellenlehre sowie zum Inhalt und Ablauf des Kurses zu Beginn der Veranstaltung kostenlos abgegeben.

Rechtsgrundlagen, Literatur und Gerichtsentscheide werden themenspezifisch selber recherchiert, unter Mithilfe und Beratung des Dozenten.

Die Veranstaltung erfordert die Bereitschaft, sich aktiv und selbständig mit einer selbstgewählten Fragestellung oder einem eigenen Fallbeispiel aus dem Gebiet des Umweltrechts und allenfalls aus Schnittstellengebieten auseinanderzusetzen. Damit die Interaktivität und die Begleitung der Teams gewährleistet werden kann, ist die Teilnehmerzahl auf maximal 16 Personen beschränkt. Es handelt sich um eine Vertiefungsveranstaltung. Der Besuch der Vorlesung "Umweltrecht: Konzepte und Rechtsgebiete" (851-0705-01) ist Voraussetzung.

- Le droit de droit civil porte notamment sur le droit des obligations (droit des contrats et responsabilité civile) et sur les droits réels (propriété, gages et servitudes). De plus, il est donné un bref aperçu du droit de la procédure et de l'exécution forcée.
- Sont indispensables:
  - le Code civil et le Code des obligations;
  - le Code pénal;
- Sont conseillés:
  - Nef, Urs Ch. : Le droit des obligations à l'usage des ingénieurs et des architectes, trad. Bovay, J., éd. Payot, Lausanne;
- Les examens peuvent se faire en français ou en italien.
- Les examens peuvent être prêts pendant le cours.

Die Veranstaltung erfordert die Bereitschaft, sich aktiv und selbständig mit einer selbstgewählten Fragestellung oder einem eigenen Fallbeispiel aus dem Gebiet des Umweltrechts und allenfalls aus Schnittstellengebieten auseinanderzusetzen. Damit die Interaktivität und die Begleitung der Teams gewährleistet werden kann, ist die Teilnehmerzahl auf maximal 16 Personen beschränkt. Es handelt sich um eine Vertiefungsveranstaltung. Der Besuch der Vorlesung "Umweltrecht: Konzepte und Rechtsgebiete" (851-0705-01) ist Voraussetzung.

- Le droit de droit civil porte notamment sur le droit des obligations (droit des contrats et responsabilité civile) et sur les droits réels (propriété, gages et servitudes). De plus, il est donné un bref aperçu du droit de la procédure et de l'exécution forcée.
- Sont indispensables:
  - le Code civil et le Code des obligations;
  - le Code pénal;
- Sont conseillés:
  - Nef, Urs Ch. : Le droit des obligations à l'usage des ingénieurs et des architectes, trad. Bovay, J., éd. Payot, Lausanne;
- Les examens peuvent se faire en français ou en italien.
- Les examens peuvent être prêts pendant le cours.

The course deals with the basic legal framework for doing e-business as well as using information technology. It discusses a variety of legal concepts and rules to be taken into account in practice, be it when designing and planning new media business models, be it when implementing online projects and undertaking information technology activities.

The objective is knowing and understanding key legal concepts relevant for doing e-business, in particularly understanding how e-business is regulated by law nationally and internationally, how contracts are concluded and performed electronically, which rules have to be obeyed in particular in the Internet with regard to third party and own content and client data, the concept of liability applied in e-business and the role of the law in the practical implementation and operation of e-business applications.

The objective is knowing and understanding key legal concepts relevant for doing e-business, in particularly understanding how e-business is regulated by law nationally and internationally, how contracts are concluded and performed electronically, which rules have to be obeyed in particular in the Internet with regard to third party and own content and client data, the concept of liability applied in e-business and the role of the law in the practical implementation and operation of e-business applications.

Vorgesehene Strukturierung der Vorlesung:

1) Welches Recht gilt im E-Business?  
Internationalität des Internets  
Regulierte Branchen

2) Gestaltung und Vermarktung von E-Business-Angeboten  
Verwendung fremder und Schutz der eigenen Inhalte  
Haftung im E-Business (und wie sie beschränkt werden kann)  
Domain-Namen

3) Beziehung zu E-Business-Kunden  
Verträge im E-Business, Konsumentenschutz  
Elektronische Signaturen  
Bearbeitung von Daten über Kunden  
Spam

4) Verträge mit E-Business-Providern

Lecture notes  
Es wird mit Folien gearbeitet, die als PDF über die elektronische Dokumentenablage (ILIAS) auf dem System der ETHZ vorgängig abrufbar sind. Auf dem Termin- und Themenplan (ebenfalls online abrufbar) sind Links zu Gesetzesstexten und weiteren Unterlagen abrufbar. Schliesslich wird jede Vorlesung auch als Podcast aufgezeichnet, der jedoch nur für die Studierenden mit einem Passwort (erhältlich beim Dozenten) zugänglich sind.

Literature  

Prerequisites / notice  
Die Semesterendprüfung ist in Form eines schriftlichen Kurztests (normalerweise MC) in voraussichtlich der letzten Doppelstunde geplant. Es wird angegeben, welche Unterlagen beim jeweiligen Thema den Prüfungsstoff definieren. Der Test wird möglicherweise elektronisch durchgeführt.

Ferner bietet Ursula Widmer eine Vorlesung zum Thema Informationssicherheit an, welche die rechtlichen Aspekte der Sicherheit von ICT-Infrastrukturen und Netzen und der transportierten und verarbeiteten Informationen.

851-0733-00L Traffic Law / Traffic Commercial Law W 2 credits 2G S. Scherlier

Abstract  
Within the scope of the lecture "Traffic Law / Traffic Commercial Law", besides an introduction into the legal basis of the national and international traffic, the main interest will be laid on actual political and economical questions and problems with respect to traffic (e.g. financing of traffic, road pricing, rail reform, air traffic vs. environment law etc.).

Objective  
Participants are acquiring a comprehensive summary about the system Traffic Law/Traffic Commercial Law in Switzerland. With practical exercises and subsequent detailed reviews themes and subjects of special interest to participants are being treated more thoroughly.

851-0735-10L Business Law W 2 credits 2V P. Peyrot

Abstract  
Particularly suitable for students of D/ITET

The students shall obtain a basic knowledge about business law. They shall be able to recognize and evaluate issues in the area of business law and suggest possible solutions.

Objective  
The students shall obtain the following competence:
- They shall obtain a working knowledge on the legal aspects involved in setting up and managing an enterprise.
- They shall be acquainted with corporate functions as contracting, negotiation, claims management and dispute resolution.
- They shall be familiar with the issues of corporate compliance, i.e. the system to ascertain that all legal and ethical rules are observed.
- They shall be able to contribute to the legal management of the company and to discuss legal issues.
- They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

Lecture notes  
A comprehensive script will be made available online on the moodle platform.

851-0735-04L Workshop and Lecture Series in Law and Finance W 2 credits 2S G. Hertig, S. Bechtold

Abstract  
The Workshop and Lectures Series in Law & Finance is a joint seminar of ETH Zurich, the University of Zurich and the University of St. Gallen. Each semester, several guest scholars from law, finance and related fields give a lecture and/or discuss their ongoing research. All speakers are internationally well-known experts from Europe, the U.S. and beyond.

Objective  
The Lecture and Workshop Series in Law & Finance aims at preparing participants to discuss current financial regulation and corporate governance issues with leading academics.

Content  
Participants discuss current Law & Finance issues with guest scholars from Europe and the U.S. In addition, participants write a comment on one of the discussed papers.

Lecture notes  
To be discussed papers are posted in advance on the course’s web page.  
- Viral Acharya et al., Regulating Wall Street (Wiley 2011)  

851-0735-09L Workshop & Lecture Series on the Law & Economics of Innovation W 2 credits 2S S. Bechtold, H. Gersbach, A. Heinemann, G. Hertig
This is a joint project by ETH Zurich and the University of Zurich. It provides an overview of interdisciplinary research on intellectual property, innovation, antitrust and technology policy. Scholars from law, economics, management and related fields give a lecture and/or present their current research. All speakers are internationally well-known experts from Europe, the U.S. and beyond.

After the workshop and lecture series, participants should be acquainted with interdisciplinary approaches towards intellectual property, innovation, antitrust and technology policy research. They should also have an overview of current topics of international research in these areas.

The workshop and lecture series will present a mix of speakers who represent the wide range of current social science research methods applied to intellectual property, innovation, antitrust policy and technology policy issues. In particular, theoretical models, empirical and experimental research as well as legal research methods will be represented.

Papers discussed in the workshop and lecture series are posted in advance on the course web page.

The aim of this course is to equip students with a legal and regulatory skill-set that allows them to translate their technical knowledge into a policy brief directed at legally trained regulators. More generally, it aims to inform students with a technical scientific background of the legal and political context of environmental policy. The focus of the course will be on international and European issues and regulatory frameworks - where relevant, the position of Switzerland within these international networks will also be discussed.

Topics covered in lectures:

1. Environmental Regulation
   a. Perspectives
   b. Regulatory Challenges of Environment Problems
   c. Regulatory Tools
2. Law: International, European and national laws
   a. International law
   b. European law
   c. National law
3. Policy: Case studies

Assessment:

(i) Class participation (25%): Students will be expected to contribute to class discussions and prepare short memos on class readings.
(ii) Exam (75%) consisting of three parts:
   a. Policy brief - a maximum of 2 pages (including graphs and tables);
   b. Background document to the policy brief - this document sets out a more detailed and academic overview of the topic (maximum 8 pages including graphs and tables);
   c. Presentation of the policy brief: presentations can use a maximum of 5 slides and can last 7 minutes.

The course is taught as a small interactive seminar and significant participation is expected from the students. Participation will be capped at 15 in order to maintain the interactive nature of the classes. All classes, readings, and assignments, are in English.

Teaching will take place over two weeks in September and October. The exam date will be in December.

An electronic copy of relevant readings will be provided to the students at no cost before the start of the lectures.

No specific pre-existing legal knowledge is required, however all students must have successfully completed Grundzüge des Rechts (851-0708-00 V) or an equivalent course.

The course is (inter)related to materials discussed in Politikwissenschaft: Grundlagen (851-0577-00 V), Ressourcen- und Umweltökonomie (751-1551-00 V), Umweltrecht: Konzepte und Rechtsgebiete (851-0705-01 V), Rechtlicher Umgang mit natürlichen Ressourcen (701-0743-01 V), Environmental Governance (701-1651-00 G), Policy and Economics of Ecosystem Services (701-1653-00 G), International Environmental Politics: Part I (851-0594-00 V).

The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights). Aspects of competition law are treated insofar as they are relevant for the protection of intellectual creations and source designations. The legal principles are developed based on current cases.
The aim of this course is to enable students at ETH Zurich to recognize which rights may protect their creations, and which rights may be infringed as a result of their activities. Students should learn to assess the risks and opportunities of intellectual property rights in the development and marketing of new products. To put them in this position, they need to know the prerequisites and scope of protection afforded by the various intellectual property rights as well as the practical difficulties involved in the enforcement of intellectual property rights. This knowledge is imparted based on current rulings and cases.

Another goal is to enable the students to participate in the current debate over the goals and desirability of protecting intellectual creations, particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls, patent thickets).

For engineering and physics students, the lecture ‘The Role of Intellectual Property in daily routine: A Practical Introduction’ will be offered, which is coordinated to the needs of students in these degree programs.

For students of chemistry-related degree programs, the lecture ‘Protecting inventions in chemistry’ will be offered, which is coordinated to the needs of students in these degree programs.

The seminar is customised to the needs of chemists and students of related degree programs. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

Investments in the development of new substances and active component in these sectors are traditionally secured by patents because publicly known inventions, generally chemical substances, may easily be reproduced by others.

In the last years, the know-how about intellectual property has become increasingly important for chemists and engineers. Both in the production process and in the distribution sector, chemists and engineers are increasingly concerned with questions related to patenting inventions and the use of patent information. As more than three-quarters of all publicly available technical information is reportedly available only in patents, it is more and more important for researchers and engineers to be capable of extracting relevant information from the flood of patents.

Patents are not only a measure to protect investments and inventions in chemistry-related sectors but also an important source of information - from competitors and potential cooperation partners to the development of markets and the risk of coming into conflict with third party IP rights. Respectively, a knowledge of patents has also become a key qualification at a company’s strategic level.

The seminar contains practical exercises on the use and research of patent information. Basic knowledge on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

Another goal is to enable the students to participate in the current debate over the goals and desirability of protecting intellectual creations, particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls, patent thickets).

For engineering and physics students, the lecture 'The Role of Intellectual Property in daily routine: A Practical Introduction' will be offered, which is coordinated to the needs of students in these degree programs.

For students of chemistry-related degree programs, the lecture ‘Protecting inventions in chemistry’ will be offered, which is coordinated to the needs of students in these degree programs.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.

The seminar is customised to the needs of chemists and students of related degree programs. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.
- Special aspects of protecting inventions in chemistry-related sectors, including polymorphs and inventions in the field of nanotechnology.

The seminar contains practical exercises on the use and search of patent information in chemistry-related sectors. Basic know-how on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

For engineering and physics students, the lecture 'The Role of Intellectual Property in daily routine: A Practical Introduction' will be offered, which is coordinated to the needs of students in these degree programs.

For engineering and physics students, the lecture ‘The Role of Intellectual Property in daily routine: A Practical Introduction’ will be offered, which is coordinated to the needs of students in these degree programs.
Cooperation and fairness in encounters with strangers are puzzling behaviors, since they contradict the law of natural selection. Yet daily experience and field and laboratory studies reveal that humans cooperate and behave fairly. This course presents the main theoretical approaches in economics and psychology to understanding cooperation and fairness and reviews relevant experimental studies. The seminar covers the basics of modern scientific research and discusses different types of scientific misconduct. Case studies are introduced and the latest diagnostic methods for uncovering data manipulation presented. Problem solving is discussed. (1) To be able to recognize and evaluate scientific misconduct and its causes against the background of the competition-oriented systems. (2) To get to know methods for uncovering data manipulation and to be able to critically assess them.

Prerequisites / notice

The seminar will focus on three strategic games: the prisoner's dilemma (PD), the ultimatum game (UG) and the Public Goods (PG) game. The theories to be discussed include: classical game theory, reciprocal theories, altruistic punishment, equity, reciprocity and competition (ERC), inequality aversion (IA), as well as a new psychological theory of aspiration levels. The theories' predictions of cooperativeness and fairness in the above mentioned games will be presented and compared using experimental data.

Autumn Semester 2015
Page 580 of 1434
Content

This course starts with a discussion of the typical and often counter-intuitive features of complex dynamical systems such as self-organization, emergence, (sudden) phase transitions at “tipping points”, multi-stability, systemic instability, deterministic chaos, and turbulence. It then discusses phenomena in networked systems such as feedback, side and cascade effects, and the problem of radical uncertainty. The course progresses by demonstrating the relevance of these properties for understanding societal and, at times, global-scale problems such as traffic jams, crowd disasters, breakdowns of cooperation, conflict, social unrests, political revolutions, bubbles and crashes in financial markets, epidemic spreading, and/or “tragedies of the commons” such as environmental exploitation, overfishing, or climate change. Based on this understanding, the course points to possible ways of mitigating techno-socio-economic-environmental problems, and what data science may contribute to their solution.

Prerequisites / notice

Mathematical skills can be helpful

851-0252-04L Behavioral Studies Colloquium

Abstract

This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences. Both at the micro- and macro-levels of cognition, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their research ideas in relation to behavioral science. The colloquium also features invited research talks.

Objective

Students know and can apply autonomously up-to-date investigation methods and techniques in the behavioral sciences. They achieve the ability to develop their own ideas in the field and to communicate their ideas in oral presentations and in written papers. The credits will be obtained by a written report of approximately 10 pages.

Content

This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their ideas in so far as they have some relation to behavioral science. The possible research areas are wide and may include theoretical as well as empirical approaches in Social Psychology and Research on Higher Education, Sociology, Modeling and Simulation in Sociology, Decision Theory and Behavioral Game Theory, Economics, Research on Learning and Instruction, Cognitive Psychology and Cognitive Science. Ideally the students (from Bachelor, Master, Ph.D. and Post-Doc programs) have started to start work on their thesis or on any other term paper.

Course credit can be obtained either based on a talk in the colloquium plus a written essay, or by writing an essay about a topic related to one of the other talks in the colloquium. Students interested in giving a talk should contact the colloquium organizers (Schinazi, Hoelscher) before the first session of the semester. Priority will be given to advanced / doctoral students for oral presentations. The course credits will be obtained by a written report of approximately 10 pages. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.

851-0252-07L Recent Debates in Social Networks Research

W 2 credits 2S C. Stadtfeld, P. Block

Abstract

Social Networks research is a highly interdisciplinary fields. For example, scholars in Sociology, Psychology, Political Sciences, Computer Science, Physics, Mathematics and Statistics contribute to the development of theories and methods. This course aims at understanding, comparing and structuring recent debates in the field of Social Networks.

Objective

Social Networks research is a highly interdisciplinary fields. At the end of this seminar, students will understand and be able to compare different subject-specific approaches to social networks research (e.g., from Sociology, Psychology, Political Sciences, Computer Science, Physics, Mathematics and Statistics). They will be familiar with recent publications in the field and be able to critically participate in a number of recent debates. Amongst others, these debates touch upon the co-evolution of selection and influence mechanisms, appropriateness of statistical models, generic mechanisms and features of social networks, models for the analysis of dynamic networks.

851-0253-00L Embodied Cognition

W 2 credits 2S K. Stocker

Abstract

This seminar offers an introduction to embodiment. Does the representation of thought and emotion depend upon the sensory and motor system? Highlights: the figurative processing of “go” still evokes voltage changes in foot muscles, conceptualizing time activates the eyes to look along a mental time line, abstract causality might still be grounded in motor control, emotion shows in the way we walk

Objective

Looking at the degree of embodiment in cognition and emotion naturally leads to the question how the mind works. What is the nature of human thoughts and emotions? How deeply are they dependent upon features of our physical body as an agent? Do the sensory and motor system play a physically constitutive role in conceptualizing thought and emotion? We will look at these questions by examining the degree of embodiment in basic thinking types of our mind (space, time, and causality thinking) as well as in abstract thought (e.g., logical thinking) and in emotion processing. As will be discussed, the topic of how the mind works is not only of central importance in the humanities (psychology, linguistics, philosophy, anthropology, education), but is also relevant for parts of the natural and technological sciences (neuroscience, medicine, computer science, artificial intelligence). Active participation is expected. Each participant can choose a topic for which they will give an oral presentation (about 30 min.) and write a related written report (about 3000 words).

851-0253-01L Introduction to Cognitive Neuroscience

W 3 credits 2V V. Goel

Abstract

This will be an introductory course in cognitive neuroscience. We will examine both human neurophysiology and cognitive functioning and explore how the latter is underwritten by the former. Topics will include brain anatomy and development, cellular mechanisms, CNS methodologies, visual perception, object recognition, memory, hemispheric specialization, and complex cognition.

Objective

The focus will be on the interplay between neural and cognitive systems. The course will have a bias towards “higher” cognitive functions.

Learning objectives and outcomes: the course will have three basic components: (1) the first component will include basics of brain anatomy and development, functioning of cellular mechanisms, and how cellular mechanisms can be modelled as computational processes; (2) the second component will overview CNS methodologies, with an emphasis on MRI techniques; (3) in the third component we will turn to content topics. These will include visual perception, object recognition, memory, hemispheric specialization, and complex cognition. By the end of the course the student will be able to identify the major brain structures, they should be able to explain the functioning of neurons, as relating to the action potential, and for each of the content topics, the student should be able to identify the phenomenon, give examples, and discuss one or two of the main theories explaining it.

851-0585-00L Rational-Choice-Sociology. Theory and Empirical Applications

W 2 credits 2S A. Diekmann

Abstract

Rational-Choice-Theory has become one of sociology’s general theoretical approaches. The seminar concerns itself with major ideas, concepts and questions involved with the development of a theory. The seminar will also include examples of empirical applications from various fields of sociology.

Objective

Attain in-depth knowledge and learn about new aspects of Rational-Choice-Theory and its applications.

Content

In collaboration with Prof. Dr. Norman Braun, Dr. Thomas Hinz, University of Munich, and Dr. Axel Franzen, University of Cologne.

Rational-Choice-Theory (RCT) has become a general theoretical approach in sociology. Recent progress in social sciences and game theory has triggered the theoretical development of RCT. The seminar will be concerned with important new ideas, concepts and questions of theory building. In addition, the seminar will illustrate empirical applications which cover broad areas in sociology: marriage and divorce, fertility, consumer behavior, labor market processes and exchange in social networks.

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 581 of 1434
This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

Particularly suitable for students of D-MAVT, D-INFK, D-ITET, D-MTEC, D-PHYS

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

Graded essay, own choice of topic according to the syllabus and upon consulting the lecturer. Submission of the essay is 31st January, 2016.

Graded essay, own choice of topic according to the syllabus and upon consulting the lecturer. Submission of the essay is 31st January, 2016.

Further German and English literature will be supplemented and made available online.

Enrolling in the course is primarily intended for students of D-INFK, D-ITET, D-MTEC, D-PHYS.

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

The number of participants is limited to the size of the available computer teaching room. **Content**

Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. «Digitization plus Internet» allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?»

The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetics», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge. Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)...

As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2020.ethz.ch.

More on teach.digisus.info starting from September. Stay tuned.

**Lecture notes**

Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

**Literature**

Content of the following books is covered (PDFs freely available online):

Other recommended books are:
1 (general) Chris DiBona et al., Open Sources. Voices from the Open Source Revolution, O'Reilly, 1999.

**Prerequisites / notice**

For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.

Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the other domains (e.g. scientific knowledge, music).

**851-0594-03L Institutions and Social Behavior**

(W 2 credits 1V T. Voss)

**Abstract**

Institutions are constraints or rules which determine the opportunities, beliefs and incentives in a given situation and induce stability in social life. There are two major questions: 1. What are the determinants of the emergence and change of institutions? 2. How can the diversity of institutions be explained? The lecture will give an overview and critical discussion of some answers.

**Objective**

In everyday language and in the social sciences, the term "institutions" is used in a broad and sometimes amorphous way. Using some elementary ideas from game theory the lecture will discuss conceptual issues and some important theoretical ideas related to the emergence and effects of institutions. Various approaches toward a "new institutionalism" will be analysed. Theoretical explanations of institutions are confronted with empirical results.

**Prerequisites / notice**

**851-0597-01L Evolutionary Foundations of Social Behavior**

(W 2 credits 1V E. Voland)

**Abstract**

This lecture will deal with the manifestations of the "selfish gene" principle in human social behavior. Cooperation and competition, selfishness and altruism, gender relations and parent-child conflicts are issues, the evolutionary backgrounds of which will be discussed. Special attention will be paid to the costly signaling theory.

**Objective**

You will receive an in-depth overview of the application of Darwinian theory on behavioral phenomena. This will enable you to approach the heuristic perspective of the so-called adaptationist program of social phenomena. Finally, you will be able to discern the benefits and the problems of the evolutionary perspective within various scientific disciplines, especially anthropology, psychology, empirical social research and comparative cultural sciences.

**Literature**

**Prerequisites / notice**

**227-0802-02L Sociology**

(W 2 credits 2V A. Diekmann)

**Abstract**

Various studies are used to introduce basic sociological concepts, theories and empirical research methods, along with selected sociological topics. The goal of the course is to provide participants with an understanding of working practice in empirical sociology and the central findings of sociological studies.

**Objective**

To learn about methods of empirical social research and key results of classic and modern sociological studies.

Objective  
Upon completion of this course, the student should have acquired:

- Basic knowledge of environmental sociology
- Overview on current fields of research in environmental sociology and their relevance for environmental protection
- Basic notion of the structure of empirical research papers in social sciences
Content
Das Seminar führt in die Umweltsoziologie ein. Dabei werden verschiedene theoretische Ansätze besprochen (Fokus: Rational Choice). Der Schwerpunkt des Kurses liegt auf aktuellen empirischen Untersuchungen zu Themen wie Umweltverhaltens, Umweltbewusstsein, soziale Dilemmata, soziale Normen, Umweltgerechtigkeit und Risikowahrnehmung. Fragen, die uns dabei beispielweise beschäftigen: Wer belastet die Umwelt besonders stark oder ist besonders stark Umweltbelastungen ausgesetzt? Was beeinflusst das Umweltverhalten der Menschen? Welche Rolle spielen bessere Faktoren (Möglichkeiten, Kosten etc.)? Welchen Einfluss haben soziale Aspekte oder Einstellungen? Wovon hängt es ab, ob eine Technologie als risikoreich eingestuft wird?

Number 851-0111-08L
Transdisciplinary Journal Club am Collegium

Abstract
Where in a field do innovative findings show up? This is a fundamental of discussion for every discipline. But what about problems that cannot be framed within one discipline? In terms of a Transdisciplinary Journal Club individual competences should be gained to lead and follow a scientific discussion beyond disciplinary boundaries.

Objective
- reading and understanding scientific papers beyond disciplinary boundaries
- gaining language competence to bridge the gap between disciplines

Number 851-0157-59L
A Historical Epistemology of Exhibitions

Abstract
The seminar provides an introduction to exhibitions as epistemic practices. By means of various research approaches and examples from historical and current exhibitions we will discuss how knowledge is created by temporary spatial constellations of exhibited objects and the ways exhibitions act as laboratories of ideas.

Objective
The seminar aims at getting to know the theoretical and practical conditions of exhibitions as temporary forms of knowledge. We will develop criteria to explore the various aspects and processes related to exhibitions, including: installations of exhibits, display cases, transporting devices, exhibition catalogues, exhibition architecture, visitor guidance, spatial arrangements of objects etc.

Using selected historical and current examples, we will discuss different formats of exhibitions that range from trade fair booths to laboratory exhibitions, exhibitions in art museums as well as in science and natural museums. Being a specific humanistic way of creating knowledge experimentally we will pay particular attention to exhibitions that deal with topics at the intersection of the sciences and the humanities, thus acting as agents in the debate on the Two Cultures.
E. Johach

Goals: Learning to understand structures and processes of environmental and science communication, becoming more sensitive for living at the expense of others. Parasites in the "Environmental Consciousness and Public Relations" shows how to communicate about environment and sustainability successfully. We wonders seem to be perfectly incompatible with science: Superstition and ignorance here, exactness and certitude there. In the seminar the course provides insight into the complex and intricate history of the parasite and the various definitions of parasitism. In particular, it will make students aware of the fact that there is no single expert discourse on parasites (such as biology or medicine) which is then transferred to the realm of the social and the political. Instead, it will be considered how and why all these aspects are intertwined when people talk about parasites.

Science and Wonder

Number of participants limited to 30.

Following the notions of "wonder" and the "wonderful" as recurrent themes students will get an overview of the history of the sciences and their specifically modern self-conception. They will gain the expertise to understand arguments and conflicts out of their particular historical context and thereby get inside into the historical variability of objectivity and scholarly standards.

Environmental Consciousness and Public Relations

Number of participants limited to 60.

Sign in until 24.09.2015.

Please describe your expectations. Why do you want to attend this special topic? Do you have any pre-information about the integral model? Do you have any practical experience in environmental communication?

"Environmental Consciousness and Public Relations" shows how to communicate about environment and sustainability successfully. We look at campaigns, exhibitions and other public relations measures to learn, how to design and realize good communication.

You learn how to handle tools and concepts in environmental communication. And you can evaluate communication projects. We also discuss the evolution of consciousness.

- Methods and tools in environmental communication.
- Marketing mix
- Examples of campaigns, events, print products, media relations.
- Integral sustainability

We will discuss new trends in environmental communication with the focus on integral solutions.

- Integral Vision; Ken Wilber, 2005

The course gives an introductory overview in research questions, theoretical perspectives and empirical results of science communication and environmental communication. They will be illustrated by concrete examples and via lectures from external guests. 

Goals: Learning to understand structures and processes of environmental and science communication, becoming more sensitive for problems of science public relations, getting an insight into public debates about environmental issues.

Methods: Case studies, invitation of media practitioners and experts, discussions, lectures on key theoretical concepts of communication.

Topics: Concrete communication instruments like media conferences, theoretical perspectives of public relations, basic principles and examples of information campaigns, environment and science as media topics, functions and structures of science communication, relations between science, media and politics.

I. Introduction
- Topics: Environment, Science, Risks, Media
- Forms, Functions, Effects of Public and Mass Communication

II. Stakeholders and their Public Relations Efforts
- Public Relations and Science PR: Theoretical Perspectives, Instruments

III. Science and Environmental Issues in the Media
- Forms and Functions of Science Journalism
- Problems of Selection, Interpretation, Quality
- Media Content Analysis
- Online Communication

IV. Uses and Effects of Science and Environmental Communication
- Extent of Media Use
- Effects on Knowledge, Risk Perceptions, Environmental Attitudes
- Effects on Science itself

Literature and powerpoint presentations will be provided on the OLAT platform.
The aim is to give an overview on crucial events, works of art, buildings and theories since the beginning of the 19th century up to today.

History of Art and Architecture I

The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be

L. Schmitt

2 credits

http://www.stalder.arch.ethz.ch/courses

3 credits

Acquirement of basic knowledge of the history of art and architecture, resp. of methodical basic knowledge of historical working.

History of Art and Architecture III

The subject of this lecture course is the history and theory of architecture since the beginning of the 19th century up to now. It examines the architectural answers to the changing technical inventions and social practices. Consequently, the focus will be less on individual architects within a broader historical context.

The course should enhance the comprehension of historical and theoretical issues, and allow the students to localize their own practice to current questions a variety of case studies will be discussed.

The first one-year course aims at these goals in the form of exemplary epoch representations which throw light upon the historical continuities. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

The two-semester course offers an introduction to the history and theory of architecture from the industrial revolution up to now. Based on current questions a variety of case studies will be discussed.

The lecture conveys historical knowledge about architecture and art as well as methodical knowledge as a preparation for the independent handling of historical sources and scientific literature. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

The course wants to develop the students ability to critically read and assess historic texts.

The history of art and architecture is part of our reality: it confronts us in the historically shaped environment of the city and plays an essential role in the creation of architecture. The historical lectures are therefore part of the fundamental courses of the undergraduate historical plannings and methods of European cities. Each specific urban development will be presented within a broader context.

Prerequisites / notice

Voraussetzungen: Die Vorlesung hat einführenden Charakter.

Type B: Reflection About Subject-Specific Methods and Contents

Subject-specific courses: Recommended for doctoral, master and bachelor students (after first-year examination only).

Autumn Semester 2015

Data: 06.04.2020 13:01

Page 587 of 1434
Objective

This course analyzes the history of urban architecture primarily in its existing three dimensional form as a complex human artefact. It also explores the inspirations that prompted the creation of this artefact: philosophical and religious concepts, social conditions, property relationships and the mechanisms that exploit the economics of real estate and the influence of building technology. Intellectual, literary or artistic modes of thought will also be assessed with regard to their impact on urban development. Urbanism has its own distinctive approach as a discipline, but it is also clearly responsive to the influence of related disciplines. Study is made of actual cities and urban expansion plans which are in the process of implementation, as well as unrealized projects and visions of the future. These projects sometimes illustrate ways of thinking that are equal to, or clearer than, actual urban situations.

Content

In the first semester an introduction to the discipline and the methods are given along the thematic issues from the beginning of urban culture until the mid-19th century.

01. Introduction to the discipline and method: The history of urban design as a historical project
02. Athens and Rome in the ancient world: Myth, selfportrayal and speculation
03. From the spirit of equality to the colonial module: Greek and Roman City foundings
04. From the urban ideal to new cities in the Middle Ages and the Renaissance
05. Baroque strategies: The new organisation of Rome under Sixtus V, the production of Versailles under Louis XIV and the invention of St. Petersburg
06. The city between Absolutism and Enlightenment: baroque defence-designs, the European colonization of the American continent and the reconstruction of Lisbon
07. Ideology and speculation after the Glorious Revolution: landscapegardens and urban figurations in England from 1650-1850
08. Between modernization, Grandeur and repression: Embellishment in Paris from 1750-1830
09. The construction of the bourgeois city: Georges-Eugène Haussmann transforms Paris into the capital of the 19th century
10. Architectural insertion and plan for the expansion of the city: From the Berlin of Karl Friedrich Schinkel to James Hobrecht
11. Neoabsolute power, bourgeois self-confidence and Marxian Idealism: The Viennese Ringstrasse and Ildéfonso Cerdas Ensanche for Barcelona

Lecture notes

The lectures are accompanied by a script (two semesters of the bachelor studies), that can be purchased at the chair for the history of urban design (HIL D 75.2) at the price of CHF 30.-. The script serves as an auxiliary means to the attended lecture compiling the most important illustrations showed and the names and dates of the buildings and its builders along with a short introductory note.

Literature

Further recommended literature to consult is listet within the script.

History of Urban Design from antiquity to the 19th century

851-0724-00L Property Law for Geometers: Land Registry and Geoinformation Law
Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

Abstract

Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

Objective

Overview of the legal norms of land registry and surveying law.

Content

Basic principles of material and formal land registry law, components of the land register, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of the geometer. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study, abgegebene Unterrlagen: Skript in digitaler Form

Lecture notes

Requirements: Property Law (12-722)

851-0705-00L Environmental Law: Topics and Case Studies
Number of participants limited to 20.

Prerequisites: Environmental Law: Conceptions and Fields ((851-0705-01L) offered in spring semester).

Abstract

This workshop offers to the students the opportunity to intensify their environmental legal knowledge on the basis of individual topics or cases of their respective programme or professional interest in a guided self-study. They develop a better understanding for the practical application of legal regulations on environmental matters.

Objective

The aim of this workshop is to equip students with legal skills and methods to solve or treat problems and questions of the environmental law and foster the understanding on the possibilities and limits of legal problem-solving. The students choose an inquiry with practical relevance. To this end they work out the legal basis demonstrating a legal correct solution or approach to a solution. In doing so, students will get to know legal methods and research possibilities.
At the beginning of the workshop the students are introduced to the legal methods and sources as well as in the aim and the process of the workshop. The participants will organize themselves in a team of two persons giving themselves an inquiry on topics of the environmental law. It is also possible to choose questions at the interfaces of e.g. zoning law, energy law, transport law. A proposal, which will be presented to the lecturer, as well as an optional Q&A-session in class will facilitate the start. Next the working on topics will follow by self-study. The results will be presented in form of a memo/paper with a minimum of ten pages (excluding graphs and tables). At the end of the workshop, a presentation of ten minutes will be made to the plenum including a question-and-answer session. Class language will be German.

**Lecture notes**
Den Studierenden werden Unterlagen zur juristischen Metoden- und Quellenlehre sowie zum Inhalt und Ablauf des Kurses zu Beginn der Veranstaltung kostenlos abgegeben.

**Literature**
Rechtsgrundlagen, Literatur und Gerichtsentscheide werden themenspezifisch selber recherchiert, unter Mithilfe und Beratung des Dozenten.

**Prerequisites / notice**
Die Veranstaltung erfordert die Bereitschaft, sich aktiv und selbständig mit einer selbstgewählten Fragestellung oder einem eigenen Fallbeispiel aus dem Gebiet des Umweltrechts und allenfalls aus Schnittstellengebieten auseinanderzusetzen. Damit die Interaktivität und die Begeleitung der Teams geeignet gewährleistet werden kann, ist die Teilnehmerzahl auf maximal 16 Personen beschränkt. Es handelt sich um eine Vertiefungsveranstaltung. Der Besuch der Vorlesung "Umweltrecht: Konzepte und Rechtsgebiete" (851-0705-01) ist Voraussetzung.

**851-0707-00L**
*Space Planning Law and Environment*
- **W** 2 credits
- **2G** O. Bucher

**Abstract**
System of swiss planning law, Constitutional and statutory provisions, Space planning and fundamental rights, Instruments, Application, legal protection, enforcement, Practical training.

**Objective**
Basic understanding of nature and function of space planning from a legal point of view. Basic knowledge of space planning instruments, relationship between space planning and constitutional law (especially property rights), solving of practical cases.

**Content**

**Lecture notes**

Häni, Peter, Planungs-, Bau- und besonderes Umweltschutzrecht, 5.A., Bern 2008

**851-0252-01L**
*Human-Computer Interaction: Cognition and Usability*
- **W** 3 credits
- **2S** C. Hölscher, I. Barisic, S. Ognjanovic

**Number of participants limited to 20.**

**Abstract**
This seminar introduces theory and methods in human-computer interaction and usability. Cognitive Science provides a theoretical framework for designing user interfaces as well as a range of methods for assessing usability (user testing, cognitive walkthrough, GOMS). The seminar will provide an opportunity to experience some of the methods in applied group projects.

**Objective**
This seminar will introduce key topics, theories and methodology in human-computer interaction (HCI) and usability. Presentations will cover basics of human-computer interaction and selected topics like mobile interaction, adaptive systems, human error and attention. A focus of the seminar will be on getting to know evaluation techniques in HCI. Students form work groups that first familiarize themselves with a select usability evaluation method (e.g. user testing, GOMS, task analysis, heuristic evaluation, questionnaires or Cognitive Walkthrough). They will then apply the methods to a human-computer interaction setting (e.g. an existing software or hardware interface) and present the method as well as their procedure and results to the plenary. Active participation is vital for the success of the seminar, and students are expected to contribute to presentations of foundational themes, methods and results of their chosen group project. In order to obtain course credit a written essay / report will be required (details to be specified in the introductory session of the course).

**851-0252-03L**
*Cognition in Architecture - Designing Orientation and Navigation for Building Users*
- **W** 3 credits
- **2S** V. Schinazi, B. Emo Nax, C. Hölscher

**Abstract**
How can behavioral and cognitive science inform architecture? This project-oriented seminar investigates contributions of cognitive science to architectural design with an emphasis on orientation and navigation in complex buildings and urban settings. It includes theories on spatial memory and decision-making as well as hands-on observations of behavior in real and virtual reality.

**Objective**
Taking the perspectives of building occupants and visitors, it is vital for a human-centered design approach. Students will learn about relevant theory and methods in cognitive science and environmental psychology that can be used to understand human behavior in built environments. The foundations of environmental psychology and human spatial cognition will be introduced. A focus of the seminar will be on how people perceive their surroundings, how they orient in a building, how they memorize the environment and how they find their way from A to B. Students will also learn about a range of methods including real-world observation, virtual reality experiments, eye-tracking and behavior simulation for design. Students will reflect on the roles of designers and other stakeholders with respect to human-centered design and an evidence-based design perspective. The seminar is geared towards a mix of students from architecture / planning, engineering, computer science and behavioral science as well as anybody interested in the relation between design and cognition. Architecture students can obtain course credit in "Vertiefungsfach" or "Wahlfach."

**851-0253-02L**
*Reflections on Design Processes*
- **W** 3 credits
- **2S** V. Goel, C. Hölscher

**Abstract**
This will be a seminar on design processes. We will review the body of work directed at understanding design processes from the 1950s to the present time. The students will be expected to prepare for and lead the presentations for some of the topics and write a final paper.

**Objective**
Designing artifacts is a critically important, if not unique, human cognitive activity. While we have engaged in design activity since we have been human, it has only been an object of study for the past 50 years. The initial focus during the 1960s was on "design methodologies." This body of work, motivated by large, technically sophisticated, geographically dispersed projects like the Polaris missile project, sought to develop an analytic, mathematically based, teachable doctrine about the design process that would serve the same role for design as the "scientific method" served for science. During the 1980s interest shifted from a normative approach to a descriptive approach, focusing on the cognitive and computational processes of designers. More recently, several researchers are using neuropsychological methodologies to understand the design process.

**Learning outcomes:** to understand the design process from a normative methodological perspective, and descriptive computational, cognitive, and neural perspectives.

**851-0157-55L**
*Avantgarde-Life: Utopia of the 'New Man' Between*
The seminar aims at getting to know the theoretical and practical conditions of exhibitions as temporary forms of knowledge. We will develop criteria to explore the various aspects and processes related to exhibitions, including: installations of exhibits, display cases, transporting devices, exhibition catalogues, exhibition architecture, visitor guidance, spatial arrangements of objects etc.

Using selected historical and current examples, we will discuss different formats of exhibitions that range from trade fair booths to laboratory exhibitions, exhibitions in art museums as well as in science and natural museums. Being a specific humanistic way of creating knowledge experimentally we will pay particular attention to exhibitions that deal with topics at the intersection of the sciences and the humanities, thus acting as agents in the debate on the Two Cultures.

Anke te Heesen: Theorien des Museums zur Einführung, Hamburg 2012.

Abstract
The lecture gives engineering students an overview of the basic aspects of intellectual property. The lecture aims to make participants aware of the various methods of protection and to put them in a position to be able to use this knowledge in the workplace.

Objective
In recent years, knowledge about intellectual property has become increasingly important for engineers. In both production and distribution as well as in research and development, engineers are increasingly being confronted with questions concerning the patenting of inventions and the utilisation of patent information. With up to 80% of publicly-available technical information being stored in patents only, it is of great importance for engineers to know the basics of the patent system and to be in a position to be able to extract relevant information from the flood of patent information available. This relates to daily work in industry as well as in research, where protecting inventions has gained in importance.

Patents are also an important source of information - from competitors and potential cooperation partners to the development of markets and the risk of coming into conflict with third party IP rights. Respectively, a knowledge of patents has also become a key qualification at a company's strategic level.

The seminar is customised to the needs of engineers. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.

The seminar contains practical exercises on the use and research of patent information. Basic knowledge on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

Prerequisites / notice
The seminar is coordinated in particular to the needs of the following degree programs: Agricultural science, architecture, civil engineering, computer science, electrical engineering and information technology, environmental engineering, geomatic engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics.

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' will be offered, which is coordinated to the needs of students in these degree programs.

History of Urban Design I

Abstract
The lecture covers the time from the beginning of urban culture until the mid 19th century. With selected examples it emphasizes on the historical plannings and methods of European cities. Each specific urban development will be presented within a broader context.

Objective
This course analyzes the history of urban architecture primarily in its existing three dimensional form as a complex human artefact. It also explores the inspirations that prompted the creation of this artefact: philosophical and religious concepts, social conditions, property relationships and the mechanisms that exploit the economics of real estate and the influence of building technology. Intellectual, literary or artistic modes of thought will also be assessed with regard to their impact on urban development. Urbanism has its own distinctive approach as a discipline, but it is also clearly responsive to the influence of related disciplines. Study is made of actual cities and urban expansion plans which are in the process of implementation, as well as unrealized projects and visions of the future. These projects sometimes illustrate ways of thinking that are equal to, or clearer than, actual urban situations.

Content
In the first semester an introduction to the discipline and the methods are given along the thematic issues from the beginning of urban culture until the mid-19th century.

- 01. Introduction to the discipline and method: The history of urban design as a historical project
- 02. Athens and Rome in the ancient world: Myth, selfportrayal and speculation
- 03. From the spirit of equality to the colonial module: Greek and Roman City foundings
- 04. From the urban ideal to new cities in the Middle Ages and the Renaissance
- 05. Baroque strategies: The new organisation of Rome under Sixtus V, the production of Versailles under Louis XIV and the invention of St. Petersburg
- 06. The city between Absolutism and Enlightenment: baroque defence-designs, the European colonization of the American continent and the reconstruction of Lisbon
- 07. Ideology and speculation after the Glorious Revolution: landscapegardens and urban figurations in England from 1650-1850
- 08. Between modernization, Grandeur and repression: Embellishment in Paris from 1750-1830

History of Art and Architecture I

Abstract
The lecture conveys historical knowledge about architecture and art as well as methodical knowledge as a preparation for the independent handling of historical sources and scientific literature. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

Objective
Acquirement of basic knowledge of the history of art and architecture, resp. of methodical basic knowledge of historical working.

Content
The history of art and architecture is part of our reality: it confronts us in the historically shaped environment of the city and plays an essential role in the creation of architecture. The historical lectures are therefore part of the fundamental courses of the undergraduate programme in architecture. On the basis of cultural and art-historical research the courses impart knowledge about architecture and art from ancient times to the present. At the same time they sharpen the perception for the conditions and capabilities of building activity in history. Moreover, they convey methodical knowledge and technical language skills and are meant as a preparation for the independent handling of historical sources and scientific literature.

The first one-year course aims at these goals in the form of exemplary epoch representations which through light upon the historical continuities. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.
The course can be not taken by Master students of the D-ARCH, who have already completed it within the Bachelor programme.

**701-0703-00L** Environmental Ethics

**Abstract**
The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

**Objective**
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and arguments to be found within the field of environmental ethics and will have practised these in small case studies.

**Content**
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

**Lecture notes**
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

**Prerequisites / notice**
The course can not be taken by Master students of the D-ARCH, who have already completed it within the Bachelor programme.

**851-0549-00L** WebClass Introductory Course History of Technology

**Abstract**
WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to

- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

**Objective**
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and arguments to be found within the field of environmental ethics and will have practised these in small case studies.

**Content**
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

**Lecture notes**
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

**Prerequisites / notice**
The course can not be taken by Master students of the D-ARCH, who have already completed it within the Bachelor programme.

**860-0006-00L** Statistical Data Analysis

**Abstract**
This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with statistical software such as Stata.

**Objective**
Students
- have a sound understanding of linear and logit regression
- know some basics about regression models for multinomial, ordered, or censored response variables, as well as for count data
- know strategies to test causal hypotheses using regression analysis with experimental and quasi-experimental methods
- are able to formulate and implement a regression model for a particular research question and a particular type of data
- are able to critically interpret results of a regression model, in particular, regarding causal inference

**Content**
The topics covered in the first part of the course are linear and logit regression analysis. Extensions to regression models for ordered, multinomial or censored response variables, as well as for count data will be addressed briefly. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, propensity score matching, and randomized controlled trials.

The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will be enabled to critically read and assess published empirical social science studies.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of one fourth. Students are assisted in solving the assignments during the exercises session. Support is provided for the analysis software Stata, but students are free to choose R, SPSS or any other software to solve the assignments.
Central Questions in Bioethics

Abstract
Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decision, principles like “Protect the dignity of the living being!”, or “Respect a person's self-determination!”? Besides answering such questions, the social, scientific and political processes linked with biotechnologies should be taken into account.

Objective

Literature:
1. Dieter Sturma/Bert Heinrichs (Hg.), Handbuch Bioethik, Stuttgart: Metzler 2015.

Philosophy of Biology

Abstract
The philosophy of biology deals with concepts and problems that occur specifically while dealing with living entities. Accordingly, it covers the historical as well as systematic aspects of concepts like gene or species, or theories explaining diversity or stability, competitive or cooperative action. Another important topic is the role of technology while affording biological objects.

Objective
The overarching objective of this seminar is to get an impression of the specificity of biological problems and to develop an appropriate philosophical sensitivity. Accordingly, philosophical traditions in biology will be discussed, just as the application of the history of concepts in the context of biology. The seminar reader will consist of contributions of biologists as well as philosophers of biology. Besides the basic concepts in biology such as gene, species, evolution, or diversity, we will be also reflecting on the relationship between technology, experimenting, and biological objects. Depending on the interests of the seminar participants, the examples to be discussed may be chosen from systems biology, molecular or synthetic biology, ecology or else.

Research Ethics

Abstract
This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective
The main goal of this course is to enhance the student’s ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry
---------------------------------------

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)
----------------------------------------------------------

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks;
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access;
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

851-0148-02L Manifolds and Individuation in Mathematics and Philosophy

Number of participants limited to 40.
Particularly suitable for students of D-BIOL, D-MATH, D-PHYS

Autumn Semester 2015

Data: 06.04.2020 13:01
Abstract

Manifolds and individuation are concepts which allow to reconsider notorious problems such as the relationship between general and particular, substance and modi, physical processes and persons. They may incorporate heterogeneous elements as needed to overcome traditional categories and classifications, and also describe processes leading to the existence of things.

Objective

The students should become familiar with some conceptual possibilities to recognise and deal with structures across the usual division of subjects. The problem areas are discussed on the basis of texts of various mathematicians and philosophers, with a wide range of applications such as psychology and life sciences.

|          | Abstract                      |      |      |       | The lecture gives students of chemistry-related degree programs an overview of the options to protect inventions and the underlying investments in research and development. The lecture aims to put the participants in a position to be able to use this know-how in the workplace. |

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 596 of 1434
Research and development play an important role in chemistry-related technology sectors, such as inorganic chemistry, pharmacy or food chemistry.

Investments in the development of new substances and active component in these sectors are traditionally secured by patents because publicly known inventions, generally chemical substances, may easily be reproduced by others.

In the last years, the know-how about intellectual property has become increasingly important for chemists and engineers. Both in the production process and in the distribution sector, chemists and engineers are increasingly concerned with questions related to patenting inventions and the use of patent information. As more than three-quarters of all publicly available technical information is reportedly available only in patents, it is more and more important for researchers and engineers to be capable of extracting relevant information from the flood of patents.

Patents are not only a measure to protect investments and inventions in chemistry-related sectors but also an important source of information about competitors and potential cooperation partners, about the development of markets and the risks of infringing others’ patents. Accordingly, the know-how about patents and patent information has also become a key qualification on the strategic level in companies and in the area of research.

The seminar is customised to the needs of chemists and students of related degree programs. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.
- Special aspects of protecting inventions in chemistry-related sectors, including polymorphs and inventions in the field of nanotechnology.

The seminar contains practical exercises on the use and search of patent information in chemistry-related sectors. Basic know-how on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

Prerequisites / notice
The lecture is coordinated in particular to the needs of the following degree programs: Agricultural science, biotechnology, chemical engineering, chemistry, food science, pharmaceutical sciences.

For engineering and physics students, the lecture 'The Role of Intellectual Property in daily routine: A Practical Introduction' will be offered, which is coordinated to the needs of students in these degree programs.

**Abstract**

The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

**Content**

- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-sectional topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

**Lecture notes**

Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

In the part of the course serving as an introduction to general and applied ethics, we shall be using the following textbook: Barbara Bleisch/Markus Huppenbauer: Ethische Entscheidungsfindung. Ein Handbuch für die Praxis, Zürich 2010 (to be published Autumn 2010).

**Literature**

- Angela Krebs (Hrsg.), Grundtexte der gegenwärtigen tier- und ökoethischen Diskussion 1997
- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003
- John O’Neill et al., Environmental Values, 2008
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008
- Marcus Düwell et. al (Hrg.), Handbuch Ethik, 2. Auflage, Stuttgart (Metzler Verlag), 2006
- Johann S. Ach et. al (Hrsg.), Grundtexte Ethik 1. Grundlagen, Paderborn (mentis) 2008
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

**Prerequisites / notice**

The procedure for accumulating CP will be explained at the start of term.

I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

**Abstract**

Particularly suitable for students of D-BIOL, D-CHAB, D-CHAB, D-CHAB.
Introduce students without prior economics background to the main concepts of health economics and policy to enhance students’ understanding of how health care institutions and markets function. First, the three important decisions made by individuals will be analyzed: What determines the health behaviors, like the intensity of preventive measures like sport, that an individual undertakes? What types and amount of personal health care services does an individual demand? How much health insurance coverage will be purchased? In a second part, the major participants on the supply side of health care markets - physicians, hospitals, nurses and pharmaceutical manufacturers - will be discussed. E.g., how important are financial incentives in the choice of medicine as a career, specialty choice and practice location? What does it mean and imply that a physician is an agent for a patient? How do pharmaceutical firms decide on investments in new products and how can public policy encourage pharmaceutical innovation? The choices made by societies about how health care services are financed and about the types of organizations that supply health care will be addressed in a third part. One important choice is whether a country will rely on public financing of personal health care services or private provision by not-for-profit or for-profit organizations or some combination. The advantages and disadvantages of the alternatives will be discussed to provide a framework for analyzing specific types of health care systems.

**851-0157-56L Avantgarde-Life: Utopia of the 'New Man' Between Science and Technology**

**Objective**

The seminar deals with the designs for a new living in the artistic and social avantgarde movements at the beginning of the 20th century. It focuses on the correlation of the contemporary scientific and technological developments and the conceptions of a 'New Man'. The discipline of psychotechnics together with scientific and technological designs of living and working environments formulated visions of new and enhanced ways of human living and perception. In the seminar, we will examine the utopian visions of life in the avantgarde movements. TOUCHING UPON THE FIELDS OF THE LIFE SCIENCES, ECONOMICS, MANAGEMENT, PROGRESSIVE EDUCATION, ARCHITECTURE, AND ART WE WILL REFLECT THE DIVERSE RELATIONS BETWEEN SCIENCE, TECHNOLOGY, AND HUMAN LIVING.

**Literature**

1. Dieter Sturma/Bert Heinrichs (Hg.), Handbuch Bioethik, Stuttgart: Metzler 2015.
Objective
The main goal of this course is to enhance the student's ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.

Content
I. Ethics & the Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics; virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 Rs (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.
This seminar will introduce key topics, theories and methodology in human-computer interaction (HCI) and usability. Presentations will cover basics of human-computer interaction and selected topics like mobile interaction, adaptive systems, human error and attention. A focus of the seminar will be on getting to know evaluation techniques in HCI. Students form work groups that first familiarize themselves with the method for designing user interfaces as well as a range of methods for assessing usability (user testing, cognitive walkthrough, GOMS). The seminar will provide an opportunity to experience some of the methods in applied group projects.

Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed listing of different topics of the course will be provided in the script/handout or on the course work space.

Lecture notes
Es wird mit Folien gearbeitet, die als PDF über die elektronische Dokumentenablage (ILIAS) auf dem System der ETHZ vorgängig abrufbar sind. Auf dem Termin- und Themenplan (ebenfalls online abrufbar) sind Links zu Gesetzeszitaten und weiteren Unterlagen abrufbar. Schliesslich wird jede Vorlesung auch als Podcast aufgezeichnet, der jedoch nur für die Studierenden mit einem Passwort (erhältlich beim Dozenten) zugänglich ist.

Literature

Prerequisites / notice
Die Semesterendprüfung ist in Form eines schriftlichen Kurztests (normalerweise MC) in voraussichtlich der letzten Doppelstunde geplant. Es wird angegeben, welche Unterlagen beim jeweiligen Thema den Prüfungsstoff definieren. Der Test wird möglicherweise elektronisch durchgeführt.

Ferner bietet Ursula Widmer eine Vorlesung zum Thema Informationssicherheit an, welche die rechtlichen Aspekte der Sicherheit von ICT-Infrastrukturen und Netzen und der transportierten und verarbeiteten Informationen.

In den Sommerferien werden von den Dozenten folgende Vorlesungen angeboten:

851-0591-00L Digital Sustainability in the Knowledge Society

<table>
<thead>
<tr>
<th>W</th>
<th>2 credits</th>
<th>2V</th>
<th>M. M. Dapp</th>
</tr>
</thead>
</table>

**Abstract**
How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on strong intellectual property rights are contrasted with open models like, e.g. Open Source/Content/Access. The course discusses consequences from different models and introduces «digital sustainability» as an alternative vision for society.

**Objective**
At the heart of the discourse is the handling of digital goods and intellectual property in society. Digitization and the Internet allow handling knowledge in a way, which directly contrasts with the traditional understanding of "intellectual property" and the industries based on it. Starting from economic and legal basics, we compare proprietary and open/"free" models. Sustainable development as a concept is transferred to digital goods, taking into account the particular nature of digital stuff.

After the lecture, you should (hopefully) be able to:
- characterize the nature of digital goods vs. physical goods
- critique the legal concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- explain the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the free/open source software model to other digital goods (e.g., open content, open access)

**Content**
Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. 「Digitization plus Internet」 allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. 「Cool, so what's the problem?」

The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, 「piracy」 and 「file-sharing」 are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of 「intellectual property」, which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to 「reading, writing and arithmetics」, this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for 「Free Software」 exists today, with 「GNU/Linux」 as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music).

As a 「teaser」 to the lecture, you are invited to read the essay 「ETH Zurich - A Pioneer in Digital Sustainability!」. It can be downloaded from www.essays2030.ethz.ch.

More on teach.digisus.info starting from September. Stay tuned.

Lecture notes
Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.
Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events. For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45. Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.

**Content**
This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

**Literature**

2. MATLAB kompakt, Wolfgang Schweizer, (Oldenbourg, 2006)

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

**Prerequisites / notice**
The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

**851-0585-41L From Computational Social Science to Global Systems Science**

| Content | The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work, (2) combining perspectives of different scientific disciplines (e.g. sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work. |
| **Objective** | Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events. They should also be able to explain how systemic instabilities can be understood by changing the perspective from a component-oriented to an interaction- and network-oriented view, and what fundamental implications this has for the proper design and management of complex dynamical systems. |
| **Literature** | Computational Social Science and Global Systems Science serve to better understand the emerging digital society with its close co-evolution of information and communication technology (ICT) and society. They make current theories of crises and disasters applicable to the solution of global-scale problems, taking a data-based approach that builds on a serious collaboration between the natural, engineering, and social sciences, i.e. an interdisciplinary integration of knowledge. |
| **Prerequisites / notice** | The number of participants is limited to 100. |

**851-0549-00L WebClass Introductory Course History of Technology**

| Content | WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field. |
| **Objective** | Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get to know basic theories and practices of the field. |

| **Prerequisites / notice** | The number of participants is limited to 20. |
The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protokoll is to be written.

The topics covered in the first part of the course are linear and logit regression analysis. Extensions to regression models for ordered, multinomial or censored response variables, as well as for count data will be addressed briefly. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, propensity score matching, and randomized controlled trials.

The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will be enabled to critically read and assess published empirical social science studies.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of one fourth. Students are assisted in solving the assignments during the exercises session. Support is provided for the analysis software Stata, but students are free to choose R, SPSS or any other software to solve the assignments.

### Autumn Semester 2015

851-0125-41L Introduction Into Philosophy of Technology
- Particularly suitable for students of D-ITET, D-MATL, D-MAVT
- W 3 credits
- 2V
- O. Müller

Abstract
- Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to a autonomous philosophy of technology, which had become important also for other philosophical disciplines (e.g. in Heidegger's philosophy).

Objective
- The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protokoll is to be written.

851-0549-12L Sharing. The History of an Attractive Technology
- Particularly suitable for students of D-ARCH, D-BAUG, D-
- W 3 credits
- 2S
- D. Gugerli
Abstract
The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be discussed as a crucial offer and problem of late modernity.

Objective
The course wants to develop the students ability to critically read and assess historic texts.

Lecture notes
A detailed program and course materials will be made available during the semester on www.tg.ethz.ch.

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 606 of 1434
Lecture with Computer Exercises: Modelling and Simulating Social Systems with MATLAB

Number of participants limited to 70.

This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

The lecture slides will be presented on the course web page after each lecture.

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

WebClass Introductory Course History of Technology

Number of participants limited to 100.

The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work, (2) combining perspectives of different scientific disciplines (e.g. sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

Computational Social Science and Global Systems Science serve to better understand the emerging digital society with its close co-evolution of information and communication technology (ICT) and society. They make current theories of crises and disasters applicable to the solution of global-scale problems, taking a data-based approach that builds on a serious collaboration between the natural, engineering, and social sciences, i.e. an interdisciplinary integration of knowledge.

WebClass Introductory Course History of Technology

Number of participants limited to 100.

The lecture gives engineering students an overview of the basic aspects of intellectual property. The lecture aims to make participants aware of the various methods of protection and to put them in a position to be able to use this knowledge in the workplace.

In recent years, knowledge about intellectual property has become increasingly important for engineers. In both production and distribution as well as in research and development, engineers are increasingly being confronted with questions concerning the patenting of inventions and the utilisation of patent information. With up to 80% of publicly-available technical information being stored in patents only, it is of great importance for engineers to know the basics of the patent system and to be in a position to be able to extract relevant information from the flood of patent information available. This relates to daily work in industry as well as in research, where protecting inventions has gained in importance.

Patents are also an important source of information - from competitors and potential cooperation partners to the development of markets and the risk of coming into conflict with third party IP rights. Respectively, a knowledge of patents has also become a key qualification at a company's strategic level.

The seminar is customised to the needs of engineers. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:
- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.

The seminar contains practical exercises on the use and research of patent information. Basic knowledge on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' will be offered, which is coordinated to the needs of students in these degree programs.
851-0252-02L Introduction to Cognitive Science

**Number of participants limited to 70.** Particularly suitable for students of D-ITET

**Abstract**
The lectures provide an overview of the foundations of cognitive science and investigate processes of human cognition, especially perception, learning, memory and reasoning. This includes a comparison of cognitive processes in humans and technical systems, especially with respect to knowledge acquisition, knowledge representation and usage in information processing tasks.

**Objective**
Cognitive Science views human cognition as information processing and provides an inter-disciplinary integration of approaches from cognitive psychology, informatics (e.g., artificial intelligence), neuroscience and anthropology among others. The lectures provide an overview of basic mechanisms of human information processing and various application domains. A focus will be on matters of knowledge acquisition, representation and usage in humans and machines. Models of human perception, reasoning, memory and learning are presented and students will learn about experimental methods of investigating and understanding human cognitive processes and representation structures.

851-0738-00L Intellectual Property: Introduction

**Particularly suitable for students of D-ITET, D-MAVT, D-MATL**

**Abstract**
The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights). Aspects of competition law are treated in so far as they are relevant for the protection of intellectual creations and source designations. The legal principles are developed based on current cases.

**Objective**
The aim of this course is to enable students at ETH Zurich to recognize which rights may protect their creations, and which rights may be infringed as a result of their activities. Students should learn to assess the risks and opportunities of intellectual property rights in the development and marketing of new products. To put them in this position, they need to know the prerequisites and scope of protection afforded by the various intellectual property rights as well as the practical difficulties involved in the enforcement of intellectual property rights. This knowledge is imparted based on current rulings and cases.

Another goal is to enable the students to participate in the current debate over the goals and desirability of protecting intellectual creations, particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls, patent thickets).

