- Bayesian Networks (models, exact and approximative inference, learning) - Temporal models (Hidden Markov Models, Dynamic Bayesian Networks)
- Probabilistic planning (MDPs, POMDPs)
- Reinforcement learning
- Combining logic and probability

Prerequisites / notice Solid basic knowledge in statistics, algorithms and programming

Seminar Information Systems

Number Title Type ECTS Hours Lecturers

263-3504-00L Hardware Acceleration for Data Processing W 2 credits 2S G. Alonso, T. Hoefler, O. Mutlu

Abstract The seminar will cover topics related to data processing using new hardware in general and hardware accelerators (GPU, FPGA, specialized processors) in particular.

Objective The seminar will cover topics related to data processing using new hardware in general and hardware accelerators (GPU, FPGA, specialized processors) in particular.

Content The general application areas are big data and machine learning. The systems covered will include systems from computer architecture, high performance computing, data appliances, and data centers.

Prerequisites / notice Students taking this seminar should have the necessary background in systems and low level programming.

252-5051-00L Advanced Topics in Machine Learning W 2 credits 2S J. M. Buhmann, T. Hofmann, A. Krause, G. Rätsch
In this seminar, recent papers of the pattern recognition and machine learning literature are presented and discussed. Possible topics cover statistical models in computer vision, graphical models and machine learning.

The seminar “Advanced Topics in Machine Learning” familiarizes students with recent developments in pattern recognition and machine learning. Original articles have to be presented and critically reviewed. The students will learn how to structure a scientific presentation in English which covers the key ideas of a scientific paper. An important goal of the seminar presentation is to summarize the essential ideas of the paper in sufficient depth while omitting details which are not essential for the understanding of the work. The presentation style will play an important role and should reach the level of professional scientific presentations.

The seminar will cover a number of recent papers which have emerged as important contributions to the pattern recognition and machine learning literature. The topics will vary from year to year but they are centered on methodological issues in machine learning like new learning algorithms, ensemble methods or new statistical models for machine learning applications. Frequently, papers are selected from computer vision or bioinformatics - two fields, which relies more and more on machine learning methodology and statistical models.

The papers will be presented in the first session of the seminar.

## Focus Courses in Software Engineering

</tbody>
</table>

- **Abstract**: Course that focuses on an in-depth understanding of object-oriented programming and compares designs of object-oriented programming languages. Topics include different flavors of type systems, inheritance models, encapsulation in the presence of aliasing, object and class initialization, program correctness, reflection
- **Objective**: After this course, students will understand advanced concepts of object-oriented programming and their support through various language features.
- **Content**: The main goal of this course is to convey a deep understanding of the key concepts of sequential object-oriented programming and their support in different programming languages. This is achieved by studying how important challenges are addressed through language features and programming idioms. In particular, the course discusses alternative language designs by contrasting solutions in languages such as C++, C#, Eiffel, Java, Python, and Scala. The course also introduces novel ideas from research languages that may influence the design of future mainstream languages.

The topics discussed in the course include among others:
- The pros and cons of different flavors of type systems (for instance, static vs. dynamic typing, nominal vs. structural, syntactic vs. behavioral typing)
- The key problems of single and multiple inheritance and how different languages address them
- The situations in which object-oriented programming does not provide encapsulation, and how to avoid them
- The pitfalls of null pointer dereferencing

- **Literature**: Will be announced in the lecture.
- **Prerequisites / notice**: Prerequisites:
- **Prerequisites**: At least one object-oriented programming language (this course will NOT provide an introduction to object-oriented programming); programming experience

- **Abstract**: Advanced topics in parallel / concurrent programming.
- **Objective**: Understand concurrency paradigms and models from a higher perspective and acquire skills for designing, structuring and developing possibly large concurrent software systems. Become able to distinguish parallelism in problem space and in machine space. Become familiar with important technical concepts and with concurrency folklore.

- **Abstract**: Main goal is teaching knowledge and skills needed for building custom operating systems and runtime environments. Relevant topics are studied at the example of sufficiently simple systems that have been built at our Institute in the past, ranging from purpose-oriented single processor real-time systems up to generic system kernels on multi-core hardware.

- **Objective**: The lecture's main goal is teaching knowledge and skills needed for building custom operating systems and runtime environments.

The lecture intends to supplement more abstract views of software construction, and to contribute to a better understanding of "how it really works" behind the scenes.
After this course students will know fundamental techniques from probabilistic combinatorics for designing randomized algorithms and will be able to apply them to solve typical problems in these areas.

The seminar will cover a variety of machine learning models and algorithms (including deep neural networks) and will discuss their challenges of scientific research. To accomplish that, students will study and present research papers in the area as well as participate in paper discussions. The papers will span topics in both theory and practice, including papers on program verification, program analysis, testing, programming language design, and development tools. A particular focus will be on domain-specific languages.

The publications to be presented will be announced on the seminar home page at least one week before the first session. To improve this the seminar will use a case-study format where all students read the same paper each week but fulfill different roles and hence prepare with different viewpoints in mind.

### Student roles/instructions

- Conference Reviewer (e.g., reviewer of UIST/ICML/PLDI ): Complete a full critical review of the paper. Use the original review from and come to a recommendation whether the paper should be accepted or not.
- Historian: Find out how this paper sits in the context of the related work. Use bibliography tools to find the most influential papers cited by this work and at least one paper influenced by the work (and summarize the two papers).
- PhD student: Propose a follow-up project for your own research based on this paper - importantly the project should be directly inspired by this work and at least one paper influenced by the work (and summarize the two papers).
- Detective: Find out background information about the authors. Where did they work when the paper was published; what was their role; who else have they published with; which prior work of the authors may have inspired the current paper? Students may contact the authors (but need to adhere to politeness and courteous manners and stay on topic in their conversations).
- Hacker: Implement a (simplified) version of the core aspect of the paper. Prepare a demo for the seminar. In case the complexity is too high perform an in-depth analysis of reproducibility of the paper.
- All students (every week): Come up with alternative title; find a missing result that the paper should have included.

Participation will be limited subject to available topics.

Las Vegas & Monte Carlo algorithms; inequalities of Markov, Chebyshev, Chernoff; negative correlation; Markov chains: convergence, rapidly mixing; generating functions; Examples include: min cut, median, balls and bins, routing in hypercubes, 3SAT, card shuffling, random walks.
Randomized Algorithms are algorithms that "flip coins" to take certain decisions. This concept extends the classical model of deterministic algorithms and has become very popular and useful within the last twenty years. In many cases, randomized algorithms are faster, simpler or just more elegant than deterministic ones. In the course, we will discuss basic principles and techniques and derive from them a number of randomized problems for different areas.

### Literature

### Abstract
Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

### Objective
Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real-world data.

### Content
The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.

Topics covered in the lecture include:

- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher’s LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non parametric density estimation: Parzen windows, nearest neighbour
- Dimension reduction: principal component analysis (PCA) and beyond

### Literature

### Prerequisites / notice
The course requires solid basic knowledge in analysis, statistics and numerical methods for CSE as well as practical programming experience for solving assignments.

Students should at least have followed one previous course offered by the Machine Learning Institute (e.g., CIL or LIS) or an equivalent course offered by another institution.

</tr>
</tbody>
</table>

### Abstract
Game theory provides a formal model to study the behavior and interaction of self-interested users and programs in large-scale distributed computer systems without central control. The course discusses algorithmic aspects of game theory.

### Objective
Learning the basic concepts of game theory and mechanism design, acquiring the computational paradigm of self-interested agents, and using these concepts in the computational and algorithmic setting.

### Content
The Internet is a typical example of a large-scale distributed computer system without central control, with users that are typically only interested in their own good. For instance, they are interested in getting high bandwidth for themselves, but don’t care about others, and the same is true for computational load or download rates. Game theory provides a particularly well-suited model for the behavior and interaction of such selfish users and programs. Classic game theory dates back to the 1930s and typically does not consider algorithmic aspects at all. Only a few years back, algorithms and game theory have been considered together, in an attempt to reconcile selfish behavior of independent agents with the common good.

This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.

### Outline
- Introduction to classic game-theoretic concepts.
- Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity.
- Speed of convergence of natural game playing dynamics such as best-response dynamics or regret minimization.
- Techniques for bounding the quality-loss due to selfish behavior versus optimal outcomes under central control (a.k.a. the ‘Price of Anarchy’).
- Design and analysis of mechanisms that induce truthful behavior or near-optimal outcomes at equilibrium.
- Selected current research topics, such as Google’s Sponsored Search Auction, the U.S. FCC Spectrum Auction, Kidney Exchange.

### Literature
- "Game Theory and Strategy", Philip D. Straffin, The Mathematical Association of America, 5th printing, 2004

### Prerequisites / notice
Several copies of both books are available in the Computer Science library.

Audience: Although this is a Computer Science course, we encourage the participation from all students who are interested in this topic.

Requirements: You should enjoy precise mathematical reasoning. You need to have passed a course on algorithms and complexity. No knowledge of game theory is required.
### Objective
The goal is to make students familiar with fundamental concepts, techniques and results in combinatorial and computational geometry, so as to enable them to model, analyze, and solve theoretical and practical problems in the area and in various application domains.

### Content
- Geometric graphs, embeddings and their representation
- Convexity in R^d, planar convex hull algorithms
- Point set triangulations
- Dehn-Leroy triangulations
- Lawson flips
- Randomized Incremental Construction
- Voronoi diagrams
- The Crossing Lemma and incidence bounds, line arrangements (duality, Zone Theorem, ham-sandwich cuts)

### Prerequisites / notice
There are no formal mathematical pre-requisites, but students should have "mathematical maturity", which entails dealing with abstract concepts and being comfortable with doing mathematical proofs. Some previous exposure to linear algebra, abstract algebra, and cryptography would be useful.

### Focus Courses in Visual Computing

The course will familiarize the students with current research on molecular algorithms, with a focus on algorithms executable in DNA. We will have an introductory lecture covering the basics of molecular computational models, and the underlying bio-chemical phenomena. Subsequently, we will read and present selected research papers, focusing on their algorithmic content. No prior knowledge of biology or chemistry will be required.

**Abstract**

The goal of this course is to provide students with a good understanding of computer vision and image analysis techniques. The main concepts and techniques will be studied in depth and practical algorithms and approaches will be discussed and explored through the exercises.

**Objective**

The objectives of this course are:

1. To introduce the fundamental problems of computer vision.
2. To introduce the main concepts and techniques used to solve those.
3. To enable participants to implement solutions for reasonably complex problems.
4. To enable participants to make sense of the computer vision literature.

**Content**

Camera models and calibration, invariant features, Multiple-view geometry, Model fitting, Stereo Matching, Segmentation, 2D Shape matching, Shape from Silhouettes, Optical flow, Structure from motion, Tracking, Object recognition, Object category recognition.

**Prerequisites / notice**

It is recommended that students have taken the Visual Computing lecture or a similar course introducing basic image processing concepts before taking this course.

**Abstract**

This lecture provides an introduction to physically-based animation in computer graphics and gives an overview of fundamental methods and algorithms. The practical exercises include three assignments which are to be solved in small groups. In an additional course project, topics from the lecture will be implemented into a 3D game or a comparable application.

**Objective**

This course covers fundamental concepts of modern computer graphics. Students will learn about 3D object representations and the details of how to generate photorealistic images from digital representations of 3D scenes. Starting with an introduction to 3D shape modeling and representation, texture mapping and ray-tracing, we will move on to acceleration structures, the physics of light transport, appearance modeling and global illumination principles and algorithms. We will end with an overview of modern image-based image synthesis techniques, covering topics such as lightfields and depth-image based rendering.

Abstract
This course introduces core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet.

Objective
How can we build systems that perform well in uncertain environments and unforeseen situations? How can we develop systems that exhibit "intelligent" behavior, without prescribing explicit rules? How can we build systems that learn from experience in order to improve their performance? We will study core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet. The course is designed for upper-level undergraduate and graduate students.

Content
Topics covered:
- Search (BFS, DFS, A*), constraint satisfaction and optimization
- Tutorial in logic (propositional, first-order)
- Probability
- Bayesian Networks (models, exact and approximate inference, learning) - Temporal models (Hidden Markov Models, Dynamic Bayesian Networks)
- Probabilistic palning (MDPs, POMDPs)
- Reinforcement learning
- Combining logic and probability

Prerequisites / notice
Prerequisites: Solid basic knowledge in statistics, algorithms and programming

263-5903-00L

Computational Regularity

W

4 credits

2V+1U

Y. Liu, M. R. Oswald

Abstract
Computational forms the key component of this course which links theory and applications. Students will witness effective computational models with concrete applications in robotics, computer vision, computer graphics and medical image analysis. The emphasis is on hands-on computational experience and on producing state of the art, publishable research projects. During the semester, we shall start with intuition, learn the basic mathematical concepts and develop state of the art computer algorithms for real-world problems. Our goal is to build "bridges" connecting, symmetry, symmetry group theory, general and specific regularities and real-world applications.

Objective
Regularity is an essential and ubiquitous concept in nature, science and art. Numerous biological, natural or man-made structures exhibit regularities, abstracted by symmetries, as a fundamental design principle or as an essential aspect of their function. Whether by evolution or by design, symmetry implies potential structural efficiencies that make it universally appealing. Much of our understanding of the world is based on the perception and recognition of recurring structures, and so is our sense of beauty. With increasing amount and variety of digitized data, seeking for patterns systematically has become increasingly pertinent and necessary. This course concentrates on rigorous theory, keen observations and computational discovery of patterns in various data forms in our daily life and research. We aim to develop effective computational treatments of regularity to capture real world regular or near-regular patterns in spite of uncertainty.

Content
- Search (BFS, DFS, A*), constraint satisfaction and optimization
- Tutorial in logic (propositional, first-order)
- Probability
- Bayesian Networks (models, exact and approximate inference, learning) - Temporal models (Hidden Markov Models, Dynamic Bayesian Networks)
- Probabilistic palning (MDPs, POMDPs)
- Reinforcement learning
- Combining logic and probability

| Content | The course covers the following subjects: (a) Models for describing hardware and software components (specification), (b) Hardware-Software Interfaces (instruction set, hardware and software components, reconfigurable computing, heterogeneous computer architecture, System-on-Chip), (c) Application specific instruction sets, code generation and retargetable compilation, (d) Performance analysis and estimation techniques, (e) System design (hardware-software partitioning and design space exploration). |
| Lecture notes | Material for exercises, copies of transparencies. |
Prerequisites

Prerequisites for the course is a basic knowledge in the following areas: computer architecture, digital design, software design, embedded systems.

Literature

Prerequisites / notice

103-0237-00L GIS III W 5 credits 3G M. Raubal

Abstract

The course deals with advanced topics in GIS: GIS project lifecycle, Managing GIS, Legal issues, GIS assets & constraints; Geospatial Web Services: technical basics, architecture, functions, interoperability, standards, mashups, portals, applications; Geostatistics; Sensor Web Enablement; Human-Computer Interaction; Cognitive Issues in GIS.

Objective

Students will get a detailed overview of advanced GIS topics. They will go through all steps of setting up a Web-GIS application in the labs and perform other practical tasks relating to Sensor Web Enablement, Human-Computer Interaction, Geostatistics, and Web Processing Services.

Lecture notes

Lecture slides will be made available in digital form.

Literature

Elective Courses

Students can individually choose from the entire Master course offerings from ETH Zurich, EPF Lausanne, the University of Zurich and - with the consent of the mentor - from all other Swiss universities.

For further details, refer to Art. 31 of the Regulations 2009 for the Master Program in Computer Science.

Internship

Only for Computer Science MSc.

Abstract

The internship must be at least 10 weeks long and can be undertaken in a Swiss or a foreign company.

Objective

An internship provides opportunities to gain experience in an industrial environment and creates a network of contacts.

Prerequisites / notice

To register the internship, please submit a document to the Student Administration Office containing the following information at the latest two weeks after beginning the internship:

- a detailed task description: task, technologies, milestones etc.
- start and end date of the internship
- supervisor: name and academic degree

GESS Science in Perspective

Recommended GESS Science in Perspective (Type B) for D-INFK.

see GESS Science in Perspective: Type A: Enhancement of Reflection Capability

see GESS Science in Perspective: Language Courses ETH/UZH

Master’s Thesis

Only students who fulfill the following criteria are allowed to begin with their master thesis:

a. successful completion of the bachelor programme;

b. fulfilling of any additional requirements necessary to gain admission to the master programme.

Abstract

Independent project work supervised by a Computer Science professor. Duration 6 months.

Objective

Independent project work supervised by a Computer Science professor.

<td><strong>Abstract</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>The course is an introduction to structural design using graphical methods and structural models, with a focus on a creative approach rather than repetitive calculations. Cable and membrane structures, arch and shell structures and combined arch and cable systems will be used to demonstrate these methods.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>Objective</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>The objective is to encourage students to develop an intuitive understanding of the relationship between the shape of a structure, the load it needs to carry and the forces in it.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>To achieve this, the teaching is based on graphic statics, which allow the visualization of internal and external forces in structural systems, therefore illustrating the relationship between shape (form) and stress (force) in load bearing elements. This understanding is directly applied to the students' design projects, in which issues of statics and design overlap.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>

**Prerequisites / notice**
Topics are available to carry out a Project Work (Semesterarbeit) on the contents of this course.

| 363-0389-00L | Technology and Innovation Management                | O    | 3    | 2G    | S. Brusoni                       |
| **Abstract** | This course focuses on the analysis of innovation as a pervasive process that cut across organizational and functional boundaries. It looks at the sources of innovation, at the tools and techniques that organizations deploy to routinely innovate, and the strategic implications of technical change. |      |      |       |                                 |
| **Objective** | This course intends to enable all students to:      |      |      |       |                                 |
|             | - understand the core concepts necessary to analyze how innovation happens |      |      |       |                                 |
|             | - master the most common methods and tools organizations deploy to innovate |      |      |       |                                 |
|             | - develop the ability to critically evaluate the innovation process, and act upon the main obstacles to innovation |      |      |       |                                 |
This course looks at technology and innovation management as a process. Continuously, organizations are faced with a fundamental decision: they have to allocate resources between well-known tasks that reliably generate positive results; or explore new ways of doing things, new technologies, products and services. The latter is a high risk choice. Its rewards can be high, but the chances of success are small.

How do firms organize to take these decisions? What kind of management skills are necessary to take them? What kind of tools and methods are deployed to sustain managerial decision-making in highly volatile environments? These are the central questions on which this course focuses, relying on a combination of lectures, case-based discussion, guest speakers, simulations and group work.

Lecture notes Slides will be available on the TIMGROUP website.
Literature Readings will be available on the TIMGROUP website.
Prerequisites / notice No specific background in economics or management is required.

**363-0503-00L** Principles of Microeconomics O 3 credits 2G M. Filippini

Abstract The course introduces basic principles, problems and approaches of microeconomics.

Objective The learning objectives of the course are:

1. Students must be able to discuss basic principles, problems and approaches in microeconomics.
2. Students can analyse and explain simple economic principles in a market using supply and demand graphs.
3. Students can contrast different market structures and describe firm and consumer behaviour.
4. Students can identify market failures such as externalities related to market activities and illustrate how these affect the economy as a whole.
5. Students can apply simple mathematical treatment of some basic concepts and can solve utility maximization and cost minimization problems.

Lecture notes Lecture notes, exercises and reference material can be downloaded from Moodle.
The book can also be used for the course ‘Principles of Macroeconomics’ (Sturm)
For students taking only the course ‘Principles of Microeconomics’ there is a shorter version of the same book:

Complementary:

**066-0423-00L** Application of CFD in Buildings O 3 credits 3V D. Lakehal

Limited number of participants.

Abstract Fundamentals, Applications and Project works in the area of CFD in buildings.

Objective Understanding:

- Basic principles of fluid flow & heat transfer
- Basic concepts of CFD
- Validation and verification, practical guidelines

Application and project works of CFD in buildings including the fields of:

- Building aerodynamics
- Steady vs. unsteady wind loads on urban structures
- Air pollution and contaminant dispersion
- Indoor ventilation
- CFD for renewable energy in the urban physics: Wind loads on roof-mounted solar photovoltaic arrays, coupled solar-wind energy generation applications, etc.

Content I. Fundamentals

- Basic principles of fluid flow & heat transfer
- Laminar versus turbulent flow
- Forced vs. natural convection
- Basic concepts of CFD (Discretization, schemes, etc.)
- Turbulence modelling
- Near-wall treatment
- Validation and verification, practical guidelines

II. Applications

CFD for:

- Building aerodynamics
- Steady vs. unsteady wind loads on urban structures
- Air pollution and contaminant dispersion
- Indoor ventilation
- CFD for renewable energy in the urban physics: Wind loads on roof-mounted solar photovoltaic arrays, coupled solar-wind energy generation applications, etc.

III. Project work

- Geometry and grid generation (from CAD to domain meshing)
- Exp. wind engineering
- Boundary conditions, solver settings and solution
- Data Post-processing
- Validation and error estimation
- Hands-on Training
- Presentation

Lecture notes Material will be sent to the students before the start of the course.
Literature We will update the material in due time.

Abstract Urban physics: wind, wind comfort, pollutant dispersion, natural ventilation, driving rain, heat islands, climate change and weather conditions, urban acoustics and energy use in the urban context.

Objective

- Basic knowledge of the global climate and the local microclimate around buildings
- Impact of urban environment on wind, ventilation, rain, pollutants, acoustics and energy, and their relation to comfort, durability, air quality and energy demand
- Application of urban physics concepts in urban design
Content
- Climate Change. The Global Picture: global energy balance, global climate models, the IPCC process. Towards regional climate scenarios: role of spatial resolution, overview of approaches, hydrostatic RCMs, cloud-resolving RCMs
- Urban micro climate and comfort: urban heat island effect, wind flow and radiation in the built environment, convective heat transport modelling, heat balance and ventilation of urban spaces - impact of morphology, outdoor wind comfort, outdoor thermal comfort,
- Urban energy and urban design. Energy performance of building quarters and cities, decentralized urban energy production and storage technologies, district heating networks, optimization of energy consumption at district level, effect of the micro climate, urban heat islands, and climate change on the energy performance of buildings and building blocks.
- Wind driving rain (WDR): WDR phenomena, WDR experimental and modeling, wind blocking effect, applications and moisture durability
- Pollutant dispersion, pollutant cycle: emission, transport and deposition, air quality
- Urban acoustics, noise propagation through the urban environment, meteorological effects, urban acoustic modeling, noise reduction measures, urban vegetation

Abstract
In the framework of this course we will look at a current electronic thermal and energy management strategies and novel energy conversion processes. The course will focus on component level fundamentals of these processes and system level analysis of interactions among various energy conversion components.

Objective
This course deals with liquid cooling based thermal management of electronics, reuse of waste heat and novel energy conversion and storage systems such as batteries, fuel cells and micro-fuel cells. The focus of the course is on the physics and basic understanding of those systems as well as their real-world applications. The course will also look at analysis of system level interactions between a range of energy conversion components.

Content
Part 1: Fundamentals:
- Overview of exergy analysis, single phase liquid cooling and micro-mixing;
- Thermodynamics of multi-component-systems (mixtures) and phase equilibrium;
- Electrochemistry;

Part 2: Applications:
- Basic principles of battery;
- Introduction to fuel cells;
- Reuse of waste heat from supercomputers;
- Hotspot targeted cooling of microprocessors;
- Microfluidic fuel cells

Part 3: System-level analysis
- Integration of the components into the system: a case study
- Analysis of the coupled operations, identification of critical states
- Support to system-oriented design

Lecture notes
Lecture slides will be made available. Lecture notes will be available for some topics (in English).

Prerequisites / notice
The course will be given in English:
1. Mid-term examination: Mid-term exam grade counts as 20% of the final grade.
2. Final exam: Written exam during the regular examination session. It counts as 80% of the final grade.

Abstract
Applied Fluid Dynamics

The methods of fluid dynamics play an important role in the description of a chain of events, involving the release, spreading and dilution of dangerous fluids in the environment. Tunnel ventilation systems and strategies are studied, which must meet severe requirements during normal operation and in emergency situations (tunnel fires etc.).

Objective
Generally applicable methods in fluid dynamics and gas dynamics are illustrated and practiced using selected current examples. Often experts fall back on the methodology of fluid dynamics when involved in the construction of environmentally friendly processing and incineration facilities, as well as when choosing safe transport and storage options for dangerous materials. As a result of accidents, but also in normal operations, dangerous gases and liquids may escape and be transported further by wind or flowing water. There are many possible forms that the resulting damage may take, including fire and explosion when flammable substances are mixed.

Content
The topics covered include: Emissions of liquids and gases from containers and pipelines, evaporation from pools and vaporization of gases kept under pressure, the spread and dilution of waste gas plumes in the wind, deflagration and detonation of inflammable gases, fireballs in gases held under pressure, pollution and exhaust gases in tunnels (tunnel fires etc.)

Lecture notes
Lecture notes not available

Prerequisites / notice
Requirements: successful attendance at lectures "Fluidodynamik I und II", "Thermodynamik I und II"

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 845 of 1571
Objective

At the end of the semester, the students have an understanding of the term of sustainable development, its history, the current political and scientific discourses and its relevance for our built environment.

In order to address current challenges of climate change mitigation and resource depletion, students will learn a holistic approach of sustainable development. Ecological, economical and social constraints will be presented and students will learn about methods for argumentation and tools for assessment (i.e. life cycle assessment).

For this purpose an overview of sustainable development is presented with an introduction to the history of sustainability and its today definition as well as the role of cities, urbanisation and material resources (i.e. energy, construction material) in social economic and environmetal aspects.

The course aims to promote an integral view and understanding of sustainability and describing different spheres (social/cultural, ecological, economical, and institutional) that influence our built environment.

Students will acquire critical knowledge and understand the role of involved stakeholders, their motivations and constraints, learn how to evaluate challenges, identify deficits and define strategies to promote a more sustainable construction.

After the course students should be able to define the relevance of specific local, regional or territorial aspects to achieve coherent and applicable solutions toward sustainable development.

The course offers an environmental, socio-economic and socio-technical perspective focussing on buildings, cities and their transition to resilience with sustainable development. Students will learn on theory and application of current scientific pathways towards sustainable development.

Content

The following topics give an overview of the themes that are to be worked on during the lecture.

- Overview on the history and emergence of sustainable development
- Overview on the current understanding and definition of sustainable development
- Case Study 1: Sustainable construction, the role of construction industry (national/international)
- Case Study 2: Cities, forms of settlements
- Case Study 3: Material resources, scenarios, energy, construction materials, urban metabolism
- Case Study 4: Buildings, heating/cooling, consumers, prosumers and other stakeholder, cooperations
- Method 1: Life cycle assessment (planning, construction, operation/use, deconstruction)
- Method 2: Economics for sustainable construction
- Method 3: Construction, flexibility, modularity
- Synthesis 1: Climate Change mitigation and adaptation in cities
- Synthesis 2: Transition to sustainable development

Lecture notes

All relevant information will be online available before the lectures. For each lecture slides of the lecture will be provided.

Literature

A list of the basic literature will be offered on a specific online platform, that could be used by all students attending the lectures.

| 101-0417-00L | Transport Planning Methods | W | 6 credits | 4G | K. W. Axhausen |
| 363-0387-00L | Corporate Sustainability | W | 3 credits | 2G | V. Hoffmann |

Abstract

The course provides the necessary knowledge to develop models supporting the solution of given planning problems. This is done by dividing the forecasting problem into sub-problems. The course is composed of a lecture part, providing the theoretical knowledge, and a applied part, in which students develop their own models.

Objective

- Knowledge of methods and algorithms commonly used in transport planning
- Ability to independently develop a transport model able to solve / answer the given problem / questions
- Understanding of algorithms and their implementations commonly used in transport planning

Content

The course provides the necessary knowledge to develop models supporting the solution of given planning problems. Examples of such planning problems are the estimation of traffic volumes, prediction of estimated utilization of new public transport lines, and evaluation of effects (e.g. change in emissions of a city) triggered by building new infrastructure and changes to operational regulations.

To cope with the forecasting problem it is first divided into sub-problems. Then, these are solved using various algorithms like iterative proportional fitting, shortest path algorithms and the method of successive averages.

The course is composed of a lecture part, providing the theoretical knowledge, and a applied part, in which students create their own models. This part takes place in form of a tutorial and consists in the development of a computer program. The programming part is closely guided and particularly suitable for students with little programming experience.

Lecture notes

The slides of the lecture are provided electronically.

Literature

363-0387-00L Corporate Sustainability W 3 credits 2G V. Hoffmann

Abstract

The lectures addresses the assessment of corporate sustainability and its links to strategy, technology, and finance. Students learn why sustainability matters for managers and how businesses can act towards it. E-modules allow students to train critical thinking skills. In the 2nd half of the semester, sustainability challenges on water, energy, mobility, and food are explored in group projects.

Objective

Understand the limits and the potential of corporate sustainability for sustainable development

Develop critical thinking skills (argumentation, communication, evaluative judgment) that are useful in the context of corporate sustainability using an innovative writing and peer review method.

Content

Overview of the key concepts of corporate sustainability and topics related to Water, Energy, Mobility, and Food

Business implications of sustainable development, in particular for the assessment of sustainability performance, strategic change towards sustainability, technological innovations and sustainability, and finance and corporate sustainability.

Critical thinking skills for corporate sustainability.

In-depth case studies of corporate sustainability challenges in the track phase: How to deal with environmental pressure groups? How to use the strength of business to solve pressing sustainability problems? How to catalyze technological innovations for sustainability? How to invest money in a sustainable way?

Lecture notes

Presentation slides will be made available on moodle prior to lectures.
Introduction to Computational Physics (for Civil Engineers)

This course offers an introduction to computer simulation methods for physics problems and their implementation on PCs and supercomputers: classical equations of motion, partial differential equations (wave equation, diffusion equation, Maxwell's equation), Monte Carlo simulations, percolation, phase transitions.

Structural Reliability and Risk Analysis

Structural reliability aims at quantifying the probability of failure of systems due to uncertainties in their design, manufacturing and environmental conditions. Risk analysis combines this information with the consequences of failure in view of optimal decision making. The course presents the underlying probabilistic modelling and computational methods for reliability and risk assessment.

Carbon Mitigation

Future climate change can only kept within reasonable bounds when CO2 emissions are drastically reduced. In this course, we will discuss a portfolio of options involving the alteration of natural carbon sinks and carbon sequestration. The course includes introductory lectures, presentations from guest speakers from industry and the public sector, and final presentations by the students.

Information Architecture and Future Cities: Smart Cities

What are SMART CITIES and how do they emerge? What is the role of architects and urban designers in this process? How do data turn into information as a building material for the future city? The course covers concepts, methods and techniques in design, simulation and communication of cities. The goal is to learn principles and preconditions for the design of sustainable and smart cities.
Objective
Students gain insight into the next generation of design processes for architects and urban designers, and into concepts of the Information Architecture of SMART CITIES, including the influence of Big Data. They learn about the expanded roles of information and of architecture: information and simulation in architecture as means to make the invisible visible, and architecture as a metaphor and ordering system to structure the immense amounts of data of the Information Society. The seminar is highly interactive and discusses visionary case studies in Europe and Asia and new techniques in Big Data informed smart urban design. Apart from learning about and experiencing Information Architecture and SMART CITIES, the course also introduces research and management skills that will distinguish the future ETH architect. An iBook and the edX Massive Open Online Course (MOOC) Future Cities support the course.

Content
SMART CITIES - What will happen when cities change from static configurations into responsive and dynamic structures? What does it mean for buildings that undergo the same changes? What is the impact on architectural and urban design education? How can citizens influence this development? The SMART CITIES course will answer these questions and supply you with the necessary skills and knowledge to understand and design such dynamic structures. The intelligent use of data and information are at the core of this course. Data and information are new building materials of future cities. Citizens produce increasing amounts of data in their daily life, with stationary sensors and mobile smartphones. Using those data, citizens begin to influence the design of future cities and the re-design of existing ones. The course will be a first step towards the emerging citizen design science and cognitive design computing. Those will be the next generation of participatory design and design computing.

Abstract
051-0725-15L
We examine patterns of crowd-flows in an extraordinary urbanisation phenomena: festivals.

053-1357-15L
In this teaching unit architectural and urban design are analyzed by current computational methods. Based on these analyses the effects of plannings can be simulated and understood. An important focus of this course is the interpretation of the analysis and simulation results and the application of these correspondent methods in early planning phases.

Objective
051-0725-15L
The course participants will learn how to program simulations using Processing/Java. Previous programming knowledge is not necessary. Furthermore they will gain insights into other analysis methods and learn about their significance, strengths and weaknesses.

053-1357-15L
The students learn how the design and planning of cities can be evidence based by using scientific methods. The teaching unit convey knowledge in state-of-the-art and emerging spatial analysis and simulation methods and equip students with skills in modern software systems. The course consists of lectures, associated exercises and workshops, as well as of one integral project work.

Content
051-0725-15L
We will look at those patterns from two sides. One being the view of a planner asking to find bottlenecks or the ideal place for amenities such as booths, toilets etc. Another being the view of visitors. We will program different behaviours that should compete against each other in order to compare their different strategies. As a case study we will use the Caliente Festival in Zurich.

053-1357-15L
For deepening the learnt in a semester thesis we offer to optimise the created simulations to make them available in interactive planning workshops. Additionally they could be converted into interactive web apps at midterm and at the final presentations.

Abstract
The semester project focuses in solving specific research questions in the field of integrated building systems.
Objective
The semester project is designed to train students in solving specific research questions in the field of integrated building systems. The goal is to apply acquired knowledge which is gained throughout the first year of the master's program. The semester project is advised by a professor who is affiliated with one of the partner departments of the Master program "Integrated building systems".

Abstract
A 6-months Master thesis completes the Master's program of Integrated Building Systems. With the thesis project students are expected to demonstrate their ability to independent and structured scientific thinking.

Objective
A 6-months Master thesis completes the Master's program of Integrated Building Systems. With the thesis project students are expected to demonstrate their ability to independent and structured scientific thinking.

Content
A 6-months Master thesis completes the Master's program of Integrated Building Systems. With the thesis project students are expected to demonstrate their ability to independent and structured scientific thinking. The thesis can be performed either at ETH Zurich, an industrial enterprise, or in a research institution, but has to be advised by one or more professors affiliated with the Master program "Integrated building systems".
The responsible supervisor defines the topic in consultation with the student, together with the scope of work, criteria of assessment, and dates of beginning and delivery of the work.

**Abstract**
Qualitative analysis (determination of cations and anions), acid-base-equilibria (pH-values, titrations, buffer), precipitation equilibria (gravimetry, potentiometry, conductivity), redoxreactions (syntheses, redox-titrations, galvanic elements), metal complexes (syntheses, complexometric titration)

**Objective**
Qualitative analysis (simple cation and anion separation process, determination of cations and anions), acid-base-equilibria (strengths of acids and bases, pH- and pKa-values, titrations, buffer systems, Kiehlav determination), precipitation equilibria (gravimetry, potentiometry, conductivity), oxidation state and redox behaviour (syntheses), redox-titrations, galvanic elements, metal complexes (syntheses of complexes, ligand exchange reactions, complexometric titration)

**Content**
The general aim for the students of the practical course in general chemistry is an introduction in the scientific work and to get familiar with simple experimental procedures in a chemical laboratory. In general, first experiences with the principal reaction behaviour of a variety of different substances will be made. The chemical characteristics of these will be elucidated by a series of quantitative experiments alongside with the corresponding qualitative analyses. In order to get an overview of classes of substances as well as some general phenomena in chemistry suitable experiments have been chosen. In the second part of the practical course, i.e. physical chemistry, the behaviour of substances in their states of aggregation as well as changes of selected physical values will be recorded and discussed.

#### Abstract
- An introductory course on quantum and atomic physics, including basics of optics and equilibrium statistical physics. The course will focus on the relation of these topics to experimental methods and observations.

#### Objective
- A basic introduction to quantum and atomic physics, including basics of optics and equilibrium statistical physics.
This lecture is an introduction to programming based on the language C++. We cover fundamental types, control statements, functions, and the concepts will be motivated and illustrated through algorithms and applications. The goal of this lecture is to teach fundamental concepts of modern programming and operational skills for developing high-quality programs, including large programs as in industry. The course introduces software engineering principles with an object-oriented approach based.

Introduction to fundamental concepts of modern programming and operational skills for developing high-quality programs, including large programs as in industry. The course introduces software engineering principles with an object-oriented approach.

Many people can write programs. The "Introduction to Programming" course goes beyond that basic goal: it teaches the fundamental concepts and skills necessary to perform programming at a professional level. As a result of successfully completing the course, students master the fundamental control structures, data structures, reasoning patterns and programming language mechanisms characterizing modern programming, as well as the fundamental rules of producing high-quality software. They have the necessary programming background for later courses introducing programming skills in specialized application areas.

Basics of object-oriented programming. Objects and classes. Pre- and postconditions, class invariants, Design by Contract. Fundamental control structures, Assignment and References. Basic hardware concepts. Fundamental data structures and algorithms. Recursion. Inheritance and interfaces, introduction to event-driven design and concurrent programming. Basic concepts of Software Engineering such as the software process, specification and documentation, reuse and quality assurance.

Lecture notes:
The lecture slides are available for download on the course page.

Literature:
See the course page for up-to-date information.

There are no special prerequisites. Students are expected to enroll in the other courses offered to first-year students of computer science.

Electives
For the Bachelor in Interdisciplinary Sciences students can in principle choose from all subjects taught at the Bachelor level at ETH Zurich.

At the beginning of the 2. year an individual study program is established for every student in discussion with the Director of Studies in interdisciplinary sciences. For details see Programme Regulations 2010.

<tr>
<td>Objective</td>
<td>Many people can write programs. The &quot;Introduction to Programming&quot; course goes beyond that basic goal: it teaches the fundamental concepts and skills necessary to perform programming at a professional level. As a result of successfully completing the course, students master the fundamental control structures, data structures, reasoning patterns and programming language mechanisms characterizing modern programming, as well as the fundamental rules of producing high-quality software. They have the necessary programming background for later courses introducing programming skills in specialized application areas.</td>

Based on the lecture 'Introduction to Materials Science' this lecture aims to give a detailed understanding of important aspects of materials science, with special emphasis on metallic and ceramic materials.

Thermodynamics and phase diagrams, crystal interfaces and microstructure, diffusional transformations in solids, and diffusionless transformations will be presented for metallic alloys. The basics of the ionic and covalent chemical bonds, the bond energy, the crystalline structure, four important structural ceramics, and the properties of glasses and glass ceramics will be presented for ceramic materials.

For metals see:
http://www.metphys.mat.ethz.ch/education/lectures/materialwissenschaft-i.html

For ceramics see:
http://www.complex.mat.ethz.ch/education/lectures.html

### Literature

**Metals:**

  ISBN : 0-7487-5741-4
- Nelson Thorns

**Ceramics:**
- Mroz, D.; Fett, T: *Ceramics, Mechanical Properties, Failure Behaviour, Materials Selection,*
- Askeland & Phulé: *Science and Engineering of Materials, 2003*
- diverse CEN ISO Standards given in the slides
- Barseum MW: *Fundamentals of Ceramics:*

"Brevieral Ceramics" published by the "Verband der Keramischen Industrie e.V.", ISBN 3-924158-77-0, partly its contents may be found in the internet @ http://www.keramverband.de/brevier_engl/brevier.htm or on our homepage

- Silicon-Based Structural Ceramics (Ceramic Transactions), Stephen C. Danforth (Editor), Brian W. Sheldon, American Ceramic Society, 2003,
- Phase relationships in the zirconia-yttria system, HGM Scott - *Journal of Materials Science, 1975, Springer*
- Thommy Ekström and Mats Nygren, SIAON Ceramics *J Am Cer Soc Volume 75 Page 259 - February 1992*

**Prerequisites / notice**

- In the first part of the lecture the bases are obtained for metals. In the second part the basics of cermics will be presented.
- One part of the lecture will be taught in English, but most of it in German.

**401-2303-00L Complex Analysis**

**Abstract**

Complex functions of one variable, Cauchy-Riemann equations, Cauchy theorem and integral formula, singularities, residue theorem, index of closed curves, analytic continuation, special functions, conformal mappings, Riemann mapping theorem.

**Objective**

Working Knowledge with functions of one complex variables; in particular applications of the residue theorem

Th. Gamelin: *Complex Analysis, Springer 2001*

E. Titchmarsh: *The Theory of Functions. Oxford University Press*

D. Salamon: "Funktionentheorie". Birkhauser, 2011. (In German)

B. Palka: "An introduction to complex function theory."

R. Remmert: *Theory of Complex Functions. Springer Verlag*

**401-2333-00L Methods of Mathematical Physics I**

**Abstract**

**Prerequisites / notice**

**402-0205-00L Quantum Mechanics I**

**Abstract**

Introduction to non-relativistic single-particle quantum mechanics. In particular, the basic concepts of quantum mechanics, such as the quantisation of classical systems, wave functions and the description of observables as operators on a Hilbert space, and the formulation of symmetries will be discussed. Basic phenomena will be analysed and illustrated by generic examples.

**Objective**

Introduction to single-particle quantum mechanics. Familiarity with basic ideas and concepts (quantisation, operator formalism, symmetries, perturbation theory) and generic examples and applications (bound states, tunneling, scattering states, in one- and three-dimensional settings). Ability to solve simple problems.

**Content**

Keywords: Schrödinger equation, basic formalism of quantum mechanics (states, operators, commutators, measuring process), symmetries (translations, rotations), quantum mechanics in one dimension, spherically symmetric problems in three dimensions, scattering theory, perturbation theory, variational techniques, spin, addition of angular momenta, relation between QM and classical physics.

**Literature**

- F. Schwab: *Quantum mechanics*
- J.J. Sakurai: *Modern Quantum Mechanics*
- C. Cohen-Tannoudji: *Quantum mechanics I*
Astrophysics I

The course provides an introduction to solid state physics, covering several topics that are later discussed in more detail in other more specialized lectures. The central topics are: solids and their lattice structures; interatomic bindings; lattice dynamics, electronic properties of insulators, metals, semiconductors, transport properties, magnetism, superconductivity.

Objective

Introduction to Solid State Physics.

Content

The course provides an introduction to solid state physics, covering several topics that are later discussed in more detail in other more specialized lectures. The central topics are: solids and their lattice structures; interatomic bindings; lattice dynamics, thermal properties of insulators; metals (classical and quantum mechanical description of electronic states, thermal and transport properties of metals); semiconductors (bandstructure and n/p-type doping); magnetism, superconductivity.

Lecture notes

A Manuscript is distributed.

Literature

Ibach & Lüth, Festkörperphysik
C. Kittel, Festkörperphysik
Ashcroft & Mermin, Festkörperphysik
W. Känzig, Kondensierte Materie

Prerequisites / notice

Voraussetzungen: Physik I, II, III wünschenswert

Semiconductor Nanostructures

The course covers the foundations of semiconductor nanostructures, e.g., materials, band structures, bandgap engineering and doping, field-effect transistors. The physics of the quantum Hall effect and of common nanostructures based on two-dimensional electron gases will be discussed, i.e., quantum point contacts, Aharonov-Bohm rings and quantum dots.

Objective

At the end of the lecture the student should understand four key phenomena of electron transport in semiconductor nanostructures:
1. The integer quantum Hall effect
2. Conductance quantization in quantum point contacts
3. the Aharonov-Bohm effect
4. Coulomb blockade in quantum dots

Content

1. Introduction and overview
2. Semiconductor crystals: Fabrication and band structures
3. k.p-theory, effective mass
4. Envelope functions and effective mass approximation, heterostructures and band engineering
5. Fabrication of semiconductor nanostructures
6. Electrostatics and quantum mechanics of semiconductor nanostructures
7. Heterostructures and two-dimensional electron gases
8. Drude Transport
9. Electron transport in quantum point contacts; Landauer-Büttiker description
10. Ballistic transport experiments
11. Interference effects in Aharonov-Bohm rings
12. Electron in a magnetic field, Shubnikov-de Haas effect
13. Integer quantum Hall effect
14. Coulomb blockade and quantum dots

Lecture notes

Literature

Prerequisites / notice

The lecture is suitable for all physics students beyond the bachelor of science degree. Basic knowledge of solid state physics is recommended. Very ambitioned students in the third year may be able to follow. The lecture can be chosen as part of the PhD-program. The course is taught in English.

Classical Mechanics

A conceptual introduction to theoretical physics: Newtonian mechanics, central force problem, oscillations, Lagrangian mechanics, symmetries and conservation laws, spinning top, relativistic space-time structure, particles in an electromagnetic field, Hamiltonian mechanics, canonical transformations, integrable systems, Hamilton-Jacob equation.

Objective

The goal of this course is to give the students a basic understanding of the molecules that build a cell and make it function, and the basic principles of metabolism and molecular genetics.

Prerequisites / notice

The lecture is suitable for all physics students beyond the bachelor of science degree. Basic knowledge of solid state physics is recommended. Very ambitioned students in the third year may be able to follow. The lecture can be chosen as part of the PhD-program. The course is taught in English.

Biology I

The lecture Biology I, together with the lecture Biology II in the following summer semester, is a basic, introductory course into Biology for Students of Materials Sciences and other students with biology as subsidiary subject.

Objective

The goal of this course is to give the students a basic understanding of the molecules that build a cell and make it function, and the basic principles of metabolism and molecular genetics.
2. Allgemeine Genetik

Kapitel 13: Meiose und Reproduktionszyklen
Kapitel 14: Mendelsche Genetik
Kapitel 15: Die chromosomale Basis der Vererbung
Kapitel 16: Die molekulare Grundlage der Vererbung
Kapitel 18: Genetik von Bakterien und Viren
Kapitel 46: Tierische Reproduktion

Lecture notes

Grundlagen des Stoffwechsels und eines Überblicks über molekulare Genetik

Literature

Der Vorlesungsstoff ist sehr nahe am Lehrbuch gehalten, Skripte werden ggf. durch die Dozenten zur Verfügung gestellt.

Autumn Semester 2016

Page 856 of 1571
Abstract
Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

Objective
Acquisition of a basic repertoire of synthetic methods including important reactions of aldehydes, ketones, carboxylic acids and carboxylic acid derivatives, as well as eliminations and fragmentations. Particular emphasis is placed on the understanding of reaction mechanisms and the correlation between structure and reactivity. A deeper understanding of the concepts presented during the lecture is reached by solving the problems handed out each time and discussed one week later in the exercise class.

Content
Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

Lecture notes
A pdf file of the printed lecture notes is provided online. Supplementary material may be provided online.

Literature
No set textbooks. Optional literature will be proposed at the beginning of the class and in the lecture notes.

701-0023-00L  
**Atmosphere**  
W 3 credits 2V H. Wernli, E. M. Fischer, T. Peter

**Abstract**
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

**Objective**
Understanding of basic physical and chemical processes in the atmosphere. Understanding of mechanisms of and interactions between: weather - climate, atmosphere - ocean - continents, troposphere - stratosphere. Understanding of environmentally relevant structures and processes on vastly differing scales. Basis for the modelling of complex interrelations in the atmosphere.

**Content**
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

**Lecture notes**
Written information will be supplied.

**Literature**

701-0245-00L  
**Introduction to Evolutionary Biology**  
W 2 credits 2V G. Velicer, S. Wielgoss

**Abstract**
This course introduces important questions about the evolutionary processes involved in the generation and maintenance of biological diversity across all domains of life and how evolutionary science investigates these questions. The topics covered range from different forms of selection, phylogenetic analysis, population genetics, life history theory, the evolution of sex, social evolution to human evolution. These topics are important for the understanding of a number of evolutionary problems in the basic and applied sciences.

**Objective**
This course introduces important questions about the evolutionary processes involved in the generation and maintenance of biological diversity across all domains of life and how evolutionary science investigates these questions.

**Content**
Topics likely to be covered in this course include research methods in evolutionary biology, adaptation, evolution of sex, evolutionary transitions, human evolution, infectious disease evolution, life history evolution, macroevolution, mechanisms of evolution, phylogenetic analysis, population dynamics, population genetics, social evolution, speciation and types of selection.

**Literature**
Textbook: 
- Evolutionary Analysis
  - Scott Freeman and Jon Heron

**Prerequisites / notice**
The exam is based on lecture and textbook.

701-0401-00L  
**Hydrosphere**  
W 3 credits 2V R. Kipfer, C. Roques

**Abstract**
Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

**Objective**
Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

**Content**
Topics of the course.
Physical properties of water (i.e. density and equation of state)
- global water resources
- Exchange at boundaries
  - energy (thermal & kinetic), gas exchange
- Mixing and transport processes in open waters
  - vertical stratification, large scale transport
  - turbulence and mixing
  - mixing and exchange processes in rivers
- Groundwater and its dynamics
  - ground water as part of the terrestrial water cycle
  - ground water hydraulics, Darcy's law
  - aquifers and their properties
  - hydrochemistry and tracer
- ground water use
- Case studies
  - 1. Water as resource, 2. Water and climate

**Lecture notes**
In addition to the suggested literature handouts are distributed.

**Literature**
Suggested literature.

**Prerequisites / notice**
The case studies and the analysis of the questions and problems are integral part of the course.

701-0423-00L  
**Chemistry of Aquatic Systems**  
W 3 credits 2G L. Winkel

**Abstract**
This course gives an introduction to chemical processes in aquatic systems and shows applications to various systems. The following topics are treated: acid-base reactions and carbonate system, solubility of solids and weathering, redox reactions, complexation of metals, reactions at the solid/water interface, interactions to lakes, rivers and groundwater.

**Objective**
Understanding of chemical processes in aquatic systems. Quantitative application of chemical equilibria to processes in natural waters.

**Content**
Introduction to the chemistry of aquatic systems. Regulation of the composition of natural waters by chemical, geochemical and biological processes. Quantitative application of chemical equilibria to processes in natural waters. The following topics are treated: acid-base reactions, carbonate system; solubility of solid phases and weathering; complexation of metals and metal cycling in natural waters; redox reactions; reactions at the interface solid phase-water; applications to lakes, rivers, groundwater.

**Lecture notes**
Script is distributed.

**Literature**
Numerical Methods in Environmental Sciences

**Abstract**

This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

**Objective**

The students are able to:
- explain up-to-date meteorological observation techniques and the basic methods of theoretical atmospheric dynamics
- to discuss the mathematical basis of atmospheric dynamics, based on selected atmospheric flow phenomena
- to explain the basic dynamics of the global circulation and of synoptic- and meso-scale flow features
- to explain how mountains influence the atmospheric flow on different scales

**Content**

Satellite observations; analysis of vertical soundings; geostrophic and thermal wind; cyclones at mid-latitude; global circulation; north-atlantic oscillation; atmospheric blocking situations; Eulerian and Lagrangian perspective; potential vorticity; Alpine dynamics (storms, orographic wind); planetary boundary layer

**Literature**

Lecture notes and slides

Lecture notes:

- Atmospheric Science, An Introductory Survey
  - John M. Wallace and Peter V. Hobbs, Academic Press

Number: 701-0473-00L

Credits: 3

Type: W

ECTS: 2G

Lecturer: M. A. Sprenger, C. Grams

Introduction to the formation and properties of soils as a function of parent rock, landscape position, climate, and soil organisms. Complex relationships between soil forming processes, physical and chemical soil properties, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

**Lecture notes**

Powerpoint slides and script will be made available.

**Prerequisites / notice**

- 50% of the time we use the concept of "flipped classroom" (en.wikipedia.org/wiki/Flipped_classroom), which we introduce at the beginning.
- We offer a lab tour, in which we demonstrate with some instruments how some of the processes, that are discussed in the lectures, are measured.

There is a additional tutorial right after each lecture to give you the chance to ask further questions and discuss the exercises. The participation is recommended but voluntary.

Pedosphere

**Abstract**

Introduction to the formation and properties of soils as a function of parent rock, landscape position, climate, and soil organisms. Complex relationships between soil forming processes, physical and chemical soil properties, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

**Objective**

Introduction to the formation and properties of soils as a function of parent rock, landscape position, climate, and soil organisms. Complex relationships between soil forming processes, physical and chemical soil properties, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

**Content**

Definition of the pedosphere, soil functions, rocks as parent materials, minerals and weathering, soil biota, soil organic matter, physical soil properties and functions, chemical soil properties and functions, soil formation, principles of soil classification, global soil regions, soil fertility, land use and soil degradation.

**Literature**

Lecture notes:

Prerequisites / notice

Prerequisites: Basic knowledge in chemistry, biology and geology.

Microbiology

**Abstract**

Teaching of basic knowledge in microbiology with main focus on Microbial Cell Structure and Function, Molecular Genetics, Microbial Growth, Metabolic Diversity, Phylogeny and Taxonomy, Prokaryotic Diversity, Human-Microbe Interactions, Biotechnology.

**Objective**

Teaching of basic knowledge in microbiology.

**Content**

**Literature**

Die Behandlung der Themen erfolgt auf der Basis des Lehrbuchs Brock, Biology of Microorganisms

Laboratory Courses, Semester Papers, Proseminars, Field Trips

Further Laboratory Courses arising upon specific written request by the students and permission by the Director of studies.

In a research project students extend their knowledge in a particular field, get acquainted with the scientific way of working, and learn to

- **Objective**

  Qualitative analysis (simple cation and anion separation process, determination of cations and anions), acid-base-equilibria (strengths of acids and bases, pH- and pKa-values, titrations, buffer systems, Kjeldahl determination), precipitations (gravimetry, potentiometry, conductivity), oxidation state and redox behaviour (syntheses), redox-titrations, galvanic elements, metal complexes (syntheses of complexes, ligand exchange reactions, complexometric titration)

  - analysis of measured values (measuring error, average value, error analysis), states of aggregation (vapour pressure), characteristics of electrolytes (conductivity measurements), thermodynamics (calorimetry)

  - The general aim for the students of the practical course in general chemistry is an introduction in the scientific work and to get familiar with simple experimental procedures in a chemical laboratory. In general, first experiences with the principal reaction behaviour of a variety of different substances will be made. The chemical characteristics of these will be elucidated by a series of quantitative experiments alongside with the corresponding qualitative analyses. In order to get an overview of classes of substances as well as some general phenomena in chemistry suitable experiments have been chosen. In the second part of the practical course, i.e. physical chemistry, the behaviour of substances in their states of aggregation as well as changes of selected physical values will be recorded and discussed.

  - **Prerequisites / notice**

    Compulsory: online enrolment latest one week prior start of the semester

</table>
The course is divided into several chapters:

1. Basic principles of Evolution.
2. Chemistry of Life: Water; Carbon and molecular diversity; biomolecules
3. The cell; structure; membrane structure and function, cell cycle
4. Metabolism: Respiration; Photosynthesis; Fermentation
5. Inheritance: meiosis and sexual reproduction; Mendelian genetics, chromosomal basis of inheritance, molecular basis of inheritance, from gene to protein, regulation of gene expression; genomes and their evolution

The text-book “Biology” (Campbell, Reece) (10th edition) is the basis of the course.

The structure of the course is largely identical with that of the text-book.

Certain sections of the text-book must be studied by self-instruction.

**401-0271-00L Mathematical Foundations I: Analysis A**

**Abstract**
Introduction to calculus in one dimension. Building simple models and analysing them mathematically.

**Content**
Functions of one variable: the notion of a function, of the derivative, the idea of a differential equation, complex numbers, Taylor polynomials and Taylor series. The integral of a function of one variable.

**Literature**
- G. B. Thomas, M. D. Weir, J. Hass: Analysis I, Lehr- und Übungsbuch, Pearson-Verlag
- R. Courant: Vorlesungen über Differential- und Integralrechnung, Springer Verlag
- V. Zorich: Analysis I. Springer Verlag 2006

**Objective**
The ability to work with the basics of calculus in a mathematically rigorous way.

**Lecture notes**
- H. Heuser: Lehrbuch der Analysis. Teubner Verlag
- W. Walter: Analysis I. Springer Verlag
- O. Forster: Analysis I. Vieweg Verlag

**401-1261-07L Analysis I**

**Objective**
The ability to work with the basics of calculus in a mathematically rigorous way.

**Literature**
- K. Königsberger: Analysis I, Springer-Verlag
- R. Courant: Vorlesungen über Differential- und Integralrechnung, Springer Verlag
- V. Zorich: Analysis I. Springer Verlag 2006
- J. Appell: Analysis in Beispielen und Gegenbeispielen. Springer Verlag
- Schichl u. Steinbauer, Einführung in das mathematische Arbeiten

**Objective**
The ability to work with the basics of calculus in a mathematically rigorous way.

**Lecture notes**
- H. Heuser: Lehrbuch der Analysis. Teubner Verlag
- W. Walter: Analysis I. Springer Verlag
- O. Forster: Analysis I. Vieweg Verlag

**401-0231-10L Introduction to Computer Science**

**Abstract**
Introduction to the differential and integral calculus in one real variable: fundamentals of mathematical thinking, numbers, sequences, basic point set topology, continuity, differentiable functions, ordinary differential equations, Riemann integration.

**Objective**
The ability to work with the basics of calculus in a mathematically rigorous way.

**Lecture notes**
- Konrad Koenigsberger, Analysis I.
- Christian Blatter: Ingenieur-Analyse (Kapitel 1-3)

**452-0001-00L General Chemistry (Inorganic Chemistry) I**

**Abstract**
Introduction to the chemistry of ionic equilibria: Acids and bases, redox reactions, formation of coordination complexes and precipitation reactions

**Objective**
Discuss fundamentals of computer architecture, languages, algorithms and programming with an eye to their application in the area of chemistry, biology and material science.

**Content**
Minimal introduction to UNIX, Data representation and processing, algorithms and programming in C++. Errors, programming guidelines, efficiency, computer architecture, algorithms for sorting and searching, databases, numerical algorithms, types of algorithms, simulation, data communication & networks, chemical structures, operating systems, programming languages, style, software engineering.

**Literature**
- See: www.csms.ethz.ch/education/lnfol

**Prerequisites / notice**
Since the exercises on the computer do convey and test essentially different skills as those being conveyed during the lectures and tested at the written exam, the results of the exercises are taken into account when evaluating the results of the exam.

For more information about the lecture: www.csms.ethz.ch/education/lnfol
Objective
Understanding and describing ionic equilibria from both a qualitative and a quantitative perspective

Content
Chemical equilibrium and equilibrium constants, mono- and polyprotic acids and bases in aqueous solution, calculation of equilibrium concentrations, acidity functions, Lewis acids, acids in non-aqueous solvents, redox reactions and equilibria, galvanic cells, electrode potentials, coordination chemistry, stepwise formation of metal complexes, solubility

Lecture notes
Copies of the course slides as well as other documents will be provided as pdf files via the moodle platform.

Literature

529-0011-03L  General Chemistry (Organic Chemistry) I

Abstract
Introduction to Organic Chemistry. Classical structure theory, stereochemistry, chemical bonds and bonding, symmetry, nomenclature, organic thermochemistry, conformational analysis, basics of chemical reactions.

Objective
Introduction to the structures of organic compounds as well as the structural and energetic basis of organic chemistry.

Content

Lecture notes
Unterlagen werden als PDF über die ILIAS-Plattform zur Verfügung gestellt

Literature

529-0011-01L  General Chemistry (Physical Chemistry) I

Abstract
Atomic structure and structure of matter; Atomic orbitals and energy levels; Quantum mechanical atom model; Chemical bonding; Equations of state.

Objective
Introduction to Physical Chemistry

Content
Atomic structure and structure of matter: atomic theory, elementary particles, atomic nuclei, radioactivity, nuclear reactions. Atomic orbitals and energy levels: ionisation energies, atomic spectroscopy, term values and symbols. Quantum mechanical atom model: wave-particle duality, the uncertainty principle, Schrödinger’s equation, the hydrogen atom, construction of the periodic table of the elements. Chemical bonding: ionic bonding, covalent bonding, molecular orbitals. Equations of state: ideal gases

Information about the practical course will be given on the first day.

Abstract
Qualitative analysis (determination of cations and anions), acid-base-equilibria (pH-values, titrations, buffer), precipitation equilibria (gravimetry, potentiometry, conductivity), redox reactions (syntheses, redox-titrations, galvanic elements), metal complexes (syntheses, complexometric titration) analysis of measured values, states of aggregation (vapour pressure, conductivity, calorimetry)

Objective
Qualitative analysis (simple cation and anion separation process, determination of cations and anions), acid-base-equilibria (strengths of acids and bases, pH- and pKa-values, titrations, buffer systems, Kjeldahl determination), precipitation equilibria (gravimetry, potentiometry, conductivity), oxidation state and redox behaviour (syntheses), redox-titrations, galvanic elements), metal complexes (syntheses of complexes, ligand exchange reactions, complexometric titration) analysis of measured values (measuring error, average value, error analysis), states of aggregation (vapour pressure), characteristics of electrolytes (conductivity measurements), thermodynamics (calorimetry)

Content
The general aim for the students of the practical course in general chemistry is an introduction in the scientific work and to get familiar with simple experimental procedures in a chemical laboratory. In general, first experiences with the principal reaction behaviour of a variety of different substances will be made. The chemical characteristics of these will be elucidated by a series of quantitative experiments alongside with the corresponding qualitative analyses. In order to get an overview of classes of substances as well as some general phenomena in chemistry suitable experiments have been chosen. In the second part of the practical course, i.e. physical chemistry, the behaviour of substances in their states of aggregation as well as changes of selected physical values will be recorded and discussed.

Abstract

Objective
The main objective is that the students get a basic knowledge of the classical tools to solve explicitly linear partial differential equations.
Content

## Examples of partial differential equations
- Classification of PDEs
- Superposition principle

## One-dimensional wave equation
- D'Alembert's formula
- Duhamel's principle

## Fourier series
- Representation of piecewise continuous functions via Fourier series
- Examples and applications

## Separation of variables
- Resolution of wave and heat equation
- Homogeneous and inhomogeneous boundary conditions, Dirichlet and Neumann boundary conditions

## Laplace equation
- Resolution of the Laplace equation on rectangle, disk and annulus
- Poisson formula
- Mean value theorem and maximum principle

## Fourier transform
- Derivation and Definition
- Inverse Fourier transformation and inversion formula
- Interpretation and properties of the Fourier transform
- Resolution of the heat equation

## Laplace transform
- Definition, motivation and properties
- Inverse Laplace transform of rational functions
- Application to ordinary differential equations

Lecture notes

There are available some Lecture Notes in English and also in German of the Professor. These can be found following the links provided under the tab 'Lernmaterialien'.

Literature

2) Y. Pinchover and J. Rubinstein, An Introduction to Partial Differential Equations, Cambridge University Press

3) E. Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons (only Chapters 1,2,6,11)

E. Kowalski

Abstract

In this lecture we treat problems in applied analysis. The focus lies on the simplest cases of three fundamental types of partial differential equations of second order: the Laplace equation, the heat equation and the wave equation.

Content

1.) Klassifizierung von PDE's
   - linear, quasilinear, nicht-linear
   - elliptisch, parabolisch, hyperbolisch

2.) Quasilineare PDE
   - Methode der Charakteristiken (Beispiele)

3.) Elliptische PDE
   - Bsp: Laplace-Gleichung
   - Harmonische Funktionen, Maximumsprinzip, Mittelwerts-Formel.
   - Methode der Variablenseparation.

4.) Parabolische PDE
   - Bsp: Wärmeleitungsgleichung
   - Bsp: Inverse Wärmeleitungsgleichung
   - Methode der Variablenseparation

5.) Hyperbolische PDE
   - Bsp: Wellengleichung
   - Formel von d'Alembert in (1+1)-Dimensionen
   - Methode der Variablenseparation

6.) Green'sche Funktionen
   - Rechnen mit der Dirac-Deltafunktion
   - Idee der Green'schen Funktionen (Beispiele)

7.) Ausblick auf numerische Methoden
   - 5-Punkt-Diskretisierung des Laplace-Operators (Beispiele)

Prerequisites / notice

Prerequisites: Analysis I and II, Fourier series (Komplexe Analysis)
A pdf file of the printed lecture notes is provided online. Supplementary material may be provided online. The lecture slides are available for download on the course page.

**Introduction to fundamental concepts of modern programming and operational skills for developing high-quality programs, including large**

This lecture is an introduction to programming based on the language C++. We cover fundamental types, control statements, functions, arrays, and classes. The concepts will be motivated and illustrated through algorithms and applications.

**Abstract**

**Introduction to the concepts and tools in physics with the help of demonstration experiments: mechanics of point-like and ridged bodies, periodic motion and mechanical waves.**

**Objective**

The concepts and tools in physics, as well as the methods of an experimental science are taught. The student should learn to identify, communicate and solve physical problems in his/her own field of science.

**Content**

Mechanics (motion, Newton's laws, work and energy, conservation of momentum, rotation, gravitation, fluids) Periodic Motion and Waves (periodic motion, mechanical waves, acoustics).

**Lecture notes**

The lecture follows the book "Physics" by Paul A. Tipler.

**Literature**

**Prerequisites / notice**

Prerequisites: Mathematics I & II

**Number** 402-1701-00L

**Title** *Physics I*

**W** 7 credits

**ECTS** 4V+2U

**Lecturer** A. Wallraff

**Abstract**

This course gives a first introduction to Physics. The emphasis is on classical mechanics, together with an introduction to thermodynamics.

Acquire knowledge of the basic principles regarding the physics of classical mechanics and thermodynamics. Skills in solving physics problems.

**Number** 529-0422-00L

**Title** *Physical Chemistry II: Introduction to Chemical Reaction Kinetics*

**O** 4 credits

**ECTS** 3V+1U

**Lecturer** H. J. Wörner

**Abstract**

**Objective**

Introduction to Chemical Reaction Kinetics

**Content**

Fundamental concepts: rate laws, elementary reactions and composite reactions, molecularity, reaction order. Experimental methods in reaction kinetics up to new developments in femtosecond kinetics. Simple chemical reaction rate theories: temperature dependence of the rate constant and Arrhenius equation, collision theory, reaction cross-section, transition state theory. Reaction mechanisms and complex kinetic systems, approximation techniques, chain reactions, explosions and detonations. Homogeneous catalysis and enzyme kinetics.

**Lecture notes**

**Literature**

- Voraussetzungen:
  - Mathematik I und II
  - Allgemeine Chemie I und II
  - Physikalische Chemie I

**Number** 529-0221-00L

**Title** *Organic Chemistry I*

**O** 3 credits

**ECTS** 2V+1U

**Lecturer** F. Diederich, C. Schaack

**Abstract**

Chemical reactivity and classes of compounds. Eliminations, fragmentsations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

**Objective**

Acquisition of a basic repertoire of synthetic methods including important reactions of aldehydes, ketones, carboxylic acids and carboxylic acid derivatives, as well as eliminations and fragmentations. Particular emphasis is placed on the understanding of reaction mechanisms and the correlation between structure and reactivity. A deeper understanding of the concepts presented during the lecture is reached by solving the problems handed out each time and discussed one week later in the exercise class.

**Content**

Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

**Lecture notes**

A pdf file of the printed lecture notes is provided online. Supplementary material may be provided online.

**Literature**

- No set textbooks. Optional literature will be proposed at the beginning of the class and in the lecture notes.

- Physikalische Chemie I

**Number** 252-0027-00L

**Title** *Introduction to Programming*

**W** 7 credits

**ECTS** 4V+2U

**Lecturer** T. Gross

**Abstract**

Introduction to fundamental concepts of modern programming and operational skills for developing high-quality programs, including large programs as in industry. The course introduces software engineering principles with an object-oriented approach based.

Many people can write programs. The "Introduction to Programming" course goes beyond that basic goal: it teaches the fundamental concepts and skills necessary to perform programming at a professional level. As a result of successfully completing the course, students master the fundamental control structures, data structures, reasoning patterns and programming language mechanisms characterizing modern programming, as well as the fundamental rules of producing high-quality software. They have the necessary programming background for later courses introducing programming skills in specialized application areas.

**Objective**

See the course page for up-to-date information.

**Content**

Basics of object-oriented programming. Objects and classes. Pre- and postconditions, class invariants, Design by Contract. Fundamental control structures. Assignment and References. Basic hardware concepts. Fundamental data structures and algorithms. Recursion. Inheritance and interfaces, introduction to event-driven design and concurrent programming. Basic concepts of Software Engineering such as the software process, specification and documentation, reuse and quality assurance.

**Lecture notes**

The lecture slides are available for download on the course page.

There are no special prerequisites. Students are expected to enroll in the other courses offered to first-year students of computer science.

**Number** 252-0847-00L

**Title** *Computer Science*

**W** 5 credits

**Abstract**
The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

**Objective**
The focus is animal cells and the development of multicellular organisms with a clear emphasis on the molecular basis of cellular structures and phenomena. The topics include biological membranes, the cytoskeleton, protein sorting, energy metabolism, cell cycle and division, viruses, extracellular matrix, cell signaling, embryonic development and cancer research.

**Content**
The lectures are presented in the Powerpoint format. These are available on the WEB for ETH students over the nethz (Moodle). Some lectures are available on the ETH WEB site in a live format (Livestream) at the above WEB site.

**Lecture notes**

**Prerequisites / notice**
Some of the lectures are given in the English language. Certain sections of the text-book must be studied by self-instruction.

**Abstract**
Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to the application of tools of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and practice.
Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to qualitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.

Bioinformatics I will cover the following topics:

- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

### 529-0051-00L Analytical Chemistry I

**Objective**

Application oriented basics of organic and inorganic instrumental analysis and of the empirical employment of structure elucidation methods:

- Mass spectrometry; Ionization methods, mass separation, isotope signals, rules of fragmentation, rearrangements.
- NMR spectroscopy; Experimental basics, chemical shift, spin-spin coupling.
- IR spectroscopy; Revisiting topics like harmonic oscillator, normal vibrations, coupled oscillating systems (in accordance to the basics of the related lecture in physical chemistry); sample preparation, acquisition techniques, law of Lambert and Beer, interpretation of IR spectra; Raman spectroscopy.
- UV/VIS spectroscopy: Basics, interpretation of electron spectra. Circular dichroism (CD) and optical rotation dispersion (ORD).

**Literature**

- M. Hesse, H. Meier, B. Zeeh, Spektroskopische Methoden in der organischen Chemie, S. überarbeitete Auflage, Thieme, Stuttgart, 1995

**Lecture notes**

Script will be for the production price.

**Prerequisites / notice**

Exercises are integrated in the lectures. In addition, attendance in the lecture 529-0289-00 "Instrumental analysis of organic compounds" (4th semester) is recommended.

### 529-0121-00L Inorganic Chemistry

**Abstract**

Introduction into the most important spectroscopical methods and their applications to gain structural information.

**Objective**

- Knowledge about the necessary theoretical background of spectroscopical methods and their practical applications
- General synthetic strategies.

**Content**

- Complexes of the transition metals; structure, bonding, spectroscopic properties, and synthesis.
- The chemical bond (overview). Symmetry and group theory. The chemical bond of coordination compounds (Valence Bond Theory, Crystal Field Theory, Molecular Orbital Theory (sigma- and pi-bonding). pi-Accepting ligands (CO, NO, olefins, dioxygen, dihydrogen, phosphines and phosphites).

**Literature**

- M. Hesse, H. Meier, B. Zeeh, Spektroskopische Methoden in der organischen Chemie, S. überarbeitete Auflage, Thieme, Stuttgart, 1995

**Lecture notes**

Can be bought at the HCI-shop.

**Prerequisites / notice**

Exercises are integrated in the lectures. In addition, attendance in the lecture 529-0289-00 "Instrumental analysis of organic compounds" (4th semester) is recommended.

### 752-4001-00L Microbiology

**Abstract**

Teaching of basic knowledge in microbiology with main focus on Microbial Cell Structure and Function, Molecular Genetics, Microbial Growth, Metabolic Diversity, Phylogeny and Taxonomy, Prokaryotic Diversity, Human-Microbe Interactions, Biotechnology.

**Objective**

Teaching of basic knowledge in microbiology.

**Content**

- Die Behandlung der Themen erfolgt auf der Basis des Lehrbuchs Brock, Biology of Microorganisms

**Lecture notes**

Wird von den jeweiligen Dozenten ausgegeben.

### 701-0243-01L Biology III: Essentials of Ecology

**Abstract**

This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed.

**Objective**

- The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level.
- The students should learn ecological concepts at these different levels in the context of concrete examples from terrestrial and aquatic ecology. Corresponding methods for studying the systems will be presented.
- A further aim of the lecture is that students achieve an understanding of biodiversity, why it is threatened and how it can be managed.

**Literature**

- M. Hesse, H. Meier, B. Zeeh, Spektroskopische Methoden in der organischen Chemie, S. überarbeitete Auflage, Thieme, Stuttgart, 1995
- M. Hesse, H. Meier, B. Zeeh, Spektroskopische Methoden in der organischen Chemie, S. überarbeitete Auflage, Thieme, Stuttgart, 1995
Topics likely to be covered in this course include research methods in evolutionary biology, adaptation, evolution of sex, evolutionary processes, and the generation and maintenance of biological diversity. This course introduces important questions about the evolutionary processes involved in the generation and maintenance of biological diversity across all domains of life and how evolutionary science investigates these questions.

**Introduction to Evolutionary Biology**

**Objective**

This course introduces important questions about the evolutionary processes involved in the generation and maintenance of biological diversity across all domains of life and how evolutionary science investigates these questions. The topics covered range from different forms of selection, phylogenetic analysis, population genetics, life history theory, the evolution of sex, social evolution to human evolution. These topics are important for the understanding of a number of evolutionary problems in the basic and applied sciences.

**Content**

Topics likely to be covered in this course include research methods in evolutionary biology, adaptation, evolution of sex, evolutionary transitions, human evolution, infectious disease evolution, life history evolution, macroevolution, mechanisms of evolution, phylogenetic analysis, population dynamics, population genetics, social evolution, speciation and types of selection.

**Literature**

Textbook: Evolutionary Analysis
Scott Freeman and Jon Herron

**Prerequisites / notice**

The exam is based on lecture and textbook.

**Atmosphere**

**Objective**

Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity, and ozone layer.

**Content**

Understanding of basic physical and chemical processes in the atmosphere. Understanding of mechanisms of and interactions between: weather - climate, atmosphere - ocean - continents, troposphere - stratosphere. Understanding of environmentally relevant structures and processes on vastly differing scales. Basis for the modelling of complex interrelations in the atmosphere.

**Literature**

- Scott Freeman and Jon Herron

**Prerequisites / notice**

- Prerequisites: Basic knowledge in chemistry, biology and geology.

**Pedosphere**

**Objective**

Introduction to the formation and properties of soils as a function of parent rock, landscape position, climate, and soil organisms. Complex relationships between soil forming processes, physical and chemical soil properties, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

**Content**

Definition of the pedosphere, soil functions, rocks as parent materials, minerals and weathering, soil organisms, soil organic matter, physical soil properties and functions, chemical soil properties and functions, soil formation, principles of soil classification, global soil regions, soil fertility, land use and soil degradation.

**Literature**

**Hydrosphere**

**Objective**

Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

**Literature**

- Scott Freeman and Jon Herron

**Prerequisites / notice**

- Evolutionsökologie: Methodik, Spezialisierung, Koevolution
- Aktuelle Naturschutzprobleme und -massnahmen
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Modellierung der komplexen Wechselwirkungen zwischen Atmosphäre, Ozean und Kontinenten
- Prinzipien der Ökosystembildung, Stoff- und Energieflüsse
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartmente, Stoff- und Energieflüsse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

**Lecture notes**

Unterlagen, Vorlesungsskizzen und relevante Literatur sind in der Lehrdokumentenablage abrufbar. Die Unterlagen für die nächste Vorlesung stehen jeweils spätestens am Freitagmorgen zur Verfügung.
Understanding of chemical processes in aquatic systems. Quantitative application of chemical equilibria to processes in natural waters.

In addition to the suggested literature handouts are distributed. Horton et al. (Pearson) serves as lecture notes. This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The following topics are treated: acid-base reactions and carbonate system, solubility of solids and weathering, redox reactions, complexation of metals, and metabolism. Those completing the course are able to describe and understand fundamental cellular metabolic processes.

The case studies and the analysis of the questions and problems are integral part of the course.

Abstract
It completes the Bachelor program and consists of a scientific project carried out independently.

Objective
Encourages students to show independence, to produce scientifically structured work and to apply engineering working methods.

#### Second and Third Year Additional Subjects

For the Bachelor in Interdisciplinary Sciences students can in principle choose from all subjects taught at the Bachelor level at ETH Zurich.

At the beginning of the 2. year an individual study program is established for every student in discussion with the Director of Studies in interdisciplinary sciences. For details see Programme Regulations 2010.

#### Other Electives ETH

Further combinations of Compulsory elective subjects arising upon specific written request by the students and permission by the Director of studies.

Interdisciplinary Sciences Master

For the Master in Interdisciplinary Sciences students can in principle choose from all subjects taught at the Master level at ETH Zurich.

At the beginning of the Master studies an individual study program is established for every student in discussion with the Director of Studies in interdisciplinary sciences. For details see Programme Regulations 2007.

➤ Majors

The students can choose from all Majors as provided by the following list: http://www.chab.ethz.ch/lehre/in_msc/index_EN

Furthermore it is also possible to create an individual Majors as specified in Art. 19 paragraph 3 of the Programme Regulations.

Selection of courses of ETH, according individual curriculum.

➤ General Courses

Selection of courses of ETH, according individual curriculum.

➤ Proseminars, Laboratory Courses, Research Projects and Sem. Papers

<tr>
<td></td>
<td>Objective</td>
<td></td>
<td></td>
<td></td>
<td>Mathematics is of ever increasing importance to the Natural Sciences and Engineering. The key is the so-called mathematical modelling cycle, i.e. the translation of problems from outside of mathematics into mathematics, the study of the mathematical problems (often with the help of high level mathematical software packages) and the interpretation of the results in the original environment. The goal of Mathematics I and II is to provide the mathematical foundations relevant for this paradigm. Differential equations are by far the most important tool for modelling and are therefore a main focus of both of these courses.</td>

Literature

Prerequisites / notice
The lecture is the first in a series of two lectures given over two semesters for students with biology as a basic subject.

701-0243-01L
Biology III: Essentials of Ecology
O 3 credits 2V S. Güsewell, C. Vorburger

Abstract
This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed.

Objective
The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level. The students should learn ecological concepts at these different levels in the context of concrete examples from terrestrial and aquatic ecology. Corresponding methods for studying the systems will be presented.

751-0013-00L
World Food System
O 4 credits 4V N. Buchmann, R. Finger, M. Kreuzer, M. Loessner, D. Moretti, M. Siegrist, E. J. Windhab

Abstract
Knowledge about the World Food System will be provided, based on case studies along food value chains in countries with various development stages and dependent on multiple boundary conditions. This shall generate profound understanding of the associated global challenges especially food scarcity, suboptimal diet and nutrition, food quality and safety as well as effects on the environment.

Objective
Attending this course, the students will recognize the elements of the World Food System (WFS) approach and the problems it is supposed to treat. They will especially comprehend the four pillars of global food security, namely (I) food availability (including sustainable production and processing), (II) access to food (physical and monetary), (III) food use (including quality and safety as well as the impact on human health and well being) and (IV) resilience to the boundary conditions (environmental, economic and political). This insight will make them aware of the global driving forces behind our ETH research on food security and is expected to alleviate motivation and understanding for the association of subsequent specific courses within a general context. The course equivalently implements agricultural and food sciences, thus supporting the interdisciplinary view on the WFS scope.

Content
Case studies on certain foods of plant and animal origin serve to demonstrate the entire food value chain from the production of raw material to processed food and its consumer relevant property functions. In doing so, important corresponding aspects for developed, emerging and developing countries are demonstrated, by use of engineering as well as natural and social science approaches.

Lecture notes
Handouts and links are provided online.

701-0757-00L
Principles of Economics
O 3 credits 2G R. Schubert
This course covers the bases for understanding micro- and macroeconomic issues and theories. Participants are given the tools to argue in economic and political terms and to evaluate the corresponding measures. Group and individual exercises deepen the knowledge gained.

Students are able to:
- describe fundamental micro- and macroeconomic issues and theories.
- apply suitable economic arguments to a given theme.
- evaluate economic measures.

Supply and demand behaviour of firm and households; market equilibrium and taxation; national income and indicators; inflation; unemployment; growth; macroeconomics policies.

The lecture discusses the role of the environmental systems based on selected environmental problems, among these the exploration of 6P L. E. Fässler Capability of preparing biological specimen, microscopy and documentation. Understanding the correlation between plant structure and function at the level of organs, tissues and cells. Special features of plant cells. Anatomy and function of plant organs. Anatomical adaptations to different environments.

The lecture provides a science-based exploration of environmental aspects from three research fields: earth, climate, and health sciences. N. Kobert Students are able to explain important properties of the three environmental systems, to discuss critical drivers, trends and conflicts of their use, and to compare potential solutions.

The lecture discusses the role of the environmental systems based on selected environmental problems, among these the exploration of raw materials and fossil fuels, climate change and its impacts on man and environment, and the spread and control of infectious diseases in the human population and agricultural systems.

Slides are provided by instructors and are accessible via moodle.

</tbody>
</table>
Content
Introduction, basics, composition of cells, biochemical units, repetition of relevant organic chemistry
Structure and function of proteins
Carbohydrates
Lipids an biological membranes
Enzymes and enzyme kinetics
Catalytic strategies
Metabolism: Basic concepts and design. Repetition of basic thermodynamics
Glycolysis, fermentation
The citric acid cycle
Oxidative phosphorylation
Fatty acid metabolism

Lecture notes
Horton et al. (Pearson) serves as lecture notes.

Prerequisites / notice
Basic knowledge in biology and chemistry is a precondition.

752-6305-00L Physiology and Anatomy I

Abstract
Imparts a basic understanding of physiology and anatomy in man, focusing on the interrelations between morphology and function of the human organism. This is fostered by discussing all subjects from a functional point of view. One major topic of the lecture is food intake and digestion with its correlated chemosensory, endocrine and metabolic processes.

Objective
At the end of the course the students understand the basic functions of the organ systems and functionally important morphological features. One focus of the course is on aspects related to nutrition and overweight including the resulting diseases.

Lecture notes
Handouts for each topic will be made available online: http://www.fpb.ethz.ch/de/teaching/handouts.html

701-0225-00L Organic Chemistry

Abstract
Introduction to Isomerism.
Reaction mechanisms in organic chemistry (substitutions, additions, eliminations, condensations)
Biosynthesis of Terpenes.

Objective
The students are able to differentiate between structural and stereoisomers.
The students know the basic reaction mechanisms in organic chemistry. They are able to understand and formulate simple biochemical reactions.
They know the basics of the biosynthesis of terpenes.

Content
Isomerism (structural isomers, stereoisomers).
Descriptive chemistry of natural products (glycerides, peptides, saccharides).
Reaction mechanisms (substitutions, additions, eliminations, condensations).
The citric acid cycle, the glyoxylate cycle.
Biosynthesis of terpenes.

Literature
Carsten Schmuck, Basisbuch Organische Chemie, Pearson

Prerequisites / notice
Der Stoff der Basischemie wird vorausgesetzt.

Exam Block 2

751-1551-00L Ressourcen- und Umweltökonomie

Abstract
Relationship between economy and environment, market failure, external effects and public goods, contingent valuation, internalisation of externalities; economics of non-renewable resources, economics of renewable resources, cost-benefit analysis, sustainability, and international aspects of resource and environmental economics.

Objective
Understanding of the basic issues and methods in resource and environmental economics; ability to solve typical problems in the field using the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Topics are:

Introduction to resource and environmental economics
Importance of resource and environmental economics
Main issues of resource and environmental economics
Normative basis
Utilitarianism
Fairness according to Rawls
Economic growth and environment
Externalities in the environmental sphere
Governmental internalisation of externalities
Private internalisation of externalities: the Coase theorem
Free rider problem and public goods
Types of public policy
Efficient level of pollution
Tax vs. permits
Command and Control Instruments
Empirical data on non-renewable natural resources
Optimal price development: the Hotelling-rule
Effects of exploration and Backstop-technology
Effects of different types of markets.
Biological growth function
Optimal depletion of renewable resources
Social inefficiency as result of over-use of open-access resources
Cost-benefit analysis and the environment
Measuring environmental benefit
Measuring costs
Concept of sustainability
Technological feasibility
Conflicts sustainability / optimality
Indicators of sustainability
Problem of climate change
Cost and benefit of climate change
Climate change as international ecological externality
International climate policy: Kyoto protocol
Implementation of the Kyoto protocol in Switzerland

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 876 of 1571

Abstract
Basic information for understanding biotechnology applied to food processing will be presented. This will include a presentation of the physiology of important productive microorganisms used in food fermentations, closely related to applications in biotechnology; microbial kinetics, and design and operation of bioreactors; and application of modern molecular tools for food biotechnology.

Objective
The main goal for this course is to provide students with basic information for understanding biotechnology applied to food processing. For the students, the aim will be:
- To understand the important role of microbial physiology and molecular tools for food biotechnology;
- To understand basic principles of fermentation biotechnology, with particular emphasis on food applications.