851-0585-15L Complexity and Global Systems Science

**Prerequisites:** solid mathematical skills.

**Particularly suitable for students of D-ITET**

**Abstract**
This course discusses complex techno-socio-economic systems, their counter-intuitive behaviors, and how their theoretical understanding empowers us to solve long-standing problems that are currently bothering the world.

**Objective**
Participants should learn to get an overview of the state of the art in the field, to present it in a well understandable way to an interdisciplinary scientific audience, to develop models for open problems, to analyze them, and to defend their results in response to critical questions. In essence, participants should improve their scientific skills and learn to think scientifically about complex dynamical systems.

**Content**
This course starts with a discussion of the typical and often counter-intuitive features of complex dynamical systems such as self-organization, emergence, (sudden) phase transitions at “ tipping points”, multi-stability, systemic instability, deterministic chaos, and turbulence. It then discusses phenomena in networked systems such as feedback, side and cascade effects, and the problem of radical uncertainty. The course progresses by demonstrating the relevance of these properties for understanding societal and, at times, global-scale problems such as traffic jams, crowd disasters, breakdowns of cooperation, crime, conflict, social unrests, political revolutions, bubbles and crashes in financial markets, epidemic spreading, and/or “tragedies of the commons” such as environmental exploitation, overfishing, or climate change. Based on this understanding, the course points to possible ways of mitigating techno-socio-economic-environmental problems, and what data science may contribute to their solution.

**Prerequisites / notice**
Mathematical skills can be helpful.

- combinatorics in literature and literary theory |
| **Content** | Kombinatorik, die Verknüpfung von Elementen, tritt als ein Verfahren in unterschiedlichen Disziplinen und Bereichen des Wissens auf: In der Mathematik, wo man sie züchter vermutet, ermöglicht sie die Berechnung von Anzahlen und Wahrscheinlichkeiten. Zugleich spielt die Kombinatorik auch eine grosse Rolle in der Philosophie (als ein Verfahren zur Erzeugung eines enzyklopädischen Wissens), in der Mystik (zur Erfahrung ekstatischer Erfahrung) und in der Literatur (als ein experimentelles Schreibverfahren). In dem Seminar werden diese vielfältigen Formen und Funktionen von kombinatorischen Verfahren zwischen mathematischer, philosophischer, mystischer und ästhetischer Anwendung verglichen und analysiert. |
| 851-0148-02L | Manifolds and Individuation in Mathematics and Philosophy | W | 3 credits | 2S | T. Böhm |
| **Number of participants limited to 40.** Particularly suitable for students of D-BIOL, D-MATH, D-PHYS | Manifolds and individuation are concepts which allow to reconsider notorious problems such as the relationship between general and particular substance and modi, physical processes and persons. They may incorporate heterogeneous elements as needed to overcome traditional categories and classifications, and also describe processes leading to the existence of things. |
| **Objective** | The students should become familiar with some conceptual possibilities to recognize and deal with structures across the usual division of subjects. The problem areas are discussed on the basis of texts of various mathematicians and philosophers, with a wide range of applications such as psychology and life sciences. |
| 851-0144-07L | The Infinite in Philosophy and in the Exact Sciences: Logic, Mathematics, Physics | W | 3 credits | 2S | G. Sommaruga |
| **Number of participants limited to 40.** Particularly suitable for students of D-MATH, D-PHYS | Number of participants limited to 40. Particularly suitable for students of D-MATH, D-PHYS |
The aim of the course is to provide the participants with an overview of international security politics in a globalized world. After dealing with current issues in international security policy as well as of the central academic debates. Participants should gain a solid understanding of current issues in international security policy as well as of the central academic debates.

Abstract
This course provides an overview of the development of the international system and the central security challenges since the end of the Cold War. The focus of this course will be on security issues of the post 9/11 era: new risks, arcs of crises, security strategies and core actors will be presented during the course.

Objective
To get acquainted with different types of infiniteness; to study what is intriguing or problematic about the infinite; to inquire whether these different types of infiniteness have (important) features in common.

853-0060-00L Current Issues in Security Policy

Abstract
This course provides an overview of the development of the international system and the central security challenges since the end of the Cold War. The focus of this course will be on security issues of the post 9/11 era: new risks, arcs of crises, security strategies and core actors will be presented during the course.

Objective
Participants should gain a solid understanding of current issues in international security policy as well as of the central academic debates.

Content
The aim of the course is to provide the participants with an overview of international security politics in a globalized world. After dealing with the major changes of the international security environment as compared to the cold war era, we will concentrate on some of the key challenges (international terrorism, proliferation of weapons of mass destruction etc.). The third part of the lecture focuses on security strategies pursued by the ‘Western’ world.

Lecture notes
Participants are expected to study the compulsory texts provided at the beginning of the semester via the online platform Moodle.

Literature
A reading list will be distributed at the beginning of the spring semester.

851-0101-47L Science in the Twentieth Century: A Global Perspective WEBCLASS

Abstract
This course studies the 20th century history of those forms of knowledge framed specifically as science and technology, from a global perspective. It explores how exchanges and relationships between different parts of the world contributed to what is understood as science and “development”. In doing so, it considers how the concept of science is entangled with structures of power and domination.

Objective
- to critically consider the concepts and knowledge
- to understand how advances in technology and science are historically rooted in European imperial expansion and are connected to global social inequalities in the postcolonial world.
- to understand the historical plurality of forms of knowledge in different parts of the world as well as entanglements between different forms of knowledge
- to systematically reconstruct and reproduce complex arguments (reading-competences)
- to understand, compare and analyse differing approaches to the history of science.
- to enable students to form an educated opinion and participate in discussions on the global history of science and knowledge

851-0125-41L Introduction Into Philosophy of Technology

Abstract
Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to a autonomous philosophy of technology, which had become important also for other philosophical disciplines (e.g. in Heidegger’s philosophy).

Objective
The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protokoll is to be written.

0853-0060-00L Current Issues in Security Policy

Abstract
This course provides an overview of the development of the international system and the central security challenges since the end of the Cold War. The focus of this course will be on security issues of the post 9/11 era: new risks, arcs of crises, security strategies and core actors will be presented during the course.

Objective
Participants should gain a solid understanding of current issues in international security policy as well as of the central academic debates.

Content

After dealing with the major changes of the international security environment as compared to the cold war era, we will concentrate on some of the key challenges (international terrorism, proliferation of weapons of mass destruction etc.). The third part of the lecture focuses on security strategies pursued by the ‘Western’ world.

Lecture notes
A reading list will be distributed at the beginning of the spring semester.

851-0549-00L WebClass Introductory Course History of Technology

Number of participants limited to 100.

Abstract
WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced to basic theories and practices of the field.

Objective
- Students are introduced into how technological innovations take place within complex economical, political and cultural contexts.
- They get to know basic theories and practices of the field.

851-0125-51L Man and Machine

Abstract
The lecture gives an overview about the different Man-Machine-Relations since the 16th century. Different models of machines will be important here: the clockwork, the steam engine and the computer.

Objective
On the one hand models of machines had a heuristical value in research on man, e.g. in Harvey's discovery of blood circulation in the 17th century or in brain research in the 20th century. On the other hand these models were always criticised, sometimes polemically, because they are supposedly not adequate for man.

Students should learn about the connections between the history of anthropology and technology and be able at the end of the course to evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

851-0125-52L Central Questions in Bioethics

Abstract
Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decision, principles like "Protect the dignity of the living being!"; or "Respect a person's self-determination!? Besides answering such questions, the social, scientific and political processes linked with biotechnologies should be taken into account.

Objective

Literature
1. Dieter Sturma/Bert Heinrichs (Hg.), Handbuch Bioethik, Stuttgart: Metzler 2015.

851-0144-01L Introduction to the Philosophy of Physics

Abstract
This is an introductory course in different areas and positions in the philosophy of physics. It falls into different parts, including one on the concepts of space and time and one on the reality of structures in physics.

Objective
Students should be able to name and critically evaluate different topics and approaches in the philosophy of physics.

851-0306-05L Literature and Technology - Simulations, Prototypes, Machines

Abstract
Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of configurations of knowledge.

Objective
Students are familiar with different relations between literature and technology. They can verbalise and analyse central contentions.

Content

851-0549-12L Sharing, The History of an Attractive Technology

Abstract
The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computer time, software and data will be discussed as a crucial offer and problem of late modernity.

Objective
The course wants to develop the students ability to critically read and asses historic texts.

Lecture notes
A detailed program and course materials will be made available during the semester on www.tg.ethz.ch.
How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on digital sustainability in the knowledge society discuss how, for example, proprietary and open approaches to the production and use of digital goods are evaluated differently. In order to critically assess the respective models, the seminar introduces the content of some selected books on the topic (e.g., 1) Volker Grassmuck, Freie Software - Zwischen Privat- und Gemeineigentum, Bundeszentrale für Politische Bildung, 2. Aufl. Bonn 2004. 2) François Léviqüe & Yann Ménière, The Economics of Patents and Copyright, Berkeley Electronic Press, 2004. 3) Yochai Benkler, The Wealth of Networks, Yale University Press. New Haven 2006. These books are referenced in the seminar, and their content is discussed by the participants. The seminar, therefore, offers a platform for active discussion of the seminar content, considering the impact of the different approaches on society in the digital age.
Economics of pollution, Optimal level of greenhouse gases, International Environmental Agreements, Tradable pollution permit markets, Carbon Taxes, Technological innovation and R&D, The optimal approach to control Climate change, The future of Climate change policy

Required reading:
Perman et al. (2003), Natural Resource and Environmental Economics, Pearson Addison Wesley. Also, Journal articles will be cited

Prerequisites / notice
Prerequisites: The course relies heavily on the concepts and techniques used in basic game theory. Therefore prior knowledge is recommended

851-0703-00L Introduction to Law
Students who have attended or will attend the lecture "Introduction to Law for Civil Engineering and Architecture" or "Introduction to Law" (851-0708-00) cannot register for this course unit.

Particularly suitable for students of D-MAVT, D-MATL

Abstract
This class introduces students into basic features of the legal system. Fundamental issues of constitutional law, administrative law, private law and the law of the EU are covered.

Objective
Students are able to identify basic structures of the legal system. They understand selected topics of public and private law and are able to apply the fundamentals in more advanced law classes.

Content
Basic concepts of law, sources of law. Private law: Contract law (particularly contract for work and services), tort law, property law. Public law: Human rights, administrative law, procurement law, procedural law.

Lecture notes
Jaap Hage, Bram Akkermans (Eds.), Introduction to Law, Cham 2014 (Online Resource ETH Library)

Further documents will be available online (see https://moodle-app2.let.ethz.ch/course/view.php?id=1596).

851-0738-00L Intellectual Property: Introduction

Particularly suitable for students of D-ITET, D-MAVT, D-MATL

Abstract
The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights). Aspects of competition law are treated insofar as they are relevant for the protection of intellectual creations and source designations. The legal principles are developed based on current cases.

Objective
The aim of this course is to enable students at ETH Zurich to recognize which rights may protect their creations, and which rights may be infringed as a result of their activities. Students should learn to assess the risks and opportunities of intellectual property rights in the development and marketing of new products. To put them in this position, they need to know the prerequisites and scope of protection afforded by the various intellectual property rights as well as the practical difficulties involved in the enforcement of intellectual property rights. This knowledge is imparted based on current rulings and cases.

Another goal is to enable the students to participate in the current debate over the goals and desirability of protecting intellectual creations, particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls, patent thickets).

701-0703-00L Environmental Ethics

W 2 credits 2V M. Huppenbauer

Abstract
The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

Objective
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognizing and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and argumentations to be found within the field of environmental ethics and will have practised these in small case studies.

Content
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarization with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

Lecture notes
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

In the part of the course serving as an introduction to general and applied ethics, we shall be using the following textbook: Barbara Bleisch/Markus Huppenbauer: Ethische Entscheidungsfindung. Ein Handbuch für die Praxis, Zürich 2010 (to be published Autumn 2010).

Literature
- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2008
- John O’Neill et al., Environmental Values, 2008
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008
- Johann S. Ach et al., Grundkurs Ethik 1. Grundlagen, Paderborn (mentis) 2008

Prerequisites / notice
The course is particularly suitable for students of D-ITET, D-MAVT, D-MATL.

701-0785-00L Environmental and Science Communication

W 4 credits 2V M. Schäfer

Abstract
The course gives an introductory overview in research questions, theoretical perspectives and empirical results of science communication and environmental communication. They will be illustrated by concrete examples and via lectures from external guests.

Objective
Goals: Learning to understand structures and processes of environmental and science communication, becoming more sensitive for problems of science and public relations, getting an insight into public debates about environmental issues.

Methods: Case studies, invitation of media practitioners and experts, discussions, lectures on key theoretical concepts of communication.

Topics: Concrete communication instruments like media conferences, theoretical perspectives of public relations, basic principles and examples of information campaigns, environment and science as media topics, functions and structures of science communication, relations between science, media and politics.

This lecture series provides students with an overview of the development of international relations since the end of World War II. The first part of the series deals with the development of and changes in Cold War security policy structures. The second part deals with the period after the transformation of 1989/91; the focus here is on current issues in international security policy.

Objective
By the end of the semester, participants of the lecture should have a solid knowledge on the history and theoretical foundations of International Relations since the end of the Second World War.

Content
- Classical political thought, 19th century texts. In addition, the course addresses some modern contributions in the history of economics - in particular extra-European economic history - and their potential for the enrichment of mainstream economic thought.

Literature
Compulsory Reading:
2. Wenger, Lukas, Lukas, and Doron Zimmerman. International Relations since the end of the Second World War.

Prerequisites / notice
The lecture is being supported by a virtual classroom. If you have any questions, please contact Lukas Meyer, lukas.meyer@ispo.gess.ethz.ch.
The seminar deals with the designs for a new living in the artistic and social avantgarde movements at the beginning of the 20th century. It focuses on the correlation of the contemporary scientific and technological developments and the conceptions of a ‘New Man’. The discipline of psychotechnics together with scientific and technological designs of living and working environments formulated visions of new and enhanced ways of human living and perception. In the seminar, we will examine the utopian visions of life in the avantgarde movements.

The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work. (2) combining perspectives of different scientific disciplines (e.g., sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

The purpose of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will work in multidisciplinary teams to solve a set of design challenges that are organized as a one-week, a three-week, and a six-week project. The final project will be in collaboration with an external project partner.

Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work. (2) combining perspectives of different scientific disciplines (e.g., sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

They should also be able to explain how systemic instabilities can be understood by changing the perspective from a component-oriented to an interaction- and network-oriented view, and what fundamental implications this has for the proper design and management of complex dynamical systems.

Computational Social Science and Global Systems Science serve to better understand the emerging digital society with its close co-evolution of information and communication technology (ICT) and society. They make current theories of crises and disasters applicable to the solution of global-scale problems, taking a data-based approach that builds on a serious collaboration between the natural, engineering, and social sciences, i.e. an interdisciplinary integration of knowledge.

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

Particularly suitable for students of D-MAVT, D-INFK, D-ITET, D-MTEC, D-PHYS.

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

Particularly suitable for students of D-INFK, D-ITET, D-MAVT, D-MTEC, D-PHYS.

For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45. Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.

Additionaly please enroll via mystudies. Places will be assigned after the first lecture on the basis of your motivation letter and commitment for the class.

The purpose of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will work in multidisciplinary teams to solve a set of design challenges that are organized as a one-week, a three-week, and a six-week project. The final project will be in collaboration with an external project partner.

The purpose of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will work in multidisciplinary teams to solve a set of design challenges that are organized as a one-week, a three-week, and a six-week project. The final project will be in collaboration with an external project partner.

Particularly suitable for students of D-ARCH, D-HEST, D-MAVT, D-INFK, D-ITET, D-MTEC, D-PHYS.

For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45. Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.

Additionally please enroll via mystudies. Places will be assigned after the first lecture on the basis of your motivation letter and commitment for the class.

The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-socio-economic processes and phenomena together with related empirical, experimental, and data-driven work. (2) combining perspectives of different scientific disciplines (e.g., sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

During the course, students will learn about different design thinking methods and tools. This will enable them to:
- Generate deep insights through the systematic observation and interaction of key stakeholders.
- Engage in collaborative ideation with a multidisciplinary (student) team.
- Rapidly prototype and iteratively test ideas and concepts by using various materials and techniques.
The Global Studies Institute (University of Geneva) is organizing a simulation seminar on nuclear disarmament in collaboration with the Chair of Negotiation and Conflict Management (ETH), experts from the United Nations Institute for Disarmament Research and the Geneva Center for Security Policy.

Students will have the possibility to participate in simulated diplomatic negotiations and to analyse and assess the negotiation logic behind the situations. They should gain insight in the basic information on disarmament issues and on the functioning of the Conference on Disarmament as well as on negotiation techniques in general.

The simulation project is intended for Master's or Doctoral students of the Global Studies Institute (GSI) of the University of Geneva, of the ETH and for interested students of the Geneva Centre for Security Policy (GCSP). The simulation will be in French and English and is conducted by Prof. Calmy-Rey, former President of Switzerland.

In the lectures, students will be provided with basic information on disarmament issues and on the functioning of the Conference on Disarmament as well as on negotiation techniques in general. Students will take the role of negotiators in the simulation (including the heads of the delegations), of keeper of the minutes or of observers and analysts.

Students will co-develop their mandates for the negotiation and be assisted by experts that are specialized in international negotiations as well as in the topic of disarmament. The negotiation tables will be chaired by former diplomats. Representatives of diplomatic missions in Geneva will play the role of the "Capitals" to which the heads of delegations will have to give account of the ongoing negotiations.

More details on the program, timetable, reading lists and performance assessment will be published here: https://chamilo.unige.ch/home/courses/M165/?id_session=0

The simulation will take place on the 26 and 27 November 2015 at the University of Geneva.

Languages: English and French

Note: The participation in the simulation on 26. and 27. November in Geneva is necessary. The two hours lectures on the 22. September, 6. and 13. October have to be attended in Zürich via conference call (ETH HG D 16.2). The other lectures during the semester can be attended via Skype.

To get the 3 ECTS, students have to participate at the 2 days simulation in Geneva, attend the 3 mandatory lecture parts via conference call an Zürich and write a report of 5 pages at the end of the course.

(Technical note for registration: At this stage all registered students are on the waiting list)
Abstract

Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of configurations of knowledge.

Objective

Students are familiar with different relations between literature and technology. They can verbalise and analyse central contents.

Content

851-0738-01L  The Role of Intellectual Property in Daily Routine: A W 2 credits 2V C. Soltmann

Abstract

The lecture gives engineering students an overview of the basic aspects of intellectual property. The lecture aims to make participants aware of the various methods of protection and to put them in a position to be able to use this knowledge in the workplace.

Objective

In recent years, knowledge about intellectual property has become increasingly important for engineers. In both production and distribution as well as in research and development, engineers are increasingly being confronted with questions concerning the patenting of inventions and the utilisation of patent information. With up to 80% of publicly-available technical information being stored in patents only, it is of great importance for engineers to know the basics of the patent system and to be in a position to be able to extract relevant information from the flood of patent information available. This relates to daily work in industry as well as in research, where protecting inventions has gained in importance.

Prerequisites / notice

Patents are also an important source of information - from competitors and potential cooperation partners to the development of markets and the risk of coming into conflict with third party IP rights. Respectively, a knowledge of patents has also become a key qualification at a company's strategic level.

The seminar is customised to the needs of engineers. Participants will become familiar with practice-relevant aspects of intellectual property with the emphasis being placed on patents. Participants will be able to use the acquired knowledge in the protection and commercialisation of their own inventions.

The topics covered will include:

- The importance of innovation in industrialised countries and high-tech sectors
- The protection of inventions and the safeguarding of commercial implementation - the role and importance of intellectual property
- Patents as a source of technical and business information
- Practical aspects of intellectual property for day-to-day research work, for the formation of start-ups and at the workplace.

The seminar contains practical exercises on the use and research of patent information. Basic knowledge on how to read and evaluate patent documents, as well as how to use publicly available patent databases in order to obtain the required patent information will also be provided.

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' will be offered, which is coordinated to the needs of students in these degree programs.

851-0125-41L  Introduction Into Philosophy of Technology W 3 credits 2V O. Müller

Abstract

Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to an autonomous philosophy of technology, which had become important also for other philosophical disciplines (e.g. in Heidegger's philosophy).

Objective

The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protokoll is to be written.

Prerequisites / notice

The lecture is coordinated in particular to the needs of the following degree programs: Agricultural science, architecture, civil engineering, computational science and engineering, computer science, electrical engineering and information technology, environmental engineering, geomatic engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics.

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' will be offered, which is coordinated to the needs of students in these degree programs.

851-0549-12L  Sharing. The History of an Attractive Technology W 3 credits 2S D. Gugerli

Abstract

The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computertime, software and data will be discussed as a crucial offer and problem of late modernity.

Objective

The course wants to develop the students ability to critically read and asses historic texts.

Lecture notes

A detailed program and course materials will be made available during the semester on www.tg.ethz.ch.

851-0549-00L  WebClass Introductory Course History of Technology W 3 credits 2V D. Gugerli

Number of participants limited to 100.

Abstract

WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

Objective

Lecture notes

Literature

https://www.tg.ethz.ch/de/programme/
From Computational Social Science to Global Systems Science

Abstract
The seminar aims at three-fold integration: (1) bringing modeling and computer simulation of techno-economic processes and phenomena together with related empirical, experimental, and data-driven work, (2) combining perspectives of different scientific disciplines (e.g., sociology, computer science, physics, complexity science, engineering), (3) bridging between fundamental and applied work.

Objective
Participants of the seminar should understand how tightly connected systems lead to networked risks, and why this can imply systems we do not understand and cannot control well, thereby causing systemic risks and extreme events.

Computational Social Science and Global Systems Science serve to better understand the emerging digital society with its close co-evolution of information and communication technology (ICT) and society. They make current theories of crises and disasters applicable to the solution of global-scale problems, taking a data-based approach that builds on a serious collaboration between the natural, engineering, and social sciences, i.e. an interdisciplinary integration of knowledge.

Lecture with Computer Exercises: Modelling and Simulating Social Systems with MATLAB

Content
This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

Lecture notes
The lecture slides will be presented on the course web page after each lecture.

Literature

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

Central Questions in Bioethics

Abstract
Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decisions, principles like "Protect the dignity of the living being!" or "Respect a person's self-determination"? Besides answering such questions, the social, scientific and political processes linked with biotechnologies should be taken into account.

Objective

Die Zahl der Teilnehmenden ist auf 100 beschränkt. Anmeldung: In der Einführungssitzung am 21.9.2015, zudem schriftliche Aktive Teilnahme und erfolgreiches Bearbeiten von Onlineaufgaben wird vorausgesetzt.

Weitere Informationen unter https://www.tg.ethz.ch/de/programme/
At the heart of the discourse is the handling of digital goods and intellectual property in society. Digitization and the Internet allow handling of digital goods in a way, which directly contrasts with the traditional understanding of "intellectual property" and the industries based on it. Starting from economic and legal basics, we compare proprietary and open/free models. Sustainable development as a concept is transferred to digital goods, taking into account the particular nature of digital stuff.

After the lecture, you should (hopefully) be able to
- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- using an example, explain the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the free/open source software model to other digital goods (e.g., open content, open access)

Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. "Digitization plus Internet" allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?»

The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetics», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these hidden, restrictions and in evading their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new domains focus on freedom for knowledge as well. As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2030.ethz.ch

Lecture notes
Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.
More on teach.digius.info starting from September. Stay tuned.

Prerequisites / notice
For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45. Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.

**Literature**

**Data Manipulation, Deception and Fabrication in the**

Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.

851-0609-05L

**The Economics of Climate Change**

* Does not take place this semester.

**Abstract**

- Climate change is one of the most pressing issues that governments and the global community have to face. This course outlines the problem of climate change and discusses the economic solutions (both domestic and international) to this problem.
Objective
This course has a number of objectives: (i) To outline the problem of climate change (ii) to discuss and compare the theoretical economic solutions to combating climate change (iii) to present existing climate change mitigation actions in an economic context and (iv) to outline possible future climate policy issues.

Content
Economics of pollution, Optimal level of greenhouse gases, International Environmental Agreements, Tradable pollution permit markets, Carbon Taxes, Technological innovation and R&D, The optimal approach to control Climate change, The future of Climate change policy

Literature
Required reading: Pernan et al. (2003), Natural Resource and Environmental Economics, Pearson Addison Wesley. Also, Journal articles will be cited

Prerequisites / notice
Prerequisites: The course relies heavily on the concepts and techniques used in basic game theory. Therefore prior knowledge is recommended

851-0703-00L Introduction to Law

Objective
Students who have attended or will attend the lecture "Introduction to Law for Civil Engineering and Architecture" or " Introduction to Law" (851-0708-00) , cannot register for this course unit.

Abstract
This class introduces students into basic features of the legal system. Fundamental issues of constitutional law, administrative law, private law and the law of the EU are covered.

Objective
Students are able to identify basic structures of the legal system. They understand selected topics of public and private law and are able to apply the fundamentals in more advanced law classes.

Content
Basic concepts of law, sources of law. Private law; Contract law (particularly contract for work and services), tort law, property law. Public law: Human rights, administrative law, procurement law, procedural law. Insights into the law of the EU and into criminal law.

Literature
Further documents will be available online (see https://moodle-app2.let.ethz.ch/course/view.php?id=1596).

851-0738-00L Intellectual Property: Introduction

Objective
Students who have attended or will attend the lecture "Introduction to Law for Civil Engineering and Architecture" or " Introduction to Law" (851-0708-00) , cannot register for this course unit.

Abstract
This class introduces students into basic features of the legal system. Fundamental issues of constitutional law, administrative law, private law and the law of the EU are covered.

Objective
Students are able to identify basic structures of the legal system. They understand selected topics of public and private law and are able to apply the fundamentals in more advanced law classes.

Content
Basic concepts of law, sources of law. Private law; Contract law (particularly contract for work and services), tort law, property law. Public law: Human rights, administrative law, procurement law, procedural law. Insights into the law of the EU and into criminal law.

Literature
Further documents will be available online (see https://moodle-app2.let.ethz.ch/course/view.php?id=1596).

701-0703-00L Environmental Ethics

Objective
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and arguments to be found within the field of environmental ethics and will have practised these in small case studies.

Content
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

Lecture notes
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

Literature
- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003
- John O'Neill et al., Environmental Values, 2008
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008

Further documents will be available online (see https://moodle-app2.let.ethz.ch/course/view.php?id=1596).

851-0707-00L Environmental and Science Communication

Objective
Goals: Learning to understand structures and processes of environmental and science communication, becoming more sensitive for problems of science public relations, getting an insight into public debates about environmental issues.

Methods: Case studies, invitation of media practitioners and experts, discussions, lectures on key theoretical concepts of communication.

Topics: Concrete communication instruments like media conferences, theoretical perspectives of public relations, basic principles and examples of information campaigns, environment and science as media topics, functions and structures of science communication, relations between science, media and politics.

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 621 of 1434
**Content**

I. Introduction
- Topics: Environment, Science, Risks, Media
- Forms, Functions, Effects of Public and Mass Communication

II. Stakeholders and their Public Relations Efforts
- Public Relations and Science PR: Theoretical Perspectives, Instruments

III. Science and Environmental Issues in the Media
- Forms and Functions of Science Journalism
- Problems of Selection, Interpretation, Quality
- Media Content Analysis
- Online Communication

IV. Uses and Effects of Science and Environmental Communication
- Extent of Media Use
- Effects on Knowledge, Risk Perceptions, Environmental Attitudes
- Effects on Science itself

**Lecture notes**

This lecture series provides students with an overview of the development of international relations since the end of World War II. The first part of the series deals with the development of and changes in Cold War security policy structures. The second part deals with the period after the transformation of 1989/91; the focus here is on current issues in international security policy.

By the end of the semester, participants of the lecture should have a solid knowledge on the history and theoretical foundations of International Relations since the end of the Second World War.

Prerequisites / notice
The lecture is being supported by a virtual classroom. If you have any questions, please contact Lukas Meyer, lukas.meyer@spg.gess.ethz.ch.

The philosophy of biology deals with concepts and problems that occur specifically while dealing with living entities. Accordingly, it covers the historical as well as systematic aspects of concepts like gene or species, or theories explaining diversity or stability, competitive or cooperative action. Another important topic is the role of technology while afoarding biological objects.

The overarching objective of this seminar is to get an impression of the specificity of biological problems and to develop an appropriate philosophical sensibility. Accordingly, philosophical traditions in biology will be discussed, just as the application of the history of concepts in the context of biology. The seminar reader will consist of contributions of biologists as well as philosophers of biology. Besides the basic concepts in biology such as gene, species, evolution, or diversity, we will be also reflecting on the relationship between technology, experimenting, and biological objects. Depending on the interests of the seminar participants, the examples to be discussed may be chosen from systems biology, molecular or synthetic biology, ecology or else.

851-0591-00L Digital Sustainability in the Knowledge Society
Particularly suitable for students of D-INFO, D-ITET, D-MATL, D-MAVT, D-MTEC, D-USYS

Abstract
How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on strong intellectual property rights are contrasted with open models like, e.g., Open Source/Content/Access. The course discusses consequences from different models and introduces «digital sustainability» as an alternative vision for society.

Objective
At the heart of the discourse is the handling of digital goods and intellectual property in society. Digitization and the Internet allow handling knowledge in a way, which directly contrasts with the traditional understanding of "property" and the industries based on it. Starting from economic and legal basics, we compare proprietary and open/free models. Sustainable development as a concept is transferred to digital goods, taking into account the particular nature of digital stuff.

After the lecture, you should (hopefully) be able to:
- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- using an example, explain the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the open/free software model to other digital goods (e.g., open content, open access)

Content
Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. «Digitization plus Internet» allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?»

The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become even more important in the 21st Century. Accordingly, «piracy» and «file-sharing» are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetics», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music).

As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2030.ethz.ch.

Lecture notes
Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

Literature
More on teach.digisisu.info starting from September. Stay tuned.

- Other recommended books are:
  - (general) Chris DiBona et al., Open Sources: Voices from the Open Source Revolution, O'Reilly, 1999.

Prerequisites / notice
For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.

Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.

851-0594-00L International Environmental Politics
Particularly suitable for students of D-ITET, D-USYS

Abstract
This course focuses on the conditions under which cooperation in international environmental politics emerges, and the conditions under which such cooperation and the respective public policies are effective and/or efficient.

Objective
The objectives of this course are to (1) gain an overview of relevant questions in the area of international environmental politics from a social sciences viewpoint; (2) learn how to identify interesting/innovative questions concerning this policy area and how to answer them in a methodologically sophisticated way; (3) gain an overview of important global and regional environmental problems.

Content
This course deals with how and why international cooperation in environmental politics emerges, and under what circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

After passing an end-of-semester test (requirement: grade 4.0 or higher) students will receive 4 ECTS credit points. The workload is around 120 hours (meetings, reading assignments, preparation of test).

Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory (http://www.rektorat.ethz.ch/students/admission/auditors/specialstudents_uzh/index_EN; see menu on left side of that webpage for students from other universities).

Lecture notes
Slides and reading material will be made available at www.ib.ethz.ch (teaching, materials, then menu on the left side of the screen). They are password protected. Use your Netzh username and password to access the material.

Literature
See www.ib.ethz.ch (teaching, materials)
Basic understanding of nature and function of space planning from a legal point of view. Basic knowledge of space planning instruments,

Required reading:

Climate change is one of the most pressing issues that governments and the global community have to face. This course outlines the problem of climate change and discusses the economic solutions (both domestic and international) to this problem.

O. Bucher

2 credits

2G

Rechtsgrundlagen, Literatur und Gerichtsentscheide werden themenspezifisch selber recherchiert, unter Mithilfe und Beratung des Dozenten.

2V

The aim of this workshop is to equip students with legal skills and methods to solve or treat problems and questions of the environmental side of that webpage for students from other universities).

The workload for this course is approx. 120 hours (all inclusive).

851-0609-05L The Economics of Climate Change

Does not take place this semester.

Particularly suitable for students of D-ITET, D-MATL, D-MAVT, D-USYS

W 3 credits 2V

Climate change is one of the most pressing issues that governments and the global community have to face. This course outlines the problem of climate change and discusses the economic solutions (both domestic and international) to this problem.

Objective This course has a number of objectives: (i) To outline the problem of climate change (ii) to discuss and compare the theoretical economic solutions to combating climate change (iii) to present existing climate change mitigation actions in an economic context and (iv) to outline possible future climate policy issues.

Content Economics of pollution, Optimal level of greenhouse gases, International Environmental Agreements, Tradable pollution permit markets, ; Carbon Taxes, Technological innovation and R&D, The optimal approach to control Climate change, The future of Climate change policy

Literature Required reading:

Perron et al. (2003), Natural Resource and Environmental Economics, Pearson Addison Wesley.

Also, Journal articles will be cited

851-0705-02L Environmental Law: Topics and Case Studies

Number of participants limited to 20.

Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

W 2 credits 2S C. Jäger

This workshop offers to the students the opportunity to intensify their environmental legal knowledge on the basis of individual topics or cases of their respective programme or professional interest in a guided self-study. They develop a better understanding for the practical application of legal regulations on environmental matters.

Objective The aim of this workshop is to equip students with legal skills and methods to solve or treat problems and questions of the environmental law and foster the understanding on the possibilities and limits of legal problem-solving. The students choose an inquiry with practical relevance. To this end they work out the legal basis demonstrating a legal correct solution or approach to a solution. In doing so, students will get to know legal methods and research possibilities.

Content At the beginning of the workshop the students are introduced to the legal methods and sources as well as in the aim and the process of the workshop. The participants will organize themselves in a team of two persons giving themselves an inquiry on topics of the environmental law. It is also possible to choose questions at the interfaces of e.g. zoning law, energy law, transport law. A proposal, which will be presented to the lecturer, as well as an optional Q&A-session in class will facilitate the start. Next the working on topics will follow by self-study. The results will be presented in form of a memo/paper with a maximum of ten pages (excluding graphs and tables). At the end of the workshop, a presentation of ten minutes will be made to the plenum including a question-and-answer session. Class language will be German.

851-0707-00L Space Planning Law and Environment

Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

W 2 credits 2G O. Bucher

System of swiss planning law, Constitutional and statutory provisions, Space planning and fundamental rights, Instruments, Application, legal protection, enforcement, Practical training.

Objective Basic understanding of nature and function of space planning from a legal point of view. Basic knowledge of space planning instruments, relationship between space planning and constitutional law (especially property rights), solving of practical cases.

Lecture notes Haller, Walter/Karlen, Peter, Raumplanung-, Bau- und Umweltrecht, S.A., Zürich 1999

Häni, Peter, Planungs-, Bau- und besonderes Umweltschutzrecht, 5.A., Bern 2008

851-0724-00L Property Law for Geometers: Land Registry and Geoinformation Law

Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

W 2 credits 2V M. Huser

Prerequisites / notice

Prerequisites: Environmental Law: Conceptions and Fields ((851-0707-01L) offered in spring semester.

Number of participants limited to 20.

Lecture notes

Den Studierenden werden Unterlagen zur juristischen Methoden- und Quellenlehre sowie zum Inhalt und Ablauf des Kurses zu Beginn der Veranstaltung kostenlos abgegeben.

Literature

Rechtgrundlagen, Literatur und Gerichtsentscheide werden themenspezifisch selber recherchiert, unter Mithilfe und Beratung des Dozenten.

Prerequisites / notice

Die Veranstaltung erfordert die Bereitschaft, sich aktiv und selbständig mit einer selbstgewählten Fragestellung oder einem eigenen Fallbeispiel aus dem Gebiet des Umweltrechts und allenfalls aus Schnittstellengebieten auseinanderzusetzen. Damit die Interaktivität und die Begleitung der Teams gewährleistet werden kann, ist die Teilnehmerzahl auf maximal 16 Personen beschränkt. Es handelt sich um eine Vertiefungsveranstaltung. Der Besuch der Vorlesung "Umweltrecht: Konzepte und Rechtsgebiete" (851-0705-01L) ist Voraussetzung.

Perman et al. (2003), Natural Resource and Environmental Economics, Pearson Addison Wesley.
Abstract
Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

Objective
Overview of the legal norms of land registry and surveying law.

Content
Basic principles of material and formal land registry law, components of the land register, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of the geometer. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.

Requirements: Property Law (12-722)

Environmental Regulation: Law and Policy

851-0735-11L
Number of participants limited to 15.
Particularly suitable for students of D-USYS

The course is fully booked

Abstract
The aim of this course is to make students with a technical scientific background aware of the legal and political context of environmental policy in order to place technical solutions in their regulatory context.

Objective
The aim of this course is to equip students with a legal and regulatory skill-set that allows them to translate their technical knowledge into a policy brief directed at legally trained regulators. More generally, it aims to inform students with a technical scientific background of the legal and political context of environmental policy. The focus of the course will be on international and European issues and regulatory frameworks - where relevant, the position of Switzerland within these international networks will also be discussed.

Content
Topics covered in lectures:
(1) Environmental Regulation
   a. Perspectives
   b. Regulatory Challenges of Environment Problems
   c. Regulatory Tools
(2) Law: International, European and national laws
   a. International law
   b. European law
   c. National law
(3) Policy: Case studies

Assessment:
(i) Class participation (25%): Students will be expected to contribute to class discussions and prepare short memos on class readings.
(ii) Exam (75%) consisting of three parts:
   a. Policy brief - a maximum of 2 pages (including graphs and tables);
   b. Background document to the policy brief - this document sets out a more detailed and academic overview of the topic (maximum 8 pages including graphs and tables);
   c. Presentation of the policy brief: presentations can use a maximum of 5 slides and can last 7 minutes.

Lecture notes
The course is taught as a small interactive seminar and significant participation is expected from the students. Participation will be capped at 15 in order to maintain the interactive nature of the classes. All classes, readings, and assignments, are in English.

Teaching will take place over two weeks in September and October. The exam date will be in December.

During the second week of the teaching period, students will have individual 30-minute meetings with the lecturer to discuss their project. An electronic copy of relevant readings will be provided to the students at no cost before the start of the lectures.

No specific pre-existing legal knowledge is required, however all students must have successfully completed Grundzüge des Rechts (851-0708-00 V) or an equivalent course.

The course is (inter)related to materials discussed in Politikwissenschaft: Grundlagen (851-0577-00 V), Ressourcen- und Umweltökonomie (751-1551-00 V), Umweltrecht: Konzepte und Rechtsgebiete (851-0705-01 V), Rechtlicher Umgang mit natürlichen Ressourcen (701-0743-01 V), Environmental Governance (701-1651-00 G), Policy and Economics of Ecosystem Services (701-1653-00 G), International Environmental Politics: Part I (851-0594-00 V).

Politics of Environmental Problem Solving in Developing Countries

701-0727-00L

The course focuses on processes and drivers of decision-making on natural resources management issues in developing countries. It gives insights into the relevance of ecological aspects in developing countries. It covers concepts, instruments, processes and actors in environmental politics at the example of specific environmental challenges of global importance.

Objective
After completion of the module, students will be able to:
- Identify and appraise ecological aspects in development cooperation, development policies and developing countries’ realities
- Analyze the forces, components and processes, which influence the design, the implementation and the outcome of ecological measures
- Characterize concepts, instruments and drivers of environmental politics and understand, how policies are shaped, both at national level and in multilateral negotiations
- Study changes (improvements) in environmental politics over time as the result of the interaction of processes and actors, including international development organizations
- Analyze politics and design approaches to influence them, looking among others at governance, social organization, legal issues and institutions
Content
Key issues and basic concepts related to environmental politics are introduced. Then the course predominantly builds on case studies, providing information on the context, specifying problems and potentials, describing processes, illustrating the change management, discussing experiences and outcomes, successes and failures. The analysis of the cases elucidates factors for success and pitfalls in terms of processes, key elements and intervention strategies.

Different cases not only deal with different environmental problems, but also focus on different levels and degrees of formality. This ranges from local interventions with resource user groups as key stakeholders, to country level policies, to multi- and international initiatives and conventions. Linkages and interaction of the different system levels are highlighted. Special emphasis is given to natural resources management.

The cases address the following issues:
- Land use and soil fertility enhancement. From degradation to sustainable use
- Common property resource management (forest and pasture): Collective action and property rights, community-based management
- Ecosystem health (integrated pest management, soil and water conservation)
- Payment for environmental services: Successes in natural resources management
- Climate change and agriculture: Adaptation and mitigation possibilities
- Biodiversity Convention: Implications for conservations and access to genetic resources
- Biodiversity as a means for more secure livelihoods: Agroforestry and intercropping
- The Millennium Development Goals: Interactions between poverty and the environment
- Poverty and natural resources management: Poverty reduction strategies, the view of the poor themselves
- Food security: Policies, causes for insecurity, the role of land grabbing
- Biofuels and food security: Did politics misfire?
- Strategy development at global level: IAASTD and World Development Report 2008

Lecture notes
Information concerning the case studies and specific issues illustrated therein will be provided during the course (uploaded on Moodle)

Literature

Prerequisites / notice
The performance assessment will consist of an individual essay to be written by each student based on at least five references in addition to the sources provided in the course. Students can choose from a list of topics. Criteria for assessment will be communicated at the beginning of the course.

701-0743-01L
Law and Natural Resources

W  2 credits  2V  N. Dajcar

Abstract
This course teaches the possibilities and limits of the law in order to protect natural resources and landscapes against harm and nuisance. The learning concept is based on the co-ordinated implementation of the relevant legislations. The complexity of the legal situation will be discussed by analysing virtual and real law cases focused on spatial projects and plans.

Objective
The students know the opportunities and restrictions which are given by the law when using natural resources. They have insights into the complex environmental legal system and their application in concrete cases. The students are able to formulate typical legal questions, to understand the argumentation of courts and to solve simple legal problems with respect to environmental problems.

Content
- Waldrecht - Natur- und Landschaftsschutzrecht - Wasserrecht - Raumplanungsetrecht - Umweltschutzrecht - Verfahrensrecht

Unterrichtssprache: Deutsch

Lecture notes
Den Studierenden werden Unterlagen wie eine Übersicht über die behandelten Stoff auf PP-Folien, typische Gerichtsentscheide, Zeitungsartikel etc. über neue Vorhaben mit Auswirkungen auf die Umwelt und entsprechenden Rechtsfragen abgegeben.

Prerequisites / notice

701-0703-00L
Environmental Ethics

W  2 credits  2V  M. Huppenbauer

Abstract
The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

Objective
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems.

Content
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

Lecture notes
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

In the part of the course serving as an introduction to general and applied ethics, we shall be using the following textbook: Barbara Bleisch/Markus Huppenbauer: Ethische Entscheidungsfindung. Ein Handbuch für die Praxis, Zürich 2010 (to be published Autumn 2010).

Environmental Policy of Switzerland I

<table>
<thead>
<tr>
<th>W</th>
<th>3 credits</th>
<th>2V</th>
<th>E. Lieberherr</th>
</tr>
</thead>
</table>

### Abstract
This course presents the basics of policy analysis and the specific characteristics of Swiss environmental policy. Political instruments, actors and processes are addressed both theoretically as well as by means of current Swiss environmental policy examples.

### Objective
Beyond acquiring basic knowledge about policy analysis, this course teaches students how to analytically address current and concrete questions of environmental policy. Through exercises the students learn about political science concepts and frameworks as well as real-life political decision-making processes. The well-grounded examination of complex political conflict situations is an important precondition for the entry into the (environmental policy) workforce or a future research career.

### Content
The processes of change, overuse or destruction of the natural environment through humans have historically placed high demands on social and political institutions. In the interplay between the environment, society and economy, the environmental policy field encompasses the sum of public measures that have the goal to eliminate, reduce or avoid environmental degradation. The course provides insight into the development of Swiss environmental policy and systematically presents the basics of environmental policy actors, instruments, programs and processes as well as their change over time. A key aspect is the distinction between politics and political science and specifically environmental policy.

### Lecture notes
Instead of lecture notes different texts on policy analysis and Swiss environmental policy are made available to the students.

### Literature

### Prerequisites / notice
The detailed semester program (syllabus) is made available to the students at the beginning of the semester.

701-0785-00L

Environmental and Science Communication

<table>
<thead>
<tr>
<th>W</th>
<th>4 credits</th>
<th>2V</th>
<th>M. Schäfer</th>
</tr>
</thead>
</table>

### Abstract
The course gives an introductory overview in research questions, theoretical perspectives and empirical results of science communication and environmental communication. They will be illustrated by concrete examples and via lectures from external guests.

### Objective
Goals: Learning to understand structures and processes of environmental and scientific communication, becoming more sensitive for questions of environmental policy. Through exercises the students learn about political science concepts and frameworks as well as real-life political decision-making processes. The well-grounded examination of complex political conflict situations is an important precondition for the entry into the (environmental policy) workforce or a future research career.

### Content
I. Introduction
- Topics: Environment, Science, Risks, Media
- Forms, Functions, Effects of Public and Mass Communication

II. Stakeholders and their Public Relations Efforts
- Public Relations and Science PR: Theoretical Perspectives, Instruments
- Problems of Selection, Interpretation, Quality
- Media Content Analysis
- Online Communication

III. Science and Environmental Issues in the Media
- Forms and Functions of Science Journalism
- Media Content Analysis

IV. Uses and Effects of Science and Environmental Communication
- Extent of Media Use
- Effects on Knowledge, Risk Perceptions, Environmental Attitudes
- Effects on Science itself

---

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 628 of 1434
Students

Literature and powerpoint presentations will be provided on the OLAT platform.

Uekötter, Frank (Ed.) 2010. The turning points of environmental history, Pittsburgh: University of Pittsburgh Press.

The lecture treats the social intercourse with risks of technical systems. The notion of risk and the perception of risk are discussed by case studies (e.g. nanotechnology) and socio-political instruments for decision-making are presented. Methods are presented that can be applied to deal with environmental risks and how they can be used for sustainable innovation.

- Getting acquainted to the extended risk concept
- Evaluation of the risks caused by technology within the societal context
- Knowledge about the mode science and society handle current environmental risks (examples gene- and nanotechnology)
- Knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)
- Risks and technical systems (risk categories, risk perception, risk management)
- Illustration with case studies (nanotechnology)
- Implementation (politics, science, media, etc.)
- Decision making (technology assessment, cost/benefit analysis etc.)
- The role of the media
- prospects for future developments

The lecture is held biweekly (for 2 hours). The dates are 21.9., 28.9 (attention, out of schedule) ; 19.10, 2.11, 16.11, 30.11, 14.12

This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with statistical software such as Stata.

- have a sound understanding of linear and logit regression
- know some basics about regression models for multinomial, ordered, or censored response variables, as well as for count data
- know strategies to test causal hypotheses using regression analysis with experimental and quasi-experimental methods
- are able to formulate and implement a regression model for a particular research question and a particular type of data
- are able to critically interpret results of a regression model, in particular, regarding causal inference

- getting acquaint to the extended risk concept
- evaluation of the risks caused by technology within the societal context
- knowledge about the mode science and society handle current environmental risks (examples gene- and nanotechnology)
- knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)
- risks and technical systems (risk categories, risk perception, risk management)
- illustration with case studies (nanotechnology)
- implementation (politics, science, media, etc.)
- decision making (technology assessment, cost/benefit analysis etc.)
- the role of the media
- prospects for future developments

The lecture is held biweekly (for 2 hours). The dates are 21.9., 28.9 (attention, out of schedule) ; 19.10, 2.11, 16.11, 30.11, 14.12

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 629 of 1434
Content
The topics covered in the first part of the course are linear and logit regression analysis. Extensions to regression models for ordered, multinomial or censored response variables, as well as for count data will be addressed briefly. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, propensity score matching, and randomized controlled trials.

The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will be enabled to critically read and assess published empirical social science studies.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of one fourth. Students are assisted in solving the assignments during the exercises session. Support is provided for the analysis software Stata, but students are free to choose R, SPSS or any other software to solve the assignments.

Language Courses ETH/UZH

Content
A variety of texts, such as classic and modern poetry, short fiction, and one short novel, will be explored. Classwork will be interactive, with pair, small group, and plenary discussions, giving all class members the chance to practice speaking freely and sustaining an argumentative line of discourse. Writing tasks will be assigned to produce coherent and well-structured texts. Lexical work will help students to increase their range of vocabulary and allow them to apply freshly acquired vocabulary in speaking and writing.

Lecture notes
No script.

Literature
Materials: Texts will be made available either online (OLAT) or as handouts.
Prerequisites / notice
Other requirements:
All participants are expected to
* Attend regularly throughout the semester
* Participate actively in discussions, group work, and pair work
* Do at least 2 hours' work a week outside the classroom, including reading and writing
* Complete written assignments during the semester

Additional requirements for Bachelor and Master students and those who wish to receive ETH/D-GESS credit points will be outlined in the first lesson of the semester.

NB: This is Part I of a two-part course. Part 2 runs in the spring semester. Each part can be taken on its own. However, a separate enrolment is required for each part.

Important note:
The course is only open to students who register online via the Sprachenzentrum website during the registration period (review the SZ webpage) and who receive on-line confirmation that they have been accepted on this course.

851-0832-11L Advanced English for Academic Purposes (C1-C2)  W  2 credits  2U  R. Taylor
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract
This course is designed for Bachelor and Master students from all disciplines, who wish to improve their English from C1 towards C2 level and train their language skills at Mastery level. Special attention is placed on Speaking and Writing.

Objective
Participants should have already reached a level of C1 (advanced), as defined in the Council of Europe Global Scale. The course is also open to participants whose level is above C1.

The course aims to train and develop linguistic skills at Mastery level, with a focus on formal and informal lexis, on listening and oral communication skills, increasing fluency, accuracy and complexity of spoken language; writing well-structured descriptive texts and argumentative essays, to fulfill the requirements for study at an English speaking university or follow University Master Courses held in English.

851-0832-10L Advanced English for Academic Purposes (C1-C2)  W  2 credits  2U  K. A. Lewis
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract
This course is designed for Bachelor and Master students from all disciplines, who wish to improve their English from C1 towards C2 level and train their language skills at Mastery level. Special attention is placed on Speaking and Writing.

Objective
Participants should already have reached a level of C1 (advanced), as defined in the Council of Europe Global Scale. The course is also open to participants whose level is above C1.

The course aims to train and develop linguistic skills at Mastery level, with a focus on formal and informal lexis, on listening and oral communication skills, increasing fluency, accuracy and complexity of spoken language; writing well-structured descriptive texts and argumentative essays, with the aim to fulfill the language requirements for study at an English speaking university or follow University Master Courses held in English.

Content
The course covers: a review of vocabulary building and extension, including the Academic Word List and formulaic language; input on academic reading, writing and listening comprehension; improvement of grammatical accuracy with web-based practice. Special emphasis is placed on individual speaking, argumentative discourse and group discussions, to enhance fluency and confidence. Topics cover globalisation, communication, social issues, work and health, and the environment.

Lecture notes
No script.

Literature
Course materials will be provided electronically, prior to the lessons. For additional handouts and materials participants will be expected to make a contribution of about CHF 5.00 at the beginning of the course.

Prerequisites / notice
Participants will be expected to:
- attend regularly throughout the semester;
- contribute actively in class discussions, group work and pair work;
- do at least 2 hours' work per week at home, including reading and writing;
- use the electronic tools provided, such as a WIKI and a virtual library on ILIAS, and engage in web-based activities to practise various linguistic skills;

A language certificate from the Language Center is issued on successful completion of the course; Bachelor and Master students of the ETH will receive D-Gess credits and a mark, awarded electronically at the end of the semester. Details will follow at the beginning of the semester.

The course is only open to students who register online via the Sprachenzentrum website (in September 2014, please review the SZ webpage) and who receive on-line confirmation that they have been accepted on this course.

851-0886-00L New Zealand Through Literature and Film (C1-C2)  W  2 credits  2U  M. Norgate
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract
The course is designed for Bachelor and Master students from all disciplines who wish to gain an insight into New Zealand culture, history, society, and - to a lesser degree - politics through its rich tradition in film and literature, while improving their English language skills further towards C2.

Objective
The aim is to explore the following questions through texts and film to introduce students to New Zealand and, in a broader sense, to raise their awareness of some of the key issues relating to former colonies from early settlement to the present day. Key questions include: What did New Zealand mean to its early settlers? Where did they come from? How did they live? What is the Treaty of Waitangi, and what is its status today? How did New Zealanders see themselves then, and how do they see themselves now?

Students will learn the discourse used, and issues under consideration, in the analysis and discussion of poetry, prose, and film. They will become aware of various ways of "reading" texts and film, and will improve their skills in planning and writing cohesive essays in which they marshal their views in a convincing and formal manner. Overall, the aims are that students become more discerning readers, improve their skills in expressing their views in written and spoken form clearly and concisely, and gain an understanding of the importance of literature and film to the development of a uniquely New Zealand identity.

Content
The course gives a chronological view of New Zealand's literary heritage from Maori settlement to the present day, using selected poems, a short novel, short stories, articles, and films. A key focus is the way New Zealanders' notion of their own identity has shifted over the years, and train their language skills at Mastery level. Special attention is placed on Speaking and Writing.

Lecture notes
Handouts, online resources, and DVDs of a wide range of NZ films (available in the Self-Access Center – NB: No hobbits!)

851-0846-01L Spanish: Grammar and Pragmatic Communication (B2.1)  W  2 credits  2U  M. Iturrizaga Slosiar

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 631 of 1434
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract
The course aims for students and staff having passed level B1.2 and for those who know and correctly use all indicative tenses, as well as the subjunctive in its present and perfect forms. On the other hand, they should be able to make themselves fluently understood in everyday conversations and read intermediate level texts.

Objective
The course aims towards integrating grammar and oral/written communication. We will present new grammar topics and will introduce them into the oral practice.

Content
The most important grammatical topic will be the imperfecto and pluscuamperfecto of subjunctive in subordinate structures. Free and directed discussion will be enhanced. We will read diverse text forms from Spanish and Latin American Authors.

Lecture notes
The teacher will provide the script. A fee of CHF 4.00 for photocopies be collected.

Prerequisites / notice
The certificate and ETCS points are granted to the students who have complied with the following requirements:
- Participation in the weekly lessons (maximum 3 absences)
- A minimum of 2 hours of self study (reading and grammar exercises)
- Presentation of one of the chosen texts
- Passing of a final exam

Important information for ETH students: The enrollment in this course at the Sprachenzentrum does not enrol the student automatically for the granting of the D-GESS points. Please inform yourself.

851-0834-17L Spanish: Oral Interaction (B2) W 2 credits 2U M. Iturrizaga Slosiar

Abstract
Intended for participants having completed level B2 who are relatively fluent but who still have difficulties with coping with specific oral tasks.

Objective
The course aims to expose the student to the oral language in order to help him/her achieve better linguistic and social skills.

Content
We practice several kinds of oral interactions, such as casual and formal conversation, interviews to Spanish-speaking people, debate, negotiation, etc. We discuss about current issues. On the other hand, it is intended for participants to develop a glossary correspondent to his/her area of study and to do a short presentation.

Literature
Material will be distributed by the teacher.

Prerequisites / notice
The certificate and the corresponding ETCS credits are granted to students having completed to the following criteria:
- Active presence (maximum 3 absences allowed)
- A minimum of 2 hours of study per week
- An interview to a Spanish-speaking person
- A presentation

The teacher will communicate the students the marking criteria.

Enrollment in this course is done through the Language Center: www.sprachenzentrum.uzh.ch.

851-0846-02L Spanish: Language and Cinema (B2-C1) W 2 credits 2U M. Iturrizaga Slosiar

Abstract
The main activity of the course is the visioning of films in Spanish (Spain and Latin America), giving an emphasis on a specific thematic, vocabulary, conversation and debate.

Objective
The course aims to introduce a specific problematic in a Spanish-speaking region or country through the cinema, taking into account the geopolitical and cultural spectrum of the Spanish language. It also aims the participant to get familiarized with topics, images, customs, dialogs and vocabulary, carrying out an observation and then an analysis and comment of these elements.

Content
We work out some interaction forms focused on observation, presentation and debate. Each student does a presentation of one of the films chosen, pointing out aspects that give path to a discussion. On the other hand, he/she creates a specific glossary to be used during the lesson in which the film will be discussed.

Literature
The chosen films can be seen / borrowed from the Selbstlernzentrum (http://www.sprachenzentrum.uzh.ch/slz/index.php).

Prerequisites / notice
The certificate and ETCS points are granted to the students who have complied with the following requirements:
- Preparation (glossary and thematics) of one of the chosen films
- Entries in the blog and forum of the course

Important information for ETH students: The enrollment in this course at the Sprachenzentrum does not enrol the student automatically for the granting of the D-GESS points. Please inform yourself.

851-0826-04L Italian: Language and Literature (B2-C1) W 2 credits 2U P. Casella

Abstract
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Objective
The course aims to approach the Italian language through literature. While reading short stories the participants will deepen their linguistic and syntactic competence as well as their understanding of the Italian culture by means of interactive exercises and class discussions.

Content
Durante il corso vengono letti e commentati testi narrativi brevi particolarmente significativi sia per il lessico e le struttura linguistiche impiegate sia per i contenuti strettamente collegati a realtà culturali e sociali tipiche per l'Italia. A presentazioni, orali e scritte, salteranno discussioni sui testi e riflessioni sulla costruzione dei racconti e sulle scelte lessicali e sintattiche.

Important information for ETH students: The enrollment in this course at the Sprachenzentrum does not enrol the student automatically for the granting of the D-GESS points. Please inform yourself.

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 632 of 1434

Chinese I (A1.1)  
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract  
This course is designed for students with a general interest in learning the modern Chinese language or students who are planning to study in China.

Objective  
The course aims at promoting various everyday communication skills without neglecting their cultural context.

Content  
Introduction to the modern standard Chinese language (Mandarin) and script, concentrating on basic vocabulary in Pinyin and Chinese characters, elementary grammar and conversation. The main focus will be on colloquial language.

Literature  
Zhghuóhuà, shàngcè und Zhngguózì, shxi (Beijing, 2007 mit Audio CD).

Q. Hu

Chinese III (A2.1)  
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract  
Building on course Chinese II the students will learn to actively master a vocabulary of 300 words. In addition, the course will teach some of the basic grammatical patterns. Exercises in spoken Chinese covering a number of topics are also part of the course-work. The course aims to bring the participants up to level 2 of the new HSK (standardized international Chinese proficiency test).

Objective  
The course has the following aims: the participants shall acquire an advanced competence in the field of speaking, listening, reading and writing. They will build up a number of key characters, so that 300 words should be actively mastered by the end of the semester. Exercises in basic grammatical forms shall give a first understanding of modern Chinese syntax. All the lessons will contain a fair share of conversational practice.

Arabic III (A2.1)  
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract  
This course forms the third semester of a five semesters' Arabic curriculum. We will work on the following topics: Talking about one's life, daily routines, comparisons, wishes, orders, eventualities, preferences. Furthermore, we will pay special attention to acquiring a basic vocabulary and work on the Arabic verbal system.

Objective  
The participants are able to show a culturally and linguistically appropriate behavior in common situations of everyday life. They acquire a basic vocabulary and know the important verbal constructions (present and past tense, imperative, conjunctive).

Content  
Die Verständigungsbedürfnisse, auf welche Übungsinhalte und -situationen abgestimmt sind, beziehen sich auf folgendes: aus dem Leben erzählten, Tagesablauf, Vergleiche, Wünsche, Befehle und Eventualitäten ausdrücken, Vorlieben angeben. Der Kurs wird mit einem Modul auf OLAT unterstützt.

</table>

**Abstract**  
The focus of this course is on the reading of challenging original texts from Japanese media and Japanese contemporary literature. The texts are analyzed and discussed in terms of their content and linguistic features.

**Objective**  
By reading selected original texts, students learn strategies for reading texts analytically. The aim is that they are able to handle Japanese sources independently, using appropriate tools.

</tbody>
</table>

**Abstract**  
The general topic of the course is Hannibal. On the basis of didactically prepared texts written by various Latin authors (including Nepos, Livy) this enigmatic figure who stood before the gates of Rome in 215 BC is examined. Students mostly prepare the texts at home for class discussion. Furthermore, important topics of basic grammar are reviewed (exercises).

**Objective**  
Students gain an understanding of various aspects of a new topic and are able to analyse and contrast these aspects within a wider context. Participants re-activate, review, and improve their language skills (vocabulary, morphology, morphosyntax) by applying these skills to texts and in exercises (translation competence, text analysis).

Cognitively Activating Instructions in MINT Subjects, P. Edelsbrunner, B. Rütsche,

The course is targeted at advanced students who have taken an interest in gathering practical research experience in the field of Learning and Instruction. In teams of two, students conduct their own research projects (planning, conducting, analyzing, interpreting, and presenting research); thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students’ independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction)

Learning goals include:
- Participants can illustrate and explain basic methods and concepts for research in the fields of Learning and Instruction, e.g. with the help of practical examples.
- Participants can generate testable research questions for a topic relevant in the fields of Learning and Instruction.
- Participants can design and conduct a study that is relevant for answering their research question.
- Participants can summarize and evaluate the main results from a study in the field of learning and instruction, with regard to the research question being asked.

see Educational Science Teaching Diploma

Subject Didactics in Geography

Cognitively Activating Instructions in MINT Subjects

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Number of participants limited to 30.

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Number of participants limited to 30.

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Number of participants limited to 30.

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Number of participants limited to 20.

The successful completion of both course no. 851-0240-00L "Menschliches Lernen (EW 1)" and course no. 851-0238-01L "Unterstützung und Diagnose von Wissenserwerbsprozessen (EW 3)" is a necessary prerequisite for this course.