Content
Biotechnology has been defined as any technique that uses living organisms, or substances from those organisms, to make or modify a product, to improve plants or animals, or to develop microorganisms for specific uses. In this course, basic knowledge for understanding biotechnology as applied to food processing will be presented. This course builds on the application of principles learned from other basic courses in the Bachelor program, especially microbiology and microbial metabolism, molecular biology, biochemistry, physics and engineering. Students will learn about the physiology of important productive microorganisms (lactic acid bacteria, bifidobacteria, propionibacteria and fungi) used in food fermentations, closely related to applications in biotechnology. Microbial kinetics, and design and operation of bioreactors used for both research and industrial scale production of traditional foods and modern food ingredients will be presented. This part will be illustrated by examples of food fermentation processes, representative of specific challenges. Finally, the application of modern molecular tools to food biotechnology will be discussed.

Lecture notes
A complete course document and/or a copy of the power point slides from each lecture will be provided.

Literature
A list of references will be given at the beginning of the course for the different topics presented during the course.

<td>2V</td>
<td>M. B. Zimmermann, C. Wolfrum</td>
</tr>
</tbody>
</table>

Abstract
This course introduces basic concepts of micro- and macronutrient nutrition. Micronutrients studied include fat-soluble and water-soluble vitamins, minerals and trace elements. Macronutrients include proteins, fat and carbohydrates. Special attention is given to nutrient digestion, bioavailability, metabolism and excretion with some focus on energy metabolism.

Objective
To introduce the students to the both macro- and micronutrients in relation to food and metabolism.

Content
The course is divided into two parts. The lectures on micronutrients are given by Prof. Zimmermann and the lectures on macronutrients are given by Prof. Wolfrum. Prof. Zimmermann discusses the micronutrients, including fat-soluble vitamins, water-soluble vitamins, minerals and trace elements. Prof. Wolfrum introduces basic nutritional aspects of proteins, fats, carbohydrates and energy metabolism. The nutrients are described in relation to digestion, absorption and metabolism. Special aspects of homeostasis and homeorhesis are emphasized.

Lecture notes
There is no script. Powerpoint presentations will be made available.

752-4005-00L Food Microbiology I
For students of the study programme Biology BSc the course can only be selected as 4th concept course.

Abstract
This lecture is the first part of a one-year course. It offers insights into the fundamentals and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts and molds present in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

Objective
The lecture offers insights into the basics, practical consequences and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts, molds and protozoa in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms. The focus of this first part of the lecture will be on the organisms, but also on the factors which determine spoilage and foodborne disease.
1. History of Food Microbiology
   1.1. Short synopsis of foodborne microorganisms
   1.2. Spoilage of Foods
   1.3. Foodborne Disease
   1.4. Food Preservation
   1.5. VIP's of Food Microbiology
2. Overview of Microorganisms in Foods
   2.1. Origin of foodborne Microorganisms
   2.2. Bacteria
   2.3. Yeasts
   2.4. Molds
   2.5. Microbial Spoilage of Foods
      3.1. Intrinsinc and Extrinsic Parameters
      3.2. Meats, Seafoods, Eggs
      3.3. Milk and Milk Products
      3.4. Vegetable and Fruit Products
      3.5. Miscellaneous (baked goods, nuts, spices, ready-to-eat products)
      3.6. Drinks and Canned Foods
   4. Foodborne Disease
      4.1. Significance and Transmission of Foodborne pathogens
      4.2. Staphylococcus aureus
      4.3. Gram-positive Sporeformers (Bacillus & Clostridium)
      4.4. Listeria monocytogenes
      4.5. Salmonella, Shigella, Escherichia coli
      4.6. Vibrio, Yersinia, Campylobacter
      4.7. Brucella, Mycobacterium
      4.8. Parasites
      4.9. Viruses and Bacteriophages
      4.10. Mycotoxins
      4.11. Bioactive Amines
      4.12. Miscellaneous (Antibiotic-resistant Bacteria, Biofilms)

Lecture notes
Electronic copies of the presentation slides (PDF) and additional material will be made available for download.

Literature
Recommendations will be given in the first lecture

Food Chemistry II

**Objective**
Introduction to consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

**Abstract**
To familiarize with the structure, properties and reactivity of food constituents. To understand the relationship between the multiple chemical reactions and the quality of food.

**Content**
Descriptive chemistry of food constituents (proteins, lipids, carbohydrates, plant phenolics, flavour compounds). Reactions which affect the colour, flavour, texture, and the nutritional value of raw food products and food products during processing, storage and preparation in a positive or in a negative way (e.g. lipid oxidation, Maillard reaction, enzymatic browning). Links to food analysis, food processing, and nutrition.

**Lecture notes**
The lectures Food Chemistry I and Food Chemistry II constitute a unit.

**Literature**

---

Food Analysis II

**Objective**
To get acquainted with the principles and applications of mass spectrometry in food analytics.

**Content**
Main focus: Mass spectrometry, applications of mass spectrometry (MS).

**Lecture notes**
The lectures are supplemented with handouts.

**Literature**
T. Gude: "Physiology and Anatomy III" (752-0220-20L)
M. L. Nyström: "Experimental Food Microbiology" (752-0407-00L)

ECTS European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
Im Verlauf des Semesters werden einzelne Unterlagen in den Veranstaltungen abgegeben. Dazu gehören auch die Handouts der als Grundlagenliteratur werden folgende Werke empfohlen: Human Learning (EW1), Introduction to Test Theory and Test Construction in Folien werden zur Verfügung gestellt.

Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

Themenspezifische Schwerpunkte:
- Lernen als Verhaltensänderung und als Informationsverarbeitung: Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzentwicklung unter besonderer Berücksichtigung des Wissenstransfers; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen

Themenübersicht für Vorträge und Seminararbeiten. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben und erläutert. Schwerpunkte der Themenvorschläge sind:
- Testentwicklung
- Gütekriterien von Tests
- Aufgabenkonstruktion
- Datenauswertung
- Rasch-Modell
- Internationale Vergleichstests
- Zulassungsverfahren

Im Verlaufe des Semesters werden einzelne Unterlagen in den Veranstaltungen abgegeben. Dazu gehören auch die Handouts der als Grundlagenliteratur werden folgende Werke empfohlen:

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: 200a968

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

At the end of the seminar, participants will be in a position to
- describe the scientific fundamentals of test theory and test structure.
- evaluate examples of scientifically-developed tests in their application context.
- if necessary, critically question the performance assessment that they employ in practice and professionalise it still further.

Die konkreten Inhalte des Seminars ergeben sich aufgrund der Präferenzen der Teilnehmenden und der daraus abgeleiteten Themenübersicht für Vorträge und Seminararbeiten. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben

Lernformen:

This lecture is only apt for students who intend to enrol in the programs "Lehrdiplom" or "Didaktisches Zertifikat". It is about learning in childhood and adolescence.

In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

Themenübersicht für Vorträge und Seminararbeiten. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben und erläutert. Schwerpunkte der Themenvorschläge sind:
- Testentwicklung
- Gütekriterien von Tests
- Aufgabenkonstruktion
- Datenauswertung
- Rasch-Modell
- Internationale Vergleichstests
- Zulassungsverfahren

Im Verlaufe des Semesters werden einzelne Unterlagen in den Veranstaltungen abgegeben. Dazu gehören auch die Handouts der verschiedenen, studentischen Vorträge.

Als Grundlagenliteratur werden folgende Werke empfohlen:
- Weitere Literatur wird in der Lehrveranstaltung genannt.

Die Leistungsanforderungen richten sich im Umfang nach der Zahl zu erwerbender ECTS-Punkte, wobei 1 ECTS-Punkt einem Zeitaufwand von ca. 30 Arbeitsstunden entspricht. ETHZ-Studierende können im Rahmen dieser Veranstaltung 3 ECTS-Punkte erwerben. Dazu sind folgende Leistungen zu erbringen:
- Präsenz und aktive mündliche Mitarbeit in der Lehrveranstaltung (MA)
- Pflichtlektüre entsprechend der Angaben in der Lehrveranstaltung
- Referat (RE)
- Schreiben einer schriftlichen Arbeit

Weitere Angaben zu den Leistungsanforderungen werden im Rahmen der Startveranstaltung abgegeben und erläutert.

In the colloquium we discuss scientific projects concerning the teaching in mathematics, computer science, natural sciences and technology (STEM). The colloquium is conducted by the professorships participating in the Competence Center EduCETH (ETH) and in the Institute for Educational Sciences (UZH).

Participants are exemplarily introduced to different research methods used in research on learning and instruction and learn to weigh advantages and disadvantages of these approaches.
Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)."

Abstract

This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

Objective

- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction
- Students possess theoretical knowledge and practical competences to be able to cope with the psychosocial demands of teaching.

Prerequisites / notice

Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

851-0242-07L Human Intelligence

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport). Number of participants limited to 30. This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)."

Abstract

The focus will be on the book "Intelligenz: Grosse Unterschiede und ihre Folgen" by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

Objective

- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

851-0242-08L Research Methods in Educational Science

Number of participants limited to 30. This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)."

Abstract

Literature from the learning sciences is critically discussed with a focus on research methods. At the first meeting, working groups will be assembled and meetings with those will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

Objective

- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

851-0240-22L Coping with Psychosocial Demands of Teaching (EW4 W DZ)

Number of participants limited to 20. The successful participation in EW1 ("Human Learning") and EW2 ("Designing Learning Environments for School") is recommended, but not a mandatory prerequisite.

Abstract

In this class, students will learn concepts and skills for coping with psychosocial demands of teaching.

Objective

Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.

1) They know the basic rules of negotiation and conflict management (e.g., mediation) and can apply them in the school context (e.g., in conversations with parents).
2) They can apply diverse techniques of classroom management (e.g., prevention of disciplinary problems in the classroom) and know relevant authorities for further information (e.g., legal conditions).

</tbody>
</table>

The teaching internship can just be visited if all other courses of TC are completed. Repetition of the teaching internship is excluded even if the examination lessons are to be repeated.

Abstract

Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.

Objective

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils' work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Die Themen für die beiden Prüfungslektionen am Schluss des Praktikums erfahren die Studierenden in der Regel eine Woche vor dem Prüfungstermin. Sie erstellen eine Vorbereitung gemäß Anleitung und reichen sie bis am Vortag um 12 Uhr den beiden Prüfungsexperten (Fachdidaktiker/-in, Departementsvertreter/-in) ein. Die gehaltenen Lektionen werden kriteriumsbasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/der Kandidatin über die gehaltenen Lektionen im Rahmen eines kurzen Kolloquiums.

**Abstract**

In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. They compile texts under supervision that are directly comprehensible to the targeted readers - generally specialist-subject teachers at high-school level.

**Objective**

The aim is for the students

- to familiarise themselves with a new topic by obtaining material and studying the sources, so that they can selectively extend their specialist competence in this way.
- to independently develop a text on the topic, with special focus on its mathematical comprehensibility in respect of the level of knowledge of the targeted readership.
- To try out different options for specialist further training in their profession.

<tr>
<td></td>
<td>In Physics of Food Colloids the principles of colloid science will applied to the aggregation of food materials based on proteins, polysaccharides, and emulsifiers. Mixtures of such raw material determine the appearance and performance of our daily food. In a number of examples, colloidal laws are linked to food science and the manufacturing and processing of food.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>Objective</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>The aggregation of food material determines the appearance and performance of complex food system as well as nutritional aspects. The underlying colloidal laws reflect the structure of the individual raw material (length scale, time scale, and interacting forces). Once these concepts are appreciated the aggregation of most food systems falls into recognizable patterns that can be used to modify and structure exiting food or to design new products. The application and use of these concepts are discussed in light of common food production.</td>

Abstract
Overview of Process Automation, Information Management in processes, process data handling and analysis, In-line measurements of complex food systems, Process control schemes, Overview of sensors and sensor principles, integrated process control case studies

Objective
Understanding the interplay of in-line measurements of complex food properties in processes, process data handling and data analysis as well as building blocks for process control.

Content
Overview Process Automation, Process Control and process data management, Industrial design of automated/controlled processes, overview on sensors/sensor principles, case studies of in-line measurements and control in/of food production processes

Lecture notes
Printed script (120 pages, 80 figures), diverse publications

Literature
List of publications and books given in course

Prerequisites / notice
VT I-III
Objective
Overview about the general principles, institutions and execution of the Swiss food law as well as a presentation of the most important regulations of the Swiss food legislation. Knowledge about the principles and the structure of the EU in general and in the area of food safety, overview on the bilateral agreements CH-EU as well as on the most important international organisations (Codex Alimentarius and WTO) and their influence on the Swiss regulations on food safety.

Content
General introduction into the EU and in the area of food safety (Directorate General SANCO, regulation on food safety), legislative procedure in the EU, introduction into the relevant bilateral agreements CH-EU, introduction into international organisations (e.g. Codex Alimentarius), general principles of the Swiss food law and the most important regulations as well as the most important legal procedures, legal settlement and the duties and responsibilities of the Food control authorities.

Lecture notes
Copies of the presentations will be handed out.

Literature
Documents about Codex Alimentarius, the EU as well as the Swiss food law and some regulations will be handed out.

Prerequisites / notice
Qualifications: General knowledge of the food sciences.

The lecture will be held in German.

752-1021-00L Food Enzymology W+ 3 credits 2G L. Nystöm

Abstract
The course covers the fundamentals of food enzymology, application of endogenous and exogenous enzymes in food processing, as well as use of enzymes in analytics.

Objective
To understand use of enzymes in food processing and analysis.

Content
Enzymes in foods: the use of added enzymes in food processing, control and/or utilization of endogenous enzymes, production of enzyme preparations for food use, and chemical analysis of food components by enzymatic methods.

Lecture notes
The lectures are supplemented with handouts.

Prerequisites / notice
Course prerequisites: Food Chemistry I/I and Food Analysis I/I (or equivalent)

752-4009-00L Molecular Biology of Foodborne Pathogens W+ 3 credits 2V M. Loessner, M. Schupper

Abstract
The course offers detailed information on selected foodborne pathogen and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism or the toxins they produce with the human system, Understanding the relationship between specific types of food and the associated pathogens and microbial risks. Another focus lies on the currently available methods and techniques useful for the various purposes, i.e., detection, differentiation (typing), and antimicrobial agents.

Content
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks? Which methods are best suited for what approach? Last, but not least, the role of bacteriophages in microbial pathogenicity will be highlighted, in addition to various applications of bacteriophage for both diagnostics and antimicrobial intervention.

Lecture notes
Recommended copies of the presentation slides (PDF) and additional material will be made available for download to registered students.

Prerequisites / notice
Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until approx. 11:15 h), with no break!

752-5103-00L Functional Microorganisms in Foods W 3 credits 2G C. Lacroix, T. de Wouters, L. Meile, C. Schwab

Abstract
This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

Objective
To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

Content
This course will address selected and current topics on applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialist from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Prebiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.

- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.

- Legal and Protection Issues Related Functional Foods

- Industrial Biotechnology of Flavor and Taste Development

- Safety of Food Starter Cultures and Prebiotics

Students will be required to complete a group project on new applications of microorganisms with functional properties in food and functional food products and ingredients with from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short write report.

Lecture notes
A list of references will be given at the beginning of the course for the different topics presented during this course.

752-1301-00L Special Topics in Toxicology W 2 credits 2G S. J. Sturla, K. Hecht

Abstract
Journal-club style course involving student presentations and active discussion and critique of recent publications and modern experimental strategies. The focus is on chemical, biochemical, and nutritional aspects of selected topics in Toxicology, with a new group of topics addressed each semester.

Objective
- to stimulate student interest and provide advanced knowledge of current research in Toxicology and its related sciences
- to develop skills in critical evaluation of scientific literature, oral presentation and questioning
- to understand modern experimental techniques and research approaches relevant in Toxicology

Content
The journal-club style course involves student presentations and active discussion of recent publications. The primary focus is on chemical, biochemical, and nutritional aspects of selected current topics in Toxicology. Participants are masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Biochemistry, Pharmaceutical Sciences, etc.).

Literature
A selection of approximately 20 papers from recent primary scientific literature.

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 887 of 1571
The course is open to Masters or PhD level students.

For Masters level participants, a strict prerequisite is (a) previously taken and passed "Introduction to Molecular Toxicology" (752-1300) and/or (b) previous courses supporting equivalent knowledge plus permission from the instructor. Please contact the instructor before the start of the class, explaining the basis of your previous knowledge other than the Introduction course, to request special permission.

If you would like to take "Special Topics in Toxicology", do not register at the same time for "Advanced Topics in Toxicology". It is only possible to take one, and it is only possible to take the advanced level after completing this course.

</tbody>
</table>

Non-integer credits: the credits count for the course is determined by the course director based on the student's performance.
The script is composed of circa 450 slides (ca 18 slides/lecture) organized in 9 modules.

Module A
From biochemical nutrition research to nutrigenomics

Module B
Nutritional genomics

Module C
Nutrigenetics

Module D
Nutri-epigenomics

Module E
Transcriptomics in nutrition research

Module F
Proteomics in nutrition research

Module G
Metabolomics in nutrition research

Module H
Nutritional systems biology

Module I
Individualized nutrition - opportunities and challenges

No extra reading requested. Most slides in the lecture are referenced with web adresses.

Basic training in biochemistry, molecular biology, physiology, and human nutrition. Interest in interdisciplinary sciences linking molecular biology to human health. Interest in the application of analytical laboratory methods to the understanding of human biology, in particular nutrition.

401-0649-00L Applied Statistical Regression W+ 5 credits 2V+1U M. Dettling

Abstract
This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning “good practice” that can be applied in every student's own projects and daily work life. A special focus will be laid in the use of the statistical software package R for regression analysis.

Objective
The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.

Content
The course starts with the basics of linear modeling, and then proceeds to parameter estimation, tests, confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, multicollinearity problems and model interpretation, as well as general modeling strategies.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

Lecture notes
A script will be available.

Literature
Faraway (2005): Linear Models with R
Faraway (2006): Extending the Linear Model with R
Draper & Smith (1998): Applied Regression Analysis
Fox (2008): Applied Regression Analysis and GLMs
Montgomery et al. (2006): Introduction to Linear Regression Analysis

Prerequisites / notice
The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression“ and 401-3622-00L "Regression“ are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

766-6205-00L Nutrient Analysis in Foods W 3 credits 3U M. B. Zimmermann, V. Galetti

Number of participants limited to 20. Permission from lecturers required for all students.

Abstract
In this practical course different meals are prepared and then analysed in the laboratory. The analyses comprise energy, macronutrients, specific micronutrients as well as polyphenols and phytic acid. Based on these results, the nutritional value of each meal is critically evaluated and discussed.

Objective
Learning analytical methods to determine macro- and micronutrient content in foods. Critical evaluation of analytical results, critical comparison with values from food composition tables, and interpretation in relation to nutritional value of meals.
The practical course nutrient analysis in foods includes the meal preparation (2 hours in December 2016, date to be defined) and chemical analysis of five meals from 5 different types of diets (students will work in groups; one meal per group). The content of macronutrients, specific micronutrients and secondary plant components are analysed using common analytical methods. The analytical results are compared with calculated data from food composition databases by using the nutrition software EbisPro and critically evaluated. The nutritional values of the meals in relation to specific chronic diseases and iron bioavailability are discussed. The practical course is accompanied by a lecture on the basic principles of analytical chemistry.

Lecture notes
A script and lecture slides are handed out before course start.

Prerequisites / notice
Students will work in groups.
Performance is assessed by a short test on course content, oral presentation or results and a short report.

Attendance in compulsory for the lecture, the laboratory work, and the oral presentation.

Abstract
This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

Objective
To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

Content
This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- Legal and Protection Issues Related Functional Foods
- Industrial Biotechnology of Flavor and Taste Development
- Safety of Food Starter Cultures and Probiotics

Lecture notes
Copy of the power point slides from lectures will be provided.

Literature
A list of references will be given at the beginning of the course for the different topics presented during this course.

Students will be required to complete a group project on food products and ingredients with or from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

---

**Data: 06.08.2018 12:56**

**Autumn Semester 2016**

**Page 891 of 1571**
Seminar in Evolutionary Ecology of Infectious Diseases

Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries

Copies of slides from lectures will be provided

Actual publications from literature will be provided

Good knowledge in biology, especially in microbiology and molecular biology are prerequisites.

Some contents will be provided by registered students who will individually or as a group present an actual publication.

752-1300-00L

Special Topics in Toxicology

Journal-club style course involving student presentations and active discussion and critique of recent publications and modern experimental strategies. The focus is on chemical, biochemical, and nutritional aspects of selected topics in Toxicology, with a new group of topics addressed each semester

-to stimulate student interest and provide advanced knowledge of current research in Toxicology and its related sciences
-to develop skills in critical evaluation of scientific literature, oral presentation and questioning
-to understand modern experimental techniques and research approaches relevant in toxicology

The journal-club style course involves student presentations and active discussion of recent publications. The primary focus is on chemical, biochemical, and nutritional aspects of selected current topics in Toxicology. Participants are masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Biochemistry, Pharmaceutical Sciences, etc.).

A selection of approximately 20 papers from recent primary scientific literature.

The course is open to Masters or PhD level students.

For Masters level participants, a strict prerequisite is (a) previously taken and passed “Introduction to Molecular Toxicology” (752-1300) and/or (b) previous courses supporting equivalent knowledge plus permission from the instructor. Please contact the instructor before the start of the class, explaining the basis of your previous knowledge other than the Introduction course, to request special permission.

If you would like to take “Special Topics in Toxicology”, do not register at the same time for “Advanced Topics in Toxicology”. It is only possible to take one, and it is only possible to take the advanced level after completing this course.

Major in Human Health, Nutrition and Environment

Definition of modules see study guide Food Science

Disciplinary Subjects

Disciplinary courses: Module Public Health plus one additional module (Infectious Diseases or Nutrition and Health or Environment and Health). A minimum of 10 CP per module have to be obtained

Number Title Type ECTS Hours Lecturers
401-0629-00L Applied Biostatistics W 4 credits 3G M. Müller

Abstract
Principles and main methods in biostatistics with emphasis on practical aspects. Experimental and observational studies. Regression and analysis of variance. Introduction into survival analysis.

Objective
Getting an overview of the problems and statistical methods used in health sciences. Practise in using the software R to analyze data and interpreting the results.

Content

Lecture notes see teaching document repository

Literature

Prerequisites / notice
The statistical package R will be used in the exercises.

If you are unfamiliar with R, I highly recommend the online R course etutoR.

551-0223-00L Immunology III W 4 credits 2V M. Kopf, M. Bachmann, J. Kisielow, A. Lanzavecchia, S. R. Leibundgut, A. Oxenius, R. Spörri

Abstract
This course provides a detailed understanding of

- development of T and B cells
- the dynamics of a immune response during acute and chronic infection
- mechanisms of immunopathology
- modern vaccination strategies

Key experimental results will be shown to help understanding how immunological text book knowledge has evolved.

Objective
Obtain a detailed understanding of

- the development, activation, and differentiation of different types of T cells and their effectormechanisms during immune responses,
- Recognition of pathogen microorganisms by the host cells and molecular events thereafter,
- events and signals for maturation of naive B cells to antibody producing plasma cells and memory B cells.
- Optimization of B cell responses by intelligent design of new vaccines

Content
- Development and selection of CD4 and CD8 T cells, natural killer T cells (NKT), and regulatory T cells (Treg)
- NK T cells and responses to lipid antigens
- Differentiation, characterization, and function of CD4 T cell subsets such as Th1, Th2, and Th17
- Overview of cytokines and their effector function
- Co-stimulation (signals 1-3)
- Dendritic cells
- Evolution of the “Danger” concept
- Cells expressing Pattern Recognition Receptors and their downstream signals
- T cell function and dysfunction in acute and chronic viral infections

Literature
Documents of the lectures are available for download at:
https://moodle-app2.let.ethz.ch/course/view.php?id=2581&noty/editingon=1

Prerequisites / notice
Immunology I and II recommended but not compulsory

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 892 of 1571
Abstract
Students of this course will discuss current topics from the field of infectious disease biology. From a list of publications, each student chooses some themes that he/she is going to explain and discuss with all other participants and under supervision. The actual topics will change from year to year corresponding to the progress and new results occurring in the field.

Objective
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

Content
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

Lecture notes
Publications and class notes can be downloaded from a web page announced during the lecture.

Literature
Papers will be assigned and downloaded from a web page announced during the lecture.

701-1341-00L  Water Resources and Drinking Water
3 credits
W
2V
S. Hug, M. Berg, F. Hammes, U. von Gunten

Abstract
The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. Natural processes, anthropogenic pollution, legislation of groundwater and surface water and of drinking water as well as water treatment will be discussed for industrialized and developing countries.

Objective
The goal of this lecture is to give an overview over the whole path of drinking water from the source to the tap and understand the involved physical, chemical and biological processes which determine the drinking water quality.

Content
The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.

Lecture notes
Handouts will be distributed

Literature
Will be mentioned in handouts

752-2122-00L  Food and Consumer Behaviour
2 credits
2V
M. Siegrist, C. Hartmann

Abstract
This course focuses on food consumer behavior, consumer’s decision-making processes and consumer’s attitudes towards food products.

Objective
The course provides an overview about the following topics: Factors influencing consumer’s food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

752-4009-00L  Molecular Biology of Foodborne Pathogens
3 credits
2V
M. Loessner, M. Schuller

Abstract
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks. Another focus lies on the currently available methods and techniques useful for the various purposes, i.e., detection, differentiation (typing), and antimicrobial agents.

Content
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks? Which methods are best suited for what approach? Last, but not least, the role of bacteriophages in microbial pathogenicity will be highlighted, in addition to various applications of bacteriophage for both diagnostics and antimicrobial intervention.

Lecture notes
Electronic copies of the presentation slides (PDF) and additional material will be made available for download to registered students.

Prerequisites / notice
Recommendations will be given in the first lecture

Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until approx. 11:15 h), with no break !

752-5103-00L  Functional Microorganisms in Foods
3 credits
2G
C. Lacroix, T. de Wouters, L. Meile, C. Schwab

Abstract
This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Students will be required to complete a group project on food products and ingredients with of from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Objective
To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

Content
This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- Legal and Protection Issues Related Functional Foods
- Industrial Biotechnology of Flavor and Taste Development
- Safety of Food Starter Cultures and Probiotics

Literature
A list of references will be given at the beginning of the course for the different topics presented during this course.

752-6101-00L  Dietary Etiologies of Chronic Disease
3 credits
2V
M. B. Zimmermann

Abstract
To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Objective
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

There is no script. Powerpoint presentations will be made available online to students.

No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

Abstract

**Epidemiology and Prevention**

- The module Epidemiology and prevention describes the process of scientific discovery from the detection of a disease and its causes, to the development and evaluation of preventive and treatment interventions and to improved population health.

**Public Health Concepts**

- At the end of this module students are able:
  - to interpret the results of epidemiological studies
  - to critically assess scientific literature
  - to know the definition, dimensions and determinants of health
  - to plan public health interventions and health promotion projects

**Nutrigenomics**

- Nutrigenomics - toward personalized nutrition?
- Breakthroughs in biology recently led nutrition scientists to apply modern tools (genomics, transcriptomics, proteomics, metabolomics, genetics, epigenetics) to the analysis of the interactions of food with humans. The lecture presents these tools and illustrates their application in selected topics relevant to human nutrition and food sciences.

Objective

- Overall understanding of the transdisciplinary research being conducted under the term nutrigenomics.
- Overall understating of the omics technologies used in nutrigenomics and their applications to human nutrition and food science.
- Ability to critically evaluate the potential and risks associated with the field of nutrigenomics

Content

- For the content of the script see section "Skript" below
- The lecture is completed by an optional project entitled 'Personalized Nutrition' in which the students have the opportunity to receive a personalized nutritional guidance that is based on their own genetic makeup. The scientific literature on which the genetic tests are based is presented by the students during the lecture.

Lecture notes

- The script is composed of circa 450 slides (ca 18 slides/lecture) organized in 9 modules
- Handouts are provided to students in the classroom.

Prerequisites / notice

- Language of the course is English
- Handouts are provided to students in the classroom.
- Lecture notes are available via email.

Literature

- No extra reading requested. Most slides in the lecture are referenced with web addresses.
Prerequisites / notice
Basic training in biochemistry, molecular biology, physiology, and human nutrition. Interest in interdisciplinary sciences linking molecular biology to human health. Interest in the application of analytical laboratory methods to the understanding of human biology, in particular nutrition.

Methodology Subjects
Methodical courses are equivalent to the module Term Paper and Seminar. Missing CPs can be obtained from the major programs Food Processing, Food Quality and Safety, or Nutrition and Health.

Abstract
Writing of a review paper of scientific quality on a topic in the domain of Human Health, Nutrition and Environment based on critical evaluation of scientific literature.

Objective
- Acquisition of knowledge in the field of the review paper
- Assessment of original literature as well as synthesis and analysis of the findings
- Practising of academic writing in English
- Giving an oral presentation with discussion on the topic of the review paper

Content
Topics are offered in the domains of the major ‘Human Health, Nutrition and Environment’ covering ‘Public Health’, ‘Infectious Diseases’, ‘Infection and Health’ and ‘Environment and Health’.

Lecture notes
Guidelines will be handed out in the beginning.

Literature
Literature will be identified based on the topic chosen.

Optional Subjects
Choice of a module not yet selected as a disciplinary course. Choice between Infectious Diseases, Nutrition and Health, and Environment and Health.

**Objective**

This course focuses on food consumer behavior, consumer's decision-making processes and consumer's attitudes towards new foods and food technologies, labeling and food policy issues.

The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. Natural processes, anthropogenic pollution, legislation of groundwater and surface water and of drinking water as well as water treatment will be discussed for industrialized and developing countries.

The goal of this lecture is to give an overview over the whole path of drinking water from the source to the tap and understand the involved physical, chemical and biological processes which determine the drinking water quality.

The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.

**Literature**

A list of references will be given at the beginning of the course for the different topics presented during this course.

**Lecture notes**

Copy of the power point slides from lectures will be provided.

Handouts will be distributed.

Will be mentioned in handouts.

**Prerequisites / notice**

Basic knowledge in linear algebra, analysis, and statistics will be helpful. Some programming experience will be useful for the exercises, but is not required. Programming skills will not be tested in the examination.

**Data:** 06.08.2018 12:56  
**Autumn Semester 2016**  
**Page 897 of 1571**
We will cover several topics where evolutionary thinking is relevant to understanding or treating infectious diseases. This includes: (i) determinants of pathogen host range and virulence, (ii) dynamics of host-parasite coevolution, (iii) pathogen adaptation to evade or suppress immune responses, (iv) antimicrobial resistance, (v) evolution-proof medicine. For each topic there will be a short (<30 minutes) introductory lecture, before students independently research the primary literature and develop half a page of discussion points and questions, followed by interactive discussion in class.

Students will read the primary literature on each topic, and in places we will use the following books:

Schmid Hempel 2011 Evolutionary Parasitology
Stearns & Medzhitov 2016 Evolutionary Medicine

A basic understanding of evolutionary biology, microbiology or parasitology will be advantageous but is not essential.

---

**Number** 701-1471-00L  **Title** Ecological Parasitology  **Type** 3 credits  **ECTS** 1V+1P  **Lecturers** O. E. Seppälä, H. Hartikainen, J. Jokela

**Number of participants limited to 20.**

Enrolment is limited to Master students of the study programme Environmental Sciences majoring Ecology and Evolution and to Master students of the study programme Biology majoring Ecology and Evolution (Elective Compulsory Master Courses), time of enrolment is decisive. It is possible to enroll until September 12. The registration will only be effective once confirmed.

**Abstract**

Course focuses on the ecology and evolution of macroparasites and their hosts. Through lectures and practical work, students learn about diversity and natural history of parasites, adaptations of parasites, ecology of host-parasite interactions, applied parasitology, and human macroparasites in the modern world.

**Objective**

1. Identify common macroparasites in aquatic organisms.
2. Understand ecological and evolutionary processes in host-parasite interactions.
3. Conduct parasitological research.

**Content**

Lectures:
1. Diversity and natural history of parasites (i.e. systematic groups and life-cycles).
2. Adaptations of parasites (e.g. evolution of life-cycles, host manipulation).
3. Ecology of host-parasite interactions (e.g. parasite communities, effects of environmental changes).
4. Applied parasitology (e.g. aquaculture and fisheries).
5. Human macroparasites (schistosomiasis, malaria).

Practical exercises:
1. Examination of parasites in fish (identification of species and description of parasite communities).
2. Examination of parasites in molluscs (identification and examination of host exploitation strategies).
3. Examination of parasites in amphipods (identification and examination of effects on hosts).

---

**Minors**

**Food Biotechnology**

---

**Number** 752-5105-00L  **Title** Biotechnology of Alcoholic Beverages  **Type** W+  **ECTS** 2 credits  **Hours** 2V  **Lecturers** H. J. Gafner, S. Schönenberg

**Number of participants limited to 60.**

**Abstract**

Basics of beer, wine and distillate production.

**Objective**

To understand the process cycle and control of beer, wine and distillate production.

**Content**

Beer Production:
- Processes in the brewhouse, malting, diacetylmanagement.

Wine Production:
- Where is the origin of the microorganisms for winemaking? What are dry yeasts? What is the meaning of spontaneous alcoholic fermentation?
- What is a “pied de cuve”? What is the influence of wine yeasts on the aroma of the wines?
- What is the role of glycerol in wine?
- What is the optimal fermentation temperature?
- What do we understand under the name biogenic amines?
- What is the reason for the occurrence of stuck fermentation?
- What is the meaning of “Böckser”?
- What is untypical ageing of wines?
- Which is the influence of Brettanomyces bruxellensis yeasts on wine quality - the wine “spaniöglet”?
- What is the task of malolactic fermentation (BSA)?
- What are the reasons for vinagre taint?
- Which are desired and which are undesired yeasts and bacteria?
- How can we determine the genotype of grape varieties?
- Which do we understand under cork taint (Zapfen)?
- Which wine bottle closures are on the market? - a quality analysis.
- What happens during the filtration process?
- What is the role of gentechology in winemaking?

Destillates:
- Composition of a distillery.
- What is pre-run, middle-run and post-run?
- What are quality parameters by spirits.

**Lecture notes**

The handouts for the lecturers will be distributed at the beginning of every lecture unit. In the wine lectures the treated subjects will be examined as self controls in form of multiple choice questions.

**Literature**

The literature is announced in the handouts for beer and for wine at the beginning of the lectures

**Prerequisites / notice**

Sound knowledges in microbiology, molecular genetics, biochemistry and physiology in fermented beverages are required.

---

**Number** 752-5111-00L  **Title** Gene Technology in Foods  **Type** W  **ECTS** 3 credits  **Hours** 2V  **Lecturers** L. Meile

**Abstract**

This course will increase basic knowledge on biotechnological constructions and application of genetically modified organisms (GMO) which are used worldwide in food production systems. The course discusses health issues, the legislation frame and food safety aspects of GMO applications in agriculture, food production and consumption in Switzerland and EU-countries.

**Objective**

This course will provide knowledge and biological background on genetically modified organisms (GMO) and food produced with the help of GMO, especially on the molecular basis of GMO constructions with emphasis on genetically modified food in Switzerland and the EU.

**Content**

Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries

**Lecture notes**

Copies of slides from lectures will be provided

**Literature**

Actual publications from literature will be provided

**Prerequisites / notice**

Good knowledge in biology, especially in microbiology and molecular biology are prerequisites.

Some contents will be provided by registered students who will individually or as a group present an actual publication.
This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- **Probiotics and Prebiotics:** Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- **Bioprotective Cultures and Antimicrobial Metabolites:** Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- **Legal and Protection Issues Related Functional Foods**
- **Industrial Biotechnology of Flavor and Taste Development**
- **Safety of Food Starter Cultures and Probiotics**

Students will be required to complete a group project on food products and ingredients with of from functional bacteria. The project will involve information research and analysis followed by oral presentation and short written report.

A list of references will be given at the beginning of the course for the different topics presented during this course.

Functional Microorganisms in Foods

Abstract
This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

Objective
To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

Content
This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.

- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.

- Legal and Protection Issues Related Functional Foods

- Industrial Biotechnology of Flavor and Taste Development

- Safety of Food Starter Cultures and Prebiotics

Lecture notes
Students will be required to complete a group project on food products and ingredients with of from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Literature
A list of references will be given at the beginning of the course for the different topics presented during this course.

Objective
Quantitative process analysis and derivation of process-structure functions for complex liquid or semi-liquid food systems with non-Newtonian flow properties. Handling of optimisation and up-/down-scaling procedures.

Content
S-PRO2 scheme, reverse engineering approach, dimension analysis, Metzner-Otto and Rieger Novack design schemes of stirred reactors for non-Newtonian fluid processing, mixing/mixing statistics, mixing characteristics, power characteristics, dispersing characteristics, dispersing processes in rotor/stator and membrane devices, spray processing, extrusion processing, diverse case studies for design and scaling of processes for food structure processing.

Literature
List of ca. 30 papers and 5 books given in course

Food Sensory Science and Consumer Behaviour

Food and Consumer Behaviour

Abstract
This course focuses on food consumer behavior, consumer’s decision-making processes and consumer’s attitudes towards food products.

Objective
The course provides an overview about the following topics: Factors influencing consumer’s food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

Public Nutrition and Health

Dietary Etiologies of Chronic Disease

Abstract
To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Objective
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.

Content
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Lecture notes
There is no script. Powerpoint presentations will be made available on-line to students.

Prerequisites / notice
To be provided by the individual lecturers, at their discretion.
Epidemiology and Prevention

Information for UZH students:
Enrolment to this course unit only possible at ETH. No enrolment to module CS16_101 at UZH.

Please mind the ETH enrolment deadlines for UZH students: https://www.ethz.ch/en/studies/non-degree-courses/special-students-university-of-zurich.html

Abstract
The module Epidemiology and prevention describes the process of scientific discovery from the detection of a disease and its causes, to the development and evaluation of preventive and treatment interventions and to improved population health.

Objective
The overall goal of the course is to introduce students to epidemiological thinking and methods, which are critical pillars for medical and public health research. Students will also become aware on how epidemiological facts are used in prevention, practice and politics.

Content
The module Epidemiology and prevention follows an overall framework that describes the course of scientific discovery from the detection of a disease to the development of prevention and treatment interventions and their evaluation in clinical trials and real world settings. We will discuss study designs in the context of existing knowledge and the type of evidence needed to advance knowledge. Examples form nutrition, chronic and infectious diseases will be used in order to show the underlying concepts and methods.

Abstract
Concepts of microeconomics and Industrial Organization and their application to the European food sector. Aspects include industry structure as well as strategic actions and performance of food sector firms.

Objective
Understanding and application of theoretical concepts along the Structure-Conduct-Performance paradigm. Ability to apply theory to empirical settings; understand and critically evaluate empirical industrial organization research and to replicate the results of such research using econometric methods.

Content
- Introduction IO
  - Relevant topics for the food sector
  - High competition and market saturation
  - Low R&D intensity
  - Bargaining power of retailers
  - Private label introduction
- Theoretical Approaches
  - Structure Conduct Performance
  - Market Based View
  - Porters Five Forces
  - Resource Based View
  - Knowledge Based View
- Empirical Issues (Based on published research papers)
  - Competition / Concentration
  - Profitability
  - Impact of Innovation / R&D
  - Efficiency
  - Market power
  - Econometric Approaches

Food and Consumer Behaviour

Abstract
This course focuses on food consumer behavior, consumer's decision-making processes and consumer's attitudes towards food products.

Objective
The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

Nutritional Aspects of Food Composition and Processing

Abstract
Lecture type course with an interdisciplinary approach for the evaluation of nutritional aspects of changes in food composition due to processing.

Objective
Students should be able to:
- Describe and compare the major concepts/criteria used for the evaluation of the nutritional quality of food
- Apply these criteria when assessing the effects of selected processing technologies on nutritional quality.
- Evaluate recent formulation strategies aimed to achieve additional physiological benefits for targeted population groups (i.e. functional foods).

Content
The course gives inputs on compositional changes in food due to processing (with focus on thermal/chilling, enzymatic, chemical, emerging technologies) or new formulation strategies. Possible evaluation methods for these changes (e.g. nutritional profile) will be addressed.

Lecture notes
There is no script. Powerpoint presentations and relevant scientific articles will be available on-line for students. A selection of recommended readings will be given at the beginning of the course.

Prerequisites / notice
The course is open to Master and MAS students in food and science and nutrition or related. Basic knowledge of food chemistry and nutrition is recommended, as well as an understanding of food processing.

Horticultural Science: Case Studies (HS)

Abstract
Lectures address 2 horticultural cropping systems and value chains, each one in 4 2h-lecture blocks. Afterwards, the students split in 2 groups for addressing a case study focusing on one of the cropping systems treated before. An excursion to a research site might be included. In a final colloquium, each group presents a report on their case study and their conclusions.

Objective
Achieve a deeper understanding of horticultural value chain challenges relating to ecological intensification, resource efficiency, climate change and healthy and safe food, and the problem solution strategies and scientific principles behind. Deliver in a team effort a report and a presentation providing a comprehensive insight into a problem of the horticultural value chain and its science-based solution strategy.
In the autumn semester, the two addressed cropping systems and value chains are fruit-production and viticulture.

In the spring semester, the two addressed cropping systems and value chains are vegetable-production and berry-production or glasshouse-horticulture.

The selected topics address challenges with regard to ecological intensification, resource efficiency or climate change and branch into ongoing research and development projects.

Lecture notes
Documents handed out during the case studies.

Prerequisites
As provided by the class study leaders.

Prerequisites / notice
The course builds on basic knowledge delivered in ‘Horticultural Crops I’ and ‘Horticultural Crops II’. If these courses have not been followed by interested participants, equivalent knowledge and experience will greatly support a successful and productive participation of the participating student.

Language: spoken E, G or F; Documents: Preferably English, G/F possible.

Abstract
This forum is a platform for the critical reflection of highly relevant topics of livestock in the frame of the world food system comprising issues from basic knowledge to acceptance in society. The exchange is operated by scientific writing and presentation.

Objective
In the Forum "Livestock in the World Food System", a topic of significance for livestock agriculture is selected by the students and subsequently dealt with from various angles (from scientific basis to production systems, environmental aspects and to the acceptance by society). The students learn to present a scientific subject in writing and orally to an audience and to defend the presentation in a discussion.

Content
The Forum "Livestock in the World Food System" will take place in blocks of 2 hours each. Once the general topic has been selected, it comprises two elements:

Element 1. Oral Presentation: The students form small groups and are lecturers. There are chair persons (moderators) from outside of these small groups and they also head the discussion. The remaining students and lecturers are the audience.

Element 2. Scientific writing: Option 1: preparation of a short scientific type of paper from a result table offered by the lecturers; Option 2: preparation of an abstract with limited word count from a scientific paper; Option 3: writing of a critical review of a paper. The students have to select 2 of the three options each. There will be a discussion be a discussion in small groups at two dates.