In teams of two, participants in this seminar conduct their own research project. Each team is advised by one of the researchers serving as lecturers in this course. Basic conceptual and methodological issues are the topic of a series of plenary meetings; however, the major part of the work is done in small-group meetings with the advising researcher, and in self-directed research projects.

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.  
UZH Module Code: 090G31

Limited number of participants.  
Please write an email for registration no later than September 1 to: barbara.vettiger@ife.uzh.ch

Simultaneous enrolment in Introductory Internship Geography (651-4219-01L), Practice Lessons for Didactics I am II (651-4219-02L) is compulsory.

**Mind the enrolment deadlines at UZH:**  
http://www.uzh.ch/studies/application/mobilitaet_en.html

**Abstract**  
Fundamentals (theory and practice) of specialist subject teaching for high-school geography lessons.

**Objective**  
The course introduces students to the practical side of geography teaching. Participants look into the understanding of this school subject over the course of time and learn:  
- how to plan their teaching in the context of the valid curricula, including on an interdisciplinary basis.  
- how geographical contents can be implemented in didactic and methodological terms so as to ensure that fundamental competences can be imparted to pupils (knowledge, skills, attitudes), with a view to university studies as well.  
- how to foster pupils in such a way that they can think independently in terms of spatial competence and can act in a responsible manner.

**Content**  
Thematische Schwerpunkte  
- Einführung in die Theorie der Geografiedidaktik.  
- Bildungsauftrag der Geografie an Mittelschulen.  
- Interesse der Lernenden am Geografieunterricht.  
- Unterrichtsgestaltung und -vorbereitung: Sachanalyse, lernzielorientierte Unterrichtsplanung; Didaktische Analyse; Einführung in die Gestaltung von Lernarrangements.  
- Mediendidaktik (Arbeiten mit Bildern und Karten).  
- Planung einer Unterrichtseinheit (Struktur - Prozess - Verlauf).

Lernformen  
Theoretische Konzepte werden präsentiert und an Beispielen diskutiert. Die Studierenden setzen sich mit Methoden aktiv auseinander (z.B. Lernpuzzle, Fallstudie sowie Sozial-und Aktionsformen) und reflektieren dabei ihre eigenen Schülerfahrungen im Fach.

**Lecture notes**  
Unterlagen werden abgegeben.

**Literature**  
Weitere Literaturangaben auf Liste.

**Prerequisites / notice**  
Fachdidaktik I ist gleichzeitig mit dem Einführungspraktikum zu belegen.  
Sie gilt als Voraussetzung für Fachdidaktik II und III, sowie die FWV II und FWV III.  
Fachdidaktik II findet nur im Sommersemester statt.  
Fachdidaktik III kann parallel zur Fachdidaktik II im Sommersemester oder parallel zur FWV III (Ringvorlesung und FD-Seminar) im Herbstsemester belegt werden  

651-4124-00L | Examination Didactics | O | 1 credit | 2G | B. Vettiger-Gallusser

**Prerequisites:** Successful completion of Geography Didactics of Geography Teaching I, II, III, IV as well as FV I, II, III, Introductory Internship and Internship.

Simultaneous enrolment in Examination Lessons Geography - course 651-2520-00L - is compulsory.

**Content**  
Geprüft werden:
Fähigkeit, Geografie-Unterricht mit Bezug zur eigenen Praxis kritisch und unter verschiedenen Blickwinkeln (inhaltlich, methodisch-didaktisch) zu betrachten. Lernarrangements mit Bezug zum heutigen Bildungs- und Schulfachverständnis zu gestalten und kritisch zu hinterfragen sowie deren möglichen/ erzielten Wirkungen zu diskutieren und zu begründen; Unterrichtssituationen zu reflektieren und zu evaluieren.

Unterlagen aus der Fachdidaktischen Ausbildung  
Fachdidaktischer Text nach eigener Wahl

**Lecture notes**  
Unterlagen aus der Fachdidaktik

**Literature**  
Unterlagen aus den Fachdidaktik

**Prerequisites / notice**  
Die Fachdidaktik-Prüfung ist eine 15 minütige mündliche Prüfung. Sie findet am selben Tag wie die praktische Prüfung (2 Prüfungslektionen plus Kolloquium) statt.

651-4120-00L | Geography Didactics IV: Mentored Project | O | 2 credits | 4A | B. Vettiger-Gallusser, S. Hesske

**Prerequisites:** successful participation in Geography Didactics of Geography Teaching I+II+III (651-4239-00L, 651-2500-00L and 651-4118-00L).

**Abstract**  
Mentoried Project: Art work with Bezug zur Fachdidaktik

**Objective**  
Selbständige, theoretisch gestützte Auseinandersetzung mit konkreter, praxisbezogener Fragestellung zum Geografieunterricht.

**Content**  
Selbständige, mentorierte Arbeit zu einem Thema aus der Fachdidaktik mit direktem Bezug zur Lehrpraxis im Fach Geografie (z.B. zu eigenen Übungslektionen oder Praktikum oder Unterrichtsforschung).  
Das Thema wird zu Beginn mit der Mentorin/ dem Mentor festgelegt.

**Prerequisites / notice**  
Frühestens parallel zum Fachdidaktik- Modul III zu belegen (Pflicht für ETH-Studierende)

651-4118-00L | Geography Didactics of Geography Teaching III (University of Zurich) | O | 3 credits | 2G | B. Vettiger-Gallusser, University lecturers

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.  
UZH Module Code: 090FDG33

Limited number of participants.
Prerequisites: successful participation in Geography Didactics of Geography Teaching I-II (651-4239-00L and 651-2500-00L).

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
The Subject Didactics III course unit comprises two blocks: one "Specialisation" block with key subjects from courses I and II and a block on "Information technology in geography teaching" with specific applications.

Objective
In Subject Didactics III, students take a more in-depth, application-oriented look at geography. Students
- learn about the options for using ICT to design their geography teaching and also the integral furtherance of pupils' IT competence. They plan an IT lesson, hold it and then evaluate it.
- identify the opportunities and limits of illustrating their geography teaching with films, models and experiments.
- look into the significance of the subjective theories for learning success and failure and discuss tuition options for a concept change (geographical case studies).

Content
Inhalt
Fachdidaktik III Block "Vertiefung" (1/2 Semester)
- Planung von Unterrichtseinheiten.
Fachdidaktik III Block "ICT im Geografieunterricht" (1/2 Semester)
- Fachspezifische Einsatzmöglichkeiten, Unterrichtshilfen, konkrete Anwendungen und Resultate an Beispielen kritisch reflektieren. (Leistungsnachweis).

Lernformen
Theoretische Konzepte werden vorgestellt und an typischen Beispielen aus der Praxis illustriert. Beispiele im IT- Bereich werden von Studierenden selbst erarbeitet ("Werkstatt"), präsentiert und diskutiert.

Lecture notes
Unterlagen werden abgegeben.

Literature
Weitere Literaturangaben.

Prerequisites / notice
Fachdidaktik III kann im Frühlingssemester parallel zu Fachdidaktik II besucht werden, aber erst nach Fachdidaktik I.

The programme "Teaching Diploma, Two Subjects in One-Step Procedure" will not be offered anymore since Autumn Semester 2010. Therefore new

Prerequisites / notice

B. Vettiger-Gallusser

Dokument: Schriftliche Vorbereitung für Prüfungslektionen.

Bitte bei der Prüfungsanmeldung den schriftlichen Nachweis erbringen, dass die ganze Ausbildung abgeschlossen ist.

- Erstellen eines Portfolios zum Praktikum mit Praktikumsjournal (6-8 Seiten) und den dazu gehörenden Dokumenten (z.B. einem Beobachtungsprotokoll; einer Unterrichtsplanung; einer Lernaufgabe; einer Prüfung)
- Im Praktikumsjournal sollen fachwissenschaftliche Aspekte, allgemein- und fachdidaktische Überlegungen, fachlich- pädagogische und didaktische Aspekte sowie konkrete Erfahrungen aus dem Praktikum einbezogen und angemessen miteinander in Verbindung gebracht werden.
- Die Art der Darstellung des Portfolios wird durch die Studierenden bestimmt.
- Der Hauptteil des Praktikumsjournals umfasst ca. sechs bis acht Seiten.
- Formal muss das Praktikumsjournal der Struktur einer wissenschaftlichen Arbeit entsprechen (Titelblatt, Inhaltsverzeichnis, Hauptteil, Schlusswort, Literatur- und Materialienangaben).

Anleitung für das Unterrichtspraktikum und die unterrichtspraktischen Übungen:
- Die berufspraktische Ausbildung am IIE LLBM; Wegleitung und Instrumente zur Vorbereitung, Durchführung und Reflexion sowie zur Beratung, Beobachtung und Beurteilung von Unterricht auf der Sekundarstufe II (Version 2012).
- Merkblatt Praktikumsjournal IIE LLBM
- Aufgabenstellungen für die berufspraktische Ausbildung aus der Fachdidaktik Geografie.

Literatur: Literaturtiteln aus der Fachdidaktik und den Erziehungswissenschaften; je nach den bearbeiteten Problem- oder Fragestellungen.

Examination Lesson I Geography ■

Simultaneous enrolment in "Examination Lesson II Geography" (651-2520-02L) is compulsory.

**Abstract**

In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter-based and didactic skills they have acquired in the course of their training.

**Objective**

- to develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle
- to analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

**Content**

Die Studierenden erfahren das Lektionsthema in der Regel 14 Tage vor dem Prüfungstermin. Von der zuständigen Lehrperson erhalten sie Informationen über den Wissensstand der zu unterrichtenden Klasse und können sie vor dem Prüfungstermin besuchen. Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie spätestens 2 Tage vor der Prüfung (bis 18 Uhr) den beiden Prüfungsexperten ein.

Die gehaltene Lektion wird kriteriumsbasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidats/ der Kandidatin über die gehaltene Lektion im Rahmen eines Kolloquiums (15 min).

**Lecture notes**

**Abstract**

Current approaches to research which are of relevance to society are presented on the basis of examples and critically examined in respect of their significance for a high-school education in the subject of geography.

**Objective**

- how to foster pupils in such a way that they can think independently in terms of spatial competence and can act in a responsible manner.
- see whether and where current topics from the specialist subject (research) can be incorporated in secondary-school tuition.
- familiarise themselves with questions and forms of cognition-oriented, moderately constructivist tuition.
- can reflect on geography teaching in an aware and theory-based manner.

Regional geography observes delimited partial areas, mapped to different scales, considering thematic and exemplary aspects. Regional geography features in this form on a large number of geography syllabuses. Against this background, the module comprises two parts. A specialist lecture on the subject takes a specific regional example to highlight current, interdisciplinary topics and case studies. The aim here is to compile specialist contextual knowledge about a region. In an accompanying seminar, this contextual knowledge is then put in the correct practical form for teaching in a school, thus ensuring that the teachers are in a position to configure regional geography teaching that has been duly reflected on from the specialist-subject, didactic and pedagogical angle.

Content

- **Vorlesung**
  - Übersicht über Themen, die für eine Region typisch sind oder sich in einer Region abspielen (z. B. Arabische Halbinsel, Afrika südlich der Sahara, Asien)
  - Regionale Fallstudien mit interdisziplinärem Charakter
  - Differenzierte Auseinandersetzung mit kulturellen und politischen Fragen und Entwicklungen in einer Region
  - Erarbeiten von bedeutenden fachwissenschaftlichen Debatten zu einer Region

- **Seminar**
  - Regional-thematische Geografie versus traditionelle Länderkunde
  - Geografisches Orientierungswissen: Stellenwert
  - Werteerziehung und Interdisziplinarität im regionalgeografischen Kontext
  - Didaktische Analyse und Planung regionalgeografischen Unterrichts: Von der Sachanalyse über den Einstieg bis zur Bewertung
  - Methoden und Recherche in der Regionalgeografie

Lernformen

Fachwissenschaftliche Aspekte werden in der Form einer Vorlesung präsentiert. Die Studierenden vertiefen nach jeder Stunde die Inhalte und setzen diese im Hinblick auf die Schulpraxis um. Dabei wird ein elektronisches Lernstagebuch geführt und über eine Lernplattform über die schulpraktische Umsetzung reflektiert. Es werden auch Materialien zusammengestellt.

Lecture notes

Folien werden zur Verfügung gestellt.

This course presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research: the individual, the population, the community and the ecosystem level.

The students should learn ecological concepts at these different levels in the context of concrete examples from terrestrial and aquatic ecosystem. Corresponding methods for studying the systems will be presented.

A further aim of the lecture is that students achieve an understanding of biodiversity, why it is threatened and how it can be managed.

The students should learn ecological concepts at these different levels in the context of concrete examples from terrestrial and aquatic ecosystem. Corresponding methods for studying the systems will be presented.

- Übersicht der aquatischen und terrestrischen Lebensräume mit ihren Bewohnern
- Einfluss von Umweltfaktoren (Temperatur, Strahlung, Wasser, Nährstoffe etc.) auf Organismen; Anpassung an bestimmte Umweltbedingungen
- Populationsdynamik: Ursachen, Beschreibung, Vorhersage und Regulation
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartimente, Stoff- und Energieflüsse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

Abstract: This course will cover the basic topics in Physics and will show/display/explain with a variety of experiments the most important physical effects. The course will address classical as well as modern physics, and the interplay between basic research and applications.

Thermodynamik: Temperatur und Wärme, Zustandsgleichungen, erster und zweiter Hauptsatz der Wärmelehre, Entropie, Transportvorgänge.
Quantenphysik und Atomphysik.
Schwingungen und Wellen.
Grundlagen der speziellen Relativitätstheorie.

Lecture notes: Manuskript und Übungsblätter
### Lecture 103-0253-00L: Urban Planning

**Objective:** The lecture introduces the main features of spatial planning. Attended will be the themes planning as a national responsibility,

**Content:** Mathematical modeling of engineering problems, general adjustment, minimization principles, propagation of variances, uncertainty of measurements, dealing with heterogeneous measurement types, linear/non linear regression, autocorrelation and colocation.

**Lecture notes:** Parameter estimation and Adjustment

**Prerequisites and notice:** Linear Algebra, Statistics

### Lecture 103-0214-00L: Cartography I

**Abstract:** Basic knowledge about communication with spatial information by using plans and maps, about the most important design rules and production methods for map graphics.

**Objective:** Acquire basic knowledge about communication with spatial information by using plans and maps, about the most important design rules and production methods for map graphics. Ability to design proper plans and well-designed legends for basic maps.

**Content:** Definitions "map" and "cartography", map types, current tasks and situation of cartography, map history, spatial reference systems, map projections, map conception and workflow planning, map design, analog and digital map production technology, prepress technology, printing technology, topographic maps, map critiques.

**Lecture notes:** Will be distributed module by module

**Literature:**
- Umweltverträglichkeitsprüfung, vdf, Zürich 1995.

**Prerequisites and notice:** Further information at http://www.karto.ethz.ch

### Lecture 103-0313-00L: Planning I

**Abstract:** The lecture introduces into the main features of spatial planning. Attended will be the themes planning as a national responsibility, instruments of spatial planning, techniques for problem-solutions in spatial planning and the Swiss concept for regional planning.

**Objective:** To follow shortly; please note the German description.

**Content:** Einleitung - Was ist Raumplanung (Begriffe)
- Die Raumplanung als staatliche Aufgabe - Raumordnungspolitik
- Instrumente der Raumplanung (Richtplanung, Nutzungsplanung)
- Problemlösungsverfahren in der Raumplanung - systemtechnisches Vorgehen
- Das schweizerische Raumordnungskonzept

**Lecture notes:** Prof. Dr. W.A. Schmid et al. (2006, Stand 2011): Raumplanung GZ - Eine Einführung für Ingenieurstudierende. IRL-Institut, ETHZ
- Handouts of the lectures
- Exercise material
- Download: http://www.irl.ethz.ch/plus/education

<td>Geodetic Metrology II</td>
<td>O</td>
<td>5</td>
<td>4G</td>
<td>A. Wieser, G. Boffi</td>
</tr>
</tbody>
</table>

**Abstract:** Advanced topics in geodetic metrology with focus on instrumental and methodic aspects for applications with higher accuracy demands.

**Objective:** The students acquire enhanced knowledge regarding the operating mode, the application and the limitations of modern geodetic standard instruments. They will be able to properly select, test and apply these instruments for geodetic tasks with higher accuracy requirements. They will get acquainted with the typical workflow from the preparation of the field works to the digital or plotted plan. Finally, the students will be introduced to specific geodetic tasks related to construction and civil engineering.

**Content:**
- The geomatics workflow
- Propagation of light in the atmosphere
- The modern total station
- Terrestrial Laserscanning
- Digital levels
- Field tests
- Traverses
- Trigonometric leveling
- Precision leveling
- Route planning and transition curves
- Earthworks: Area and cubature

**Lecture notes:** The slides and documents for enhanced study and further reading will be provided online.

**Literature:**
**Exam Block 3**

In place of the German course 851-0703-03L Introduction to Law for Civil Engineering students can take the French course 851-0709-00L Droit civil.

**Abstract**

This class introduces students to basic features of the legal system. Questions of constitutional and administrative law, contract law, tort law, corporate law, as well as litigation are covered.

**Objective**

Introduction to fundamental questions of public and private law which serves as a foundation for more advanced law classes.

**Content**

1. Public Law
   - Constitutional law: sources of law, organization of the state, fundamental rights. Administrative law: administrative decisions, organization of the administration, enforcement of administrative decisions, procedural law, basics of police, environmental and zoning law.

2. Private law

**Literature**

- Sont conseillés:
- Sont indispensables:

</tbody>
</table>

**Abstract**

Fundamentals and theory of geodetic reference systems and frames. Introduction to current international systems as well as to systems for the Swiss national geodetic survey.

**Objective**

Provision of fundamental knowledge and theory to get familiar with the applications of geodetic reference systems. Special emphasis will be placed on international global systems as well as on the systems of the Swiss national geodetic survey.

**Content**

- Various coordinate systems and transformations; 
- reference systems and frames (inertial, Earth-fixed, topocentric) and associated transformations between the systems; 
- introduction to Earth rotation theory; 
- time systems; 
- Swiss national geodetic survey.

**Literature**

**Abstract**

**Objective**
Overview over the entire spectrum of Higher Geodesy

**Content**
Actual methods of Higher Geodesy. Basics of Shape of the Earth: Geoid determination and deflection of the vertical. Introduction into the most important topics: Satellite Geodesy (GPS) and Navigation; Physical Geodesy and gravity field of the Earth; Astronomical Geodesy and Positioning; Mathematical Geodesy and basics of Geodynamics. Reference systems and applications in National and Global Geomatics.

</table>

**Abstract**
First part: Spatial planning on the Commune level with focus on the special land use management
Second part: land re-allocation as an instrument of spatial planning; specific explanations for land re-allocations in rural regions and in construction zones.
Third part: land marketing; the view of investors.

**Objective**
Getting knowledge in spatial planning and land re-allocation as an interactive process.

**Content**
PART 1: Spatial Planning and Special Land Use Management
- Overview about Spatial Planning on the commune level
- workflows and planning methods on the commune level
- comprehension of the public
- getting knowledge of the special land use management

PART 2: Methods of Land Re-Allocation
- Intensions and principles of land re-allocation
- implementation of the land re-allocation
- land re-allocation in construction zones
- amelioration

PART 3: Agricultural Planning

**Abstract**
General introduction to the development, the life cycle and the characteristics of projects. Introduction to, and experience with, the methods and tools to help with the preparation, evaluation, organisation, planning, controlling and completion of projects.

**Objective**
To introduce the methods and tools of project management. To impart knowledge in the areas of project organisation and structure, project planning, resource management, project controlling and on team leadership and team work.

**Content**
- From strategic planning to implementation (Project phases, goals, constraints, and feasibility)
- Project leadership (Leadership, Teams)
- Project organization (Structure)
- Project planning (Schedule, cost and resource planning)
- Project controlling
- Risk and Quality Management
- Project completion

**Lecture notes**
Yes

The transparencies will be available for download from the website at least one week before each class.

Copies of all necessary documents will be distributed at appropriate times.

</tbody>
</table>

**Abstract**
Fundamentals of railroad technology and interactions between track and vehicles, network development and infrastructure planning, planning of rail infrastructure, planning and design of railway stations, construction and dimensioning of tracks, approval and beginning service on complex infrastructure facilities, special issues of maintenance.

**Objective**
Teaches the basic principles of public transport network and topology design, geometrical design, dimensioning and construction as well as the maintenance of rail infrastructures. Teaches students to recognize the interactions between the infrastructure design and the production processes. Provides the background for Masters degree study.

**Content**
- Infrastructure design: Fundamentals of the layout of a line; track geometry; switches and crossings; design of station platforms. (4) Construction of railway infrastructures: Assembly and evolution of the railway track; elements of the railway track; dimensioning of the track; track stability. (5) Approval and beginning service on complex infrastructure facilities: Definitions and limitations; fundamentals of the legal situation; test and approval processes; processes of putting railway systems into operation. (6) Maintenance of railway infrastructures: Fundamentals of infrastructure maintenance; kinds of deprivations; supervision methods; steps of infrastructure maintenance; estimation of maintenance need; methods to minimize maintenance costs.

**Lecture notes**
Course notes will be provided in German. Slides are made available some days before each lecture.

**Literature**
References to technical literature will be included in the course script. An additional list of literature will be given during the course.

**Abstract**
Thematic map types (focus on quantitative information), analysis of themes and application, base maps, generalisation

**Objective**
Knowing of most important thematic map types.

Ability to design adequate thematic maps from statistical data.

---

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 654 of 1434
The students are able to plan, pre-analyse and perform analysis of geodetic networks for practical problems. They are able to understand and apply the principles of statistical and probabilistic basics, and to develop geodetic software.

**Objective**

The aim of the course is to provide the fundamental knowledge about earth observation sensors, techniques and methods for bio/geophysical environmental parameter estimation. Students should know at the end of the course:

1. Basics of measurement principle
2. Fundamentals of image acquisition
3. Basics of the sensor-specific geometries
4. Sensor-specific determination of environmental parameters

**Content**

The Lehrveranstaltung gibt einen Einblick in die heutige Erdbeobachtung mit dem folgenden skizzierten Inhalt:

1. Einführung in die Fernerkundung von Luft- und Weltraum gestützten Systemen
2. Einführung in das Elektromagnetische Spektrum
3. Einführung in optische Systeme (optisch und hyperspektral)
4. Einführung in Mikrowellen-Technik (aktiv und passiv)
5. Einführung in atmosphärische Systeme (meteo und chemisch)
6. Einführung in die Techniken und Methoden zur Bestimmung von Umweltparametern
7. Einführung in die Anwendungen zur Bestimmung von Umweltparametern in der Hydrologie, Glaziologie, Forst und Landwirtschaft, Geologie und Topographie

**Literature**

Ausgewählte Literatur wird am Anfang der Vorlesung vorgestellt.

**Prerequisites / notice**

Prerequisite: Cartography Introduction

</table>

**Abstract**

This course provides knowledge for parameter estimation and data analysis in geodetic networks. The necessary mathematical and statistical methods are explained and applied by means of concrete examples.

**Objective**

The students are able to plan, pre-analyse and perform analysis of geodetic networks for practical problems. They are able to understand and develop geodetic software.

**Content**

Refreshment of statistical and probabilistic basics (simulations with random number generators, correlated random noise, empirical density and distribution functions, hypothesis tests), 2D + 1 and 3D terrestrial and satellite based observation equations, coordinate transformation (Helmert, affine), geodetic datum problem (free networks, stochastic network), quality indicators of geodetic networks (global and local accuracy resp. reliability), robust estimators (M-estimators, L-estimators, LMS-estimator), network optimization (manual, semi-automatic), deformation measurements (congruence test, S-transformations).

**Prerequisites / notice**

Linear algebra, statistic and probability, geoprocessing and parameter estimation, geodetic metrology

---

Abstract
Independent development of a basis for decision-making and preparation of specific project documents in the context of practical spatial and environmental problems.

Objective
The students know different GIS-based techniques and methods for analysis of landscape and urban areas as well as GIS-based process models and can implement these for quantifying urban qualities in planning processes.

Content
Current topics from planning practice lead to a practical task in the context of sustainable urban development. A systematic approach of choosing suitable planning and analysis methods is shown and implemented on a concrete project. The results of the GIS-based analysis serve for developing possible solutions. Different alternatives are evaluated with selected indicators and discussed.

Lecture notes
No script. Handouts will be provided.

Abstract
Introduction to basic techniques and problems of mathematical optimization.

Objective
The goal is to get a good understanding of some of the most important mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems.

Content
Topics covered in this course include:
- Linear programming (simplex method, duality theory, shadow prices, ...).
- Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...).

Literature
Information about relevant literature will be given in the lecture.

Prerequisites / notice
This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture covering similar topics and more.

Abstract
The course introduces basic principles, problems and approaches of microeconomics.

Objective
The course includes the following main topics:
- Basic principles of demand and supply, market and state in a modern economy, externalities, cost analysis, consumer behaviour, economies of scale and economies of scope, perfect competition, monopoly, oligopoly, monopolistic competition, mathematical treatment of some basic concepts.

Literature
Lecture notes, exercises and reference material can be downloaded from Moodle.

Prerequisites / notice

- For students taking only the course "Principles of Microeconomics" there is a shorter version of the same book: N. Gregory Mankiw and Mark P. Taylor (2014), "Microeconomics", 3rd edition, South-Western Cengage Learning.
- Complementary:

Compulsory Electives in Humanities, Social and Political Sciences

Recommended GESS compulsory elective courses (Type B) for D-BAUG.

see GESS Compulsory Electives: Type A: Enhancement of Reflection Capability

see GESS Compulsory Electives: Language Courses ETH/UZH

Election

The entire course programs of ETH Zurich and the University of Zurich are open to students to individual selection.

<td>B. Gärtner, M. Hoffmann, E. Welzl</td>
</tr>
</tbody>
</table>

Abstract
Geometric structures are useful in many areas, and there is a need to understand their structural properties, and to work with them algorithmically. The lecture addresses theoretical foundations concerning geometric structures. Central objects of interest are triangulations. We study combinatorial (Does a certain object exist?) and algorithmic questions (Can we find a certain object efficiently?)

Objective
The goal is to make students familiar with fundamental concepts, techniques and results in combinatorial and computational geometry, so as to enable them to model, analyze, and solve theoretical and practical problems in the area and in various application domains. In particular, we want to prepare students for conducting independent research, for instance, within the scope of a thesis project.

Content
Planar and geometric graphs, embeddings and their representation (Whitney's Theorem, canonical orderings, DCEL), polygon triangulations and the art gallery theorem, convexity in Rd, planar convex hull algorithms (Jarvis Wrap, Graham Scan, Chan's Algorithm), point set triangulations, Delaunay triangulations (Lawson flips, lifting map, randomized incremental construction), Voronoi diagrams, the Crossing Lemma and incidence bounds, line arrangements (duality, Zone Theorem, ham-sandwich cuts), 3-SUM hardness, counting planar triangulations.

Prerequisites / notice
Prerequisites: The course assumes basic knowledge of discrete mathematics and algorithms, as supplied in the first semesters of Bachelor Studies at ETH. Outlook: In the following spring semester there is a seminar "Geometry: Combinatorics and Algorithms" that builds on this course. There are ample possibilities for Semester-, Bachelor- and Master Thesis projects in the area.

**Abstract**
The Bachelor Programme concludes with the Bachelor Thesis. This project is supervised by a professor. Writing up the Bachelor Thesis encourages students to show independence and to produce structured work.

**Objective**
Encourages students to show independence, to produce scientifically structured work and to apply engineering working methods.

**Content**
The contents base upon the fundamentals of the Bachelor Programme. Students can choose from different subjects and tasks. The thesis consists of both a written report and an oral presentation.

### Literature

### Prerequisites / notice

Successful participation in the lab requires knowledge and experiences conveyed within the related course "Engineering Geodesy". Students who have not already passed that course and who are not participating in that course will only be admitted to the lab after discussion with the instructors.

If the timetable of the participants allows it, the 3-hourly lab units will partially be combined to individual full-time units.

### Computer Vision

**Objective**
- To introduce the fundamental problems of computer vision.
- To introduce the main concepts and techniques used to solve those.
- To enable participants to understand the main concepts and techniques used to solve those.
- To enable participants to make sense of the computer vision literature.

**Content**
- Camera models and calibration, invariant features, Multiple-view geometry, Model fitting, Stereo Matching, Segmentation, 2D Shape matching, Shape from Silhouettes, Optical flow, Structure from motion, Tracking, Object recognition, Object category recognition.

**Prerequisites / notice**
- It is recommended that students have taken the Visual Computing lecture or a similar course introducing basic image processing concepts before taking this course.

### Major in Space Geodesy and Navigation

**Abstract**
- Understanding the major observation techniques in space geodesy as modern methods applied in Earth system monitoring (geometry, rotation and gravity field of the Earth and the atmosphere), in national surveying and navigation.
- Overview of GPS, VLBI, Satellite and Lunar Laser Ranging (SLR/LLR), Satellite Radar Altimetry with the basic principles, the instruments and observation equations. Modelling of the station motions and the estimation of station coordinates and station motion. Ionospheric and tropospheric refraction and estimation of atmospheric parameters. Equation of motion of the unperturbed and perturbed satellite orbit. Perturbation theory and orbit determination.

| 103-0657-01L | Signal Processing, Modeling, Inversion     | O    | 3    | 2G    | A. Geiger                |

**Abstract**
- Timeseries analysis, orthogonal decomposition, interpretation of measurements, Parameter estimation and Inversion of analytical and voxel-type models.

**Objective**
- Students are able to analyse data in view of specific scientific questions and interpretations. They have basic methodologies at hand to mathematically formulate engineering and scientific problems. Students know terminologies and basic methodologies in order to be able to further study the expert literature.

| 103-0627-00L | Astro and Gravity Lab                      | W    | 5    | 4P    | S. Guillaume, C. Hollenstein |

**Abstract**
- Timeseries analysis, Fourier transformation, DFT, auto- and crosscorrelation, ARMA, interpretation of measurements, Parameter estimation and Inversion of analytical and voxel-type models, resolution, uncertainties.

**Objective**
- Knowledge of up-to-date astro-geodetic methods aiming at the determination of the direction of the local plumb line in terms of astronomical latitude and longitude.

**Content**
- Earth- and space fixed coordinate systems and their changes in time, basic astronomical calculation procedures, time scales, time keeping, transformations, star catalogues, computation of precise apparent places, relevant methods for the determination of latitude/longitude, CCD technique and astrometry, application of deflections of the vertical as regards the geoid determination.

**Prerequisites / notice**
- Courses corresponding to: Analysis I-II, Geoprocessing and Parameter estimation, Linear Algebra I.

| 103-0787-00L | Project Parameter Estimation               | W    | 3    | 2P    | A. Wieser                |

**Abstract**
- Solving engineering problems with modern methods of parameter estimation for network adjustment in a real-world scenario; choosing adequate mathematical models, suitable data-flow and performing software.

**Objective**
- Learn to solve engineering problems with modern methods of parameter estimation in a real-world scenario.

**Content**
- Analysis of the given problem, selection of effective mathematical models, use of appropriate software.

<td>The course is an introduction to the concepts of geodesy applied to the seismic cycle and to the monitoring of ground deformation.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Objective
a) Students are introduced to various geodetic techniques and to their most famous applications in Earth Sciences;
b) Students are able to independently conceptualize 1) the inter seismic strain accumulation for an earthquake and 2) inflation of a spherical reservoir (i.e. magma chamber of a volcano) or 3) water level change within aquifer. c) Students are then introduced to news techniques linking seismology and geodesy.

Content
1. Plate Tectonics before Space Geodesy.
4. Space geodetic techniques (VBLI, gravity, etc.)
3. The seismic cycle monitoring (Moment release, seismology, Stress transfer)
5. Presentation of GPS and Applications 1 (positioning, rigid plate motions)
6. GPS networks in the world. Development of tectonic geodesy and Applications 2 (Practical on inter-seismic deformation)
7. Presentation of InSAR, psSAR, etc. Applications to earthquake. Post-seismic deformation.
8. GPS and deformation related to volcanoes (Practical on Mogi source)
9. GPS, Strain, Stress and Plate motion.
10. InSAR applied to subsidence and small deformation.
11. Troposphere sounding. Accuracies of GPS and InSAR.
12. GPS and geodynamics
13. Future of GPS. Future of InSAR.
14. GPS and normal modes?

Lecture notes
Slides. Script in English is planned. PDF of articles cited.

Literature
Geology and Geophysics equivalent to Bachelor program at ETH
Math of Bachelor program at ETH

Pre-requisites / notice
Pre-Requisite:
Higher Geodesy Basics; Physical Geodesy and Geodynamics I; Seismotectonics

The grading is based on participation, homework sets, and a final oral presentation. There is no final exam.

851-0724-00L Property Law for Geometers: Land Registry and Geoinformation Law

Abstract
Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

Objective
Overview of the legal norms of land registry and surveying law.

Content
Basic principles of material and formal land registry law, components of the land register, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of the geom-eter. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.

Lecture notes
Abgegebene Unterlagen: Skript in digitaler Form
Pflichtlektüre: Meinrad Huser, Schweizerisches Vermessungsrecht, unter besonderer Berücksichtigung des Geoinformationsrechts und des Grundbuchrechts, Beiträge aus dem Institut für schweizerisches und internationales Baurecht der Universität Freiburg/Schweiz, Zürich 2014

103-0258-00L Interoperability of GIS

Abstract
Content: Transform back and forth (geo-)data with same content but different structure.
Tools: Conceptual schema languages UML and INTERLIS, formats ITF, XML, tools ILI-Checker and awk, and for the semantic transformation UMLT and FME.

Objective
- Explain and apply the model-driven approach based on standards
- Know and use interoperability types
- Know transfer formats and reformat with 1:1 processors
- Explain object-oriented modelling (with graphic and text)
- Know and use communication technologies and OGC Web services
- UML, EBNF, INTERLIS, ITF, XML, awk, FME
- Know and apply appropriate software tools

Content
Semantic interoperability of GIS is in the main part of this lecture and means to transform back and forth (geo-) data with same content but different structure. The reduction of the necessary programming amount to a modest minimum is provided by the system-independent model-driven approach. Its elements reality selection, conceptual modelling, flexible standard formats, 1:1 processors and semantic transformation are presented and used. As generally useful tools are introduced and applied the conceptual schema languages UML and INTERLIS, the flexible transfer formats ITF, XML the ILI-Checker, the efficient reformating tool awk and for the semantic transformation UMLT and FME.

Prerequisites / notice
Condition for participation: Successful bachelor lecture GIS II

103-0778-00L GIS and Geoinformatics Lab

Abstract
Independent study project with (mobile) geoinformation technologies. Design and programm and mobile app and contribute it to the “Zurich Open data” portal.

Objective
See: https://www.stadt-zuerich.ch/portal/de/index/ogd/daten.html
Learn how to work with (mobile) geoinformation technologies (including application design and programming) and make a contribution to the Zurich Open Data community. A possible topic is given below but students may choose their own topic(s). The only requirement is that the application makes use of the Zurich open dataset

Content
A possible topic is the design and programming of a bicycle information system that provides the following data sets as a service:
- Routing-Service
- Real-time data "Rent-a-bike"
- Bicycle Pump Station
- Bicycle parking spots

All data is freely available and part of the Zurich Open Data.

Literature
https://www.stadt-zuerich.ch/portal/de/index/ogd.html
https://www.stadt-zuerich.ch/portal/de/index/ogd/daten.html
The aim of this course is to provide participants with an introduction to the statistical open-source software R. Students will learn how to use R, which is one of the most popular statistical open-source software for data analysis and data modeling. It has proved very useful for a variety of tasks commonly faced by planners, such as data preparation, exploratory analysis, model estimation or graphical display. R is also a programming language providing users with a more flexible and powerful tool for solving more complex problems.

No script. The documentation, consisting of presentation slides are partly handed out and are provided for download on the PLUS website.

The main focus of the lecture is on site and project development questions in relation to recycling of industrial wasteland. A semester exercise covers a specific major project and serves as the semester grade (project report and presentation).

The contents of the course will be illustrated in the associated lecture 103-0347-01 U (Landscape Planning and Environmental Systems (exercises)). An combination of courses is recommended.

Lecture notes: Further information and the documents for the lecture can be found on the homepage of the Chair of Spatial Development.

Literature: "Introduction to R" by W. N. Venables and D. M. Smith available online at http://cran.r-project.org/doc/manuals/R-intro.pdf

Prerequisites / notice: The course will be held in English and no prior knowledge on R is required.

103-0317-00L Sustainable Spatial Development I O 3 credits 2G B. Scholl

Abstract: The lectures impart important knowledge for solving spatial relevant conflicts and problems. Case studies will be used to demonstrate the implementation in practice.

Objective: Spatial development deals with the development and the design of our living space. To meet the expectations, the interests and the plans of the different actors, it is needed a planning approach considering the overview of both the actual and future situation.

The concept of sustainable development in spatial planning leads necessarily to an efficient management of the resources, especially regarding the resource land. The basics of this important discipline will be the subject of this lecture, which is therefore organised in three parts:
- Inner development
- Integrated spatial and infrastructure development
- Cross-border issues in spatial development

Content: Contents
- Tasks of Spatial Planning and development
- Issues of local and supra-local interest
- Recurring spatial changes, impacts and key figures
- Formal and informal instruments and procedures in spatial planning
- Spatial Design - Ideas about the future
- Reasoning and assessing the situation in spatial planning
- Spatial planning as a sequence of decisions and interventions
- Process and procedures management
- Focus issues - Inner development before external development
- Focus issues - Cross-border tasks
- Focus Issues - Integrated spatial and infrastructure development

103-0417-02L Theory and Methodology of Spatial Planning W 3 credits 2G R. Signer, M. Nollert

Abstract: In order to solve problems in spatial planning it is necessary to explore actions and to judge them; finally, one has to argue why a certain option should be preferred to others. Assessments of the situation are the basis for the problems to treat. Specific knowledge, represented in an adequate manner, is required.

Objective: The participants know the interdependencies between the assessment of a situation, decision making, knowlegde and language. They know the nature of a decision dilemma und maximes, how to deal with it. Especially they learn that the requirement of information for a decision depends upon the preferences of the deciding acteur. They are also familiar with difficulties and pitfalls within these contexts and know what can be done against it.

Content: Assessment of the situation, deciding, language and knowledge are the main parts.

101-0427-01L System and Network Planning W 6 credits 4G U. A. Weidmann

Abstract: Public transports in the context of the transport systems; customer needs in the transport market; service planning processes for regular public transport services; long distance, regional and urban public transport service strategies; access to public transport and the last mile.

Objective: Students will develop a basic knowledge of all stages of the public transport planning process from market demand to service planning; they will understand the most relevant planning methods and will be able to use them.

Content: (1) Fundamentals of system and network planning: Mobility and transport systems; public transport systems; customer needs versus supply characteristics of regular services. (2) System and network planning in public passenger services: Goals of the system and network planning; generic planning process; demarcation, analysis of the situation, setting of targets; design of public transport services; evaluation and optimization; system planning. (3) Public transport services: long distance service offers; suburban and urban service offers; regional and local service offers; access to public transport and the last mile.

Lecture notes: A script in German will be provided for the course. The slides are made available.

Literature: References to technical literature will be included in the course script. An additional list of literature will be given during the course.

101-0417-00L Transport Planning Methods W 6 credits 4G K. W. Axhausen

Abstract: The course provides the necessary knowledge to develop models supporting the solution of given planning problems. This is done by dividing the forecasting problem into sub-problems.

The course is composed of a lecture part, providing the theoretical knowledge, and a applied part, in which students develop their own models.

Objective: - Knowledge of methods and algorithms commonly used in transport planning
- Ability to independently develop a transport model able to solve / answer the given problem / questions
- Understanding of algorithms and their implementations commonly used in transport planning

Content: The course provides the necessary knowledge to develop models supporting the solution of given planning problems. Examples of such planning problems are the estimation of traffic volumes, prediction of estimated utilization of new public transport lines, and evaluation of effects (e.g. change in emissions of a city) triggered by building new infrastructure and changes to operational regulations.

To cope with the forecasting problem it is first divided into sub-problems. Then, these are solved using various algorithms like iterative proportional fitting, shortest path algorithms and the method of successive averages.

The course is composed of a lecture part, providing the theoretical knowledge, and a applied part, in which students create their own models. This part takes place in form of a tutorial and consists in the development of a computer program. The programming part is closely guided and particularly suitable for students with little programming experience.

Lecture notes: The slides of the lecture are provided electronically.

103-0347-01L Landscape Planning and Environmental Systems W 3 credits 2U A. Grêt-Regamey, S. Huber,
Familiarity with the essential methods of project appraisal

Type

Hours

Interdisciplinary Project

Promote independent, structured and scientific work in an interdisciplinary context; learn to apply engineering methods; deepen the knowledge in the field of the treated task.

U. A. Weidmann

S. E. Rabe

Working on a concrete interdisciplinary task in Geomatics

ECTS

Comprehension of the transport and administrative policy as well as of the regulation of public transport companies. To develop a full understanding of the three important public transport system operations management processes: (1) Business management; (2) Marketing; (3) Quality control. The course will teach essential working techniques in each of these processes.

O

Introduction to Economic Policy - A Case Study

Will be named in the lecture.

O

References to technical literature will be included in the course script. An additional list of literature will be given during the course.

24A

(1) Transport and administrative policy: Goals of the state related to public transports, governmental activities in public transport, regulation.

M. Rothacher

The course content of the lecture Landscape Planning and Environmental Systems (103-0347-00 V) will be illustrated.

K. W. Axhausen

Title

Course notes will be provided in German. Slides will be made available.

4G

Learn how to search for literature, how to write a scientific report, how to present scientific results, and how to critically read and review a scientific article.

Professors

Geomatics Seminar

To show the importance of ecosystem services.

Before starting the Master's thesis, students must have

a. obtained the Bachelor's degree;

b. fulfilled all specified admission conditions, if any;

c. acquired at least 90 credits in the Master's programme, including 12 credits in the area of the interdisciplinary project.

### Abstract
The Master Programme concludes with the Master Thesis, which has to be done in one of the chosen Majors and has to be completed within 16 weeks. The Master Thesis is supervised by a professor and shall attest the students ability to work independently and to produce scientifically structured work.

### Objective
To work independently and to produce a scientifically structured work.

### Content
The topics of the Master Thesis are published by the professors. The Topic can be set also in consultation between the student and the professor.

## Course Units for Additional Admission Requirements

The courses below are only available for MSc students with additional admission requirements.

Enrolment only for MSc students who need this course as additional admission requirement.

### Abstract
Advanced topics in geodetic metrology with focus on instrumental and methodic aspects for applications with higher accuracy demands.

### Objective
The students acquire enhanced knowledge regarding the operating mode, the application and the limitations of modern geodetic standard instruments. They will be able to properly select, test and apply these instruments for geodetic tasks with higher accuracy requirements. They will get acquainted with the typical workflow from the preparation of the field works to the digital or plotted plan. Finally, the students will be introduced to specific geodetic tasks related to construction and civil engineering.

### Content

- The geomatics workflow
- Propagation of light in the atmosphere
- The modern total station
- Terrestrial Laserscanning
- Digital levels
- Field tests
- Traverses
- Trigonometric leveling
- Precision leveling
- Route planning and transition curves
- Earthworks: Area and cubature

Lecture notes: Slides and documents for enhanced study and further reading will be provided online.

### Abstract
Fundamentals and theory of geodetic reference systems and frames. Introduction to current international systems as well as to systems for the Swiss national geodetic survey.

### Objective
Provision of fundamental knowledge and theory to get familiar with the applications of geodetic reference systems. Special emphasis will be placed on international global systems as well as on the systems of the Swiss national geodetic survey.

### Abstract
Introduction to the most important sensors, operation and calculation methods of Geodetic Metrology

### Objective
Getting to know the most important sensors, operation and calculation methods of Geodetic Metrology

### Content
Overview on the different domains of geodetic metrology
Geodetic instruments and sensors
Determination of 3D-coordinates with GNSS, total station and levelling
Calculation methods of geodetic metrology
Survey and staking-out methods

Lecture notes: Slides and additional material used in the associated regular course Geodätische Messtechnik GZ (in German) are provided in electronic form.

Literature

### Prerequisites / notice
The field course is part of this lecture. Practical exercises complete the subjects taught during the semester.

If evidence of equivalent practical experience in surveying cannot be provided by the student, participation in the field course during the respective next available period (i.e. 1 week in the beginning of the summer holidays) is required.

Abstract
The course introduces the basic theories and methods of transport planning.

Objective
The course introduces the basic theories and methods of transport planning.

Content
Basic theoretical links between transport, space and economic development; basic terminology; measurement and observation of travel behaviour; methods of the four stage approach; cost-benefit analysis.

Literature
Spatial planning is concerned with the foresighted design of the built and un-built environment. Starting points are spatially relevant.

The lecture introduces the main features of spatial planning. Attended will be the themes planning as a national responsibility, understanding the theoretical principles in spatial data analysis, understanding and using methods for spatial data analysis, detecting common sources of errors in spatial data analysis, and advanced practical knowledge in using appropriate GIS-tools.

The self-study course comprises the following readings:

- S. Schneider: Photogrammetry (slides on the web)

Abstract
Mathematical tools for the engineer

Objective
Mathematics as a tool to solve engineering problems.
Mathematical formulation of technical and scientific problems.

Basic mathematical knowledge for engineers.

Content
Complex numbers.
Calculus for functions of one variable with applications.
Simple Mathematical models in engineering.

Literature
Textbooks in English:

Textbooks in German:
- M. Akveld, R. Sperb: Analysis I, vdf
- M. Akveld, R. Sperb: Analysis II, vdf
- L. Papula: Mathematik für Ingenieure und Naturwissenschaftler, Vieweg Verlag

406-0603-AAL Stochastics (Probability and Statistics)  E- 4 credits 9R  M. Kalisch
Enrolment only for MSc students who need this course as additional admission requirement.

Abstract
Introduction to basic methods and fundamental concepts of statistics and probability theory for non-mathematicians. The concepts are presented on the basis of some descriptive examples. Learning the statistical program R for applying the acquired concepts will be a central theme.

Objective
The objective of this course is to build a solid fundament in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

Content
From "Statistics for research" (online)
Ch 1: The Role of Statistics
Ch 2: Populations, Samples, and Probability Distributions
Ch 3: Binomial Distributions
Ch 6: Sampling Distribution of Averages
Ch 7: Normal Distributions
Ch 8: Student's t Distribution
Ch 9: Distributions of Two Variables

From "Introductory Statistics with R (online)"
Ch 1: Basics
Ch 2: The R Environment
Ch 4: Descriptive statistics and tables
Ch 5: One- and two-sample tests
Ch 6: Regression and correlation

Literature

This lecture is important as an Introduction to the Master Programme

**Abstract**

The lecture series are held by all scientific disciplines involved in the HPK-Master programme and are meant to acquaint the students with the different ambitions, methods and techniques of each discipline. Furthermore, the lectures should serve as a "helpdesk" and "workshop" for all theses written within the M.A. programme.

**Objective**

The interdisciplinary lecture series are exclusively addressed to the students of the HPK-M.A. programme. They provide an insight into all the disciplines which participate in the M.A. programme and their specific demands, approaches, problems and techniques. Subsequent to the lectures, there will be an opportunity to discuss difficulties occurring within the procedures of thesis-writing. The series should provide and secure a substantial, methodological and formal orientation within the disciplines taught in the M.A. -program.

**Prerequisites / notice**

Dates: Thursday, 10-12

</tr>
</tbody>
</table>

**Abstract**

Rights in Objects are founded by an inalienable Self-Ownership. These Idea ist central for personal rights. We speak of my body, my genes, my name, my portrait, my ideas oder ways of expression.

**Objective**

The students will be acquainted with founding texts of the natural rights property concept (John Locke). They will see the connection between inalienable self-ownership, prohibition of slavery, derivative commercial rights and modern personal rights. They will learn about the problems of self-ownership today concerning property in one's body and intellectual property. Critical alternatives to the property paradigm will be discussed.

**Content**

Texts by Locke, Nozick, Christman, Otsuka, Rasmussen, Schneider, Stinner, Fichte and Forschner. Founding of property right in self-ownership (Locke), revival of this concept in Nozick and his egalitarian critics. Critique of the concept of self-ownership related to property in one's body. Looking back to the personal self-relatedness that comes up again in Intellectual Property and in modern personal rights.

**Literature**

Text, Seminarplan und Literaturliste in ILIAS Lehrdokumentenablage.

<td>2V</td>
<td>M. Hagner</td>
</tr>
</tbody>
</table>

**Abstract**

In the last 2500 years, the mind-brain relationship has been articulated in various ways. In these lectures, I will explore the scientific and philosophical aspects of this relationship in the context of relevant cultural, historical and technological processes, with a focus on the modern neurosciences, but I will also discuss works of art and literature.

**Objective**

By the end of this lecture, students should be familiar with essential positions in the scientific and philosophical treatment of questions relating the mind to the brain. It should also become clear that some of the most relevant problems in current neurosciences have a long history.

**Content**

According to a myth, the ancient Greek philosopher Democrit dissected animals, because he was in search of the seat of the soul. Current neuroscientists use neuroimaging techniques like functional magnetic-resonance-tomography in order to localize cognitive and emotional qualities in the brain. Between these two dates lies a history of 2500 years, in which the relationship between the mind and the brain has been defined in various ways. Starting with ancient and medieval theories, the lecture will have its focus on modern theories from the nineteenth century onward. I will discuss essential issues in the history of the neurosciences such as localization theories, the neuron doctrine, reflex theory, theories of emotions, neurocybernetics and the importance of visualizing the brain and its parts, but I will also include works of art and literature.

<tr>
<td></td>
<td>and Impact of Presocratic Natural Philosophy</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Abstract**

Several questions and notions introduced by presocratic natural philosophy are still considered important (albeit in historically altered forms, of course). This applies, e.g., to the notion of the infinite, the process character of nature, and atomism. The present lecture discusses both, the origin of these notions and their persistent relevance for later approaches in philosophy.

**Objective**

By the end of the lecture the students are able to describe and classify different approaches and notions in presocratic philosophy. Moreover, they are able to critically compare and evaluate them in relation to later approaches in natural philosophy.

851-0125-41L Introduction Into Philosophy of Technology
Particularly suitable for students of D-TEET, D-MATL, D-MAVT
3 credits 2V O. Müller
Abstract
Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to a autonomous philosophy of technology, which had become important also for other philosophical disciplines (e.g. in Heidegger's philosophy).
Objective
The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protocol is to be written.

851-0158-00L Living at the Expense of Others. Parasites in the History of Science
Number of participants limited to 80.
3 credits 2V E. Johach
Abstract
Parasites have a bad reputation. They settle in with other creatures' bodies, they manipulate and deceive them, they live at the expense of others. Such features are not only of biological but also of social, political, and economic importance. The lecture will track the traces of the parasite through the history of biology and medicine and the fields of political economy and cultural theory.
Objective
The course provides insight into the complex and intricate history of the parasite and the various definitions of parasitism. In particular, it will make students aware of the fact that there is no single expert discourse on parasites (such as biology or medicine) which is then transferred to the realm of the social and the political. Instead, it will be considered how and why all these aspects are intertwined when people talk about parasites.

851-0300-95L Writing Between Cultures. German-Jewish Literature and Cultural Knowledge 1822-1933
3 credits 2V A. Kilcher
Abstract
German-Jewish literature, which includes famous modern authors from Heine to Kafka, is remarkable because it is a cultural double. This lecture course shows the at once productive and problematic dual, transcultural relationship of its history. The key question is how, in this relationship, cultural knowledge is discussed in theoretical, political and literary terms.
Objective
Overview on the history of German-Jewish literature in Germany and Austria between ca. 1822 and 1933
- Discussion of key text of the most important German-Jewish authors (such as Heine, Börne, Herzl, Kafka, Döblin, Kraus, Roth, Wolfskehl, Lasker-Schüler)
- Analysis of theoretical and cultural reflections in German-Jewish literature, art and culture
- Answer to the general question: how cultural knowledge was theorized and discussed in (Jewish) modernity
Content
Literature
Andreas B. Kilcher (Hrsg.): Metzler Lexikon der deutsch-jüdischen Literatur. 2. aktualisierte und erweiterte Auflage, Stuttgart 2012.

851-0125-51L Man and Machine
Particularly suitable for students of D-CHAB, D-HEST, D-MAVT, D-MATL
3 credits 2G M. Hampe, D. A. Strassberg
Abstract
The lecture gives an overview about the different Man-Machine-Relations since the 16th century. Different models of machines will be important here: the clockwork, the steam engine and the computer.
Objective
On the one hand models of machines had a heuristical value in research on man, e.g. in Harvey's discovery of blood circulation in the 17th century or in brain research in the 20th century. On the other hand these models were always criticised, sometimes polemically, because they are supposedly not adequate for man. Students should learn about the connections between the history of anthropology and technology and be able at the end of the course to evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

851-0125-53L What Is Knowledge?
3 credits 2G L. Wingert
Abstract
The seminar aims at a clarification of the concept of knowledge, as it is built in our experiential relations to the world. An analysis is needed of the difference between knowledge and belief, of the relation between objectivity and knowledge, and of the role of reasons for having knowledge. Additionally, the legitimacy of different types of knowledge claims should be evaluated.
Objective
If things are going well, active students will acquire some knowledge of the arguments pro and con the thesis, that knowledge is justified, true belief. Furthermore, one will gain some insights in the role of reasons for knowledge and in the merits and misgivings of a naturalistic account of knowledge. Finally, one will be a bit more familiar with some elements within the Western tradition of philosophical epistemology (e.g. empiricism, rationalism)

851-0300-96L Literature and Photography
Does not take place this semester.
3 credits 2G
Abstract
The course focuses on writers (such as Henry James, Virginia Woolf, Margaret Atwood, Arthur Miller, Charles Dickens, George Eliot and Oscar Wilde) who by approaching the technique of photography i.e. its optical and chemical procedures have discovered novel modes and methods of representation.
Objective
The course introduces students to what an interdisciplinary approach to literature implies. Students are familiar with the main techniques of photography and relate these to the literary discourse of specifically the 20th century.

851-0103-00L Switzerland in the 20th Century: an Economic and Social Overview (UZH)
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
UZH Module Code: 600736
Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html
Abstract
Switzerland in the 20th Century - an Overview. Perspectives from Economic, Social and the History of Technology. Subjects: Switzerland and the World Wars; economic cycles, growth and sectoral development; migration and the labor market; infrastructure, spatial planning and technology; 1968: students' movements and the environmental movement; wealth and its distribution; Switzerland and Europe
Objective

ETH students get a useful survey of crucial topics and processes in Switzerland in the course of the 20th century which had impacts up to the current day. The perspective is an entangled one combining approaches and methods from the economic and social history as well as the history of technology. For MA GPW students, these insights can enable them to better contextualize other courses within the realm of social sciences, the history of knowledge, technology and philosophy.

Although this course connects with the one on the 19th century in the spring semester 2015, it is an independent course and participation requires no previous knowledge about the 19th century.

851-0331-02L The Factory of the Origins: Myth and Sciences

W 3 credits 2V M. Olender

In which language has God pronounced «Fiat Lux»? Which discourses have dealt with the origins of religions, nations, languages and «races»? Renan questions if the «destiny» of peoples has ever been driven by racial «instinct». In his Schwarze Hefte (2014-2015), Heidegger speaks about the «metaphysics» of «race». The «origins factory» can be related both to oneself as well as to the others.

Objective

More informations will follow in the lecture.

Seminars

Number Title Type ECTS Hours Lecturers
851-0129-00L Writing for Others - Science and Public W 2 credits 2V U. J. Wenzel

Learning to write texts, that can present topics from the sciences to an interested public (in newspapers, non-specialist journals but also in papers for non-specialists in an academic context); to gain insights into the cultural, historical and philosophical contexts of science and the public.

Objective

Learning to write texts, that can present topics from the sciences to an interested public (in newspapers, non-specialist journals but also in papers for non-specialists in an academic context); to gain insights into the cultural, historical and philosophical contexts of science and the public.

Content

Practical exercises in writing articles for the feature pages of newspapers will be combined with the theoretical work on topics relevant for the historical, sociological and philosophical aspects of writing for others.

Prerequisites / notice

Voraussetzungen: Die Bereitschaft, sich auf ein Projekt mit experimentellem Charakter einzulassen. GUTE BEHERRSCHUNG DER DEUTSCHEN SPRACHE.

Die Teilnehmerzahl ist begrenzt. SCHRIFTLICHE ANMELDUNG erforderlich (bis 31. August): uwe.justus.wenzel@nzz.ch

851-0144-01L Introduction to the Philosophy of Physics

W 3 credits 2S N. Sieroka

Does not take place this semester. Particularly suitable for students of D-MAVT, D-MATL

Abstract

This is an introductory course in different areas and positions in the philosophy of physics. It falls into different parts, including one on the concepts of space and time and one on the reality of structures in physics.

Objective

Students should be able to name and critically evaluate different topics and approaches in the philosophy of physics.

Content

The course will run as a book reading club. The first session will provide a short introduction as to how to explore a particular text (that is not a scientific paper) to identify the key points for discussion.

Thereafter, in each week a text (typically a chapter from a book or a paper) considered to be seminal or foundational will be assigned by a course lecturer. The lecturer will introduce the selected text with a brief background of the historical and cultural context in which it was written, with some additional biographical information about the author. He/she will also briefly explain the justification for selecting the particular text.

The students will read the text, with two to four students (depending on class size) being assigned to present it at the next session. Presentation of the text requires the students to prepare by, for example:

identifying the key points made within the text
identifying issues of particular personal interest and resonance
considering the impact of the text at the time of publication, and its importance now

Such preparation would be supported by a mid-week tutorial discussion (about 1 hour) with the assigning lecturer.

These students will then present the text (for about 15 minutes) to the rest of the class during the scheduled class session, with the lecturer facilitating the subsequent class discussion (about 45 minutes). Towards the end of the session the presenting students will summarise the emerging points (5 minutes) and the lecturer will finish with a brief discussion of how valuable and interesting the text was (10 minutes). In the remaining 15 minutes the next text will be presented by the assigning lecturer for the following week.

Literature

The specific texts selected for discussion will vary, but examples include:
Leopold (1949) A Sand County Almanach
Carson (1962) Silent Spring
Jared Diamond (2005) Collapse

Discussions might also encompass films or other forms of media and communication about nature.

862-0096-00L Theoretical Philosophy Work in Progress Seminar

W 3 credits 1S N. Sieroka

Does not take place this semester.
Only for History and Philosophy of Knowledge MSc and D-GESS PhD students.

Number of participants limited to 15.
This course studies the 20th century history of those forms of knowledge framed specifically as science and technology, from a global perspective. It explores how exchanges and relationships between different parts of the world contributed to what is understood as science and "development". In doing so, it considers how the concept of science is entangled with structures of power and domination. Objective: - to critically consider the concepts of science and knowledge - to understand how advances in technology and science are historically rooted in European imperial expansion and are connected to global social inequalities in the postcolonial world - to understand the historical plurality of forms of knowledge in different parts of the world as well as entanglements between different forms of knowledge - to systematically reconstruct and reproduce complex arguments (reading-competences) - to understand, compare and analyse differing approaches to the history of science - to enable students to form an educated opinion and participate in discussions on the global history of science and knowledge

851-0306-05L Literature and Technology - Simulations, Prototypes, Machines

Abstract: Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of configurations of knowledge.

Objective: - Students are familiar with different relations between literature and technology. They can verbalise and analyse central contentions.

851-0309-13L "Materialmäränen": Thomas Mann's Zauberberg from the Point of View of the History of Knowledge

Objective: This seminar is dedicated to Thomas Mann's "Zauberberg", the great Bildungsroman and "Zeitroman" (Mann) from the author's middle period. Mann himself feared that the novel might be intellectually overburdened with contexts and concepts. The seminar will attempt to elucidate these contexts from the point of view of the history of ideas and knowledge and will take into account current research.

Objective: - Students familiarize themselves with one of the great novels of the 20th century in the context of a diligent reading accompanied by the lecturer.

Content: A. Kilcher - to critically consider the concepts of science and knowledge

851-0300-94L Combinatorics: History of a Method Between Mathematics and Literature

Abstract: Combinatorics is a procedure shared by various disciplines. In mathematics it concerns the calculation of quanta and probabilities, in philosophy the creation of encyclopedic knowledge, in mysticism the achievement of ecstatic experience, in literature, finally, experimental writing. This course investigates these different forms of combinatorics.

Objective: - comparative understanding of combinatorics as a transcultural and transdisciplinary procedure to generate knowledge - cultural and epistemic history of combinatorics since the medieval ages - combinatorics in theology, mysticism and occultism - combinatorics in philosophy and the natural sciences - combinatorics in literature and literary theory

Content: Kombinatorik, die Verknüpfung von Elementen, tritt als ein Verfahren in unterschiedlichen Disziplinen und Bereichen des Wissens auf: In der Mathematik, wo man sie zuerst vermutet, ermöglicht sie die Berechnung von Anzahlen und Wahrscheinlichkeiten. Zugleich spielt die Kombinatorik auch eine grosse Rolle in der Philosophie (als ein Verfahren zur Erzeugung eines enzyklopädischen Wissens), in der Mystik (zur Erfahrung ekstatischer Erfahrung) und in der Literatur (als ein experimentelles Schreibverfahren). In dem Seminar werden diese vielfältigen Formen und Funktionen von kombinatorischen Verfahren zwischen mathematischer, philosophischer, mystischer und ästhetischer Anwendung verglichen und analysiert.

<td></td>
<td>The seminar deals with the designs for a new living in the artistic and social avantgarde movements at the beginning of the 20th century. It focuses on the correlation of the contemporary scientific and technological developments and the conceptions of a 'New Man'. The discipline of psychotechnics together with scientific and technological designs of living and working environments formulated visions of new and enhanced ways of human living and perception. In the seminar, we will examine the utopian visions of life in the avantgarde movements. Touching upon the fields of the life sciences, economics, management, progressive education, architecture, and art we will reflect the diverse relations between science, technology, and human living.</td>
</tr>
<tr>
<td></td>
<td>Objective</td>
<td></td>
<td></td>
<td>The overarching objective of this seminar is to get an impression of the specificity of biological problems and to develop an appropriate philosophical sensibility. Accordingly, philosophical traditions in biology will be discussed, just as the application of the history of concepts in the context of biology. The seminar reader will consist of contributions of biologists as well as philosophers of biology. Besides the basic concepts in biology such as gene, species, evolution, or diversity, we will be also reflecting on the relationship between technology, experimenting, and biological objects. Depending on the interests of the seminar participants, the examples to be discussed may be chosen from systems biology, molecular or synthetic biology, ecology or else. The seminar is fully booked!</td>

<tr>
<td></td>
<td>Abstract</td>
<td></td>
<td></td>
<td>More often than not, classics are known by hearsay; they are quoted, but not read, or re-discovered and re-read selectively, so we can quote them. That holds true for many ‘classics’ in the history of science, too - texts, that is, which have shaped approaches to, and understandings of, science. The aim of this introductory course is to critically read some of these seminal texts. The course is suited for all students with an interest in the history of science and knowledge. Conceived of as an advanced historiographical introduction to the subject, the course is to explore a selection of “classics” in the history of science - some of them well known, others less so. In this course, we shall be as much concerned with the positions and the perspectives on science that were advanced in these various texts as we shall be concerned with the historical circumstances, political meanings and wider cultural contexts of these perspectives.</td>
</tr>

851-0125-52L Central Questions in Bioethics
Particularly suitable for students of D-BIOL, D-CHAB, D-HEST, D-MATL, D-MAVT

W 3 credits 2S  L. Wingert

Abstract

Bioethics deals with the evaluation and regulation of technology based interventions into life. What are valid principles guiding bioethical decision, principles like "Protect the dignity of the living being!", or "Respect a person's self-determination"? Besides answering such questions, the social, political and ethical processes linked with biotechnologies should be taken into account.

Objective

Literature

1. Dieter Sturma/Bert Heinrichs (Hg.), Handbuch Bioethik, Stuttgart: Metzler 2015.

851-0549-12L Sharing. The History of an Attractive Technology
Particularly suitable for students D-ARCH, D-BAUG, D-HEST, D-INFK, D-ITET, D-MAVT, D-MATL

W 3 credits 2S  D. Gugerli

Abstract

The seminar deals with hot topics of the history of technology since the 1960s. Sharing of computer time, software and data will be discussed as a crucial offer and problem of late modernity.

Objective

The course wants to develop the students ability to critically read and assess historic texts.

Lecture notes

A detailed program and course materials will be made available during the semester on www.tg.ethz.ch.

851-0157-59L A Historical Epistemology of Exhibitions
Particularly suitable for students D-ARCH, D-BAUG.

W 3 credits 2S  M. Pratschke

Abstract

The seminar provides an introduction to exhibitions as epistemic practices. By means of various research approaches and examples from historical and current exhibitions we will discuss how knowledge is created by temporary spatial constellations of exhibited objects and the ways exhibitions act as laboratories of ideas.

Objective

The seminar aims at getting to know the theoretical and practical conditions of exhibitions as temporary forms of knowledge. We will develop criteria to explore the various aspects and processes related to exhibitions, including: installations of exhibits, display cases, transporting devices, exhibition catalogues, exhibition architecture, visitor guidance, spatial arrangements of objects etc.

Using selected historical and current examples, we will discuss different formats of exhibitions that range from trade fair booths to transport ing devices, exhibition catalogues, exhibition architecture, visitor guidance, spatial arrangements of objects etc.

Literature

Title
ECTS
History and/or "Rigorous" Science?
3 credits

W

2S
C. Jany

Abstract
The difference between the natural sciences and the humanities is often characterized in terms of their relation to history: here rigorous method & transhistorical laws, there historically conditioned, and hence relative, understanding. But the discrepancy between transhistorical immanence and historical constitution figures also within both disciplines. We will discuss precisely this discrepancy.

Objective
- reflect on the ideal of scientific rigor, as well as the historical constitution of all knowledge;
- question the paradigm of historicity with regard to both the natural sciences and the humanities;
- critical reading of theoretical and literary texts that deal with the tension between scienticity and historicity.

Content

Literature

Prerequisites / notice
Readings in German and English, discussions in class in German.
The learning target is the development of a problem oriented differentiation of arguments in the history of technology.

This essay is the outcome of an individual teaching and learning process during several terms and draws upon representative books and articles in history of technology. It has to consider the state of the art in the field.

Writing this essays intents to become acquainted with methods, tools and concepts relevant for the students master thesis.

In the seminars topics from the introductory courses are taught in more detail. Topics for essays are to be arranged with the teachers that are named in the Leitfaden. In three subjects essays are to be written about works on these lists.

### Essays

In each subject of the master reading lists are handed out. The books on these lists are the subject of the tutorials one has to attend with the teachers that are named in the Leitfaden. In three subjects essays are to be written about works on these lists.

This paper aims at the differentiation of one topic in the current seminar in the history of technology and has to connect its topic with the seminar’s discussions.

The learning target is the development of a problem oriented differentiation of arguments in the history of technology.

**Advanced Seminar in History of the Modern World (HS W 2015)**

**Research Colloquium. Extra-European History and Global History**

*Abstract*

The fortnightly colloquium provides a forum for PhD students and postdoctoral researchers to present and discuss their current work. Half of the slots are reserved for presentations by invited external scholars.

**Objective**

PhD students will have an opportunity to improve their presentation skills and obtain an important chance to receive feedback both from peers and more advanced scholars.

**Master-Colloquium: Research Colloquium for Ph.D.- Students and Members of Staff**

*Abstract*

This colloquium provides a collegial and non-competitive forum for young researches to discuss these questions. We shall examine programmatic textes on Global History and connect them to source materials from our own research projects.

**Objective**

The folk nightly colloquium provides a forum for PhD students and postdoctoral researchers to present and discuss their current work. Half of the slots are reserved for presentations by invited external scholars.

**Research Colloquium. Extra-European History and Global History**

*Abstract*

The colloquium addresses advanced and graduate students. First, it offers participants the opportunity to present their own research projects (work in progress); and, second, it provides a most fruitful space to discuss methodological, theoretical and systematic complex issues.

**Objective**

The colloquium addresses advanced and graduate students. First, it offers participants the opportunity to present their own research projects (work in progress); and, second, it provides a most fruitful space to discuss methodological, theoretical and systematic complex issues.

**Research Colloquium. Extra-European History and Global History**

*Abstract*

The colloquium deals with the general problems, questions and methods of the interdisciplinary research field “The History of Knowledge”. Knowledge has become one of the existential conditions of modern societies and it increasingly determines their dynamics. Therefore, it is getting more and more relevant to develop a differentiated analysis of the epistemic, social and cultural constraints of the production, circulation and the decay of knowledge. In addition, the colloquium asks after the cultural and ethical resonances of knowledge not only within science but also in relation to art, literature, technology, everyday life, and so on.

**Objective**

The colloquium deals with the general problems, questions and methods of the interdisciplinary research field “The History of Knowledge”. Knowledge has become one of the existential conditions of modern societies and it increasingly determines their dynamics. Therefore, it is getting more and more relevant to develop a differentiated analysis of the epistemic, social and cultural constraints of the production, circulation and the decay of knowledge. In addition, the colloquium asks after the cultural and ethical resonances of knowledge not only within science but also in relation to art, literature, technology, everyday life, and so on.

**Prerequisites / notice**

Goals: to identify, discuss, and resolve methodological problems that emerge while elaborating a master or doctoral thesis.

This colloquium is highly recommended for first and second semester MAGPW students.

**Research Colloquium History of Knowledge (HS 2015)**

*Abstract*

The colloquium focuses on present developments, debates and perspectives in the field of history of knowledge. On the second and fourth date there will be public events in the Cabaret Voltaire. Check the program on www.zgw.ethz.ch

**Objective**

The colloquium deals with the general problems, questions and methods of the interdisciplinary research field “The History of Knowledge”. Knowledge has become one of the existential conditions of modern societies and it increasingly determines their dynamics. Therefore, it is getting more and more relevant to develop a differentiated analysis of the epistemic, social and cultural constraints of the production, circulation and the decay of knowledge. In addition, the colloquium asks after the cultural and ethical resonances of knowledge not only within science but also in relation to art, literature, technology, everyday life, and so on.

**Prerequisites / notice**

Short notice about program changes are possible and will be communicated through the ZGW newsletter. Please register with www.zgw.ethz.ch/de/newsletter.html

Credit points can be gained by regular attending and by writing an essay. In addition to the five colloquia there will be a deepening seminar on offer (lecturer K. Espahangizi).

Free childcare available.

**Concepts and Sources of Global History: Young Researchers’ Colloquium**

*Abstract*

What distinguishes Global History - conceptually and empirically - from other modes of historical inquiry? This research colloquium provides a collegial and non-competitive forum for young researchers to discuss these questions. We shall examine programmatic texts on Global History and connect them to source materials from our own research projects.

**Objective**

Participants will acquire an systematic overview of different definitions of and approaches to Global History. They will be able to position their own approach within the field of Global History and gain a clearer understanding on how to examine their source materials.

**Course Registration**

Colloquium is designed for advanced and graduated students. Only for History and Philosophy of Knowledge MSc.

**Research Colloquium. Extra-European History and Global History**

*Abstract*

This colloquium is devoted to the introduction into the theory and practice of scientific work. The schedule can be found on the institute’s website - http://www.wiss.ethz.ch/en/teaching/

**Objective**

This colloquium is devoted to the introduction into the theory and practice of scientific work.

**Prerequisites / notice**

Papers presented may be in English or German. Students receive 1 credit point for submitted a brief, written commentary on one of the presentations (approx. 5 pages).

**Advanced Colloquium in Literary Studies**

*Abstract*

The colloquium is designed for advanced and graduated students.

**Objective**

The colloquium addresses advanced and graduate students. First, it offers participants the opportunity to present their own research projects (work in progress); and, second, it provides a most fruitful space to discuss methodological, theoretical and systematic complex issues.

**Research Colloquium Science Studies**

*Abstract*

This colloquium is devoted to the introduction into the theory and practice of scientific work.

**Objective**

This colloquium is devoted to the introduction into the theory and practice of scientific work.
Philosophical Colloquium (HS 2015)  ■  W  2 credits  1K  L. Wingert

No fixed schedule. Registrations with Prof. L. Wingert.

Abstract
Ph.D. students, post docs, members of staff, and senior colleagues from other philosophy departments will report on their work in progress. Furthermore, promising new philosophical articles and parts of new philosophical books will be studied.

Objective
Ideas and arguments dealing with systematic problems especially in epistemology, ethics, political philosophy, and the philosophy of mind will be scrutinized and elaborated.

Master Thesis
The work on the master-thesis is supervised by one of the teachers that are allowed to offer tutorials for it, named in the Leitfaden.

Number  Title  Type  ECTS  Hours  Lecturers
862-0500-00L  Master's Thesis  ■
A student is only permitted to commence the Master thesis if
a. the Bachelor degree programme has been completed
b. any additional requirements for admission to the degree programme have been fulfilled
c. all credits have been acquired in the categories basic courses and major courses and at least 6 credits have been acquired in the category research colloquium

Abstract
The Master's thesis gives a thorough historical, philological or philosophical analysis of a topic related to the experimental or formal sciences or to technology. It incorporates the relevant research literature on this topic as well as first attempts at original research.

Objective
The master thesis gives a thorough historical, philological or philosophical analysis of a topic related to the experimental or formal sciences or to technology. It incorporates the relevant research literature on this topic as well as first attempts at original research.

<td>M. Aebi, E. Hafen</td>
</tr>
</tbody>
</table>

**Objective**

The course provides an introduction to the basics of molecular- and cell biology and genetics.

**Content**

- Introduction to modern biology and to principal biological concepts.

**Literature**

The text-book “Biology” (Campbell, Reece) (10th edition) is the basis of the course.

**Prerequisites**

Certain sections of the text-book must be studied by self-instruction.

**Abstract**

Fundamentals of Organic Chemistry; molecular structure. Bonding and functional groups; nomenclature; resonance and aromaticity; stereochemistry; conformation; bond strength; organic acids and bases; basic reaction thermodynamics and kinetics; reactive intermediates: carbanions, carbenium ions and radicals.

**Objective**

Understanding the basic concepts and definitions of organic chemistry. Knowledge of the functional groups and classes of compounds that are important in biological systems. Understanding the relationship between structure and reactivity.

**Content**

**Literature**

Printed lecture notes are available. Exercises, answer keys and other handouts can be downloaded from the Moodle course "Organic Chemistry I" of the current semester (https://moodle-app2.let.ethz.ch).

**Prerequisites**

None.

</table>

**Abstract**

Mathematics I/II is an introduction to one- and multidimensional calculus and linear algebra emphasizing on applications.

**Objective**

Students understand mathematics as a language for modeling and as a tool for solving practical problems in natural sciences.

Students can analyze models, describe solutions qualitatively or calculate them explicitly if need be. They can solve examples as well as their practical applications manually and using computer algebra systems.
## Eindimensionale diskrete Entwicklungen ##
- linear, exponentiell, begrenzt, logistisch
- Fixpunkte, diskrete Veränderungsrate
- Folgen und Grenzwerte

## Funktionen in einer Variablen ##
- Reproduktion, Fixpunkte,
- Periodizität,
- Stetigkeit

## Differentialrechnung (I) ##
- Veränderungsrate/-geschwindigkeit
- Differentialquotient und Ableitungsfunktion
- Anwendungen der Ableitungsfunktion

## Integralrechnung (I) ##
- Stammfunktion
- Integrationstechniken

## Gewöhnliche Differentialgleichungen (I) ##
- Qualitative Beschreibung an Beispielen: Beschränkt, Logistisch, Gompertz
- Stationäre Lösungen
- Lineare DGL 1. Ordnung
- Trennung der Variablen

## Lineare Algebra ##
- Erste Arithmetische Aspekte
- Matrizenrechnung
- Eigenwerte / -vektoren
- Quadratische LGS und Determinante

Lecture notes
In Ergänzung zu den Vorlesungskapiteln der Lehrveranstaltungen fassen wir wichtige Sachverhalte, Formeln und weitere Ausführungen jeweils in einem Vademecum zusammen. Die pdfs finden Sie unter Lernmaterial > Dokumente.

Dabei gilt:

* Die Skripte ersetzen nicht die Vorlesung und/oder die Übungen!
* Ohne den Besuch der Lehrveranstaltungen verlieren die Ausführungen ihren Mehrwert.
* Details entwickeln wir in den Vorlesungen und den Übungen, um die hier bestehenden Lücken zu schliessen.
* Prüfungsrelevant ist, was wir in der Vorlesung und in den Übungen behandeln.

**Th. Wihler**
Mathematik für Naturwissenschaften, 2 Bände: Einführung in die Analysis, Einführung in die Lineare Algebra; Haupt-Verlag Bern, UTB.

Prerequisites / notice

## Übungen und Prüfungen ##
+ Die Übungsaufgaben (inkl. Multiple-Choice) sind ein wichtiger Bestandteil der Lehrveranstaltung.
+ Es wird erwartet, dass Sie mindestens 75 % der wöchentlichen Serien bearbeiten und zur Korrektur einreichen.
+ Der Prüfungsstoff ist eine Auswahl von Themen aus Vorlesung und Übungen. Für eine erfolgreiche Prüfung ist die konzentrierte Bearbeitung der Aufgaben unerlässlich.

## Einschreibung in die Übungen ##
Die Einschreibung in die Übungsgruppen erfolgt online. Alle unter http://www.mystudies.ethz.ch/ für die Vorlesung Eingeschriebenen erhalten rechtzeitig per Email einen personalisierten Link zur Einschreibung. Behalten Sie diesen Link.

## Zugang Übungsserien ##
Erfolgt auch online. Alle unter http://www.mystudies.ethz.ch/ für die Vorlesung Eingeschriebenen erhalten rechtzeitig per Email einen 2. personalisierten Link. Behalten Sie auch diesen Link.

252-0852-00L Foundations of Computer Science O 4 credits 2V+2U J. Hromkovic, H.J. Böckenhauer, M. Dahinden, L. E. Fässler, D. Komm

Abstract
Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects.

The following topics are covered: modeling and simulations, introduction to programming, visualizing multi-dimensional data, introduction matrices, managing data with lists and tables and with relational databases, universal methods for algorithm design.
The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students learn to:

- understand the role of computer science in science,
- to control computer and automate processes of problem solving by programming,
- choose and apply appropriate tools from computer science, process and analyze real-world data from their subject of study,
- handle the complexity of real-world data,
- know universal methods for algorithm design.

### Content

1. The role of computer science in science
2. Introduction to Programming with Python
3. Modeling and simulations
4. Introduction to Matrices with Matlab
5. Visualizing multidimensional data
6. Data management with lists and tables
7. Data management with a relational database
8. Universal methods for algorithm design

### Lecture notes

All materials for the lecture are available at [www.gdi.ethz.ch](http://www.gdi.ethz.ch)

### Prerequisites / notice

This course is based on application-oriented learning. The students spend most of their time working through projects with data from natural science and discussing their results with teaching assistants. To learn the computer science basics there are electronic tutorials available.

#### 376-0003-00L Introduction to Health Sciences and Technology I

**ECTS:** 4 credits  
**Type:** 2V+2U  
**Lecturers:** R. Müller

**Abstract:** Overview on various aspects of health and disease (health models, classification of diseases, prevention and rehabilitation, therapy, epidemiology); introduction to technical aspects (measurement technique, etc.); fundamentals of scientific working (ethics, literature search, study design, data collection, data analysis and data presentation).

**Objective:** Students should know the terms, models and classification systems used in health and disease; in addition, they should understand the methods of scientific working.

**Content:**

- Health: biomedical model and classification of diseases, salutogenesis and ICF, prevention and rehabilitation, therapy, epidemiology.
- Technology: measurement technology, automatic control engineering.
- Science: ethics, literature search, study design, tests, data analysis, data presentation.

---

### First Year Laboratory Courses

#### 376-0003-01L Demonstration Week Health Sciences and Technology

**Only for Health Sciences and Technology BSc.

**ECTS:** 1 credit  
**Type:** 2P  
**Lecturers:** R. Müller, W. Langhans, S. Lorenzetti, R. Riener, M. Ristow, M.E. Schwab, N. Wenderoth, further lecturers

**Abstract:** Delivery of practical insight into research methods relevant to the field by means of demonstrations and small projects in the areas of Human Movement Science, Health Technologies, Molecular Health Sciences, and Neurosciences.

**Objective:** Students can experience research methods that may arise in the field of Health Sciences and Technology.

**Content:**

- Human Movement Science: movement analysis, biomechanical measurement techniques
- Health Technologies: prostheses
- Molecular Health Sciences: metabolism, behaviour
- Neurosciences: neurological measurement techniques, neurorehabilitation
- Clinical Research

---

### Second Year Compulsary Subjects

#### Examination Blocks

#### Examination Block 1

#### 551-0103-00L Fundamentals of Biology II: Cell Biology

**ECTS:** 5 credits  
**Type:** 5V  
**Lecturers:** E. Hafner, U. Kutay, J. Matos, G. Schertler, U. Suter, S. Werner

**Abstract:** The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

**Objective:** The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

**Content:** The focus is animal cells and the development of multicellular organisms with a clear emphasis on the molecular basis of cellular structures and phenomena. The topics include biological membranes, the cytoskeleton, protein sorting, energy metabolism, cell cycle and division, viruses, extracellular matrix, cell signaling, embryonic development and cancer research.

**Lecture notes:** The lectures are presented in the Powerpoint format. These are available on the WEB for ETH students over the nethz (Moodle). Some lectures are available on the ETH WEB site in a live format (Livestream) at the above WEB site.

**Prerequisites / notice:** Some of the lectures are given in the English language. Certain sections of the text-book must be studied by self-instruction.

#### 376-0002-00L Product Design in Medical Engineering

**ECTS:** 4 credits  
**Type:** 2V+2U  
**Lecturers:** S. J. Ferguson

**Abstract:** This course will provide insight into various aspects of medical device design such as patient needs assessment, product specification, research and technical design, validation, regulatory affairs and clinical evaluation.

**Objective:** The goal of this lecture series is to enable the students to (i) identify the principal functional requirements for a medical device, (ii) understand the mechanical properties of natural tissues and synthetic biomaterials, (iii) to apply this information and a basic knowledge of mechanics in the calculation of implant performance, (iv) to develop a plan for the pre-clinical evaluation and regulation of a new device.

---

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 684 of 1434
Content
1. Introduction to Medical Technology
2. Design Process
3. Mechanics
4. Mechanics of Materials
5. Tissue Mechanics
6. Prostheses: Biomechanics and Design
7. Prostheses: Biomaterials, Surfaces and Wear
8. Allografts: Heart Valves
9. Preclinical Evaluation
10. Regulatory Affairs (MepV, FDA, CE)
11. Intellectual Property
12. Group Work and Presentation

Abstract
Vertiefung der mehrdimensionalen Analysis mit Schwerpunkt in der Anwendung der partiellen Differentialgleichungen, Vertiefung der Linearen Algebra und Einführung in die Systemanalyse.

Objective
Vertiefung und Ausbau des Stoffes Mathematik I/II für die Anwendung in der Systemanalyse.

Content
- Modellbildung
- Lineare Modelle:
  - Vektorräume,
  - Normalformen,
  - Lösungsräume linearer DGL-Systeme
- Qualitative Aussagen, nichtlineare Modelle:
  - Stabilität für eine DGL 1. Ordnung, für allgemeine DGL-Systeme
- Modelle in Raum und Zeit:
  - Partielle DGL,
  - Fourier-Reihe, Transformationsoperator, Laplace-Operator

Abstract
Basic knowledge of the anatomy and physiology of tissues, of the embryonal and postnatal development, of the basic terminology of pathology, of the neuro-muscular system, of the cardiovascular system and the respiratory system.

Objective
Basic knowledge of human anatomy and physiology and basics of clinical pathophysiology.

Content
Short overview of human anatomy, physiology and general pathology.

- Anatomy and Physiology I (fall term):
  Basics of cytology, histology, embryology, general pathology; nervous system, muscles, cardiovascular system, respiratory system
- Anatomy and Physiology II (spring term):
  Digestive system, kidney and urinary tract, endocrine system, skin, thermoregulation, sensory organs, male and female reproductive system, pregnancy and child birth.

Abstract
Introduction to the concepts and tools in physics with the help of demonstration experiments: mechanics of point-like and ridged bodies, periodic motion and mechanical waves.

Objective
The concepts and tools in physics, as well as the methods of an experimental science are taught. The student should learn to identify, communicate and solve physical problems in his/her own field of science.
Online material is provided during the course.

Students are able to describe the human body as a mechanical system.

The aim is to give a deepened insight on the normal development of the nervous system based on molecular, cellular and biochemical approaches. Must be downloaded from OLAT: https://www.olat.uzh.ch/olat/dmz/ECTS 2V E. Stoeckli

The course covers the development of the nervous system (NS) with a focus on neurogenesis and migration, axon growth, synapse formation, mol. & cell. mechanisms, and diseases of the developing NS. The main focus is on the development of the NS: Early development of the NS, cellular processes, nerve fiber growth, building of synapses and neuronal networks.

Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.

In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

Introduction into methodology used in biomaterials research and application. Analyze image encoding/decoding, point-spread function/modular transfer function, signal-to-noise ratio, contrast behavior for each of the methods. Matlab exercises are used to implement and study basic concepts.

Biocompatible Materials

The class consists of three parts:
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Handouts can be accessed online.

Handouts provided during the classes and references therein.

Biomedical Imaging

New course. Not to be confused with 227-0385-00L of fall 2014.

Introduction and analysis of medical imaging technology including X-ray procedures, computed tomography, nuclear imaging techniques using single photon and positron emission tomography, magnetic resonance imaging and ultrasound imaging techniques.

Objective To understand the physical and technical principles underlying X-ray imaging, computed tomography, single photon and positron emission tomography, magnetic resonance imaging, ultrasound and Doppler imaging techniques. The mathematical framework is developed to describe image encoding/decoding, point-spread function/modular transfer function, signal-to-noise ratio, contrast behavior for each of the methods. Matlab exercises are used to implement and study basic concepts.

Focus Courses: Neurosciences

376-1305-01L Structure, Plasticity and Repair of the Nervous System

The course covers the structure, plasticity and regeneration of the adult nervous system (NS) with focus on: sensory systems, cognitive functions, learning and memory, molecular and cellular mechanisms, animal models, and diseases of the NS.

Objective The aim is to give a deepened insight into the structure, plasticity and regeneration of the nervous system based on molecular, cellular and biochemical approaches.

Content The main focus is on the structure, plasticity and regeneration of the NS: biology of the adult nervous system; structural plasticity of the adult nervous system, regeneration and repair: networks and nerve fibers, regeneration, pathological loss of cells.

Lecture notes ETH students: Lecture notes will be provided on Moodle https://moodle-app2.let.ethz.ch/course/view.php?id=694 Password will be provided at the beginning of the lecture.

UZH students: Lecture notes will be provided on OLAT: https://www.olat.uzh.ch/olat/dmz/

376-1305-00L Development of the Nervous System

The course covers the development of the nervous system (NS) with a focus on neurogenesis and migration, axon growth, synapse formation, mol. & cell. mechanisms, and diseases of the developing NS.

Objective The aim is to give a deepened insight on the normal development, of the nervous system based on molecular, cellular and biochemical approaches.

Content The main focus is on the development of the NS: Early development of the NS, cellular processes, nerve fiber growth, building of synapses and neuronal networks.

Lecture notes Must be downloaded from OLAT: https://www.olat.uzh.ch/olat/dmz/ 376-1305-00L

Literature

The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on OLAT.

Prerequisites / notice

Auxiliary tools: None. Bring something to write and your student ID

376-0130-00L  Laboratory Course in Exercise Physiology  ▬  W  3 credits  4P  C. Spengler, B. Wilms

Number of participants limited to 36.

Abstract
Conduct physical performance tests and measurements that are typically used to assess performance of athletes and/or patients and that deepen the understanding of physiological processes in response to physical exertion.

Objective
Gain hands-on experience in exercise physiology and consolidate knowledge on physiological adaptations to different types and degrees of physical activity and climatic influences. Learn fundamental assessment techniques of the muscular system, the cardio-respiratory system and of whole-body performance, learn scientifically correct data analysis and interpretation of results. Insight into today's Sports Medicine.

Content
Various exercise tests assessing human performance and assessments of physiological responses to activity (examples are VO2max-test, Conconi-Tests, Determination of anaerobic threshold, Cooper-Test, 1-repetition maximum test, lactate minimum test), dynamometry, mechanography, body composition etc.). Insight into measurements in Sports Medicine.

Lecture notes
Tutorial on Laboratory Experiments in Exercise Physiology
( Editor: Exercise Physiology Lab)

Literature
Schmidt/Lang/Heckmann: Physiologie des Menschen, Springer-Verlag, Heidelberg

Kenney/Wilmore/Costill: Physiology of Sport and Exercise, Human Kinetics

Prerequisites / notice
Prerequisite:
Mandatory for "Exercise physiology".

Desirable:
Exercise Physiology Lecture (concomitantly or passed; is selection criterion in case of more applications than lab spaces)
This lecture is intended as an introduction to sport psychology and imparts knowledge on selected areas of the subject. Students are given insight into different work areas of sport psychology. In order to understand what «sport psychology» is, it is necessary to reflect to a greater extent on the forms in which sport psychology can be applied in their practice of sports and to integrate these in their teaching.

Main Topics
- Introduction to sport psychology
- Cognitions in sports: mental rehearsal and mental training
- Emotions and stress
- Motivation: goal-setting in sports
- Career and career transition in elite sport
- Coach-Athlete-Interaction
- Psychological aspects of sport-injury rehabilitation
- Group dynamics in sport

Content
- Perception of the own posture
- Analysis of the own posture
- Status of the posture standing
- Own training program
- Neutral liability on the back
- Back injuries - healthy back
- Tension / Stability
- Tone regulation
- Sensomotor activity (treats the capacity to feel the own movements, transfer from theory into practice of programming and modifying neuromotoric movements)
- Torso stability 1, 2
- Relaxation
- Work-life - Balance
- Mental training
- Ideas for relaxation (also for kids)
- Stress regulation
- Massage (introduction in Massage techniques)

Literature

Optional readings

A detailed program with additional references will be delivered at the beginning of the lecture.

376-1117-00L
Sport Psychology
W 2 credits 2V H. Gubelmann

Abstract
This lecture is intended as an introduction to sport psychology and imparts knowledge on selected areas of the subject.

Objective
Students are given insight into different work areas of sport psychology. In order to understand what «sport psychology» is, it is necessary to explain the essence and tasks of sport psychology and what it relates to, and to work out an underlying basis for key topics, such as cognition and emotions. Students' expertise is furthered by presenting and providing more in-depth treatment of additional topics of sport psychology. Selected intervention forms are intended to provide insight into applied sport psychology and ensure that mental processes and their impact in sport can be recognised. Case studies and practical exercises (e.g. objective training) are intended to prompt students to reflect to a greater extent on the forms in which sport psychology can be applied in their practice of sports and to integrate these in their teaching.

Content
- Main Topics
  - Introduction to sport psychology
  - Cognitions in sports: mental rehearsal and mental training
  - Emotions and stress
  - Motivation: goal-setting in sports
  - Career and career transition in elite sport
  - Coach-Athlete-Interaction
  - Psychological aspects of sport-injury rehabilitation
  - Group dynamics in sport

Sociology of Sport
W 2 credits 2V M. Lamprecht

Abstract
These lectures deal with the current changes in society and sport and provide an overview of the many different problems and perspectives of sport sociology.

Objective
The lectures set out to:
- present the different dimensions, functions and interrelationships of present-day sport
- provide an introduction to the central theories and models of (sport) sociology
- show how far sport reflects society and how it changes and becomes more differentiated in the process
- take current examples from newspapers, magazines and television to highlight the sociological view of sport.

Content
- Sport and social change: developments and trends
- The economy and the media: dependencies, consequences, scandals
- Social inequalities and distinctions: gender differences and group behavior
- Conflicts and politics: sports organizations, doping, violence

Lecture notes
Selected materials for the lecture are available under www.LSSFB.ch --> Lehre

Literature

A detailed program with additional references will be delivered at the beginning of the lecture.

The Musculoskeletal System and Work
W 3 credits 2V T. Läubli

Abstract
Consolidated findings of movement sciences concerning deterioration, overload and regeneration of the musculoskeletal system are an important basis for an ergonomic working environment. The following topics are covered: Muscle fatigue during the 8-hour day, use of the computer mouse, backaches, Tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, measuring procedures.

Objective
Goal of the course is the activation of physiological and patho-physiological insights for the understanding of loads of the musculoskeletal system during work. Prevention and rehabilitation of work related musculoskeletal disease will be discussed with the help of a bio-psychosocial model. Furthermore, evidence based methods for a healthy work design will be presented.

Content
- Insights of human movement sciences concerning wear, overstraining and regeneration of the musculoskeletal system form an important basis for an ergonomic working environment. The following topics are covered: Muscle fatigue during the 8-hour day, use of the computer mouse, backaches, Tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, measuring procedures.

Cancer: Fundamentals, Origin and Therapy
W 2 credits 2G H. Nägeli

Abstract

Objective
Students are able to describe selected chemicals, biological and molecular processes that occur in cells spontaneously or after physical or chemical exposure and resulting in a tumor. They are able to list important cancer-inducing agents and explain the respective mechanism of action. They have knowledge of significant risk factors for cancer diseases. They are confronted with the basics of toxicology and they can explain the principle of the most common therapeutic strategies.

Data: 06.04.2020 13:01   Autumn Semester 2015   Page 690 of 1434
The lecture deals with problems of tumor epidemiology (causes, mortality, incidence). Cancer is delineated as a multi-step process. Classes of chemical compounds that induce cancer are discussed as well as the reactive metabolites that may be built from. Covalent binding to DNA is discussed and different types of mutations resulting thereof. A selection of proto-oncogenes and tumor suppressor genes is presented. Their function will be discussed as well as the changes which are found in these genes in tumor cells, starting from single nucleotide exchanges up to large deletions. The reason for genetic predisposition to cancer will be discussed as well as cancer relevant aspects of cell cycle regulation. Phenomenons like angiogenesis and metastasis are presented as well as the mechanisms that protect the genome from mutagenic damage. Further subjects address old and new strategies of cancer treatment. Personalised cancer treatment.

Handouts with reproductions of all presented transparencies will be distributed.

Students learn: the assessments to plan an exercise-therapy-treatment. They are able to use them. They're able to integrate biological and medical basics. They are able to prepare a therapy-session. Grundlagen der Diagnostik, Anamnese, Bewegungsdagnostik, Funktionsdiagnostik, Sport- und Bewegungstherapeutische Testverfahren, Motorische Basidiagnostik, Diagnostik bewegungsbezogenen Erlebens und Verhaltens, Biologisch-medicinische Grundlagen, Biomechanik (v.a. Gelenke), Pathophysiologische Grundlagen, Modelle der Methodik und Didaktik, Lektionsplanung.
### 376-1717-00L  
**Practical Basics in Sports and Exercise Therapy**  
*W* 2 credits  2V  
B. Spörri Kälin, B. S. Wirth Gasser  
*Number of participants limited to 30.*

**Abstract**  
Impart knowledge of practical basics of Sports and Exercise Therapy.

**Objective**  
The members are able to transform the knowledge from the previous courses in practical situations of Sports and Exercise Therapy. They learn basic aspects to design therapy lessons.

**Content**  
communication/conversation with patients  
psychoregulation: relaxation  
anatomy in vivo

**Lecture notes**  
*The courses “Introduction in Sports and Exercise Therapy” and has been completed successfully.*

**Prerequisites / notice**  
Skript will be on lern-platform.

### 376-1722-00L  
**Spinal Cord Injury and Exercise**  
*Prerequisite: Anatomy and Physiology*  
*W* 2 credits  2V  
C. Perret

**Abstract**  
Intensive discussion concerning complications of a spinal cord injury and their consequences on trainability and exercise performance of persons sitting in a wheelchair. Overview on the clinical application of exercise testing as well as on the implementation of sport scientific findings to optimise performance of spinal cord injured subjects in rehabilitation and elite sports.

**Objective**  
Knowledge of the pathophysiology and the concomitant complications of a spinal cord injury and the consequences for physical exercise and trainability during rehabilitation as well as in recreational and elite sport.

**Content**  
The following issues will be discussed: Epidemiology and etiology of spinal cord injury; complications and consequences of spinal cord injury; trainability/exercise physiology and spinal cord injury; history and organisation of wheelchair sports; elite sport and spinal cord injury

**Literature**

**Prerequisites / notice**  
Voraussetzung: Vorlesung Anatomie/Physiologie besucht!

### 529-0731-00L  
**Nucleic Acids and Carbohydrates**  
*W* 6 credits  3G  
D. Hilvert, P. A. Kast, S. J. Sturla, H. Wennemers

**Abstract**  
Structure, function and chemistry of nucleic acids and carbohydrates, DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNA; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

**Objective**  
Structure, function and chemistry of nucleic acids and carbohydrates, DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNA; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

**Content**  
Structure, function and chemistry of nucleic acids and carbohydrates, DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNA; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccine

**Literature**  
Mainly based on recent original literature, a detailed list will be distributed during the first lecture.

### 529-1023-00L  
**Physical Chemistry I (for Biology and Pharmacy)**  
*W* 3 credits  2V+1U  
R. Riek, H. P. Lüthi

**Abstract**  

**Objective**  
Understanding the fundamental thermodynamical properties of chemical and biological systems.

**Content**  

**Literature**  

**Prerequisites / notice**  
Prerequisite: mathematics I-II, functions of multiple variables, partial derivatives.

### 535-0230-00L  
**Medicinal Chemistry I**  
*W* 2 credits  2V  
J. Hall

**Abstract**  
The lectures give an overview of selected drugs and the molecular mechanisms underlying their therapeutic effects in disease. The historical and modern-day methods by which these drugs were discovered and developed are described. Structure-function relationships and the biophysical rules underlying ligand-target interactions will be discussed and illustrated with examples.

**Objective**  
Basic understanding of therapeutic agents with respect to molecular, pharmacological and pharmaceutical properties.

**Content**  
Molecular mechanisms of action of drugs. Structure function and biophysical basis of ligand-target interactions

**Lecture notes**  
Will be provided in parts before each individual lecture.
The two-semester lecture course will provide a detailed understanding of the fundamentals of drug action and the mechanisms of action.

Introduction and overview of important fundamentals, principles and technologies for the development and manufacturing of dosage forms.

### Literature

### Prerequisites / notice
Requirements: Knowledge of physical and organic chemistry, biochemistry and biology.

Attendance of Medicinal Chemistry II in the spring semester.

### Literature

**Abstract**
Principles and technologies for the manufacturing of dosage forms and drug delivery systems. Knowledge of pharm. excipients, materials, containers, liquid and semi-solid dosage forms, their production, function, quality and application. Comprehension of molecular interactions in solution and colloid systems. Comprehension of interfacial phenomena and stabilization measures in dosage forms.

**Objective**
Knowledge of the most important pharmaceutical excipients, materials, containers, liquid and semi-solid dosage forms, of their production, function, quality, stability and application. Comprehension of the molecular interactions in solution and colloid systems. Comprehension of interfacial phenomena and stabilization measures in dispense dosage forms.

**Content**
Introduction and overview of important fundamentals, principles and technologies for the development and manufacturing of dosage forms and drug delivery systems. Overview of the most important pharmaceutical excipients and polymers, their structure, properties and processing; importance of materials properties for containers. Pharmaceutical solvents, fundamentals of solubility and solubilization of drugs. Water treatment processes, sterilization techniques and quality requirements of pharmaceutical water. Parenteral dosage forms and liquid opthalmics. Surfactants, micel formation and colloid systems. Liquid suspensions and emulsions, Stabilization measures in dosage forms.

**Abstract**
The two-semester lecture course will provide a detailed understanding of the fundamentals of drug action and the mechanisms of action and therapeutic use of the important classes of drugs. The lectures are intended for students of pharmaceutical sciences.

**Objective**
The lectures will provide a comprehensive survey of pharmacology and toxicology. Special emphasis is placed on the interrelationship between pharmacological, pathophysiological and clinical aspects.

**Content**
Topics include disease-relevant macroscopic, microscopic, pathobiochemical and functional disturbances of specific organs and organ systems. The lectures integrate disease pathology with mechanisms of drug action, usage, metabolism, pharmacokinetics, side effects, toxicity, contraindications and dosage of relevant drug classes. Basic principles of clinical pharmacology and pharmacotherapy will be covered.

**Lecture notes**
Für jede Vorlesung wird ein Skript abgegeben, das eine Zusammenfassung mit den wichtigsten Stichpunkten beinhaltet.

**Literature**

or

11th edition - 1808 Seiten

Comprehensive overview:

English version

The classic textbook in Pharmacology:
Goodman and Gilman’s The Pharmacological Basis of Therapeutics Laurence Brunton, Bruce Chabner, Bjorn Knollman. 12th edition - 1808 Seiten

**Prerequisites / notice**
Voraussetzungen: Abschluss Grundstudium
The aim of the lecture course is to provide a solid overview of the science and issues in gene technology and genome science. Topics: Antibody phage technology, protein modification technology, genome projects, genome sequencing, transcriptomics, proteomics and SNP technology. The course is suited for advanced undergraduate and early graduate students in pharmaceutical sciences or related fields.

The course will provide a solid overview of the science and issues in gene technology and genome science.

1. Antibody phage technology
   - The antibody molecule
   - V genes, CDRs, basics of antibody engineering
   - Principles of phage display
   - Phagemid and phage vectors
   - Antibody libraries
   - Phage display selection methodologies
   - Other phage libraries (peptides, globular proteins, enzymes)
   - Alternative screening/selection methodologies
   - DNA-encoded chemical libraries

2. Proteins: chemical modification and detection of biomolecular interactions
   - Homo- and hetero-dimerization of proteins
   - Chemical modifications of proteins
   - Radioactive labeling of proteins
   - Kinetic association and dissociation constants
   - Affinity constant: definition and its experimental measurement

3. Genomics: Applications to Human Biology
   - Protein cloning and expression
   - Functional Genomics
   - Sequencing genomes and novel sequencing methods
   - Genetic disorders: discovery and pharmaceutical implications
   - Transcriptomics
   - Proteomics
   - Principles of Cancer
   - Principles of Vaccine Development
   - Principles of Gene Therapy

4: Pharmaceuticals: Focus on Discovery
   - Chemical Libraries
   - Protein Therapeutics
   - Consideration on pharmacokinetics and half-life extension

Lecture notes
Skript "Gene Technology" by Prof. Dario Neri

Abstract
Get Students familiar with basic Immunological concepts of pharmaceutical relevance.

Objective
This course focuses on the concepts of classical and modern genetics and genomics.

Content
- Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histocompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

Lecture notes
Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien"

Literature

Prerequisites / notice
Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

Abstract
Concepts of modern genetics and genomics, including principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

Objective
This course focuses on the concepts of classical and modern genetics and genomics.

Content
- Introduction into structural and functional aspects of the immune system.
- Basic knowledge of the mechanisms and the regulation of an immune response.
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histocompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

Lecture notes
Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien"

Prerequisites / notice
Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

Abstract
535-0810-00L Gene Technology

535-0830-00L Pharmaceutical Immunology

551-0309-00L Concepts in Modern Genetics

551-0317-00L Immunology I

551-0319-00L Cellular Biochemistry (Part I)
Abstract
Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function, and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

Objective
The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry. The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

Content
Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes. Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular transport and targeting; vesicular trafficking and phagocytosis; post-transcriptional regulation of gene expression.

Lecture notes
Scripts and additional material will be provided during the semester. Please contact Dr. Alicia Smith for assistance with the learning materials. (alicia.smith@bc.biol.ethz.ch)

Literature
Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

Prerequisites / notice
To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English.

Abstract
Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.

Objective
Introduction to Bioinformatics: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

Content
Bioinformatics I will cover the following topics:
- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation
551-1323-00L Fundamentals of Biology II: Biochemistry and Molecular Biology  W  4 credits  4V  K. Locher, N. Ban, R. Glockshuber, E. Weber-Ban

Abstract
The course provides an introduction to Biochemistry / Molecular Biology with some emphasis on chemical and biophysical aspects.

Objective
Topics include the structure-function relationship of proteins / nucleic acids, protein folding, enzymatic catalysis, cellular pathways involved in bioenergetics and the biosynthesis and breakdown of amino acids, glycans, nucleotides, fatty acids and phospholipids, and steroids. There will also be a discussion of DNA replication and repair, transcription, and translation.

Lecture notes
none

Literature
mandatory; "Biochemistry". Autoren: Berg/Tymoczko/Stryer, 8th edition, Palgrave Macmillan, International edition (the English version will be preordered at the Polybuchhandlung)

Prerequisites / notice
Some of the lectures are given in the English language.

752-2120-00L Consumer Behaviour I  W  2 credits  2V  M. Siegrist, C. Keller, B. S. Sütterlin

Abstract
Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

Objective
Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

752-4005-00L Food Microbiology I  W  3 credits  2V  M. Loessner

Abstract
This lecture offers insights into the basics, practical consequences and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts and molds present in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

Objective
The lecture offers insights into the basics, practical consequences and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts, molds and protozoa in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms. The focus of this first part of the lecture will be on the organisms, but also on the factors which determine spoilage and foodborne disease.

Content
1. History of Food Microbiology
   1.1. Short synopsis of foodborne microorganisms
   1.2. Spoilage of Foods
   1.3. Foodborne Disease
   1.4. Food Preservation
   1.5. VIP's of Food Microbiology
2. Overview of Microorganisms in Foods
   2.1 Origin of foodborne Microorganisms
   2.2. Bacteria
   2.3. Yeasts
   2.4. Molds
   3. Microbial Spoilage of Foods
   3.1. Intrinsic and Extrinsic Parameters
   3.2. Meats, Seafoods, Eggs
   3.3. Milk and Milk Products
   3.4. Vegetable and Fruit Products
   3.5. Miscellaneous (baked goods, nuts, spices, ready-to-eat products)
   3.6. Drinks and Canned Foods
   4. Foodborne Disease
   4.1. Significance and Transmission of Foodborne pathogens
   4.2. Staphylococcus aureus
   4.3. Gram-positive Sporeformers (Bacillus & Clostridium)
   4.4. Listeria monocytogenes
   4.5. Salmonella, Shigella, Escherichia coli
   4.6. Vibrio, Yersinia, Campylobacter
   4.7. Brucella, Mycobacterium, Aeromonas, Plesiomonas
   4.8. Parasites
   4.9. Viruses and Bacteriophages
   4.10. Mycotoxins
   4.11. Bioactive Amines
   4.12. Miscellaneous (Antibiotic-resistant Bacteria, Biofilms)

Lecture notes
Electronic copies of the presentation slides (PDF) will be made available for download.

Literature
Recommendations will be given in the first lecture

752-6001-00L Introduction to Nutritional Science  W  3 credits  2V  M. B. Zimmermann, C. Wolfrum

Abstract
This course introduces basic concepts of micro- and macronutrient nutrition. Micronutrients studied include fat-soluble and water-soluble vitamins, minerals and trace elements. Macronutrients include proteins, fat and carbohydrates. Special attention is given to nutrient digestion, bioavailability, metabolism and excretion with some focus on energy metabolism.

Objective
To introduce the students to the both macro- and micronutrients in relation to food and metabolism.

Content
The course is divided into two parts. The lectures on micronutrients are given by Prof. Zimmermann and the lectures on macronutrients are given by Prof. Wolfrum. Prof. Zimmermann discusses the micronutrients, including fat-soluble vitamins, water-soluble vitamins, minerals and trace elements. Prof. Wolfrum introduces basic nutritional aspects of proteins, fats, carbohydrates and energy metabolism. The nutrients are described in relation to digestion, absorption and metabolism. Special aspects of homeostasis and homeorheosis are emphasized.

Lecture notes
There is no script. Powerpoint presentations will be made available.

752-6301-00L Selected Topics in Physiology Related to Nutrition  W  3 credits  2V  W. Langhans

Abstract
Gives the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand.
Objective
Some basic knowledge in physiology is recommended for this course, which revisits important physiological topics, emphasizing their relation to nutrition. The aim is to give the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand. For students with a background in medicine, pharmacy or biology, the course is useful as a review of previously acquired knowledge. Major topics are basic neuroanatomy and neurophysiology; general endocrinology; the physiology of taste and smell; nutrient digestion and absorption; intermediary metabolism and energy homeostasis; and some aspects of cardiovascular physiology and water balance.

</table>
Objective
- Students know how to prepare, conduct and reflect a single lesson based on educational requirements.
- Students take the learning goals as a starting point considering previous knowledge as well as the professional environment and the ambitions of the learners.
- Students apply the basic teaching techniques of their subject area in a sensible way and know how to appropriately arrange the phases of learning.
- Students know how to simplify and present complex technical contents of their subject area.

Health Sciences and Technology

Only for Health Sciences and Technology TC students.

The teaching internship can just be visited if all other courses of TC are completed.
Repetition of the teaching internship is excluded even if the examination lessons are to be repeated.

Abstract
Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.

Objective
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practice finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils' work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

The mentored paper is designed to bring together the findings from the FD1 and the FD2. By using various teaching techniques and methods a semester plan, which is based on various curricula will be elaborated for a given topic.

Abstract
1. The students have planned a curriculum for a semester course.
2. Students reflect on formative and summative ways such a teaching unit to examine and implement parts of it.
3. The students have implemented parts of the semester curriculum.
4. The students deal with the question to what extent teaching techniques, teaching methods but also sequences of self-study must be involved in the planning.

Special students and auditors need special permission from the lecturers.
On completion of this course, students will be able to demonstrate:

**Physical Activities and Health**

Translational Science for Health and Medicine

Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication)

Content

- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources

Positive and negative examples will be illustrated by distinguished guest speakers.

**Contemporary Problems of Neural Control of Movement**

Prerequisites / notice

- Students are required to have successfully completed the course "Neural control of movement and motor learning" and to have basic knowledge of applied statistics. Self-study material will be available at the beginning of the course and statistical knowledge will be tested (central element) in the second course week (open book). Passing this test is a requirement for continuing the course. Students will be required to write essays, give presentations and participate in discussions on a regular basis. Assessment will be made on the basis of the complete aforementioned practical work.

**Advanced Topics in Exercise Physiology**

How to identify need?

- How to measure success?
- Outcome variables
- Improving the translational process

Challenges of communication?

- How independent is translational science?
- Academic boundary conditions vs. industrial influences

Positive and negative examples will be illustrated by distinguished guest speakers.

**Physical Activities and Health**

This course introduces/explores the complex relationship between physical activity, sedentary behavior and health. It will discuss the evolution of current physical activity recommendations. It will examine the current evidence base that has informed physical activity recommendations and that identified physical activity as a key modifiable lifestyle behavior contributing to disease and mortality.

Objective

- 1. knowledge of and critical awareness of the role of physical activity and sedentary behavior in the maintenance of health and the aetiology, prevention and treatment of disease.
- 2. thorough knowledge and critical awareness of current recommendations for physical activity, and current prevalence and trends of physical activity and associated diseases
- 3. awareness of current national and international physical activity policies and how these impact on global challenges

Content

- Physical activity assessment
- Physical activity policies
- Physical activity assessment
- Physical activity epidemiology; concepts principles and approaches
- Physical activity and chronic disease; Coronary heart disease, diabetes, bone health, cancer and obesity
- Physical activity and brain health
- Physical activity and sedentary behavior recommendations
- Population prevalence of physical activity and sedentary behavior

Selective journal articles from relevant journals such as Journal of Physical Activity and Health and Journal of Aging and Physical Activity

**Physical Activities and Health**

- Introduction to Physical Activity for Health, including sedentary behavior
- Physical activity epidemiology; concepts principles and approaches
- Physical activity and chronical disease; Coronary heart disease, diabetes, bone health, cancer and obesity
- Physical activity and brain health
- Physical activity and sedentary behavior recommendations
- Population prevalence of physical activity and sedentary behavior
- Physical activity policies
- Physical activity assessment

Core texts for this course are:

### Prerequisites / notice
From the BSc-course the following book is recommended: ‘Essentials of strength training and conditioning’ T. Baechle, R. Earle (3rd Edition)

Laboratory Course in Exercise Physiology

**Course Description**

Number of participants limited to 36.

**Abstract**

Conduct physical performance tests and measurements that are typically used to assess performance of athletes and/or patients and that deepen the understanding of physiological processes in response to physical exertion.

**Objective**

Gain hands-on experience in exercise physiology and consolidate knowledge on physiological adaptations to different types and degrees of physical activity and climatic influences. Learn fundamental assessment techniques of the muscular system, the cardio-respiratory system and of whole-body performance, learn scientifically correct data analysis and interpretation of results. Insight into today's Sports Medicine.

**Content**

Various exercise tests assessing human performance and assessments of physiological responses to activity (examples are VO2max-test, Conconi-Tests, Determination of anaerobic threshold, Cooper-Test, 1-repetition maximum test, lactate minimum test), dynamometry, mechanography, body composition etc.). Insight into measurements in Sports Medicine.

### 376-0203-00L Movement and Sport Biomechanics

**W** 4 credits 3G  
**B. Taylor, R. List, S. Lorenzetti**

**Abstract**  
Learning to view the human body as a (bio-) mechanical system. Making the connections between everyday movements and sports activity with injury, discomfort, prevention and rehabilitation.

**Objective**  
Students are able to describe the human body as a mechanical system. They analyse and describe human movement according to the laws of mechanics.

**Content**  
Movement- and sports biomechanics deals with the attributes of the human body and their link to mechanics. The course includes topics such as functional anatomy, biomechanics of daily activities (gait, running, etc.) and looks at movement in sport from a mechanical point of view. Furthermore, simple reflections on the loading analysis of joints in various situations are discussed. Additionally, questions covering the statics and dynamics of rigid bodies, and inverse dynamics, relevant to biomechanics are investigated.

**Lecture notes**  
Online material is provided during the course.

### 376-0207-00L Exercise Physiology

**W** 4 credits 3V  
**C. Spengler**

**Abstract**  
This course provides an overview over molecular and systemic aspects of neuromuscular, cardiovascular and respiratory adaptations to acute and chronic exercise as well as the interactions of the different systems influencing factors, e.g. genetics, gender, age, altitude/depth, heat/cold, with respect to performance and health.

**Objective**  
The aim of this course is to understand molecular and systemic aspects of neuromuscular, cardiovascular and respiratory adaptations to acute and chronic exercise as well as the interaction of the different systems regarding health-relevant aspects and performance in healthy people and persons with selected diseases. Furthermore, students will understand the influence of genetics, gender, age, altitude/depth, heat and cold on the named factors.

**Content**  
History of Exercise Physiology, research methods, fibertype heterogeneity and its functional significance, neural control of muscle force, molecular and cellular mechanisms of muscle adaptation to resistance, endurance and stretching exercise, interindividual variability in the response to training, cardiorespiratory and metabolic responses to acute and chronic exercise, sex differences relevant to exercise performance, exercise in hot and cold environment, children and adolescents in sport and exercise, exercise at altitude and depth, aging and exercise performance, exercise for health, exercise in the context of disease.

**Lecture notes**  
Online material is provided during the course.

### 376-1107-00L Sport Pedagogy

**W** 2 credits 2V  
**D. Seiler Hubler**

**Abstract**  
Central aspects of Sport related pedagogy will be handled in these lectures. These aspects cover, amongst others, the subject and tasks of Sport related pedagogy. Furthermore, the general and sports relevant foundations of Sport related pedagogy will be covered.

**Objective**  
To gain basic knowledge of sports pedagogy and to recognize starting points for applied sports pedagogical intervention in schools.

**Content**  
- Einführung in die Sportpädagogik  
- Bedeutung des Sports im Kindes- und Jugendalter  
- Leistungssport im Kindes- und Jugendalter  
- Pädagogische Perspektiven des Sportunterrichts in der Schule  
- Ein zeitgemäßer Schulsport  
- Bewegungskulturelle Bildung: Bewegungserziehung, Spielerziehung

**Lecture notes**  
Unterrichtsmaterialien zu den einzelnen Veranstaltungen werden den Studierenden zur Verfügung gestellt.

### 376-1127-00L Sociology of Sport

**W** 2 credits 2V  
**M. Lamprecht**

**Abstract**  
These lectures deal with the current changes in society and sport and provide an overview of the many different problems and perspectives of sport sociology.

**Objective**  
The lectures set out to:
- present the different dimensions, functions and interrelationships of present-day sport  
- provide an introduction to the central theories and models of (sport) sociology  
- show how far sport reflects society and how it changes and becomes more differentiated in the process  
- take current examples from newspapers, magazines and television to highlight the sociological view of sport.

**Content**  
Sport and social change: developments and trends  
- The economy and the media: dependencies, consequences, scandals  
- Social inequalities and distinctions: gender differences and group behavior  
- Conflicts and politics: sports organizations, doping, violence

**Lecture notes**  
Selected materials for the lecture are available under www.LSSFB.ch --> Lehre
A detailed program with additional references will be delivered at the beginning of the lecture.

**376-1117-00L**

**Sport Psychology**

**W**

2 credits

2V

H. Gubelmam

**Abstract**

This lecture is intended as an introduction to sport psychology and imparts knowledge on selected areas of the subject.

**Objective**

Students are given insight into different work areas of sport psychology. In order to understand what «sport psychology» is, it is necessary to explain the essence and tasks of sport psychology and what it relates to, and to work out an underlying basis for key topics, such as cognition and emotions. Students’ expertise is furthered by presenting and providing more in-depth treatment of additional topics of sport psychology. Selected intervention forms are intended to provide insight into applied sport psychology and ensure that mental processes and their impact in sport can be recognised. Case studies and practical exercises (e.g. objective training) are intended to prompt students to reflect to a greater extent on the forms in which sport psychology can be applied in their practice of sports and to integrate these in their teaching.

**Content**

- Main Topics
  - Introduction to sport psychology
  - Cognitions in sports: mental rehearsal and mental training
  - Emotions and stress
  - Motivation: goal-setting in sports
  - Career and career transition in elite sport
  - Coach-Athlete-Interaction
  - Psychological aspects of sport-injury rehabilitation
  - Group dynamics in sport

**Literature**

Unterrichtsmaterialien zu den einzelnen Veranstaltungen werden den Studierenden zur Verfügung gestellt.

**376-1177-00L**

**Human Factors I**

**W**

2 credits

2V

M. Menozzi Jäckli

**Abstract**

Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people's satisfaction & overall performance.

**Objective**

The goal of the lecture is to empower students in better understanding the applied theories, principles, and methods in various applications.

**Content**

- Physiological, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

**Literature**

- H. Gubelmann

**376-1179-00L**

**Applications of Cybernetics in Ergonomics**

**W**

1 credit

1U

M. Menozzi Jäckli

**Y.Y. Hedinger Huang, R. Huang

**Abstract**

Cybernetics systems have been studied and applied in various research fields, such as applications in the ergonomics domain. Research interests include the man-machine interaction (MMI) topic which involving the performance in multi-model interactions, quantification in gestalt principles in product development; or the information processing matter.

**Objective**

To learn and practice cybernetics principles in interface designs and product development.

**Content**

- Fitt's law applied in manipulation tasks
- Hick-Hyman law applied in design of the driver assistance systems - Vigilance applied in quality inspection
- Accommodation/vergence crosslink function
- Cross-link models in neurobiology- the ocular motor control system
- Human performance in optimization of production lines

**Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions**

**W**

3 credits

2V

R. Rienner, R. Gassert,

L. Marchal Crespo

**Abstract**

Rehab. Engineering is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

**Objective**

Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.
## Content

Introduction, problem definition, overview  
Rehabilitation of visual function  
- Anatomy and physiology of the visual sense  
- Technical aids (glasses, sensor substitution)  
- Retina and cortex implants  
- Rehabilitation of hearing function  
- Anatomy and physiology of the auditory sense  
- Hearing aids  
- Cochlea Implants  
Rehabilitation and use of kinesthetic and tactile function  
- Anatomy and physiology of the kinesthetic and tactile sense  
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)  
- Role of displays in motor learning  
- Rehabilitation of vestibular function  
- Anatomy and physiology of the vestibular sense  
- Rehabilitation strategies and devices (e.g. BrainPort)  
Rehabilitation of vegetative Functions  
- Cardiac Pacemaker  
- Phrenic stimulation, artificial breathing aids  
- Bladder stimulation, artificial sphincter  
Brain stimulation and recording  
- Deep brain stimulation for patients with Parkinson, epilepsy, depression  
- Brain-Computer Interfaces

## Literature

Selected Journal Articles and Web Links:  

### Prerequisites / notice

Target Group:
- Students of higher semesters and PhD students of  
  - D-MAVT, D-ITET, D-INFK, D-HEST  
  - Biomedical Engineering, Robotics, Systems and Control  
  - Medical Faculty, University of Zurich  
- Students of other departments, faculties, courses are also welcome

| 376-1714-00L | Biocompatible Materials | W | 4 credits | 3G | K. Maniura, J. Möller, M. Zenobi-Wong |
Getting insight into actual areas and problems of biomechanics.

Introduction to the basic principles of trauma biomechanics.

During the lecture, several electronically available MATLAB introductions are indicated. Course-specific scripts will be provided by the lecturer.

Drawbacks of Excel; Possibilities in MATLAB; Import of several data formats; Plot of one and more signals; Removing of an offset and filtering of data based on self-written functions; Normalisation and parametrisation of data; Reliability; Interpolation, Differentiation and Integration in MATLAB.

The class consists of three parts:
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.

In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

Handouts can be accessed online.

Literature

(available online via ETH library)

Handouts provided during the classes and references therein.

376-1720-00L Application of MATLAB in the Human Movement

Abstract
Students will learn to import, process and graphically present experimental data using the MATLAB computing environment. Both the data and the methods of analysis will be typical for experiments in Human Movement Science (i.e. kinematics, kinetics and electromyography).

Objective
Students will acquire the ability to independently load, plot, and process kinematic, kinetic and electromyographical data using the MATLAB computing environment.

Content
Drawbacks of Excel; Possibilities in MATLAB; Import of several data formats; Plot of one and more signals; Removing of an offset and filtering of data based on self-written functions; Normalisation and parametrisation of data; Reliability; Interpolation, Differentiation and Integration in MATLAB.

Prerequisites / notice
A Laptop with MATLAB installed (v2009 or higher) and wireless internet access is mandatory. Two students can share a laptop if necessary. A MATLAB student version can be obtained at Stud-IDES for free.

376-1722-00L Spinal Cord Injury and Exercise

Abstract
Intensive discussion concerning complications of a spinal cord injury and their consequences on trainability and exercise performance of persons sitting in a wheelchair. Overview on the clinical application of exercise testing as well as on the implementation of sport scientific findings to optimise performance of spinal cord injured subjects in rehabilitation and elite sports.

Objective
Knowledge of the pathophysiology and the concomitant complications of a spinal cord injury and the consequences for physical exercise and trainability during rehabilitation as well as in recreational and elite sport.