Introductions to both forms of presentation will be offered by lecturers.

The preparation of the oral and written presentations takes place to a small part during the 2-h blocks and mainly outside of this time.

Number of participants limited to 25.

It is necessary to apply and be selected in order to participate in this course. This also applies to ETH Zurich applicants, they will go through a competitive selection process and are not guaranteed a place simply by signing up for the course.

Further information available:
http://www.worldfoodsystem.ethz.ch/education/summer-schools/upcoming.html

Abstract
Provide the opportunity for young scientists and practitioners to understand the challenges and opportunities of sustainable agriculture and organic production systems and to connect these to the broader context of the world food system. During the two week summer school at the Gut Rheinau, one of Switzerland's largest organic farms, participants will engage in lectures, workshops, group work, case

Objective
Understand: the science, relationships, interactions and trade-offs in food systems; the role and potential of organic production systems; potential interventions; the cultural, socio-political, economic and environmental factors to be incorporated into solutions. Build skills in systems thinking, multi-cultural and multi-disciplinary collaboration, participatory processes. Connect to a network of expert faculty/scientists/practitioners

Content
The content framework includes the following modules: world food system overview; agricultural production; Global change drivers; smallholder livelihoods and rural development; Agroforestry systems; labelling; International policy and trade; Processing, distribution, and retail; Nutrition and health; National policy and state interventions. The course will conclude with a group work on food system challenges.

Language: spoken E, G or F; Documents: Preferably English, G/F possible.

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 902 of 1571
Project teaching; time frame totals ca. 80 hours.

Objective
The course provides an introduction on the link between flow and structural properties of flowing material. Rheometrical techniques and appropriate measuring protocols for the characterization of complex fluids will be discussed. The concept of rheological constitutive equations and the application to different material classes are established.

Content
Lectures will be given on general introduction (4h), fluid dynamics (2h), complex flow behavior (4h), influence of temperature (2h), rheometers (4h), rheological tests (6h) and structure and rheology of complex fluids (4h).

Lecture notes
Notes will be handed out during the lectures.

Literature
Provided in the lecture notes.

752-2314-00L Physics of Food Colloids W+ 3 credits 2V P. A. Fischer, R. Mezzenga

Abstract
Rheology is the science of flow and deformation of matter such as polymers, dispersions (emulsions, foams, suspensions), and colloidal systems. The fluid dynamical basis, measuring techniques (rheometry), and the flow properties of different fluids (Newtonian, non-Newtonian, viscoelastic) are introduced and discussed.

Objective
The course provides an introduction on the link between flow and structural properties of flowing material. Rheometrical techniques and appropriate measuring protocols for the characterization of complex fluids will be discussed. The concept of rheological constitutive equations and the application to different material classes are established.

Content
Lectures will be given on general introduction (4h), fluid dynamics (2h), complex flow behavior (4h), influence of temperature (2h), rheometers (4h), rheological tests (6h) and structure and rheology of complex fluids (4h).

Lecture notes
Notes will be handed out during the lectures.

Literature
Provided in the lecture notes.

752-1300-00L Advanced Topics in Toxicology W 2 credits 2G S. J. Sturla

Abstract
Journal-style course involving student presentations and active discussion of recent publications and modern experimental strategies. The focus is on chemical, biochemical, and nutritional aspects of selected topics in Toxicology, with a new group of topics addressed each semester.

Objective
- to stimulate student interest and provide advanced knowledge of current research in Toxicology and its related sciences
- to develop skills in critical evaluation of scientific literature, oral presentation and questioning
- to understand modern experimental techniques and research approaches relevant in toxicology

Content
The journal-style course involves student presentations and active discussion of recent publications. The primary focus is on chemical, biochemical, and nutritional aspects of selected current topics in Toxicology. Participants are masters or PhD students in Food Sciences and related disciplines (i.e. Chemistry, Biochemistry, Pharmaceutical Sciences, etc.).

Literature
A selection of approximately 20 papers from recent primary scientific literature.

Prerequisites / notice
The course is open to Masters or PhD level students.

For Masters level participants, a strict prerequisite is (a) previously taken and passed "Introduction to Molecular Toxicology" (752-1300) and/or (b) previous courses supporting equivalent knowledge plus permission from the instructor. Please contact the instructor before the start of the class, explaining the basis of your previous knowledge other than the Introduction course, to request special permission.

If you would like to take "Special Topics in Toxicology", do not register at the same time for "Advanced Topics in Toxicology". It is only possible to take one, and it is only possible to take the advanced level after completing this course.

752-1301-00L Special Topics in Toxicology W 2 credits 2G S. J. Sturla, K. Hecht

Abstract
Journal-style course involving student presentations and active discussion of recent publications and modern experimental strategies. 752-4009-00L Molecular Biology of Foodborne Pathogens

Abstract
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganisms or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks. Another focus lies on the currently available methods and techniques useful for the various purposes, i.e., detection, differentiation (typing), and antimicrobial agents.

Content
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks? Which methods are best suited for what approach? Last, but not least, the role of bacteriophages in microbial pathogenicity will be highlighted, in addition to various applications of bacteriophage for both diagnostics and antimicrobial intervention.

Lecture notes
Electronic copies of the presentation slides (PDF) and additional material will be made available for download to registered students.

Literature
Recommendations will be given in the first lecture

752-6105-00L Epidemiology and Prevention

Number 752-0005-00L Public Colloquium in Food Science

Abstract
Participation in weekly seminars on a variety of topics including Food Microbiology, Food Toxicology, Food Biochemistry, Food Processing, Consumer Behavior, Food Technology, and Food Materials and Technology, and oral presentation of a selected published study in one of these areas inspired by participation in the seminars.

Objective
The objectives are to become familiar with and stimulate interest in leading-edge science related to the research topics of the Institute of Food, Nutrition and Health. Participants attend weekly seminars given by external and internal speakers, and are also required to deliver a presentation on a recent research article inspired by a topic from the semester presentations.

Objective

To introduce the students to the both macro- and micronutrients in relation to food and metabolism.

Content

The course is divided into two parts. The lectures on micronutrients are given by Prof. Zimmermann and the lectures on macronutrients are given by Prof. Wolfrum. Prof. Zimmermann discusses the micronutrients, including fat-soluble vitamins, water-soluble vitamins, minerals and trace elements. Prof. Wolfrum introduces basic nutritional aspects of proteins, fats, carbohydrates and energy metabolism. The nutrients are described in relation to digestion, absorption and metabolism. Special aspects of homeostasis and homeorhesis are emphasized.

551-0001-AAL  General Biology I  E- 3 credits  6R  U. Sauer, O. Y. Martin, A. Widmer

Abstract

Organismic biology to teach the basic principles of classical and molecular genetics, evolutionary biology and phylogeny.

Objective

The understanding of basic principles of biology (inheritance, evolution and phylogeny) and an overview of the diversity of life.

Content

The first semester focuses on the organismal biology aspects of genetics, evolution and diversity of life in the Campbell chapters 12-34.

Week 1-7 by Alex Widmer, Chapters 12-25
12 Cell biology Mitosis
13 Genetics Sexual life cycles and meiosis
14 Genetics Mendelian genetics
15 Genetics Linkage and chromosomes
20 Genetics Evolution of genomes
21 Evolution How evolution works
22 Evolution Phylogenetic reconstructions
23 Evolution Microevolution
24 Evolution Species and speciation
25 Evolution Macroevolution

Week 8-14 by Oliver Martin, Chapters 26-34
26 Diversity of Life Introduction to viruses
27 Diversity of Life Prokaryotes
29 Diversity of Life Nonvascular&seedless vascular plants
30 Diversity of Life Seed plants
31 Diversity of Life Introduction to fungi
32 Diversity of Life Overview of animal diversity
33 Diversity of Life Introduction to invertebrates
34 Diversity of Life Origin & evolution of vertebrates

No script

551-0002-AAL  General Biology II  E- 4 credits  6R  U. Sauer, R. Aebersold, H.M. Fischer, W. Gruissem

Abstract

Molecular biology approach to teach the basic principles of biochemistry, cell biology, cgenetics, evolutionary biology and form and function of vascular plants.

Objective

The understanding basic concepts of biology: the hierarchy of the structural levels of biological organisation, with particular emphasis on the cell and its molecular functions, the fundamentals of metabolism and molecular genetics, as well as form and function of vascular plants.

Prerequisites / notice

This is a virtual self-study lecture for non-german speakers of the *Allgemeine Biology II (551-0002-00L) lecture. The exam will be written jointly with the participants of this lecture.

Example exam questions will be discussed during the lectures, and old exam questions are kept by the various student organisations. If necessary, please contact Prof. Uwe Sauer (sauer@ethz.ch) for details regarding the exam.
Content

The structure and function of biomacromolecules; basics of metabolism; tour of the cell; membrane structure and function; basic energetics of cellular processes; respiration, photosynthesis; cell cycle, from gene to protein; structure and growth of vascular plants, resource acquisition and transport, soil and plant nutrition.

Specifically the following Campbell chapters will be covered:
3. Biochemistry Chemistry of water
4. Biochemistry Carbon: the basis of molecular diversity
5. Biochemistry Biological macromolecules and lipids
7. Cell biology Cell structure and function
8. Cell biology Cell membranes
10. Cell biology Respiration: introduction to metabolism
10. Cell biology Cell respiration
11. Cell biology Photosynthetic processes
16. Genetics Nucleic acids and inheritance
17. Genetics Expression of genes
18. Genetics Control of gene expression
19. Genetics DNA Technology
35. Plant structure & function Plant Structure and Growth
36. Plant structure & function Transport in vascular plants
37. Plant structure & function Plant nutrition
38. Plant structure & function Reproduction of flowering plants
39. Plant structure & function Plants signal and behavior

Lecture notes
No script

Literature

Prerequisites
Basic general and organic chemistry

PLEASE NOTE This lecture is newly conceived and will be held for the first time in the spring semester 2017.

406-0063-AAL Physics II

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Abstract
Introduction to the "way of thinking" and the methodology in Physics. The Chapters treated are Magnetism, Refraction and Diffraction of Waves, Elements of Quantum Mechanics with applications to Spectroscopy, Thermodynamics, Phase Transitions, Transport Phenomena.

Objective
Introduction to the scientific methodology. The student should develop his/her capability to turn physical observations into mathematical models, and to solve the latter.

The student should acquire an overview over the basic concepts used in the theory of heat and electricity.

Content
Book:

Chapters:

406-0603-AAL Stochastics (Probability and Statistics)

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Abstract
Introduction to basic methods and fundamental concepts of statistics and probability theory for non-mathematicians. The concepts are presented on the basis of some descriptive examples. Learning the statistical program R for applying the acquired concepts will be a central theme.

Objective
The objective of this course is to build a solid fundament in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

**Abstract**

The MAS ETH in Architecture and Digital Fabrication is an interdisciplinary education programme initiated by the National Centre of Competence in Research (NCCR) Digital Fabrication and the ETH Zurich. The focus lies upon the methods and techniques of digital design and fabrication and their significance for future building culture.

**Objective**

The NCCR Digital Fabrication is an ambitious initiative that brings together leading researchers in the disciplines of architecture, engineering, robotics, material and computer sciences. As the main education platform for this NCCR, the MAS ETH in Architecture and Digital Fabrication will benefit from direct exchange with its investigators and immediate access to cutting edge research and innovation. In the NCCR's unique robotic fabrication facilities, the students will also have the opportunity to research digital design and construction processes, and to implement these directly in large-scale prototypes.

The MAS ETH in Architecture and Digital Fabrication is conceived as a 12 months full-time programme targeted at university graduates with excellent design skills and technical knowledge. The teaching language of the programme will be English. The programme begins on the 14th of September 2015. Applications will be accepted until the 30th of April 2015.

Participants will develop competence in complex design and production challenges and will be able to take leading positions in the field of architecture, construction, or the extended design and production industries.

**Content**

Detailed information on the programme and the inscription form can be found on our website: www.dfab.ch/mas.

**Prerequisites / notice**

A Master's degree in architecture or engineering acknowledged by ETH, or equivalent educational qualifications (i.e. a bachelor's degree and a minimum of two years professional experience in a directly related field). Additional critical requirements are proof of creative design skills and technological capabilities. Qualification will be assessed from application documents and skills will be evaluated through portfolio review.

European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
MAS in Architecture and Information

The studies take one full year and begin in the autumn semester.

The programme contains 75 CP and is divided into about 6-8 modules of 3-4 weeks, which are taught in seminars that are each concluded with an individual or group project. The studies end with an individual thesis.

For more information about the modules please visit: http://www.caad.arch.ethz.ch/

Teaching languages are English and German. The number of participants is 6 to 12.

After successful completion the students achieve 70 Creditpoints.

Abstract
A fundamental theoretical and practical introduction to the application of information technologies in architecture. The MAS program CAAD is a yearly full time program, consisting of eight 4-weekly instruction modules with practical exercises and a concluding individual Masterthesis.

Objective
Development of new design methods, new construction forms, media architectures, narrative infrastructures, global models. Parametric and generative CAD systems, procedural, object-oriented and agent-based programming, introduction to JAVA/Processing, introduction to diverse computer-controlled machines with practical examples, development of machine-compatible building constructions, development of electronics for automated tasks, implementation of radio networks.

MAS in Development and Cooperation

The lectures and advanced training courses of NADEL are accessible only for students of the MAS in Development and Cooperation and for qualified employees with at least two years experience in development cooperation and a Master's level or equivalent level of education as recognized by ETH. PhD students doing empirical research in development cooperation may be admitted "sur Dossier".

Food security has been on top of the policy agenda for decades, but still a considerable proportion of the population in developing countries remains hungry and malnourished. This lecture series will explore how we produce and distribute food; analyse the concept of food security and discuss ways and means for increasing the availability and accessibility of food in developing countries.

**Content**
- The student will be able to:
  - describe the most important milestones in the history of food and agriculture
  - understand the concept of food security and discuss causes and impacts of food insecurity
  - compare different approaches to promote and increase crop- and livestock production in a sustainable manner
  - reflect on some of the main economic challenges of the world food system and understand some of the tradeoffs between smallholders' decisions of labor, consumption, and production of food
  - give insights in how international organizations work with farmers and governments in developing countries to ensure availability and equal access to food

**Objective**
- Students have a sound understanding of linear and logit regression
- know strategies to test causal hypotheses using regression analysis and/or experimental methods
- are able to formulate and implement a regression model for a particular policy question and a particular type of data
- are able to critically interpret results of applied statistics, in particular, regarding causal inference
- are able to critically read and assess published studies on policy evaluation
- are able to use the statistical software STATA for data analysis
- are able to use the statistical software STATA for data Analysis

**Abstract**
The participants are able to:
- present the global situation and development trends in the sector of sanitation, water supply, waste management and for its main actors;
- discuss the relationships between water supply, sanitation and health;
- explain the principles of technologies for drinking water treatment, the management of sewage and waste, as well as appraise their strengths and weaknesses;
- explain which sustainable concepts are implemented and how they can be inserted into the technical, institutional and social structures so that they are economically, ecologically and socially sustainable;
- provide information where good professional resources are available.

---

**Sanitation and Water Supply in Development**

**Objective**
- The course provides an overview of the links among sanitation, water supply, waste management and environmental and health aspects. It gives an understanding of the specific challenges and possible solutions in ensuring environmental services and illustrates their impact on the population and settlements.

**Content**
- The topics covered in the first part of the course are a revision of basic statistics and linear and logit regression analysis. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, and randomized controlled trials.
- The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs.

**Abstract**
- Foundation of Sustainable Development Practice
  - The course provides students with an introduction to concepts of sustainable development, with an emphasis on the Sustainable Development Goals (SDGs).
  - Both conceptual and practical issues are presented, with the intention of challenging students to critically assess and debate on current issues of global development.

**Objective**
- The course is about a selection of SDGs and their related targets (not dealt with in other courses).

**Content**
- The Agenda 2030: 17 goals and 169 targets
- examine what the SDGs could mean for “developed nations” like Switzerland.
- discuss the merits and the limitations of such an ambitious, multi-disciplinary, universally agreed upon framework
- describe the relevant actors and their roles and responsibilities
- discuss practical difficulties in pursuing and achieving sustainable development through development & cooperation interventions;
- define the main underlying concepts of the SDGs like “sustainability” and “development”;
- explain the background of the Agenda 2030, its intention, the process of its development and the guiding principles for its implementation;
- discuss practical difficulties in pursuing and achieving sustainable development through development & cooperation interventions;
- describe the relevant actors and their roles and responsibilities;
- discuss the merits and the limitations of such an ambitious, multi-disciplinary, universally agreed upon framework;
- examine what the SDGs could mean for “developed nations” like Switzerland.

**Abstract**
- Health and Development - Health Related Aspects of Food Security and Agriculture
  - Food security has been on top of the policy agenda for decades, but still a considerable proportion of the population in developing countries remains hungry and malnourished. This lecture series will explore how we produce and distribute food; analyse the concept of food security and discuss ways and means for increasing the availability and accessibility of food in developing countries.

**Objective**
- Students are able to:
  - focus on a selection of SDGs and their related targets (not dealt with in other courses).

**Content**
- Setting the stage: What is sustainable? What is development? Why Sustainable Development Goals (SDGs)?
- The Agenda 2030: 17 goals and 169 targets
- Actors: Who are the actors in the SDG debate? How do these actors influence decisions? What are the roles of civil society, of the private sector, and of governments in implementing the SDGs?
- Switzerland: What does the Agenda 2030 mean for Switzerland's national and international agendas? Which SDGs does Switzerland focus on at home and abroad?
- Focus on a selection of SDGs and their related targets (not dealt with in other courses).
Abstract
The following topics will be discussed: Basic principles of epidemiology and global burden of disease distribution, Health systems and health system strengthening including economic aspects and health insurance, communicable diseases such as HIV/AIDS, Malaria, tuberculosis and neglected tropical diseases, mother and child health, non-communicable diseases and transition in health in LAMICs.

Objective
This course aims at providing a public health driven overview on most important topics related to health and health care in low- and middle-income countries (LAMICs). After the module participants shall have broad understanding of challenges for health, health care and health systems in LAMICs. They shall be able to discuss more in depth some major global health topics, such as health systems, transition in health, malaria, neglected tropical diseases and HIV/AIDS. The course will provide an insight into current strategies and approaches addressing major global health topics.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 914 of 1571
Abstract
Gives the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand.

Objective
Some basic knowledge in physiology is recommended for this course, which revisits important physiological topics, emphasizing their relation to nutrition. The aim is to give the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand. For students with a background in medicine, pharmacy or biology, the course is useful as a review of previously acquired knowledge. Major topics are basic neuroanatomy and neurophysiology; general endocrinology; the physiology of taste and smell; nutrient digestion and absorption; intermediary metabolism and energy homeostasis; and some aspects of cardiovascular physiology and water balance.

Lecture notes
Handouts for each lecture will be made available every week: http://www.fpb.ethz.ch/teaching/handouts.html

766-6205-00L  Nutrient Analysis in Foods

Number of participants limited to 20.
Permission from lecturers required for all students.

Abstract
In this practical course different meals are prepared and then analysed in the laboratory. The analyses comprise energy, macronutrients, specific micronutrients as well as polyphenols and phytic acid. Based on these results, the nutritional value of each meal is critically evaluated and discussed.

Objective
Learning analytical methods to determine macro- and micronutrient content in foods. Critical evaluation of analytical results, critical comparison with values from food composition tables, and interpretation in relation to nutritional value of meals.

Content
The practical course nutrient analysis in foods includes the meal preparation (2 hours in December 2016, date to be defined) and chemical analysis of five meals from 5 different types of diets (students will work in groups; one meal per group). The content of macronutrients, specific micronutrients and secondary plant components are analysed using common analytical methods. The analytical results are compared with calculated data from food composition databases by using the nutrition software EbisPro and critically evaluated. The nutritional values of the meals in relation to specific chronic diseases and iron bioavailability are discussed. The practical course is accompanied by a lecture on the basic principles of analytical chemistry.

Lecture notes
A script and lecture slides are handed out before course start.

Prerequisites / notice
Students will work in groups.
Performance is assessed by a short test on course content, oral presentation or results and a short report.
Attendance in compulsory for the lecture, the laboratory work, and the oral presentation.

752-6101-00L  Dietary Etiologies of Chronic Disease

Abstract
To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Objective
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.

Content
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Lecture notes
There is no script. Powerpoint presentations will be made available on-line to students.

Literature
To be provided by the individual lecturers, at their discretion.

Prerequisites / notice
No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

752-6403-00L  Nutrition and Performance

Abstract
The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

Objective
To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Content
The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise.

Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

Lecture notes
Lecture slides and required handouts will be available on the ETH website.

Literature
Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

Prerequisites / notice
General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English

It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

### Functional Microorganisms in Foods

**752-5103-00L**

| W | 3 credits | 2G | C. Lacroix, T. de Wouters, L. Meile, C. Schwab |

**Abstract**

This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

**Objective**

To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

**Content**

This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- **Probiotics and Prebiotics:** Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.

- **Bioprotective Cultures and Antimicrobial Metabolites:** Anti fungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.

- **Legal and Protection Issues Related Functional Foods**

- **Industrial Biotechnology of Flavor and Taste Development**

- **Safety of Food Starter Cultures and Prebiotics**

**Lecture notes**

Students will be required to complete a group project on food products and ingredients with of from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

**Literature**

A list of references will be given at the beginning of the course for the different topics presented during this course.

### Gene Technology in Foods

**752-5111-00L**

| W | 3 credits | 2V | L. Meile |

**Abstract**

This course will increase basic knowledge on biotechnological constructions and application of genetically modified organisms (GMO) which are used worldwide in food production systems. The course discusses health issues, the legislation frame and food safety aspects of GMO applications in agriculture, food production and consumption in Switzerland and EU-countries.

**Objective**

This course will provide knowledge and background on genetically modified organisms (GMO) and food produced with the help of GMO, especially on the molecular basis of GMO constructions with emphasis on genetically modified food in Switzerland and the EU. Criteria of rational food safety and health assessment in agriculture and food consumption will be elaborated.

**Content**

Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries.

**Lecture notes**

Copies of slides from lectures will be provided.

**Literature**

Actual publications from literature will be provided.

**Prerequisites / notice**

Good knowledge in biology, especially in microbiology and molecular biology are prerequisites.

Some contents will be provided by registered students who will individually or as a group present an actual publication.

### Immunology I

**551-0317-00L**

| W | 3 credits | 2V | A. Oxenius, M. Kopf |

**Abstract**

Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

**Objective**

Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

**Content**

- Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histo compatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

**Lecture notes**

Electronic access to the documentation will be provided. The link can be found at “Lernmaterialien”

**Literature**

**Prerequisites / notice**

Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a “Sessionsprüfung”.

### Public Health Concepts

**752-6151-00L**

| W+ | 3 credits | 2V | R. Housser |

**Abstract**

The module “public health concepts” offers an introduction to key principles of public health. Students get acquainted with the concepts and methods of epidemiology. Students also learn to use epidemiological data for prevention and health promotion purposes. Public health concepts and intervention strategies are presented, using examples from infectious and chronic diseases.

**Objective**

At the end of this module students are able:
- to interpret the results of epidemiological studies
- to critically assess scientific literature
- to know the definition, dimensions and determinants of health
- to plan public health interventions and health promotion projects

**Content**

Concepts of descriptive and analytical epidemiology, study designs, measures of effect, confounding and bias, screening, surveillance, definition of health and health promotion, health dimensions and health determinants, prevention strategies, public health interventions, public health action cycle, epidemiology and prevention of infectious and chronic diseases (HIV, Tuberculosis, Obesity, Public health nutrition).

**Lecture notes**

Handouts are provided to students in the classroom.

**Prerequisites / notice**

Language of the course is English

Abstract

The MAS program “Competency in the Building Process” provides graduates of the program with a thorough understanding of the complexities of a project, instilling them with an increased capacity to assess the consequences of their actions and decisions. Upon successful completion of the studies, graduates are qualified to assume the complex duties of an overall project leader in building projects.

Objective

Over the course of the MAS program, students review and closely examine professional experiences gained so far. The goal of the program is to develop an understanding and form opinions on the present-day building process. The course directs students to draw independent conclusions and set forecasts for design professionals in the building process, creating a basis, in conjunction with group discussions, for independent study.

Content

The Master of Advanced Studies in «Competency in the Building Process» imparts an integral view of the building process. Ever-changing technical and social demands, complex permit processes and increasing pressure to speed up production and completion times have led to the fragmentation and specialization of services and work performed by building process participants. Maintaining an overview of the project are the architects and engineers, who draw from a broad knowledge base as they direct, coordinate and moderate all disciplines involved in the design and construction process.

The MAS program «Competency in the Building Process» is a part-time study for professionally experienced architects and engineers. It provides graduates of the program with a thorough understanding of the complexities of a project, instilling them with an increased capacity to assess the consequences of their actions and decisions. Upon successful completion of the studies, graduates are qualified to assume the complex duties of an overall project leader in building projects.

The first three semesters of the study are comprised of: «Construction Participants», «Services» and «Strategies Interests». Explored in the first semester is communication as it relates to qualifications, acquisition and the organisation chart of the participating client, architects and design and construction professionals. The second semester then turns to the building process as a sequence of activities, placing its focus on basic principles and the services, i.e., the commission for design services, the service model, relevant economic considerations, the overall project leader, coordination of specialty engineers and the project leader. Over the course of the third semester, correlations are then drawn between the topic areas as they relate to the strategies and interests of building industry players. An in-depth look is also taken at the competencies of design professionals. The masters thesis in the fourth and final semester completes the course of study.

Over the course of the MAS program, students review and closely examine professional experiences gained so far. The goal of the program is to develop an understanding and form opinions on the present-day building process. The course directs students to draw independent conclusions and set forecasts for design professionals in the building process, creating a basis, in conjunction with group discussions, for independent study.

MAS in History and Theory of Architecture (GTA)

The MAS-programm in “History and Theory of Architecture” is a two-year half-time course and contains 60 CP. The course starts in the autumn semester.

Attendance of classes supplemented by independent research; practical training periods and excursions; lectures/seminars on one to two days per week, in total 600 ca. contact hours, in addition private study ca. 600 hours (for each in-class day one day of work preparation), two individually tutored seminar papers on chosen subjects (200 hours) and credited Master's thesis (600 hours).

Abstract

The program aims at enhancing students' understanding of subject matter and methods in the field of research into architectural theory and at assisting them in the critical investigation of the history and theory of architecture.

Objective

The historical and social roots of architecture are an essential aspect of the work of architects. To adapt the past to one's own thinking and knowledge, is a challenge. This will be done in a lively and reflecting process. Anyone faced with this challenge in the practical work will find a quality for his buildings that can't be reached by only considering urbanistic, aesthetic and functional factors. Based on selected issues, the participants of the MAS-program «Geschichte und Theorie der Architektur» get acquainted with the methods of historic research. Participants will gain a deeper insight into the subjects and methods of architectural historians and will be supported in scientific discourses.

Content

The MAS-program «Geschichte und Theorie der Architektur» includes a weekly four-hour seminar in which the techniques of scientific work (methodology, creating a bibliography, researching, textual criticism, editing) and practicing essential aspects of art and architecture are discussed on the basis of texts and buildings before they are written down in textual form. Historiographical and methodological aspects as well as training in analyzing and describing architectural phenomena are at the forefront. A major concern is also to improve the ability for writing of texts (encyclopedia articles, short essays, project descriptions, academic papers). Writing is a key instrument not only of disciplinary discourse, but also the public exchange of research. Depending on the topic of the course, there is a single or multi-day trip, during which the participants talk about the buildings that are visited. In addition, each semester, at least two additional courses of the Institute gta have to be visited.

The course concludes with a diploma thesis written on a subject that is chosen by the students. The concept and writing of this work are intended to be a process that evolves continuously while studying. The thesis can be extended into a dissertation, provided the student has a graduate degree that is acknowledged by the ETH.
MAS in Housing

The course offered within the MAS-programm "Housing" is classified in four relevant modules:

- Module 1: social and historical context of housing, housing design and construction.
- Module 2: Housing design, past and present: Typology, building, biography of usage.
- Module 3: Housing as a contribution of urban design and neighborhood development.
- Module 4: Sustainable development - a new goal in housing design and construction.

Also see separate program.

The attendance of the lecture "Housing" of Prof. Eberle in the autumn semester is compulsory.

Individual chosen 3-4 further lectures or seminars in the Autumn or Spring Semester have to be attended (6 CP).

The modules 3 and 4 are offered in the Spring Semester.

Abstract

Relevant issues about the provision, the design and the construction of housing and quality of living are explored based on an interdisciplinary analysis. The MAS thesis is focused on studying, for example, the interdependence of architectural, social, spatial and urban planning considerations, and shifting demand and usage patterns related to housing.

Objective

Against the backdrop of jointly developed theoretical ideas, the students job-related skills and accomplishments in the fields of drawing up concepts, analysis, interpretation, and conversion as well in oral and written conveying are consolidated and expanded in discussions and in joint work. The course of study does not strive to train generalists. Instead it deals with the formulation of questions and procedures elaborated by the students in a generalistic or interdisciplinary way. This is the decisive factor in the qualitative added value of methods which span over several disciplines.

Content

Relevant issues about the provision, the design and the construction of housing and quality of living are explored based on an interdisciplinary analysis. The MAS thesis is focused on studying, for example, the interdependence of architectural, social, spatial and urban planning considerations, and shifting demand and usage patterns related to housing.

MAS in Landscape Architecture

The Master of Advanced Studies in Landscape Architecture is a one-year full time postgraduate diploma programme delivered in English. It deals mainly with a scale of landscape that is between that of project design and landscape planning. The focus is on peripheral landscapes and their integration into our cities. In the context of the MAS LA these are discussed and developed in respect to their contemporary functional, ecological and aesthetic potentials. Language: English, contact hours: 600h.

For further information please visit: http://www.girot.arch.ethz.ch/

Courses Offered

The programme is a one-year full time master programme, structured a-round two main poles: a landscape design studio (laboratory), and a theory seminar (oratory). Emphasis within the programme on Landscape Video will also help provide a strong analytical basis in both theory and design. The studios are held during the semester from Tuesday to Friday. The programme will conclude with an individual thesis work.

Abstract

Within the "Master of Advanced Studies in Landscape Architecture" (MAS LA), the use of the latest modeling and visualization possibilities as well as the actual 3D depiction of landscape architecture make up the core emphasis. Here, the focus lies on the integration of CAD/CAM technologies as a design-supporting medium.

Objective

Through an intensive investigation of the latest software and techniques, the students are capable of the following:
- Represent complex design tasks
- Develop spatial perception at different levels of scales
- Handle current problems efficiently and experimentally
- Develop new visualization and communication techniques using new media
- Communicate design ideas professionally

Content

The MAS LA is a one-year (academic) postgraduate diploma programme delivered in English. It is divided into themed modules and a concluding synthesis module. The chosen CAD programs (i.e. Rhino) are particularly appropriate for the visualization of large-scale landscape designs and offer the possibility for export to computer-steered milling machines.

In addition, superior competency enhancement in the area of 3D GIS and the use of photography as a design tool and video as tool for illustration and design round off the goal-oriented program.

ECTS

European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
After taking the lecture, students should have knowledge on:

- Know effects of work design on competence, motivation, and well-being
- Understand links between design of individual jobs and work processes
- Know basic processes involved in systematic organizational change
- Understand the interaction between organization and technology and its impact on organizational change
- Understand relevance of work design for company performance and strategy
- Know and apply methods for analyzing and designing work

Good work design is crucial for individual and company effectiveness and a core element to be considered in organizational change. As course project, students learn and apply a method for analyzing and designing work in business settings.

We develop a 'systemic' view of organizations.

We look at organizations as part of an industry context, which is affected by different elements like strategy, structure, culture, tasks, people and outputs.

We consider how managerial decisions are made in any one of these domains affect decisions in each of the others.

Further information is available on the Tim Group Chair's website:

http://www.timgroup.ethz.ch/en/courses

and on the Moodle of the course: https://moodle-app2.let.ethz.ch/course/view.php?id=2209

(The Enrollment Key to Moodle will be provided during the course)

The content of the course will rely on the book:

Selected readings and additional learning materials will be available on the course Moodle:

https://moodle-app2.let.ethz.ch/course/view.php?id=2209

All the materials uploaded on Moodle must be considered as required readings.

The final exam of the present course is in written form.

The final exam is requested for all types of students (BSc, MSc, MAs, PhD, and Exchange students).

We strongly recommend Exchange students to take it into consideration when selecting the courses to attend.

The course is designed to convey a profound understanding of marketing’s role in modern firms, its interactions and interfaces with other disciplines, its main instruments and recent trends. Particular attention is given to emerging marketing concepts and instruments, and the role of marketing in technology firms.

The lecture features a short tutorial that is held at irregularly spaced intervals throughout the semester (approximately every third week).

The case data will be provided so that students practice and apply the concepts of the lecture on their own. The tutorial is held jointly by two Teaching Assistants (Zhiying Cui and Jana Gross) and the professor (Prof. F. v. Wangenheim).
Information Management, Operations Management

### Number Title Type ECTS Hours Lecturers
363-0445-00L Production and Operations Management W+ 3 credits 2G T. Netland, P. Schönsleben

**Abstract**
This core course on Production and Operations Management provides the students insights into the basic theories, principles, concepts, and techniques used to design, analyze, and improve the operational capabilities of an organization.

**Objective**
Students learn why and how operations can be a competitive weapon; how to design, plan, control, and manage production and service processes; how to improve effectiveness and efficiency in operations; how to take advantage of new technological advancements; and how environmental and social concerns affect decisions in global production networks.

**Content**
The course covers the most fundamental strategic and tactical concepts in production and operations management. The lectures cover: Introduction to POM; Operations strategy; Capacity management; Production planning and control; Production philosophies; Lean management; Performance measurement; Problem solving; Service operations; New technologies in POM; Servitization; Global production; and Triple-bottom line.

Mastering Digital Business Models

### Number Title Type ECTS Hours Lecturers
363-0421-00L Mastering Digital Business Models W+ 3 credits 2G E. Fleisch

**Number of participants limited to 100**

**Abstract**
This lecture provides a theory- and practice-based understanding of how today's information technologies enable new digital business models and disrupt existing markets.

**Objective**
A. After the lecture, the student is able to evaluate digital business models from different angels, including theory-based views:

- Definition and classification of business models
- Digital business model patterns
- Theoretical frameworks that explain why and how digital business models function
- Impact of digital business model patterns on P&L and balance sheet

Students know how to measure & evaluate investments into the digital space as

- a decision maker in an established company (should I invest in project A or B?)
- an entrepreneur (should I pursue this venture?)
- an investor (should I invest in start-up xy?)

B. The student knows different tools to design digital business model patterns.

**Content**
Uber, Airbnb, Nest and Jawbone - A wide range of innovative companies exist, which successfully implemented ICT enabled business models and continue to grow at a rapid pace. Examples, illustrating how digitalization, including the "Internet of Things" currently fosters business model innovation across various industries. This course is designed to help students to understand and critically assess such newly immersing (digital) business models.

For the lecture students will get access to one of the leading online teaching platforms (called edX) also offered by other top universities (incl. MIT, Harvard, Berkeley, etc.). Using the edX platform, will allow students to collaborate in online discussions, solve online exercises and present a short educational video as part of a group project.

**Key Topics:**
Business model innovation; (digital) business model patterns; business value of IT; the concept of integration; transaction cost perspective; network economics perspective; essentials and impact of web 2.0, internet of things, mobile computing, market places, social analytics and big data; IT governance and portfolio management; entrepreneurship in the digital space, etc.

Quantitative and Qualitative Methods

### Number Title Type ECTS Hours Lecturers
363-0541-00L Systems Dynamics and Complexity W+ 3 credits 3G F. Schweitzer, G. Casiraghi, V. Nanumyan

**Abstract**
Finding solutions: what is complexity, problem solving cycle.

Implementing solutions: project management, critical path method, quality control feedback loop.

Controlling solutions: Vensim software, feedback cycles, control parameters, instabilities, chaos, oscillations and cycles, supply and demand, production functions, investment and consumption

**Objective**
A successful participant of the course is able to:

- understand why most real problems are not simple, but require solution methods that go beyond algorithmic and mathematical approaches
- apply the problem solving cycle as a systematic approach to identify problems and their solutions
- calculate project schedules according to the critical path method
- setup and run systems dynamics models by means of the Vensim software
- identify feedback cycles and reasons for unintended systems behavior
- analyse the stability of nonlinear dynamical systems and apply this to macroeconomic dynamics
Why are problems not simple? Why do some systems behave in an unintended way? How can we model and control their dynamics? The course provides answers to these questions by using a broad range of methods encompassing systems oriented management, classical systems dynamics, nonlinear dynamics and macroeconomic modeling. The course is structured along three main tasks:

1. Finding solutions
2. Implementing solutions
3. Controlling solutions

PART 1 introduces complexity as a system immanent property that cannot be simplified. It introduces the problem solving cycle, used in systems oriented management, as an approach to structure problems and to find solutions.

PART 2 discusses selected problems of project management when implementing solutions. Methods for identifying the critical path of subtasks in a project and for calculating the allocation of resources are provided. The role of quality control as an additional feedback loop and the consequences of small changes are discussed.

PART 3, by far the largest part of the course, provides more insight into the dynamics of existing systems. Examples come from biology (population dynamics), management (inventory modeling, technology adoption, production systems) and economics (supply and demand, investment and consumption). For systems dynamics models, the software program VENSIM is used to evaluate the dynamics. For economic models analytical approaches, also used in nonlinear dynamics and control theory, are applied. These together provide a systematic understanding of the role of feedback loops and instabilities in the dynamics of systems. Emphasis is on oscillating phenomena, such as business cycles and other life cycles.

Weekly self-study tasks are used to apply the concepts introduced in the lectures and to come to grips with the software program VENSIM. The lecture slides are provided as handouts - including notes and literature sources - to registered students only. All material is to be found on the Moodle platform. More details during the first lecture.

Self-study tasks (discussion exercises, Vensim exercises), are provided as home work. Weekly exercise sessions (45 min) are used to discuss selected solutions. Regular participation in the exercises is an efficient way to understand the concepts relevant for the final exam.

### Economics

<td>2G</td>
<td>M. Filippini</td>
</tr>
</tbody>
</table>

**Abstract**
This course examines the behaviour of macroeconomic variables, such as gross domestic product, unemployment and inflation rates. It tries to answer questions like: How can we explain fluctuations of national economic activity? What can economic policy do against unemployment and inflation? What significance do international economic relations have for Switzerland?

**Objective**
This lecture will introduce the fundamentals of macroeconomic theory and explain their relevance to everyday economic problems.

**Content**
This course helps you understand the world in which you live. There are many questions about the macroeconomy that might spark your curiosity. Why are living standards so meagre in many African countries? Why do some countries have high rates of inflation while others have stable prices? Why have some European countries adopted a common currency? These are just a few of the questions that this course will help you answer.

Furthermore, this course will give you a better understanding of the potential and limits of economic policy. As a voter, you help choose the policies that guide the allocation of society's resources. When deciding which policies to support, you may find yourself asking various questions about economics. What are the burdens associated with alternative forms of taxation? What are the effects of free trade with other countries? What is the best way to protect the environment? How does the government budget deficit affect the economy? These and similar questions are always on the minds of policy makers.

**Literature**
The course webpage (to be found at https://moodle-app2.let.ethz.ch/course/view.php?id=2467) contains announcements, course information and lecture slides.

We advise you to also buy access to Aplia. This internet platform will support you in learning for this course. To save money, you should buy the book together with Aplia. This is sold as a bundle (ISBN: 9781473715998).

Besides this textbook, the slides and lecture notes will cover the content of the lecture and the exam questions.

### Financial Management

<table>

<td>3</td>
<td>2V</td>
<td>M. Passardi</td>
</tr>
</tbody>
</table>

the course provides answers to these questions by using a broad range of methods encompassing systems oriented management, classical systems dynamics, nonlinear dynamics and macroeconomic modeling. The learning objectives of the course are:

1. Students must be able to discuss basic principles, problems and approaches in microeconomics. (2) Students can analyse and explain simple economic principles in a market using supply and demand graphs. (3) Students can contrast different market structures and describe firm and consumer behaviour. (4) Students can identify market failures such as externalities related to market activities and illustrate how these affect the economy as a whole. (5) Students can apply simple mathematical treatment of some basic concepts and can solve utility maximization and cost minimization problems.

For students taking only the course 'Principles of Microeconomics' there is a shorter version of the same book:

Complementary:
Abstract

Overview of financial and managerial accounting
Accounting for current and fixed assets
Liabilities and owners equity
Recording change in balance sheet
Measuring financial performance
Managing financial reporting
Full and variable costing system
Using accounting information for decision making purposes

Objective

Understand the different procedures involved in the accounting system
Record change in financial position
Measure business income
Prepare final accounts
Understand the principles of cost accounting
Calculate the different product costs
Make decisions about the acceptance or rejection of a particular product

Content

Financial Accounting: Balance sheet, income statement, double-entry accounting, journal and ledger, accounting for merchandising activities, value-added tax, adjustments before final accounts, provisions, depreciation, valuation,

Managerial Accounting: Full costing, variable costing, cost-volume profit, break-even analysis, activity-based costing

Prerequisites / notice

This course is a prerequisite for the course Financial Management.

3. Semester

Abstract

This course conveys concepts and methods in strategic management, with a focus on competitive strategy. Competitive strategy aims at improving and establishing position of firms within an industry.

Objective

The lecture "Strategic Management" is designed to teach relevant competences in strategic planning and -implementation, for both professional work-life and further scientific development. The course provides an overview of the basics of strategy and the most prevalent concepts and methods in strategic management. The course is given as a combination of lectures about concepts/methods, and case studies where the students solve strategic issues of the case companies. In two sessions, the students will also be addressing real-time strategic issues of firms that are represented by executives.

Content

Contents:

a. Introduction to strategy
b. Industry dynamics I: Industry analysis
c. Industry dynamics II: Analysis of technology and innovation
d. The resource-based theory of the firm
e. The knowledge-based theory of the firm

Prerequisites / notice

Session #0: (September 19) Introductory Guest Lecture & Organizational Issues
Session #1: (September 26) Introduction & How to Solve a Case
Session #2: (October 3) Industry Dynamics I
Session #3: (October 24) Guest Lecture
Session #4: (October 31) Industry Dynamics II
Session #5: (November 7) Resource-Based Theory
Session #6: (November 14) Knowledge-Based Theory
Session #7: (November 28) Guest Lecture

For participants of the MAS-MTEC program we offer a complimentary course Practicing Strategy in which students will apply the concepts of Strategic Management to their real-life contexts and organizations. Please register simultaneously for both courses if you want to take part in this course.