Content
The following issues will be discussed: Epidemiology and etiology of spinal cord injury; complications and consequences of spinal cord injury; trainability/exercise physiology and spinal cord injury; history and organisation of wheelchair sports; elite sport and spinal cord injury prevention measures. Topics include: accident statistics and accident reconstruction, biomechanical response of the human to impact loading, injury mechanisms and injury criteria, test methods (including crash tests), computer simulations using multi-body and finite element modelling techniques, aspects of passive safety of vehicles (focusing on restraint systems and vehicle compatibility). Real world examples mainly from automobile safety are used to augment lecture material.

Prerequisites / notice

376-1974-00L Colloquium in Biomechanics

Abstract
Current topics in biomechanics presented by speakers from academia and industry. Getting insight into actual areas and problems of biomechanics.

376-1985-00L Trauma Biomechanics

Abstract
Trauma biomechanics in an interdisciplinary research field investigating the biomechanics of injuries and related subjects such as prevention. The lecture provides an introduction to the basic principles of trauma biomechanics.

Objective
Introduction to the basic principles of trauma biomechanics.

Content
This lecture serves as an introduction to the field of trauma biomechanics. Emphasis is placed on the interdisciplinary nature of impact biomechanics, which uses the combination of fundamental engineering principles and advanced medical technologies to develop injury prevention measures. Topics include: accident statistics and accident reconstruction, biomechanical response of the human to impact loading, injury mechanisms and injury criteria, test methods (including crash tests), computer simulations using multi-body and finite element modelling techniques, aspects of passive safety of vehicles (focusing on restraint systems and vehicle compatibility). Real world examples mainly from automobile safety are used to augment lecture material.

Voraussetzung: Vorlesung Anatomie/Physiologie besucht!

376-1743-00L Sports Nutrition for Paralympic Athletes

Abstract
Introduction into the nutrition of paralympic athletes. Key topics include: Energy requirements; macronutrient and micronutrient needs; hydration; special issues related to female athletes; supplements and ergogenic aids.

Objective
To provide an understanding of the nutritional needs of paralympic athletes and to equip them with the knowledge to make informed decisions about their nutrition during training and competition.

Content
The lecture will cover the following topics: Energy requirements; macronutrient and micronutrient needs; hydration; special issues related to female athletes; supplements and ergogenic aids.

Prerequisites / notice

376-1990-00L Colloquium in Biomechanics

Abstract
Current topics in biomechanics presented by speakers from academia and industry. Getting insight into actual areas and problems of biomechanics.

376-1991-00L Trauma Biomechanics

Abstract
Trauma biomechanics in an interdisciplinary research field investigating the biomechanics of injuries and related subjects such as prevention. The lecture provides an introduction to the basic principles of trauma biomechanics.

Objective
Introduction to the basic principles of trauma biomechanics.

Content
This lecture serves as an introduction to the field of trauma biomechanics. Emphasis is placed on the interdisciplinary nature of impact biomechanics, which uses the combination of fundamental engineering principles and advanced medical technologies to develop injury prevention measures. The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

R. Scharpf, S. Mettler

Handouts can be downloaded.

W. M. Eichholzer, J. Goldhahn

Concepts of descriptive and analytical epidemiology, study designs, measures of effect, confounding and bias, screening, surveillance, definition of health and health promotion, health dimensions and health determinants, prevention strategies, public health interventions, public health action cycle, epidemiology and prevention of infectious and chronic diseases (HIV, Tuberculosis, Obesity, Public health nutrition).

M. B. Zimmermann

Language of the course is English

The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

S. Mettler, M. B. Zimmermann

Handouts can be downloaded.

Lecture slides and required handouts will be available on the ETH website.

Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented.

M. Eichholzer

Script and original publications will be supplied during the course.

The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented.

M. Eichholzer

Students are able to assess human movement using different methods of movement analysis.

Based on practical examples, these methods are used and compared. The examples range from sport, everyday movement and therapy, such as hockey, gymnastics, acrobatics, badminton, gait / running and strength training. In the first phase of the class, the different approaches are applied. In the second phase, small teams are working on individual projects. These will be discussed and presented in plenum.

R. Scharpf, S. Lorenzetti

A course work is required. The mark of this course work contributes to the final credits for this lecture. Details will be given during the first lecture.

Handouts can be downloaded.

Lecture notes

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Switzerland taken as an example, the health risks associated with our nutritional habits will be evaluated. Finally, examples of preventive measures addressing individuals but also the society in relation to the obesity epidemic and other threats to health are discussed.

U. Sauer, N. Zamboni, M. Zampieri

Number of participants limited to 15.

Based on practical examples out of sport, everyday movement and therapy, students use and compare different methods of movement analysis.

R. Scharpf, S. Lorenzetti

U. Sauer, N. Zamboni, M. Zampieri

Number of participants limited to 15.
Prerequisites / notice

General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English

It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

► Major in Human Health, Nutrition and Environment

►► Compulsory Courses

<table>

Abstract

Writing of a review paper of scientific quality on a topic in the domain of Human Health, Nutrition and Environment based on critical evaluation of scientific literature.

Objective

- Acquisition of knowledge in the field of the review paper
- Assessment of original literature as well as synthesis and analysis of the findings
- Practising of academic writing in English
- Giving an oral presentation with discussion on the topic of the review paper

Content

Topics are offered in the domains of the major 'Human Health, Nutrition and Environment' covering 'Public Health', 'Infectious Diseases', 'Nutrition and Health' and 'Environment and Health'.

Lecture notes

Guidelines will be handed out in the beginning.

Literature

Literature will be identified based on the topic chosen.

376-0300-00L Translational Science for Health and Medicine

Abstract

Translational science is a cross disciplinary scientific research that is motivated by the need for practical applications that help people. The course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key features into their future projects.

Objective

After completing this course, students will be able to understand:

- Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication)

Content

What is translational science and what is it not?
- How to identify need?
- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
- How to measure success?
- Outcome variables
- Improving the translational process
- Challenges of communication?
- How independent is translational science?
- Academic boundary conditions vs. industrial influences

Positive and negative examples will be illustrated by distinguished guest speakers.

Abstract

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented.

Objective

Students are able
- to evaluate the scientific evidence on the effects of diet on human health
- to describe the role of nutritional factors in the prevention of chronic diseases
- to assess the nutritional status of a population (Switzerland taken as an example)
- to put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic
Content

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Switzerland taken as an example, the health risks associated with our nutritional habits will be evaluated. Finally, examples of preventive measures addressing individuals but also the society in relation to the obesity epidemic and other threats to health are discussed.

752-6151-00L

Public Health Concepts

W 3 credits 2V R. Housser

Abstract

The module "public health concepts" offers an introduction to key principles of public health. Students get acquainted with the concepts and methods of epidemiology. Students also learn to use epidemiological data for prevention and health promotion purposes. Public health concepts and intervention strategies are presented, using examples from infectious and chronic diseases.

Objective

At the end of this module students are able:
- to interpret the results of epidemiological studies
- to critically assess scientific literature
- to know the definition, dimensions and determinants of health
- to plan public health interventions and health promotion projects

Content

Concepts of descriptive and analytical epidemiology, study designs, measures of effect, confounding and bias, screening, surveillance, definition of health and health promotion, health dimensions and health determinants, prevention strategies, public health interventions, public health action cycle, epidemiology and prevention of infectious and chronic diseases (HIV, Tuberculosis, Obesity, Public health nutrition).

Lecture notes

Handouts are provided to students in the classroom.

Prerequisites / notice

Language of the course is english

Elective Courses II

Module: Infectious Diseases

Number Title Type ECTS Hours Lecturers
551-0223-00L Immunology III W 4 credits 2V M. Kopf, M. Bachmann, J. Kisielow, A. Lanzavecchia, S. R. Leibundgut, A. Oxenius, R. Spörri

Abstract

This course provides a detailed understanding of
- development of T and B cells
- the dynamics of an immune response during acute and chronic infection
- mechanisms of immunopathology
- modern vaccination strategies

Key experimental results will be shown to help understanding how immunological text book knowledge has evolved.

Objective

Obtain a detailed understanding of
- the development, activation, and differentiation of different types of T cells and their effectormechanisms during immune responses,
- Recognition of pathogenic microorganisms by the host cells and molecular events thereafter,
- events and signals for maturation of naive B cells to antibody producing plasma cells and memory B cells.
- Optimization of B cell responses by intelligent design of new vaccines

Content

- Development and selection of CD4 and CD8 T cells, natural killer T cells (NKT), and regulatory T cells (Treg)
- NK T cells and responses to lipid antigens
- Differentiation, characterization, and function of CD4 T cell subsets such as Th1, Th2, and Th17
- Overview of cytokines and their effector function
- Co-stimulation (signals 1-3)
- Dendritic cells
- Evolution of the "Danger" concept
- Cells expressing Pattern Recognition Receptors and their downstream signals
- T cell function and dysfunction in acute and chronic viral infections

Literature

Documents of the lectures are available for download at: https://moodle-app2.let.ethz.ch/course/view.php?id=998

Prerequisites / notice

Immunology I and II

551-1171-00L Immunology: from Milestones to Current Topics W 4 credits 2S B. Ludewig, M. Kopf, A. Oxenius, University lecturers

Abstract

Milestones in Immunology: on old concepts and modern experiments

Objective

The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptual framework and critical technological advances. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

Content

Milestones and current topics of innate immunity, antigen presentating, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunology.

Lecture notes

Original and review articles will be distributed by the lecturer.

Literaturunterlagen werden vor Beginn des Kurses auf folgender website zugänglich sein: Moodle Course https://moodle-app2.let.ethz.ch/course/view.php?id=1002

636-0017-00L Molecular Evolution, Phylogenetics and Phylodynamics W 4 credits 3G T. Stadler

Abstract

The aim of the course is to provide up-to-date knowledge on how we can obtain an understanding of the evolution and population dynamics of organisms based on their genetic sequencing data, employing key concepts from molecular evolution, phylogenetics and phylodynamics. Throughout the course, we tie the models and methods closely with applications, mainly in the field of epidemiology and evolution.
Objective
Attendees will learn what information is contained in genetic sequencing data and how this information is extracted from the sequencing data. The main concepts introduced are:

* models in molecular evolution
* phylogenetic & phylodynamic inference
* maximum likelihood and Bayesian statistics
* stochastic processes

Attendees will apply these concepts to a number of applications yielding biological insight into:

* epidemiology
* pathogen evolution
* macroevolution of species

Content
The course consists of three parts. We first introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Second, we employ these evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phylodynamics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades.

Lecture notes
Slides of the lecture will be available online.

Literature
The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:

* Yang, Z. 2006. Computational Molecular Evolution.
* Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST.

Prerequisites / notice
Basic knowledge in linear algebra, analysis, and statistics.

701-0283-01L Seminar in Evolutionary Ecology of Infectious Diseases W 3 credits 2G D. Croll, S. Bonhoeffer, R. R. Regös

Abstract
Students of this course will discuss current topics from the field of infectious disease biology. From a list of publications, each student chooses some themes that he/she is going to explain and discuss with all other participants and under supervision. The actual topics will change from year to year corresponding to the progress and new results occurring in the field.

Objective
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

Content
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

Lecture notes
Publications and class notes can be downloaded from a web page announced during the lecture.

Literature
Slides of the lecture will be available online.

752-4009-00L Molecular Biology of Foodborne Pathogens W 3 credits 2V M. Loessner, M. Schuppler

Abstract
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks.

Content
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks?

Lecture notes
Electronic copies of the presentation slides (PDF) will be made available for download to registered students.

Literature
Recommendations will be given in the first lecture

Prerequisites / notice
Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until 11:15 h), with no break.

</tbody>
</table>
This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- Legal and Protection Issues Related Functional Foods
- Industrial Biotechnology of Flavor and Taste Development
- Safety of Food Starter Cultures and Probiotics

Students will be required to complete a group project on food products and ingredients with of from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Lecture notes
Copy of the power point slides from lectures will be provided.

Literature
A list of references will be given at the beginning of the course for the different topics presented during this course.

752-6101-00L Nutrition and Chronic Disease (HS) W 3 credits 2V M. B. Zimmermann

Abstract
To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Objective
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.

Content
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Lecture notes
There is no script. Powerpoint presentations will be made available on-line to students.

Literature
To be provided by the individual lecturers, at their discretion.

Prerequisites / notice
No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

752-6402-00L Nutrigenomics W 3 credits 2V G. Vergères

Abstract
Nutrigenomics - toward personalized nutrition? Breakthroughs in biology recently led nutrition scientists to apply modern tools (genomics, transcriptomics, proteomics, metabolomics, genetics, epigenetics) to the analysis of the interactions of food with humans. The lecture presents these tools and illustrates their application in selected topics relevant to human nutrition and food sciences.

Objective
- Overall understanding of the transdisciplinary research being conducted under the term nutrigenomics.
- Overall understating of the omics technologies used in nutrigenomics and their applications to human nutrition and food science.
- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics

Content
- For the content of the script see section "Skript" below
- The lecture is completed by an optional project entitled 'Personalized Nutrition' in which the students have the opportunity to receive a personalized nutritional guidance that is based on their own genetic makeup. The scientific literature on which the genetic tests are based is presented by the students during the lecture.

Lecture notes
The script is composed of circa 450 slides (ca 18 slides/lecture) organized in 9 modules

Module A
From biochemical nutrition research to nutrigenomics

Module B
Nutritional genomics

Module C
Nutrigenetics

Module D
Nutri-epigenomics

Module E
Transcriptomics in nutrition research

Module F
Proteomics in nutrition research

Module G
Metabolomics in nutrition research

Module H
Nutritional systems biology

Module I
Individualized nutrition - opportunities and challenges

Basic training in biochemistry, molecular biology, physiology, and human nutrition. Interest in interdisciplinary sciences linking molecular biology to human health. Interest in the application of analytical laboratory methods to the understanding of human biology, in particular nutrition.
Abstract
The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. Natural processes, anthropogenic pollution, legislation of groundwater and surface water and of drinking water as well as water treatment will be discussed for industrialized and developing countries.

Objective
The goal of this lecture is to give an overview over the whole path of drinking water from the source to the tap and understand the involved physical, chemical and biological processes which determine the drinking water quality.

Content
The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.

Lecture notes
Handouts will be distributed

Literature
Will be mentioned in handouts

Abstract
Many disciplines are meeting at the nanoscale, from physics, chemistry to engineering, from the life sciences to medicine. The course will prepare students to communicate more effectively across disciplinary boundaries, and will provide them with deep insights into the various frontiers.

Objective
Building upon advanced technologies to create, visualize, analyze and manipulate nano-structures, as well as to probe their nano-chemistry, nano-mechanics and other properties within manmade and living systems, many exciting discoveries are currently made. They change the way we do science and result in so many new technologies.

Content
The goal of the course is to give Master and Graduate students from all interested departments an overview of what nanotechnology is all about, from analytical techniques to nanosystems, from physics to biology. Students will start to appreciate the extent to which scientific communities are meeting at the nanoscale. They will learn about the specific challenges and what is currently sizzling in the respective fields, and learn the vocabulary that is necessary to communicate effectively across departmental boundaries.

Each lecturer will first give an overview of the state-of-the-art in his/her field, and then describe the research highlights in his/her own research group. While preparing their Final Projects and discussing them in front of the class, the students will deepen their understanding of how to apply a range of new technologies to solve specific scientific problems and technical challenges. Exposure to the different frontiers will also improve their ability to conduct effective nanoscale research, recognize the broader significance of their work and to start collaborations.

Lecture notes
All the enrolled students will get access to a password protected website where they can find pdf files of the lecture notes, and typically 1-2 journal articles per lecture that cover selected topics.

Abstract
Rehab. Engineering is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective
Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.
Content

Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces

Literature

| Abstract        | Microrobotics is an interdisciplinary field that combines aspects of robotics, micro and nanotechnology, biomedical engineering, and materials science. The aim of this course is to expose students to the fundamentals of this emerging field. Throughout the course students are expected to submit assignments. The course concludes with an end-of-semester examination. |
| Objective       | The objective of this course is to expose students to the fundamental aspects of the emerging field of microrobotics. This includes a focus on physical laws that predominate at the microscale, technologies for fabricating small devices, bio-inspired design, and applications of the field. |
| Content         | Main topics of the course include:          |
| Lecture notes   | The powerpoint slides presented in the lectures will be made available in hardcopy and as pdf files. Several readings will also be made available electronically. |
| Literature      | Lecture notes and references therein. |

| 227-0474-00L    | Image Analysis and Computer Vision          | W    | 6    | 3V+1U | G. Székely, O. Göksel, L. Van Gool |
| Objective       | Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises. |
| Content         | The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed. |
| Lecture notes   | Course material Script, computer demonstrations, exercises and problem solutions |
| Prerequisites / notice | Prerequisites: Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C. The course language is English. |

| Literature      | See teaching document repository. |

### Autumn Semester 2015

Data: 06.04.2020 13:01  Page 714 of 1434
Abstract
The lecture introduces the physical and technical know-how of X-ray tomographic microscopy. Several X-ray imaging techniques (absorption-, phase- and darkfield contrast) will be discussed and their use in daily research, in particular, biology, is presented. The course discusses the aspects of quantitative evaluation of tomographic data sets like segmentation, morphometry and statistics.

Objective
Introduction to the basic concepts of X-ray tomographic imaging, image analysis and data quantification at the micro and nano scale with particular emphasis on biological applications.

Content
Synchrotron-based X-ray micro- and nano-tomography is today a powerful technique for non-destructive, high-resolution investigations of a broad range of materials. The high-brilliance and high-coherence of third generation synchrotron radiation facilities allow quantitative, three-dimensional imaging at the micro and nanometer scale and extend the traditional absorption imaging technique to edge-enhanced and phase-sensitive measurements, which are particularly suited for investigating biological samples.

The lecture includes a general introduction to the principles of tomographic imaging from image formation to image reconstruction. It provides the physical and engineering basics to understand how imaging beamlines at synchrotron facilities work, looks into the recently developed phase contrast methods, and explores the first applications of X-ray nano-tomographic experiments.

The course finally provides the necessary background to understand the quantitative evaluation of tomographic data, from basic image analysis to complex morphometrical computations and 3D visualization, keeping the focus on biomedical applications.

Lecture notes
Will be indicated during the lecture.

Literature
Available online
Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people's satisfaction & overall performance.

The goal of the lecture is to empower students in better understanding the applied theories, principles, and methods in various applications. Students are expected to learn about how to enable an efficient and qualitatively high standing interaction between human and the environment, considering costs, benefits, health, and safety as well. Thus, a ergonomic design and evaluation process of products, tasks, and environments may be promoted in different disciplines. The goal is achieved in addressing a broad variety of topics and embedding the discussion in macroscopic factors such as the behavior of consumers and objectives of economy.

- Physiological, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

Virtual Reality in Medicine

Abstract
Virtual Reality has the potential to support medical training and therapy. This lecture will derive the technical principles of multi-modal input devices, displays, and rendering techniques. Several examples are presented that are currently being developed or already applied for surgical training, intra-operative augmentation, and rehabilitation.

Objective
- To provide theoretical and practical knowledge of new principles and applications of multi-modal simulation and interface technologies in medical education, therapy, and rehabilitation.

Content
- Virtual Reality has the potential to provide descriptive and practical information for medical training and therapy while relieving the patient and/or the physician. Multi-modal interactions between the user and the virtual environment facilitate the generation of high-fidelity sensory impressions, by using not only visual and auditory modalities, but also kinesthetic, tactile, and even olfactory feedback. On the basis of the existing physiological constraints, this lecture will derive the technical requirements and principles of multi-modal input devices, displays, and rendering techniques. Several examples are presented that are currently being developed or already applied for surgical training, intra-operative augmentation, and rehabilitation.

Target Group:
- Students of higher semesters and PhD students of Biomedical Engineering/Movement Science and Sport
- Medical Faculty, University of Zurich

Students of other departments, faculties, courses are also welcome!

Prerequisites / notice
The course language is English.

More details will be announced in the lecture.

Micro/Nanotechnology and Microfluidics for Biomedical Applications

Abstract
This course is an introduction to techniques in micro/nanotechnology and to microfluidics. It reviews how many familiar devices are built and can be used for research and biomedical applications. Transistors for DNA sequencing, beamers for patterning proteins, hard-disk technology for biosensing and scanning microfluidics for analyzing tissue sections are just a few examples of the covered topics.

Objective
The main objective of the course is to introduce micro/nanotechnology and microfluidics to students having a background in the life sciences. The course should familiarize the students with the techniques used in micro/nanotechnology and show them how micro/nanotechnology pervades throughout life sciences. Microfluidics will be emphasized due to their increasing importance in research and medical applications. The second objective is to have life students less intimidated by micro/nanotechnology and make them able to link instruments and techniques to specific problems that they might have in their projects/studies. This will also help students getting access to the ETHZ/IBM Nanotech Center infrastructure if needed.

Content
Mostly formal lectures (2 x 45 min), with a 2 hour visit and introduction to cleanroom and micro/nanotechnology instruments, last 3 sessions would be dedicated to the presentation and evaluation of projects by students (3 students per team).

Prerequisites / notice
- Basic experience in Information Technology and Computer Science will be of advantage
- More details will be announced in the lecture.
- Nanotech center and lab visit at IBM would be mandatory, as well as attending the student project presentations.

Physical Human Robot Interaction (pHRI)

Abstract
This course focuses on the emerging, interdisciplinary field of physical human-robot interaction, bringing together themes from robotics, real-time control, human factors, haptics, virtual environments, interaction design and other fields to enable the development of human-oriented robotic systems.
Objective
The objective of this course is to give an introduction to the fundamentals of physical human robot interaction, through lectures on the underlying theoretical/mechatronics aspects and application fields, in combination with a hands-on lab tutorial. The course will guide students through the design and evaluation process of such systems.

By the end of this course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and design safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the designed requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement and test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) identify and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

Content
This course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neuromuscular and psychophysics, principles of human-robot interaction systems (kinematics, mechanical transmissions, robotic sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance and force-position control, haptic rendering basics and issues in device design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical-human-robot interaction, laboratory sessions and lab visits.

Students will attend laboratory sessions where they will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://edu.haptics.org/index.php/HapticDevices/HapticPaddles), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, damping, time delays, sampling rate, sensor quantization, etc.) during rendering of different mechanical properties.

Lecture notes
Will be distributed through the document repository before the lectures.

http://www.relab.ethz.ch/education/courses/phri.html

Literature

Prerequisites / notice
Notice:
The registration is limited to 26 students
There are 4 credit points for this lecture.
The lecture will be held in English.
The students are expected to have basic control knowledge from previous classes.

Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For
Physics in Medical Research: From Atoms to Cells
The course covers the following topics: drug targeting and delivery principles, radiopharmaceuticals, macromolecular drug carriers,
The students are able to analyse the human movement from a technical point of view, to process the data and perform modeling with a
focus towards clinical application.
This course includes ethical considerations, measurement techniques, clinical testing, accessing movement data and anaylsis as well as modeling with regards to human movement.

376-1985-00L Trauma Biomechanics W 4 credits 2V+1U K.U. Schmitt, M. H. Muser
Abstract Trauma biomechanics in an interdisciplinary research field investigating the biomechanics of injuries and related subjects such as prevention. The lecture provides an introduction to the basic principles of trauma biomechanics.
Objective Introduction to the basic principles of trauma biomechanics.
Content This lecture serves as an introduction to the field of trauma biomechanics. Emphasis is placed on the interdisciplinary nature of impact biomechanics, which uses the combination of fundamental engineering principles and advanced medical technologies to develop injury prevention measures. Topics include: accident statistics and accident reconstruction, biomechanical response of the human to impact loading, injury mechanisms and injury criteria, test methods (including crash tests), computer simulations using multi-body and finite element modelling techniques, aspects of passive safety of vehicles (focusing on restraint systems and vehicle compatibility), Real world examples mainly from automobile safety are used to augment lecture material.
Lecture notes Available via homepage.

376-1974-00L Colloquium in Biomechanics W 2 credits 2K B. Helgason
Abstract Current topics in biomechanics presented by speakers from academia and industry.
Objective Getting insight into actual areas and problems of biomechanics.

402-0674-00L Physics in Medical Research: From Atoms to Cells W 6 credits 2V+1U B. K. R. Müller
Abstract Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.
Objective The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced.
The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.
High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.
Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.
Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.
3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

535-0423-00L Drug Delivery and Drug Targeting W 2 credits 2V J.C. Leroux, D. Brambilla
Abstract The students gain an overview on current principles, methodologies and systems for controlled delivery and targeting of drugs. This enables the students to understand and evaluate the field in terms of scientific criteria.
Objective The students dispose of an overview on current principles and systems for the controlled delivery and targeting of drugs. The focus of the course lies on developing a capacity to understand the involved technologies and methods, as well as an appreciation of the chances and constraints of their therapeutic usage, with prime attention on anticancer drugs, therapeutic peptides, proteins, nucleic acids and vaccines.
Content The course covers the following topics: drug targeting and delivery principles, radiopharmaceuticals, macromolecular drug carriers, liposomes, micelles, micro/nanoparticles, gels and implants, administration of vaccines, delivery of active agents in tissue engineering, targeting at the gastrointestinal level, synthetic carriers for nucleic acid drugs, ophthalmic devices and novel trends in transdermal and nasal drug delivery.
Lecture notes Selected lecture notes, documents and supporting material will be directly provided or may be downloaded using http://www.galenik.ethz.ch/teaching/drug_del_drug_targ

Further references will be provided in the course.

551-0317-00L Immunology I W 3 credits 2V A. Ozienius, M. Kopf
Abstract Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.
Objective

Introduction into structural and functional aspects of the immune system.
Basic knowledge of the mechanisms and the regulation of an immune response.

Content

- Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histocompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

Lecture notes

Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien".

Literature

Prerequisites / notice

Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

551-0319-00L Cellular Biochemistry (Part I) W 3 credits 2V U. Kutay, C. M. Azzalin, B. Kornmann, M. Peter

Abstract

Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

Objective

The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these topics and their integration in modern cellular biochemistry.

The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

Content

Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.

Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular transport and targeting; vesicular trafficking and phagocytosis; post-transcriptional regulation of gene expression.

Lecture notes

Scripts and additional material will be provided during the semester. Please contact Dr. Alicia Smith for assistance with the learning materials. (alicia.smith@bc.biol.ethz.ch)

Literature

Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

Prerequisites / notice

To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English.

636-0003-00L Biological Engineering and Biotechnology W 6 credits 3V M. Fussenegger

Abstract

Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.

Objective

1. Insight Into The Mammalian Cell Cycle. Cycling, The Balance Between Proliferation and Cancer - Implications For Biopharmaceutical Manufacturing.
2. The Licence To Kill. Apoptosis Regulatory Networks - Engineering of Survival Pathways To Increase Robustness of Production Cell Lines.
5. From Target To Market. An Antibody's Journey From Cell Culture to Development of Biological Weapons?
7. Functional Food. Enjoy your Meal!
13. Handout during the course.

Lecture notes

Handout during the course.

Abstract

Translational science is a cross disciplinary scientific research that is motivated by the need for practical applications that help people. The course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key features into their future projects.

Objective

After completing this course, students will be able to understand:

- Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication)
What is translational science and what is it not?

How to identify need?
- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications

How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources

How to measure success?
- Outcome variables

Improving the translational process
Challenges of communication?

How independent is translational science?
- Academic boundary conditions vs. industrial influences

Positive and negative examples will be illustrated by distinguished guest speakers.

Abstract
The mechanisms of disease development will be studied. Main topics will be: Genetic regulation of disease development with a focus on monogenic and polygenic forms. In addition the methods used in elucidating genetic components in disease progression will be discussed. Ageing and development associated disease progression including the underlying molecular mechanisms.

Objective
To understand the mechanisms governing disease development with a special emphasis on genetic and ageing associated components to understand the mechanisms governing disease development with a special emphasis on genetic and ageing associated components.

Abstract
This course provides a detailed understanding of
- Development of T and B cells
- The dynamics of an immune response during acute and chronic infection
- Mechanisms of immunopathology
- Modern vaccination strategies

Key experimental results will be shown to help understanding how immunological textbook knowledge has evolved.

Objective
Obtain a detailed understanding of
- the development, activation, and differentiation of different types of T cells and their effectormechanisms during immune responses,
- Recognition of pathogenic microorganisms by the host cells and molecular events thereafter,
- events and signals for maturation of naïve B cells to antibody producing plasma cells and memory B cells.
- Optimization of B cell responses by intelligent design of new vaccines

Content
- Development and selection of CD4 and CD8 T cells, natural killer T cells (NKT), and regulatory T cells (Treg)
- NK T cells and responses to lipid antigens
- Differentiation, characterization, and function of CD4 T cell subsets such as Th1, Th2, and Th17
- Overview of cytokines and their effector function
- Co-stimulation (signals 1-3)
- Dendritic cells
- Evolution of the “Danger” concept
- Cells expressing Pattern Recognition Receptors and their downstream signals
- T cell function and dysfunction in acute and chronic viral infections

<td>The course introduces you to recent developments in the fields of cellular and molecular neurobiology. It also supports you to develop your skills in critically reading the scientific literature. You should be able to grasp what the authors wanted to learn i.e. their goals, why the authors chose the experimental approach they used, the strengths and weaknesses of the experiments and the data presented, and how the work fits into the wider literature in the field. You will present one paper yourself, which provides you with practice in public speaking.</td>
<td>You will present one paper yourself. Give an introduction to the field of the paper, then show and comment on the main results (all the papers we present are available online, so you can show original figures with a beamer). Finish with a summary of the main points and a discussion of their significance. You are expected to take part in the discussion and ask questions. To prepare for this you should read all the papers beforehand (they will be announced a week in advance of the presentation).</td>
<td>We cover a range of themes related to development and neurobiology. Before starting your preparations, check with Jorge Pereira (<a href="mailto:jorge.pereira@biol.ethz.ch">jorge.pereira@biol.ethz.ch</a>), who helps you with finding an appropriate paper.</td>
<td>You must attend at least 80% of the journal clubs, and give a presentation of your own. At the end of the semester there will be a 30 minute oral exam on the material presented during the semester. The grade will be based on the exam (45%), your presentation (45%), and a contribution based on your active participation in discussion of other presentations (10%).</td>

**551-1145-00L**  
**Viral and Non-Viral Vectors for Human Gene-Therapy - From Pathogens to Safe Medical Applications**  
Number of participants limited to 15.  

**Abstract**  
Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

**Objective**  
Basic aspects of virology, the viral mechanisms for transfer of genetic material into cells, different vector-systems and target cells, animal models, specific applications for inborn diseases of the immune system and of metabolism, adverse effects, and new developments of vector systems will be taught.

**Literature**  
Script and original publications will be supplied during the course.

**551-1153-00L**  
**Systems Biology of Metabolism**  
Number of participants limited to 15.

**Abstract**  
From Milestones to Current Topics  
Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

**Objective**  
Develop a deeper understanding of how relevant biological problems can be solved, thereby providing advanced insights to key experimental and computational methods in systems biology.

**Content**  
The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics. For each particular problem studied, we will work out how the various methods work and what their capabilities/limits are. The problem areas range from microbial metabolism to cancer cell metabolism and from metabolic networks to regulation networks in populations and single cells. Key methods to be covered are various modeling approaches, metabolic flux analyses, metabolomics and other omics.

**Prerequisites / notice**  
The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

**551-1171-00L**  
**Immunology: from Milestones to Current Topics**  
Number of participants limited to 15.

**Abstract**  
The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptual framework and critical technological advances. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

**Objective**  
Milestones in immunology: on old concepts and modern experiments

**Content**  
Milestones and current topics of innate immunity, antigen presentation, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunology.

**Literature**  
Lektureunterlagen werden vor Beginn des Kurses auf folgender website zugänglich sein: Moodle Course https://moodle-app2.let.ethz.ch/course/view.php?id=1002

**551-1303-00L**  
**Current Research Topics in Cellular Biochemistry**  
Number of participants limited to 15.

**Abstract**  
Introduction, presentation, evaluation, critical discussion and written analysis of recent scientific articles in the research area of cellular biochemistry.

**Objective**  
The goal of the course is to train students in critical analysis of current research. Analysis by individual students will be assessed in oral and written form. The students will be able to introduce, present, evaluate, critically discuss and write about recent scientific articles in the research area of cellular biochemistry.

**Content**  
The course is composed of seminar lectures on specific topics, followed by discussions of scientific papers relevant to these topics. The students will work in small groups under the supervision of a tutor. Each group prepares and presents a lecture, and leads a critical discussion of the selected articles. While being exposed to advanced research in cellular biochemistry, the students practice the critical reading of scientific literature, the evaluation of experimental approaches, and the interpretation of results.

**Literature**  
The relevant references to primary literature and review articles will be provided during the course.

**551-1323-00L**  
**Fundamentals of Biology II: Biochemistry and Molecular Biology**

**Abstract**  
The course provides an introduction to Biochemistry / Molecular Biology with some emphasis on chemical and biophysical aspects.

**Objective**  
Topics include the structure-function relationship of proteins / nucleic acids, protein folding, enzymatic catalysis, cellular pathways involved in bioenergetics and the biosynthesis and breakdown of amino acids, glycan, nucleotides, fatty acids and phospholipids, and steroids. There will also be a discussion of DNA replication and repair, transcription, and translation.

**Prerequisites / notice**  
The course will be taught in English.

**636-0003-00L**  
**Biological Engineering and Biotechnology**

**Abstract**  
Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.
The course consists of three parts. We first introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic
sequences change over time. Second, we employ these evolutionary concepts to infer ancestral relationships between organisms based
on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phylodynamics.
The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation &
extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets
giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the
methods to the field of macroevolution provide insight into the evolution and ecology of different species clades.

Objective
Attendees will apply these concepts to a number of applications yielding biological insight into:
- epidemiology
- pathogen evolution
- macroevolution of species

Content

Lecture notes
Slides of the lecture will be available online.

Literature
The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:
* Yang, Z. 2006. Computational Molecular Evolution.
* Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST.

Prerequisites / notice
Basic knowledge in linear algebra, analysis, and statistics.

636-0017-00L Molecular Evolution, Phylogenetics and Phylodynamics W 4 credits 3G T. Stadler

636-0507-00L Synthetic Biology II W 4 credits 4A S. Panke, Y. Benenson, J. Stelling

752-4009-00L Molecular Biology of Foodborne Pathogens W 3 credits 2V M. Loessner, M. Schuppler

752-6101-00L Nutrition and Chronic Disease (HS) W 3 credits 2V M. B. Zimmermann
The main focus is on the development of the NS: Early development of the NS, cellular processes, nerve fiber growth, building of synapses.

After completing this course, students will be able to understand:

- To evaluate the scientific evidence on the effects of diet on human health
- To describe the role of nutritional factors in the prevention of chronic diseases
- To assess the nutritional status of a population (Switzerland taken as an example)
- To put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic.

What is translational science and what is it not?

- Academic boundary conditions vs. industrial influences
- How independent is translational science?
- Challenges of communication?
- Improving the translational process
- How to measure success?
- Coordination of complex approaches incl. timing and resources
- How independent is translational science?
- Positive and negative examples will be illustrated by distinguished guest speakers.

Objective

- Translational science is a cross-disciplinary scientific research that is motivated by the need for practical applications that help people. The course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key features into their future projects.

Content

- What is translational science and what is it not?
- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
- How to measure success?
- Outcome variables
- Improving the translational process
- Challenges of communication?
- How independent is translational science?

Abstract

- The course covers the development of the nervous system (NS) with a focus on neurogenesis and migration, axon growth, synapse formation, mol. & cell. mechanisms, and diseases of the developing NS.

Objective

- The aim is to give a deepened insight on the normal development, of the nervous system based on molecular, cellular and biochemical approaches.

Content

- The main focus is on the development of the NS: Early development of the NS, cellular processes, nerve fiber growth, building of synapses and neuronal networks.

Lecture notes

- Must be downloaded from OLAT: https://www.olat.uzh.ch/olat/dmz/ as BIO344

Literature

- The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on OLAT.

Prerequisites / notice

- None. Bring something to write and your student ID

Abstract

- The course covers the structure, plasticity and regeneration of the adult nervous system (NS) with focus on: sensory systems, cognitive functions, learning and memory, molecular and cellular mechanisms, animal models, and diseases of the NS.

Objective

- The aim is to give a deepened insight into the structure, plasticity and regeneration of the nervous system based on molecular, cellular and biochemical approaches.

Content

- The main focus is on the structure, plasticity and regeneration of the NS: biology of the adult nervous system; structural plasticity of the adult nervous system, regeneration and repair: networks and nerve fibers, regeneration, pathological loss of cells.

Lecture notes

- ETH students: Lecture notes will be provided on Moodle https://moodle-app2.let.ethz.ch/course/view.php?id=694
- Password will be provided at the beginning of the lecture.

Literature

- The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on Moodle / OLAT.

Abstract
Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.
The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicores architectures.

Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.
The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
2. Probability Theory: The Logic of Science by E. T. Jaynes
3. Class Notes

Fundamentals of Probability, Fundamentals of Computational Modeling

Prerequisites:
Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.
The course language is English.

Prerequisites:
The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monocultures of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

Thirteen major areas of research have been selected, which cover the key concepts that have led to our current ideas of how the nervous system is built and functions. We will read both original papers and explore the conceptual the links between them and discuss the ‘sociology’ of science, the pursuit of basic science questions over a century of research.

Page 725 of 1434
Objective

It is a commonplace that scientists rarely cite literature that is older than 10 years and when they do, they usually cite one paper that serves as the representative for a larger body of work that has long since been incorporated anonymously in textbooks. Worse than that, many authors have not even read the papers they cite in their own publications. This course, Foundations of Neuroscience is one antidote. Thirteen major areas of research have been selected, which cover the key concepts that have led to our current ideas of how the nervous system is built and functions. Unusually, we will explore these areas of research, by discussing the seminal papers, instead of reading someone else's digested summary from a textbook or review. By doing this, we will learn how the discoveries were made, what instrumentation was used, how the scientists interpreted their own findings, and how their work, often over many decades and linked together with related findings from many different scientists, generate the current views of mechanism and structure of the nervous system. To exemplify the controversial contexts, before 1890 Roy and Sherrington showed that there was a neural activity-dependent regulation of blood flow in the brain. One hundred years later, Ogawa discovered that they could use Nuclear Magnetic Resonance (NMR) to measure a blood oxygen-level dependent (BOLD) signal, which they showed was neural activity-dependent. This discovery led to the development of human functional Magnetic Resonance Imaging (fMRI), which has revolutionized neuropsychology and neuropsychiatry. We will read both these original papers and explore the conceptual links between them and discuss the sociological and scientific context in which this case, the pursuit of basic science questions over a century of research, led to an explosion in applications. We will also explore the personalities of the scientists and the context in which they made their seminal discoveries. Each week the course members will be given original papers to read for homework, they will have to write a short abstract for each paper. We will then meet weekly with the course leader (KACM) and an assistant for an hour-or-so long interactive seminar. An intimate knowledge of the papers will be assumed so that the discussion does not center simply on an explication of the contents of the papers. Assessment will be done continuously as the individual students are asked to explain a figure, technique, or concept.

Consciousness: From Philosophy to Neuroscience

W 3 credits 2V D. Kiper, A. Gamma

Abstract

This seminar reviews the philosophical and phenomenological as well as the neurobiological aspects of consciousness. The subjective features of consciousness as well as the experience of self are a major focus. These topics are explored through a selection of primary literature, including articles and books, and modern research into its neural substrate, particularly in the visual domain, is explained.

Objective

The course's goal is to give an overview of the contemporary state of consciousness research, with emphasis on the contributions brought by modern cognitive neuroscience. We aim to clarify concepts, explain their philosophical and scientific backgrounds, and to present different theories of consciousness.

Content

The course includes discussions of scientific as well as philosophical articles. We review current schools of thought, models of consciousness, and proposals for the neural correlate of consciousness (NCC).

Lecture notes

None

Literature

We display articles pertaining to the issues we cover in the class on the course's webpage.

Prerequisites / notice

Since we are all experts on consciousness, we expect active participation and discussions!

376-1177-00L

Human Factors I

W 2 credits 2V M. Menozzi Jäckli, R. Boutilier, R. Huang, M. Siegrist

Abstract

Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people's satisfaction & overall performance.

Objective

The goal of the lecture is to empower students in better understanding the applied theories, principles, and methods in various applications. Students are expected to learn about how to enable an efficient and qualitatively high standing interaction between human and the environment, considering costs, benefits, health, and safety as well. Thus, an ergonomic design and evaluation process of products, tasks, and environments may be promoted in different disciplines. The goal is achieved in addressing a broad variety of topics and embedding the discussion in macroscopic factors such as the behavior of consumers and objectives of economy.

Content

- Physiological, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

Literature

376-1179-00L

Applications of Cybernetics in Ergonomics

W 1 credit 1U M. Menozzi Jäckli, Y.Y. Hedinger Huang, R. Huang

Abstract

Cybernetic systems have been studied and applied in various research fields, such as applications in the ergonomics domain. Research interests include the man-machine interaction (MMI) topic which involving the performance in multi-model interactions, quantification in gesture principles in product development; or the information processing technology. Cybernetics systems have been studied and applied in various research fields, such as applications in the ergonomics domain. Research interests include the man-machine interaction (MMI) topic which involving the performance in multi-model interactions, quantification in gestural principles in product development; or the information processing technology.

Objective

To learn and practice cybernetics principles in interface designs and product development.

Content

- Fitt's law applied in manipulation tasks
- Hick-Hyman law applied in design of the driver assistance systems - Vigilance applied in quality inspection - Accommodationvergence crosslink function - Cross-link models in neurobiology- the ocular motor control system - Human performance in optimization of production lines

Literature

376-1414-00L

Current Topics in Brain Research

W 1 credit 1.5K M. E. Schwab, F. Helmchen, S. Jessberger, I. Mansuy, further lecturers

Abstract

Different national and international scientific guests are invited to present and discuss their actual scientific results.
Objective
To exchange scientific knowledge and data and to promote communication and collaborations among researchers.

For students: Critical discussion of current research. Students aiming at getting a credit point for this colloquium choose one topic and write a critical essay on the presented research topic.

Content
Different scientific guests working in the field of molecular cognition, neurochemistry, neuromorphology and neurophysiology present their latest scientific results.

376-1504-00L
Number of participants limited to 26.

Abstract
This course focuses on the emerging, interdisciplinary field of physical human-robot interaction, bringing together themes from robotics, real-time control, human factors, haptics, virtual environments, interaction design and other fields to enable the development of human-oriented robotic systems.

Objective
The objective of this course is to give an introduction to the fundamentals of physical human robot interaction, through lectures on the underlying theoretical/mechatronics principles and application fields, in combination with a hands-on lab tutorial. The course will guide students through the design and evaluation process of such systems.

By the end of the course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and de- sign safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the defined design requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) investigate and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

Content
This course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neurophysiology, principles of human-robot interaction systems (kinematics, mechanical transmissions, robot sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance and force control, haptic rendering basics and issues in design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical human-robot interaction, laboratory sessions and lab tutorials. Students will attend periodic laboratory sessions where they will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://edu.haptics.org/index.php/HapticDevices/HapticPaddles), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, damping, time delays, sampling rate, sensor quantization, etc.) during rendering of different mechanical properties.

Lecture notes
Will be distributed through the document repository before the lectures.

http://www.relab.ethz.ch/education/courses/phri.html

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 727 of 1434
Prerequisites / notice

Notice:
The registration is limited to 26 students.
There are 4 credit points for this lecture.
The lecture will be held in English.
The students are expected to have basic control knowledge from previous classes.
http://www.relath.ethz.ch/education/pHRI

551-0309-00L Concepts in Modern Genetics
W 6 credits 4V Y. Barral, D. Bopp, A. Hajnal, O. Voinnet
Objective
This course focuses on the concepts of classical and modern genetics and genomics.
Content
The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

551-0317-00L Immunology I
W 3 credits 2V A. Oxenius, M. Kopf
Abstract
Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

551-0319-00L Cellular Biochemistry (Part I)
W 3 credits 2V U. Kutay, C. M. Azzalin, B. Kommann, M. Peter
Abstract
Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

551-1145-00L Viral and non-Viral Vectors for Human Gene-Therapy - W from Pathogens to Safe Medical Applications
W 2 credits 3V University lecturers
Abstract
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
UZH Module Code: BIO708
Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
Basic aspects of virology, the viral mechanisms for transfer of genetic material into cells, different vector systems and target cells, animal models, specific applications for inborn diseases of the immune system and of metabolism, adverse effects, and new developments of vector systems will be taught.

Objective
Knowledge of important viral and non-viral vector systems.
Knowledge of application in human diseases.
Knowledge of limiting factors.

752-4009-00L Molecular Biology of Foodborne Pathogens
W 3 credits 2V M. Loessner, M. Schuppler
Abstract
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganisms or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks.

Autumn Semester 2015

Data: 06.04.2020 13:01 Page 728 of 1434
Students shall exercise scientific working as preparation for their master thesis. To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Mathematics I & II

Mathematics is of ever increasing importance to the Natural Sciences and Engineering. The key is the so-called mathematical modelling cycle, i.e. the translation of problems from outside of mathematics into mathematics, the study of the mathematical problems (often with the help of high level mathematical software packages) and the interpretation of the results in the original environment.

The goal of Mathematics I and II is to provide the mathematical foundations relevant for this paradigm. Differential equations are by far the most important tool for modelling and are therefore a main focus of both of these courses.

Mathematics I covers mathematical concepts and techniques necessary to model, solve and discuss scientific problems - notably through ordinary differential equations. Main focus of Mathematics II: multivariable calculus and partial differential equations.

The students shall demonstrate their ability to carry out a structured, scientific piece of work independently.

The Master Thesis can only be started after the Bachelor Degree was obtained and/or master admission requirements have been fulfilled.

### Course Units for Additional Admission Requirements

1. Linear Algebra and Complex Numbers:
   - systems of linear equations, Gauss-Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, cartesian and polar forms for complex numbers, complex powers, complex roots, fundamental theorem of algebra.

2. Single-Variable Calculus:
   - review of differentiation, linearisation, Taylor polynomials, maxima and minima, antiderivative, fundamental theorem of calculus, integration methods, improper integrals.

3. Ordinary Differential Equations:
   - separable ordinary differential equations (ODEs), integration by substitution, 1st and 2nd order linear ODEs, homogeneous systems of linear ODEs with constant coefficients, introduction to 2-dimensional dynamical systems.

4. Multivariable Differential Calculus:
   - functions of several variables, partial differentiation, curves and surfaces in space, scalar and vector fields, gradient, curl and divergence.

5. Multivariable Integral Calculus:
   - multiple integrals, line and surface integrals, work and flow, Green, Gauss and Stokes theorems, applications.

6. Partial Differential Equations:
   - separation of variables, Fourier series, heat equation, wave equation, Laplace equation, Fourier transform.

Abstract
This course discusses the quantisation of fields in order to introduce a coherent formalism for the combination of quantum mechanics and special relativity. Topics include:
- Relativistic quantum mechanics
- Quantisation of bosonic and fermionic fields
- Interactions in perturbation theory
- Scattering processes and decays
- Radiative corrections

Objective
The goal of this course is to provide a solid introduction to the formalism, the techniques, and important physical applications of quantum field theory. Furthermore it prepares students for the advanced course in quantum field theory (Quantum Field Theory II), and for work on research projects in theoretical physics, particle physics, and condensed-matter physics.

Abstract
Low energy particle physics provides complementary information to high energy physics with colliders. In this lecture, we will concentrate on selected experiments, using mainly neutrons and muons, which have significantly improved our understanding of particle physics today.

Objective
The course aims to provide an introduction to selected advanced topics in low energy particle physics with neutrons and muons.

Content
Low energy particle physics provides complementary information to high energy physics with colliders. At the Large Hadron Collider one directly searches for new particles at energies up to the TeV range. In a complementary way, low energy particle physics indirectly probes the existence of such particles and provides constraints for "new physics", making use of precision and high intensities.

Besides the sensitivity to effects related with new physics (e.g. lepton flavor violation, symmetry violations, CPT tests, search for electric dipole moments, new low mass exchange bosons etc.), low energy physics provides the best test of QED (electron g-2), the best tests of bound-state QED (atomic physics and exotic atoms), precise determinations of fundamental constants, information about the CKM matrix, precise information on the weak and strong force even in the non-perturbative regime etc.

In this lecture, we will concentrate on selected experiments, using mainly neutrons and muons, which have significantly improved our understanding of particle physics today. Starting from a general introduction on high intensity/high precision particle physics and the main characteristics of muons and neutrons and their production, we will then focus on the discussion of fundamental problems and ground-breaking experiments:

- Production and characteristics of muon and neutron beams
- Ultracold neutron production
- Measurement of the neutron lifetime and electric dipole moment
- The neutron in the gravitational field and its electric charge
- Muon and neutron decay correlations
- Lepton flavour violations with muons to search for new physics
- What atomic physics can do for particle physics and vice versa
- Laser experiments at accelerators
- From myonic hydrogen to the proton structure and bound-state QED
- From piconic hydrogen to the strong interaction and effective field theories
- etc.

Literature
Golub, Richardson & Lamoreaux: "Ultra-Cold Neutrons"
Rauch & Werner: "Neutron Interferometry"
Carlile & Willis: "Experimental Neutron Scattering"
Byrne: "Neutrons, Nuclei and Matter"
Klapdor-Kleingrothaus: "Non Accelerator Particle Physics"
### 402-0725-00L Experimental Methods and Instruments of Particle Physics

**Abstract**

**Objective**
Acquire an in-depth understanding and overview of the essential elements of experimental methods in particle physics, including accelerators and experiments.

**Content**
1. Examples of modern experiments
2. Basics: Bethe-Bloch, radiation length, nucl. interaction length, fixed-target vs. collider, principles of measurements: energy- and momentum-conservation, etc
3. Physics and layout of accelerators
4. Charged particle tracking and vertexing
5. Calorimetry
6. Particle identification
7. Analysis methods: invariant and missing mass, jet algorithms, b-tagging
8. Special detectors: extended airshowers, emulsions, cryogenic detectors for dark matter detection
9. MC simulations (GEANT), trigger, readout, electronics

**Lecture notes**
Slides are handed out regularly, see [www.physik.uzh.ch/lectures/empp/](http://www.physik.uzh.ch/lectures/empp/)

**Literature**
See lecture home page: [http://ihp-lx2.ethz.ch/AstroTeilchen/](http://ihp-lx2.ethz.ch/AstroTeilchen/)

### 402-0713-00L Astro-Particle Physics I

**Abstract**
This lecture gives an overview of the present research in the field of Astro-Particle Physics, including the different experimental techniques. In the first semester, main topics are the charged cosmic rays including the antimatter problem. The second semester focuses on the neutral components of the cosmic rays as well as on some aspects of Dark Matter.

**Objective**
Successful students know:
- experimental methods to measure cosmic ray particles over full energy range
- current knowledge about the composition of cosmic ray
- possible cosmic acceleration mechanisms
- correlation between astronomical object classes and cosmic accelerators
- information about our galaxy and cosmology gained from observations of cosmic ray

**Content**
First semester (Astro-Particle Physics I):
- definition of 'Astro-Particle Physics'
- important historical experiments
- chemical composition of the cosmic rays
- direct observations of cosmic rays
- indirect observations of cosmic rays
- 'extended air showers' and 'cosmic muons'
- 'knee' and 'ankle' in the energy spectrum
- the 'anti-matter problem' and the Big Bang
- 'cosmic accelerators'

**Lecture notes**
See lecture home page: [http://ihp-lx2.ethz.ch/AstroTeilchen/](http://ihp-lx2.ethz.ch/AstroTeilchen/)

### 402-0849-00L Introduction to Lattice QCD

**Abstract**
This course offers an introduction to quantum field theories, in particular QCD, formulated on a space-time lattice. The lattice provides a numerical non-perturbative, gauge-invariant regularization scheme for the Euclidean path integral. The course introduces both the theoretical background and the computational tools, like Monte Carlo simulations, used for the quantitative study of quarks and gluons.

**Objective**
To gain familiarity with the formalism of lattice field theories and their numerical simulation methods.

### 402-0767-00L Neutrino Physics

**Abstract**
Theoretical basis and selected experiments to determine the properties of neutrinos and their interactions (mass, spin, helicity, chirality, oscillations, interactions with leptons and quarks).

**Objective**
Introduction to the physics of neutrinos with special consideration of phenomena connected with neutrino masses.

**Lecture notes**
Script

**Literature**

- D.O. Caldwell, Current Aspects of Neutrino Physics, Springer.

### 402-0883-63L Symmetries in Physics

**Abstract**
The course gives an introduction to symmetry groups in physics. It will explain the relevant mathematical background (finite groups, Lie groups and algebras as well as their representations), and illustrate their important role in modern physics.

**Objective**
The aim of the course is to give a self-contained introduction into finite group theory as well as Lie theory from a physicists point of view. Abstract mathematical constructions will be illustrated with examples from physics.

### 402-0830-00L General Relativity

**Abstract**
Manifold, Riemannian metric, connection, curvature; Special Relativity; Lorentzian metric; Equivalence principle; Tidal force and spacetime curvature; Energy-momentum tensor, field equations, Newtonian limit; Post-Newtonian approximation; Schwarzschild solution; Mercury's perihelion precession, light deflection.

**Objective**
Basic understanding of general relativity, its mathematical foundations, and some of the interesting phenomena it predicts.
After the course the student should have a good knowledge of some of the most relevant theories beyond the Standard Model and have the techniques to understand those theories that have not been surveyed in the course. He or she should be able to compute the constraints on any model of new physics, its successes explaining current experimental data and its main phenomenological implications at colliders.

**Prerequisites / notice**

The former title of this course unit was "The Physics Beyond the Standard Model". If you already got credits for "The Physics Beyond the Standard Model" (402-0898-00L), you cannot get credits for "The Physics of Electroweak Symmetry Breaking" (402-0898-00L).

**Suggested textbooks:**

- C. Misner, K. Thorne and J. Wheeler: Gravitation
- S. Carroll - Spacetime and Geometry: An Introduction to General Relativity
- R. Wald - General Relativity
- S. Weinberg - Gravitation and Cosmology
- N. Straumann - General Relativity with applications to Astrophysics

---

**402-0899-65L Higgs Physics**

**Abstract**

The course introduces the theory and phenomenology of the recently discovered Higgs boson. With this course the students will receive a detailed introduction to the physics of the Higgs boson in the Standard Model. They will acquire the necessary theoretical background to understand the main production and decay channels of the Higgs boson at high-energy colliders, and the corresponding experimental signatures.

**Objective**

With this course the students will receive a detailed introduction to the physics of the Higgs boson in the Standard Model. They will acquire the necessary theoretical background to understand the main production and decay channels of the Higgs boson at high-energy colliders, and the corresponding experimental signatures.

**Content**

- Theory part:
  - the Standard Model and the mass problem: WW scattering and the no-lose theorem
  - the Higgs mechanism and its implementation in the Standard Model
  - radiative corrections and the screening theorem
  - theoretical constraints on the Higgs mass; the hierarchy problem
  - Higgs production in e+e- collisions
  - Higgs production at hadron colliders
  - Higgs decays to fermions and vector bosons
  - Higgs differential distributions, rapidity distribution, pt spectrum and jet vetoes
  - Higgs properties and beyond the Standard Model perspective
  - Outlook: The Higgs sector in weakly coupled and strongly coupled new physics scenarios.

- Experimental part:
  - Introductory material:
    - reminders of detectors/accelerators
    - reminders of statistics: likelihoods, hypothesis testing
    - reminders of multivariate techniques: Neural Networks, Decision Trees
  - Main topics:
    - pre-history (pre-LEP)
    - LEP1: measurements at the Z-pole
    - LEP2: towards the limit mH<114 GeV
    - TeVatron searches
    - LHC:
      -- main channels overview
      -- dissect on analysis
      -- combine information from all channels
      -- differential measurements
      -- off-shell measurements
    - Future:
      -- pseudo-observables / EFT
      -- Beyond Standard Model

**Literature**

---

**Prerequisites / notice**

- Higgs Hunter's Guide

---

**402-0777-00L Particle Accelerator Physics and Modeling I**

**Abstract**

This is the first of two courses, introducing particle accelerators from a theoretical point of view and covers state-of-the-art modeling techniques. It emphasizes the multidisciplinary aspect of the field, both in methodology (numerical and computational methods) and with regard to applications such as medical, industrial, material research and particle physics.

**Objective**

You understand the building blocks of particle accelerators. Modern analysis tools allows you to model state-of-the art particle accelerators. In some of the exercises you will be confronted with next generation machines. We will develop a Python simulation tool (AcceLEGOrator) that reflects the theory from the lecture.

**Content**

- Particle Accelerators an Overview
- Relativity for Accelerator Physicists
- Building Blocks of Particle Accelerators
- Lie Algebraic Structure of Classical Mechanics and Applications to Particle Accelerators
- Symplectic Maps & Analysis of Maps
- Particle Tracking
- Linear & Circular Machines
- Cyclotrons
- Free Electron Lasers
- Collective effects in linear approximation
- Preview of Particle Accelerator Physics and Modeling II

---
### Literature

- Particle Accelerator Physics, H. Wiedemann, ISBN-13 978-3-540-49043-2, Springer

### Prerequisites / notice

This lecture is also suited for PhD. students.

### 402-0851-00L QCD: Theory and Experiment

**W 3 credits 3G**

C. Anastasiou, G. Dissertori

**Abstract**

Does not take place this semester.

**Objective**

Knowledge acquired on basics of perturbative QCD, both of theoretical and experimental nature. Ability to perform simple calculations of perturbative QCD, as well as to understand modern publications on theoretical and experimental aspects of perturbative QCD.

**Content**

- QCD Lagrangian and Feynman Rules
- QCD running coupling
- Parton model
- Altarelli-Parisi equations
- Basic processes
- Experimental tests at lepton and hadron colliders
- Measurements of the strong coupling constant

**Literature**

2) R. K. Ellis, W. J. Stirling, B. R. Webber : "QCD and Collider Physics" (Cambridge Monographs on Particle Physics, Nuclear Physics & Cosmology)

**Prerequisites / notice**

Will be given as block course, language: English.

**Abstract**

- Differential Geometry I
- This course is an introduction to differential and riemannian geometry.

**Objective**

- The aim is to lead students from a reasonable knowledge of advanced calculus, basic knowledge of general topology and solid knowledge of linear algebra to fundamental knowledge of differentiable manifolds and their basic tools. Riemannian geometry, some basic Lie theory, and de Rham cohomology will be developed as applications.

**Literature**

**Abstract**

- Particle Physics at CERN
- During the semester break participating students stay for 4 weeks at CERN and perform experimental work relevant to our particle physics projects. Dates to be agreed upon.

- Particle Physics at PSI (Paul Scherrer Institute)
- During semester breaks 6-12 students stay for 3 weeks at PSI and participate in a hands-on course on experimental particle physics. A small real experiment is performed in common, including apparatus design, construction, running and data analysis. The course includes some lectures, but the focus lies on the practical aspects of experimenting.

- Proseminar Theoretical Physics: Particle Physics at the Energy Frontier
- A guided self-study of original papers and of advanced textbooks in theoretical physics. Within the general topic, determined each semester, participants give a presentation on a particular subject and deliver a written report.

- Theoretical Semester Project in a Group of the Physics Department
- This course unit is an alternative if no suitable "Proseminar Theoretical Physics" is available of if the proseminar is already overbooked. Die Leistungskontrolle erfolgt aufgrund eines oder mehrerer schriftlicher Berichte bzw. einer schriftlichen Arbeit. Vorträge können ein zusätzlicher Bestandteil der Leistungskontrolle sein.

- Experimental Semester Project in a Group of the Physics Department
- The aim of the project is to give the student experience in working in a research environment, carrying out physics experiments, analysing and interpreting the resulting data.

Abstract

Foundations of information systems from a user's viewpoint. The focus is on structured data: relational databases, the data language SQL, designing relational databases. Additional topics: Information Retrieval (searching documents), and estimating their relevance and authority with respect to free-text queries; XML as a format for data exchange; Characteristics and processing of "Big Data"

Objective

Following the course should enable students to

1. answer non-trivial queries on existing relational databases by formulating (entry-level) SQL statements, as well as to add new database content and to update or delete existing content,
2. formalize facts as perceived in the real world in terms of the entity-relationship model, and derive a set of normalized relations (tables) which define the structure of a relational database
3. explain how a database management system (DBMS) essentially works and what kind of services it provides
4. understand how a web search engine such as Google basically works
5. know and apply the core concepts to structure and query XML-documents
6. list the characteristics of "Big Data" and know the basics of processing "Big Data"

Content

Im Zentrum stehen relationale Datenbanksysteme, die Abfrage- und Datenmanipulationssprache SQL, sowie der Entwurf bzw. die Strukturierung relationaler Datenbanken. Dieser Stoff wird auch in praktischen Übungen vertieft.

Weitere Themen sind der Umgang mit unstrukturierten und semistrukturierten Daten, die Integration von Daten aus verschiedenen autonomen Informationssystemen, sowie eine Übersicht der Architektur von Datenbanksystemen.

Inhalt:
1. Einleitung.
2. Das Relationenmodell.
3. Die Abfrage- und Datenmanipulationssprache SQL
5. Architektur relationaler Datenbanksysteme.

Literature

Vorlesungsunterlagen (PowerPoint Folien, teilweise auch zusätzlicher Text) werden auf der Web-Site publiziert. Der Kauf eines Buches wird nicht vorausgesetzt.

Als englischsprachiges Werk kann z.B.

empfohlen werden (Umfang: 1349 Seiten).

Prerequisites / notice

Voraussetzung:

252-0835-00L | Computer Science I | Z | 4 credits | 2V+2U | F. O. Friedrich

Abstract

The course covers the fundamental concepts of computer programming with a focus on systematic algorithmic problem solving. Teached language is C++. No programming experience is required.