For more information please see:

http://www.smi.ethz.ch/education/practicing-strategy.html

365-1059-00L | Practicing Strategy | W+ | 1 credit | 1S | G. von Krogh, S. Herting

Abstract

This lecture is a special course for MAS students which supplements the Strategic Management course. Participants work on real-life strategy problems in a two-day workshop and apply concepts & methods from the Strategic Management course to develop suitable solutions.

Limited number of participants: a minimum of 10 persons and a maximum of 25 persons.

Please register through myStudies to enrol for the course no later than 27.10.2016.

Objective

The goal of the course is that participants are able to transfer and use the concepts and methods from the Strategic Management lecture to develop solutions for strategic issues in real-life business contexts.

Prerequisites / notice

Successful registration and prior/parallel enrollment in "363-0392-00G Strategic Management" required (see course catalogue page for details).
The lectures address the assessment of corporate sustainability and its links to strategy, technology, and finance. Students learn why sustainability matters for managers and how businesses can act towards it. E-modules allow students to train critical thinking skills. In the 2nd half of the semester, sustainability challenges on water, energy, mobility, and food are explored in group projects.

**Objective**

Understand the limits and the potential of corporate sustainability for sustainable development

Develop critical thinking skills (argumentation, communication, evaluative judgment) that are useful in the context of corporate sustainability using an innovative writing and peer review method.

Be able to recognize and realize opportunities for corporate sustainability in a business environment

**Content**

Overview of the key concepts of corporate sustainability and topics related to Water, Energy, Mobility, and Food

Business implications of sustainable development, in particular for the assessment of sustainability performance, strategic change towards sustainability, technological innovations and sustainability, and finance and corporate sustainability.

In-depth case studies of corporate sustainability challenges in the track phase: How to deal with environmental pressure groups? How to use the strengths of business to solve pressing sustainability problems? How to catalyze technological innovations for sustainability? How to invest money in a sustainable way?

**Lecture notes**

Presentation slides will be made available on moodle prior to lectures.

**Literature**

- V. Hoffmann
- T. Gutzwiller

**Presentation slides**

Transformation: Corporate Development and IT

The lecture treats the main challenges of business transformation and the alignment of corporate development and IT activities. It presents a holistic approach to business transformation projects by introducing an integrated model dealing with three main design areas "strategy", "processes" and "information systems" and applying this model to various case studies.

**Objective**

The goal of the lecture is to understand the main challenges of corporate transformation and to demonstrate the application of a holistic project procedure model for corporate transformation projects with special emphasis on the alignment of business and IT.

The student should understand and be able to explain

the main reasons for corporate transformation,

the relevant management processes to manage corporate transformation,

the interdependencies between strategy, processes and information systems, especially how this three levels interrelate,

the critical success factors for the successful accomplishment of large scale corporate transformation projects,

the main instruments of project, quality and change management and

the different types of resulting IT projects.

**Content**

The globalization of the world leads to an increasingly faster pace in business transformation. Enterprises have to adapt faster and even faster to the environmental changes in a global economy to remain competitive and to make sure they stay in business. In todays information age this does not only mean to adapt business strategy and business processes but also to adapt information systems to the new circumstances. The fast adaptation trough large scale corporate transformation projects that change strategy, business processes and information systems is critical to ensure competitiveness for tomorrow. The introduction of new business processes and information systems typically takes years in very complex large scale projects. Many projects fail because of insufficient alignment between decision makers in business and IT. Unclear understanding of the overall project scope, undefined roles and responsibilities, unclear project processes, quality problems and resistance to change are some typical problems found in such projects. The lecture is subdivided into following modules:

- Corporate development introduction and motivation,
- Parallelization of corporate development and complexity reduction,
- Planning process and project portfolio management in corporate development,
- Management of large scale projects integration of strategy, processes and information systems,
- Quality management in large scale projects,
- Project management in large scale projects,
- Change management within projects. The lecture is accompanied by four case studies that are used to exemplify the contents of the lecture by applying the concepts to real situations in corporate life.

**Number**

**Abstract**

The course offers an introduction to the theory and practice of supply chain management. Students will learn how to develop supply chain strategies and supply chain networks based on firms competitive strategies and marketing priorities.

**Objective**

The task of designing and managing supply chains requires that managers apply strategic, decision making and leadership skills in a supply chain context. The goal of this course is to develop and practice these skills.

**Content**

Effective supply chains ought to be aligned with and support the achievement of the firms corporate, business and product strategies, taking into account future opportunities and risks. This course will familiarize students with modern supply chain management theory and practice to develop and manage supply chains. The topics covered range from fundamental logistics and supply chain concepts (e.g. push vs. pull, postponement) to the development of supply chain strategies, relationships and networks.

**Lecture notes**

Course material will be available for download from the homepage of the Chair of Logistics Management:

http://www.scm.ethz.ch/teaching/courses.html

Login will be provided in the first lecture or can be obtained from the Teaching Assistant Dagmar Reinerth (dreinerth@ethz.ch).

**Literature**

**Prerequisites / notice**

- The final course grade will be a weighted average of the following: Exam (semester end): 70% Case studies (during the semester): 30%

- Students (at least in groups of two) must bring a laptop with MS Excel and the Excel Solver installed to class.

Abstract
Evidence-based management requires valid empirical research. In this course, students will learn the basics of research design, fundamentals of data collection and statistical methods to analyze the data acquired in social science research. Students are expected to apply their knowledge in class discussions and out-of-class assignments.

Objective
- Ability to formulate research questions and designing an appropriate study
- Ability to collect and analyze data using a variety of methods
- Ability to critically assess the quality of empirical research in management
- Applied knowledge of empirical methods through out-of-class assignments

Content
1) Introduction to empirical management research
2) Research designs: exploratory, descriptive, experimental
3) Measurement and scaling
4) Data collection and sampling
5) Data analysis methods
6) Reporting and presenting empirical research

Prerequisites / notice
Assignments and projects: This course includes out-of-class assignments and projects to give students some hands-on experience in conducting empirical research in management. Projects will focus on one particular aspect of empirical research, like the formulation of a research question or the design of a study. Students will have at least one week to work on each assignment. Students are expected to work on these assignments individually. Duplicate answers will receive no credit and will be subject to a disciplinary review. Assignments will be graded and need to be turned-in on time.

Class participation: Class participation is encouraged and can greatly improve students’ learning in this class. In this spirit, students are expected to attend class regularly and come to class prepared.

</table>

Abstract
This course provides an introduction to operations research methods in the fields of management science and economics. Requisite mathematical concepts are introduced with a practical, problem-solving perspective.

Objective
- Introduction to building and using quantitative models in a business / industrial environment
- Introduction to basic optimization techniques (Linear Programming and extensions, network flows, integer programming, dynamic and stochastic optimization)
- Understanding the integration of quantitative models into the managerial decision process

Content
The following topics are covered: Systems and models, linear models and the importance of linear programming, duality theory and shadow prices, integer programming, optimization under uncertainty and applications in inventory management.

Lecture notes
A printed script will be made available.

Literature
Any standard textbook in Operations Research is a useful complement to the course.

Prerequisites / notice
Undergraduate calculus, linear algebra, probability and statistics are a prerequisite.

Abstract
Relationship between economy and environment, market failure, external effects and public goods, contingent valuation, internalisation of externalities; economics of non-renewable resources, economics of renewable resources, cost-benefit analysis, sustainability, and international aspects of resource and environmental economics.

Objective
Understanding of the basic issues and methods in resource and environmental economics; ability to solve typical problems in the field using the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Topics are:
- Introduction to resource and environmental economics
- Importance of resource and environmental economics
- Main issues of resource and environmental economics
- Normative basis
- Utilitarianism
- Fairness according to Rawls
- Economic growth and environment
- Externalities in the environmental sphere
- Governmental internalisation of externalities
- Private internalisation of externalities: the Coase theorem
- Free rider problem and public goods
- Types of public policy
- Efficient level of pollution
- Tax vs. permits
- Command and Control Instruments
- Empirical data on non-renewable natural resources
- Optimal price development: the Hotelling-rule
- Effects of exploration and Backstop-technology
- Effects of different types of markets.
- Biological growth function
- Optimal depletion of renewable resources
- Social inefficiency as result of over-use of open-access resources
- Cost-benefit analysis and the environment
- Measuring environmental benefit
- Measuring costs
- Concept of sustainability
- Technological feasibility
- Conflicts sustainability / optimality
- Indicators of sustainability
- Problem of climate change
- Cost and benefit of climate change
- Climate change as international ecological externality
- International climate policy: Kyoto protocol
- Implementation of the Kyoto protocol in Switzerland
Content
Economy and natural environment, welfare concepts and market failure, external effects and public goods, measuring externalities and contingent valuation, internalising external effects and environmental policy, economics of non-renewable resources, renewable resources, cost-benefit-analysis, sustainability issues, international aspects of resource and environmental problems, selected examples and case studies.

</tr>
</tbody>
</table>

Abstract
I aim to introduce students to the concepts and tools of modern finance and to make them understand the limits of these tools, and the many problems met by the theory in practice. I will put this course in the context of the on-going financial crises in the US, Europe, Japan and China, which provide fantastic opportunities to make the students question the status quo and develop novel solutions.

Objective
The course explains the key concepts and mechanisms of financial economics, their depth and then stresses how and why the theories and models fail and how this is impacting investment strategies and even a global view of citizenship, given the present developing crises in the US since 2007 and in Europe since 2010.

- Development of the concepts and tools to understand these risks and master them.
- Working knowledge of the main concepts and tools in finance (Portfolio theory, asset pricing, options, real options, bonds, interest rates, inflation, exchange rates)
- Strong emphasis on challenging assumptions and developing a systemic understanding of financial markets and their many dimensional risks

Content
1. The Financial Crises: what is really happening? Historical perspective and what can be expected in the next decade(s). Bubbles and crashes. The illusion of the perpetual money machine.
2. Risks in financial markets
   - What is risk?
   - Measuring risks of financial assets
   - Introduction to three different concepts of probability
   - History of financial markets, diversification, market risks
3. Introduction to financial risks and its management.
   - Relationship between risk and return
   - Portfolio theory: the concept of diversification and optimal allocation
   - How to price assets: the Capital Asset Pricing Model
   - How to price assets: the Arbitrage Pricing Theory, the factor models and beyond
4. Financial markets: role and efficiency
   - What is an efficient market?
   - Financial markets as valuation engines: exogeneity versus endogeneity (reflexivity)
   - Deviations from efficiency, puzzles and anomalies in the financial markets
   - Financial bubbles, crashes, systemic instabilities
5. An introduction to Options and derivatives
   - Calls, Puts and Shares and other derivatives
   - Financial alchemy with options (options are building blocks of any possible cash flow)
   - Determination of option value; concept of risk hedging
6. Valuation and using options
   - A first simple option valuation model
   - The Binomial method for valuing options
   - The Black-Scholes model and formula
   - Practical examples and implementation
   - Realized prices deviate from these theories: volatility smile and real option trading
   - How to imperfectly hedge with real markets?
7. Real options
   - The value of follow-on investment opportunities
   - The timing option
   - The abandonment option
   - Flexible production
   - Conceptual aspects and extensions
8. Government bonds and their valuation
   - Relationship between bonds and interest rates
   - Real and nominal rates of interest
   - Term structure and Yields to maturity
   - Explaining the term structure
   - Different models of the term structure
9. Managing international risks
   - The foreign exchange market
   - Relations between exchanges rates and interest rates, inflation, and other economic variables
   - Hedging currency risks
   - Currency speculation
   - Exchange risk and international investment decisions

Lecture notes
Lecture slides will be available on the site of the lecture
Corporate Finance

**Objective**

Introduction in theory and practical application of Corporate Finance, with a particular focus on financing of operations and transactions, analysed from multiple aspects, including legal and tax.

**Content**

**Literature**

**Prerequisites / notice**

The lecture will be supported by the Chair of Entrepreneurial Risks. Please refer to the chair's website for more detailed information regarding the course (www.er.ethz.ch/teaching).

</table>

**Abstract**

Number of participants limited to 65.

Using uncertainty management by organizations and individuals as conceptual framework, risk management and risk implications of new technologies are treated. Three components of risk management (risk identification/evaluation, risk mitigation, risk communication) and underlying psychological and organizational processes are discussed, using company case studies to promote in-depth understanding.

**Objective**

- understand basic components of risk management in organizations
- know and apply methods for risk identification/evaluation, risk mitigation, risk communication
- know psychological foundations of risk perception, decision-making under risk, and risk communication
- know organizational principles for managing uncertainty
- apply theoretical foundations to applied issues such as safety management, regulatory activities, and technology design and implementation in different domains (e.g. transport systems, IT, insurance)

**Content**

The syllabus includes the following topics:

- Elements of risk management
- risk identification and evaluation
- risk mitigation
- risk communication
- Psychological and organizational concepts relevant in risk management
- decision-making under uncertainty
- risk perception
- resilient organizational processes for managing uncertainty

Case studies on different elements of risk management (e.g., rule making, training, managing project risks, automation)

Group projects related to company case studies

**Lecture notes**

There is no script, but slides will be made available before the lectures.

**Literature**

There are texts for each of the course topics made available before the lectures.

**Prerequisites / notice**

The course is restricted to 40 participants who will work closely with the lecturers on case studies prepared by the lecturers on topics relevant in their own companies (Swiss Re, Skyguide, Swisscom).

**Abstract**

Exclusively for MAS MTEC students (1st semester).

Limited number of participants: a minimum of 10 persons and a maximum of 12 persons per course.

Once your pre-registration has been confirmed, a registration in myStudies is possible as of 26 September 2016.

**Objective**

This course will cover how to prepare and deliver your future presentations. You will be more confident presenting yourself. Thanks to the feedback from your colleagues, the trainer and the video you will be able to identify your strengths and weaknesses.

The participants know the most important elements of a professional presentation, their presentations are more professional and interesting than before, they can structure their presentation for easy delivery and understanding, they can tell what their strengths and areas for improvement are, they will know how to speak of the cuff, they deliver constructive feedback.

**Content**

This course will cover how to prepare and deliver your future presentations. The following contents will be covered: the most important elements of a powerful presentation, structure of prepared presentations, do's and don'ts of a professional presentation, dealing with nervousness, how to work with Power Point, body language (gestures, facial expressions, voice, eye contact), handling of Q&A, speaking of the cuff.

**Abstract**

Due to didactic considerations, the number of participants for this course is limited to 50.

Please register through myStudies to enroll for the course.

Slots are assigned on a first-come-first-serve basis (in the order of the registration date on myStudies). We will confirm your registration by e-mail. If you have any questions, please contact the chair of the course by email at the address chair@st.ethz.ch.

**Literature**

Course Topic and Learning Objectives:

Large- and medium-sized corporations play a central role in the economic activity of most developed and developing countries. Many of these organizations perform multiple business activities in multiple markets. In the face of increasing international competition, globalization, technological development, deregulation, and the emergence of new markets and industries, operating such a portfolio of business activities poses important managerial challenges forcing corporations to continuously re-consider their vertical and horizontal scope and boundaries.

The course Corporate Strategy draws from a wide range of theories and methods to develop an understanding of the conceptual frameworks, debates, and developments concerning decisions associated with the management of multi-business corporations. We will cover the key questions driving a firm’s corporate strategy, including:

- In what markets to compete with which businesses?
- Which activities should be performed by the firm and which should be outsourced (i.e. “make” or “buy” decisions)?
- What are the most appropriate approaches to growth and divestiture?
- How do institutional forces impact corporate strategy?

Specifically, we will examine how organizations manage their portfolio of business activities and markets to achieve competitive advantage through vertical integration, cooperative strategies such as strategic alliances and joint ventures, corporate diversification, mergers and acquisitions, divestitures, and globalization/international strategies, and strategic renewal.

Format:

The course is a combination of lectures about concepts/methods, guest lectures, case studies/assignments, and group debates/assignments.

Learning outcomes professional competence

- Contributing to the learning journey
- Transferring theory directly into application
- Writing academic papers

Learning outcomes methodological competence

- Apply tools hands on in real companies (in coll. with companies)
- Identify and understand specific forms of collaboration (Strat. All., JV, Networks, M&A, etc.)
- Understand underlying theoretical models (Transaction cost theory, principal agent, game theory)

Learning outcomes social competence

- Contributing to the learning journey
- Work together with industrial partners
- Improving communication skills as basics for collaboration
- Developing and applying team work skills
- Coping with conflicts resolution in teams

Content

The constantly augmenting complexity of technologies and systems, the increased pressure caused by competition, the need for shortening time-to-market and the thereby implied growing risks force organizations to increasingly focus on core competencies. Collaboration with external partners is a key value creation opportunity for successful ventures. This type of cooperation also has implications on daily management activities. This lecture will provide a better understanding of special requirements needed for management of cooperation issues. Content:

- Introduction to theory and management of inter-firm collaboration and networks.
- Description of the formation, management and evolution of collaborations and networks.
- Collaborations in marketing, development, manufacturing (e.g. NUMMI).
- Special forms of collaborations: mergers & acquisition (e.g. pre- and post-merger activities, joint venture, strategic alliances (e.g. Doz & Hamel, networks, virtual communities)

Learning journey:

In an introductory lecture we will give an overview of the theoretical framework and explain the concept of the lecture (Sept. 18, 2014). In weeks 2-5 you will work on a first assignment on six different aspects of the underlying framework: strategy and activities, structure and process, culture and people orientation, interaction and roles, risk and trust, knowledge and learning. This first assignment will give you the basics to participate in the second part (Oct. 30-31, 2014) of this seminar. There you will present the results of the first assignment and get additional theoretical input to perform the 2nd assignment. The second assignment will be to analyze real alliance projects in the partner companies. The final lesson will be used as a best practice exchange together with our industrial partners (Dec. 18, 2014).

Lecture notes

- Lecture script
- Current course material
- Harvard Case Studies
- Reader with current papers

Literature

A list with recommended publications will be distributed in the lecture.

Additional Books:

- HBR Collaborating Effectively ISBN 978-1-4221-6264-4
- HBR on Mergers and Acquisitions ISBN 1-57851-555-6
Prerequisites / notice

The number of students participating in the lecture is limited to 30.

351-0555-00L Open- and User Innovation W 3 credits 2G S. Häfliger, S. Spaeth

Abstract

The course introduces the students to the long-standing tradition of actively involving users of technology and other knowledge-intensive products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies.

Objective

The course includes both lectures and exercises alternately. The goal is to understand the opportunity of user innovation for management and develop strategies to harness the value of user-developed ideas and contributions for firms and other organizations.

The students actively participate in discussions during the lectures and contribute presentations of case studies during the exercises. The combination should allow to compare theory with practical cases from various industries.

The course presents and builds upon recent research and challenges the students to devise innovation strategies that take into account the availability of user expertise, free and public knowledge, and the interaction with communities that span beyond one organization.

Content

Grading is based on the final exam, the class presentations (including the slides) as well as class participation.

This course on user innovation extends courses on knowledge management and innovation as well as marketing. The students are introduced to the long-standing tradition of actively involving users of technology and other knowledge-intensive products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies. Theoretical underpinnings taught in the course include models of innovation, the structuration of technology, and an introduction to entrepreneurship.

Lecture notes

The slides of the lectures are made available and updated continuously through the SMI website:

Literature

Relevant literature for the exam includes the slides and the reading assignments. The corresponding papers are either available from the author online or distributed during class.

Reading assignments: please consult the SMI website:

363-0884-00L Industrial Engineering and Management Methodology W 1 credit 1G

Abstract

This course is a preparation course for theses in industry: Criteria of scientific work, writing the final report, using research resources at ETH. Using case studies, content of other lectures is discussed with regard to the special challenges during theses: Systems Engineering, Social science methods for empirical data collection and analysis, project management, presentation technique.

Objective

The objective of this course is to provide students with a practical toolset of techniques, procedures and hints for a successful scientific thesis (Bachelor/Master/MAS Thesis) in industry. The course is held by assistants of professorships at D-MTEC.

Content

Methodology: Systems Engineering, problem solving process, situation analysis, SWOT, objectives, solution finding, evaluation.

Project Management: tasks plan, milestones, roles, communication

Scientific work: research, resources, citation, argumentation

Presentation: techniques, procedure, handouts, significance

Final report: organization, layout, figures, formal requirements, appendix

Lecture notes

http://www.timgroup.ethz.ch/education/Courses_at_TIMGROUP

Handouts of the presentations / course materials have to be downloaded and printed out before the course (see link above).

Literature

Further reading:

This course provides theory-grounded knowledge and practice-driven skills for founding, financing, and growing new technology ventures.

Lecture Cycle Purchasing

Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by management research.

1S. Wagner

This lecture is about practical and theoretical issues in the field of purchasing & supply management. Purchasing managers from various industries examine the importance of purchasing for corporate success.

Possible topics of the presentations could be: Corporate and purchasing strategy, supplier networks, procurement innovations, and sustainability in purchasing & supply management.

The speakers are executives from purchasing and supply chain management departments as well as from general management. They will discuss recent issues in purchasing and supply management such as: Corporate and purchasing strategy, supplier networks, procurement organization, innovations in purchasing, supply chain redesign, sustainability in purchasing & supply management.

The course is held in English; handouts are available in English.

Besonderes (deutsche Version):

Der Kurs richtet sich an Studierende, welche an einer Professur des D-MTEC eine Arbeit in der Wirtschaft schreiben werden. Im Allgemeinen sind dies:

1. MSc-Studierende MTEC oder MAVT mit Masterarbeit (MA) im kommenden Semester, die vom MTEC betreut wird, (entspricht 3. oder 4. Semester Master) sowie
2. BSc-Studierende MAVT mit Bachelorarbeit (BA) in der Wirtschaft, die vom MTEC betreut wird, sowie mit vollem MTEC Fokus (entspricht 5. oder 6. Semester Bachelor) oder

Die Veranstaltung wird auf Englisch gehalten; Handouts sind in Englisch verfügbar.

363-0345-01L Lecture Cycle Purchasing

This lecture is about practical and theoretical issues in the field of purchasing & supply management. Purchasing managers from various industries examine the importance of purchasing for corporate success. Possible topics of the presentations could be: Corporate and purchasing strategy, supplier networks, innovations in purchasing, supply chain redesign, sustainability in purchasing.

The speakers are executives from purchasing and supply chain management departments as well as from general management. They will discuss recent issues in purchasing and supply management such as: Corporate and purchasing strategy, supplier networks, procurement organization, innovations in purchasing, supply chain redesign, sustainability in purchasing & supply management.

363-0887-00L Management Research

The course is mandatory for MSc students and recommended for MAS students who write their Master Thesis at the Chair of Strategic Management and Innovation.

Participation to both sessions are mandatory to receive the credit, there will be no exceptions.

If a student can't take part in one of the sessions, the course has to be taken the following semester.

This course teaches students about the basic principles of scientific work in the field of social sciences. The goal is to motivate students to develop an own thesis design and write scientific articles.
Objective
This course teaches students about the basic principles of scientific work in the field of social sciences. The goal is to motivate students to develop an own thesis design and write scientific articles.

Content
This course teaches students about the basic principles of scientific work in the field of social sciences. It is an introduction into the fascinating field of research. The course shows the power of theory and literature, helps formulating intriguing research questions, provides an overview of scientific methods and data analysis, and gives hints on how to derive insightful conclusions out of results. The goal is to motivate students to find and read research papers relevant to their field, develop an own thesis design and write scientific articles.

Literature
Nicolay Siggekow (2007) Persuasion with Case Studie AMJ Vol. 50, No. 1

Prerequisites / notice
The course is mandatory for MSc. students and recommended for MAS students who write their Master Thesis at the Chair of Strategic Management and Innovation - those will be served first.
· The course will be given once every semester by Dr. Zeynep Erden Özkol and the PhD students of the chair
· The course takes two days, one for lecture, one for student paper presentations. Participation to both sessions are mandatory to receive the credit, there will be no exceptions.
· Students who participate in the lecture and present a paper receive 1 credit point. The course and the presentations will be given in English.
· Students might benefit more if they take this course towards the end of their studies, before writing their master thesis.

363-0445-02L Production and Operations Management (Additional Cases)
Abstract
Extension to course 363-0445-00 Production and Operations Management.
Objective
Extension to course 363-0445-00 Production and Operations Management.
Content
Additional cases to course 363-0445-00 Production and Operations Management.

363-0622-00L Basic Management Skills
Abstract
With the aim of preparing the students to take on managerial responsibility, this 2x5 days-seminar teaches basic and practical management skills.
Objective
To convey management behaviour based on practical examples, own experiences and team discussions complemented by short theory sessions (subsidized from the donation for promotion and training in enterprise sciences at the ETHZ).
Content
1 Fundamentals of Communication Psychology
2 Communication in Business-Life
3 Fundamentals of Leadership
4 Self-Management and Life Balance
5 Leadership Tools
6 Problem Solving and Decision Making Techniques
7 Performance Coaching
8 Conflict Management
9 Personality
10 Summary-Day, Domino-Examination

365-1019-00L Human Resource Management: Skills in Practice
Abstract
Exclusively for MAS MTEC students (third semester).
Objective
Limited number of participants: Mandatory registration required.

365-1019-00L 

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 933 of 1571
Entrepreneurial Leadership

Based on several core Human Resource Management processes, this seminar teaches practical skills in HRM and leadership in teams. Using a variety of interactive methods and discussions of real-life situations, it provides a highly practice-oriented approach to dealing with potential HRM- and team-related conflicts at work.

Objective
Participants are able to cope with potentially difficult HRM-related situations they may encounter as line managers and team leaders.

Content
Based on several core Human Resource Management processes (e.g., recruiting, performance management, reward, training and development), this seminar teaches practical skills in HRM and leadership in teams from a managerial point of view. Using a variety of interactive methods (e.g., role plays) and discussions of real-life situations, it provides a highly practice-oriented approach to dealing with potential HRM- and team-related conflicts at work. The course also includes a guest lecture on diversity and gender issues at work.

Literature
Will be announced and published ahead of each session.

Prerequisites / notice
Prior participation in Prof. Grote's lecture 'Human Resource Management: Leading Teams' is highly recommended.

The online course will be open from 19.09.2016 to 22.01.2017. Within this time, students can proceed through the course at their own convenience. Seat time is about 25 hours. The online course should be accessed and activated only if students wish to take and complete it.

No lectures are offered for this course. Specific course topics can be discussed with other course participants, and any questions regarding the course content will be answered by an expert on the learning platform Moodle.

**363-1044-00L Applied Negotiation Seminar**

*Due to didactics reasons, the number of participants is limited to 30.*

Prerequisites: Successful completion of lectures “363-1039-00L Introduction to Negotiation”.

**Abstract**
The block-seminar combines lectures introducing negotiation, negotiation engineering and specific aspects of successful negotiation with the respective application through in-class negotiation case studies and games.

**Objective**
Students obtain a concentrated insight into key aspects of the field of negotiations, negotiation engineering and specific aspects of successful negotiation. Multiple opportunities to apply that knowledge in different negotiation situations allow for an in-depth learning experience.

**365-1035-00L Quality Management**

**Abstract**
The design of this course is intended to introduce quality management from an operations and manufacturing viewpoint. Many of the key topics covered throughout the course can be located in the Content section below.

**Objective**
This course will provide students with the underlying principles and techniques surrounding Quality Management with an emphasis on the application in manufacturing and services settings. Students will develop a working knowledge of the best practices in Quality and Process Management. Students will learn to view quality from a variety of functional perspectives and in the process, gain a better understanding of the problems associated with improving quality. The course aims to impart knowledge on the quality management process and key quality management activities. Specifically it aims to: Compare and contrast the various tools used in quality management, comprehend the concepts of customer's value, discuss the emerging tendencies toward global competitiveness, understand different perspectives on quality, explore six-sigma management and its tools, demonstrate how to design quality into product and services, describe the importance of developing a strategic plan for Quality Management, and discuss the importance of 'benchmarking' as a means of identifying the choice of markets.

**Content**
Major Topics:
- Total Quality Management (TQM): Excellence in manufacturing/service, factors of excellence, applications of TQM
- Process Management: Quality function development (QFD) and quality assurance systems, factors affecting process management

**Literature**
**Readings:**
- ISO 9001, 9002, 9003 / ISO 14001 (Environmental quality policies)

**363-1049-00L Contemporary Conflict Management**

**Abstract**
The course provides students with theoretical background and practical insights in conflict management in the 3 areas international, business and interpersonal (legal) relations. Students are introduced into theoretical concepts related to the research field and real world case studies including examples of international conflicts, WWI, old and new regional conflicts, business and mediation.

**Objective**
Students will gain
- knowledge of history of conflict management;
- comprehension of major ideas in the theory and practice of conflict management, mediation, transformation and resolution;
- application of theoretical concepts to current conflict situations;
- evaluation of conflict situations in international relations and business.

**Content**
The following topics will be covered:
- history of international and regional conflicts;
- theoretical concepts of conflict management;
- theoretical models of arms races and conflict escalation;
- case studies in international conflicts, as well as in business.

Distinguished guest speakers will be invited.
This course is based on mini-cases that will be distributed during the classes.

- Fraud and corruption in organizations

This course will enhance students' understanding of the complexity of hierarchical relationships in the workplace in weekly lessons that

3 credits
A. Vaccaro
Managing the Technology Driven Enterprise

The aim of this module is to introduce students to some key concepts in technology marketing and to familiarize them subsequently with the challenges that (marketing) managers face in technology intensive markets by using real life cases. Students will have to "solve" current and past managerial problems and will be enabled to compare their solutions with what has actually been done.

2 credits
S. von Wangenheim
365-1067-00L (Un)ethical Decision Making: Alternative and Critical Thinking in Management

Limited number of participants: a minimum of 10 persons and a maximum of 40 persons.

Please register by 7.9.2016 at the latest via myStudies.

This course is about decision making processes in complex situations involving financial, relational and ethical problems. First, it provides fundamental tools for addressing problematic situations.

Second, it discusses how stakeholders' ethical expectations and social responsibility issues can be effectively implemented and integrated in organizational systems and strategic planning processes.

- Understanding the mutual relationship between financial, relational and ethical drivers in managerial decision making
- Become familiar with tools and procedures to prevent and resolve corporate crises and scandals
- Understand the opportunities associated with the corporate social responsibility (CSR) movement and how to integrate CSR in organizational and strategic planning
- Create an effective CSR strategic planning process to successfully develop and implement a CSR package
- Understand a variety of strategic CSR planning tools
- Become familiar with creating deep destructive change in pursuit of dual economic and social value

Content
- Fraud and corruption in organizations
- Crisis management
- Personnel problems: Preventing and managing mobbing and sexual harassment
- Global criminal networks

Lecture notes
Most classes are taught through a series of mini-cases and notes that represent real management decisions.

Some classes are complemented with readings from prominent media resources, guest speakers and experimental exercises.

This course is based on mini-cases that will be distributed during the classes.

https://moodle-app2.let.ethz.ch/course/view.php?id=2210
(The Enrollment Key to Moodle will be provided one week before the course)

No Pre-course preparation as requirement.

This is an interactive course.

Number of participants limited to 20.

Students have to apply for this course by sending a CV and an one-page motivation letter to mgrohmann@ethz.ch. Additionally please enroll via myStudies. Places will be assigned on the basis of your motivation letter.

Abstract
The aim of this module is to introduce students to some key concepts in technology marketing and to familiarize them subsequently with the challenges that (marketing) managers face in technology intensive markets by using real life cases. Students will have to "solve" current and past managerial problems and will be enabled to compare their solutions with what has actually been done.

Objective
This module should enable students to deal with the uncertainty related to challenges in technology marketing by introducing them to some key concepts and letting them apply those concepts to real life cases. The competences acquired in this module are meant to go beyond the mere understanding of the study material by improving students' problem solving capabilities, analytical skills and capacity for team work. Furthermore, students will be exposed to decision-making styles and procedures in companies.

Content
Students have to work on three to four real Bühler cases and present the solutions in class.

Solutions/ presentations will be part of the grades.

Prerequisites / notice
Students have to apply for this course by sending a CV and a one-page motivation letter until 09.09.2015 to mgrohmann@ethz.ch.

365-1080-00L

Power and Leadership

Students will learn about different leadership styles and how power and leadership play out in social interactions. Emphasis is placed on the importance of implementation and application to the workplace.

3 credits
P. Schmid

This course will enhance students' understanding of the complexity of hierarchical relationships in the workplace in weekly lessons that include lectures, analysis of leadership situations (e.g., case studies), exercises, and group discussions. More specifically, students will be informed about how power shapes people's behaviors and decision-making processes. They will learn to analyze the different elements that make a good leader including personality traits, behavior, and habits. With case studies and small group exercises, students will learn to evaluate different types of social and emotional skills related to leadership and will be encouraged to reflect upon their own communication skills and leadership potential. The course further addresses integrity and ethics in leadership.

Class presence is mandatory.

Number of participants limited to 20 and a maximum of 40 persons.

Please register through myStudies to enrol for the course no later than 10.10.2016.

This interactive course provides leaders in technology-driven enterprises with critical insights and tools for addressing key challenges in innovation management.

365-1083-00L

Managing the Technology Driven Enterprise

Exclusively for MAS MTEC students (third semester).

Limited number of participants: a minimum of 20 and a maximum of 40 persons.

This interactive course provides leaders in technology-driven enterprises with critical insights and tools for addressing key challenges in innovation management.

2 credits
P. Bubenzer
Objective

This course offers an intensive, two-day integrated learning experience to provide leaders in technology-driven enterprises with critical insights and tools for tackling key innovation management challenges. The course combines an innovative set of lectures with practical case studies and group exercises taught by seasoned industry executives with experience in technology-driven start-ups and large firms in a variety of industries. Unlike more traditional courses, this is a highly interactive immersion into real-life challenges where established frameworks and contemporary models are used to develop leadership capabilities in technologically complex business environments. This course is thus designed to particularly suit the needs and expectations of engineers or other technology specialists who intend to develop into more general leadership roles in technology based enterprises.

Content

This course is tailored to, firstly, enable participants to understand key concepts of technology and innovation management and, secondly, gain practical “real-life based” leadership skills that improve their ability to implement massive innovative change in today’s dynamic global work and marketplace. In consequence, the first part of the course explores foundational frameworks in technology and innovation management with a particular focus on the evolution and adoption of technology-based innovations. The second part of the course, then, provides tools for successfully implementing innovation initiatives at all levels - individual, project and organization.

Literature

Eligible for credits

Recommended, not eligible for credits

Lecturers

Participants form teams and identify an idea, which is then taken through the steps necessary to form a startup. The primary focus of this course is geared to technology startups that want to reach scale. The course enables students to identify an idea that they would like to commercialise through the course. If they do not have an idea, they are required to provide a motivation letter stating why they would like to do this elective.

The total number of students in this first batch will be limited to 30. It is preferable that the students already form teams of at least two persons, where both the team-members would like to do the course. The names of the team-members should be provided together with the business idea or the motivation letter submitted by the students.

The students should submit the necessary information and apply before 21st September 2016 to anilsethi@ethz.ch. They will be intimated by 23rd September 2016 to confirm if they have secured a place.

Once the application has been confirmed, a registration in myStudies is possible.

Abstract

Participants form teams and identify an idea, which is then taken through the steps necessary to form a startup. The primary focus of the course is geared to technology startups that want to reach scale.

Objective

Participants want to become entrepreneurs.

Content

Participants can be from business or science & technology. The course will enable the students to identify an idea and take all necessary steps to convert it into a company, through the duration of the two semesters.

The participants will have constant exposure to investors and entrepreneurs (with a focus on ETH spin-offs) through the course, to gain an understanding of their vision and different perspectives.

Prerequisites / notice

This course is only relevant for those students who aspire to become entrepreneurs.

Students applying for this course are requested to submit a 1 page business idea or, in case they don't have a business idea, a brief motivation letter stating why they would like to do this course.

This will be in two modules (autumn and spring), which will run in two consecutive semesters. Priority for the second semester will be given to those students who have attended the first semester.

ECTS  European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
Introduction and analysis of medical imaging technology including X-ray procedures, computed tomography, nuclear imaging techniques using single photon and positron emission tomography, magnetic resonance imaging and ultrasound imaging techniques.

To understand the functional chain from primary physical effects of ionizing radiation to clinical radiation effects. Dealing with dose as a quantitative measure of medical exposure. Getting familiar with methods to generate ionizing radiation in medicine and learn how they are applied for medical purposes. Eventually, the lecture aims to show the students that medical physics is a fascinating and evolving discipline where physics can directly be used for the benefits of patients and the society.

The specializations in medicine are introduced. The students will learn the basics of medical physics and gain an overview of the different fields of application. The specializations will be presented in an accessible manner targeted to physicist working in a medical environment. The lectures will be based on current clinical practices in Radiology, Neuroradiology and Nuclear Medicine. After an introduction to cells and tissues the following systems will be addressed: 1) Support & Movement (musculoskeletal system, biomechanics); 2) Neurosciences (central and peripheral nervous system); 3) Auto-regulation (endocrine system) & Internal Transport (blood & cardiovascular system); 4) Environmental Exchange (respiratory, urinary, digestive & reproductive system).

The course starts with the physical basis of radiography (from X-ray production to image detectors) and continues with the basic parameters of image quality in radiography (contrast, resolution, noise) and their measurement methods. Specific applications of radiation diagnostic are then considered separately.

The course deals with simple quantitative and graphical as well as more complex methods of biostatistics. Contents: Descriptive statistics, probability theory and design of experiments, testing hypotheses, confidence intervals, correlation, simple and multiple linear regression, classification and prediction, diagnostic tests, measurement of agreement.

The course is dedicated to introduce MAS students from Medical Physics to the field of radiodiagnostic and nuclear medicine. Dedicated practicals will illustrate the theory with an emphasis on the relationship between dose and image quality as well as the security problems related to the work with radiations.

The course starts with the physical basis of radiography (from X-ray production to image detectors) and continues with the basic parameters of image quality in radiography (contrast, resolution, noise) and their measurement methods. Specific applications of radiation diagnostic are then considered separately.

The physics of fluoroscopy and mammography is presented with emphasis on the type of detectors. Computer tomography starts from mono- to multi-detector row technology and finishes with the dose indicators and the impacts of acquisition parameters on patient dose. Nuclear medicine is approached through the production and labeling of radiopharmaceuticals before explaining the aspects related to quality control like the stability of the compounds, nuclide- and radionuclide purity as well as apyrogenicity and sterility. Imaging aspects of nuclear medicine are treated in details for SPECT and PET through the instrumentation, the reconstruction algorithms and the corresponding image quality.

Finally, the aspects related to patient dose and radiation protection of the personnel are considered separately for diagnostic radiology and nuclear medicine. The general frameworks of external as well as internal irradiation are presented and practical examples of dose calculations are explained.

The lecture is covering the basic principles of ionizing radiation and its physical and biological effects. The physical interactions of photons as well as of charged particles will be reviewed and their consequences for medical applications will be discussed. The concept of Monte Carlo simulation will be introduced in the excercises and will help the student to understand the characteristics of ionizing radiation in simple and complex situations. Fundamentals in dosimetry will be provided in order to understand the physical and biological effects of ionizing radiation. Deterministic as well as stochastic effects will be discussed and fundamental knowledge about radiation protection will be provided. In the second part of the lecture series, we will cover the generation of ionizing radiation. By this means, the x-ray tube, the clinical linear acceleratior, and different radioactive sources in radiology, radiotherapy and nuclear medicine will be addressed. Applications in radiology, nuclear medicine and radiotherapy will be described with a special focus on the physics underlying these applications.

A script will be provided.
Abstract
The purpose of this course is to impart basic knowledge in radiobiology in order to handle ionizing radiation and to provide a basis for predicting the radiation risk.

Objective
By the end of this course the participants will be able to:

a) interpret the 5 Rs of radiation oncology in the context of the hallmarks of cancer
b) understand factors which underpin the differing radiosensitivities of different tumors
c) follow rational strategies for combined treatment modalities of ionizing radiation with targeted agents
d) understand differences in the radiation response of normal tissue versus tumor tissue
e) understand different treatment responses of the tumor and the normal tissue to differential clinical-related parameters of radiotherapy (dose rate, LET etc.).

Content
Einführung in die Strahlenbiologie ionisierender Strahlen: Allgemeine Grundlagen und Begriffsbestimmungen; Mechanismen der biologischen Strahlenwirkung; Strahlenwirkung auf Zellen, Gewebe und Organe; Modifikation der biologischen Strahlenwirkung; Strahlenzytogenetik; Chromosomenveränderungen, DNA-Defekte, Reparaturprozesse; Molekulare Strahlenbiologie: Bedeutung inter- und intrazellulärer Signalübermittlungsprozesse, Apoptose, Zellzyklus-Checkpoints; Strahlenrisiko: Strahlensyndrome, Krebsinduktion, Mutation auslösung, pränatale Strahlenwirkung; Strahlenbiologische Grundlagen des Strahlenschutzes; Nutzen-Risiko-Abwägungen bei der medizinischen Strahlenanwendung; Prädikitive strahlenbiologische Methoden zur Optimierung der therapeutischen Strahlenanwendung.

Abstract
The former number of this course unit is 465-0951-00L.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 940 of 1571
The lecture introduces the physical and technical know-how of X-ray tomographic microscopy. Several X-ray imaging techniques (absorption-, phase- and darkfield contrast) will be discussed and their use in daily research, in particular biology, is presented. The course discusses the aspects of quantitative evaluation of tomographic data sets like segmentation, morphometry and statistics. The lecture includes a general introduction to the principles of tomographic imaging from image formation to image reconstruction. It provides the physical and engineering basics to understand how imaging beamlines at synchrotron facilities work, looks into the recently developed phase contrast methods, and explores the first applications of X-ray nano-tomographic experiments.

The course finally provides the necessary background to understand the quantitative evaluation of tomographic data, from basic image analysis to complex morphometrical computations and 3D visualization, keeping the focus on biomedical applications.

The course includes a general introduction to the principles of tomographic imaging from image formation to image reconstruction. It provides the physical and engineering basics to understand how imaging beamlines at synchrotron facilities work, looks into the recently developed phase contrast methods, and explores the first applications of X-ray nano-tomographic experiments.

The course finally provides the necessary background to understand the quantitative evaluation of tomographic data, from basic image analysis to complex morphometrical computations and 3D visualization, keeping the focus on biomedical applications.
Objective
The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichromism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

**Clinical and Movement Biomechanics**

Measurement and modeling of the human movement during daily activities and in a clinical environment.

The students are able to analyse the human movement from a technical point of view, to process the data and perform modeling with a focus towards clinical application.

This course includes study design, measurement techniques, clinical testing, accessing movement data and analysis as well as modeling with regards to human movement.

Trauma Biomechanics

Abstract
Trauma biomechanics in an interdisciplinary research field investigating the biomechanics of injuries and related subjects such as prevention. The lecture provides an introduction to the basic principles of trauma biomechanics.

Objective
Introduction to the basic principles of trauma biomechanics.

Content
This lecture serves as an introduction to the field of trauma biomechanics. Emphasis is placed on the interdisciplinary nature of impact biomechanics, which uses the combination of fundamental engineering principles and advanced medical technologies to develop injury prevention measures. Topics include: accident statistics and accident reconstruction, biomechanical response of the human to impact loading, injury mechanisms and injury criteria, test methods (including crash tests), computer simulations using multi-body and finite element modelling techniques, aspects of passive safety of vehicles (focusing on restraint systems and vehicle compatibility). Real world examples mainly from automobile safety are used to augment lecture material.

Lecture notes
Handouts will be made available.

---|---|---|---|---|---
151-0255-00L | Energy Conversion and Transport in Biosystems | W | 4 credits | 2V+1U | D. Poulikakos, A. Ferrari |

Abstract
Theory and application of thermodynamics and energy conversion in biological systems with focus on the cellular level.

Objective
Theory and application of energy conversion at the cellular level. Understanding of the basic features governing solutes transport in the principal systems of the human cell. Connection of characteristics and patterns from other fields of engineering to bioluidics. Heat and mass transport processes in the cell, generation of forces, work and relation to biomedical technologies.

Content
Mass transfer models for the transport of chemical species in the human cell. Organization and function of the cell membrane and of the cell cytoskeleton. The role of molecular motors in cellular force generation and their function in cell migration. Description of the functionality of these systems and of analytical experimental and computational techniques for understanding of their operation. Introduction to cell metabolism, cellular energy transport and cellular thermodynamics.

Lecture notes and references therein.

151-0524-00L | Continuum Mechanics I | W | 4 credits | 2V+1U | E. Mazza |

Abstract
The lecture deals with constitutive models that are relevant for design and calculation of structures. These include anisotropic linear elasticity, linear viscoelasticity, plasticity, viscoplasticity. Homogenization theories and laminate theory are presented. Theoretical models are complemented by examples of engineering applications and experiments.

Objective
Basic theories for solving continuum mechanics problems of engineering applications, with particular attention to material models.

Content

Lecture notes
yes

151-0604-00L | Micro robotics | W | 4 credits | 3G | B. Nelson |

Abstract
Micro robotics is an interdisciplinary field that combines aspects of robotics, micro and nanotechnology, biomedical engineering, and materials science. The aim of this course is to expose students to the fundamentals of this emerging field. Throughout the course students are expected to submit assignments. The course concludes with an end-of-semester examination.

Objective
The objective of this course is to expose students to the fundamental aspects of the emerging field of micro robotics. This includes a focus on physical laws that predominate at the microscale, technologies for fabricating small devices, bio-inspired design, and applications of the field.

Content
Main topics of the course include:
- Scaling laws at micro/nano scales
- Electrostatics
- Electromagnetism
- Low Reynolds number flows
- Observation tools
- Materials and fabrication methods
- Applications of biomedical microrobots

Lecture notes
The powerpoint slides presented in the lectures will be made available in hardcopy and as pdf files. Several readings will also be made available electronically.

Prerequisites / notice
The lecture will be taught in English.

263-5001-00L | Introduction to Finite Elements and Sparse Linear System Solving | W | 4 credits | 2V+1U | P. Arbenz |

Abstract
The finite element (FE) method is the method of choice for (approximately) solving partial differential equations on complicated domains. In the first third of the lecture, we give an introduction to the method. The rest of the lecture will be devoted to methods for solving the large sparse linear systems of equation that a typical for the FE method. We will consider direct and iterative methods.

Objective
Students will know the most important direct and iterative solvers for sparse linear systems. They will be able to determine which solver to choose in particular situations.
I. THE FINITE ELEMENT METHOD

(1) Introduction, model problems.
(2) 1D problems. Piecewise polynomials in 1D.
(3) 2D problems. Triangulations. Piecewise polynomials in 2D.
(4) Variational formulations. Galerkin finite element method.
(5) Implementation aspects.

II. DIRECT SOLUTION METHODS

(6) LU and Cholesky decomposition.
(7) Sparse matrices.
(8) Fill-reducing orderings.

III. ITERATIVE SOLUTION METHODS

(9) Stationary iterative methods, preconditioning.
(10) Preconditioned conjugate gradient method (PCG).
(11) Incomplete factorization preconditioning.
(12) Multigrid preconditioning.
(13) Nonsymmetric problems (GMRES, BiCGstab).
(14) Indefinite problems (SYMMLQ, MINRES).

Literature

Prerequisites / notice

Prerequisites: Linear Algebra, Analysis, Computational Science.
The exercises are made with Matlab.

376-2017-00L Biomechanics of Sports Injuries and Rehabilitation

Abstract

This lecture introduces the basic principles of injury mechanics and rehabilitation focussing on sports injuries.

Objective

Within the scope of this lecture you will learn the basic principles of trauma biomechanics. Based on examples from sports, you will get to know different mechanisms that can possibly result in injury. Investigating the background and cause of injury should allow you to assess the injury risk for sports activities. Furthermore you should be able to develop measures to prevent such injury.

Content

This lecture deals with the basic principles of injury mechanics and rehabilitation. Mechanisms that can result in injury are presented. Furthermore possibilities to prevent injuries are discussed. Thereby the lecture focuses on sports injuries.

Lecture notes

Handouts will be made available.

Literature

Prerequisites / notice

A course work is required. The mark of this course work contributes to the final credits for this lecture. Details will be given during the first lecture.

Abstract: The theoretical part of the course starts from an overview of existing and emerging applications that need computer vision. It shows how the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

Objective: The practical work is aimed at training the student’s capability to apply and connect specific skills acquired during the MAS specialization program towards the solution of a focused problem.

Abstract: From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles. Intermolecular forces, their macroscopic manifestations, and ways to control such interactions. Self-assembly and directed assembly of 2D and 3D structures. Special emphasis on the emerging field of molecular electronic devices.

Objective: Special emphasis is placed on the emerging field of molecular electronic devices, their working principles, applications, and how they may be assembled.

Content: Topics are treated in 2 blocks:

1. From Quantum to Continuum
   - From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

2. Interaction Forces on the Micro and Nano Scale
   - Intermolecular forces, their macroscopic manifestations, and ways to control such interactions. Self-assembly and directed assembly of 2D and 3D structures.

Lecture notes:

Prerequisites:
- Course material Script, computer demonstrations, exercises and problem solutions

Homework: Mini-Reviews
- Students select a paper (list distributed in class) and expand the topic into a Mini-Review that illuminates the particular field beyond the immediate results reported in the paper.
- Students prepare a presentation of the Mini-Review before the next lecture.

Abstract: It is the objective of this lecture to introduce the basic concepts used in Medical Image Analysis. In particular the lecture focuses on shape representation schemes, segmentation techniques, and the various image registration methods commonly used in Medical Image Analysis applications.

Objective: This lecture aims to give an overview of the basic concepts of Medical Image Analysis and its application areas.

Prerequisites:
- Basic knowledge of computer vision would be helpful.

Abstract

The lecture introduces the physical and technical knowledge of X-ray tomographic microscopy. Several X-ray imaging techniques (absorption-, phase- and darkfield contrast) will be discussed and their use in daily research, in particular biology, is presented. The course discusses the aspects of quantitative evaluation of tomographic data sets like segmentation, morphometry and statistics.

Objective

Introduction to the basic concepts of X-ray tomographic imaging, image analysis and data quantification at the micro and nano scale with particular emphasis on biological applications.

Content

Synchrotron-based X-ray micro- and nano-tomography and tomography is today a powerful technique for non-destructive, high-resolution investigations of a broad range of materials. The high-brilliance and high-coherence of third generation synchrotron radiation facilities allow quantitative, three-dimensional imaging at the micro and nanometer scale and extend the traditional absorption imaging technique to edge-enhanced and phase-sensitive measurements, which are particularly suited for investigating biological samples.

The lecture includes a general introduction to the principles of tomographic imaging from image formation to image reconstruction. It provides the physical and engineering basics to understand how imaging beamlines at synchrotron facilities work, looks into the recently developed phase contrast methods, and explores the first applications of X-ray nano-tomographic experiments.

The course finally provides the necessary background to understand the quantitative evaluation of tomographic data, from basic image analysis to complex morphometrical computations and 3D visualization, keeping the focus on biomedical applications.

Lecture notes

Available online

Literature

Will be indicated during the lecture.

**227-0967-00L Computational Neuroimaging Clinic**

W 3 credits 2V  K. E. Stephan

**Abstract**

This seminar teaches problem solving skills for computational neuroimaging, based on joint analyses of neuroimaging and behavioural data. It deals with a wide variety of real-life problems that are brought to this meeting from the neuroimaging community at Zurich, e.g. mass-univariate and multivariate analyses of fMRI/EEG data, or generative models of fMRI, EEG, or behavioural data.

**Objective**

1. Consolidation of theoretical knowledge (obtained in the following courses: 'Methods & models for fMRI data analysis', 'Translational Neuromodeling', 'Computational Psychiatry') in a practical setting.

2. Acquisition of practical problem solving strategies for computational modeling of neuroimaging data.

**Content**

This seminar teaches problem solving skills for computational neuroimaging, based on joint analyses of neuroimaging and behavioural data. It deals with a wide variety of real-life problems that are brought to this meeting from the neuroimaging community at Zurich, e.g. mass-univariate and multivariate analyses of fMRI/EEG data, or generative models of fMRI, EEG, or behavioural data.

**Prerequisites / notice**

The participants are expected to have successfully completed at least one of the following courses: 'Methods & models for fMRI data analysis', 'Translational Neuromodeling', 'Computational Psychiatry'.

**227-0969-00L Methods & Models for fMRI Data Analysis**

W 6 credits 4V  K. E. Stephan

**Abstract**

This course teaches methods and models for fMRI data analysis, covering all aspects of statistical parametric mapping (SPM), incl. preprocessing; the general linear model, statistical inference, multiple comparison corrections, event-related designs, and Dynamic Causal Modelling (DCM), a Bayesian framework for identification of nonlinear neuronal systems from neurophysiological data.

**Objective**

To obtain in-depth knowledge of the theoretical foundations of SPM and DCM and of their application to empirical fMRI data.

**Content**

This course teaches state-of-the-art methods and models for fMRI data analysis. It covers all aspects of statistical parametric mapping (SPM), incl. preprocessing, the general linear model, frequentist and Bayesian inference, multiple comparison corrections, and event-related designs, and Dynamic Causal Modelling (DCM), a Bayesian framework for identification of nonlinear neuronal systems from neurophysiological data. A particular emphasis of the course will be on methodological questions arising in the context of studies in psychiatry, neurology and neuroeconomics.

**376-1279-00L Virtual Reality in Medicine**

W 3 credits 2V  R. Rienner

**Abstract**

Virtual Reality has the potential to support medical training and therapy. This lecture will derive the technical principles of multi-modal (audiovisual, haptic, tactile etc.) input devices, displays and rendering techniques. Examples are presented in the fields of surgical training, intra-operative augmentation, and rehabilitation. The lecture is accompanied by practical courses and excursions.

**Objective**

Provide theoretical and practical knowledge of new principles and applications of multi-modal simulation and interface technologies in medical education, therapy, and rehabilitation.

**Content**

Virtual Reality has the potential to provide descriptive and practical information for medical training and therapy while relieving the patient and/or the physician. Multi-modal interactions between the user and the virtual environment facilitate the generation of high-fidelity sensory impressions, by using not only visual and auditory modalities, but also kinesthetic, tactile, and even olfactory feedback. On the basis of the existing physiological constraints, this lecture will derive the technical requirements and principles of multi-modal input devices, displays, and rendering techniques. Several examples are presented that are currently being developed or already applied for surgical training, intra-operative augmentation, and rehabilitation. The lecture will be accompanied by several practical courses on graphical and haptic display devices as well as excursions to facilities equipped with large-scale VR equipment.

**Target Group:**

Students of higher semesters and PhD students of:
- D-HEST, D-NAV, D-ITET, D-INF, D-PHYS
- Robotics, Systems and Control Master
- Biomedical Engineering/Movement Science and Sport
- Medical Faculty, University of Zurich

**Students of other departments, faculties, courses are also welcome!**

**Literature**

**Prerequisites / notice**

The course language is English. Basic experience in Information Technology and Computer Science will be of advantage. More details will be announced in the lecture.

**402-0674-00L Physics in Medical Research: From Atoms to Cells**

W 6 credits 2V+1U  B. K. R. Müller

**Abstract**

Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.
The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to far infrared light. The high-brilliance and high-coherence of third generation synchrotron radiation facilities allow quantitative, three-dimensional imaging at the micro and nanometer scale. The high-energy electrons used to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

| Abstract | Starting with the fabrication and analysis of nanoparticles and nanostructured materials that enable a variety of scientific and technical applications, we will transition to discussing biological nanosystems, how they work and what bioinspired engineering principles can be derived, to finally discussing biomedical applications and potential health risk issues. Scientific aspects as well as the many of the emerging technologies will be covered that start impacting so many aspects of our lives. This includes new phenomena in physics, advanced materials, novel technologies and new methods to address major medical challenges. |
| Objective | All the enrolled students will get access to a password protected website where they can find pdf files of the lecture notes, and typically 1-2 journal articles per lecture that cover selected topics. |
Microrobotics is an interdisciplinary field that combines aspects of robotics, micro and nanotechnology, biomedical engineering, and materials science. The aim of this course is to expose students to the fundamentals of this emerging field. Throughout the course students are expected to submit assignments. The course concludes with an end-of-semester examination.

The class consists of three parts:

1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Introduction to native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.

In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

The powerpoint slides presented in the lectures will be made available in hardcopy and as pdf files. Several readings will also be made available electronically.

Lecture notes
Introduction to Biomedical Engineering by Enderle, Banchard, and Bronzino

AND

https://www1.ethz.ch/lbb/Education/BME

327-1101-00L  Biomineralization W 2 credits 2G K.H. Ernst

Abstract
The course addresses undergraduate and graduate students interested in getting introduced into the basic concepts of biomineralization.

Objective
The course aims to introduce the basic concepts of biomineralization and the underlying principles, such as supersaturation, nucleation and growth of minerals, the interaction of biomolecules with mineral surfaces, and cell biology of inorganic materials creation. An important part of this class is the independent study and the presentation of original literature from the field.

Content
Biomineralization is a multidisciplinary field. Topics dealing with biology, molecular and cell biology, solid state physics, mineralogy, crystallography, organic and physical chemistry, biochemistry, dentistry, oceanography, geology, etc. are addressed. The course covers definition and general concepts of biomineralization (BM)/ types of biominerals and their function / crystal nucleation and growth / biological induction of BM / control of crystal morphology, habit, shape and orientation by organisms / strategies of compartmentalization / the interface between biomolecules (peptides, polysaccharides) and the mineral phase / modern experimental methods for studying BM phenomena / inter-, intra, extra- and epicellular BM / organic templates and matrices for BM / structure of bone, teeth (vertebrates and invertebrates) and mollusk shells / calcification / silification in diatoms, radiolaria and plants / calcium and iron storage / impact of BM on lithosphere and atmosphere/ evolution / taxonomy of organisms.

1. Introduction and overview
2. Biominerals and their functions
3. Chemical control of biomineralization
4. Control of morphology: Organic templates and additives
5. Modern methods of investigation of BM
6. BM in matrices: bone and nacre
7. Vertebrate teeth
8. Invertebrate teeth
9. BM within vesicles: calcite of coccoliths
10. Silica
11. Iron storage and mineralization

Lecture notes
Script with more than 600 pages with many illustrations will be distributed free of charge.

Literature
3) P. M. Dove, J. J. DeYoreo, S. Weiner (Eds.) Biomineralization, Reviews in Mineralogy & Geochemistry Vol. 54, 2003

Prerequisites / notice
Each attendee is required to present a publication from the field. The selection of key papers is provided by the lecturer. No special requirements are needed for attending. Basic knowledge in chemistry and cell biology is expected.

376-1622-00L  Practical Methods in Tissue Engineering W 5 credits 4P K. Würtz-Kozak, M. Zenobi-Wong

Abstract
The goal of this course is to teach MSc students the necessary skills for doing research in the fields of tissue engineering and regenerative medicine.

Objective
Practical exercises and demonstrations on topics including sterile cell culture, light microscopy and histology, protein and gene expression analysis, and viability assays are covered. The advantages of 3D cell cultures will be discussed and practical work on manufacturing and evaluating hydrogels and scaffolds for tissue engineering will be performed in small groups. In addition to practical lab work, the course will teach skills in data acquisition/analysis.

402-0674-00L  Physics in Medical Research: From Atoms to Cells W 6 credits 2V+1U B. K. R. Müller

Abstract
Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.
Bioinformatics I will cover the following topics:

- Drug Delivery and Drug Targeting

The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitations of the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

**Objective**

The students gain an overview on current principles, methodologies and systems for controlled delivery and targeting of drugs. This enables the students to understand the field in terms of scientific criteria.

**Abstract**

The students dispose of an overview on current principles and systems for the controlled delivery and targeting of drugs. The focus of the course lies on developing a capacity to understand the involved technologies and methods, as well as an appreciation of the chances and constraints of their therapeutic usage, with prime attention on anticancer drugs, therapeutic peptides, proteins, nucleic acids and vaccines.

**Content**

The course covers the following topics: drug targeting and delivery principles, radiopharmaceuticals, macromolecular drug carriers, liposomes, micelles, micro/nanoparticles, gels and implants, administration of vaccines, delivery of active agents in tissue engineering, targeting at the gastrointestinal level, synthetic carriers for nucleic acid drugs, opthalmic devices and novel trends in transdermal and nasal drug delivery.

**Lecture notes**

Selected lecture notes, documents and supporting material will be directly provided or may be downloaded using

http://www.galenik.ethz.ch/teaching/drug_del_drug_targ

The website also displays additional information on peroral delivery systems, transdermal systems and systems for alternative routes (nasal, pulmonary) of delivery. These fields are covered in detail in the course Galenische Pharmazie II (Galenical Pharmacy II).

**Literature**

Further references will be provided in the course.

<td>Objective</td>
<td>Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monopolures of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Content</td>
<td>This course considers the structure and function of biological neural networks at different levels. The function of neuronal networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood. If biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.</td>

| Objective    | The class consists of three parts:  
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.  
2. The concept of biocompatibility.  
3. Introduction into methodology used in biomaterials research and application. | | | | |
| Content      | Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed. In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers. | | | | |
Many disciplines are meeting at the nanoscale, from physics, chemistry to engineering, from the life sciences to medicine. The course will prepare students to communicate more effectively across disciplinary boundaries, and will provide them with deep insights into the various frontiers.

The goal of the course is to give Master and Graduate students from all interested departments an overview of what nanotechnology is all about, from analytical techniques to nanosystems, from physics to biology. Students will start to appreciate the extent to which scientific communities are meeting at the nanoscale. They will learn about the specific challenges and what is currently sizzling in the respective frontiers.

Each lecturer will first give an overview of the state-of-the-art in his/her field, and then describe the research highlights in his/her own research group. While preparing their Final Projects and discussing them in front of the class, the students will deepen their understanding of how to apply a range of new technologies to solve specific scientific problems and technical challenges. Exposure to the different frontiers will also improve their ability to apply and connect specific skills acquired during the MAS specialization program towards the solution of a focused problem.
Starting with the fabrication and analysis of nanoparticles and nanostructured materials that enable a variety of scientific and technical applications, we will transition to discussing biological nanosystems, how they work and what bioinspired engineering principles can be derived, to finally discussing biomedical applications and potential health risk issues. Scientific aspects as well as the many of the emerging technologies will be covered that start impacting so many aspects of our lives. This includes new phenomena in physics, advanced materials, novel technologies and new methods to address major medical challenges.

Lecture notes

All the enrolled students will get access to a password protected website where they can find pdf files of the lecture notes, and typically 1-2 journal articles per lecture that cover selected topics.

**402-0674-00L**

**Physics in Medical Research: From Atoms to Cells**  
W 6 credits  2V+1U  B. K. R. Müller

Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.

**Abstract**

The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

**529-0837-00L**

**Biomicrofluidic Engineering**  
W 7 credits  3G  A. de Mello

Number of participants limited to 30.

**Abstract**

Microfluidics describes the behaviour, control and manipulation of fluids that are geometrically constrained within sub-microliter environments. The use of microfluidic devices offers an opportunity to control physical and chemical processes with unrivalled precision, and in turn provides a route to performing chemistry and biology in an ultra-fast and high-efficiency manner.

**Objective**

In the course students will investigate the theoretical concepts behind microfluidic device operation, the methods of microfluidic device manufacture and the application of microfluidic architectures to important problems faced in modern day chemical and biological analysis. A design workshop will allow students to develop new microscale flow processes by appreciating the dominant physics at the microscale. The application of these basic ideas will primarily focus on biological problems and will include a treatment of diagnostic devices for use at the point-of-care, advanced functional material synthesis, DNA analysis, proteomics and cell-based assays. Lectures, assignments and the design workshop will acquaint students with the state-of-the-art in applied microfluidics.

**Content**

Specific topics in the course include, but not limited to:

1. Theoretical Concepts
   - Features of mass and thermal transport on the microscale
   - Key scaling laws
2. Microfluidic Device Manufacture
   - Conventional lithographic processing of rigid materials
   - Soft lithographic processing of plastics and polymers
   - Mass fabrication of polymeric devices
3. Unit operations and functional components
   - Analytical separations (electrophoresis and chromatography)
   - Chemical and biological synthesis
4. Sample pre-treatment (filtration, SPE, pre-concentration)
   - Molecular detection
5. Design Workshop
   - Design of microfluidic architectures for PCR, distillation & mixing
6. Contemporary Applications in Biological Analysis
   - Microarrays
   - Cellular analyses (single cells, enzymatic assays, cell sorting)
   - Proteomics
7. System integration
   - Applications in radiochemistry, diagnostics and high-throughput experimentation

**636-0003-00L**

**Biological Engineering and Biotechnology**  
W 6 credits  3V  M. Fussenegger

Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.
Objective
1. Insight Into The Mammalian Cell Cycle. Cycling, The Balance Between Proliferation and Cancer - Implications For Biopharmaceutical Manufacturing.
2. The Licence To Kill. Apoptosis Regulatory Networks - Engineering of Survival Pathways To Increase Robustness of Production Cell Lines.
5. From Target To Market. An Antibody’s Journey From Cell Culture to Biologics and Malign Applications. Do Life Sciences Enable the Development of Biological Weapons?
6. Functional Food. Enjoy your Meal!
7. Molecular dynamics simulation and how this information can be used to simulate dynamic molecular networks.

Abstract
The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

Objective
Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monocolures of physics, math, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

Content
This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. Abstract
Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.

Objective
Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for gene annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.

Content
Bioinformatics I will cover the following topics:
- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

Abstract
The practical work is designed to train the students in the solution of a specific problem and provides insights in the field of the selected MAS specialization. Tutors propose the subject of the project, the project plan, and the roadmap together with the student, as well as monitor the overall execution.

Objective
The practical work is aimed at training the student’s capability to apply and connect specific skills acquired during the MAS specialization program towards the solution of a focused problem.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 954 of 1571
Micro and Nano-Tomography of Biological Tissues

The lecture introduces the physical and technical know-how of X-ray tomographic microscopy. Several X-ray imaging techniques (absorption-, phase- and darkfield contrast) will be discussed and their use in daily research, in particular biology, is presented. The course teaches the conception, simulation, and physical layout of such circuits with chip design tools.

Objective
Introduction to X-ray tomography and its use in biological research.

Abstract
This course covers analog circuits with emphasis on neuromorphic engineering: MOS transistors in CMOS technology, static circuits, dynamic circuits, systems (silicon neuron, silicon retina, silicon cochlea) with an introduction to multi-chip systems. The lectures are accompanied by weekly laboratory sessions.

Objective
Understanding of the characteristics of neuromorphic circuit elements.

Content
Neuromorphic circuits are inspired by the organizing principles of biological neural circuits. Their computational primitives are based on physics of semiconductor devices. Neuromorphic architectures often rely on collective computation in parallel networks. Adaptation, learning and memory are implemented locally within the individual computational elements. Transistors are often operated in weak inversion (below threshold), where they exhibit exponential I-V characteristics and low currents. These properties lead to the feasibility of high-density, low-power implementations of functions that are computationally intensive in other paradigms. Application domains of neuromorphic circuits include silicon retinas and cochleas for machine vision and audition, real-time emulations of networks of biological neurons, and the development of autonomous robotic systems. This course covers devices in CMOS technology (MOS transistor below and above threshold, floating-gate MOS transistor, phototransducers), static circuits (differential pair, current mirror, transconductance amplifiers, etc.), dynamic circuits (linear and nonlinear filters, adaptive circuits), systems (silicon neuron, silicon retina and cochlea) and an introduction to multi-chip systems that communicate events analogous to spikes. The lectures are accompanied by weekly laboratory sessions on the characterization of neuromorphic circuits, from elementary devices to systems.

Mass transfer models for the transport of chemical species in the human cell. Organization and function of the cell membrane and of the

The course addresses undergraduate and graduate students interested in getting introduced into the basic concepts of biomineralization. The course aims to introduce the basic concepts of biomineralization and the underlying principles, such as supersaturation, nucleation and growth of minerals, the interaction of biomolecules with mineral surfaces, and cell biology of inorganic materials creation. An important part of this class is the independent study and the presentation of original literature from the field.

Practical Methods in Tissue Engineering
Number of participants limited to 12.

The goal of this course is to teach MSc students the necessary skills for doing research in the fields of tissue engineering and regenerative medicine.

Practical exercises and demonstrations on topics including sterile cell culture, light microscopy and histology, protein and gene expression analysis, and viability assays are covered. The advantages of 3D cell cultures will be discussed and practical work on manufacturing and evaluating hydrogels and scaffolds for tissue engineering will be performed in small groups. In addition to practical lab work, the course will teach skills in data acquisition/analysis.

Handouts can be accessed online.

Practical Work

Only for MAS in Medical Physics

The practical work is designed to train the students in the solution of a specific problem and provides insights in the field of the selected MAS specialization. Tutors propose the subject of the project, the project plan, and the roadmap together with the student, as well as monitor the overall execution.

The practical work is aimed at training the student's capability to apply and connect specific skills acquired during the MAS specialization program towards the solution of a focused problem.

Electives

Energy Conversion and Transport in Biosystems

Theory and application of thermodynamics and energy conversion in biological systems with focus on the cellular level.

Theoretical systems of the human cell. Connection of characteristics and patterns from other fields of engineering to biofluidics. Heat and mass transport processes in the cell, generation of forces, work and relation to biomedical technologies.

Material in the form of hand-outs will be distributed.

Handouts provided during the classes and references therein.
Content

Biomineralization is a multidisciplinary field. Topics dealing with biology, molecular and cell biology, solid state physics, mineralogy, crystallography, organic and physical chemistry, biochemistry, dentistry, oceanography, geology, etc. are addressed. The course covers definition and general concepts of biomineralization (BM)/ types of biominerals and their function / crystal nucleation and growth / biological induction of BM / control of crystal morphology, habit, shape and orientation by organisms / strategies of compartmentalization / the interface between biomolecules (peptides, polysaccharides) and the mineral phase / modern experimental methods for studying BM phenomena / inter-, intra, extra- and epicellular BM / organic templates and matrices for BM / structure of bone, teeth (vertebrates and invertebrates) and mollusk shells / calcification / silification in diatoms, radiolaria and plants / calcium and iron storage / impact of BM on lithosphere and atmosphere/ evolution / taxonomy of organisms.

1. Introduction and overview
2. Biominerals and their functions
3. Chemical control of biomineralization
4. Control of morphology: Organic templates and additives
5. Modern methods of investigation of BM
6. BM in matrices: bone and nacre
7. Vertebrate teeth
8. Invertebrate teeth
9. BM within vesicles: calcite of coccoliths
10. Silica
11. Iron storage and mineralization

Lecture notes

Script with more than 600 pages with many illustrations will be distributed free of charge.

Literature

3) P. M. Dove, J. J. DeYoreo, S. Weiner (Eds.) Biomineralization, Reviews in Mineralogy & Geochemistry Vol. 54, 2003

Prerequisites / notice

Each attendee is required to present a publication from the field. The selection of key papers is provided by the lecturer.

No special requirements are needed for attending. Basic knowledge in chemistry and cell biology is expected.

376-1103-00L Frontiers in Nanotechnology W 4 credits 4V V. Vogel, further lecturers

Abstract

Many disciplines are meeting at the nanoscale, from physics, chemistry to engineering, from the life sciences to medicine. The course will prepare students to communicate more effectively across disciplinary boundaries, and will provide them with deep insights into the various frontiers.

Objective

Building upon advanced technologies to create, visualize, analyze and manipulate nano-structures, as well as to probe their nano-chemistry, nano-mechanics and other properties within manmade and living systems, many exciting discoveries are currently made. They change the way we do science and result in so many new technologies.

The goal of the course is to give Master and Graduate students from all interested departments an overview of what nanotechnology is all about, from analytical techniques to nanostructures, from physics to biology. Students will start to appreciate the extent to which scientific communities are meeting at the nanoscale. They will learn about the specific challenges and what is currently sizzling in the respective fields, and learn the vocabulary that is necessary to communicate effectively across departmental boundaries.

Each lecturer will first give an overview of the state-of-the art in his/her field, and then describe the research highlights in his/her own research group. While preparing their Final Projects and discussing them in front of the class, the students will deepen their understanding of how to apply a range of new technologies to solve specific scientific problems and technical challenges. Exposure to the different frontiers will also improve their ability to conduct effective nanoscale research, recognize the broader significance of their work and to start collaborations.

Content

**Content**

Biomineralization is a multidisciplinary field. Topics dealt with in the course include: biominerallization, settlement and cell biology, solid state physics, mineralogy, crystallography, organic and physical chemistry, biochemistry, dentistry, oceanography, geology, etc. The course covers the definition and general concepts of biomineralization (BM) and their function / crystal nucleation and growth / biological induction of BM / control of crystal morphology, habit, shape and orientation by organisms / strategies of compartmentalization / the interface between biomolecules (peptides, polysaccharides) and the mineral phase / modern experimental methods for studying BM phenomena / inter-, intra-, extra- and intercellular BM / organic templates and matrices for BM / structure of bone, teeth (vertebrates and invertebrates) and mollusk shells / calcification / silification in diatoms, radiolaria and plants / calcium and iron storage / impact of BM on lithosphere and atmosphere / evolution / taxonomy of organisms.

1. Introduction and overview
2. Biominerallization and their functions
3. Chemical control of biomineralization
4. Control of morphology: Organic templates and additives
5. Modern methods of investigation of BM
6. BM in matrices: bone and nacre
7. Vertebrate teeth
8. Invertebrate teeth
9. BM within vesicles: calcite of coccoliths
10. Silica
11. Iron storage and mineralization

**Lecture notes**

Script with more than 600 pages with many illustrations will be distributed free of charge.

**Literature**

3) P. M. Dove, J. J. DeYoreo, S. Weiner (Eds.) Biomineralization, Reviews in Mineralogy & Geochemistry Vol. 54, 2003

**Prerequisites / notice**

Each attendee is required to present a publication from the field. The selection of key papers is provided by the lecturer. No special requirements are needed for attending. Basic knowledge in chemistry and cell biology is expected.

**Abstract**

Many disciplines are meeting at the nanoscale, from physics, chemistry to engineering, from the life sciences to medicine. The course will prepare students to communicate more effectively across disciplinary boundaries, and will provide them with deep insights into the various frontiers.
Building upon advanced technologies to create, visualize, analyze and manipulate nano-structures, as well as to probe their nano-chemistry, nano-mechanics and other properties within mammade and living systems, many exciting discoveries are currently made. They change the way we do science and result in so many new technologies.

The goal of the course is to give Master and Graduate students from all interested departments an overview of what nanotechnology is all about, from analytical techniques to nanosystems, from physics to biology. Students will start to appreciate the extent to which scientific communities are meeting at the nanoscale. They will learn about the specific challenges and what is currently sizzling in the respective fields, and learn the vocabulary that is necessary to communicate effectively across departmental boundaries.

Each lecturer will first give an overview of the state-of-the art in his/her field, and then describe the research highlights in his/her own research group. While preparing their Final Projects and discussing them in front of the class, the students will deepen their understanding of how to apply a range of new technologies to solve specific scientific problems and technical challenges. Exposure to the different frontiers will also improve their ability to conduct effective nanoscale research, recognize the broader significance of their work and to start collaborations.

Starting with the fabrication and analysis of nanoparticles and nanostructured materials that enable a variety of scientific and technical applications, we will transition to discussing biological nanosystems, how they work and what bioinspired engineering principles can be derived. Finally discussing biomedical applications and potential health risk issues. Scientific aspects as well as the many of the emerging technologies will be covered that start impacting so many aspects of our lives. This includes new phenomena in physics, advanced materials, novel technologies and new methods to address major medical challenges.

The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein structural biology. The students dispose of an overview on current principles and systems for the controlled delivery and targeting of drugs. The focus of the course lies on developing a capacity to understand the involved technologies and methods, as well as an appreciation of the chances and challenges that come with them. The preparation of clean metallic, semiconducting, oxide and organic surfaces is introduced.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.
The course consists of a series of research seminars on Structural Biology, Biochemistry and Biophysics, given by both scientists of the National Center of Competence in Research (NCCR) in Structural Biology and external speakers. Information on the individual seminars is provided on the following websites:
http://www.structuralbiology.uzh.ch/educ002.asp
http://www.biol.ethz.ch/dbiol-cal/index

The goal of this course is to provide doctoral and postdoctoral students with a broad overview on the most recent developments in biochemistry, structural biology and biophysics.

551-0307-00L Molecular and Structural Biology I: Protein Structure and Function W 3 credits 2V R. Glockshuber, K. Locher, E. Weber-Ban

D-BIOL BSc students are obliged to take part I and part II (next semester) as a two-semester course

Biophysics of protein folding, membrane proteins and biophysics of membranes, enzymatic catalysis, catalytic RNA and RNAi, current topics in protein biophysics and structural biology.

Understanding of structure-function relationships in proteins and in protein folding, detailed understanding of biophysics and physical methods as well as modern methods for protein purification and microanalytics.

Scripts on the individual topics can be found under http://www.mol.biol.ethz.ch/teaching.

Basics:
- Creighton, T.E., Proteins, Freeman, (1993)
- Fersht, A., Enzyme, Structure and Mechanism in Protein Science (1999), Freeman.

Current topics: References will be given during the lectures.

636-0003-00L Biological Engineering and Biotechnology W 6 credits 3V M. Fussenegger

Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.

1. Insight Into The Mammalian Cell Cycle. Cycling, The Balance Between Proliferation and Cancer - Implications For Biopharmaceutical Manufacturing.
2. The Licence To Kill. Apoptosis Regulatory Networks - Engineering of Survival Pathways To Increase Robustness of Production Cell Lines.
5. From Target To Market. An Antibody's Journey From Cell Culture to The Clinics.

Handsout during the course.

MAS in Sustainable Water Resources

The Master of Advanced Studies in Sustainable Water Resources is a 12 month full time postgraduate diploma programme. The focus of the programme is on issues of sustainability and water resources in Latin America, with special attention given to the impacts of development and climate change on water resources. The programme combines multidisciplinary coursework with high quality research. Sample research topics include: water quality, water quantity, water for agriculture, water for the environment, adaptation to climate change, and integrated water resource management.

Language: English. Credit hours: 66 ECTS.

For further information please visit: http://www.ifu.ethz.ch/MAS_SWR

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 964 of 1571
The course is structured as follows:

**Objective**

The goal of this course is to provide the students with an understanding and the tools to develop their own mathematical models, to plan experiments, to evaluate error propagation and to test simple process control strategies in the field of process engineering in urban water management.

**Content**

The course will provide a broad introduction into the fundamentals of modeling water treatment systems. The topics are:

- Introduction into modeling and simulation
- The material balance equations, transport processes, transformation processes (kinetics, stoichiometry, conservation)
- Ideal reactors
- Hydraulic residence time distribution and modeling of real reactors
- Dynamic behavior of reactor systems
- Systems analytical tools: Sensitivity, parameter identification, error propagation, Monte Carlo simulation
- Introduction to process control (PID controller, fuzzy control)

**Lecture notes**

Copies of overheads will be made available.

**Literature**

There will be a required textbook that students need to purchase:

**Prerequisites / notice**

This course will be offered together with the course Process Engineering Ia. It is advantageous to follow both courses simultaneously.

---

### Literature

**Systems Analysis and Mathematical Modeling in Urban Water Management**

- **Abstract**

- **Objective**
  The course will provide a broad introduction into the fundamentals of modeling water treatment systems. The topics are:
  - Introduction into modeling and simulation
  - The material balance equations, transport processes, transformation processes (kinetics, stoichiometry, conservation)
  - Ideal reactors
  - Hydraulic residence time distribution and modeling of real reactors
  - Dynamic behavior of reactor systems
  - Systems analytical tools: Sensitivity, parameter identification, error propagation, Monte Carlo simulation
  - Introduction to process control (PID controller, fuzzy control)

- **Lecture notes**
  Copies of overheads will be made available.

- **Literature**
  There will be a required textbook that students need to purchase:

**Handouts.**

Selected scientific articles & book chapters

---

### Literature

**Sustainability Assessment**

- **Abstract**
  The course deals with the concepts and methodologies for the analysis and assessment of sustainable development. A special focus is given to the social dimension and to social justice as a guiding principle of sustainability as well as to trade-offs between the three dimensions of sustainability.

- **Objective**
  At the end of the course students should:
  - core concepts of sustainable development, and;
  - the concept of social justice - normatively and empirically - as a core element of social sustainability;
  - important empirical methods for the analysis and assessment of local / regional sustainability issues.

- **Content**
  Understand and reflect on:
  - the challenges of trade-offs between the different goals of sustainable development;
  - and the respective impacts on individual and societal decision-making.

- **Lecture notes**
  Copies of overheads will be made available.

- **Literature**
  Selected scientific articles & book chapters

---

### Literature

**Process Engineering Ia**

- **Abstract**
  Biological processes used in wastewater treatment, organic waste management, biological resource recovery. Focus on fundamental principles of biological processes and process design based on kinetic and stoichiometric principles. Processes include anaerobic digestion for biogas production and aerobic wastewater treatment.

- **Objective**
  Students should be able to evaluate and design biological processes. Develop simple mathematical models to simulate treatment processes.

- **Content**
  Microbial transformation processes
  Introduction to design and modeling of activated sludge processes
  Anaerobic processes, industrial applications, sludge stabilization

- **Lecture notes**
  Copies of overheads will be made available.

- **Literature**
  There will be a required textbook that students need to purchase (see http://www.sww.ifu.ethz.ch/studium/vorlesungen/process-engineering-i0.html for further information).

**Prerequisites / notice**

For detailed information on prerequisites and information needed from Systems Analysis and Mathematical Modeling the student should consult the lecture program and important information (syllabus) of Process Engineering I that can be downloaded at http://www.sww.ifu.ethz.ch/studium/vorlesungen/process-engineering-i0.html

---

### Literature

**Geographic Information Systems**

- **Abstract**
  Introduction to the architecture and data processing capabilities of geographic information systems (GIS). Practical application of spatial data modeling and geoprocessing functions to a selected project from the earth sciences.

- **Objective**
  Knowledge of the basic architecture and spatial data handling capabilities of geographic information systems.

- **Content**
  Theoretical introduction to the architecture, modules, spatial data types and spatial data handling functions of geographic information systems (GIS).

- **Lecture notes**
  Introduction to Geographic Information Systems, Tutorial: Introduction to ArcGIS Desktop

- **Literature**

---

### Literature

**Implementation of Environmental and other Sustainability Goals**

- **Abstract**
  Master students in Environmental Engineering choosing module Ecological Systems Design are not allowed to
Enrol 102-0327-01 Advanced Environmental Assessments (2KP) as already included in 102-0307-01 Advanced Environmental, Social and Economic Assessments (5KP).

Abstract
How to make sustainability operational - in industry, services and other organizations: You will learn how to put sustainability into practice by integrating environmental, social and economic aspects into organisations' management and processes. The course contains both a management view, as well as a sustainability view - and how to combine them.

Objective
To provide understanding of how sustainability can be made operational in an organisation. To do so, students will understand how to integrate sustainability thinking into the typical current organisational environment and processes, such as planning, implementing and controlling.

Content
We meet for five 3-hour-lectures, with discussions and case studies during course time. Additionally, small case studies in-between courses will be given at most course days.

Course topics are:
- Sustainable Development and its meaning for Management
- Management Standards for Sustainability (ISO and others)
- Sustainability Opportunities and Innovation
- Organisation and Implementation
- The concept of 'Continuous Improvement'
- Environmental Performance Measurement (Concepts, Standards, Methods)
- Life Cycle Costing, Life Cycle Management
- (Sustainable) Supply Chain Management
- Communication of Sustainability Issues

Lecture notes
Course documentation as well as case study descriptions will be provided during the course via the "Ilias" repository.

Literature
There are two ways to approach the course's issues:

c) We will touch upon the hotel sustainable scheme and label "Ibex" see: http://www.e2mc.com/images/stories/e2_bilder/downloads/Umweltfocus_d.pdf (for an english version, pls contact the lecturer at arthurb@ethz.ch)

Prerequisites / notice
If you have specific interests or questions, let me know at arthurb@ethz.ch. Maybe I can include your issues - or I can't :-(

701-0015-00L Seminar on Transdisciplinary Research for Sustainable Development

Abstract
The seminar is designed for students and researchers (MA, PhD, PostDoc) who use inter- and transdisciplinary elements in their projects. It addresses the challenges of this research: How to integrate disciplines? How (and in what role) to include societal actors? How to bring results to fruition? We discuss these questions based on case studies and theories and on the participant's projects.

Objective
The participants understand the specific challenges of inter- and transdisciplinary research in general and in the context of sustainable development in particular. They know methods and concepts to address these challenges and apply them to their research projects.

Content
The seminar covers the following topics:
(1) Theories and concepts of inter- and transdisciplinary research
(2) The specific challenges of inter- and transdisciplinary research
(3) Involving stakeholders
(4) Collaborating disciplines
(5) Exploration of tools and methods
(6) Analysing participants' projects to improve inter- and transdisciplinary elements

Literature
Literature will be made available to the participants

Prerequisites / notice
The seminar is specifically suitable for PhD or PostDoc researchers. It is open to master students (minor "global change and sustainability") and further interested people, who preferably are preparing, or working on, a project/thesis.