Objective

Primary educational objective is to learn programming with C++. When successfully attended the course, students have a good command of the mechanisms to construct a program. They know the fundamental control and data structures and understand how an algorithmic problem is mapped to a computer program. They have an idea of what happens "behind the scenes" when a program is translated and executed.

Secondary goals are an algorithmic computational thinking, understanding the possibilities and limits of programming and to impart the way of thinking of a computer scientist.

Content

The course covers fundamental data types, expressions and statements, (Limits of) computer arithmetic, control statements, functions, arrays, structural types and pointers. The part on object orientation deals with classes, inheritance and polymorphy, simple dynamic data types are introduced as examples.

In general, the concepts provided in the course are motivated and illustrated with algorithms and applications.

Lecture notes

A script written in English will be provided during the semester. The script and slides will be made available for download on the course web page.

Literature

Bjarne Stroustrup: Einführung in die Programmierung mit C++, Pearson Studium, 2010

Prerequisites / notice

From AS 2013, an admission to the exam does not any more formally require an attending of the recitation sessions. Handing in solutions to the weekly exercise sheets is thus not mandatory, but we strongly recommend it.

Examination is a one hour-long written test.
The students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects. The following topics are covered: publishing over the internet, processing and visualizing time series, visualizing multi-dimensional data, managing data with lists and tables and with relational databases, introduction to macro programming, universal methods for algorithm design.

The course covers the basic concepts of computer programming.

1. Simulation and Modeling
2. Visualizing multidimensional data
3. Data management with lists and tables
4. Data management with a relational database
5. Introduction to macro programming
6. Introduction to programming with Python

This course is based on application-oriented learning.

All materials for the lecture are available at www.evim.ethz.ch

252-0845-00L

Computer Science I

Abstract
The course covers the basics of computer programming.

Objective
Basic understanding of programming concepts. Students will be able to write and read simple programs and to modify existing programs.

Content
1. Simulation and Modeling
2. Visualizing multidimensional data
3. Data management with lists and tables
4. Data management with a relational database
5. Introduction to macro programming
6. Introduction to programming with Python

252-0847-00L

Computer Science

Abstract
This lecture is an introduction to programming based on the language C++. We cover fundamental types, control statements, functions, arrays, and classes. The concepts will be motivated and illustrated through algorithms and applications.

Objective
The goal of this lecture is an algorithmically oriented introduction to programming.

Content
This lecture is an introduction to programming based on the language C++. We cover fundamental types, control statements, functions, arrays, and classes. The concepts will be motivated and illustrated through algorithms and applications.

Literature

252-0851-00L

Algorithms and Complexity

Abstract
Introduction: RAM machine, data structures; Algorithms: sorting, median, matrix multiplication, shortest paths, minimal spanning trees; Paradigms: divide & conquer, dynamic programming, greedy algorithms; Data Structures: search trees, dictionaries, priority queues; Complexity Theory: P and NP, NP-completeness, Cook's theorem, reductions.

Objective
After this course students know some basic algorithms as well as underlying paradigms. They will be familiar with basic notions of complexity theory and can use them to classify problems.

Content

Literature
Ja. Wird zu Beginn des Semesters verteilt.

252-0852-00L

Foundations of Computer Science

Abstract
Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects.

The following topics are covered: modeling and simulations, introduction to programming, visualizing multi-dimensional data, introduction matrices, managing data with lists and tables and with relational databases, universal methods for algorithm design.

Objective
The students learn to

- understand the role of computer science in science,
- to control computer and automate processes of problem solving by programming,
- choose and apply appropriate tools from computer science,
- process and analyze real-world data from their subject of study,
- handle the complexity of real-world data,
- know universal methods for algorithm design.

Content
1. The role of computer science in science
2. Introduction to Programming with Python
3. Modeling and simulations
4. Introduction to Matrices with Matlab
5. Visualizing multidimensional data
6. Data management with lists and tables
7. Data management with a relational database
8. Universal methods for algorithm design

Literature

252-0855-00L

Computer Science in Secondary School Mathematics

Abstract

Objective

Content

Literature

Prerequisites / notice
This course is based on application-oriented learning. The students spend most of their time working through electronic tutorials and discussing their results with teaching assistants.
The general goal of the course consists in presenting ways to teach fundamentals of computer science, which are closely related to contents and methods of mathematics. After attending the course unit, a mathematics teacher is able to teach selected fundamentals of computer science in mathematics classes.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

The main topics of the course unit "Computer Science in Secondary School Mathematics" represent a scientific and didactic added value for mathematics classes.

The course covers the didactics of logic, of cryptography, of finite state automata, of computability and of the introduction to programming. The students develop the understanding of fundamental scientific concepts such as algorithm, program, complexity, determinism, computation, automata, verification, testing, security of a cryptosystem and secure communication. They reflect on ways to embed them into a scientifically sound and didactically sustainable mathematics course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

Learning the basic concepts of computer science along their historical development

ECTS

Linear Algebra:

Lecturers
U. Maurer

Lecture notes
Lecture notes "Linear Algebra" (Gutknecht) in German, with English expressions for all technical terms.

Prerequisites / notice
The course covers not only basic concepts of programming but also some advanced topics seldom encountered in introductory courses, such as recursion, undecidability, event-driven programming, multiple inheritance and others.

252-0023-00L Discrete Mathematics O 8 credits 5V+2U U. Maurer

Abstract
Content: Mathematical reasoning and proofs, abstraction. Sets, relations (e.g. equivalence and order relations), functions, combinatorics, (un-)countability, graph theory, number theory, algebra (groups, rings, fields, polynomials, subalgebras, morphisms), logic (propositional and predicate logic, proof calculi).

Objective
The primary goals of this course are (1) to introduce the most important concepts of discrete mathematics, (2) to understand and appreciate the role of abstraction and mathematical proofs, and (3) to discuss a number of applications, e.g. in cryptography, coding theory, and algorithm theory.

Content
See course description.

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 741 of 1434
This lecture gives an introduction to theoretical computer science, presenting the basic concepts and methods of computer science in its historical context. We present computer science as an interdisciplinary science which, on the one hand, investigates the border between the possible and the impossible and the quantitative laws of information processing, and, on the other hand, designs, analyzes, verifies, and implements computer systems.

The main topics of the lecture are:
- alphabets, words, languages, measuring the information content of words, representation of algorithmic tasks
- finite automata, regular and context-free grammars
- Turing machines and computability
- complexity theory and NP-completeness
- design of algorithms for hard problems

The lecture is covered in detail by the textbook "Theoretical Computer Science".

Basic literature:

Further reading:

More exercises and examples in:
6. A. Asteroth, Ch. Baier: Theoretische Informatik

During the semester, two non-obligatory test exams will be offered.
Objective  

- a) ability to understand the covered methods from probability theory and to apply them in other contexts
- b) probabilistic thinking and stochastic modelling
- c) ability to perform basic statistical tests and to interpret the results

Content  

Basic concepts from probability and statistics with special emphasis on the topics needed in computer science

The conceptual goals are

- the laws of randomness and probabilistic thinking (thinking in probabilities)
- understanding and intuition for stochastic modelling
- simple and basic methods from statistics

The contents of the course encompasses

- an introduction to probability theory: basic concepts (probability space, probability measure), independence, random variables, discrete and continuous distributions, conditional probability, expectation and variance, limit theorems
- methods from statistics: parameter estimation, maximum likelihood and moment methods, tests, confidence intervals

Lecture notes  

Lecture notes for the course (in German) will be made available electronically at the beginning of the course.

401-0663-00L Numerical Methods for CSE  

Objective  

- Knowledge of the fundamental algorithms in numerical mathematics
- Knowledge of the essential terms in numerical mathematics and the techniques used for the analysis of numerical algorithms
- Ability to choose the appropriate numerical method for concrete problems
- Ability to interpret numerical results
- Ability to implement numerical algorithms efficiently

Content  

1. Direct Methods for linear systems of equations
2. Interpolation
3. Iterative Methods for non-linear systems of equations
4. Krylov methods for linear systems of equations
5. Eigenvalues
6. Least Squares Techniques
7. Filtering Algorithms
8. Approximation of Functions
9. Numerical Quadrature
10. Clustering Techniques
11. Single Step Methods for ODEs
12. Stiff Integrators
13. Structure Preserving Integrators

Lecture notes  

Lecture slides will be made available to participants.

Literature

Abstract  

This course uses compilers as example to expose modern software development techniques. Compiler organization. Lexical analysis. Top-down parsing via recursive descent, table-driven parsers, bottom-up parsing. Symboltables, semantic checking. Code generation for a simple RISC machine: conditionals, loops, procedure calls, simple register allocation techniques. Learn principles of compiler design, gain practical experience designing and implementing a medium-scale software system.

Objective  

This course uses compilers as example to expose modern software development techniques. The course introduces the students to the fundamentals of compiler construction. Students will implement a simple yet complete compiler for an object-oriented programming language for a realistic target machine. Students will learn the use of appropriate tools (parser generators); the implementation language is Java. Throughout the course, students learn to apply their knowledge of theory (automata, grammars, stack machines, program transformation) and well-known programming techniques (module definitions, design patterns, frameworks, software reuse) in a software project. Specific topics: Compiler organization. Lexical analysis. Top-down parsing via recursive descent, table-driven parsers, bottom-up parsing. Symboltables, semantic checking. Code generation for a simple RISC machine: expression evaluation, straight line code, conditionals, loops, procedure calls, simple register allocation techniques. Storage allocation on the stack, parameter passing, runtime storage management, heaps. Special topics as time permits: introduction to global dataflow and its application to register allocation, instruction scheduling.

Literature  

Prerequisites / notice  

Prior exposure to modern techniques for program construction, knowledge of at least one processor architecture at the assembly language level.

252-0213-00L Distributed Systems  

Objective  

Literature  

Prerequisites / notice  

Prior exposure to modern techniques for program construction, knowledge of at least one processor architecture at the assembly language level.
Abstract
Distributed control algorithms (mutual exclusion, logical clocks), communication models (RPC, synchronous/asynchronous communication, broadcast, events, tuple spaces), middleware, service- and resource-oriented architectures (SOAP, REST), security, fault-tolerance (failure models, consensus), replication (primary copy, 2PC, 3PC, Paxos, quorum systems), shared memory (spin locks, concurrency).

Objective
Become acquainted with pertinent technologies and architectures of distributed systems.

Content
We present the characteristics and concepts of distributed systems, and discuss distributed control algorithms (flooding, mutual exclusion, logical clocks), communications models (remote procedure call, client-server models, synchronous and asynchronous communication), abstract communication principles (broadcast, events, tuple spaces), name services, communication middleware for open systems (e.g., REST, SOAP), infrastructure for ad hoc networking (JINI), cloud computing, and mechanisms for security and safety. Having a distributed system may permit getting away with failures and malfunctions of parts of the system. We discuss fault-tolerance issues (models, consensus, agreement) as well as replication issues (primary copy, 2PC, 3PC, Paxos, quorum systems, distributed storage) and problems with asynchronous multiprocessing (shared memory, spin locks, concurrency). To get familiar with message passing communication, some of the exercises will be devoted to a practical lab where participants will develop software for a mobile platform (smartphones).

### Major in Computational Science

The lecture 151-0107-20L High Performance Computing for Science and Engineering I in the autumn semester can only together with the lecture 401-0686-10L High Performance Computing for Science and Engineering II in the spring semester be accredited as compulsory course.

**Abstract**
This course acquaints students with core knowledge in computer graphics, image processing, multimedia and computer vision. Topics include: Graphics pipeline, perception and camera models, transformation, shading, global illumination, texturing, sampling, filtering, image representations, image and video compression, edge detection and optical flow.

**Objective**
This course provides an in-depth introduction to the core concepts of computer graphics, image processing, multimedia and computer vision. The course forms a basis for the specialization track Visual Computing of the CS master program at ETH.

**Content**
Course topics will include: Graphics pipeline, perception and color models, camera models, transformations and projection, projections, lighting, shading, global illumination, texturing, sampling theorem, Fourier transforms, image representations, convolution, linear filtering, diffusion, nonlinear filtering, edge detection, optical flow, image and video compression.

**Lecture notes**
In theoretical and practical homework assignments students will learn to apply and implement the presented concepts and algorithms. A scriptum will be handed out for a part of the course. Copies of the slides will be available for download. We will also provide a detailed list of references and textbooks.

**Literature**

151-0107-20L High Performance Computing for Science and Engineering (HPCE) I

**Abstract**
This course gives an introduction into algorithms and numerical methods for parallel computing for multi and many-core architectures and for applications from problems in science and engineering.

**Objective**
Introduction to HPC for scientists and engineers

**Fundamental of:**
1. Parallel Computing Architectures
2. MultiCores
3. ManyCores

**Content**
Programming models and languages:
1. C++ threading (2 weeks)
2. OpenMP (4 weeks)
3. MPI (5 weeks)

Computers and methods:
1. Hardware and architectures
2. Libraries
3. Particles: N-body solvers
4. Fields: PDEs
5. Stochastics: Monte Carlo

**Lecture notes**
A scriptum will be handed out for a part of the course. Copies of the slides will be available for download. We will also provide a detailed list of references and textbooks.

**Abstract**
This course is an opportunity to take part in leading-edge software construction and gain academic credit for it. The EiffelStudio environment provides a rich basis of extensions and new developments. The course will be held in laboratory-style: students choose a project and meet regularly with assistants. The best developments are candidate for inclusion in actual software releases.

**Objective**
This course is an opportunity to take part in leading-edge software construction and gain academic credit for it. The EiffelStudio environment provides a rich basis of extensions and new developments. The course will be held in laboratory-style: students choose a project and meet regularly with assistants. The best developments are candidate for inclusion in actual software releases.
Content
The growing popularity of open-source projects provides a fertile ground for creative software developers to demonstrate and hone their design and implementation skills. This course is an opportunity to take part in leading-edge software construction and gain academic credit for it. The EiffelStudio environment (in 2006, 2 million lines of open-source code) provides a rich basis of potential extensions and new developments. The course is not structured as a traditional set of lectures but is laboratory-style: students choose a project and meet regularly with assistants to report progress and obtain guidance. The results produced should meet standards of quality software engineering; the best developments are candidate for inclusion in actual software releases. This is an opportunity to learn by doing and to encounter the challenges of large, production-grade software development.

252-3110-00L Human Computer Interaction W 4 credits 2+1U O. Hilliges, M. Norrie
Abstract
The course provides an introduction to the field of human-computer interaction, emphasising the central role of the user in system design. Through detailed case studies, students will be introduced to different methods used to analyse the user experience and show how these can inform the design of new interfaces, systems and technologies.
Objective
The goal of the course is that students should understand the principles of user-centred design and be able to apply these in practice.
Content
The course will introduce students to various methods of analysing the user experience, showing how these can be used at different stages of system development from requirements analysis through to usability testing. Students will get experience of designing and carrying out user studies as well as analysing results. The course will also cover the basic principles of interaction design. Practical exercises related to touch and gesture-based interaction will be used to reinforce the concepts introduced in the lecture. To get students to further think beyond traditional system design, we will discuss issues related to ambient information and awareness.

252-4101-00L ACM-Lab W 4 credits 3P A. Steger
Abstract
Solve programming problems from previous ACM Programming Contests (see http://acm.uva.es/problemset/); learn and use efficient programming methods and algorithms.
Objective
The objective of this course is to learn how to solve algorithmic problems given as descriptions in natural language, similar to those posed in ACM Programming Contests. This includes appropriate problem modeling, choice of suitable (combinatorial) algorithms, and their efficient implementation using C/C++ and the STL.

Abstract
This course gives an introduction into algorithms and numerical methods for parallel computing for multi and many-core architectures and for applications from problems in science and engineering.
Objective
Introduction to HPC for scientists and engineers
Fundamental of:
1. Parallel Computing Architectures
2. MultiCores
3. ManyCores
Content
Programming models and languages:
1. C++ threading (2 weeks)
2. OpenMP (4 weeks)
3. MPI (5 weeks)
Computers and methods:
1. Hardware and architectures
2. Libraries
3. Particles; N-body solvers
4. Fields: PDEs
5. Stochastics: Monte Carlo

Class notes, handouts

227-0627-00L Applied Computer Architecture W 6 credits 4G A. Gunzinger
Abstract
This lecture gives an overview of the requirements and the architecture of parallel computer systems, performance, reliability and costs.
Objective
Understand the function, the design and the performance modeling of parallel computer systems.
Content
The lecture "Applied Computer Architecture" gives technical and corporate insights in the innovative Computer Systems/Architectures (CPU, GPU, FPGA, special processors) and their real implementations and applications. Often the designs have to deal with technical limits. Which computer architecture allows the control of the over 1000 magnets at the Swiss Light Source (SLS)? Which architecture is behind the alarm center of the Swiss Railway (SBB)? Which computer architectures are applied for driver assistance systems? Which computer architecture is hidden behind a professional digital audio mixing desk? How can data volumes about 30 TB/s, produced by a proton accelerator, be processed in real time? Can the weather forecast also be processed with GPUs? How can a good computer architecture be found? Which are the driving factors in successful computer architecture design?
Lecture notes
Script and exercises sheets.
Prerequisites / notice
Basics of computer architecture.

227-0945-00L Cell and Molecular Biology for Engineers I W 3 credits 3G C. Frei
Abstract
This course is part I of a two-semester course.
Objective
After completing this course, engineering students will be able to apply their previous training in the quantitative and physical sciences to modern biology. Students will also learn the principles how biological models are established, and how these models can be tested.
Content
Lectures will include the following topics: DNA, chromosomes, RNA, protein, genetics, gene expression, membrane structure and function, vesicular traffic, cellular communication, energy conversion, cytoskeleton, cell cycle, cellular growth, apoptosis, autophagy, cancer, development and stem cells.
In addition, three journal clubs will be held, where one/two publications will be discussed. For each journal club, students (alone or in groups of up to three students) have to write a summary and discussion of the publication. These written documents will be graded, and count as 25% for the final grade.
Lecture notes
Scripts of all lectures will be available.

227-1037-00L Introduction to Neuroinformatics W 6 credits 2V+1U K. A. Martin, M. Cook, V. Mante, M. Pfeiffer
Abstract
The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

Objective
Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monocultures of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

Content
This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

</table>

Abstract
The course is an introduction to research in software engineering, based on reading and presenting high quality research papers in the field. The instructor may choose a variety of topics or one topic that is explored through several papers.

Objective
The main goals of this seminar are 1) learning how to read and understand a recent research paper in computer science; and 2) learning how to present a technical topic in computer science to an audience of peers.

Content
The focus of the course this year is on reliability of high-performance programs.

</table>

Abstract
The Bachelor thesis is the final requirement of the BSc program and is supervised by one of the D-INFK professors. The thesis encourages students to show and produce a scientifically structured work.

Objective
In their BSc thesis students should demonstrate their ability to carry out independent, structured scientific work.

Prerequisites / notice
The supervisor of the thesis defines the task, start and end date. A written report will be prepared on the scientific studies carried out, followed by a final presentation. The thesis must be handed in within 6 months.

Abstract
The unit "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The course deals with the thoughtful choice of educational contents for computer science classes, which takes into account its comprehensibility for different age groups as well as didactic approaches suitable for a successful knowledge transfer.

Objective
- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

see Educational Science TC
Content

The course "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The chosen topics support the young learners in developing a unique and indispensable way of thinking, in enhancing their understanding of our world as well as in achieving university education entrance qualifications.

The main topics of the course unit "Subject Didactics of Computer Science I" are the didactics of finite state automata, of formal languages and of the introduction to programming. The unit focuses on contents of computer science that contribute to general education. This involves the understanding of fundamental scientific concepts such as algorithm, complexity, determinism, computation, automata, verification, testing and programming language as well as the way to embed them into a scientifically sound and didactically sustainable computer science course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

Teaching Internship Including Examination Lessons

271-0102-00L

Teaching Internship Including Examination Lessons in Computer Science

Teaching Internship Computer Science for TC and Teaching Diploma Computer Science as Minor Subject.

Repetition of the Teaching Internship is excluded even if Examination Lessons are to be repeated.

Content

Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.

Objective

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Literature

Dokument: schriftliche Vorbereitung für Prüfungslektionen.

Wird von der Praktikumslehrperson bestimmt.

Mentored Work Subject Didactics Computer Science

272-0103-00L

Mentored Work Subject Didactics Computer Science for TC, Teaching Diploma and Teaching Diploma Computer Science as Minor Subject

In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

Objective

The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Content

Die Gegenstände der mentorierten Arbeit in Fachdidaktik stammen in der Regel aus dem gymnasialen Unterricht.

Lernformen

Literature

Die Literatur ist themenspezifisch. Die Studierenden beschaffen sie in der Regel selber (siehe Lernziele). In besonderen Fällen wird sie vom Betreuer zur Verfügung gestellt.

Prerequisites / notice

Die Arbeit sollte vor Beginn des Praktikums abgeschlossen werden.

**Data:** 06.04.2020 13:01  **Autumn Semester 2015**  **Page 749 of 1434**
This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.

Outline:
- Introduction to classical game theoretic concepts.
- Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity.
- The cost difference between an optimum under central control and an equilibrium under selfish agents, known as the "price of anarchy".
- Auction-like mechanisms and algorithms that "direct" the actions of selfish agents into a certain desired equilibrium situation.

Content
Randomized Algorithms are algorithms that "flip coins" to take certain decisions. This concept extends the classical model of deterministic algorithms and has become very popular and useful within the last twenty years. In many cases, randomized algorithms are faster, simpler or just more elegant than deterministic ones. In the course, we will discuss basic principles and techniques and derive from them a number of randomized methods for problems in different areas.

Human Intelligence

ECTS

In teams of two, participants in this seminar conduct their own research project. Each team is advised by one of the researchers serving as lecturers in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students' independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction). Thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. Basic conceptual and methodological issues are the topic of a series of plenary meetings; however, the major part of the work is done in small-group meetings with the advising researcher, and in self-directed research projects.

Learning goals include:
- Participants can illustrate and explain basic methods and concepts for research in the field of Learning and Instruction, e.g. with the help of practical examples.
- Participants can design and conduct a study that is relevant for answering their research question.
- Participants can summarize and evaluate the main results from a study in the field of Learning and Instruction, with regard to the research question being asked.

The successful completion of both course no. 851-0240-00L "Menschliches Lernen (EW 1)" and course no. 851-0238-01L "Unterstützung und Diagnose von Wissenserwerbsprozessen (EW 3)" is a necessary prerequisite for this course.

Objective
- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

Prerequisites / notice
Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

Number of participants limited to 30.

Abstract
This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

Objective
- Understanding research methods used in the empirical human sciences
- Understanding findings relevant for education

Prerequisites / notice

Course offerings in the category Educational Science are listed under "Programme: Educational Science for Teaching Diploma and TC*.

Abstract

The unit "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The course deals with the thoughtful choice of educational contents for computer science classes, which takes into account its comprehensibility for different age groups as well as didactic approaches suitable for a successful knowledge transfer.

Objective

The general objective of the course consists in highlighting the tight connection between the mathematical and algorithmic way of thinking and the approaches adopted by engineering disciplines, and in reflecting on teaching approaches for sustainable computer science teaching activities.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

The students encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

Content

The course "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The chosen topics support the young learners in developing a unique and indispensable way of thinking, in enhancing their understanding of our world as well as in achieving university education entrance qualifications.

The main topics of the course unit "Subject Didactics of Computer Science I" are the didactics of finite state automata, of formal languages and of the introduction to programming. The unit focuses on contents of computer science that contribute to general education. This involves the understanding of fundamental scientific concepts such as algorithm, complexity, determinism, computation, automata, verification, testing and programming language as well as the way to embed them into a scientifically sound and didactically sustainable computer science course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

272-0103-00L Mentored Work Subject Didactics Computer Science A

Abstract

In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

Objective

The objective is for the students:

- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

<td>J. Hromkovic, G. Serafini</td>
</tr>
</tbody>
</table>

**Abstract**
During the introductory teaching practice, the students sit in on five lessons given by the teacher responsible for their teaching practice, and teach five lessons themselves. The students are given observation and reflection assignments by the teacher responsible for their teaching practice.

**Objective**
Right at the start of their training, students acquire initial experience with the observation of teaching, the establishment of concepts for teaching and the implementation of teaching. This early confrontation with the complexity of everything that teaching involves helps students decide whether they wish to, and, indeed, ought to, continue with the training. It forms a basis for the subsequent pedagogical and subject-didactics training.

**Abstract**
In the course Professional Exercises the students achieve additional school-relevant experiences. The students carry out individually specified, practice related projects, in which they support, document or reflect on learning processes.

**Objective**
Achievement of additional school-relevant experiences. The students carry out individually specified, practice related projects, in which they support, document or reflect on learning processes.

**Content**
The course Professional Exercises offers the opportunity for additional school-relevant activities.

The students are supported by the lecturers or by experienced teachers. They assist teachers at school, they create training systems and tests, correct the written homework of pupils and evaluate the progress of a class. The students create explanations and detailed solutions to exercises with respect to the actual knowledge of the pupils. A written assignment states the exact scope of the activity.

**Abstract**
The teaching practice takes in 50 lessons: 30 are taught by the students, and the students sit in on 20 lessons. The teaching practice lasts 4-6 weeks. It gives students the opportunity to implement the contents of their specialisation in the educational science and subject-didactics training in the classroom. Students also conduct work assignments in parallel to their teaching practice.

**Objective**
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics in their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They acquire the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

**Abstract**
This is a supplement to the Teaching Internship required to obtain a Teaching Diploma in the corresponding subject. It is aimed at enlarging the already acquired teaching experience. Students observe 10 lessons and teach 15 lessons independently.
Die Studierenden können die Bedeutung von Unterrichtsthemen in ihrem Fach unter verschiedenen Blickwinkeln einschätzen. Sie kennen und beherrschen das unterrichtliche Handwerk. Sie können ein gegebenes Unterrichtsthema für eine Gruppe von Lernenden fachlich und didaktisch korrekt strukturieren und in eine adäquate Lernumgebung umsetzen. Es gelingt ihnen, die Balance zwischen Anleitung und Offenheit zu finden, sodass die Lernenden sowohl über den nötigen Freiraum wie über ausreichend Orientierung verfügen, um aktiv und effektiv flexibel nutzbares (Fach-)Wissen zu erwerben.

#### Abstract

In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter-based and didactic skills they have acquired in the course of their training.

#### Objective

- to develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle

#### Content

The aim is for the students to familiarise themselves with a new topic by obtaining material and studying the sources, so that they can selectively extend their specialist competence in this way.

- to try out different options for specialist further training in their profession.

Thematic Schwerpunkte:

- Game theory provides a formal model to study the behavior and interaction of self-interested users and programs in large-scale distributed computer systems without central control. The course discusses algorithmic aspects of game theory.

No lecture notes, but slides will be made available on the course webpage.

Yes.

Learning the basic concepts of game theory and mechanism design, acquiring the computational paradigm of self-interested agents, and using these concepts in the computational and algorithmic setting.

252-0341-00L

Information Retrieval

W 4 credits 2V+1U

T. Hofmann

Objective

In depth understanding of managing, indexing, and retrieving documents with text, image and XML content. Knowledge of basic search algorithms on the web, benchmarking of search algorithms, and relevance feedback methods.

Abstract

Introduction to information retrieval with a focus on text documents and images. Main topics comprise extraction of characteristic features from documents, index structures, retrieval models, search algorithms, benchmarking, and feedback mechanisms. Searching the web, images and XML collections demonstrate recent applications of information retrieval and their implementation.

252-0417-00L

Randomized Algorithms and Probabilistic Methods

W 7 credits 3V+2U+1A

A. Steger

Objective

After this course students will know fundamental techniques from probabilistic combinatorics for designing randomized algorithms and will be able to apply them to solve typical problems in these areas.

Abstract

Las Vegas & Monte Carlo algorithms; inequalities of Markov, Chebyshev, Chernoff; negative correlation; Markov chains: convergence, rapidly mixing; generating functions; Examples include: min cut, median, balls and bins, routing in hypercubes, 3SAT, card shuffling, random walks

Content

Randomized Algorithms are algorithms that "flip coins" to take certain decisions. This concept extends the classical model of deterministic algorithms and has become very popular and useful within the last twenty years. In many cases, randomized algorithms are faster, simpler or just more elegant than deterministic ones. In the course, we will discuss basic principles and techniques and derive from them a number of randomized methods for problems in different areas.

252-0535-00L

Machine Learning

W 6 credits 3V+2U

J. M. Buhmann

Objective

Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real world data.

Abstract

Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

Content

The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous machine learning algorithms on real world-data.

Lecture notes

No lecture notes, but slides will be made available on the course webpage.

Literature

Solid basic knowledge in analysis, statistics and numerical methods for CSE. Experience in programming for solving the project tasks.

252-1407-00L

Algorithmic Game Theory

W 7 credits 3V+2U+1A

P. Widmayer

Objective

Learning the basic concepts of game theory and mechanism design, acquiring the computational paradigm of self-interested agents, and using these concepts in the computational and algorithmic setting.
Content
The Internet is a typical example of a large-scale distributed computer system without central control, with users that are typically only interested in their own good. For instance, they are interested in getting high bandwidth for themselves, but don’t care about others, and the same is true for computational load or download rates. Game theory provides a particularly well-suited model for the behaviour and interaction of such selfish users and programs. Classical game theory dates back to the 1930s and typically does not consider algorithmic aspects at all. Only a few years back, algorithms and game theory have been considered together, in an attempt to reconcile selfish behavior of independent agents with the common good.

This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.

Outline:
- Introduction to classical game theoretic concepts.
- Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity.
- The cost difference between an optimum under central control and an equilibrium under selfish agents, known as the “price of anarchy”.
- Auction-like mechanisms and algorithms that “direct” the actions of selfish agents into a certain desired equilibrium situation.
- Selected current research topics of Algorithmic Game Theory, such as Web-Search Based Keyword Auctions, or Information Cascading in Social Networks

Lecture notes
No lecture notes.

Literature
"Game Theory and Strategy", Philip D. Straffin, The Mathematical Association of America, 5th printing, 2004

Prerequisites / notice
Several copies of both books are available in the Computer Science library.

Audience: Although this is a Computer Science course, we encourage the participation from all students who are interested in this topic.

Requirements: You should enjoy precise mathematical reasoning. You need to have passed a course on algorithms and complexity. No knowledge of game theory is required.

Compulsory Elective Courses
Further course offerings from the category Educational Science are listed under “Programme: Educational Science for Teaching Diploma and TC”. see Compulsory Elective Courses Teaching Diploma

Abstract
Concepts to cope with: a) what can be accomplished in a fully automated fashion (algorithmically solvable) b) How to measure the inherent difficulty of tasks (problems) c) What is randomness and how can it be useful? d) What is nondeterminism and what role does it play in CS? e) How to represent infinite objects by finite automata and grammars?

Objective
Learning the basic concepts of computer science along their historical development

Content
This lecture gives an introduction to theoretical computer science, presenting the basic concepts and methods of computer science in its historical context. We present computer science as an interdisciplinary science which, on the one hand, investigates the border between the possible and the impossible and the quantitative laws of information processing, and, on the other hand, designs, analyzes, verifies, and implements computer systems.

The main topics of the lecture are:
- alphabets, words, languages, measuring the information content of words, representation of algorithmic tasks
- finite automata, regular and context-free grammars
- Turing machines and computability
- complexity theory and NP-completeness
- design of algorithms for hard problems

Lecture notes
The lecture is covered in detail by the textbook “Theoretical Computer Science”.

Basic literature:

Further reading:

More exercises and examples in:
6. A. Asteroth, Ch. Baier: Theoretische Informatik

Prerequisites / notice
During the semester, two non-obligatory test exams will be offered.
Abstract

Introduction to computer architecture and system programming:

Instruction sets, storage hierarchies, runtime structures with an emphasis on computers as engines for the execution of compiled programs. Interaction between system software and the hardware. Problems that arise from the final representation, performance measurement and tuning, and program portability issues are covered.

Objective

The objective is to allow students to understand all aspects of the execution of compiled (C) programs on modern architectures -- the instruction set, the storage resources (registers, stack, memory), input/output, the impact of compiler decisions, and the interaction between the operating system and hardware. Two main themes are correctness issues (esp. those that arise from the finite representation of data) and performance issues (incl. measurement and tuning issues). The interface to the operating system is discussed to prepare for subsequent classes on more advanced systems topics.

The two key goals are:

1) To equip students with a thorough understanding of how to write correct programs that run fast on modern computer, and
2) How to write correct and efficient low-level systems code.

This course does not cover how to design or build a processor or computer.

Content

This course provides an overview of “computers” as a platform for the execution of (compiled) computer programs. This course provides a programmer's view of how computer systems execute programs, store information, and communicate. The course introduces the major computer architecture structures that have direct influence on the execution of programs (processors with registers, caches, other levels of the memory hierarchy, supervisor/kernel mode, and I/O structures) and covers implementation and representation issues only to the extend that they are necessary to understand the structure and operation of a computer system.

The course attempts to expose students to the practical issues that affect performance, portability, security, robustness, and extensibility. This course provides a foundation for subsequent courses on operating systems, networks, compilers and many other courses that require an understanding of the system-level issues. Topics covered include: machine-level code and its generation by optimizing compilers, address translation, input and output, trap/event handlers, performance evaluation and optimization (with a focus on the practical aspects of data collection and analysis).

Literature

The course is based in part on “Computer Systems: A Programmer's Perspective” (2nd Edition) by R. Bryant and D. O'Hallaron, with some additional material.

Abstract
Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.

Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils' work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Content

Die Themen für die beiden Prüfungslektionen am Schluss des Praktikums erfahren die Studierenden in der Regel eine Woche vor dem Prüfungstermin. Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie bis am Vortrag um 12 Uhr den beiden Prüfungsexperten (Fachdidaktiker/-in, Departementsvertreter/-in) ein. Die gehaltenen Lektionen werden kriteriumsbasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/der Kandidatin über die gehaltenen Lektionen im Rahmen eines kurzen Kolloquiums.

**Abstract**

Students learn how to solve algorithmic problems given by a textual description (understanding problem setting, finding appropriate modeling, choosing suitable algorithms, and implementing them). Knowledge of basic algorithms and data structures is assumed; more advanced material and usage of standard libraries for combinatorial algorithms are introduced in tutorials.

**Objective**

The objective of this course is to learn how to solve algorithmic problems given by a textual description. This includes appropriate problem modeling, choice of suitable (combinatorial) algorithms, and implementing them (using C+++, STL, CGAL, and BGL).

**Abstract**

The goal of this course is to teach students how to evaluate the performance of complex computer and software systems. Accordingly, the methodology to carry out experiments and measurements is studied.

Furthermore, the modelling of systems with the help of queueing network systems is explained.

**Objective**

The goal of this course is to teach students how to evaluate the performance of complex computer and software systems.

**Abstract**

Study of computational techniques, algorithms and data structures used to solve problems in computational biology. Topics: basic biology, string alignment, phylogeny (distance, character, parsimony), molecular evolution, multiple sequence alignment, probabilistic and statistical models, Markov models, miRNA, dynamic programming, maximum likelihood and specialized DNA and protein analysis.

**Objective**

Familiarize the students with the basic concepts of molecular biology and the models and algorithms used to understand, classify and predict behaviour of living organism. This course is at the most basic level, where the main issues, mostly of molecular sequences, are studied.

**Content**

This course lies in the intersection between Computer Science and Molecular Biology. The main purpose is to study computational techniques, algorithms and data structures which are usually applied to solve problems in Molecular Biology and Biochemistry.

The following topics are likely to be covered: Introduction, mathematical models of evolution, protein and DNA sequence alignment and its meaning, phylogenetic tree construction, multiple sequence alignments, secondary structure prediction, molecular dynamics, threading, role of bioinformatics in drug design, etc. From the computer science point of view we concentrate our attention in practical solutions for the above problems. Biological knowledge is an asset but not a prerequisite.

**Abstract**

Study of fundamental concepts, models and computational methods for the analysis of complex biological networks. Topics: Systems approaches in biology, biology and reaction network fundamentals, modeling and simulation approaches (topological, probabilistic, stoichiometric, qualitative, linear / nonlinear ODEs, stochastic), and systems analysis (complexity reduction, stability, identification).

**Objective**

The aim of this course is to provide an introductory overview of mathematical and computational methods for the modeling, simulation and analysis of biological networks.

**Content**

Biology has witnessed an unprecedented increase in experimental data and, correspondingly, an increased need for computational methods to analyze this data. The explosion of sequenced genomes, and subsequently, of bioinformatics methods for the storage, analysis and comparison of genetic sequences provides a prominent example. Recently, however, an additional area of research, captured by the label "Systems Biology", focuses on how networks, which are more than the mere sum of their parts' properties, establish biological functions. This is essentially a task of reverse engineering. The aim of this course is to provide an introductory overview of corresponding computational methods for the modeling, simulation and analysis of biological networks.

We will start with an introduction into the basic units, functions and design principles that are relevant for biology at the level of individual cells. Making extensive use of example systems, the course will then focus on methods and algorithms that allow for the investigation of biological networks with increasing detail. These include (i) graph theoretical approaches for revealing large-scale network organization, (ii) probabilistic (Bayesian) network representations, (iii) structural network analysis based on reaction stoichiometries, (iv) qualitative methods for dynamic modeling and simulation (Boolean and piece-wise linear approaches), (v) mechanistic modeling using ordinary differential equations (ODEs) and finally (vi) stochastic simulation methods.

**Abstract**

Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

**Objective**

Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real world data.
The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.

Topics covered in the lecture include:
- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non-parametric density estimation: Parzen windows, nearest neighbour
- Dimension reduction: principal component analysis (PCA) and beyond

Topics covered in the lecture include:

| Lecture notes | No lecture notes, but slides will be made available on the course webpage. |

Prerequisites / notice
Solid basic knowledge in analysis, statistics and numerical methods for CSE. Experience in programming for solving the project tasks.
Literature

Prerequisites / notice

Prerequisites: Linear Algebra, Analysis, Computational Science.
The exercises are made with Matlab.

263-5150-00L Scientific Databases

Abstract

Scientific databases share many aspects with classical DBs, but have additional specific aspects. We will review Relational DBs, Object Oriented DBs, Knowledge DBs, textual DBs and the Semantic Web. All these topics will be studied from the point of view of the scientific applications (Bioinformatics, Physics, Chemistry, Health, Engineering) A toy SDB will be used for exercises.

Objective

The goals of this course are to:
(a) Familiarize the students with how existing DBs can be used for scientific applications.
(b) Recognize the areas where SciDBs differ and require additional features compared to classical DBs.
(c) Be able to understand more easily SciDBs, improve existing ones or design/create new ones.
(d) Familiarize the students with at least two examples of SciDBs.

Content

1) - Introduction, Statement of the problem, course structure, exercises, why Scientific DBs (SDBs) do not fit exactly the classical DB area.
   - Hierarchy: File systems, data bases, knowledge bases and variations.
   - Efficiency issues and how they differ from classical DB.
2) - Relational DB used for scientific data, pros/cons
   - Introduction to RDB, limitations of the model, basics of SQL, handling of metadata, examples of scientific use of RDBs.
3) - Object Oriented DB. Rich/structured objects are very appealing in SDB. OODB primitives and environments. OODB searching.
   - Space and access time efficiency of OODBs.
4) - Knowledge bases, key-value stores, ontologies, workflow-based architectures. WASA.
5) - MapReduce / Hadoop
6) - Storing and sharing mathematical objects, Open Math, its relation with OODB and Knowledge bases. Also the problem of chemical formula representation.
7) - SGML and XML, human-readable databases, genomic databases.
   - Advantages of human-readable databases (the huge initial success of genomic databases).
8) - Semantic web, Resource Description Framework (RDF) triples, SparQL.
   - An example of very flexible database for knowledge storage. Goals of the Semantic Web, discussion about its future.
9) - An ideal scenario (and the design of a toy system with most of the desired features for exploration and exercises).
11) - Functional testing, Verifiers, Consistency, Short-circuit testing, Recovery and Automatic recovery, Backup (incremental) methods.
12) - Performance and space issues, various uses of compression, concurrency control. Hardware issues, clusters, Cloud computing, Crowd-sourcing.
13) - Guest speaker: Ioannis Xenarios (UniProtKB/Swiss-Prot).

151-0104-00L Uncertainty Quantification for Engineering & Life Sciences

Abstract

Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective

The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicores architectures.

Content

Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes

The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature

Several papers and online articles will be made available.

There is no single textbook for this course. A significant amount of material will be delivered in the lectures making lecture attendance highly recommended.

Number of participants limited to 60.

Autumn Semester 2015

Data: 06.04.2020 13:01
This course is intended to give students a thorough understanding of design and implementation issues for modern operating systems. We will cover key design issues in implementing an operating system, such as memory management, scheduling, protection, inter-process communication, device drivers, and file systems. The goal is to get an in-depth understanding of actual problems and research topics in the field of computer graphics as well as improve presentations and critical analysis skills.

The courses "Computer Graphics I and II" (GDV I & II) are recommended, but not mandatory.

Along the lectures, model cases will be elaborated and evaluated in the exercises.

Im einzelnen werden u.a. folgende Themen behandelt:
- Modelle verteilter Berechnungen; Raum-Zeit Diagramme; Virtuelle Zeit; Logische Uhren und Kausalität; Wellenalgorithmen; Verteilte und parallele Graphtraversierung; Berechnung konsistenter Schnappschüsse; Wechselseitiger Ausschluss; Election und Symmetriebrechung;
- Verteilte Terminierung; Garbage-Collection in verteilen Systemen; Beobachten verteilter Systeme; Berechnung globaler Prädikate.

Abstract
This seminar course will discuss research topics in the area of information systems. We will read recent research papers on a selected topic, and present/discuss them in class.

Objective
Gain hands-on-experience with real products and the latest technology in distributed systems.

Content
Each participant will be assigned as a buddy on another paper which means that they must read the paper and be prepared to start of the discussion on the paper with some comments and questions. Students also have to submit a 2-page summary of the paper that they present. Grading will depend on the quality of the talk, the report, and also active participation during the seminar.

For information of the course or projects available, please contact Prof. Mattern, Prof. Wattenhofer, Prof. Roscoe or Prof. G. Alonso.

Topics covered include

* security requirements & risk analysis,
* system modeling and model-based development methods,
* implementation-level security, and
* evaluation criteria for the development of secure systems

Modules taught:

1. Introduction
   - Introduction of Infsec group and speakers
   - Security meets SW engineering: an introduction
   - The activities of SW engineering, and where security fits in
   - Overview of this class
2. Requirements Engineering: Security Requirements and some Analysis
   - overview: functional and non-functional requirements
   - use cases, misuse cases, sequence diagrams
   - safety and security
   - FMEA, FTA, attack trees
3. Modeling in the design activities
   - structure, behavior, and data flow
   - class diagrams, statecharts
4. Model-driven security for access control (design)
   - SecureUML as a language for access control
   - Combining Design Modeling Languages with SecureUML
   - Semantics, i.e., what does it all mean,
   - Generation
   - Examples and experience
5. Model-driven security (Part II)
   - Continuation of above topics
6. Security patterns (design and implementation)
7. Implementation-level security
   - Buffer overflows
   - Input checking
   - Injection attacks
8. Testing
   - overview
   - model-based testing
   - testing security properties
9. Risk analysis and management 1 (project management)
   - "risk": assets, threats, vulnerabilities, risk
   - risk assessment: quantitative and qualitative
   - safeguards
   - generic risk analysis procedure
   - The OCTAVE approach
10. Risk analysis: IT baseline protection
    - Overview
    - Example
11. Evaluation criteria
    - CMM
    - systems security engineering CMM
    - common criteria
12. Guest lecture
    - TBA

Literature

- Further relevant books and journal/conference articles will be announced in the lecture.

Prerequisites / notice

Prerequisite: Class on Information Security

System Security

252-1414-00L

The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over operating system related security mechanisms to application software systems, such as host based intrusion detection systems. In the second part, the focus is on system design and methodologies for large projects.

In this lecture, students learn about the security requirements and capabilities that are expected from modern hardware, operating systems and other software environments. An overview of available technologies, algorithms and standards is given, with which these requirements can be met.
The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over operating system related security mechanisms to application software systems such as host based intrusion detection systems. The main topics covered are: tamper resistant hardware, CPU support for security, protection mechanisms in the kernel, file system security (permissions / ACLs / network filesystem issues), IPC Security, mechanisms in more modern OS, such as Capabilities and Zones, Libraries and Software tools for security assurance, etc.

In the second part, the focus is on system design and methodologies for large projects. The main question answered is how to get a large secure system. Topics include: patch management, common software faults (buffer overflows, etc.), writing secure software (design, architecture, QA, testing), compiler-supported security, language-supported security (java...), logging and auditing (BSM audit, dtrace, ...), cryptographic support, TCG, secure file systems, dos/windows/ windowsXP security issues.

Along the lectures, model cases will be elaborated and evaluated in the exercises.

| 252-1411-00L | Security of Wireless Networks  
* Core Elements: Wireless communication channel, Wireless network architectures and protocols, Attacks on wireless networks, Protection techniques.  
* After this course, the students should be able to: describe and classify security goals and attacks in wireless networks; describe security architectures of the following wireless systems and networks: 802.11, GSM/UMTS, RFID, ad hoc/sensor networks; reason about security protocols for wireless network; implement mechanisms to secure 802.11 networks.  
* Wireless network basics, Wireless electronic warfare: jamming and target tracking, Basic security protocols in cellular, WLAN and multi-hop networks. Recent advances in security of multi-hop networks; RFID privacy challenges and solutions. | W    | 5    | 2V+1U+1A | S. Capkun  |
| 263-4630-00L | Computer-Aided Modelling and Reasoning  
* In the Master Programme max. 10 credits can be accounted by Labs on top of the Interfocus Courses. Additional Labs will be listed on the Addendum.  
* The "computer-aided modelling and reasoning" lab is a hands-on course about using an interactive theorem prover to construct formal models of algorithms, protocols, and programming languages and to reason about their properties. The lab has two parts: The first introduces various modelling and proof techniques. The second part consists of a project in which the students apply these techniques.  
* The students learn to effectively use a theorem prover to create unambiguous models and rigorously analyse them. They learn how to write precise and concise specifications, to exploit the proof assistant as a tool for checking and analysing such models and for taming their complexity, and to extract certified executable implementations from such specifications.  
* The "computer-aided modelling and reasoning" lab is a hands-on course about using an interactive theorem prover to construct formal models of algorithms, protocols, and programming languages and to reason about their properties. The focus is on applying logical methods to concrete problems supported by a theorem prover. The course will demonstrate the challenges of formal rigor, but also the benefits of machine support in modelling, proving and validating.  
* The lab will have two parts: The first part introduces basic and advanced modelling techniques (functional programs, inductive definitions, modules), the associated proof techniques (term rewriting, resolution, induction, proof automation), and compilation of the models to certified executable code. In the second part, the students work in teams of two on a project assignment in which they apply these techniques; they build a formal model and prove its desired properties. The project lies in the area of programming languages, model checking, or information security. | W    | 8    | 7P    | A. Lochbihler, C. Sprenger |

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 766 of 1434
The seminar covers various topics in information security including network security, cryptography and security protocols. The participants are expected to read a scientific paper and present it in a 35-40 min talk. At the beginning of the semester a short introduction to presenting techniques will be given. Several case studies illustrate the dark side of the Internet and explain how to protect against current threats. A hands-on computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection.

This lecture is intended for students with an interest in securing Internet services and networked devices. Students are assumed to have knowledge in computer networking and Internet protocols (e.g. course Communication Networks (D-ITET) or Operating Systems and Networks (D-INFK)).

Due to recent changes in the Swiss law, ETH requires each student of this course to sign a written declaration that he/she will not use the information given in this for illegal purposes. This declaration will have to be signed and submitted no later than at the beginning of the second lesson.

Abstract
The seminar covers various topics in information security: security protocols (models, specification & verification), trust management, access control, non-interference, side-channel attacks, identity-based cryptography, host-based attack detection, anomaly detection in backbone networks, key-management for sensor networks.

Objective
The main goals of the seminar are the independent study of scientific literature and assessment of its contributions as well as learning and practicing presentation techniques.

Content
The seminar covers various topics in information security, including network security, cryptography and security protocols. The participants are expected to read a scientific paper and present it in a 35-40 min talk. At the beginning of the semester a short introduction to presentation techniques will be given.

Selected Topics
- security protocols: models, specification & verification
- trust management, access control and non-interference
- side-channel attacks
- identity-based cryptography
- host-based attack detection
- anomaly detection in backbone networks
- key-management for sensor networks

252-0463-00L  Security Engineering

Abstract
Subject of the class are engineering techniques for developing secure systems. We examine concepts, methods and tools, applied within
different activities of the SW development process to improve security of the system. Topics: security requirements & risk analysis,
modeling & model-based development methods, implementation-level security, and evaluation criteria for secure systems

Objective
Security engineering is an evolving discipline that unifies two important areas: software engineering and security. Software Engineering
addresses the development and application of methods for systematically developing, operating, and maintaining, complex, high-quality
software.
Security, on the other hand, is concerned with assuring and verifying properties of a system that relate to confidentiality, integrity, and
availability of data.

The goal of this class is to survey engineering techniques for developing secure systems. We will examine concepts, methods, and tools
that can be applied within the different activities of the software development process, in order to improve the security of the resulting
systems.

Topics covered include
* security requirements & risk analysis,
* system modeling and model-based development methods,
* implementation-level security, and
* evaluation criteria for the development of secure systems

Content
Security engineering is an evolving discipline that unifies two important areas: software engineering and security. Software Engineering
addresses the development and application of methods for systematically developing, operating, and maintaining, complex, high-quality
software.
Security, on the other hand, is concerned with assuring and verifying properties of a system that relate to confidentiality, integrity, and
availability of data.

The goal of this class is to survey engineering techniques for developing secure systems. We will examine concepts, methods, and tools
that can be applied within the different activities of the software development process, in order to improve the security of the resulting
systems.

Topics covered include
* security requirements & risk analysis,
* system modeling and model-based development methods,
* implementation-level security, and
* evaluation criteria for the development of secure systems

Modules taught:

1. Introduction
   - Introduction of Infsec group and speakers
   - Security meets SW engineering: an introduction
   - The activities of SW engineering, and where security fits in
     - Overview of this class
2. Requirements Engineering: Security Requirements and some Analysis
   - overview: functional and non-functional requirements
   - use cases, misuse cases, sequence diagrams
   - safety and security
   - FMEA, FTA, attack trees
3. Modeling in the design activities
   - structure, behavior, and data flow
   - class diagrams, statecharts
4. Model-driven security for access control (design)
   - SecureUML as a language for access control
   - Combining Design Modeling Languages with SecureUML
   - Semantics, i.e., what does it all mean,
   - Generation
   - Examples and experience
5. Model-driven security (Part II)
   - Continuation of above topics
6. Security patterns (design and implementation)
7. Implementation-level security
   - Buffer overflows
   - Input checking
   - Injection attacks
8. Testing
   - overview
   - model-based testing
   - testing security properties
9. Risk analysis and management 1 (project management)
   - "risk": assets, threats, vulnerabilities, risk
   - risk assessment; quantitative and qualitative
   - safeguards
   - generic risk analysis procedure
   - The OCTAVE approach
10. Risk analysis: IT baseline protection
    - Overview
    - Example
11. Evaluation criteria
    - CMMI
    - systems security engineering CMM
    - common criteria
12. Guest lecture
    - TBA
Scientific databases share many aspects with classical DBs, but have additional specific aspects. We will review Relational DBs, Object Oriented DBs, Knowledge DBs, textual DBs and the Semantic Web. All these topics will be studied from the point of view of the scientific applications (Bioinformatics, Physics, Chemistry, Health, Engineering). A toy SDB will be used for exercises.

The goals of this course are to:
(a) Familiarize the students with how existing DBs can be used for scientific applications.
(b) Recognize the areas where SciDBs differ and require additional features compared to classical DBs.
(c) Be able to understand more easily SciDBs, improve existing ones or design/create new ones.
(d) Familiarize the students with at least two examples of SciDBs.
### Content

1) - Introduction, Statement of the problem, course structure, exercises, why Scientific DBs (SDBs) do not fit exactly the classical DB area. Efficiency issues and how they differ from classical DB.

2) - Relational DB used for scientific data, pros/cons. Introduction to RDB, limitations of the model, basics of SQL, handling of metadata, examples of scientific use of RDBs.

3) - Object Oriented DB. Rich/structured objects are very appealing in SDB. OODB primitives and environments. OODB searching, Space and access time efficiency of OODBs.

4) - Knowledge bases, key-value stores, ontologies, workflow-based architectures. WASA.

5) - MapReduce / Hadoop

6) - Storing and sharing mathematical objects, Open Math, its relation with OODB and Knowledge bases. Also the problem of chemical formula representation.

7) - SGML and XML, human-readable databases, genomic databases. Advantages of human-readable databases (the huge initial success of genomic databases).

8) - Semantic web, Resource Description Framework (RDF) triples, SparQL. An example of very flexible database for knowledge storage. Goals of the Semantic Web, discussion about its future.

9) - An ideal scenario (and the design of a toy system with most of the desired features for exploration and exercises).

11) - Functional testing, Verifiers, Consistency, Short-circuit testing, Recovery and Automatic recovery, Backup (incremental) methods.

12) - Performance and space issues, various uses of compression, concurrency control. Hardware issues, clusters, Cloud computing, Crowd-sourcing.

13) - Guest speaker: Ioannis Xenarios (UniProtKB/Swiss-Prot).

### Literature

Several papers and online articles will be made available. There is no single textbook for this course. A significant amount of material will be delivered in the lectures making lecture attendance highly recommended.

#### 263-5200-00L Data Mining: Learning from Large Data Sets

<table>
<thead>
<tr>
<th>Abstract</th>
<th>Many scientific and commercial applications require insights from massive, high-dimensional data sets. This course introduces principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course both covers theoretical foundations and practical applications.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objective</td>
<td>We will study principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course will both cover theoretical foundations and practical applications.</td>
</tr>
</tbody>
</table>
| Content  | Topics covered:
- Dealing with large data (Data centers; Map-Reduce/Hadoop; Amazon Mechanical Turk)
- Fast nearest neighbor methods (Shingling, locality sensitive hashing)
- Online learning (Online optimization and regret minimization, online convex programming, applications to large-scale Support Vector Machines)
- Multi-armed bandits (exploration-exploitation tradeoffs, applications to online advertising and relevance feedback)
- Active learning (uncertainty sampling, pool-based methods, label complexity)
- Dimension reduction (random projections, nonlinear methods)
- Data streams (Sketches, coresets, applications to online clustering)
- Recommender systems |
| Prerequisites / notice | Prerequisites: Solid basic knowledge in statistics, algorithms and programming. Background in machine learning is helpful but not required. |

#### 263-5210-00L Probabilistic Artificial Intelligence

<table>
<thead>
<tr>
<th>Abstract</th>
<th>This course introduces core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objective</td>
<td>How can we build systems that perform well in uncertain environments and unforeseen situations? How can we develop systems that exhibit &quot;intelligent&quot; behavior, without prescribing explicit rules? How can we build systems that learn from experience in order to improve their performance? We will study core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet. The course is designed for upper-level undergraduate and graduate students.</td>
</tr>
</tbody>
</table>
| Content  | Topics covered:
- Search (BFS, DFS, A*), constraint satisfaction and optimization
- Tutorial in logic (propositional, first-order)
- Probability
- Bayesian Networks (models, exact and approximate inference, learning) - Temporal models (Hidden Markov Models, Dynamic Bayesian Networks)
- Probabilistic planning (MDPs, POMDPs)
- Reinforcement learning
- Combining logic and probability |
| Prerequisites / notice | Solid basic knowledge in statistics, algorithms and programming |
This seminar course will discuss research topics in the area of information systems. We will read recent research papers on a selected topic, and present/discuss them in class.

The goal is to introduce students to current research, and to enable them to read, understand, and present scientific papers.

Each participant will be required to give a presentation of about 30 mins followed by a discussion on an assigned topic. In addition, each participant will be assigned as a buddy on another paper which means that they must read the paper and be prepared to start of the discussion on the paper with some comments and questions. Students also have to submit a 2-page summary of the paper that they present. Grading will depend on the quality of the talk, the report, and also active participation during the seminar.

This course surveys some of the main approaches to software verification, including axiomatic semantics, abstract interpretation, model checking, and testing.

The idea of software verification has been around for decades, but only recently have the techniques become mature enough to be implemented and be applicable in practice. Progress has been made possible by the convergence of different techniques, originally developed in isolation.

This course embraces this diversity of approaches, by surveying some of the main ideas, techniques, and results in software verification. These include in particular:

- Axiomatic semantics, which provides a foundation of program correctness proofs by supplying a rigorous semantics of programs.
- Abstract interpretation, which provides a general framework to express and design static techniques for program analysis.
- Model checking, which provides efficient techniques for the exhaustive exploration of state-based models of programs and reactive systems.
- Testing, which provides the counterpart to exhaustive techniques by defining dynamic analyses to detect programming mistakes and correct them.

To demonstrate some of the techniques in practice, the course will offer a practical project requiring the application of verification tools to illustrative examples.
Literature Axiomatic semantics:

Abstract interpretation:

Model checking and real-time:

Testing:

263-2800-00L Design of Parallel and High-Performance Computing W 7 credits 3V+2U+1A T. Hoefler, M. Püschel

Abstract Advanced topics in parallel / concurrent programming.
Understand concurrency paradigms and models from a higher perspective and acquire skills for designing, structuring and developing possibly large concurrent software systems. Become able to distinguish parallelism in problem space and in machine space. Become familiar with important technical concepts and with concurrency folklore.

Objective

Understand concurrency paradigms and models from a higher perspective and acquire skills for designing, structuring and developing possibly large concurrent software systems. Become able to distinguish parallelism in problem space and in machine space. Become familiar with important technical concepts and with concurrency folklore.

Focus Elective Courses Software Engineering

Number Title Type ECTS Hours Lecturers

252-0273-01L Distributed Software Engineering Laboratory W 8 credits 2V+2U+3A B. Meyer, P. Kolb, D. M. Nordio

Abstract In the Master Programme max. 10 credits can be accounted by Labs on top of the Interfocus Courses. Additional Labs will be listed on the Addendum.
The Distributed Software Engineering Laboratory introduces the software engineering principles and techniques appropriate for the increasingly prevalent style of modern software development, involving teams spread across teams, companies and countries.
The course involves a distributed project conducted in cooperation with student teams from other universities.

Objective

Modern software development is increasingly "distributed": projects are developed by different groups collaborating across teams, companies, countries, timezones. This setup radically alters the assumptions underlying many of the traditional views of software engineering.

Content Basics of distributed development

The outsourcing phenomenon; country review.
Requirements engineering for distributed projects.
Quality assurance for distributed projects.
Process models (especially CMMI) and agile methods.
Supplier assessment and qualification.
Negotiating a contract for a distributed project.
Software project management for distributed projects.
Role of interfaces and other technical issues of distributed development.

A key part of the Laboratory is the course project, performed in groups involving teams from other universities. Students get to practice distributed development directly, experiencing issues and applying techniques presented in the course.

Lecture notes

The exercise sessions usually start at 9am.

Prerequisites / notice

The course page includes the full set of slides and links to supplementary documentation.
Prerequisites: Basic understanding of programming.

252-0286-00L System Construction W 4 credits 2V+1U F. O. Friedrich

Abstract Main goal is teaching knowledge and skills needed for building custom operating systems and runtime environments. Relevant topics are studied at the example of sufficiently simple systems that have been built at our Institute in the past, ranging from purpose-oriented single processor real-time systems up to generic system kernels on multi-core hardware.
The lecture's main goal is teaching of knowledge and skills needed for building custom operating systems and runtime environments.

The lecture intends to supplement more abstract views of software construction, and to contribute to a better understanding of "how it really works" behind the scenes.

**Objective**

Case Study 1: Embedded System
- Safety-critical and fault-tolerant monitoring system
- Based on an auto-pilot system for helicopters

Case Study 2: Multi-Processor Operating System
- Universal operating system for symmetric multiprocessors
- Shared memory approach
- Based on Language-/System Codesign (Active Oberon / A2)

Case Study 3: Custom designed Single-Processor System
- RISC Single-processor system designed from scratch
- Hardware on FPGA
- Graphical workstation OS and compiler (Project Oberon)

Case Study 4: Custom-designed Multi-Processor System
- Special purpose heterogeneous system on a chip
- Massively parallel hard- and software architecture based on message passing
- Focus: dataflow based applications

**Content**

-B. Meyer, J. W. Shin

**Lecture notes**

Printed lecture notes will be delivered during the lecture. Slides will also be available from the lecture homepage.

</table>

- Knowledge of basic software engineering principles and methods
- Knowledge of how software engineering applies to robotics
- Knowledge of the most common architectures, coordination and synchronization methods
- Experience in design of a small robotics system with aspects of sensing, planning and control

**Content**

- Software engineering tools
- Design patterns
- Software architecture
- ROS and Roboscope
- Perception
- Mapping and localization
- Path planning and obstacle avoidance

**Prerequisites / notice**

Students will program Thymio II educational robot with a Carmine 1.09 RGBD camera as the sensor.

- Combination of lectures and a semester-long project.
- Prior programming experience required. Object-oriented programming (especially Eiffel and C++) strongly recommended. Experience with Linux helpful.

Limited to 18 students.

- Expected to work both individually and in teams of 2-3 students

**Objective**

Combination of lectures and a semester-long project.

**Content**

- Focus: dataflow based applications
- Massively parallel hard- and software architecture based on message passing
- Special purpose heterogeneous system on a chip
- Massively parallel hard- and software architecture based on message passing
- Graphical workstation OS and compiler (Project Oberon)

**Prerequisites / notice**

Limited to 18 students.

- Expected to work both individually and in teams of 2-3 students
The aim of this seminar is to introduce students to recent research results in the area of programming languages and software engineering. To accomplish that, students will study and present research papers in the area as well as participate in paper discussions. The papers will span topics in both theory and practice, including papers on program verification, program analysis, testing, programming language design, and development tools.

The publications to be presented will be announced on the seminar home page at least one week before the first session. Organizational note: the seminar will meet only when there is a scheduled presentation. Please consult the seminar's home page for information.

<td>Learning the basic concepts of game theory and mechanism design, acquiring the computational paradigm of self-interested agents, and using these concepts in the computational and algorithmic setting.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Content</td>
<td>The Internet is a typical example of a large-scale distributed computer system without central control, with users that are typically only interested in their own good. For instance, they are interested in getting high bandwidth for themselves, but don't care about others, and the same is true for computational load or download rates. Game theory provides a particularly well-suited model for the behaviour and interaction of such selfish users and programs. Classical game theory dates back to the 1930s and typically does not consider algorithmic aspects at all. Only a few years back, algorithms and game theory have been considered together, in an attempt to reconcile selfish behavior of independent agents with the common good. This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.</td>
<td></td>
<td></td>
<td></td>

Data: 06.04.2020 13:01 Autumn Semester 2015 Page 775 of 1434
Objective: Each student is expected to read, understand, and elaborate on a selected research paper. To this end, (s)he should give a 45-min. presentation about the paper. The process includes:

* getting an overview of the related literature;
* understanding and working out the background/motivation: why and where are the questions addressed relevant?
* understanding the contents of the paper in all details;
* selecting parts suitable for the presentation;
* presenting the selected parts in such a way that an audience with some basic background in geometry and graph theory can easily understand and appreciate it.

Prerequisites / notice: To attend the seminar, some basic knowledge in (discrete and computational) geometry and graphs and algorithms is required. Thus, previous participation in some of the courses “Graphs and Algorithms”, “Computational Geometry”, “Geometric Graphs: Combinatorics & Algorithms”, or similar courses is strongly encouraged. It is also possible to take this seminar in parallel to the lecture “Computational Geometry”.

<td>The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Topics covered in the lecture include:</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Bayesian theory of optimal decisions</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Maximum likelihood and Bayesian parameter inference</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Ensemble methods: Bagging and Boosting</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Non parametric density estimation: Parzen windows, nearest neighbour</td>

| Abstract     | This course covers some of the fundamental concepts of computer graphics, namely 3D object representations and generation of photorealistic images from digital representations of 3D scenes. |
| Objective    | At the end of the course the students will be able to build a rendering system. The students will study the basic principles of rendering and image synthesis. In addition, the course is intended to stimulate the students' curiosity to explore the field of computer graphics in subsequent courses or on their own. |
| Content      | This course covers fundamental concepts of modern computer graphics. Students will learn about 3D object representations and the details of how to generate photorealistic images from digital representations of 3D scenes. Starting with an introduction to 3D shape modeling, representation, texture mapping and ray-tracing, we will move on to acceleration structures, the physics of light transport, appearance modeling and global illumination principles and algorithms. We will end with an overview of modern image-based image synthesis techniques, covering topics such as lightfields and depth-image based rendering. |
| Lecture notes | No lecture notes, but slides will be made available on the course webpage. |
| Prerequisites / notice | Fundamentals of calculus and linear algebra, basic concepts of algorithms and data structures, programming skills in C++, Visual Computing course recommended. |
| Prerequisites / notice | The programming assignments will be in C++. This will not be taught in the class. |

| 263-5902-00L | Computer Vision | W | 6 credits | 3V+1U+1A | M. Pollefeys, L. Van Gool |
| Abstract     | The goal of this course is to provide students with a good understanding of computer vision and image analysis techniques. The main concepts and techniques will be studied in depth and practical algorithms and approaches will be discussed and explored through the exercises. |
| Objective    | The objectives of this course are: |
|              | 1. To introduce the fundamental problems of computer vision. |
|              | 2. To introduce the main concepts and techniques used to solve those. |
|              | 3. To enable participants to implement solutions for reasonably complex problems. |
|              | 4. To enable participants to make sense of the computer vision literature. |
| Content      | Camera models and calibration, invariant features, Multiple-view geometry, Model fitting, Stereo Matching, Segmentation, 2D Shape matching, Shape from Silhouettes, Optical flow, Structure from motion, Tracking, Object recognition, Object category recognition |
| Prerequisites / notice | It is recommended that students have taken the Visual Computing lecture or a similar course introducing basic image processing concepts before taking this course. |

252-5703-00L Multimedia Communications W 4 credits 2V+1U A. Smolic

Abstract
After a summary of fundamentals in signal processing and information theory, an introduction to processing and coding of different types of multimedia is given.

Objective
Understanding principles of multimedia communications and getting an illustrative overview of available and emerging technology.

Content
After a summary of fundamentals in signal processing and information theory, an introduction to processing and coding of different types of multimedia is given. This starts with speech (PCM, vocoder, CELP etc.), continues over audio (MP3, AAC etc.), still images (JPEG etc.), video (MPEG-2, MPEG-4, H.264/AVC, HEVC etc.), and interactive graphics (MPEG-4), to emerging and future multimedia content such as 3D video, free viewpoint video, high dynamic range video. Algorithms as well as human perception will be addressed.

Content:
- Fundamentals of information theory
- Fundamentals of signal processing and coding
- Speech processing and coding
- Audio processing and coding
- Still image processing and coding
- Video processing and coding
- Emerging multimedia (3D video, free viewpoint video, HDR, HFR)

263-5200-00L Data Mining: Learning from Large Data Sets W 4 credits 2V+1U A. Krause

Abstract
Many scientific and commercial applications require insights from massive, high-dimensional data sets. This courses introduces principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course both covers theoretical foundations and practical applications.

Objective
Many scientific and commercial applications require us to obtain insights from massive, high-dimensional data sets. In this graduate-level course, we will study principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course will both cover theoretical foundations and practical applications.

Content
Topics covered:
- Dealing with large data (Data centers; Map-Reduce/Hadoop; Amazon Mechanical Turk)
- Fast nearest neighbor methods (Shingling, locality sensitive hashing)
- Online learning (Online optimization and regret minimization, online convex programming, applications to large-scale Support Vector Machines)
- Multi-armed bandits (exploration-exploitation tradeoffs, applications to online advertising and relevance feedback)
- Active learning (uncertainty sampling, pool-based methods, label complexity)
- Dimension reduction (random projections, nonlinear methods)
- Data streams (Sketches, coresets, applications to online clustering)
- Recommender systems

Prerequisites/notice
Prerequisites: Solid basic knowledge in statistics, algorithms and programming. Background in machine learning is helpful but not required.

263-5210-00L Probabilistic Artificial Intelligence W 4 credits 2V+1U A. Krause

Abstract
This course introduces core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet.

Objective
How can we build systems that perform well in uncertain environments and unforeseen situations? How can we develop systems that exhibit "intelligent" behavior, without prescribing explicit rules? How can we build systems where the system learns from experience in order to improve their performance? We will study core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet. The course is designed for upper-level undergraduate and graduate students.

Content
Topics covered:
- Search (BFS, DFS, A*), constraint satisfaction and optimization
- Tutorial in logic (propositional, first-order)
- Probability
- Bayesian Networks (models, exact and approximate inference, learning) - Temporal models (Hidden Markov Models, Dynamic Bayesian Networks)
- Probabilistic palnning (MDPs, POMDPs)
- Reinforcement learning
- Combining logic and probability

Prerequisites/notice
Solid basic knowledge in statistics, algorithms and programming

252-0527-00L Probabilistic Graphical Models for Image Analysis W 4 credits 3G

Abstract
This course will focus on the algorithms for inference and learning with statistical models. We use a framework called probabilistic graphical models which include Bayesian Networks and Markov Random Fields.

Objective
We will use examples from traditional vision problems such as image registration and image segmentation, as well as recent problems such as object recognition.

Literature
Students will be introduced to probabilistic graphical models and will learn how to apply them to problems in image analysis and understanding. The focus will be to study various algorithms for inference and parameter learning.

Seminar Visual Computing

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 777 of 1434
This seminar covers advanced topics in computer graphics, such as modeling, rendering, animation, real-time graphics, physical simulation, and computational photography. Each time the course is offered, a collection of research papers is selected and each student presents one paper to the class and leads a discussion about the paper and related topics.

The goal is to get an in-depth understanding of actual problems and research topics in the field of computer graphics as well as improve presentations and critical analysis skills.

The seminar will cover a number of recent papers which have emerged as important contributions to the pattern recognition and machine learning literature. The topics will vary from year to year but they are centered on methodological issues in machine learning like new learning algorithms, ensemble methods or new statistical models for machine learning applications. Frequently, papers are selected from computer vision or bioinformatics - two fields, which relies more and more on machine learning methodology and statistical models.

The papers will be presented in the first session of the seminar.

Advanced Topics in Computer Graphics and Vision

W 2 credits 2S  M. Gross, M. Pollefeys, O. Sorkine Hornung

This seminar covers advanced topics in computer graphics, including both seminal research papers as well as the latest research results. Each time the course is offered, a collection of research papers are selected covering topics such as modeling, rendering, animation, real-time graphics, physical simulation, and computational photography. Each student presents one paper to the class and leads a discussion about the paper and related topics.

The course "Computer Graphics I and II" (GDV I & II) are recommended, but not mandatory.

Computer Science Elective Courses

The Elective Computer Science Courses can be selected from all Master level courses offered by D-INFK.

Wireless and Mobile Computing for Entertainment Applications

W 4 credits 2V+1U  S. Mangold

This course gives a detailed overview about the 802 standards and summarizes the state of the art for WLANs, WPANs, and WMANs, including new topics such as mesh networks, cognitive radio, and visible light communications. The course combines lectures with a set of assignments in which students are asked to work with a simple JAVA simulation software.

The objective of the course is to learn about the general principles of wireless communications, including physics, frequency spectrum regulation, and standards. Further, the most up-to-date standards and protocols used for wireless LAN IEEE 802.11, Bluetooth and Wi-Fi, mesh networks, sensor networks, cellular networks, visible light communication, and cognitive radios, are analyzed and evaluated.

Students develop their own add-on mobile computing algorithms to improve the behavior of the systems, using a JAVA-based event-driven simulator. We also hand out embedded systems that can be used for experiments for optical communication.

The script will be made available from the course webpage.

(1) The course blog at http://blogs.ethz.ch/stefanmangold/
(2) The course webpage at http://www.lst.inf.ethz.ch/teaching/lectures/hs14/293/index.html
(3) The JAVA simulation kernel "jemula"
(4) The JAVA 802 protocol emulator "JEmula802"

Students should have interest in wireless communication, and should be familiar with JAVA programming.

Smart Energy

W 3 credits 2G  F. Mattern, V. Tiefenbeck

The course is 10 ECTS credits. The lecture covers the role of ICT for sustainable energy usage. Concepts of the emerging smart grid are outlined and approaches to motivate sustainable consumer choices are explained. The lecture combines technologies from ubiquitous computing and traditional ICT with insights from socio-psychological concepts and illustrates them with examples from actual applications.

Participants become familiar with the challenges related to sustainable energy usage, understand the principles of a smart grid infrastructure and its applications, know the role of ubiquitous computing technologies, can explain the challenges regarding security and privacy, can reflect the basics cues to induce changes in consumer behavior, develop a general understanding of the effects of a smart grid infrastructure on energy efficiency, and know how to apply the learning to related design projects.

- Background on energy generation and consumption; characteristics, potential, and limitations of renewable energy sources
- Introduction to energy economics
- Smart grid and smart metering infrastructures, virtual power plants, security challenges
- Demand management and home automation using ubiquitous computing technologies
- Changing consumer behavior with smart ICT
- Benefits challenges of a smart energy system

Note: The script will be made available from the course webpage.

Prerequisites / notice

Students should have interest in wireless communication, and should be familiar with JAVA programming.

Number Title Type ECTS Hours Lecturers
252-0293-00L Wireless and Mobile Computing for Entertainment Applications W 4 credits 2V+1U S. Mangold
252-3051-00L Advanced Topics in Machine Learning W 2 credits 2S J. M. Buhmann, T. Hofmann, A. Krause
252-5701-00L Advanced Topics in Computer Graphics and Vision W 2 credits 2S M. Gross, M. Pollefeys, O. Sorkine Hornung
252-3610-00L Smart Energy W 3 credits 2G F. Mattern, V. Tiefenbeck
Prerequisites / notice

The course covers advanced knowledge in the design of complex computer systems, in particular embedded systems. Models and methods are discussed that are fundamental for systems that consist of software and hardware components.

Prerequisites for the course is a basic knowledge in the following areas: computer architecture, digital design, software design, embedded systems

Hardware/Software Codesign

227-0778-00L

Abstract

The course provides advanced knowledge in the design of complex computer systems, in particular embedded systems. Models and methods are discussed that are fundamental for systems that consist of software and hardware components.

Objective

The course provides advanced knowledge in the design of complex computer systems, in particular embedded systems. Models and methods are discussed that are fundamental for systems that consist of software and hardware components.

Content

The course covers advanced topics in GIS: GIS project lifecycle, Managing GIS, Legal issues, GIS assets & constraints; Geospatial Web Services: technical basics, architecture, functions, interoperability, standards, mashups, portals, applications; Geostatistics; Sensor Web Enablement; Human-Computer Interaction; Cognitive Issues in GIS.

Lecture notes

Material for exercises, copies of transparencies.

Literature

Prerequisites / notice

G. DeMicheli, R. Ernst and W. Wolf, Readings in Hw/Sw Co-design, M. Kaufmann, 2003.

GIS III

Abstract

The course deals with advanced topics in GIS: GIS project lifecycle, Managing GIS, Legal issues, GIS assets & constraints; Geospatial Web Services: technical basics, architecture, functions, interoperability, standards, mashups, portals, applications; Geostatistics; Sensor Web Enablement; Human-Computer Interaction; Cognitive Issues in GIS.

Objective

Students will get a detailed overview of advanced GIS topics. They will go through all steps of setting up a Web-GIS application in the labs and present in small groups at the end of the course. The course covers all aspects of delivering strong presentations. I explain common mistakes, what works and what does not, and why. Then I discuss structure and content as well as a set of fundamental principles from graphic design that make slides communicate effectively. These principles also apply to the presentation and visualization of data which is covered in some detail. Finally, I give some useful tips on the use of Powerpoint that simplify the creation of strong presentations.

Autumn Semester 2015

263-0600-00L Research in Computer Science

Abstract

Independent project work under the supervision of a Computer Science Professor.

Objective

Independent project work under the supervision of a Computer Science Professor.

Prerequisites / notice

Only students who fulfill one of the following requirements are allowed to begin a research project:

a) 1 lab (interfocus course) and 1 focus course
b) 2 core focus courses
c) 2 labs (interfocus courses)

A task description must be submitted to the Student Administration Office at the beginning of the work.

Elective Courses

Students can individually choose from the entire Master course offerings from ETH Zurich, EPF Lausanne, the University of Zurich and - with the consent of the mentor - from all other Swiss universities.

For further details, refer to Art. 31 of the Regulations 2009 for the Master Program in Computer Science.

Internship

The internship must be at least 10 weeks long and can be undertaken in a Swiss or a foreign company.

An internship provides opportunities to gain experience in an industrial environment and create a network of contacts.

To register the internship, please submit a document to the Student Administration Office containing the following information at the latest two weeks after beginning the internship:
- a detailed task description: task, technologies, milestones etc.
- start and end date of the internship
- supervisor: name and academic degree

Compulsory Electives in Humanities, Social and Political Sciences

Recommended GESS compulsory elective courses (Type B) for D-INFK.

see GESS Compulsory Electives: Type A: Enhancement of Reflection Capability

see GESS Compulsory Electives: Language Courses ETH/UZH

<td>W</td>
<td>2 credits</td>
<td>2V</td>
<td>P. Block, J. Schwartz</td>
</tr>
<tr>
<td><strong>Abstract</strong></td>
<td>The course is an introduction to structural design using graphical methods and structural models, with a focus on a creative approach rather than repetitive calculations. Cable and membrane structures, arch and shell structures and combined arch and cable systems will be used to demonstrate these methods.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Objective</strong></td>
<td>The objective is to encourage students to develop an intuitive understanding of the relationship between the shape of a structure, the load it needs to carry and the forces in it. To achieve this, the teaching is based on graphic statics, which allow the visualization of internal and external forces in structural systems, therefore illustrating the relationship between shape (form) and stress (force) in load bearing elements. This understanding is directly applied to the students' design projects, in which issues of statics and design overlap.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Content</strong></td>
<td>After a general introduction of basic concepts, structural systems such as cable and arch structures will be analyzed with the help of graphic statics. The students will learn to understand the flow of forces in a structural system in relation to the system's form. They will be able to modify this force flow and give dimension to the structural components.</td>

Abstract
Lectures on twelve compact aspects gaining importance in an increasingly specialised, complex and international surrounding: Topics of the profession, design quality, the project, organisation, coordination, costing, contracts and agreements, tendering and construction management, life cycle, real estate market, building trade and getting started.

Objective
"Design and Building Process MBS" is a brief manual covering the competencies and the responsibilities of all involved parties through the design and building process. Lectures on the topics of the profession, design quality, the project, organisation, coordination, costing, contracts and agreements, tendering and construction management, life cycle, real estate market, building trade, and getting started will guide the participants, bringing the individual pieces of knowledge into a superordinate relationship.

Content
"Design and Building Process MBS" is a brief manual covering the competencies and the responsibilities of involved parties through the design and building process. Twelve compact aspects regarding the establish building culture are gaining importance in an increasingly specialised, complex and international surrounding. Lectures on the topics of the profession, design quality, the project, organisation, coordination, costing, contracts and agreements, tendering and construction management, life cycle, real estate market, building trade, and getting started will guide the participants, bringing the individual pieces of knowledge into a superordinate relationship. The course introduces the key figures, depicts the measurable and non-measurable criteria of the project and highlights the provided services of the consultants. In addition to discussing the basics, the terminologies and the tendencies, the lecture units will refer to the studios as well as the practice. Teaching-based case studies will compliment and deepen the understanding of the twelve selected aspects. The course is presented as a moderated seminar to allow students the opportunity for individual input: active collaboration between the students and their tutor therefore required.

Abstract
Sustainable building construction, high performance materials for energy efficient buildings, focus on next generation building materials, sustainable construction, glazing, energy integration, production processes

Objective
The students will acquire knowledge in the following fields:
- Fundamentals of heat transport in (porous) materials
- Super-insulating materials and systems (including insulating nano-materials)
- Materials for retrofitting of buildings
- Introduction to durability problems of building facades
- Glazing, windows and glazed facades
- Materials for photovoltaic devices and solar thermal collector technology and their integration into buildings
- Materials for energy storage (thermal, electrical) and for decentralized energy generation
- Embodied energy of building materials. Introduction to LCA analysis for building materials
- Integrated building envelope solutions, multi-functional and adaptive facades, smart façade concepts

Literature

Abstract
Principles of heat and mass transport, hygro-thermal performance, durability of the building envelope and interaction with indoor and outdoor climates, applications.

Objective
The students will acquire in the following fields:
- Indoor and outdoor climate and driving forces.
- Hygrothermal properties of building materials.
- Building envelope solutions and their construction.
- Hygrothermal performance and durability.

Abstract
Scenarios for world energy demand and CO2 emissions, implications for climate. Methods for the assessment of energy chains. Potential and technology of renewable energies: Biomass (heat, electricity, biofuels), solar energy (low temp. heat, solar thermal and photovoltaic electricity, solar chemistry). Wind and ocean energy, heat pumps, geothermal energy, energy from waste. CO2 sequestration.

Objective
Scenarios for the development of world primary energy consumption are introduced. Students know the potential and limitations of renewable energies for reducing CO2 emissions, and their contribution towards a future sustainable energy system that respects climate protection goals.

Content

Prerequisites / notice
Fundamentals of chemistry and physics are a prerequisite for this course.

Topics are available to carry out a Project Work (Semesterarbeit) on the contents of this course.

Abstract
This course focuses on the analysis of innovation as a pervasive process that cut across organizational and functional boundaries. It looks at the sources of innovation at the tools and techniques that organizations deploy to routinely innovate, and the strategic implications of technical change.

Objective
This course intends to enable all students to:
- understand the core concepts necessary to analyze how innovation happens
- master the most common methods and tools organizations deploy to innovate
- develop the ability to critically evaluate the innovation process, and act upon the main obstacles to innovation

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 782 of 1434
This course looks at technology and innovation management as a process. Continuously, organizations are faced with a fundamental decision: they have to allocate resources between well-known tasks that reliably generate positive results; or explore new ways of doing things, new technologies, products and services. The latter is a high risk choice. Its rewards can be high, but the chances of success is small.

How do firms organize to take these decisions? What kind of management skills are necessary to take them? What kind of tools and methods are deployed to sustain managerial decision-making in highly volatile environments? These are the central questions on which this course focuses, relying on a combination of lectures, case-based discussion, guest speakers, simulations and group work.

Lecture notes
Slides will be available on the TIMGROUP website.

Literature
Readings will be available on the TIMGROUP website.

Prerequisites / notice
No specific background in economics or management is required.

### Content

- **Principles of Microeconomics**
  - The course introduces basic principles, problems and approaches of microeconomics.
  - The course includes the following main topics:
    - Basic principles of demand and supply, market and state in a modern economy, externalities, cost analysis, consumer behaviour, economies of scale and economies of scope, perfect competition, monopoly, oligopoly, monopolistic competition, mathematical treatment of some basic concepts.

- **Building Physics IV: Urban Physics**
  - Urban physics: wind, wind comfort, pollutant dispersion, natural ventilation, driving rain, heat islands, climate change and weather conditions, urban acoustics and energy use in the urban context.
  - Basic knowledge of the global climate and the local microclimate around buildings
  - Impact of urban environment on wind, ventilation, rain, pollutants, acoustics and energy, and their relation to comfort, durability, air quality and energy demand
  - Application of urban physics concepts in urban design
  - Climate Change. The Global Picture: global energy balance, global climate models, the IPCC process. Towards regional climate scenarios: role of spatial resolution, overview of approaches, hydrostatic RCMs, cloud-resolving RCMs
  - Wind driving rain (WDR): WDR phenomena, WDR experimental and modeling, wind blocking effect, applications and moisture durability
  - Pollutant dispersion, pollutant cycle : emission, transport and deposition, air quality
  - Urban acoustics, noise propagation through the urban environment, meteorological effects, urban acoustic modeling, noise reduction measures, urban vegetation

- **Application of CFD in Buildings**
  - Fundamentals, Applications and Project works in the area of CFD in buildings.
  - Understanding:
    - Basic principles of fluid flow & heat transfer
    - Basic concepts of CFD
    - Validation and verification, practical guidelines
  - Application and project works of CFD in buildings including the fields of:
    - Building aerodynamics
    - Steady vs. unsteady wind loads on urban structures
    - Air pollution and contaminant dispersion
    - Indoor ventilation
    - CFD for renewable energy in the urban physics: Wind loads on roof-mounted solar photovoltaic arrays, coupled solar-wind energy generation applications, etc.

---

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 783 of 1434
I. Fundamentals
- Basic principles of fluid flow & heat transfer
- Laminar versus turbulent flow
- Forced vs. natural convection
- Basic concepts of CFD
- Discretization, stability & convergence, space and time-marching schemes, etc.
- Turbulence modelling
- Near-wall treatment
- Validation and verification, practical guidelines

II. Applications
CFD for:
- Building aerodynamics
- Steady vs. unsteady wind loads on urban structures
- Air pollution and contaminant dispersion
- Indoor ventilation
- CFD for renewable energy in the urban physics: Wind loads on roof-mounted solar photovoltaic arrays, coupled solar-wind energy generation applications, etc.

III. Project work
- Geometry and grid generation (from CAD to domain meshing)
- Exp. wind engineering
- Boundary conditions, solver settings and solution
- Data Post-processing
- Validation and error estimation
- Hands-on-Training
- Presentation

| 151-0113-00L    | Applied Fluid Dynamics                          | W    | 4    | 2V+1U | J.P. Kunsch |
| Abstract        | Applied Fluid Dynamics                          |      |      |       |           |
|                 | The methods of fluid dynamics play an important role in the description of a chain of events, involving the release, spreading and dilution of dangerous fluids in the environment. |
|                 | Tunnel ventilation systems and strategies are studied, which must meet severe requirements during normal operation and in emergency situations (tunnel fires etc.). |
| Objective       | Generally applicable methods in fluid dynamics and gas dynamics are illustrated and practiced using selected current examples. |
| Content         | Often experts fall back on the methodology of fluid dynamics when involved in the construction of environmentally friendly processing and incineration facilities, as well as when choosing safe transport and storage options for dangerous materials. As a result of accidents, but also in normal operations, dangerous gases and liquids may escape and be transported further by wind or flowing water. |
|                 | There are many possible forms that the resulting damage may take, including fire and explosion when flammable substances are mixed. |
|                 | The topics covered include: Emissions of liquids and gases from containers and pipelines, evaporation from pools and vaporization of gases kept under pressure, the spread and dilution of waste gas plumes in the wind, deflagration and detonation of inflammable gases, fireballs in gases held under pressure, pollution and exhaust gases in tunnels (tunnel fires etc.) |

Lecture notes
Copy of the slides presented.

Literature

151-0103-00L Fluid Dynamics II W 3 credits 2V+1U P. Jenny

Abstract
Two-dimensional irrotational (potential) flows: stream function and potential, singularity method, unsteady flow, aerodynamic concepts. Vorticity dynamics: vorticity and circulation, vorticity equation, vortex theorems of Helmholtz and Kelvin.

Objective
Expand basic knowledge of fluid dynamics. Concepts, phenomena and quantitative description of irrotational (potential), rotational, and one-dimensional compressible flows.

Content
Two-dimensional irrotational (potential) flows: stream function and potential, complex notation, singularity method, unsteady flow, aerodynamic concepts.

Vorticity dynamics: vorticity and circulation, vorticity equation, vortex theorems of Helmholtz and Kelvin.

Compressible flows: isentropic flow along stream tube, normal and oblique shocks, Laval nozzle, Prandtl-Meyer expansion, viscous effects.

Lecture notes
Lecture notes are available (in German).

(See also info on literature below.)

Literature
Relevant chapters (corresponding to lecture notes) from the textbook

Prerequisites / notice
Analysis I/II, Knowledge of Fluid Dynamics I, thermodynamics of ideal gas

401-0647-00L Introduction to Mathematical Optimization O 5 credits 2V+1U R. Zenklusen

Abstract
Introduction to basic techniques and problems of mathematical optimization.

Objective
The goal is to get a good understanding of some of the most important mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems.

Content
Topics covered in this course include:
- Linear programming (simplex method, duality theory, shadow prices, ...).
- Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...).

Literature
Information about relevant literature will be given in the lecture.

Prerequisites / notice
This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture covering similar topics and more.

227-0477-00L Acoustics I W 6 credits 4G K. Heutschi

Abstract
Introduction to the fundamentals of acoustics in the area of sound field calculations, measurement of acoustical events, outdoor sound propagation and room acoustics of large and small enclosures.

Objective
Introduction to acoustics. Understanding of basic acoustical mechanisms. Survey of the technical literature. Illustration of measurement techniques in the laboratory.

Content
Fundamentals of acoustics, measuring and analyzing of acoustical events, anatomy and properties of the ear. Outdoor sound propagation, absorption and transmission of sound, room acoustics of large and small enclosures, architectural acoustics, noise and noise control, calculation of sound fields.

Lecture notes
yes

101-0579-00L Infrastructure Maintenance Processes W 3 credits 2G B. T. Adey

Abstract
This course provides an introduction to:
- how to model the changes in infrastructure objects over time,
- how to monitor these changes and assess the benefits of monitoring,
- how to intervene to improve infrastructure performance and assess the benefits of interventions, and
- how to model the changes in stakeholders interests over time.

Prerequisites
Analysis I/II. Knowledge of Fluid Mechanics, Thermodynamics of ideal gas.

Objective
Deterioration
- manifest and latent processes,
- modeling
- monitoring
- non-destructive and destructive techniques,
- evaluation of benefits of monitoring
- types of intervention,
- evaluation of benefits of intervention

Intervention
Benefits
- modeling of stakeholder benefits over time

Lecture notes
All necessary materials (e.g. transparencies and hand-outs) will be handed out at the beginning of each class.

Literature
Appropriate reading material will be assigned when necessary.

101-0577-00L An Introduction to Sustainable Development in the Built Environment W 3 credits 2G G. Habert

Abstract
This year the UN Conference in Paris will shape future world objectives to tackle climate change.

This course provides an introduction to the notion of sustainable development when applied to our built environment.
At the end of the semester, the students have an understanding of the term of sustainable development, its history, the current political and scientific discourses and its relevance for our built environment.

In order to address current challenges of climate change mitigation and resource depletion, students will learn a holistic approach of sustainable development. Ecological, economical and social constraints will be presented and students will learn about methods for argumentation and tools for assessment (i.e. life cycle assessment).

For this purpose an overview of sustainable development is presented with an introduction to the history of sustainability and its today definition as well as the role of cities, urbanisation and material resources (i.e. energy, construction material) in social economic and environmetal aspects.

The course aims to promote an integral view and understanding of sustainability and describing different spheres (social/cultural, ecological, economical, and institutional) that influence our built environment.

Students will acquire critical knowledge and understand the role of involved stakeholders, their motivations and constraints, learn how to evaluate challenges, identify deficits and define strategies to promote a more sustainable construction.

After the course students should be able to define the relevance of specific local, regional or territorial aspects to achieve coherent and applicable solutions toward sustainable development.

The course offers an environmental, socio-economic and socio-technical perspective focussing on buildings, cities and their transition to resilience with sustainable development. Students will learn on theory and application of current scientific pathways towards sustainable development.

### Content

The following topics give an overview of the themes that are to be worked on during the lecture.

- Overview on the history and emergence of sustainable development
- Overview on the current understanding and definition of sustainable development
- Case Study 1: Sustainable construction, the role of construction industry (national/international)
- Case Study 2: Cities, forms of settlements
- Case Study 3: Material resources, scenarios, energy, construction materials, urban metabolism
- Case Study 4: Buildings, heating/cooling, consumers, prosumers and other stakeholder, cooperations
- Method 1: Life cycle assessment (planning, construction, operation/use, deconstruction)
- Method 2: Economics for sustainable construction
- Method 3: Construction, flexibility, modularity
- Synthesis 1: Climate Change mitigation and adaptation in cities
- Synthesis 2: Transition to sustainable development

### Lecture notes

All relevant information will be online available before the lectures. For each lecture slides of the lecture will be provided.

### Literature

A list of the basic literature will be offered on a specific online platform, that could be used by all students attending the lectures.

**102-1227-15L Advanced Life Cycle Assessment (HS15)**

- **Objective**: To improve ones understanding of life cycle assessment, and the broader issues in modeling, improving, and understanding sustainability assessments.
- **Content**: The first hour of class is an interactive student presentation with discussion and class participation; each student is expected to present once, either alone or with one other student. The second half of class is devoted to a practical exercise of the concepts introduced and examined in the first half.
- **Literature**: Everyone is expected to read one or two scientific articles or manuscripts each week, to be provided by the instructor.

**101-0417-00L Transport Planning Methods**

- **Abstract**: A seminar on current topic in life cycle assessment. In the fall of 2015, the focus is on assessment of complex systems. We will look a number of topics, including input/output tables, optimization, and linking LCA with physical or economic models.
- **Objective**: Students should be familiar with either life cycle assessment, environmental science, or economic modeling. This seminar is intended to be primarily for Ph.D. students.
- **Content**: The course provides the necessary knowledge to support the solution of given planning problems. This is done by dividing the forecasting problem into sub-problems. The course is composed of a lecture part, providing the theoretical knowledge, and an applied part, in which students develop their own models.

**101-0414-AAL Transport Planning (Transportation I)**

- **Abstract**: The lecture course discusses the basic concepts, approaches and methods of transport planning i.e. enology and the application of the four stage approach; cost-benefit analysis.
- **Objective**: The course introduces the basic theories and methods of transport planning.
- **Content**: Basic theoretical links between transport, space and economic development; basic terminology; measurement and observation of travel behaviour; methods of the four stage approach; cost-benefit analysis.
Corporat Sustainability (3 credits)

Objective
Understand the limits and the potential of corporate sustainability for sustainable development

Content
Be able to recognize and realize opportunities for corporate sustainability in a business environment

Overview of the grand sustainability challenges of Water, Energy, Mobility, and Food

Critical thinking skills for corporate sustainability

In-depth case study of concrete corporate sustainability challenge in the group project phase, such as: How to deal with environmental pressure groups? How to use the strengths of business to solve pressing sustainability problems? How to catalyze radical innovations for sustainability? How to invest money in a sustainable way?

Lecture and exercise lessons in English

Literature recommendations will be distributed during the lecture

Introduction to Computational Physics (for Civil Engineers) (4 credits)

Abstract
This course offers an introduction to computer simulation methods for physics problems and their implementation on PCs and supercomputers: classical equations of motion, partial differential equations (wave equation, diffusion equation, Maxwell’s equation), Monte Carlo simulations, percolation, phase transitions

Content

Prerequisites / notice
Lecture and exercise lessons in English

Introduction to Computational Physics (for Civil Engineers) (8 credits)

Abstract
This course offers an introduction to computer simulation methods for physics problems and their implementation on PCs and supercomputers: classical equations of motion, partial differential equations (wave equation, diffusion equation, Maxwell’s equation), Monte Carlo simulations, percolation, phase transitions

Content

Prerequisites / notice
Lecture and exercise lessons in English, exams in German or in English

Digital Urban Simulation (4 credits)

Abstract
In this teaching unit architectural and urban design are analyzed by current computational methods. Based on these analyses the effects of planning can be simulated and understood. An important focus of this course is the interpretation of the analysis and simulation results and the application of these correspondent methods in early planning phases.

Objective
The students learn how the design and planning of cities can be evidence based by using scientific methods. The teaching unit convey knowledge in state-of-the-art and emerging spatial analysis and simulation methods and equip students with skills in modern software systems. The course consists of lectures, associated exercises and workshops, as well as of one integral project work.

Content
In a series of theory lectures we explore how the design and planning of cities can be evidence based by using scientific methods. By various exercises the students are equipped with skills in modern software systems. In an integral project the students work on the design and planning of a city, using state-of-the-art and emerging spatial analysis and simulation methods. The project is completed with a final presentation and report.

Project Management: Pre-tender to Contract Execution (3 credits)

Abstract
This course will provide a comprehensive overview and understanding of the techniques, processes, tools and terminology to manage the Pre-Tender stage of a project to Contract Execution. This course will cover the critical thinking skills required to manage the Pre-Tender stage of a project.

Objective
Upon successful completion of this course students will have the understanding of the Project Management duties and responsibilities from the Pre-Tender stage of a project to Contract Execution.

Content
- Project scope definition and project organization
- Technical specification proposals
- Work Breakdown Structure
- Estimating
- Schedule development
- Interface management
- Resource and cost integration
- Risk and opportunity identification and quantification
- Contract review and analysis
- Project life cycle
- Contract Execution - Project Manager Check List

Literature
Appropriate reading material (e.g., chapters out of certain textbooks or trade articles) will be assigned when necessary and made available via Moodle.

Appropriate reading material (e.g., chapters out of certain textbooks or trade articles) will be assigned when necessary and made available via Moodle.

Lecture notes
The slides will either be distributed at the beginning of the class, or made available online (via Moodle) prior to class. A copy of the appropriate chapter of the script, the assignment and any other assigned reading materials will be available via Moodle.

Project Management: Pre-tender to Contract Execution (to be announced)

Abstract
This course will provide a comprehensive overview and understanding of the techniques, processes, tools and terminology to manage the Pre-Tender stage of a project to Contract Execution. This course will cover the critical thinking skills required to manage the Pre-Tender stage of a project.

Objective

### 101-0187-00L
#### Structural Reliability and Risk Analysis

<table>
<thead>
<tr>
<th>Credit Hours</th>
<th>Students</th>
</tr>
</thead>
<tbody>
<tr>
<td>W 3 credits, 2G</td>
<td>B. Sudret</td>
</tr>
</tbody>
</table>

**Abstract**
Structural reliability aims at quantifying the probability of failure of systems due to uncertainties in their design, manufacturing and environmental conditions. Risk analysis combines this information with the consequences of failure in view of optimal decision making. The course presents the underlying probabilistic modelling and computational methods for reliability and risk assessment.

**Objective**
The goal of this course is to provide the students with a thorough understanding of the key concepts behind structural reliability and risk analysis. After this course the students will have refreshed their knowledge of probability theory and statistics to model uncertainties in view of engineering applications. They will be able to analyze the reliability of a structure and to use risk assessment methods for decision making under uncertain conditions. They will be aware of the state-of-the-art computational methods and software in this field.

**Content**
Engineers are confronted every day to decision making under limited amount of information and uncertain conditions. When designing new structures and systems, the design codes such as SIA or Euro-codes usually provide a framework that guarantees safety and reliability. However the level of safety is not quantified explicitly, which does not allow the analyst to properly choose between design variants and evaluate a total cost in case of failure. In contrast, the framework of risk analysis allows one to incorporate the uncertainty in decision making.

The first part of the course is a reminder on probability theory that is used as a main tool for reliability and risk analysis. Classical concepts such as random variables and vectors, dependence and correlation are recalled. Basic statistical inference methods used for building a probabilistic model from the available data, e.g. the maximum likelihood method, are presented.

The second part is related to structural reliability analysis, i.e. methods that allow one to compute probabilities of failure of a given system with respect to prescribed criteria. The framework of reliability analysis is first set up. Reliability indices are introduced together with the first order-second moment method (FOSM) and the first order reliability method (FORM). Methods based on Monte Carlo simulation are then reviewed and illustrated through various examples. By-products of reliability analysis such as sensitivity measures and partial safety coefficients are derived and their links to structural design codes is shown. The reliability of structural systems is also introduced as well as the methods used to reassess existing structures based on new information.

The third part of the course addresses risk assessment methods. Techniques for the identification of hazard scenarios and their representation by fault trees and event trees are described. Risk is defined with respect to the concept of expected utility in the framework of decision making. Elements of Bayesian decision making, i.e. pre-, post- and pre-post risk assessment methods are presented. Bayesian networks are introduced as a generic numerical tool for solving such problems. The course also includes a tutorial using a software dedicated to real world structural reliability analysis.

**Literature**

**Prerequisites / notice**
Basic course on probability theory and statistics

### 051-0723-15L
#### Information Architecture and Future Cities: Smart Cities

<table>
<thead>
<tr>
<th>Credit Hours</th>
<th>Students</th>
</tr>
</thead>
<tbody>
<tr>
<td>W 2 credits, 1V</td>
<td>G. Schmitt</td>
</tr>
</tbody>
</table>

**Abstract**
What are SMART CITIES and how do they emerge? What is the role of architects and urban designers in this process? How do data turn into information as a building material for the future city? The course covers concepts, methods and techniques in design, simulation and communication of cities. The goal is to learn principles and preconditions for the design of sustainable and smart cities.

**Objective**
Students gain insight into the next generation of design processes for architects and urban designers, and into concepts of the Information Architecture of SMART CITIES, including the influence of Big Data. They learn about the expanded roles of information and of architecture: information and simulation in architecture as means to make the invisible visible, and architecture as a metaphor and ordering system to structure the immense amounts of data of the Information Society. The seminar is highly interactive and discusses visionary case studies in Europe and Asia and new techniques in Big Data informed smart urban design. Apart from learning about and experiencing Information Architecture and SMART CITIES, the course also introduces research and management skills that will distinguish the future ETH architect.

**Content**
SMART CITIES - What will happen when cities change from static configurations into responsive and dynamic structures? What does it mean for buildings that undergo the same changes? What is the impact on architectural and urban design education? How can citizens influence this development? The SMART CITIES course will answer these questions and supply you with the necessary skills and knowledge to understand and design such dynamic structures. The intelligent use of data and information are at the core of this course. Data and information are new building materials of future cities. Citizens produce increasing amounts of data in their daily life, with stationary sensors and mobile smartphones. Using those data, citizens begin to influence the design of future cities and the re-design of existing ones. The course will be a first step towards the emerging citizen design science and cognitive design computing. Those will be the next generation of participatory design and design computing.

**Lecture notes**
The iBook INFORMATION CITIES

**Literature**
The necessary texts will be found on the Chair's website at: http://www.ia.arch.ethz.ch. We specifically recommend the consultation of the Future Cities Website at: http://www.futurecities.ethz.ch during the entire course. The iBook INFORMATION CITIES is available in the iBooks Store for free.

**Prerequisites / notice**
Interactive seminar including 3 exercises

### 051-0725-15L
#### Digital Urban Visualization. People as Flows

<table>
<thead>
<tr>
<th>Credit Hours</th>
<th>Students</th>
</tr>
</thead>
<tbody>
<tr>
<td>W 2 credits, 2U</td>
<td>G. Schmitt</td>
</tr>
</tbody>
</table>

**Abstract**
We examine patterns of crowd-flows in an extraordinary urbanisation phenomena: festivals.

The course participants will learn how to program simulations using Processing/Java. Previous programming knowledge is not necessary. Furthermore they will gain insights into other analysis methods and learn about their significance, strengths and weaknesses.

**Content**
We will look at those patterns from two sides. One being the view of a planer asking to find bottle necks or the ideal place for amenities such as booths, toilets etc. Another being the view of visitors. We will program different behaviours that should compete against each other in order to compare their different strategies. As a case study we will use the Caliente Festival in Zurich.

For deepening the learnt in a semester thesis we offer to optimise the created simulations to make them available in interactive planning workshops. Additionally they could be converted into interactive web apps.

**Literature**
http://www.ia.arch.ethz.ch

**Prerequisites / notice**
No programming skills are required.

### 701-1346-00L
#### Carbon Mitigation

<table>
<thead>
<tr>
<th>Credit Hours</th>
<th>Students</th>
</tr>
</thead>
<tbody>
<tr>
<td>W 3 credits, 2G</td>
<td>N. Gruber</td>
</tr>
</tbody>
</table>

**Abstract**
The reduction of CO2 emissions is the only option for keeping future climate change within reasonable bounds. In this course, we will discuss a portfolio of options involving the alteration of natural carbon sinks and carbon sequestration. The course includes introductory lectures, presentations from guest speakers from industry and the public sector, and final presentations by the students.
The goal of this course is to investigate, as a group, a particular set of carbon mitigation/sequestration options and to evaluate their potential, their cost, and their consequences.

From the large number of carbon sequestration/mitigation options, a few options will be selected and then investigated in detail by the students. The results of this research will then be presented to the other students, the involved faculty, and discussed in detail by the whole group.

Will be identified based on the chosen topic.

Exam: No final exam. Pass/No-Pass is assigned based on the quality of the presentation and ensuing discussion.

Abstract During the integrated design studio students work on a selected integrated architectural/urban design project, considering both energy- and climate systems (HVAC) as well architectural and urban design in a specific site context. The objective is to follow an integrated design process to achieve synergistic solutions.

Objective The integrated design studio enables students to identify site specific energy demand and potentials, develop integrated energy and climate systems on both the urban and building scale and evaluate their interactions and impact on building design and operation.

Content Retrieving relevant concepts and technologies of energy and HVAC systems, students are able to develop and compare integrated concepts using appropriate methods and digital toolsets and present them to a mixed audience using drawings, renderings and reports.

Abstract The semester project focuses in solving specific research questions in the field of integrated building systems.

Objective The semester project is designed to train students in solving specific research questions in the field of integrated building systems. The goal is to apply acquired knowledge which is gained throughout the first year of the master's program. The semester project is advised by a professor who is affiliated with one of the partner departments of the Master program "Integrated building systems".

Content The semester project is designed to train students in solving specific research questions in the field of integrated building systems. Abstract Structural Design I: Introduction to the design of structures, by means of graphic statics and structural models, focusing on cable, membrane, as well as arched and shell structures.

Structural Design II: Determination of internal forces and description of structural behavior of mixed arches and cable structures, of truss systems, beams, slabs and frames using method of graphical statics.

Objective Structural Design I: Using graphical methods, students are taught to understand and generate the flow of forces through a structural system in relation to its form, and to dimension its components.

Structural Design II: Awareness of the most important structural systems. Understanding of the interplay of load and form. Estimation of the inner forces and dimensioning of elements.
Content

Structural Design I:
The students learn to determine the internal forces and understand the structural behavior of cable, arch, and combined arch-cable structures, but are also introduced to three-dimensional membrane and shell structures. By means of graphical design methods, such as graphic statics, students are taught to analyse the flow of forces through structural systems in relation to their form and to dimension the components of the systems.

Structural Design II:
Determination of internal forces and description of structural behaviour of mixed arches and cable structures, of truss systems, beams, slabs, panels and frames using method of graphical statics as well as dimensioning of these structural systems. Structural behaviour of columns. Discussion of reference buildings and illustration of interplay of structural system and architectural intention.

151-1633-AAL Energy Conversion E- 4 credits 9R H. G. Park

Enrolment only for MSc students who need this course as additional admission requirement.

Abstract
Fundamentals of Thermal Sciences in association with Energy Conversion

Objective
To become acquainted and familiarized with basic principles of fundamental thermal sciences (Thermodynamics, Heat Transfer, etc.) as well as their linkage to energy conversion technologies.

Content
Thermodynamics (first and second laws), Heat Transfer (conduction/convection/radiation), Technical Applications

Lecture notes
Slides will be distributed by e-mail every week.

Literature
1. Introduction to Thermodynamics and Heat Transfer, 2nd ed. by Cengel, Y. A., McGraw Hill;
2. Fundamentals of Engineering Thermodynamics, 6th ed. by Moran & Shapiro, Wiley

Prerequisites / notice
This course is intended for students outside of D-MAVT.

*Latest online enrolment is one week before the beginning of the semester.

Abstract
Qualitative analysis (determination of cations and anions), acid-base-equilibria (pH-values, titrations, buffer), precipitation equilibria (gravimetry, potentiometry, conductivity), redox reactions (syntheses, redox-titrations, galvanic elements), metal complexes (syntheses, complexometric titration)

Objective
Qualitative analysis (simple cation and anion separation process, determination of cations and anions), acid-base-equilibria (strengths of acids and bases, pH- and pKa-values, titrations, buffer systems, Kjeldahl determination), precipitation equilibria (gravimetry, potentiometry, conductivity), oxidation state and redox behaviour (syntheses), redox-titrations, galvanic elements), metal complexes (syntheses of complexes, ligand exchange reactions, complexometric titration)

Content
The general aim for the students of the practical course in general chemistry is an introduction in the scientific work and to get familiar with simple experimental procedures in a chemical laboratory. In general, first experiences with the principal reaction behaviour of a variety of different substances will be made. The chemical characteristics of these will be elucidated by a series of quantitative experiments alongside with the corresponding qualitative analyses. In order to get an overview of classes of substances as well as some general phenomena in chemistry suitable experiments have been chosen. In the second part of the practical course, i.e. physical chemistry, the behaviour of substances in their states of aggregation as well as changes of selected physical values will be recorded and discussed.

Lecture notes

402-2883-00L Physics III

Abstract: Introductory course on quantum and atomic physics including optics and statistical physics.

Objective: A basic introduction to quantum and atomic physics, including basics of optics and equilibrium statisticical physics. The course will focus on the relation of these topics to experimental methods and observations.

Lecture notes: Lecture notes will be provided electronically during the course.

Electives

For the Bachelor in Interdisciplinary Sciences students can in principle choose from all subjects taught at the Bachelor level at ETH Zurich.

At the beginning of the 2. year an individual study program is established for every student in discussion with the Director of Studies in interdisciplinary sciences. For details see Programme Regulations 2010.

Abstract: Introduction to fundamental concepts of modern programming and operational skills for developing high-quality programs, including large programs as in industry. The course introduces software engineering principles with an object-oriented approach based on Design by Contract as present in Eiffel. For the second time we offer a supporting MOOC (online) version with more exercises and a hint system.
Objective

Many people can write programs. The "Introduction to Programming" course goes beyond that basic goal: it teaches the fundamental concepts and skills necessary to perform programming at a professional level. As a result of successfully completing the course, students master the fundamental control structures, data structures, reasoning patterns and programming language mechanisms characterizing modern programming, as well as the fundamental rules of producing high-quality software. They have the necessary programming background for later courses introducing programming skills in specialized application areas.

Content

Basics of object-oriented programming. Objects and classes. Pre- and postconditions, class invariants. Design by Contract. Fundamental control structures. Assignment and References. Basic hardware concepts. Fundamental data structures and algorithms. Recursion. Inheritance and deferred classes, introduction into event-driven design and concurrent programming. Basic concepts of Software Engineering such as the software process, specification and documentation, reuse and quality assurance.

Lecture notes

The lecture slides are available for download on the course page.

Literature

Bertrand Meyer: Touch of Class: Learning to Program Well Using Objects and Contracts, Springer Verlag, 2009; new printing, 2012. This is the official textbook for the course. See http://www.polybuchhandlung.ch/100/con_liste.asp

Prerequisites / notice

The course uses an "Outside-In" approach enabling students, right from the beginning, to use an advanced graphical library and produce significant applications. Students then learn step by step how the library is built, as a source of imitation and inspiration.

The course covers not only basic concepts of programming but also some advanced topics seldom encountered in introductory courses, such as recursion, undecidability, event-driven programming, multiple inheritance and others.

252-0847-00L

Computer Science

W 5 credits 2V+2U B. Gärtner

Abstract

This lecture is an introduction to programming based on the language C++. We cover fundamental types, control statements, functions, arrays, and classes. The concepts will be motivated and illustrated through algorithms and applications.

Objective

The goal of this lecture is an algorithmically oriented introduction to programming.

Content

This lecture is an introduction to programming based on the language C++. We cover fundamental types, control statements, functions, arrays, and classes. The concepts will be motivated and illustrated through algorithms and applications.

Lecture notes

Lecture notes in English and Handouts in German will be distributed electronically along with the course.

Literature

Materials Science I

W 3 credits 3G J. F. Löfler, A. R. Studart, P. Uggowitzer

Abstract

Basic concepts of metal physics, ceramics, polymers and their technology.

Objective

Based on the lecture 'Introduction to Materials Science' this lecture aims to give a detailed understanding of important aspects of materials science, with special emphasis on metallic and ceramic materials.

Content

Thermodynamics and phase diagrams, crystal interfaces and microstructure, diffusional transformations in solids, and diffusionless transformations will be presented for metallic alloys.

The basics of the ionic and covalent chemical bonds, the bond energy, the crystalline structure, four important structural ceramics, and the properties of glasses and glass ceramics will be presented for ceramic materials.

The lecture Biology I, together with the lecture Biology II in the following summer semester, is a basic, introductory course into Biology for students of Materials Sciences and other students with biology as subsidiary subject. Students of Materials Sciences and other students with biology as subsidiary subject.

The course provides an overview of fundamental concepts and physical processes in astrophysics with the dual goals of: i) illustrating physical principles through a variety of astrophysical applications; and ii) providing an overview of research topics in astrophysics.

The course covers the foundations of semiconductor nanostructures, e.g., materials, band structures, bandgap engineering and doping, field-effect transistors. The physics of the quantum Hall effect and of common nanostructures based on two-dimensional electron gases will be discussed, i.e., quantum point contacts, Aharonov-Bohm rings and quantum dots.

At the end of the lecture the student should understand four key phenomena of electron transport in semiconductor nanostructures:
1. The integer quantum Hall effect
2. Conductance quantization in quantum point contacts
3. the Aharonov-Bohm effect
4. Coulomb blockade in quantum dots

The course is taught in English.

The lecture is suitable for all physics students beyond the bachelor of science degree. Basic knowledge of solid state physics is recommended. Very ambitioned students in the third year may be able to follow. The lecture can be chosen as part of the PhD-program.

The course is taught in English.

The lecture Biology I, together with the lecture Biology II in the following summer semester, is a basic, introductory course into Biology for Students of Materials Sciences and other students with biology as subsidiary subject.

The goal of this course is to give the students a basic understanding of the molecules that build a cell and make it function, and the basic principles of metabolism and molecular genetics.

Die folgenden Kapitelnummern beziehen sich auf das der Vorlesung zugrundeliegende Lehrbuch "Biology" (Campbell & Rees, 7th edition, 2005)

Kapitel 1-4 des Lehrbuchs werden als Grundwissen vorausgesetzt

Kapitel 5: Struktur und Funktion biologischer Makromoleküle
Kapitel 6: Eine Tour durch die Zelle
Kapitel 7: Membranstruktur und -funktion
Kapitel 8: Einführung in den Stoffwechsel
Kapitel 9: Zelluläre Atmung und Speicherung chemischer Energie
Kapitel 10: Photosynthese
Kapitel 12: Der Zellzyklus
Kapitel 17: Vom Gen zum Protein

2. Allgemeine Genetik

Kapitel 13: Meiose und Reproduktionszyklen
Kapitel 14: Mendelsche Genetik
Kapitel 15: Die chromosomale Basis der Vererbung
Kapitel 16: Die molekulare Grundlage der Vererbung
Kapitel 18: Genetik von Bakterien und Viren
Kapitel 46: Tierische Reproduktion

Grundlagen des Stoffwechsels und eines Überblicks über molekulare Genetik

Der Vorlesungsstoff ist sehr nahe am Lehrbuch gehalten, Skripte werden ggf. durch die Dozenten zur Verfügung gestellt.

Das folgende Lehrbuch ist Grundlage für die Vorlesungen Biologie I und II:

Introduction into the most important spectroscopical methods and their applications to gain structural information. Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, 2V).

Application oriented basics of organic and inorganic instrumental analysis and of the empirical employment of structure elucidation.

Excercises are integrated in the lectures. In addition, attendance in the lecture 529-0289-00 "Instrumental analysis of organic compounds" (4th semester) is recommended.

None.

The text-book "Biology" (Campbell, Reece) (10th edition) is the basis of the course. The structure of the course is largely identical with that of the text-book.

Can be bought at the HCI-shop.

A pdf file of the printed lecture notes is provided online. Supplementary material may be provided online.

No set textbooks. Optional literature will be proposed at the beginning of the class and in the lecture notes.

Text-books:
- M. Heusler, H. Meier, B. Zeeh, Spektroskopische Methode der organischen Chemie, 5. überarbeitete Auflage, Thieme, Stuttgart, 1995;

No set textbooks. Optional literature will be proposed at the beginning of the class and in the lecture notes.

None.

Can be bought at the HCI-shop.

Abstract
Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

Objective
Quantitative and qualitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

Content
Physical properties of water (i.e. density and equation of state)
- global water resources
Exchange at boundaries
- energy (thermal & kinetic), gas exchange
Mixing and transport processes in open waters
- vertical stratification, large scale transport
- turbulence and mixing
- mixing and exchange processes in rivers
Groundwater and its dynamics
- ground water as part of the terrestrial water cycle
- ground water hydraulics, Darcy’s law
- aquifers and their properties
- hydrochemistry and tracer
- ground water use
Case studies
- 1. Water as resource, 2. Water and climate

Lecture notes
In addition to the suggested literature handouts are distributed.

Literature
Suggested literature.

Prerequisites / notice
The case studies and the analysis of the questions and problems are integral part of the course.

Abstract
This course gives an introduction to chemical processes in aquatic systems and shows applications to various systems. The following topics are treated: acid-base reactions and carbonate system, solubility of solids and weathering, redox reactions, complexation of metals, reactions at the solid/water interface, applications to lakes, rivers and groundwater.

Objective
Understanding chemical processes in aquatic systems. Quantitative application of chemical equilibria to processes in natural waters.

Content
Introduction to the chemistry of aquatic systems. Regulation of the composition of natural waters by chemical, geochemical and biological processes. Quantitative application of chemical equilibria to processes in natural waters. The following topics are treated: acid-base reactions, carbonate system; solubility of solid phases and weathering; complexation of metals and metal cycling in natural waters; redox reactions; reactions at the interface solid phase-water; applications to lakes, rivers, groundwater.

Lecture notes
Script is distributed.

Literature

Abstract
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Objective
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Content
Classification of numerical problems, introduction to finite-difference methods, time integration schemes, non-linearity, conservative numerical techniques, an overview of spectral and finite-element methods. Examples and exercises from a diverse cross-section of Environmental Science.

Lecture notes
Three obligatory exercises, each two hours in length, are integrated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

Literature
List of literature is provided.

Prerequisites / notice
Die Vorlesung verlangt Vorkenntnisse in Linearer Algebra, Analysis und Physik (z.B. komplexe Zahlen, Beschreibung von ebenen Wellen, einfache gewöhnliche Differentialgleichungen)

Abstract
This lecture introduces the theoretical principles and the observational and analytical methods of atmospheric dynamics. Based on these principles, the following aspects are discussed: the energetics of the global circulation, the basic synoptic- and meso-scale flow phenomena, in particular the dynamics of extratropical cyclones, and the influence of mountains on the atmospheric flow.

Objective
The students are able to
- explain up-to-date meteorological observation techniques and the basic methods of theoretical atmospheric dynamics
- to discuss the mathematical basis of atmospheric dynamics, based on selected atmospheric flow phenomena
- to explain the basic dynamics of the global circulation and of synoptic- and meso-scale flow features
- to explain how mountains influence the atmospheric flow on different scales

Content
Satellite observations; analysis of vertical soundings; geostrophic and thermal wind; cyclones at mid-latitude; global circulation; north-atlantic oscillation; atmospheric blocking situtations; Eulerian and Lagrangian perspective; potential vorticity; Alpine dynamics (storms, orographic wind); planetary boundary layer

Lecture notes
Lecture notes and slides

Literature
Atmospheric Science, An Introductory Survey
John M. Wallace and Peter V. Hobbs, Academic Press
Teaching of basic knowledge in microbiology with main focus on Microbial Cell Structure and Function, Molecular Genetics, Microbial Growth, Metabolic Diversity, Phylogeny and Taxonomy, Prokaryotic Diversity, Human-Microbe Interactions, Biotechnology.

Lecture notes
Powerpoint slides and script will be made available

Literature
Rogers and Yau, A Short Course in Cloud Physics, Pergamon Press, 1989; Wallace and Hobbs, Atmospheric Science: An Introductory Survey, Elsevier, 2006

Prerequisites / notice
50% of the time we use the concept of "flipped classroom" (en.wikipedia.org/wiki/Flipped_classroom), which we introduce at the beginning. We offer a lab tour, in which we demonstrate with some instruments how some of the processes, that are discussed in the lectures, are measured.

There is a additional tutorial right after each lecture to give you the chance to ask further questions and discuss the exercises. The participation is recommended but voluntary.

Pedosphere
Introduction to the formation and properties of soils as a function of parent rock, landscape position, climate, and soil organisms. Complex relationships between soil forming processes, physical and chemical soil properties, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

Objective
Introduction to the formation and properties of soils as a function of parent rock, landscape position, climate, and soil organisms. Complex relationships between soil forming processes, physical and chemical soil properties, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

Content
Definition of the pedosphere, soil functions, rocks as parent materials, minerals and weathering, soil organisms, organic matter, physical soil properties and functions, chemical soil properties and functions, soil formation, principles of soil classification, global soil regions, soil fertility, land use and soil degradation.

Lecture notes
Lecture notes can be purchased during the first lecture (15.- SFr)

Literature

Prerequisites / notice
Prerequisites: Basic knowledge in chemistry, biology and geology.

Microbiology
Teaching of basic knowledge in microbiology with main focus on Microbial Cell Structure and Function, Molecular Genetics, Microbial Growth, Metabolic Diversity, Phylogeny and Taxonomy, Prokaryotic Diversity, Human-Microbe Interactions, Biotechnology.

Objective
Teaching of basic knowledge in microbiology.

Content

Lecture notes
Wird von den jeweiligen Dozenten angegeben.

Literature
Die Behandlung der Themen erfolgt auf der Basis des Lehrbuchs Brock, Biology of Microorganisms

Prerequisites / notice

Laboratory Courses, Semester Papers, Proseminars, Field Trips
Further Laboratory Courses arising upon specific written request by the students and permission by the Director of studies.

Number Title Type ECTS Hours Lecturers
529-0011-04L Practical Course General Chemistry ■ O 8 credits 12P H. V. Schönberg, E. C. Meister

Abstract
Information about the practical course will be given on the first day.

Objective
Qualitative analysis (determination of cations and anions), acid-base-equilibria (pH-values, titrations, buffer), precipitation equilibria (gravimetry, potentiometry, conductivity), redox reactions (syntheses, redox-titrations, galvanic elements), metal complexes (syntheses, complexometric titration) analysis of measured values, states of aggregation (vapour pressure, conductivity, calorimetry)

Content
Qualitative analysis (determination of cations and anions), acid-base-equilibria (pH-values, titrations, buffer), precipitation equilibria (gravimetry, potentiometry, conductivity), redox reactions (syntheses, redox-titrations, galvanic elements), metal complexes (syntheses, complexometric titration) analysis of measured values, states of aggregation (vapour pressure, conductivity, calorimetry)

Objective
The general aim for the students of the practical course in general chemistry is an introduction in the scientific work and to get familiar with simple experimental procedures in a chemical laboratory. In general, first experiences with the principal reaction behaviour of a variety of different substances will be made. The chemical characteristics of these will be elucidated by a series of quantitative experiments alongside with the corresponding qualitative analyses. In order to get an overview of classes of substances as well as some general phenomena in chemistry suitable experiments have been chosen. In the second part of the practical course, i.e. physical chemistry, the behaviour of substances in their states of aggregation as well as changes of selected physical values will be recorded and discussed.