401-6215-00L Using R for Data Analysis and Graphics (Part I) W 1 credit 1G A. Drewek, A. J. Papritz

Abstract
The course provides the first part an introduction to the statistical software R for scientists. Topics covered are data generation and selection, graphical and basic statistical functions, creating simple functions, basic types of objects.

Objective
The students will be able to use the software R for simple data analysis.
Content

The course provides the first part of an introduction to the statistical software R for scientists. R is free software that contains a huge collection of functions with focus on statistics and graphics. If one wants to use R one has to learn the programming language R - on very rudimentary level. The course aims to facilitate this by providing a basic introduction to R.

Part I of the course covers the following topics:
- What is R?
- R Basics: reading and writing data from/to files, creating vectors & matrices, selecting elements of dataframes, vectors and matrices, arithmetics;
- Types of data: numeric, character, logical and categorical data, missing values;
- Simple (statistical) functions: summary, mean, var, etc., simple statistical tests;
- Writing simple functions;
- Introduction to graphics: scatter-, boxplots and other high-level plotting functions, embellishing plots by title, axis labels, etc., adding elements (lines, points) to existing plots.

The course focuses on practical work at the computer. We will make use of the graphical user interface RStudio: www.rstudio.org

Note: Part I of Using R is complemented and extended by Part II, which is offered during the second part of the semester and which can be taken independently from Part I.

Lecture notes

An Introduction to R. http://stat.ethz.ch/CRAN/doc/contrib/Lam-IntroductionToR_LHL.pdf

Prerequisites / notice

The course resources will be provided via the Moodle web learning platform. Please login (with your ETH (or other University) username+password) at https://moodle-app2.let.ethz.ch/enrol/users.php?id=1145

Choose the course "Using R for Data Analysis and Graphics" and follow the instructions for registration.

651-4077-00L Quantification and Modeling of the Cryosphere: Dynamic Processes (University of Zurich) W 3 credits 1V University lecturers

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: GE6815

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract

Overview of the most important earth surface processes and landforms in cold regions (regions with glaciers and intense frost) with emphasis on high-mountain aspects. Discussion of present research challenges.

Objective

Knowledge of the most prominent climate-related geomorphological processes and phenomena in high-mountain regions, understanding of primary research challenges.

Content

Erosion and sedimentation by glaciers as a function of topography, englacial temperature, sediment balance, sliding and melt water runoff. Processes and landforms in regions of seasonal and perennial frost (frost weathering, rock falls, debris cones/talus, solifluction, permafrost creep/rock glaciers, debris flows).

Lecture notes

Glacial and periglacial geomorphodynamics in high-mountain regions. Ca. 100 pages.

Literature

references in skript

Prerequisites / notice

Basic knowledge about geomorphology and glaciers/permafrost from corresponding courses at ETH/UZH or from the related lecture notes

701-1341-00L Water Resources and Drinking Water W 3 credits 2G S. Hug, M. Berg, F. Hammes, U. von Gunten

Abstract

The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. Natural processes, anthropogenic pollution, legislation of groundwater and surface water and of drinking water as well as water treatment will be discussed for industrialized and developing countries.

Objective

The goal of this lecture is to give an overview over the whole path of drinking water from the source to the tap and understand the involved physical, chemical and biological processes which determine the drinking water quality.

Content

The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.

Lecture notes

Handouts will be distributed

Literature

Will be mentioned in handouts

701-1253-00L Analysis of Climate and Weather Data W 3 credits 2G C. Frei

Abstract

Observation networks and numerical climate and forecasting models deliver large primary datasets. The use of this data in practice and in research requires specific techniques of statistical data analysis. This lecture introduces a range of frequently used techniques, and enables students to apply them and to properly interpret their results.

Objective

Observation networks and numerical climate and forecasting models deliver large primary datasets. The use of this data in practice and in research requires specific techniques of statistical data analysis. This lecture introduces a range of frequently used techniques, and enables students to apply them and to properly interpret their results.

Content

Introduction into the theoretical background and the practical application of methods of data analysis in meteorology and climatology.

Topics: exploratory methods, hypothesis tests, analysis of climate trends, measuring the skill of climate and forecasting models, analysis of extreme events, principal component analysis and maximum covariance analysis.

The lecture also provides an introduction into R, a programming language and graphics tool frequently used for data analysis in meteorology and climatology. During hands-on computer exercises the student will become familiar with the practical application of the methods.

Lecture notes

Documentation and supporting material include:
- documented view graphs used during the lecture
- exercise sets and solutions
- R-packages with software and example datasets for exercise sessions

All material is made available via the lecture web-page.

Literature

Suggested literature:
### 701-1251-00L Land-Climate Dynamics

**Abstract**
The purpose of this course is to provide fundamental background on the role of land surface processes (vegetation, soil moisture dynamics, land energy and water balances) for the climate system. The course consists of 2 contact hours per week, including 2 computer exercises.

**Objective**
The students are able to understand and interpret measurements of ice flow, subglacial water pressure and ice temperature. They will be well equipped to work on glacier-related problems by numerical modeling, remote sensing, and field work.

**Prerequisites / notice**
Powerpoint slides will be made available

**Content**
- The dynamics of glaciers and polar ice sheets is the key requisite to understand their history and future evolution. We will take a closer look at ice deformation, basal motion, heat flow and glacier hydraulics. The specific dynamics of tide water and calving glaciers is investigated, as is the reaction of glaciers to changes in mass balance (and therefore climate).

**Lecture notes**
http://people.ee.ethz.ch/~luethim/teaching.html

**Literature**
A list of relevant literature is available on the class web site.

**Prerequisites / notice**
- Good high school mathematics and physics knowledge required.

### 651-4101-00L Physics of Glaciers

**Abstract**
Understanding glaciers and ice sheets with simple physical concepts. Topics include the reaction of glaciers to the climate, ice rheology, temperature in glaciers and ice sheets, glacier hydrology, glacier seismology, basal motion and calving glaciers. A special focus is the current development of Greenland and Antarctica.

**Objective**
After the course the students are able understand and interpret measurements of ice flow, subglacial water pressure and ice temperature. They will have an understanding of glaciology-related physical concepts sufficient to understand most of the contemporary literature on the topic. The students will be well equipped to work on glacier-related problems by numerical modeling, remote sensing, and field work.

**Content**

### 701-1437-00L Limnoecology

**Abstract**
This course combines Limnology (the study of inland waters in its broad sense) with ecological and evolutionary concepts. It deals with rivers, groundwater and lakes. This course contains a lecture part, an experimental part as well as 1-day excursions.

**Objective**
During this course you will get an overview of the world's typical freshwater ecosystems. After this course you will be able to understand how aquatic organisms have adapted to their habitat and how the interactions (e.g. food web) between organisms work. During the experimental part of this course you will learn the principles of doing research to observe interrelations in aquatic ecosystems. You will measure and interpret biological and physical data (e.g. during experiments, field work) and present the collected knowledge. In short: apply the theoretical / lecture knowledge to field situations in a lake and river.

**Content**
The course contains a lecture part, an experimental part and field excursions. The lecture part covers ecology and evolution of aquatic organisms in lentic and lotic waters. Topics include: Adaptations, distribution patterns, biotic interactions, and conceptual paradigms in freshwater ecosystems. Important aspects regarding ecosystem metabolism and habitat properties of freshwaters. Applied case studies and experiments testing ecological and evolutionary processes in freshwaters. The lectures are given by Piet Spaak (Eawag), Florian Altermann (UNI, Eawag), Tom Gonser (Eawag), Katja Räisänen (Eawag) and Chris Robinson (Eawag), specialists from the Aquatic Ecology department of Eawag and University of Zurich.

**Practical part:** The practical part contains 1-day excursions to a lake (Greifensee) and rivers (Sense, Töss) as well as research projects in small groups within research groups at Eawag.

**Lecture notes**
Course notes and power point presentations provided during the course.

**Prerequisites / notice**
This course can only be taken together with "701-1437-01 Bestimmungskurs aquatische Makroinvertebraten" and "701-1437-02 Bestimmungskurs aquatische Mikroinvertebraten und Kryptogamen".

**Registration**
The maximal participating number of students is 8 from D-USYS and 14 from D-BIOL (ETH & UNI). Registration for the course until Thu 15.9.2016, free places will be distributed Fri 16.9.2016.

### 701-1631-00L Foundations of Ecosystem Management

**Abstract**
This course introduces the broad variety of conflicts that arise in projects focusing on sustainable management of natural resources. It explores case studies of ecosystem management approaches and considers their practicability, their achievements and possible barriers to their uptake.

**Objective**
Students should be able to
- a) propose appropriate and realistic solutions to ecosystem management problems that integrate ecological, economic and social dimensions across relevant temporal and spatial scales.
- b) identify important stakeholders, their needs and interests, and the main conflicts that exist among them in the context of land and resource management.
Content

Traditional management systems focus on extraction of natural resources, and their manipulation and governance. However, traditional management has frequently resulted in catastrophic failures such as, for example, the collapse of fish stocks and biodiversity loss. These failures have stimulated the development of alternative ecosystem management approaches that emphasise the functionality of human-dominated systems. Inherent to such approaches are system-wide perspectives and a focus on ecological processes and services, multiple spatial and temporal scales, as well as the need to incorporate diverse stakeholder interests in decision making. Thus, ecosystem management is the science and practice of managing natural resources, biodiversity and ecological processes, to meet multiple demands of society. It can be local, regional or global in scope, and addresses critical issues in developed and developing countries relating to economic and environmental security and sustainability.

This course provides an introduction to ecosystem management, and in particular the importance of integrating ecology into management systems to meet multiple societal demands. The course explores the extent to which human-managed terrestrial systems depend on underlying ecological processes, and the consequences of degradation of these processes for human welfare and environmental well-being. Building upon a theoretical foundation, the course will tackle issues in resource ecology and management, notably forests, agriculture and wild resources within the broader context of sustainability, biodiversity conservation and poverty alleviation or economic development. Case studies from tropical and temperate regions will be used to explore these issues. Dealing with ecological and economic uncertainty, and how this affects decision making, will be discussed. Strategies for conservation and management of terrestrial ecosystems will give consideration to landscape ecology, and community management, paying particular attention to alternative livelihood options and marketing strategies of common pool resources.

Politics of Environmental Problem Solving in Developing Countries

W 2 credits 2G U. Scheidegger

Abstract

The course focuses on processes and drivers of decision-making on natural resources management issues in developing countries. It gives insights into the relevance of ecological aspects in developing countries. It covers concepts, instruments, processes and actors in environmental politics at the example of specific environmental challenges of global importance.

Objective

After completion of the module, students will be able to:
- Identify and appraise ecological aspects in development cooperation, development policies and developing countries’ realities
- Analyze the forces, components and processes, which influence the destiny, the implementation and the outcome of ecological measures
- Characterize concepts, instruments and drivers of environmental politics and understand, how policies are shaped, both at national level and in multilateral negotiations
- Study changes (improvements) in environmental politics over time as the result of the interaction of processes and actors, including international development organizations
- Analyze politics and design approaches to influence them, looking among others at governance, social organization, legal issues and institutions

Content

Key issues and basic concepts related to environmental politics are introduced. Then the course predominantly builds on case studies, providing information on the context, specifying problems and potentials, describing processes, illustrating the change management, discussing experiences and outcomes, successes and failures. The analysis of the cases elucidates factors for success and pitfalls in terms of processes, key elements and intervention strategies.

Different cases not only deal with different environmental problems, but also focus on different levels and degrees of formality. This ranges from local interventions with resource user groups as key stakeholders, to country level policies, to multi- and international initiatives and conventions. Linkages and interaction of the different system levels are highlighted. Special emphasis is given to natural resources management.

The cases address the following issues:
- Land use and soil fertility enhancement: From degradation to sustainable use
- Common property resource management (forest and pasture): Collective action and property rights, community-based management
- Ecosystem health (integrated pest management, soil and water conservation)
- Payment for environmental services: Successes in natural resources management
- Climate change and agriculture: Adaptation and mitigation possibilities
- Biodiversity Convention: Implications for conservations and access to genetic resources
- Biodiversity as a means for more secure livelihoods: Agroforestry and intercropping
- The Millennium Development Goals: Interactions between poverty and the environment
- Poverty and natural resources management: Poverty reduction strategies, the view of the poor themselves
- Food security: Policies, causes for insecurity, the role of land grabbing
- Biofuels and food security: Did politics misfire?
- Food security and environmental relations: Another perspective

Lecture notes

Information concerning the case studies and specific issues illustrated therein will be provided during the course (uploaded on Moodle)

Literature

Prerequisites / notice

The performance assessment will consist of an individual essay to be written by each student based on at least five references in addition to the sources provided in the course. Students can choose from a list of topics. Criteria for assessment will be communicated at the beginning of the course.

701-0535-00L

Environmental Soil Physics/Vadose Zone Hydrology

W 3 credits 2G+2U D. Or

Abstract

The course provides theoretical and practical foundations for understanding and characterizing physical and transport properties of soils near-surface earth materials, and quantifying hydrological processes and fluxes of mass and energy at multiple scales. Emphasis is given to land-atmosphere interactions, the role of plants on hydrological cycles, and biophysical processes in soils.

Objective

Students are able to
- characterize quantitative knowledge needed to measure and parameterize structural, flow and transport properties of partially-saturated porous media,
- quantify driving forces and resulting fluxes of water, solute, and heat in soils,
- apply modern measurement methods and analytical tools for hydrological data collection
- conduct and interpret a limited number of experimental studies
- explain links between physical processes in the vadose-zone and major societal and environmental challenges
Content

Weeks 1 to 3: Physical Properties of Soils and Other Porous Media
Units and dimensions, definitions and basic mass-volume relationships between the solid, liquid and gaseous phases; soil texture; particle size distributions; surface area; soil structure. Soil colloids and clay behavior.

Soil Water Content and its Measurement - Definitions; measurement methods - gravimetric, neutron scattering, gamma attenuation; and time domain reflectometry; soil water storage and water balance.

Weeks 4 to 5: Soil Water Retention and Potential (Hydrostatics) - The energy state of soil water; total water potential and its components; properties of water (molecular, surface tension, and capillary rise); modern aspects of capillarity in porous media; units and calculations and measurement of equilibrium soil water potential components; soil water characteristic curves definitions and measurements; parametric models; hysteresis. Modern aspects of capillarity.

Demo-Lab: Laboratory methods for determination of soil water characteristic curve (SWC), sensor pairing.

Weeks 6 to 9: Water Flow in Soil - Hydrodynamics:
Part 1 - Laminar flow in tubes (Poiseuille's Law); Darcy's Law, conditions and states of flow; saturated flow; hydraulic conductivity and its measurement.

Lab #1: Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.

Part 2 - Unsaturated steady state flow; unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximate solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties.

Midterm exam

Lab #2: Measurement of vertical infiltration into dry soil column - Green-Ampt, and Philip's approximations; infiltration rates and wetting front propagation.

Part 3 - Use of Hydrus model for simulation of unsaturated flow

Week 10 to 11: Energy Balance and Land Atmosphere Interactions - Radiation and energy balance; evapotranspiration definitions and estimation; transpiration, plant development and transpiration coefficients small and large scale influences on hydrological cycle; surface evaporation.

Week 12 to 13: Solute Transport in Soils - Transport mechanisms of solutes in porous media; breakthrough curves; convection-dispersion eq.; solutions for pulse and step solute application; parameter estimation; salt balance.

Lab #3: Miscible displacement and breakthrough curves for a conservative tracer through a column; data analysis and transport parameter estimation.

Additional topics:

Temperature and Heat Flow in Porous Media - Soil thermal properties; steady state heat flow; nonsteady heat flow; estimation of thermal properties; engineering applications.

Biological Processes in the Vadose Zone - An overview of below-ground biological activity (plant roots, microbial, etc.); interplay between physical and biological processes. Focus on soil-atmosphere gaseous exchange; and challenges for bio- and phytoremediation.

Lecture notes

Classnotes on website: Vadose Zone Hydrology, by Or D., J.M. Wraith, and M. Tuller (available at the beginning of the semester)

Literature

Supplemental textbook (not mandatory) - Environmental Soil Physics, by: D. Hillel

102-0617-00L Basics and Principles of Radar Remote Sensing for Environmental Applications

Abstract

The course will provide the basics and principles of Radar Remote Sensing (specifically Synthetic Aperture Radar (SAR)) and its imaging techniques for the use of environmental parameter estimation.

Objective

The course should provide an understanding of SAR techniques and the use of the imaging tools for bio/geophysical parameter estimation. At the end of the course the student has the understanding of:

1. SAR basics and principles,
2. SAR polarimetry,
3. SAR interferometry and
4. environmental parameter estimation from multi-parametric SAR data

Content

The course is giving an introduction into SAR techniques, the interpretation of SAR imaging responses and the use of SAR for different environmental applications. The outline of the course is the following:

1. Introduction into SAR basics and principles
2. Introduction into electromagnetic wave theory
3. Introduction into scattering theory and decomposition techniques
4. Introduction into SAR interferometry
5. Introduction into polarimetric SAR interferometry
6. Introduction into bio/geophysical parameter estimation (classification/segmentation, soil moisture estimation, earth quake and volcano monitoring, forest height inversion, wood biomass estimation etc.)

Lecture notes

Handouts for each topic will be provided

Literature

First readings for the course:

Complete literature listing will be provided during the course.

401-0649-00L Applied Statistical Regression

Abstract

This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning "good practice" that can be applied in every student's own projects and daily work life. A special focus will be laid in the use of the statistical software package R for regression analysis.

Objective

The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.
The course starts with the basics of linear modeling, and then proceeds to parameter estimation, tests, confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, multicollinearity problems and model interpretation, as well as general modeling strategies.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

A script will be available. Recommended and required reading will be specified at the first class session (with possible modifications as the semester proceeds).

### Master's Thesis

Students propose relevant research topics from their home countries, or from Latin American research projects, around which individual study programmes are devised, and on which they write their thesis. The Master thesis is supervised by scientific staff at ETH and collaborating institutions, and is based on the student's academic or professional experience.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

Using a combination of lectures, field exercises, and data analysis, we explore the processes controlling the delivery of water, solutes, and sediment to streams, and how those processes are affected by changes in land cover, land use, and climate. We review the connections between process understanding and predictive modeling in these complex environmental systems. How well can we understand the processes controlling watershed-scale phenomena, and what uncertainties are unavoidable? What are the relative advantages of top-down versus bottom-up approaches? How much can "black box" analyses reveal about what is happening inside the black box?

Conversely, can small-scale, micro-mechanistic approaches be successfully "scaled up" to predict whole-watershed behavior? Practical problems to be considered include the effects of land use, atmospheric deposition, and climate on streamflow, water quality, and sediment dynamics, illustrated with data from experimental watersheds in North America, Scandinavia, and Europe.

The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-3622-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

After successful completion the students achieve 65 Creditpoints.

Abstract
The MAS programme is structured around an investigation of transforming urban conditions as they pertain to global phenomena, and the development of practical tools for operating within such domains.

Objective
The programme aims at developing a culture of urban research and design that will enable the participant to actively engage in envisioning future urban scenarios. Secondly, a strong emphasis is put on methodology, process design and communication in order to prepare for the interdisciplinary negotiating agenda of the urban designer as future member of professional design offices, academic research teams, public services or communication agencies.

Content
Each year, the MAS studio will focus on two specific topics of urban research and two existing sites on which to intervene in the form of two design research studios. The sites are preferably territories under development pressure with existing groups of urban actors to engage with.

**Abstract**
Discovering Management offers an introduction to the field of business management and entrepreneurship for engineers and natural scientists. The module provides an overview of the principles of management, teaches knowledge about management that is highly complementary to the students’ technical knowledge, and provides a basis for advancing the knowledge of the various subjects offered at D-MTEC.

**Objective**
Discovering Management combines in an innovative format a set of lectures and an advanced business game. The learning model for Discovering Management involves ‘learning by doing’. The objective is to introduce the students to the relevant topics of the management literature and give them a good introduction in entrepreneurship topics too. The course is a series of lectures on the topics of strategy, innovation, corporate finance, leadership, design thinking and corporate social responsibility. While the 14 different lectures provide the theoretical and conceptual foundations, the experiential learning outcomes result from the interactive business game. The purpose of the business game is to analyse the innovative needs of a large multinational company and develop a business case for the company.

**Content**
Discovering Management aims to broaden the students’ understanding of the principles of business management, emphasizing the interdependence of various topics in the development and management of a firm. The lectures introduce students not only to topics relevant for managing large corporations, but also touch upon the different aspects of starting up your own venture. The lectures will be presented by the respective area specialists at D-MTEC.

**Prerequisites / notice**
Discovering Management is designed to suit the needs and expectations of Bachelor students at all levels as well as Master and PhD students not belonging to D-MTEC. By providing an overview of Business Management, this course is an ideal enrichment of the standard curriculum at ETH Zurich. No prior knowledge of business or economics is required to successfully complete this course.

**Abstract**
Discovering Management (Exercises) is complementary exercises for the module Discovering Management.

**Objective**
This course is offered complementary to the basis course 351-0778-00L, "Discovering Management". The course offers additional exercises and case studies.

**Content**
This course offers additional exercises and case studies concerning:
- Strategic Management; Technology and Innovation Management; Operations and Supply Chain Management; Finance and Accounting; Marketing and Sales.

Please refer to the course website for further information on the content, credit conditions and schedule of the module: www.dm.ethz.ch

**Abstract**
The course introduces the students to the long-standing tradition of actively involving users of technology and other knowledge-intensive products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies.

**Objective**
The course includes both lectures and exercises alternately. The goal is to understand the opportunity of user innovation for management and develop strategies to harness the value of user-developed ideas and contributions for firms and other organizations.

The students actively participate in discussions during the lectures and contribute presentations of case studies during the exercises. The combination should allow to compare theory with practical cases from various industries.

The course presents and builds upon recent research and challenges the students to devise innovation strategies that take into account the availability of user expertise, free and public knowledge, and the interaction with communities that span beyond one organization.

**Content**
Grading is based on the final exam, the class presentations (including the slides) as well as class participation.

This course on user innovation extends courses on knowledge management and innovation as well as marketing. The students are introduced to the long-standing tradition of actively involving users of technology and other knowledge-intensive products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies. Theoretical underpinnings taught in the course include models of innovation, the structuration of technology, and an introduction to entrepreneurship.

**Lecture notes**
The slides of the lectures are made available and updated continuously through the SMI website:

**Literature**
Relevant literature for the exam includes the slides and the reading assignments. The corresponding papers are either available from the author online or distributed during class.

**Reading assignments**
please consult the SMI website:
Abstract
Managerial Economics applies economic theory and methods to business and economic decision-making. Economic ideas related to optimization, the theory of consumer demand, the theory of the firm, industrial organization and decision making under uncertainty are studied using methods of numerical analysis, statistical estimation, game theory and constrained optimization.

Objective
The objective of the course is to provide undergraduate and graduate students in MAVT with an understanding of the use of economic concepts for firm-level management decisions. The course covers a number of models and methods of analysis which are commonly employed in business decisions. The course covers the economic theory of choice, models of oligopoly and industrial organization, applications of game theory to contract design and agency theory, and the theory of decision making under uncertainty focusing specifically on long-term investment decisions. The course will include three lectures by Professor Volker Hoffman focusing on related case-studies in management.

Literature
Mikroökonomie (Pearson Studium - Economic VWL) Gebundene Ausgabe, August 2013, Robert S. Pindyck, Dr. Daniel L. Rubinfeld.

Prerequisites / notice
The course acquaints students who have previous not studied economics to economic concepts and quantitative methods which can be used to solve management decision problems.

363-1075-00L Reflecting Leadership: Mutual Learning Via Shadowing
Student must have the status as ESOP-fellow. Please apply with letter of motivation and CV.

Abstract
This course introduces ESOP (Excellence Scholarship & Opportunity Programme) Fellows to leadership in the business world. After a preparatory seminar that builds foundations in theory and methods, the fellows ‘shadow’ top-managers and observe their work-routines for several days.

Objective
Observations are later analyzed amongst the students and in a personal debriefing with managers to allow for mutual reflections on leadership.

The participants develop deep insights into a company as they follow a senior manager or a member of the Board of Directors for several days as a ‘shadow’. They learn by experiencing leadership in action and later offer their reflections to the executives, thereby creating opportunities for mutual learning. The course gives students an introduction to theories of leadership and methods to observe leadership practices. Students will record their impressions in field journals. The intensive shadowing phase is prepared in a two-day bloc seminar and de-briefed in a one-day reflection workshop. At a common event with ETH Foundation and participating companies, selected reflections by ESOP fellows are presented to a larger audience.

A central aim and learning objective of the course is that students reflect deeply about responsibilities and challenges in the practice of leadership and refine their critical thinking skills. The course is an innovative contribution to intergenerational learning and a stimulus to the development of the students’ personalities towards becoming confident entrepreneurs of the next generation.

Abstract
This course is an introduction to the critical management skills involved in planning, structuring, controlling and leading an organization.

Objective
We develop a 'systemic' view of organizations.
We look at organizations as part of an industry context, which is affected by different elements like strategy, structure, culture, tasks, people and outputs.
We consider how managerial decisions are made in any one of these domains affect decisions in each of the others.

Content
Further information is available on the Tim Group Chair's website:
http://www.timgroup.let.ethz.ch/en/courses

and on the Moodle of the course:
https://moodle-app2.let.ethz.ch/course/view.php?id=2209
(The Enrollment Key to Moodle will be provided during the course)

Lecture notes
The content of the course will rely on the book:

Selected readings from the book and additional learning materials will be available on the course Moodle:
https://moodle-app2.let.ethz.ch/course/view.php?id=2209

All the materials uploaded on Moodle must be considered as required readings.

Prerequisites / notice
The final exam of the present course is in written form.
The final exam is requested for all types of students (BSc, MSc, MA, PhD, and Exchange students).
It is not possible to retake the exam within the same term or academic year.

We strongly recommend Exchange students to take it into consideration when selecting the courses to attend.

Abstract
The lectures addresses the assessment of corporate sustainability and its links to strategy, technology, and finance. Students learn why sustainability matters for managers and how businesses can act towards it. E-modules allow students to train critical thinking skills. In the 2nd half of the semester, sustainability challenges on water, energy, mobility, and food are explored in group projects.

Objective
Understand the limits and the potential of corporate sustainability for sustainable development.

Develop critical thinking skills (argumentation, communication, evaluative judgment) that are useful in the context of corporate sustainability using an innovative writing and peer review method.

Content
Overview of the key concepts of corporate sustainability and topics related to Water, Energy, Mobility, and Food

Business implications of sustainable development, in particular for the assessment of sustainability performance, strategic change towards sustainability, technological innovations, and sustainability, and finance and corporate sustainability.

Critical thinking skills for corporate sustainability.

In-depth case studies of corporate sustainability challenges in the track phase: How to deal with environmental pressure groups? How to use the strengths of business to solve pressing sustainability problems? How to catalyze technological innovations for sustainability? How to invest money in a sustainable way?

Lecture notes
Presentation slides will be made available on moodle prior to lectures.

Literature
Literature recommendations will be distributed during the lecture.

Technological and Innovation Management

363-0389-00L | Technology and Innovation Management | W+   | 3 credits | 2G    | S. Brusoni    |

Abstract
This course focuses on the analysis of innovation as a pervasive process that cut across organizational and functional boundaries. It looks at the sources of innovation, at the tools and techniques that organizations deploy to routinely innovate, and the strategic implications of technical change.

Objective
This course intends to enable all students to:
- understand the core concepts necessary to analyze how innovation happens
- master the most common methods and tools organizations deploy to innovate
- develop the ability to critically evaluate the innovation process, and act upon the main obstacles to innovation

Content
This course looks at technology and innovation management as a process. Continuous organizations are faced with a fundamental decision: they have to allocate resources between well-known tasks that reliably generate positive results; or explore new ways of doing things, new technologies, products and services. The latter is a high risk choice. Its rewards can be high, but the chances of success are small.

How do firms organize to take these decisions? What kind of management skills are necessary to take them? What kind of tools and methods are deployed to support managerial decision-making in highly volatile environments? These are the central questions on which this course focuses, relying on a combination of lectures, case-based discussion, guest speakers, simulations and group work.

Lecture notes
Slides will be available on the TIMGROUP website.

Literature
Readings will be available on the TIMGROUP website.

Prerequisites / notice
No specific background in economics or management is required.

363-0392-00L | Strategic Management | W+ | 3 credits | 2G    | G. von Krogh |

Number of participants limited to 80.

Registration through myStudies (first come, first served). If you are unable to sign up through myStudies, please apply for an enrolment key to Moodle.
Introduction to Marketing

**W+** 3 credits  2G  F. von Wangenheim

**Abstract**

The course is designed to convey a profound understanding of marketing's role in modern firms, its interactions and interfaces with other disciplines, its main instruments and recent trends. Particular attention is given to emerging marketing concepts and instruments, and the role of marketing in technology firms.

**Objective**

After taking the lecture, students should have knowledge on:

1. The definition and role of marketing (marketing basics)
2. Creating marketing insights - understanding customer behavior
   - Theoretical concepts in customer behavior (customer behavior)
   - Analytical means to extend knowledge on customer behavior (marketing research)
   - Strategic tools to quantify customer behavior (CLV, CE)
3. Strategic marketing - translating marketing insights into actionable marketing strategies
   - Segmentation, Targeting, and Positioning
   - Attracting customers (marketing mix, 4Ps)
   - Maintaining profitable customer relations (CRM)
4. Strategic tools to quantify customer behavior (CLV, CE)
5. Analytical means to extend knowledge on customer behavior (marketing research)
6. Strategic tools to quantify customer behavior (CLV, CE)
7. Theoretical concepts in customer behavior (customer behavior)
8. Strategic marketing - translating marketing insights into actionable marketing strategies
9. Segmentation, Targeting, and Positioning
10. Attracting customers (marketing mix, 4Ps)
11. Maintaining profitable customer relations (CRM)

**Content**

The course is designed to convey a profound understanding of marketing's role in modern firms, its interactions and interfaces with other disciplines, its main instruments and recent trends. Particular attention is given to emerging marketing concepts and instruments, and the role of marketing in technology firms.

The lecture features a short tutorial that is held at irregularly spaced intervals throughout the semester (approximately every third week). The tutorial is embedded within the lecture and consists of short sessions of about 30 minutes. It serves to illustrate theoretical and methodological concepts from the lecture by walking students through the analysis of real-world data from the telecommunications industry. The case data will be provided so that students practice and apply the concepts of the lecture on their own. The tutorial is held jointly by two Teaching Assistants (Zhiying Cui and Jana Gross) and the professor (Prof. F. v. Wangenheim).

**Literature**

Weekly readings, distributed in class (via Moodle)
Content

Uber, Airbnb, Nest and Jawbone - A wide range of innovative companies exist, which successfully implemented ICT enabled business models and continue to grow at a rapid pace. Examples, illustrating how digitalization, including the "Internet of Things" currently fosters business model innovation across various industries. This course is designed to help students to understand and critically assess such newly emerging (digital) business models.

For the lecture students will get access to one of the leading online teaching platforms (called edX) also offered by other top universities (incl. MIT, Harvard, Berkeley, etc.). Using the edX platform, will allow students to collaborate in online discussions, solve online exercises and present a short educational video as part of a group project.

Key Topics:
Business model innovation; (digital) business model patterns; business value of IT; the concept of integration; transaction cost perspective; network economics perspective; essentials and impact of web 2.0, internet of things, mobile computing, market places, social analytics and big data; IT governance and portfolio management; entrepreneurship in the digital era, etc.

363-0445-00L Production and Operations Management
W+ 3 credits 2G T. Netland, P. Schönsleben
Abstract
This core course on Production and Operations Management provides the students insights into the basic theories, principles, concepts, and techniques used to design, analyze, and improve the operational capabilities of an organization.

Objective
Students learn why and how operations can be a competitive weapon; how to design, plan, control, and manage production and service processes; how to improve effectiveness and efficiency in operations; how to take advantage of new technological advancements; and how environmental and social concerns affect decisions in global production networks.

Content
The course covers the most fundamental strategic and tactical concepts in production and operations management. The lectures cover: Introduction to POM; Operations strategy; Capacity management; Production planning and control; Production philosophies; Lean management; Performance measurement; Problem solving; Service operations; New technologies in POM; Servitization; Global production; and Triple-bottom line.

Literature

363-0453-00L Strategic Supply Chain Management
W+ 3 credits 2G S. Wagner
Abstract
The course offers an introduction to the theory and practice of supply chain management. Students will learn how to develop supply chain strategies and supply chain networks based on firms competitive strategies and marketing priorities.

Objective
The task of designing and managing supply chains requires that managers apply strategic, decision making and leadership skills in a supply chain context. The goal of this course is to develop and practice these skills.

Content
Effective supply chains ought to be aligned with and support the achievement of the firms corporate, business and product strategies, taking into account future opportunities and risks. This course will familiarize students with modern supply chain management theory and practice to develop and manage supply chains. The topics covered range from fundamental logistics and supply chain concepts (e.g. push vs. pull, postponement) to the development of supply chain strategies, relationships and networks.

Lecture notes
Course material will be available for download from the homepage of the Chair of Logistics Management:
http://www.scm.ethz.ch/teaching/courses.html

Login will be provided in the first lecture or can be obtained from the Teaching Assistant Dagmar Reinerth (dreinerth@ethz.ch).

The following textbook is mandatory:

The following textbook is supplementary:

Prerequisites / notice
The final course grade will be a weighted average of the following:
Exam (semester end): 70%
Case studies (during the semester): 30%

Students (at least in groups of two) must bring a laptop with MS Excel and the Excel Solver installed to class.

Quantitative and Qualitative Methods

Number Title Type ECTS Hours Lecturers
363-0305-00L Empirical Methods in Management W+ 3 credits 2G A. Scherer
Abstract
Evidence-based management requires valid empirical research. In this course, students will learn the basics of research fundamentals of data collection and statistical methods to analyze the data acquired in social science research. Students are expected to apply their knowledge in class discussions and out-of-class assignments.

Objective
- Ability to formulate research questions and designing an appropriate study
- Ability to collect and analyze data using a variety of methods
- Ability to critically assess the quality of empirical research in management
- Applied knowledge of empirical methods through out-of-class assignments

Content
1) Introduction to empirical management research
2) Research designs: exploratory, descriptive, experimental
3) Measurement and scaling
4) Data collection and sampling
5) Data analysis methods
6) Reporting and presenting empirical research

Prerequisites / notice
Assignments and projects: This course includes out-of-class assignments and projects to give students some hands-on experience in conducting empirical research in management. Projects will focus on one particular aspect of empirical research, like the formulation of a research question or the design of a study. Students will have at least one week to work on each assignment. Students are expected to work on these assignments individually. Duplicate answers will receive no credit and will be subject to a disciplinary review. Assignments will be graded and need to be turned-in on time.

Class participation: Class participation is encouraged and can greatly improve students’ learning in this class. In this spirit, students are expected to attend class regularly and come to class prepared.

363-0541-00L Systems Dynamics and Complexity
W+ 3 credits 3G F. Schweitzer, G. Casiraghi, V. Nanumyan
Abstract
Finding solutions: what is complexity, problem solving cycle.

Implementing solutions: project management, critical path method, quality control feedback loop.

Controlling solutions: Vensim software, feedback cycles, control parameters, instabilities, chaos, oscillations and cycles, supply and demand, production functions, investment and consumption
A successful participant of the course is able to:
- understand why most real problems are not simple, but require solution methods that go beyond algorithmic and mathematical approaches
- apply the problem solving cycle as a systematic approach to identify problems and their solutions
- calculate project schedules according to the critical path method
- set up and run systems dynamics models by means of the Vensim software
- analyse the stability of nonlinear dynamical systems and apply this to macroeconomic dynamics

Why are problems not simple? Why do some systems behave in an unintended way? How can we model and control their dynamics? The course provides answers to these questions by using a broad range of methods encompassing systems oriented management, classical systems dynamics, nonlinear dynamics and macroeconomic modeling.

The course is structured along three main tasks:
1. Finding solutions
2. Implementing solutions
3. Controlling solutions

PART 1 introduces complexity as a system immanent property that cannot be simplified. It introduces the problem solving cycle, used in systems oriented management, as an approach to structure problems and to find solutions.

PART 2 discusses selected problems of project management when implementing solutions. Methods for identifying the critical path of subtasks in a project and for calculating the allocation of resources are provided. The role of quality control as an additional feedback loop and the consequences of small changes are discussed.

PART 3, by far the largest part of the course, provides more insight into the dynamics of existing systems. Examples come from biology (oscillations dynamics), management (inventory modeling, technology adoption, production systems) and economics (supply and demand, investment and consumption). For systems dynamics models, the software program VENSIM is used to evaluate the dynamics. For economic models analytical approaches, also used in nonlinear dynamics and control theory, are applied. These together provide a systematic understanding of the role of feedback loops and instabilities in the dynamics of systems. Emphasis is on oscillating phenomena, such as business cycles and other life cycles.

Weekly self-study tasks are used to apply the concepts introduced in the lectures and to come to grips with the software program VENSIM.

Lecture notes
The lecture slides are provided as handouts - including notes and literature sources - to registered students only. All material is to be found on the Moodle platform. More details during the first lecture

Prerequisites / notice
Self-study tasks (discussion exercises, Vensim exercises) are provided as home work. Weekly exercise sessions (45 min) are used to discuss selected solutions. Regular participation in the exercises is an efficient way to understand the concepts relevant for the final exam.

363-1004-00L Operations Research

Prerequisite
- Undergraduate calculus, linear algebra, probability and statistics are a prerequisite.

Content
- Introduction to building and using quantitative models in a business / industrial environment
- Introduction to basic optimization techniques (Linear Programming and extensions, network flows, integer programming, dynamic and stochastic optimization)
- Understanding the integration of quantitative models into the managerial decision process
- The following topics are covered: Systems and models, linear models and the importance of linear programming, duality theory and shadow prices, integer programming, optimization under uncertainty and applications in inventory management.

Lecture notes
A printed script will be made available.

Literature
Any standard textbook in Operations Research is a useful complement to the course.

363-0537-00L Resource and Environmental Economics

Prerequisite
- Undergraduate calculus, linear algebra, probability and statistics are a prerequisite.

Content
- Relationship between economy and environment, market failure, external effects and public goods, contingent valuation, internalisation of externalities; economics of non-renewable resources, economics of renewable resources, cost-benefit analysis, sustainability, and international aspects of resource and environmental economics.
Objective

Understanding of the basic issues and methods in resource and environmental economics; ability to solve typical problems in the field using the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Topics are:
- Introduction to resource and environmental economics
- Importance of resource and environmental economics
- Main issues of resource and environmental economics
- Normative basis
- Utilitarianism
- Fairness according to Rawls
- Economic growth and environment
- Externalities in the environmental sphere
- Governmental internalisation of externalities
- Private internalisation of externalities: the Coase theorem
- Free rider problem and public goods
- Types of public policy
- Efficient level of pollution
- Tax vs. permits
- Command and Control Instruments
- Empirical data on non-renewable natural resources
- Optimal price development: the Hotelling-rule
- Effects of exploration and Backstop-technology
- Effects of different types of markets.
- Biological growth function
- Optimal depletion of resources
- Social inefficiency as result of over-use of open-access resources
- Cost-benefit analysis and the environment
- Measuring environmental benefit
- Measuring costs
- Concept of sustainability
- Technological feasibility
- Conflicts sustainability / optimality
- Indicators of sustainability
- Problem of climate change
- Cost and benefit of climate change
- Climate change as international ecological externality
- International climate policy: Kyoto protocol
- Implementation of the Kyoto protocol in Switzerland

Content

- Economy and natural environment, welfare concepts and market failure, external effects and public goods, measuring externalities and contingent valuation, internalising external effects and environmental policy, economics of non-renewable resources, renewable resources, cost-benefit-analysis, sustainability issues, international aspects of resource and environmental problems, selected examples and case studies.

<td>D. Sornette</td>
</tr>
</tbody>
</table>

Abstract

I aim to introduce students to the concepts and tools of modern finance and to make them understand the limits of these tools, and the many problems met by the theory in practice. I will put this course in the context of the ongoing financial crises in the US, Europe, Japan and China, which provide fantastic opportunities to make the students question the status quo and develop novel solutions.
Objective
The course explains the key concepts and mechanisms of financial economics, their depth and then stresses how and why the theories and models fail and how this is impacting investment strategies and even a global view of citizenship, given the present developing crises in the US since 2007 and in Europe since 2010.

- Development of the concepts and tools to understand these risks and master them.
- Working knowledge of the main concepts and tools in finance (Portfolio theory, asset pricing, options, real options, bonds, interest rates, inflation, exchange rates)
- Strong emphasis on challenging assumptions and developing a systemic understanding of financial markets and their many dimensional risks

Content
1- The Financial Crises: what is really happening? Historical perspective and what can be expected in the next decade(s). Bubbles and crashes. The illusion of the perpetual money machine.

2- Risks in financial markets
- What is risk?
- Measuring risks of financial assets
- Introduction to three different concepts of probability
- History of financial markets, diversification, market risks

3- Introduction to financial risks and its management.
- Relationship between risk and return
- Portfolio theory: the concept of diversification and optimal allocation
- How to price assets: the Capital Asset Pricing Model
- How to price assets: the Arbitrage Pricing Theory, the factor models and beyond

4- Financial markets: role and efficiency
- What is an efficient market?
- Financial markets as valuation engines: exogeneity versus endogeneity (reflexivity)
- Deviations from efficiency, puzzles and anomalies in the financial markets
- Financial bubbles, crashes, systemic instabilities

5- An introduction to Options and derivatives
- Calls, Puts and Shares and other derivatives
- Financial alchemy with options (options are building blocks of any possible cash flow)
- Determination of option value; concept of risk hedging

6- Valuation and using options
- A first simple option valuation model
- The Binomial method for valuing options
- The Black-scholes model and formula
- Practical examples and implementation
- Realized prices deviate from these theories: volatility smile and real option trading
- How to imperfectly hedge with real markets?

7- Real options
- The value of follow-on investment opportunities
- The timing option
- The abandonment option
- Flexible production
- Conceptual aspects and extensions

8- Government bonds and their valuation
- Relationship between bonds and interest rates
- Real and nominal rates of interest
- Term structure and Yields to maturity
- Explaining the term structure
- Different models of the term structure

9- Managing international risks
- The foreign exchange market
- Relations between exchange rates and interest rates, inflation, and other economic variables
- Hedging currency risks
- Currency speculation
- Exchange risk and international investment decisions

</table>
The goal of the lecture is to understand the main challenges of corporate transformation and to demonstrate the application of a holistic approach to business transformation projects by introducing an integrated model dealing with three main design areas “strategy”, “processes” and “information systems” and applying this model to various case studies.