Lecture notes
http://www.gruetzmacher.ethz.ch/education/labcourses

Prerequisites / notice
Compulsory: online enrolment latest one week prior to the beginning of the semester

529-0129-00L Inorganic and Organic Chemistry II W 11 credits 16P A. Mezzetti, A. Togni

Abstract
Introduction to the experimental methods of Inorganic Chemistry

Objective
The teaching laboratory offers an insight into different aspects of Inorganic Chemistry, including solid state chemistry, organometallic chemistry, kinetics, etc.. The synthesis, characterization and analysis of inorganic compound are a main topic. Emphasis is given to scientific writing (experiment reports).
The course provides an introduction to the basics of molecular- and cell biology and genetics.

Lecture notes
A manual is distributed in the teaching laboratory.

Prerequisites / notice
- Attendance of Course Inorg. Chem. I (2. Sem., 529-0230)
- Practice Course General Chemistry (1. Semester, 529-0011-04)

If necessary, access priority will be settled according to the results of the first-year examinations.

Abstract

Objective
The main objective is that the students get a basic knowledge of the classical tools to solve explicitly linear partial differential equations.

Content
## Examples of partial differential equations
- Classification of PDEs
- Superposition principle

## One-dimensional wave equation
- D'Alembert's formula
- Duhamel's principle

## Fourier series
- Representation of piecewise continuous functions via Fourier series
- Examples and applications

## Separation of variables
- Resolution of wave and heat equation
- Homogeneous and inhomogeneous boundary conditions, Dirichlet and Neumann boundary conditions

## Laplace equation
- Resolution of the Laplace equation on rectangle, disk and annulus
- Poisson formula
- Mean value theorem and maximum principle

## Fourier transform
- Derivation and Definition
- Inverse Fourier transformation and inversion formula
- Interpretation and properties of the Fourier transform
- Resolution of the heat equation

## Laplace transform
- Definition, motivation and properties
- Inverse Laplace transform of rational functions
- Application to ordinary differential equations

Lecture notes
There are available some Lecture Notes in English and also in German of the Professor. These can be found following the links provided under the tab 'Lernmaterialien'.

Literature

2) Y. Pinchover and J. Rubinstein, An Introduction to Partial Differential Equations, Cambridge University Press

3) E. Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons (only Chapters 1,2,6,11)

Prerequisites / notice
It is required a minimal background of: 1) multivariable functions (Riemann integrals in two or three variables, change of variables in the integrals through the Jacobian, partial derivatives, differentiability, Jacobian) 2) numerical and functional sequences and series, basic knowledge of ordinary differential equations.

401-0353-00L Analysis III

In this lecture we treat problems in applied analysis. The focus lies on the simplest cases of three fundamental types of partial differential equations of second order: the Laplace equation, the heat equation and the wave equation.
### Content

1.) Klassifizierung von PDE's
- linear, quasilinear, nicht-linear
- elliptisch, parabolisch, hyperbolisch

2.) Quasilinear PDE
- Methode der Charakteristiken (Beispiele)

3.) Elliptische PDE
- Bsp: Laplace-Gleichung
- Harmonische Funktionen, Maximumprinzip, Mittelwerts-Formel.
- Methode der Variablenseparation.

4.) Parabolische PDE
- Bsp: Wärmeleitungsgleichung
- Bsp: Inverse Wärmeleitungsgleichung
- Methode der Variablenseparation

5.) Hyperbolische PDE
- Bsp: Wellengleichung
- Formeln von d'Alembert in (1+1)-Dimensionen
- Methode der Variablenseparation

6.) Green'sche Funktionen
- Rechnen mit der Dirac-Deltafunktion
- Idee der Green'schen Funktionen (Beispiele)

7.) Ausblick auf numerische Methoden
- 5-Punkt- Diskretisierung des Laplace-Operators (Beispiele)

### Literature

G. Dissertori
Acquire knowledge of the basic principles regarding the physics of classical mechanics and thermodynamics. Skills in solving physics problems.

### Prerequisites / notice

**402-0043-00L**

<table>
<thead>
<tr>
<th>Physics I</th>
<th>W</th>
<th>4 credits</th>
<th>3V+1U</th>
<th>M. R. Meyer</th>
</tr>
</thead>
</table>

**Objective**

Introduction to the concepts and tools in physics with the help of demonstration experiments: mechanics of point-like and ridged bodies, periodic motion and mechanical waves.

**Content**

The concepts and tools in physics, as well as the methods of an experimental science are taught. The student should learn to identify, communicate and solve physical problems in his/her own field of science.

**Lecture notes**

The lecture follows the book "Physics" by Paul A. Tipler.

**Literature**

Paul A. Tipler and Gene P. Mosca, Physics for Scientists and Engineers, W.H. Freeman (see also "Physik für Wissenschaftler und Ingenieure"; Springer Spektrum).

**Prerequisites / notice**

Prerequisites: Mathematics I & II

<thead>
<tr>
<th>Organic Chemistry I</th>
<th>O</th>
<th>3 credits</th>
<th>2V+1U</th>
<th>F. Diederich, C. Schaad</th>
</tr>
</thead>
</table>

**Objective**

Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

**Abstract**

Acquisition of a basic repertoire of synthetic methods including important reactions of aldehydes, ketones, carboxylic acids and carboxylic acid derivatives, as well as eliminations and fragmentations. Particular emphasis is placed on the understanding of reaction mechanisms and the correlation between structure and reactivity. A deeper understanding of the concepts presented during the lecture is reached by solving the problems handed out each time and discussed one week later in the exercise class.
Electives

Im Bachelor-Studiengang Interdisziplinäre Naturwissenschaften können die Studierenden prinzipiell alle Lehrveranstaltungen wählen, die in einem Bachelor-Studiengang der ETH angeboten werden.

Prerequisites / notice

Some of the lectures are given in the English language. Certain sections of the text-book must be studied by self-instruction. Some of the lectures are available on the ETH WEB site in a live format (Livestream) at the above WEB site.
Abstract

Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.

Objective

Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.

Content

Bioinformatics I will cover the following topics:

- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

401-0373-00L Mathematics III: Partial Differential Equations

W 4 credits 2V+1U F. Da Lio

Abstract

Objective

The main objective is that the students get a basic knowledge of the classical tools to solve explicitly linear partial differential equations.

Content

## Examples of partial differential equations
- Classification of PDEs
- Superposition principle

## One-dimensional wave equation
- D'Alembert's formula
- Duhamel's principle

## Fourier series

<td>Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Topics of the course.

Physical properties of water (i.e. density and equation of state)
- global water resources
Exchange at boundaries
- energy (thermal & kinetic), gas exchange
Mixing and transport processes in open waters
- vertical stratification, large scale transport
- turbulence and mixing
- mixing and exchange processes in rivers
Groundwater and its dynamics
- ground water as part of the terrestrial water cycle
- ground water hydraulics, Darcy's law
- aquifers and their properties
- hydrochemistry and tracer
- ground water use

Case studies
- 1. Water as resource, 2. Water and climate

This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Classification of numerical problems, introduction to finite-difference methods, time integration schemes, non-linearity, conservative numerical techniques, an overview of spectral and finite-element methods. Examples and exercises from a diverse cross-section of Environmental Science.

Three obligatory exercises, each two hours in length, are integrated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

The case studies and the analysis of the questions and problems are integral part of the course.

252-0021-00L Introduction to Programming W 7 credits 4V+2U B. Meyer

Introduction to fundamental concepts of modern programming and operational skills for developing high-quality programs, including large programs as in industry. The course introduces software engineering principles with an object-oriented approach based on Design by Contract as present in Eiffel. For the second time we offer a supporting MOOC (online) version with more exercises and a hint system.

Three obligatory exercises, each two hours in length, are integrated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

The case studies and the analysis of the questions and problems are integral part of the course.
Objective

Many people can write programs. The "Introduction to Programming" course goes beyond that basic goal: it teaches the fundamental concepts and skills necessary to perform programming at a professional level. As a result of successfully completing the course, students master the fundamental control structures, data structures, reasoning patterns and programming language mechanisms characterizing modern programming, as well as the fundamental rules of producing high-quality software. They have the necessary programming background for later courses introducing programming skills in specialized application areas.

Content

Basics of object-oriented programming. Objects and classes. Pre- and postconditions, class invariants, Design by Contract. Fundamental control structures. Assignment and References. Basic hardware concepts. Fundamental data structures and algorithms. Recursion. Inheritance and deferred classes, introduction into event-driven design and concurrent programming. Basic concepts of Software Engineering such as the software process, specification and documentation, reuse and quality assurance.

Lecture notes

Textbook: "Touch of Class" (see under "Literatur")

The lecture slides are available for download on the course page.

Literature

Bertrand Meyer: Touch of Class: Learning to Program Well Using Objects and Contracts, Springer Verlag, 2009; new printing, 2012. This is the official textbook for the course. See http://www.polybuchhandlung.ch/100/con_liste.asp

Prerequisites / notice

The course uses an "Outside-In" approach enabling students, right from the beginning, to use an advanced graphical library and produce significant applications. Students then learn step by step how the library is built, as a source of imitation and inspiration.

The course covers not only basic concepts of programming but also some advanced topics seldom encountered in introductory courses, such as recursion, undecidability, event-driven programming, multiple inheritance and others.

5. Semester (Biochemical-Physical Direction)

Laboratory Courses, Semester Papers, Proseminars, Field Trips

Laboratory Courses arising upon specific written request by the students and permission by the Director of studies.

Abstract

In a semester project students extend their knowledge in a particular field, get acquainted with the scientific way of working, and learn to work on an actual research topic.

Objective

Students are accustomed to scientific work and they get to know one specific research field.

Bachelor's Thesis

It completes the Bachelor program and consists of a scientific project carried out independently.

Objective

Encourages students to show independence, to produce scientifically structured work and to apply engineering working methods.

Second and Third Year Additional Subjects

For the Bachelor in Interdisciplinary Sciences students can in principle choose from all subjects taught at the Bachelor level at ETH Zurich.

At the beginning of the 2. year an individual study program is established for every student in discussion with the Director of Studies in interdisciplinary sciences. For details see Programme Regulations 2010.

Other Electives ETH

Further combinations of Compulsory elective subjects arising upon specific written request by the students and permission by the Director of studies.

Course Catalogue of ETH

Compulsory Electives in Humanities, Social and Political Sciences

Recommended GESS compulsory elective courses (Type B) for D-CHAB.

see GESS Compulsory Electives: Type A: Enhancement of Reflection Capability

see GESS Compulsory Electives: Language Courses ETH/UZH

Interdisciplinary Sciences Bachelor - Key for Type

| O | Compulsory | E- | Recommended, not eligible for credits |
| W+ | Eligible for credits and recommended | Z | Courses outside the curriculum |
| W | Eligible for credits | Dr | Suitable for doctorate |

Key for Hours

V | lecture | P | practical/laboratory course |
G | lecture with exercise | A | independent project |
U | exercise | D | diploma thesis |
S | seminar | R | revision course / private study |
K | colloquium |

ECTS European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
Interdisciplinary Sciences Master

For the Master in Interdisciplinary Sciences students can in principle choose from all subjects taught at the Master level at ETH Zurich.

At the beginning of the Master studies an individual study program is established for every student in discussion with the Director of Studies in interdisciplinary sciences. For details see Programme Regulations 2007.

► Majors

The students can choose from all Majors as provided by the following list: http://www.chab.ethz.ch/lehre/in_msc/index_EN

Furthermore it is also possible to create an individual Majors as specified in Art. 19 paragraph 3 of the Programme Regulations.

Selection of courses of ETH, according individual curriculum.

► General Courses

Selection of courses of ETH, according individual curriculum.

► Proseminars, Laboratory Courses, Research Projects and Sem. Papers

Abstract

In the Master thesis students prove their ability to independent, structured and scientific working. The Master thesis is usually carried out in a core or optional subject area as chosen by the student.

Objective

In the Master Thesis students prove their ability to independent, structured and scientific working.

529-1000-30L Master's Thesis

Only students who fulfill the following criteria are allowed to begin with their master thesis:

a. successful completion of the bachelor programme;
b. fulfilling of any additional requirements necessary to gain admission to the master programme.

Duration of the Master's Thesis 6 months, possible only with the permission of the director of studies.

Abstract

In the Master thesis students prove their ability to independent, structured and scientific working. The Master thesis is usually carried out in a core or optional subject area as chosen by the student.

Objective

In the Master Thesis students prove their ability to independent, structured and scientific working.

Abstract

This course covers mathematical concepts and techniques necessary to model, solve and discuss scientific problems - notably through ordinary differential equations.

Objective

Mathematics is of ever increasing importance to the Natural Sciences and Engineering. The key is the so-called mathematical modelling cycle, i.e. the translation of problems from outside of mathematics into mathematics, the study of the mathematical problems (often with the help of high level mathematical software packages) and the interpretation of the results in the original environment.

The goal of Mathematics I and II is to provide the mathematical foundations relevant for this paradigm. Differential equations are by far the most important tool for modelling and are therefore a main focus of both of these courses.

Content

1. Single-Variable Calculus:
   - review of differentiation, linearisation, Taylor polynomials, maxima and minima, antiderivative, fundamental theorem of calculus, integration methods, improper integrals.
2. Linear Algebra and Complex Numbers:
   - systems of linear equations, Gauss-Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, cartesian and polar forms for complex numbers, complex powers, complex roots, fundamental theorem of algebra.
3. Ordinary Differential Equations:
   - separable ordinary differential equations (ODEs), integration by substitution, 1st and 2nd order linear ODEs, homogeneous systems of linear ODEs with constant coefficients, introduction to 2-dimensional dynamical systems.

Literature

- Bretscher, O.: Linear Algebra with Applications (Pearson Prentice Hall).

Prerequisites / notice

Prerequisites: familiarity with the basic notions from Calculus, in particular those of function and derivative.

Assistance:

Mondays 12-13, Tuesdays 17-19, Wednesdays 17-19, in Room HG E 41.

Abstract

Basics of structure, formation and function of cells and biomacromolecules, principles of metabolism, as well as basic classical and molecular genetics and evolutionary biology. First in a series of two lectures given over two semesters for students of agricultural and food sciences, as well as of environmental sciences.

Objective

The understanding of some basic principles of biology: the hierarchy of the structural levels of biological organisation, with particular emphasis on the cell and its functions, as well as metabolism, inheritance and evolution.
The structure and function of biomacromolecules; basics of metabolism; cell biology; membrane structure and function; basic energetics of cellular processes; respiration, photosynthesis; cell cycle, meiosis and sexual life cycles; Mendelian and molecular genetics; animal reproduction and behavior; sensory and motor mechanisms; population biology and evolution; principles of phylogeny.

The Campbell Chapters 1-4 (10th edition) under the heading "The role of chemistry in biology" are expected. We will treat the following Campbell chapters:

5 Biochemistry Biological Macromolecules and Lipids
7 Cell biology Cell Structure and Function
8 Cell biology Cell Membranes
10 Cell biology Cellular Respiration: An Introduction to Metabolism
10 Cell biology Cellular Respiration
11 Cell biology Photosynthesis
12 Cell Biology Mitosis
13 The Genetic Basis of Life Sexual Life Cycles and Meiosis
14 The Genetic Basis of Life Mendelian Genetics
15 The Genetic Basis of Life Linkage and Chromosomes
20 The Genetic Basis of Life The Evolution of Genomes
21 Evolution How Evolution Works
22 Evolution Phylogenetic Reconstruction
23 Evolution Microevolution
24 Evolution Species and Speciation
25 Evolution Macroevolution

The lecture is the first in a series of two lectures given over two semesters for students with biology as a basic subject.

Biology III: Essentials of Ecology

Abstract
This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed.

Objective
The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level.

Content
- Überblick der aquatischen und terrestrischen Lebensräume mit ihren Bewohnern
- Einfluss von Umweltfaktoren (Temperatur, Strahlung, Wasser, Nährstoffe etc.) auf Organismen; Anpassung an bestimmte Umweltbedingungen
- Populationsdynamik: Ursachen, Beschreibung, Vorhersage und Regulation
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartimente, Stoff- und Energieflüsse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

Lecture notes
Unterlagen, Vorlesungsskripten und relevante Literatur sind in der Lehrdokumentenablage abrufbar. Die Unterlagen für die nächste Vorlesung stehen jeweils spätestens am Freitagmorgen zur Verfügung.

Literature
Generelle Ökologie:
Aquatische Ökologie:
Lampert & Sommer 1999. Limnökologie. Thieme, 2. Aufl., ca. Fr. 55.-;
Bohle 1995. Limnische Systeme. Springer, ca. Fr. 50.-
Naturschutzbiologie:

Earth and Natural Production Systems

Abstract
The lecture provides a science-based exploration of key aspects of our planet: from its formation, to its properties and resources (minerals, soils, climate, water, vegetation), to agricultural production.

Objective
Overview and understanding of key aspects of planet earth and its role for agricultural production, including consideration of current challenges such as climate change, water crises, deforestation, north-south conflict and biodiversity.

Content
Origin of the planetary system, composition of the earth and the atmosphere, formation of continents and oceans, biogeochemical cycles, plate tectonics and earthquakes, erosion, climate, water cycle, surface waters, vegetation, forests and crops, food production including related worldwide ecological and economical interactions.

Lecture notes
Scripts provided by each teaching person.

https://moodle-app2.let.ethz.ch/course/info.php?id=1682

Principles of Economics

Abstract
This course covers the bases for understanding micro- and macroeconomic issues and theories. Participants are given the tools to argue in economic and political terms and to evaluate the corresponding measures. Group and individual exercises will lead to the knowledge gained.

Objective
Students are able to
- describe fundamental micro- and macroeconomic issues and theories.
- apply suitable economic arguments to a given theme.
- evaluate economic measures.

Content
Supply and demand behaviour of firms and households; market equilibrium and taxation; national income and indicators; inflation; unemployment; growth; macroeconomics policies

Lecture notes
available on electronic platform

<td>N. Buchmann, M. Kreuzer, M. Loessner, D. Moretti, M. Sonneveld, E. J. Windhab</td>
</tr>
</tbody>
</table>

**Objective**

- Knowledge about the World Food System will be provided, based on case studies along food value chains in countries with various development stages and dependent on multiple boundary conditions. This will generate profound understanding of the associated global challenges especially food scarcity, suboptimal diet and nutrition, food quality and safety as well as effects on the environment.

**Content**

- Case studies on certain foods of plant and animal origin serve to demonstrate the entire food value chain from the production of raw material to processed food and its consumer relevant property functions. In doing so, important corresponding aspects for developed, emerging and developing countries are demonstrated, by use of engineering as well as natural and social science approaches.

**Prerequisites / notice**

Information on books and other literature references is communicated during the course.

**Lecture notes**

All materials for the lecture are available at www.evim.ethz.ch

**Literature**

**Additional First Year Courses**

**529-0030-00L Laboratory Course: Elementary Chemical Techniques**

<td>Laboratory Course: Elementary Chemical Techniques</td>
<td>O</td>
<td>3 credits</td>
<td>6P</td>
<td>N. Kober, M. Morbidelli</td>
</tr>
</tbody>
</table>

**Objective**

- This practical course provides an introduction to elementary laboratory techniques.
- The experiments cover a wide range of techniques, including analytical and synthetic techniques (e.g. investigation of soil and water samples or the preparation of simple compounds). Furthermore, the handling of gaseous substances is practised.

**Prerequisites / notice**

Groups of a maximum of 30 students.

**Literature**

For further reading (not obligatory):

Gerhard Wanner; Mikroskopisch-Botanisches Praktikum, Georg Thieme Verlag, Stuttgart.

**Lecture notes**

Handouts and links are provided online.

**Abstract**

- Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects. The following topics are covered: publishing over the internet, processing and visualizing time series, visualizing multi-dimensional data, managing data with lists and tables and with relational databases, introduction to macro programming, universal methods for algorithm design.

**Objective**

- The students spend most of their time working through electronic tutorials and discussing their results with teaching assistants.
- - know universal methods for algorithm design.
- - handle the complexity of real-world data.
- - process and analyze real-world data from their subject of study.
- - choose and apply appropriate tools from computer science.

**Content**

1. Simulation and Modeling
2. Visualizing multidimensional data
3. Data management with lists and tables
4. Data management with a relational database
5. Introduction to macro programming
6. Introduction to programming with Python

**Prerequisites / notice**

This course is part of the block exam after the first study year. Paper copies can be used ("Open Book") during the on-line exam, but no other means are not allowed. The course is taught in German.
The classification and analysis of natural and artificial compounds is a key subject of this course. It provides an introduction to elementary laboratory techniques, and the experiments cover a wide range of analytic and synthetic tasks:

- Selected samples (e.g. soil and water) will be analysed with various methods, such as titrations, spectroscopy or ion chromatography. The chemistry of aqueous solutions (acid-base equilibria and solvatation or precipitation processes) is studied.
- The synthesis of simple inorganic complexes or organic molecules is practised.
- Furthermore, the preparation and handling of environmentally relevant gaseous species like carbon dioxide or nitrogen oxides is a central subject of the Praktikum.

Lecture notes
The script will be published on the web.
Details will be provided on the first day of the semester.

Literature
A thorough study of all script materials is requested before the course starts.

### Biochemistry

**Abstract**

Building on the biology courses in the 1st and 2nd semesters, this course covers basic biochemical knowledge in the areas of enzymology and metabolism. Those completing the course are able to describe and understand fundamental cellular metabolic processes.

**Objective**

- Students are able to understand
  - the structure and function of biological macromolecules
  - the kinetic bases of enzyme reactions
  - thermodynamic and mechanistic basics of relevant metabolic processes

- Students are able to describe the relevant metabolic reactions in detail

**Content**

- Program
  - Introduction, basics, composition of cells, biochemical units, repetition of relevant organic chemistry
  - Structure and function of proteins
  - Carbohydrates
  - Lipids an biological membranes
  - Enzymes and enzyme kinetics
  - Catalytic strategies
  - Metabolism: Basic concepts and design. Repetition of basic thermodynamics
  - Glycolysis, fermentation
  - The citric acid cycle
  - Oxidative phosphorylation
  - Fatty acid metabolism

**Lecture notes**

Horton et al. (Pearson) serves as lecture notes.

**Prerequisites / notice**

Basic knowledge in biology and chemistry is a precondition.

### Physiology and Anatomy I

**Abstract**

Imparts a basic understanding of physiology and anatomy in man, focusing on the interrelations between morphology and function of the human organism. This is fostered by discussing all subjects from a functional point of view. One major topic of the lecture is food intake and digestion with its correlated chemosensory, endocrine and metabolic processes.

**Objective**

At the end of the course the students understand the basic functions of the organ systems and functionally important morphological features. One focus of the course is on aspects related to nutrition and overweight including the resulting diseases.

### Organic Chemistry

**Abstract**

Introduction to Isomerism.

Reaction mechanisms in organic chemistry (substitutions, additions, eliminations condensations)

Biosynthesis of Terpenes.

**Objective**

The students are able to differentiate between structural and stereoisomers.

- They know the basic reaction mechanisms in organic chemistry.
- They are able to understand and formulate simple biochemical reactions.
- They know the basics of the biosynthesis of terpenes.

**Content**

- Isomerism (structural isomers, stereoisomers).
- Descriptive chemistry of natural products (glycerides, peptides, saccharides).
- Reaction mechanisms (substitutions, additions, eliminations, condensations).
- The citric acid cycle, the glyoxylate cycle.
- Biosynthesis of terpenes.

**Literature**

Carsten Schmuck, Basisbuch Organische Chemie, Pearson

**Prerequisites / notice**

Der Stoff der Basischemie wird vorausgesetzt.

Relationship between economy and environment, market failure, external effects and public goods, contingent valuation, internalisation of externalities; economics of non-renewable resources, economics of renewable resources, cost-benefit analysis, sustainability, and international aspects of resource and environmental economics.
Objective

Understanding of the basic issues and methods in resource and environmental economics; ability to solve typical problems in the field using the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Topics are:

- Introduction to resource and environmental economics
- Importance of resource and environmental economics
- Main issues of resource and environmental economics
- Normative basis
- Utilitarianism
- Fairness according to Rawls
- Economic growth and environment
- Externalities in the environmental sphere
- Governmental internalisation of externalities
- Private internalisation of externalities: the Coase theorem
- Free rider problem and public goods
- Types of public policy
- Efficient level of pollution
- Tax vs. permits
- Command and Control Instruments
- Empirical data on non-renewable natural resources
- Optimal price development: the Hotelling-rule
- Effects of exploration and Backstop-technology
- Effects of different types of markets.
- Biological growth function
- Optimal depletion of renewable resources
- Social inefficiency as result of over-use of open-access resources
- Cost-benefit analysis and the environment
- Measuring environmental benefit
- Measuring costs
- Concept of sustainability
- Technological feasibility
- Conflicts sustainability / optimality
- Indicators of sustainability
- Problem of climate change
- Cost and benefit of climate change
- Climate change as international ecological externality
- International climate policy: Kyoto protocol
- Implementation of the Kyoto protocol in Switzerland

Content

Economy and natural environment, welfare concepts and market failure, external effects and public goods, measuring externalities and contingent valuation, internaising external effects and environmental policy, economics of non-renewable resources, renewable resources, cost-benefit-analysis, sustainability issues, international aspects of resource and environmental problems, selected examples and case studies.

Abstract

Basic principles of the handling of microorganisms (MO) - Detection of MO in the environment - Foodmicrobiology - Morphology and diagnostics of MO - Morphology and physiology of fungi - Antimicrobial agents - Microbial genetics - Bacterial physiology and interactions - Microbial pest control

Objective

The students are familiar with the laboratory work with microorganisms. Specific emphasis is put on the isolation and maintenance of pure cultures and the required hygiene measures. The students know the practical, clinical and ecological importance of microorganisms.

Content

In an introductory part students are made familiar with the handling and cultivation of microorganisms (MO). Afterwards, the students detect MO in the environment and use MO for the conservation of food. This part is then followed by a practical introduction on routine diagnostics of MO and experiments with antimicrobial agents. The part on diagnostics is complemented by an overview over the morphology and physiology of fungi. On experiments on plant-bacteria-interactions - a current research topic at the Institute of Microbiology - the students experience the interaction of of MO with higher organisms. Some simple experiments demonstrate the importance of MO in molecular genetics. The course ends with an example of applied microbiology i.e. an experiment on microbial pest control.

Lecture notes

A detailed script of approx. 100 pp. and other relevant documents are available at https://moodle-app2.let.ethz.ch/course/view.php?id=1646 at latest 1 week before the beginning of the practical course.
Biotechnology has been defined as any technique that uses living organisms, or substances from those organisms, to make or modify a product, to improve plants or animals, or to develop microorganisms for specific uses. In this course, basic knowledge for understanding biotechnology as applied to food processing will be presented. This course builds on the application of principles learned from other basic courses in the Bachelor program, especially microbiology and microbial metabolism, molecular biology, biochemistry, physics and engineering. Students will learn about the physiology of important productive microorganisms (lactic acid bacteria, bifidobacteria, propionibacteria and fungi) used in food fermentations, closely related to applications in biotechnology. Microbial kinetics, and design and operation of bioreactors; and application of modern molecular tools for food biotechnology.

Objective
- To understand basic principles of fermentation biotechnology, with particular emphasis on food applications.
- To understand the important role of microbial physiology and molecular tools for food biotechnology;
- To understand basic principles of analytical chemistry. To get acquainted with the principles and applications of important routine methods of instrumental food analysis (UV/VIS, IR, AAS, GC, HPLC);

Prerequisites / notice
Performance of the students in this practical course is controlled by:
1. Attendance of all 7 course days
2. Giving a short communication to a selected topic of Microbiology (in groups of 3 students)
3. Handing in of written reports to selected experiments (in groups of 2 students)

Participating PhD students who collect credit points during their thesis are examined in a 30-minute oral exam at the end of the course.

Abstract
- To understand accounting as a component of the complex system of the enterprise
- To understand accounting not as an isolated discipline, but as a part of the complex system of the enterprise

Objective
- Accounting system as a part of management economics.
- The different steps for scheduling and evaluation of the accountancy will be studied. The main part of the lecture is dedicated to the financial accounting nevertheless the fundamentals of the internal cost-accounting will also be presented. The lecture will also include the clarification of concrete cases and the calculation of practical exercises.

Content
- Introduction and historical background
- Basic knowledge of the mechanisms and the regulation of an immune response.
- Basic knowledge of the mechanisms and the regulation of an immune response.
- Introduction into structural and functional aspects of the immune system.
- Introduction into structural and functional aspects of the immune system.
- - Antigen presentation and Major Histoincompatibility (MHC) antigens
- - Thymus and T cell selection
- - Autoimmunity
- - Cytotoxic T cells and NK cells
- - Th1 and Th2 cells, regulatory T cells
- - Allergies
- - Hypersensitivities
- - Vaccines, immune-therapeutic interventions

Lecture notes
- Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien"

Prerequisites / notice
- Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

Lecture notes
- Dokuments will be distributed per lecture.
- Lombriser Roman & Aplanalp Peter: Strategisches Management
Food Chemistry II

Objective
Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

Abstract
To familiarize with the structure, properties and reactivity of food constituents. To understand the relationship between the multiple chemical reactions and the quality of food.

Content
Descriptive chemistry of food constituents (proteins, lipids, carbohydrates, plant phenolics, flavour compounds). Reactions which affect the colour, flavour, texture, and the nutritional value of food raw materials and food products during processing, storage and preparation in a positive or in a negative way (e.g. lipid oxidation, Maillard reaction, enzymatic browning). Links to food analysis, food processing, and nutrition.

Lectures
The lectures Food Chemistry I and Food Chemistry II constitute a unit.

Lecture notes
The lectures are supplemented with handouts.

Literature

---

Food Analysis II

Objective
To get acquainted with the principles and applications of mass spectrometry in food analytics.

Abstract
Principles of soft condensed matter applied to food polymers, surfactants and colloids

Content
Main focus: Mass spectrometry, applications of mass spectrometry (MS).

Lecturers
L. Nyström, M. Erzinger

---

Food Process Engineering II

Objective
To procure students with the basics of mechanical process engineering with main focus on technical unit operations used in the food industry.

Abstract
Mechanical  Verfahrenstechnik: Grundtechniken für die mikrobiologische Untersuchung von Lebensmitteln, Qualitätssicherung, Anwendung von antimikrobiellen Wirkstoffen, Nachweismethoden für die wichtigsten pathogenen Keime aus Lebensmitteln und einzelnen Keimen aus fermentierten oder probiotischen Lebensmitteln mit klassischen Methoden (u.a. Anreicherungssysteme, ELISA, Enzymsysteme) und Methoden der Molekularbiologie (PCR, Hybridisierung, in situ-Nachweis), Durchführung von Gentransfermethoden mit Mikroorganismen (Konjugation, Transformation) und Bakteriophagen in Lebensmitteln

Content
Food Process Engineering II

Lecturers

Experimental Food Microbiology

Objective
Teaching of basic experimental knowledge in detection and identification of relevant microorganisms in food. Various practical experiments were accompanied by theoretic introductions to the different topics. The students become acquainted with state-of-the-art methods with main focus on modern molecular techniques for the rapid detection of food borne pathogens.

Abstract
Teaching of basic experimental knowledge for detection and identification of relevant microorganisms in food. To get acquainted with the principles and applications of mass spectrometry in food analytics. Reactions which affect the colour, flavour, texture, and the nutritional value of food raw materials and food products during processing, storage and preparation in a positive or in a negative way (e.g. lipid oxidation, Maillard reaction, enzymatic browning). Links to food analysis, food processing, and nutrition.

Little notes
The lectures are supplemented with handouts.

Literature
- Matthias Stiess, Mechanische Verfahrenstechnik Band 1 & 2, Springer Verlag
- F. Löffler, J. Raasch, Grundlagen der Mechanischen Verfahrenstechnik, Vieweg Verlag

Prerequisites / notice
Voraussetzungen: Vorlesung in VTI, sowie physikalische und mathematische Grundkenntnisse

---

Bachelor Thesis

Objective
The Bachelor Thesis completes the Bachelor programme and consists of a scientific project carried out independently under the tutorship of a lecturer at D-HEST.

Abstract
The Bachelor Thesis completes the Bachelor programme and consists of a scientific project carried out independently under the tutorship of a lecturer at D-HEST.
Objective

The Bachelor Thesis aims at fostering the student's ability to independent, structured and scientific working and at deepening their knowledge in a specific field.

Cognitive Activating Instructions in MINT Subjects

**Number:** 851-0242-06L

**Title:** Human Intelligence

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

**ECTS:** 1 credit

**Hours:** 1S

**Lecturers:** E. Stern, P. Edelsbrunner, B. Rütsche

**Prerequisites / Notice:** Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

Research Methods in Educational Science

**Number:** 851-0242-08L

**Title:** Research Methods in Educational Science

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

**ECTS:** 1 credit

**Hours:** 1S

**Lecturers:** P. Edelsbrunner, B. Rütsche, E. Stern, E. Ziegler

**Prerequisites / Notice:** Number of participants limited to 30.

Coping with Psychosocial Demands of Teaching (EW4 W DZ)

**Number:** 851-0240-22L

**Title:** Coping with Psychosocial Demands of Teaching (EW4 W DZ)

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

**ECTS:** 2 credits

**Hours:** 3S

**Lecturers:** A. Deiglmayr, P. Greutmann, S. Hofer

**Prerequisites / Notice:** Number of participants limited to 20.
In this class, students will learn concepts and skills for coping with psychosocial demands of teaching.

Objective

Students possess theoretical knowledge and practical competences to be able to cope with the psychosocial demands of teaching.

- They know the basic rules of negotiation and conflict management (e.g., mediation) and can apply them in the school context (e.g., in conversations with parents).
- They can apply diverse techniques of classroom management (e.g., prevention of disciplinary problems in the classroom) and know relevant authorities for further information (e.g., legal conditions).

The teaching internship can just be visited if all other courses of TC are completed.

Abstract

Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.

Objective

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Content

Die Themen für die beiden Prüfungslektionen am Schluss des Praktikums erfahren die Studierenden in der Regel eine Woche vor dem Prüfungstermin. Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie bis am Vortrag um 12 Uhr den beiden Prüfungsexperten (Fachdidaktiker/-in, Departementsvertreter/-in) ein. Die gehaltenen Lektionen werden kriteriumsbasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/der Kandidatin über die gehaltenen Lektionen im Rahmen eines kurzen Kolloquiums.

Abstract

In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. They compile texts under supervision that are directly comprehensible to the targeted readers - generally specialist-subject teachers at high-school level.

Objective

The aim is for the students
- to familiarise themselves with a new topic by obtaining material and studying the sources, so that they can selectively extend their specialist competence in this way.
- to independently develop a text on the topic, with special focus on its mathematical comprehensibility in respect of the level of knowledge of the targeted readership.
- To try out different options for specialist further training in their profession.

<tr>
<td>Abstract</td>
<td>In Physics of Food Colloids the principles of colloid science will applied to the aggregation of food material such as proteins, polysaccharides, and emulsifiers. Mixtures of such raw material determine the appearance and performance of our daily food. Examples of colloidal laws at work will link food colloid science to the manufacturing and processing of food.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>The aggregation of food raw material determine to appearance and performance of a complex food system as far as nutritional aspects. The underlying colloidal laws are reflecting the structure of the individual raw material (length scale, character of the interacting forces). Once those concepts are appreciated the aggregation of most food systems falls into recognizable patterns that can be used to modify and structure exiting food or to design new products. The application and use of those concepts are discussed in light of common food production.</td>
<td></td>
<td></td>

</table>

Abstract
This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning "good practice" that can be applied in every student’s own projects and daily work life.

Objective
The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.

Content
The course starts with the basics of linear regression modeling, and then proceeds to parameter estimation, tests and confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, categorical input variables, shrinkage and general modeling strategies.

The last third of the course is dedicated to an introduction into generalized linear regression models: this includes logistic regression for binary response variables, Poisson regression for count data, cumulative logit models for ordered, and multinomial regression for categorical response variables.

Lecture notes
A script will be available.

Literature
Faraway (2005): Linear Models with R
Faraway (2006): Extending the Linear Model with R
Draper & Smith (1998): Applied Regression Analysis
Fox (2008): Applied Regression Analysis and GLMs
Montgomery et al. (2006): Introduction to Linear Regression Analysis

Prerequisites / notice
The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-3622-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

Abstract
Journal-club style course involving student presentations and active discussion and critique of recent publications and modern experimental strategies. The focus is on chemical, biochemical, and nutritional aspects of selected topics in Toxicology, with a new group of topics addressed each semester.

Objective
-to stimulate student interest and provide advanced knowledge of current research in Toxicology and its related sciences
-to develop skills in critical evaluation of scientific literature, oral presentation and questioning
-to understand modern experimental techniques and research approaches relevant in toxicology

Content
The journal-club style course involves student presentations and active discussion of recent publications. The primary focus is on chemical, biochemical, and nutritional aspects of selected current topics in Toxicology. Participants are masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Biochemistry, Pharmaceutical Sciences, etc.).

Literature
A selection of approximately 20 papers from recent primary scientific literature.
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant chemical and biochemical aspects of selected topics in Toxicology. Participants are generally masters or PhD students in Food Sciences and related disciplines (i.e. Microbiology, Chemistry, Pharmaceutical Sciences, etc.), and strong knowledge of organic chemistry and biochemistry are prerequisite. Selected course topics change every semester.

Participants are required to have completed previously "Special Topics in Toxicology" (752-1301-00L). Both courses are run concurrently every semester. It is only possible to register for one course at a time. Do not register for "Advanced Topics in Toxicology" until after you have completed "Special Topics in Toxicology".

This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry, will contribute to the selected topics as follows:

- **Probiotics and Prebiotics**: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.

- **Bioprotective Cultures and Antimicrobial Metabolites**: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.

- **Legal and Protection Issues Related Functional Foods**

- **Industrial Biotechnology of Flavor and Taste Development**

- **Safety of Food Starter Cultures and Prebiotics**

Students will be required to complete a group project on food products and ingredients with or from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

### Literature

A list of references will be given at the beginning of the course for the different topics presented during this course.

### 752-1301-00L Special Topics in Toxicology

**Abstract**

Journal-club style course involving student presentations and active discussion and critique of recent publications and modern experimental strategies. The focus is on chemical, biochemical, and nutritional aspects of selected topics in Toxicology, with a new group of topics addressed each semester.

**Objective**

- to stimulate student interest and provide advanced knowledge of current research in Toxicology and its related sciences
- to develop skills in critical evaluation of scientific literature, oral presentation and questioning
- to understand modern experimental techniques and research approaches relevant in Toxicology

**Content**

The journal-club style course involves student presentations and active discussion of recent publications. The primary focus is on chemical, biochemical, and nutritional aspects of selected recent topics in Toxicology. Participants are masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Biochemistry, Pharmaceutical Sciences, etc.).

**Prerequisites / notice**

The course is open to Masters or PhD level students.

For Masters level participants, a strict prerequisite is (a) previously taken and passed "Introduction to Molecular Toxicology" (752-1300) and/or (b) previous courses supporting equivalent knowledge plus permission from the instructor. Please contact the instructor before the start of the class, explaining the basis of your previous knowledge other than the Introduction course, to request special permission.

If you would like to take "Special Topics in Toxicology", do not register at the same time for "Advanced Topics in Toxicology". It is only possible to take one, and it is only possible to take the advanced level after completing this course.

### 752-1302-00L Advanced Topics in Toxicology

**Abstract**

Journal-club style course that involves student presentations of selected topics in Toxicology on the basis of current primary research and review papers.

**Objective**

The goals are to stimulate student interest and provide advanced knowledge of current research in the interdisciplinary area of Food and Nutrition Toxicology and its related sciences. The student should develop skills in the critical evaluation of scientific literature, oral presentation and questioning, and understanding modern experimental techniques in Molecular Toxicology.

**Content**

The journal-club style course involves student presentations of recent publications. The primary focus is on chemical and biochemical aspects of selected topics in Toxicology. Participants are generally masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Pharmaceutical Sciences, etc.), and strong knowledge of organic chemistry and biochemistry are prerequisite. Selected course topics change every semester.

**Prerequisites / notice**

Participants are required to have completed previously "Special Topics in Toxicology" (752-1301-00L). Both courses are run concurrently every semester. It is only possible to register for one course at a time. Do not register for "Advanced Topics in Toxicology" until after you have completed "Special Topics in Toxicology".

| 401-0649-00L    | **Applied Statistical Regression**            | W+   | 5 credits | 2V+1U   | M. Dettling |
| **Abstract**    | This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning "good practice" that can be applied in every student's own projects and daily work life. |
| **Objective**   | The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling. |
The course starts with the basics of linear regression modeling, and then proceeds to parameter estimation, tests and confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, categorical input variables, shrinkage and general modeling strategies.

The last third of the course is dedicated to an introduction into generalized linear regression models: this includes logistic regression for binary response variables, Poisson regression for count data, cumulative logit models for ordered, and multinomial regression for categorical response variables.

A script will be available.

This course will provide knowledge and biological background on genetically modified organisms (GMO) and food produced with the help of GMO, especially on the molecular basis of GMO constructions with emphasis on genetically modified food in Switzerland and the EU. Criteria of rationale food safety and health assessment in agriculture and food consumption will be elaborated.

Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries.

Some contents will be provided by registered students who will individually or as a group present an actual publication.

The course is open to Master and MAS students in food and science and nutrition or related. Basic knowledge of food chemistry and nutrition is expected, as well as an understanding of food processing.

To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.

The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

To be provided by the individual lecturers, at their discretion.

No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

To be provided by registered students who will individually or as a group present an actual publication.

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented.

Students are able to:
- evaluate recent formulation strategies aimed to achieve additional physiological benefits for targeted population groups (i.e. functional foods).
- apply these criteria when assessing the effects of selected processing technologies on nutritional quality.
- describe and compare the major concepts/criteria used for the evaluation of the nutritional quality of food
- to describe the role of nutritional factors in the prevention of chronic diseases
- to assess the nutritional status of a population (Switzerland taken as an example)
- to put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic.
The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Switzerland taken as an example, the health risks associated with our nutritional habits will be evaluated. Finally, examples of preventive measures addressing individuals but also the society in relation to the obesity epidemic and other threats to health are discussed.

**752-6402-00L**

**Nutrigenomics**

Nutrigenomics - toward personalized nutrition? Breakthroughs in biology recently led nutrition scientists to apply modern tools (genomics, transcriptomics, proteomics, metabolomics, genetics, epigenetics) to the analysis of the interactions of food with humans. The lecture presents these tools and illustrates their application in selected topics relevant to human nutrition and food sciences.

**Objective**
- Overall understanding of the transdisciplinary research being conducted under the term nutrigenomics.
- Overall understanding of the current research on nutrition and food science.
- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics.

**Content**
- The course is composed of approximately 450 slides (ca 18 slides/lecture) organized in 9 modules.

**Lecture notes**
- The script is composed of circa 450 slides (ca 18 slides/lecture) organized in 9 modules.

**Module A**
- From biochemical nutrition research to nutrigenomics.

**Module B**
- Nutritional genomics.

**Module C**
- Nutrigenetics.

**Module D**
- Nutri-epigenomics.

**Module E**
- Transcriptomics in nutrition research.

**Module F**
- Proteomics in nutrition research.

**Module G**
- Metabolomics in nutrition research.

**Module H**
- Nutritional systems biology.

**Module I**
- Individualized nutrition - opportunities and challenges.

**Literature**
- No extra reading requested. Most slides in the lecture are referenced with web addresses.

**Prerequisites / notice**
- Basic training in biochemistry, molecular biology, physiology, and human nutrition. Interest in interdisciplinary sciences linking molecular biology to human health. Interest in the application of analytical laboratory methods to the understanding of human biology, in particular nutrition.

**752-1301-00L**

**Special Topics in Toxicology**

Journal-club style course involving student presentations and active discussion and critique of recent publications and modern experimental strategies. The focus is on chemical, biochemical, and nutritional aspects of selected topics in Toxicology, with a new group of topics addressed each semester.

**Objective**
- To stimulate student interest and provide advanced knowledge of current research in Toxicology and its related sciences.
- To develop skills in critical evaluation of scientific literature, oral presentation and questioning.
- To understand modern experimental techniques and research approaches relevant in toxicology.

**Content**
- The journal-club style course involves student presentations and active discussion of recent publications. The primary focus is on chemical, biochemical, and nutritional aspects of selected current topics in Toxicology. Participants are open to Masters or PhD level students.

**Literature**
- A selection of approximately 20 papers from recent primary scientific literature.

**Prerequisites / notice**
- For Masters level participants, a strict prerequisite is (a) previously taken and passed "Introduction to Molecular Toxicology" (752-1300) and/or (b) previous courses supporting equivalent knowledge plus permission from the instructor. Please contact the instructor before the start of the class, explaining the basis of your previous knowledge other than the Introduction course, to request special permission.

If you would like to take "Special Topics in Toxicology", do not register at the same time for "Advanced Topics in Toxicology". It is only possible to take one, and it is only possible to take the advanced level after completing this course.

This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- Legal and Protection Issues Related Functional Foods
- Industrial Biotechnology of Flavor and Taste Development
- Safety of Food Starter Cultures and Prebiotics

Students will be required to complete a group project on food products and ingredients with of from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Copy of the power point slides from lectures will be provided.

A list of references will be given at the beginning of the course for the different topics presented during this course.

Gives the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand.

Some basic knowledge in physiology is recommended for this course, which revisits important physiological topics, emphasizing their relationship to nutrition. The aim is to give the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand. For students with a background in medicine, pharmacy or biology the course is useful as a review of previously acquired knowledge. Major topics are basic neuroanatomy and neurophysiology; general endocrinology; the physiology of taste and smell; nutrient digestion and absorption; intermediary metabolism and energy homeostasis; and some aspects of cardiovascular physiology and water balance.

752-6403-00L Nutrition and Performance W+ 2 credits 2V S. Mettler, M. B. Zimmermann

Abstract
The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

Objective
To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Content
The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

Lecture notes
Lecture slides and required handouts will be available on the ETH website.

Literature
Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

Prerequisites / notice
General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English
It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

752-5111-00L Gene Technology in Foods W 3 credits 2V L. Meile

Abstract
This course will increase basic knowledge on biotechnological constructions and application of genetically modified organisms (GMO) which are used worldwide in food production systems. The course discusses health issues, the legislation frame and food safety aspects of GMO applications in agriculture, food production and consumption in Switzerland and EU-countries.

Objective
This course will provide knowledge and biological background on genetically modified organisms (GMO) and food produced with the help of GMO, especially on the molecular basis of GMO constructions with emphasis on genetically modified food in Switzerland and the EU. Criteria of rationale food safety and health assessment in agriculture and food consumption will be elaborated.

Content
Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries.

Lecture notes
Copies of slides from lectures will be provided

Literature
Actual publications from literature will be provided

Prerequisites / notice
Good knowledge in biology, especially in microbiology and molecular biology are prerequisites. Some contents will be provided by registered students who will individually or as a group present an actual publication.

752-1302-00L Advanced Topics in Toxicology W 2 credits 2G S. J. Sturla

Abstract
Journal-club style course that involves student presentations of selected topics in Toxicology on the basis of current primary research and review papers.

Objective
The goals are to stimulate student interest and provide advanced knowledge of current research in the interdisciplinary area of Food and Nutrition Toxicology and its related sciences. The student should develop skills in the critical evaluation of scientific literature, oral presentation and questioning, and understanding modern experimental techniques in Molecular Toxicology.

Content
The journal-club style course involves student presentations of recent publications. The primary focus is on chemical and biochemical aspects of selected topics in Toxicology. Participants are generally masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Pharmaceutical Sciences, etc.), and strong knowledge of organic chemistry and biochemistry are prerequisite. Selected course topics change every semester.

Prerequisites / notice
Participants are required to have completed previously "Special Topics in Toxicology" (752-1301-00L). Both courses are run concurrently every semester. It is only possible to register for one course at a time. Do not register for "Advanced Topics in Toxicology" until after you have completed "Special Topics in Toxicology".

Major in Human Health, Nutrition and Environment
Definition of modules see study guide Food Science

Disciplinary Subjects
Disciplinary courses: Module Public Health plus one additional module (Infectious Diseases or Nutrition and Health or Environment and Health). A minimum of 10 CP per module have to be obtained

Number Title Type ECTS Hours Lecturers
401-0629-00L Applied Biostatistics W 4 credits 3G M. Müller

Abstract
Principles and main methods in biostatistics with emphasis on practical aspects. Experimental and observational studies. Regression and analysis of variance. Introduction into survival analysis.

Objective
Getting an overview of the problems and statistical methods used in health sciences. Practise in using the software R to analyze data and interpreting the sults.

Content

Lecture notes

Literature

Prerequisites / notice
The statistical package R will be used in the exercises. If you are unfamiliar with R, I highly recommend the online R course etutoR.
### 551-0223-00L Immunology III

**Abstract**
This course provides a detailed understanding of:
- development of T and B cells
- the dynamics of an immune response during acute and chronic infection
- mechanisms of immunopathology
- modern vaccination strategies

**Objective**
Key experimental results will be shown to help understanding how immunological text book knowledge has evolved.

**Content**
- Development and selection of CD4 and CD8 T cells, natural killer T cells (NKT), and regulatory T cells (Treg)
- NK T cells and responses to lipid antigens
- Differentiation, characterization, and function of CD4 T cell subsets such as Th1, Th2, and Th17
- Overview of cytokines and their effector function
- Co-stimulation (signals 1-3)
- Dendritic cells
- Evolution of the "Danger" concept

**Literature**
Documents of the lectures are available for download at: https://moodle-app2.let.ethz.ch/course/view.php?id=998

#### Prerequisites / notice
Immunology I and II

### 551-1171-00L Immunology: from Milestones to Current Topics

**Abstract**
Milestones in Immunology: an old concepts and modern experiments

**Objective**
The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptional framework and critical technological advancements. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

**Content**
- Milestones and current topics of innate immunity, antigen presentation, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunity.

**Lecture notes**
Original and review articles will be distributed by the lecturer.

**Literature**
Literaturunterlagen werden vor Beginn des Kurses auf folgender website zugänglich sein: Moodle Course https://moodle-app2.let.ethz.ch/course/view.php?id=1002

### 701-0263-01L Seminar in Evolutionary Ecology of Infectious Diseases

**Abstract**
Students of this course will discuss current topics from the field of infectious disease biology. From a list of publications, each student chooses some themes that he/she is going to explain and discuss with all other participants and under supervision. The actual topics will change from year to year corresponding to the progress and new results occurring in the field.

**Objective**
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

**Content**
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

**Lecture notes**
Publications and class notes can be downloaded from a web page announced during the lecture.

**Literature**
Papers will be assigned and downloaded from a web page announced during the lecture.

### 701-1341-00L Water Resources and Drinking Water

**Abstract**
The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.

**Objective**
- T cell function and dysfunction in acute and chronic viral infections
- Cells expressing Pattern Recognition Receptors and their downstream signals
- Co-stimulation (signals 1-3)
- Evolution of the "Danger" concept

**Literature**
Will be mentioned in handouts

### 752-2122-00L Food and Consumer Behaviour

**Abstract**
This course focuses on food consumer behavior, consumer's decision-making processes and consumer's attitudes towards food products.

**Objective**
The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues

### 752-4009-00L Molecular Biology of Foodborne Pathogens

**Abstract**
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

**Objective**
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganisms or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks.

---

Data: 06.04.2020 13:01  Autumn Semester 2015  Page 832 of 1434
The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented.

Objective
- Students are able
  - to evaluate the scientific evidence on the effects of diet on human health
  - to describe the role of nutritional factors in the prevention of chronic diseases
  - to assess the nutritional status of a population (Switzerland taken as an example)
  - to put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic

Content
The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Switzerland taken as an example, the health risks associated with our nutritional habits will be evaluated. Finally, examples of preventive measures addressing individuals but also the society in relation to the obesity epidemic and other threats to health are discussed.

Lecture notes
Handouts are provided to students in the classroom.

Prerequisites / notice
Language of the course is English
Nutrigenomics - toward personalized nutrition?

Breakthroughs in biology recently led nutrition scientists to apply modern tools (genomics, transcriptomics, proteomics, metabolomics, genetics, epigenetics) to the analysis of the interactions of food with humans. The lecture presents these tools and illustrates their application in selected topics relevant to human nutrition and food sciences.

- Overall understanding of the transdisciplinary research being conducted under the term nutrigenomics.
- Overall understanding of the omics technologies used in nutrigenomics and their applications to human nutrition and food science.
- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics

The lecture is completed by an optional project entitled ‘Personalized Nutrition’ in which the students have the opportunity to receive a personalized nutritional guidance that is based on their own genetic makeup. The scientific literature on which the genetic tests are based is presented by the students during the lecture.

The script is composed of circa 450 slides (ca 18 slides/lecture) organized in 9 modules

- Module A
  From biochemical nutrition research to nutrigenomics
- Module B
  Nutritional genomics
- Module C
  Nutrigenetics
- Module D
  Nutri-epigenomics
- Module E
  Transcriptomics in nutrition research
- Module F
  Proteomics in nutrition research
- Module G
  Metabolomics in nutrition research
- Module H
  Nutritional systems biology
- Module I
  Individualized nutrition - opportunities and challenges

No extra reading requested. Most slides in the lecture are referenced with web addresses.

Basic training in biochemistry, molecular biology, physiology, and human nutrition. Interest in interdisciplinary sciences linking molecular biology to human health. Interest in the application of analytical laboratory methods to the understanding of human biology, in particular nutrition.

- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics
- Overall understanding of the omics technologies used in nutrigenomics and their applications to human nutrition and food science.
- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics

Methodical courses are equivalent to the module Term Paper and Seminar. Missing CPs can be obtained from the major programs Food Processing, Food Quality and Safety, or Nutrition and Health.

- Acquisition of knowledge in the field of the review paper
- Assessment of original literature as well as synthesis and analysis of the findings
- Practising of academic writing in English
- Giving an oral presentation with discussion on the topic of the review paper

Topics are offered in the domains of the major 'Human Health, Nutrition and Environment' covering 'Public Health', 'Infectious Diseases', 'Nutrition and Health' and 'Environment and Health'.

Guidelines will be handed out in the beginning.

- Electronic copies of the presentation slides (PDF) will be made available for download to registered students.
- Recommendations will be given in the first lecture
- Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until 11:15 h), with no break.

Molecular Biology of Foodborne Pathogens

The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks.

Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment ? What can be done to interfere with the potential risks?

Electronic copies of the presentation slides (PDF) will be made available for download to registered students.

Recommendations will be given in the first lecture

Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until 11:15 h), with no break.
Milestones in Immunology: on old concepts and modern experiments

Objective
The course will cover six grand topics in immunology: B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptional framework and critical technological advances. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

Content
Milestones and current topics of innate immunity, antigen presentation, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunology.

Lecture notes
Original and review articles will be distributed by the lecturer.

Seminar in Evolutionary Ecology of Infectious Diseases

Abstract
This course provides a detailed understanding of development of T and B cells, the dynamics of a immune response during acute and chronic infection, mechanisms of immunopathology, modern vaccination strategies.

Objective
Obtain a detailed understanding of the development, activation, and differentiation of different types of T cells and their effectormechanisms during immune responses, recognition of pathogen microorganisms by the host cells and molecular events thereafter, events and signals for maturation of naive B cells to antibody producing plasma cells and memory B cells.

Content
- Development and selection of CD4 and CD8 T cells, natural killer T cells (NKT), and regulatory T cells (Treg)
- NK T cells and responses to lipid antigens
- Differentiation, characterization, and function of CD4 T cell subsets such as Th1, Th2, and Th17
- Overview of cytokines and their effector function
- Co-stimulation (signals 1-3)
- Dendritic cells
- Evolution of the "Danger" concept
- Cells expressing Pattern Recognition Receptors and their downstream signals
- T cell function and dysfunction in acute and chronic viral infections

Literature
Documents of the lectures are available for download at: https://moodle-app2.let.ethz.ch/course/view.php?id=998

Prerequisites / notice
Immunology I and II

---

Nutrigenomics - toward personalized nutrition?

Abstract
Breakthroughs in biology recently led nutrition scientists to apply modern tools (genomics, transcriptomics, proteomics, metabolomics, genetics, epigenetics) to the analysis of the interactions of food with humans. The lecture presents these tools and illustrates their application in selected topics relevant to human nutrition and food sciences.

Objective
- Overall understanding of the transdisciplinary research being conducted under the term nutrigenomics.
- Overall understating of the omics technologies used in nutrigenomics and their applications to human nutrition and food science.
- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics

Content
- For the content of the script see section "Skript" below
- The lecture is completed by an optional project entitled 'Personalized Nutrition' in which the students have the opportunity to receive a personalized nutritional guidance that is based on their own genetic makeup. The scientific literature on which the genetic tests are based is presented by the students during the lecture.
The goal of this lecture is to give an overview over the whole path of drinking water from the source to the tap and understand the involved mechanisms.

To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in food and functional food products, the course provides an overview about the following topics:

- Factors influencing consumer's food choice
- Food and health
- Attitudes towards food products

No extra reading requested. Most slides in the lecture are referenced with web addresses. Copy of the power point slides from lectures will be provided. A list of references will be given at the beginning of the course for the different topics presented during this course.

This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- Legal and Protection Issues Related Functional Foods
- Industrial Biotechnology of Flavor and Taste Development
- Safety of Food Starter Cultures and Prebiotics

Students will be required to complete a group project on food products and ingredients with probiotics. The project will involve information research and analysis followed by an oral presentation and short written report.

This course focuses on food consumer behavior, consumer's decision-making processes and consumer's attitudes towards food products. The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

This lecture covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. Natural processes, anthropogenic pollution, legislation of groundwater and surface water and of drinking water as well as water treatment will be discussed for industrialized and developing countries.

The goal of this lecture is to give an overview over the whole path of drinking water from the source to the tap and understand the involved processes, anthropogenic pollution, legislation of groundwater and surface water and of drinking water as well as water treatment will be discussed for industrialized and developing countries.

The lecture covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore, legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally, unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.

Lecture notes
Handouts will be distributed

Literature
Will be mentioned in handouts

A list of references will be given at the beginning of the course for the different topics presented during this course.

The aim of the course is to provide up-to-date knowledge on how we can obtain an understanding of the evolution and population dynamics of organisms based on their genetic sequencing data, employing key concepts from molecular evolution, phylogenetics and phylodynamics. Throughout the course, we tie the models and methods closely with applications, mainly in the field of epidemiology and evolution.

Attendees will learn what information is contained in genetic sequencing data and how this information is extracted from the sequencing data. The main concepts introduced are:
- models in molecular evolution
- phylogenetic & phylodynamic inference
- maximum likelihood and Bayesian statistics
- stochastic processes

Attendees will apply these concepts to a number of applications yielding biological insight into:
- epidemiology
- pathogen evolution
- macroevolution of species

The course consists of three parts. We first introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Second, we employ these evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. Finally, we introduce the field of phylodynamics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the course, the models and methods are illustrated on different datasets, giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades.

Slides of the lecture will be available online.

The literature is not based on any of the textbooks below, but they are excellent choices as accompanying material:
- * Yang, Z. 2006. Computational Molecular Evolution.*
- * Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST.*

Basic knowledge in linear algebra, analysis, and statistics.

Objective

Students are able
- to evaluate the scientific evidence on the effects of diet on human health
- to describe the role of nutritional factors in the prevention of chronic diseases
- to assess the nutritional status of a population (Switzerland taken as an example)
- to put forward preventive measures addressing individuals but also our society in relation to the obesity epidemic

Content

The module Epidemiology and prevention gives a brief introduction to epidemiology with the aim to enable students to judge the scientific evidence on dietary habits and health. The importance of nutrition in the prevention of chronic diseases such as type 2 diabetes, cardiovascular diseases, cancer, obesity etc. is presented. Switzerland taken as an example, the health risks associated with our nutritional habits will be evaluated. Finally, examples of preventive measures addressing individuals but also the society in relation to the obesity epidemic and other threats to health are discussed.

**Abstract**

Lectures address 2 horticultural cropping systems and value chains, each one in 4 2h-lecture blocks. Afterwards, the students split in 2 groups for addressing a case study focusing on one of the cropping systems treated before. An excursion to a research site might be included. In a final colloquium, each group presents a report on their case study and their conclusions.

**Objective**

Achieve a deepened understanding of horticultural value chain challenges relating to ecological intensification, resource efficiency, climate change and healthy and safe food, and the problem solution strategies and scientific principles behind. Deliver in a team effort a report and a presentation providing a comprehensive insight into a problem of the horticultural value chain and its science-based solution strategy.

**Content**

In the autumn semester, the two addressed cropping systems and value chains are fruit-production and viticulture. In the spring semester, the two addressed cropping systems and value chains are vegetable-production and berry-production or glasshouse-horticulture.

The selected topics address challenges with regard to ecological intensification, resource efficiency or climate change and branch into ongoing research and development projects.

**Lecture notes**

Documents handed out during the case studies. As provided by the case study leaders.

**Prerequisites / notice**

The course builds on basic knowledge delivered in ‘Horticultural Crops I’ and ‘Horticultural Crops II’. If these courses have not been followed by interested participants, equivalent knowledge and experience will greatly support a successful and productive participation of the participating student.

Language: spoken E, G or F, Documents: Preferably English, G/F possible.

**Abstract**

This forum is a platform for the critical reflection of highly relevant topics of livestock in the frame of the world food system comprising issues from basic knowledge to acceptance in society. The exchange is operated by scientific writing and presentation.

**Objective**