Specifically, we will examine how organizations manage their portfolio of business activities and markets to achieve competitive advantage through vertical integration, cooperative strategies such as strategic alliances and joint ventures, corporate diversification, mergers and acquisitions, divestitures, and globalization/international strategies, and strategic renewal.

Format:
The course is a combination of lectures about concepts/methods, guest lectures, case studies/assignments, and group debates/assignments.

The course homepage can be found at: http://www.smi.ethz.ch/education/courses/corporatestrategy

Having participated in the course Strategic Management by Prof. Georg von Krogh/Dr. Zeynep Erden is an advantage but not a requirement.

**Course Topic and Learning Objectives:**

Large- and medium-sized corporations play a central role in the economic activity of most developed and developing countries. Many of these organizations perform multiple business activities in multiple markets. In the face of increasing international competition, globalization, technological development, deregulation, and the emergence of new markets and industries, operating such a portfolio of business activities poses important managerial challenges forcing corporations to continuously re-consider their vertical and horizontal scope and boundaries.

The course Corporate Strategy draws from a wide range of theories and methods to develop an understanding of the conceptual frameworks, debates, and developments concerning decisions associated with the management of multi-business corporations. We will cover the key questions driving a firm's corporate strategy, including:

- In what markets to compete with which businesses?
- Which activities should be performed by the firm and which should be outsourced (i.e. “make” or “buy” decisions)?
- What are the most appropriate approaches to growth and divestiture?
- How do institutional forces impact corporate strategy?

The transparencies used in the lectures will be distributed to the participants.

The course homepage can be found at: http://www.smi.ethz.ch/education/courses/corporatestrategy

### Fiscal Competition and Multinational Firms

**Abstract**
The course enables students to understand how multinational firms respond to differential tax regimes in a global economy and how countries strategically use the tax system to host multinationals. In particular, the course covers transfer pricing issues, internal financing decisions and agency problems and their relation to tax policy.

**Objective**
Understanding how taxes influence decisions of multinational firms

Develop thinking about the strategic use of differential tax systems for multinational firms

### Asset Liability Management and Treasury Risks

**Abstract**
Using theoretical models and empirical analysis to uncover regularities in how multinational firms respond to taxes

**Objective**
- Develop understanding of the balance sheet of any corporation
- Discuss the foundations and to develop a thorough understanding of the Treasury function, with a particular emphasis on managing the risks relating to ALM.
Participants start from idea identification, forming team, technology and market size validation, assessing time-to-market, customer focus, and workshos and teamwork. There is a particular emphasis on market validation on each step of the journey, to ensure the relevance of the idea, relevance to customers, time to market and customer value.

The seminar comprises lectures, talks from invited investors regarding the importance of the various elements being covered in content, workshops and teamwork. There is a particular emphasis on market validation on each step of the journey, to ensure the relevance of the idea, relevance to customers, time to market and customer value.

This will be in two modules (autumn and spring), which will run in two consecutive semesters. Priority for the second semester will be given to those students who have attended the first semester.

Technology Entrepreneurship

**Abstract**
Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding.

This course offers the fundamentals in theory and practice of entrepreneurship in new technology ventures. Main topics covered are success factors in the creation of new firms, including founding, financing and growing a venture.

**Objective**
This course provides theory-grounded knowledge and practice-driven skills for founding, financing, and growing new technology ventures. A critical understanding of dos and don'ts is provided through highlighting and discussing real life examples and cases.

**363-0861-00L**
Alliance Advantage - Exploring the Value Creation Potential of Collaborations

**Abstract**
The development of new business models coping with the constantly augmenting complexity of technologies and systems as well as the ever increasing global competition force organizations to focus on close collaboration with key partners. These alliances are key value creation opportunities and constitute the core part of this lecture.
The objective of this course is to provide students with a practical toolset of techniques, procedures and hints for a successful scientific work.

Methodology: Systems Engineering, problem solving process, situation analysis, SWOT, objectives, solution finding, evaluation.

This course is a preparation course for theses in industry: Criteria of scientific work, writing the final report, using research resources at ETH. Using case studies, content of other lectures is discussed with regard to the special challenges during theses: Systems Engineering, project management, presentation technique.

The constantly augmenting complexity of technologies and systems, the increased pressure caused by competition, the need for shortening time-to-market and the thereby implied growing risks force organizations to increasingly focus on core competencies. Collaboration with external partners is a key value creation opportunity for successful ventures. This type of cooperation also has implications on daily management activities. This lecture will provide a better understanding of special requirements needed for management of cooperation issues.

- Introduction to theory and management of inter-firm collaboration and networks.
- Description of the formation, management and evolution of collaborations and networks.
- Collaborations in marketing, development, manufacturing (e.g. NUMMI).
- Special forms of collaborations: mergers & acquisition (e.g. pre- and post-merger activities, joint venture, strategic alliances (e.g. Doz & Hamel, networks, virtual communities).

Learning outcomes professional competence
- The students learn and understand the management basics of inter-firm cooperation and organizational networks (business models, incl. risk, communication, etc.)
- Realize the value creation potentials of alliances (added value)
- Understand underlying theoretical models (Transaction cost theory, principal agent, game theory)
- Identify and understand specific forms of collaboration (Strat. All., JV, Networks, M&A, etc.)
- Apply tools hands on in real companies (in coll. with companies)

Learning outcomes methodological competence
- Writing academic papers
- Developing structured documentation of interviews
- Transferring theory directly into application
- Contributing to the learning journey

Learning outcomes social competence
- Work together with industrial partners
- Improving communication skills as basics for collaboration
- Developing and applying team work skills
- Coping with conflicts resolution in teams

Content
- Lecture notes
- Writer script
- Current course material
- Harvard Case Studies
- Reader with current papers

Literature
- A list with recommended publications will be distributed in the lecture.

Additional Books:
- HBR Collaborating Effectively ISBN 978-1-4221-6264 4
- HBR on Mergers and Acquisitions: ISBN 1-57851-555-6
- Additional Reading:

Prerequisites / notice
- The number of students participating in the lecture is limited to 30.

W 1 credit 1G

Industrial Engineering and Management Methodology for Theses in Companies

Objective

- Contributing to the learning journey

Content

Learning outcomes methodological competence
- Writing academic papers
- Developing structured documentation of interviews
- Transferring theory directly into application
- Contributing to the learning journey

Learning outcomes social competence

- HBR on Mergers and Acquisitions: ISBN 1-57851-555-6
- Additional Reading:

Prerequisites / notice
- The number of students participating in the lecture is limited to 30.
Further reading:

Prerequisites / notice

The course is intended for students who want to carry out a thesis in industry, in general these are:

1. MSc-students MTEC or MAVT with master thesis (MA) during the next term and supervised by MTEC, (corresponds to 3rd or 4th semester Master) and
2. BSc-students MAVT with bachelor thesis (BA) in industry and supervised by MTEC, as well as with full MTEC focus (corresponds to 5th or 6th semester Bachelor) or
3. MAS MTEC students in 3rd semester for MA during the next term.

Important note: Credits will only be awarded to students according to (1), (2) or (3). Prerequisites for obtaining the credit or "Testat": being present during the whole course (presence list) and prior study of documents provided on the Internet and of the book Züst, R.: Einstieg ins Systems Engineering. 3. Aufl., Verlag Industrielle Organisation, Zürich 2004.

Other students on request (limited places).

Important: the chair coaching your BA/MA defines whether the course is mandatory. Please contact your chair!

Electronic enrollment until 08.09.2015 required. Without electronic enrollment participation in the course can't be confirmed. The course is held "en bloc" at the beginning of the semester.

Date: Friday 11.09.2015 (13:15-17:00), location: HG E33.1 (ETH main building) and Saturday, 12.09.2015 (09:15-17:00), location: HG E33.1 (ETH main building). Participation at both days required (Friday afternoon and Saturday whole day).

The course is held in English; handouts are available in English.

Besonderes (deutsche Version):

Der Kurs richtet sich an Studierende, welche an einer Professur des D-MTEC eine Arbeit in der Wirtschaft schreiben werden. Im Allgemeinen sind dies:

1. MS-S-Studierende MTEC oder MAVT mit Masterarbeit (MA) im kommenden Semester, die vom MTEC betreut wird, (entspricht 3. oder 4. Semester Master) sowie
2. BS-S-Studierende MAVT mit Bachelorarbeit (BA) in der Wirtschaft, die vom MTEC betreut wird, sowie mit vollem MTEC Fokus (entspricht 5. oder 6. Semester Bachelor) oder

Andere Studierende auf Anfrage (beschränkte Anzahl Plätze).

Wichtig: die Professur, welche die jeweilige BA/MA betreut, legt fest, ob der Besuch der Veranstaltung obligatorisch ist. Bitte informieren Sie sich dort!

Elektronische Einschreibung bis zum 08.09.2015 notwendig. Ohne elektronische Einschreibung kann Ihre Teilnahme am Kurs nicht bestätigt werden.

Der Kurs wird als Blockkurs zu Beginn des Semesters gehalten.

Termine: Freitag, den 11.09.2015 (13:15-17:00) im HG E33.1 und Samstag, 12.09.2015 (09:15-17:00) im HG E33.1 (ETH Hauptgebäude). Anwesenheitspflicht an beiden Tagen (Freitagnachmittag und Samstag ganztags).

Die Veranstaltung wird auf Englisch gehalten; Handouts sind in Englisch verfügbar.

The main aim of this course is to analyse the goals of monetary policy and to review the instruments available to central banks in order to pursue these goals. It will focus on the transmission mechanisms of monetary policy and the differences between monetary policy rules and discretionary policy. It will also make connections between theoretical economic concepts and current real world issues.
363-1042-00L Economics of Regulation 3 credits 2V W. Hu

Objective - To deliver the general understanding about why and when regulations are needed; to make students familiar with common regulatory policies and regulatory practices in various industries; and to introduce several classical cases;

Content - With this course, we go through a broad range of microeconomic theories that are relevant for regulation, including game theory, industrial organization, environmental economics, and contract theory. Through applying these theories to the regulatory problems, we have an excellent opportunity to see how to use (micro-)economic theories to explain and solve real-life issues.

Literature Lodge, M., M. Cave and R. Baldwin (eds.), The Oxford Handbook of Regulation, Oxford University Press, 2010. (accessible online via the school network)

Prerequisites / notice Students are expected to have taken at least one basic microeconomics course. Knowledge about game theory, industrial organization and public economics will be useful. Knowledge about contract theory is a plus.

363-1024-00L Empirical Innovation Economics 3 credits 2V W. Hu

We will discuss and develop answers to the following questions:

- What do I want to achieve in my life?
- Why is it to important to define goals?
- What decision criteria can I use as a guide?
- How do potential career paths look like? What are the possibilities?
- How does the life cycle of a career look like? What are the alternatives?
- How do I increase my chances of success/reaching my goals?
- What kind of advice can experienced captains of industry give?
- Why is a periodic check of my goals and my progress necessary?

### Content

**INTRODUCTION**

Awareness building / Overview on the career life cycle / Examples from praxis / Exchange of experiences / Approach for goal setting / Introduction to the success secrets of a career

**ORIENTATION AND GOAL SETTING**

Class discussion of the success secrets of a career / Orientation on career options / Discussion of possible decision criteria / Initial formulation of concrete goals

External guest speaker: Inspiring Start-up Entrepreneur

**CAREER DEVELOPMENT PLANS**

Exchange with representatives of industries / Personal Values & Norms vs Corporate Identity / Work-Life Balance Gender / Diversity / Summary of discussions / Best practice / Modification/Sharpening of goals

External guest speaker: Representatives from Hilti AG Switzerland

**DETAILED INDIVIDUAL CAREER PLANS**

Development of detailed individual career plans / Next steps / action plan / Tips & Tricks for careers in organizations and entrepreneurship

**REVIEW & APPLICATION COUNSELING**

Review/check of goals and career plans / Motivation letter / CV / Preparation for interviews

### Lecture notes

In today’s world of everything is possible it becomes an every increasing challenge to find orientation, to define a goal for which it is worth to work for and energy. But this is exactly what is so important in today’s work environment. Only with a definite goal one can decide if the taken path is right, one can develop enough motivation to go beyond the comfort zone. With a definite goal, one increases the chances of success of one’s education and career. The earlier one has defined what he/she wants to achieve, the bigger the effect.

### Prerequisites / notice

Motivation. Strategic long-term view.

</tbody>
</table>

**Abstract**

The first part of the course will present some basic principles of transportation economics, applied to the main issues in urban transport policy (e.g. road pricing, public transport tariffs, investment in infrastructure etc.). The second part of the course will consider some case studies where we will apply the tools acquired in the first part to actual policy issues.

**Objective**

The main objective of this course is to provide students with some basic tools to analyze transport policy decisions from an economic perspective. Can economics help us reduce road congestion problems? Should drivers be asked to pay for using urban roads? Should public transport tariffs depend on how roads are priced? How should the investment in transport infrastructure be financed? These are some of the questions that students should be able to tackle after completing the course.

**Content**

**COURSE OUTLINE (preliminary):**

1. Introduction
2. Travel demand:
   a. travel cost and value of time
   b. mode choice
3. Road congestion and first-best pricing:
   a. Static congestion model
   b. Dynamic congestion models
   c. Examples: London Congestion Charge, Stockholm Congestion Charge
4. Second-best pricing:
   a. Pricing roads with unpriced alternatives. Examples: tolled and toll-free highways
   b. Public transport: pricing with road congestion and with (or without) road tolls
5. Investment in infrastructure: public transport and roads:
   a. Roads: Investment with and without pricing
   b. induced demand
   c. Economies of scale/density in public transport
6. Topics:
   a. Political economy of road pricing: why do we see road pricing in so few cities (London, Stockholm...) and not in many other cities (NYC, Manchester, Paris...)?
   b. What are the alternatives to road pricing to reduce congestion? Parking tariffs, traffic regulation (speed bumps, low emission zones), road space reduction. Examples: Zurich, San Francisco (SFPark), Paris.
   c. Transport and land use: value of housing and transport services. Road congestion, transport subsidies and urban sprawl.

**Lecture notes**

Course slides will be made available to students prior to each class.

**Literature**

Additional material:

Part 1 to 5: textbook: Small and Verhoef (The economics of urban transportation, 2007).

Part 6: Topics to be covered on research papers/case studies.

**Abstract**

The course focuses on the establishment of sustainability in firm's supply chains (that is, in their internal operations, in their logistics processes, and in their upstream supply chains). We will consider how supply chains can become more sustainable, as well as the extent to which firms are interested in such a development.
This course aims to equip students with an in-depth knowledge of the sustainability-related challenges and problems within supply chain management, and suggests some tools for managing these challenges. Equally importantly, the course seeks to capacitate students for understanding and analyzing the tradeoffs and conflicts of target within sustainable supply chain management. The content of the course is closely linked to the latest research in the field, meaning that the absence of simple solutions will be the rule, rather than the exception. Moreover, the course will be highly interactive, and there will be intensive coursework during the course.

The preliminary course outline is as follows:

### Objective
- There are no formal prerequisites. However, to profit most from the course, it would be desirable if students attended the MTEC courses on Strategic Supply Chain Management (MTEC MSc course no. 363-0453-00L), on Purchasing and Supply Management (MTEC MSc course no. 363-0452-00L) and on Corporate Sustainability (MTEC MSc course no. 363-0387-00L) beforehand. Moreover, the course builds on and details lectures on Sustainable Supply Chain Management within the course LOS II: Manufacturing Strategies - From Supply Chain Design to Factory Planning II (MTEC MSc course no. 363-0448-00L).

### Content
- The preliminary course outline is as follows:

#### Module 1: Motivation for SusSCM
- Introductory case study
- Basic terminology
- Sustainability issues
- Dilemmas for firms
- Motivation for firms to engage in SusSCM
- SusSCM and LCA
- Specificity of SusSCM

#### Module 2: Sustainable operations management
- Lean and green
- CO2 emissions: measurement and management
- Extended producer responsibility
- Recycling

#### Module 3: Sustainable logistics
- Closed-loop supply chain management and reverse logistics
- Sustainable transportation: fundamentals related to energy and CO2
- Sustainable transportation: improvement measures related to energy and CO2
- Sustainable transportation: other sustainability-related issues
- Sustainable warehousing: basics and sustainability-related benefits
- Sustainable warehousing: sustainability-related challenges

#### Module 4: Sustainable purchasing and supply management
- Introduction to sustainable purchasing and supply management
- Sustainable supply management
- Information processing prerequisites to sustainable supply management
- GRI supply chain issue reporting
- Sustainability-oriented supply chain risk management
- A buying firm's self-interest in suppliers' sustainability-related conditions

#### Literature
- Supplementary textbooks:
  - Dennis Carlton / Jeffrey Perloff, Modern Industrial Organization, 4th edition, 2004
  - Bronwyn Hall / Nathan Rosenberg (eds.), Handbook of the Economics of Innovation, 2 volumes, Amsterdam 2010
  - Bronwyn Hall / Dietmar Harhoff, Recent Research on the Economics of Patents, 2011
  - Paul Belleflamme / Martin Peitz, Industrial Organization; Markets and Strategies, Cambridge 2010
  - Einer Elhauge / Damien Geradin, Global Competition Law and Economics, 2007
  - Dennis Carlton / Jeffrey Perloff, Modern Industrial Organization, 4th edition, 2004

#### Lecture notes
- The course material will be available for download from the homepage of the Chair of Logistics Management:
  - http://www.scm.ethz.ch/teaching/Courses. The login will be announced in the first lecture. In addition, we will employ scientific publications and case studies as readings which are provided throughout the course. Supplementary textbooks are listed below in the literature section.

#### Prerequisites / notice
- There are no formal prerequisites. However, to profit most from the course, it would be desirable if students attended the MTEC courses on Strategic Supply Chain Management (MTEC MSc course no. 363-0453-00L), on Purchasing and Supply Management (MTEC MSc course no. 363-0452-00L) and on Corporate Sustainability (MTEC MSc course no. 363-0387-00L) beforehand. Moreover, the course builds on and details lectures on Sustainable Supply Chain Management within the course LOS II: Manufacturing Strategies - From Supply Chain Design to Factory Planning II (MTEC MSc course no. 363-0448-00L).

**Workshop & Lecture Series on the Law & Economics of Innovation**
- **W 2 credits**
- **S. Bechtold, H. Gersbach, A. Heinemann**

**Objective**
- This series is a joint project by ETH Zurich and the University of Zurich. It provides an overview of interdisciplinary research on intellectual property, innovation, antitrust and technology policy. Scholars from law, economics, management and related fields give a lecture and/or present their current research. All speakers are internationally well-known experts from Europe, the U.S. and beyond.

**Content**
- The workshop and lecture series will present a mix of speakers who represent the wide range of current social science research methods applied to intellectual property, innovation, antitrust policy and technology policy issues. In particular, theoretical models, empirical and experimental research as well as legal research methods will be represented.

**Prerequisites / notice**
- Papers discussed in the workshop and lecture series are posted in advance on the course web page.

**Literature**
- Bronwyn Hall / Nathan Rosenberg (eds.), Handbook of the Economics of Innovation, 2 volumes, Amsterdam 2010
- Bronwyn Hall / Dietmar Harhoff, Recent Research on the Economics of Patents, 2011
- Paul Belleflamme / Martin Peitz, Industrial Organization; Markets and Strategies, Cambridge 2010
- Einer Elhauge / Damien Geradin, Global Competition Law and Economics, 2007

**Autumn Semester 2016**

**Page 991 of 1571**
The Circle of Excellence is a one-year talent program for outstanding students together with the universities of Münster, Cologne and Berlin. It aims at preparing the participants for interesting management tasks within various workshops in collaboration with our internationally operating partner companies, e.g. PanGas, L’Oréal, Henkel, McKinsey, EDEKA,...

Participants receive a certificate.

Abstract
This seminar provides master students at MTEC with the challenging opportunity of a real case on strategy, innovation and leadership in close collaboration with the top management of leading Swiss technology company.

Objective
In your team, you will work on a specific assignment that flows from the current strategic agenda of the board. While gaining substantial insights into the structure, dynamics and challenges of the industry, you immerse into the business model and strategic landscape of the corporate partner. You visit their headquarters, conduct interviews with members of the management team as well as internal and external experts before you discuss your ideas with top executives. To secure impact, it is key that you formulate your recommendations from a deep understanding of the authentic leadership culture of the corporate partner.

Content
In this endeavour you are coached and supported by
- Guidela Grote, Chair of Work and Organizational Psychology
- Stefano Brusoni, Chair of Technology and Innovation Management
- Claude Siegenthaler, Business School Lausanne / The St.Gallen MBA
- Georg von Krogh, Chair of Strategic Management and Innovation
- Pius Baschera, former Chair of Entrepreneurship

Prerequisites / notice
Please apply for this course via the official website (www.mtec.ethz.ch) - to be opened by end of May 2016. Apply no later than August 22. The number of participants is limited to 16.

ECTS: 4

363-1051-00L Cases in Technology Marketing

Number of participants limited to 20.

Students have to apply for this course by sending a CV and an one-page motivation letter to mgrohmann@ethz.ch. Additionally please enroll via myStudies. Places will be assigned on the basis of your motivation letter.

Abstract
The aim of this module is to introduce students to some key concepts in technology marketing and to familiarize them subsequently with the challenges that (marketing) managers face in technology intensive markets by using real life cases. Students will have to "solve" current and past managerial problems and will be enabled to compare their solutions with what has actually been done.

Objective
This module should enable students to deal with the uncertainty related to challenges in technology marketing by introducing them to some key concepts and letting them apply those concepts to real life cases. The competences acquired in this module are meant to go beyond the mere understanding of the study material by improving students' problem solving capabilities, analytical skills and capacity for team work. Furthermore, students will be exposed to decision-making styles and procedures in companies.

Content
Students have to work on three to four real Bühler cases and present the solutions in class.

Solutions/ presentations will be part of the grades.

Prerequisites / notice
Students have to apply for this course by sending a CV and a one-page motivation letter until 09.09.2015 to mgrohmann@ethz.ch.

363-1055-00L Marketing Practice

Marketing Practice
Please send your application documents (Cover Letter, CV, Transcript of Records, Reports) by 30.09.2016 to: mgrohmann@ethz.ch

Once your application has been confirmed, a registration in myStudies is possible.

Abstract
The course enables students to apply their knowledge from marketing and other disciplines to real life cases under the supervision of internationally operating partner companies.

Objective
First, students have to assess and analyse real life problems in order to generate creative solutions.

Secondly, students have to demonstrate that they are both - able to apply their knowledge from marketing theory to practice, as well as to communicate their ideas to other students and leading marketing executives.

Content
The Circle of Excellence is a one-year talent program for outstanding students together with the universities of Münster, Cologne and Berlin. It aims at preparing the participants for interesting management tasks within various workshops in collaboration with our internationally operating partner companies, e.g. PanGas, L’Oréal, Henkel, McKinsey, EDEKA,...

Please find more information on:
http://www.circle-of-excellence-marketing.de

Prerequisites / notice
Your profile:
- Strong interest in Marketing topics
- Very good academic performance
- Interesting and convincing personality
- High commitment and flexibility

Students have to organize the remaining phase of their studies in a way that they are able to participate in the workshops.

363-1065-00L Design Thinking: Human-Centred Solutions to Real World Challenges

Design Thinking: Human-Centred Solutions to Real World Challenges
Due to didactic reasons, the number of participants is limited to 30.

All interested students are invited to apply for this course by sending a one-page motivation letter until 14.9.16 to Florian Rittiner (rittiner@ethz.ch).

Additionally please enroll via mystudies. Places will be assigned after the first lecture on the basis of your motivation letter and commitment for the class.

Abstract
The goal of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will work in teams to solve a set of design challenges that are organized as a one-week, a three-week, and a final six-week project in collaboration with an external project partner.

Information and application: www.sparklabs.ch/ethz
Objective

During the course, students will learn about different design thinking methods and tools. This will enable them to:
- Generate deep insights through the systematic observation and interaction of key stakeholders.
- Engage in collaborative ideation with a multidisciplinary (student) team.
- Rapidly prototype and iteratively test ideas and concepts by using various materials and techniques.

Content

The purpose of this course is to equip the students with methods and tools to tackle a broad range of problems. Following a Design Thinking approach, the students will learn how to observe and interact with key stakeholders in order to develop an in-depth understanding of what is truly important and emotionally meaningful to the people at the center of a problem. Based on these insights, the students ideate on possible solutions and immediately validated them through quick iterations of prototyping and testing using different tools and materials. The students will work in multidisciplinary teams on a set of challenges that are organized as a one-week, a three-week, and a final six-week project with an external project partner. In this course, the students will learn about the different Design Thinking methods and tools that are needed to generate deep insights, to engage in collaborative ideation, rapid prototyping and iterative testing.

Design Thinking is a deeply human process that taps into the creative abilities we all have, but that get often overlooked by more conventional problem solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols. Design Thinking provides an integrated way by incorporating tools, processes and techniques from design, engineering, the humanities and social sciences to identify, define and address diverse challenges. This integration leads to a highly productive collaboration between different disciplines.

For more information and the application visit: http://sparklabs.ch/ethz

Prerequisites / notice

Class attendance and active participation is crucial as much of the learning occurs through the work in teams during class. Therefore, attendance is obligatory for every session. Please also note that the group work outside class is an essential element of this course, so that students must expect an above-average workload.
The simulation project is intended for Master's or Doctoral students of the Global Studies Institute (GSI) of the University of Geneva, of the ETH and for interested students of the Geneva Centre for Security Policy (GCSP). The simulation will be in French and English and is conducted by Prof. Calmy-Rey, former President of Switzerland.

In the lectures, students will be provided with basic information on disarmament issues and on the functioning of the Conference on Disarmament as well as on negotiation techniques in general. Students will take the role of negotiators in the simulation (including the heads of the delegations), of keeper of the minutes or of observers and analysts. Students will co-develop their mandates for the negotiation and be assisted by experts that are specialized in international negotiations as well as in the topic of disarmament. The negotiation tables will be chaired by former diplomats. Representatives of diplomatic missions in Geneva will play the role of the "Capitals" to which the heads of delegations will have to give account of the ongoing negotiations.

More details on the program, timetable, reading lists and performance assessment will be published here: https://chamilo.unige.ch/home/courses/M165/?id_session=0

The simulation will take place on the 26 and 27 November 2015 at the University of Geneva.

Languages: English and French

Dates/Time/Location (GE = University of Geneva)

22 Sept. | ETH HG D 22 | 10:15-12:00 | Introduction
29 Sept. | GE Uni Mail Salle 1170 | 10:15-12:00 | Introduction to Negotiation Techniques (Dr. Vitalijs Butenko and Dr. Sibylle Zürcher, ETH)
6 Oct. | ETH HG D 16.2 | 10:15-12:00 | Distribution of the roles, composition of the negotiation tables, preparation of mandates for the HA (humanitarian approach)
13 Oct. | ETH HG D 22 | 10:15-12:00 | Preparation of the mandates for the FMCT (Fissile Material Cut-off Treaty)
20 Oct. | GE Uni Mail Salle 1170 | 10:15-12:00 | No session; Students deepen and summarize their mandates on one page (A4)
27 Oct. | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the Mandates I (FMCT)
10 Nov. | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the Mandates II (HA)
17 Nov. | GE Uni Mail Salle 1170 | 10:15-12:00 | Preparation Meeting
26 & 27 Nov. | GE Salles 407 et 408 | 10:00-18:00 | Simulation at Uni Dufour
1 Dec. | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the results

Note:
The participation in the simulation on 26. and 27. November in Geneva is necessary.
The two hours lectures on the 22. September, 6. and 13. October have to be attended in Zürich via conference call (ETH HG D 16.2). The other lectures during the semester can be attended via Skype.
To get the 3 ECTS, students have to participate at the 2 days simulation in Geneva, attend the 3 mandatory lecture parts via conference call an Zürich and write a report of 5 pages at the end of the course.

(Technical note for registration: At this stage all registered students are on the waiting list)

Supplementary Courses
The students have to deepen their knowledge in the area(s) of engineering/natural sciences in consultation with the responsible professor (tutor). Core courses and electives of D-MTEC can not be used as supplementary courses.

Abstract
Only students who fulfill the following criteria are allowed to begin with their master thesis:
- a. successful completion of the bachelor programme;
- b. fulfilling of any additional requirements necessary to gain admission to the master programme;
- c. internship fulfilled;
- d. academic writing course has been completed (students from Spring Semester 2015 onwards).

Objective
In the Master thesis students prove their ability to independent, structured and scientific working. The Master thesis is supervised by the tutor and normally deals with a subject contained in the major fields. The research will be performed normally within a private company or at the ETH Zurich.

Abstract
This course for MTEC master’s students will focus on developing and refining students' English writing skills and their understanding of the requirements and conventions of academic writing.
Objective
The course develops a range of practical and transferrable writing skills. Its first aim is to improve the academic writing skills necessary for the successful completion of an MSc thesis. The course provides theoretical input, practical writing exercises, and detailed individual feedback. It is organized into an initial group lecture and four subsequent workshops in smaller tutorial groups.

The group lecture raises awareness about academic conduct, especially with regard to plagiarism. Afterwards, students take placement tests so that the areas where they need improvement can be identified. The following workshops concentrate on these highlighted areas, and feedback on placement tests is integrated into the input and practice during these sessions.

Students can use the skills developed on the course to improve the overall quality of their MSc theses and to produce their thesis more rapidly and efficiently. These skills can also be used beyond the MSc, whether students go on to complete a PhD or to produce reports and other documents in industry.

Content
Group lecture:
an introduction to writing an MSc thesis in D-MTEC
selecting topic and supervisor
academic expectations
avoiding plagiarism

Workshop 1:
the writing process
reading, note taking and planning
overview of the thesis structure
building academic vocabulary

Workshop 2:
writing methods sections
embedding figures and tables
structuring sentences and paragraphs
noun phrases and articles

Workshop 3:
introductions; results and discussion sections
analysis v description
writing critically
relative clauses

Workshop 4:
abstracts and conclusions
editing your own text
punctuation, spelling, and grammar

Lecture notes
Notes will be available after registration.

The lecture covers the structure and the properties of metallic materials. In the focus are the branches: microscopic structure, thermally activated processes; solidification; elastic, plastic deformation, creep. Generally the lecture also refers to manufacturing, to the processing, and application of the concerning materials.

Active participation in the exercises is part of this course. It is expected, that students submit 3/4 of all exercises for control.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 996 of 1571
The lecture slides will be published beforehand on the website of the pd|z.

For Bachelor studies in Mechanical and Process Engineering, the lecture "Maschinenelemente" (HS) is examined together with "Innovationsprozess" (FS) in the exam "Basisprüfung Maschinenelemente and Innovationsprozess".

**529-0010-00L Chemistry**  
**Type**: O  
**ECTS**: 3  
**Hours**: 2V+1U  
**C. Mondelli, A. de Mello**

**Abstract**  
This is a general chemistry course aimed at first year undergraduate students in the Department of Mechanical and Process Engineering (D-MAVT).

**Objective**  
The aims of the course are as follows:  
1) To provide a thorough understanding of the basic principles of chemistry and its application.  
2) To develop an understanding of the atomic and molecular nature of matter and of the chemical reactions that describe their transformations.  
3) To emphasize areas considered most relevant in an engineering context.

**Content**  
Electronic structure of atoms, chemical bonding, molecular shape and bonding theory, gases, thermodynamics, chemical thermodynamics, chemical kinetics, equilibria, solutions and intermolecular forces, redox and electrochemistry.

**Literature**  
The course is based on "Chemistry the Central Science" by Brown, LeMay, Bursten, Murphy and Woodward. Pearson, 12th Edition (international edition).

| **Abstract**    | Fundamentals of Technical Drawing and Computer Aided Design. Introduction to the design process and sketching. Create and read technical drawings. Create 3D models in CAD and fabricate them directly using additive manufacturing (3D printing).  
**Objective**  
The lecture and exercises teach the fundamentals of technical drawing and CAD. After taking the course students will be able to create accurate technical drawings of parts and assemblies as well as read them. Students will also be able to create models of parts and assemblies in a 3D, feature-based CAD system. They will understand the links with simulation, product data management (PDM) and additive manufacturing.  
**Content**  
Introduction to Engineering Design  
Sketching in Engineering Design  
- Technical Drawing:  
  - projections and views  
  - cuts  
  - notations  
  - primitives  
  - ISO norm elements  
  - dimensioning  
  - tolerances  
  - assemblies  
  - documentation  
- CAD:  
  - CAD basics  
  - CAD modeling methods  
  - sketch modeling  
  - modeling operations  
  - feature-based modeling  
  - assemblies  
  - creating 2D drawings from 3D parts  
  - links to simulation, e.g. kinematics  
  - links to model variants and Product Data Management (PDM)  
  - links to additive manufacturing (3D printing)  
**Lecture notes**  
Lecture slides and exercise handouts are available on the course Moodle website: https://moodle-app2.let.ethz.ch/course/index.php?categoryid=56  
**Literature**  
In addition to the lecture material the following books are recommended (only in German):  
TZ  
Technisches Zeichnen: selbstständig lernen und effektiv üben

| **Abstract**    | Basics: Position of a material point, velocity, kinematics of rigid bodies, forces, reaction principle, mechanical power  
Static: Groups of forces, moments, equilibrium of rigid bodies, reactions at supports, parallel forces, center of gravity, statics of systems, principle of virtual power, trusses, frames, forces in beams and cables, friction

Semester Fee  
A fee is charged for printed copies of the course handouts.
Objective

The understanding of the fundamentals of Statics for engineers and their application in simple settings.

Content

Basics: Position of a material point; velocity; kinematics of rigid bodies; translation, rotation, planar motion; forces, action-reaction principle, internal and external forces, distributed forces; mechanical power.

Statics: equivalence and reduction of groups of forces; rest and equilibrium; basic theorem of statics; kinematic and static boundary conditions, applications to supports and clamps of rods and beams; procedures for determination of forces at supports and clamps; parallel forces and centre of gravity; statics of systems, solution using basic theorem and using the principle of virtual power, statically indeterminate systems; statically determinate truss structures, ideal truss structures, nodal point equilibrium, methods for truss force determination; friction, static friction, sliding friction, friction at joints and supports, rolling resistance; forces in cables; beam loading, force and moment vector.

Lecture notes

Übungsblätter

Literature

Sayir, M.B., Dual J., Kaufmann S., Ingenieurmechanik 1: Grundlagen und Statik, Teubner

Objective

Mathematical treatment of problems in science and engineering. To understand the properties of the different types of partial differential equations.

Abstract

Introduction to partial differential equations. Differential equations which are important in applications are classified and solved. Elliptic, parabolic and hyperbolic differential equations are treated. The following mathematical tools are introduced: Laplace transforms, Fourier series, separation of variables, methods of characteristics.

Objective

Mathematical treatment of problems in science and engineering. To understand the properties of the different types of partial differential equations.

Abstract

Kinematics, dynamics and oscillations: Motion of a single particle - Motion of systems of particles - 2D and 3D motion of rigid bodies Vibrations

Lecture notes

Alessandra Iozzi's Lecture notes: https://polybox.ethz.ch/index.php/s/RcsFm70tWCheSqH

Errata: https://polybox.ethz.ch/index.php/s/VKh86gvQRTwIE0w

Literature

For reference/complement of the Analysis I/II courses:

Christian Blatter: Ingenieur-Analysis (Download PDF)
The lecture uses basic strength theory from Mechanics II to size and design typical machine elements as beam structures, axes and shafts, available modeling and linearization of dynamic systems with single input and output signals. State-space description. Analysis (stability, reachability, 2V+2U analysis and synthesis of linear systems with one input and one output signal (SISO); transition matrix; stability; controllability; O
 Typed course notes from the previous year

Hand-written slides will be downloadable after each lecture.

151-0303-00L Dimensioning I O 3 credits 3G P. Hora K. Wegener

Objective The lecture uses basic strength theory from Mechanics II to size and design typical machine elements as beam structures, axes and shafts, pressure vessels, weldings and screws. The students learn to define both geometry and material of frequently used machine elements.

Content - Theoretical basics of engineering design
- Description of ductil and brittle material behavior
- Design of machine elements at static loading conditions
- Notch effects
- Axes and shafts
- Fatigue design
- Surface pressure
- Rotationally symmetric bodies, pressure vessels and cylindrical interference
- Dimensioning of permanent and separable joints

151-0051-00L Thermodynamics I O 4 credits 2V+2U D. Poulikakos
Abstract Introduction to the fundamentals of technical thermodynamics.

Objective Introduction to the fundamentals of technical thermodynamics.

Content 1. Konzepte und Definitionen
2. Der erste Hauptsatz, der Begriff der Energie und Anwendungen für geschlossene Systeme
3. Eigenschaften reiner kompressibler Substanzen, quasistatische Zustandsänderungen
4. Elemente der kinetischen Gastheorie
5. Der erste Hauptsatz in offenen Systemen - Energieanalyse in einem Kontrollvolumen
6. Der zweite Hauptsatz - Der Begriff der Entropie
7. Nutzbarkeit der Energie - Exergie
8. Thermodynamische Beziehungen für einfache, kompressible Substanzen.

151-0591-00L Control Systems I O 4 credits 2V+2U E. Frazzoli
Abstract Analysis and synthesis of linear systems with one input and one output signal (SISO); transition matrix; stability; controllability; observability; Laplace transfer; transfer functions; transient and steady state responses. PID control; dynamic compensators; Nyquist theorem.

Objective Introduction to main ideas of linear systems analysis and synthesis. Transient and steady-state behavior, system engineering (input/output, static/dynamic behavior, feedforward and feedback loops, etc.), introduction of most important tools (solution of linear ODE, Laplace transformation, Nyquist theorem, etc.). Elementary controller synthesis.

Lecture notes available

Basic knowledge of (complex) analysis and linear algebra

**Abstract**
This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

**Objective**
This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.
401-0603-00L Stochastics (Probability and Statistics) W 4 credits 2V+1U M. H. Maathuis
Abstract This class covers the following concepts: random variables, probability, discrete and continuous distributions, joint and conditional probabilities and distributions, the law of large numbers, the central limit theorem, descriptive statistics, statistical inference, inference for normally distributed data, point estimation, and two-sample tests.
Objective Knowledge of the basic principles of probability and statistics.
Content Introduction to probability theory, some basic principles from mathematical statistics and basic methods for applied statistics.
Lecture notes Lecture notes
Prerequisites / notice Two tests are offered for practicing the course material. Participation is mandatory.

151-0573-00L System Modeling W 4 credits 2V+2U G. Ducard, C. Onder
Content Introduction to generic system modeling approaches for control-oriented models based on first principles and on experimental data. Examples: mechatronic, thermodynamic, chemistry, fluid dynamic, energy, and process engineering systems. Model scaling, linearization, order reduction, and balancing. Estimation techniques (least-squares methods).
Lecture notes The handouts in English will be sold in the first lecture.
Literature A list of references is included in the handouts.

151-0973-00L Fundamentals in Process Engineering W 4 credits 2V+2U P. Rudolf von Rohr, C. Müller
Abstract Overview of process engineering, reactions, balances and residence time analysis; overview of the thermal separation processes; equilibria for multiphase systems; introduction into mechanical process engineering and particle technology.
Objective To expand fundamentals in process engineering.
Content Overview of process engineering, reactions, balances and residence time analysis; overview of the thermal separation processes; equilibria for multiphase systems; introduction into mechanical process engineering and particle technology.
Lecture notes Lecture notes available in German.

151-0575-01L Signals and Systems W 4 credits 2V+2U R. D’Andrea
Abstract Signals arise in most engineering applications. They contain information about the behavior of physical systems. Systems respond to signals and produce other signals. In this course, we explore how signals can be represented and manipulated, and their effects on systems. We further explore how we can discover basic system properties by exciting a system with various types of signals.
Objective Master the basics of signals and systems. Apply this knowledge to problems in the homework assignments and programming exercise.
Lecture notes Lecture notes available on course website.

363-0511-00L Managerial Economics W 4 credits 3V S. Rausch, V. Hoffmann
Abstract Not for MSC students belonging to D-MTEC!
Objective The objective of the course is to provide undergraduate and graduate students in MAVT with an understanding of the use of economic concepts for firm-level management decisions. The course covers a number of models and methods of analysis which are commonly employed in businesses. The course covers the economic theory of choice, models of oligopoly and industrial organization, applications of game theory to contract design and agency theory, and the theory of decision making under uncertainty focusing specifically on long-term investment decisions. The course will include three lectures by Professor Volker Hoffmann focusing on related case-studies in management.
Literature Mikroökonomie (Pearson Studium - Economic VWL) Gebundene Ausgabe, August 2013, Robert S. Pindyck, Dr. Daniel L. Rubinfeld.
Prerequisites / notice The course acquaints students who have previous not studied economics to economic concepts and quantitative methods which can be used to solve management decision problems.

227-0076-00L Electrical Engineering II W 4 credits 2V+2U J. Biela
Abstract Signals and systems in the time and frequency domain, principle of operation and design of basic analog and digital circuits, analog-digital conversion. Basic power electronic circuits, design of magnetic components, electromechanical energy conversion, principle of operation and characteristics of transformers and selected rotating electrical machines.
Objective see above

401-0435-00L Computational Methods for Engineering Applications II W 4 credits 2V+2U S. Mishra
Abstract The course gives an introduction to the numerical methods for the solution of ordinary and partial differential equations that play a central role in engineering applications. Both basic theoretical concepts and implementation techniques necessary to understand and master the methods will be addressed.
Objective At the end of the course the students should be able to:
- implement numerical methods for the solution of ODEs (= ordinary differential equations);
- identify features of a PDE (= partial differential equation) based model that are relevant for the selection and performance of a numerical algorithm;
- implement the finite difference, finite element and finite volume method for the solution of simple PDEs using C++;
- read engineering research papers on numerical methods for ODEs or PDEs.
Content

Initial value problems for ODE: review of basic theory for ODEs, Forward and Backward Euler methods, Taylor series methods, Runge-Kutta methods, basic stability and consistency analysis, numerical solution of stiff ODEs.

Two-point boundary value problems: Green's function representation of solutions, Maximum principle, finite difference schemes, stability analysis.

Elliptic equations: Laplace's equation in one and two space dimensions, finite element methods, implementation of finite elements, error analysis.

Hyperbolic equations: Linear advection equation, method of characteristics, upwind schemes and their stability. Burgers equation, scalar conservation laws, shocks and rarefactions, Riemann problems, Godunov type schemes, TVD property.

Lecture notes

Script will be provided.

Literature

Chapters of the following book provide supplementary reading and are not meant as course material:

Prerequisites / notice

(Suggested) Prerequisites:

Analysis I-III (for D-MAVT), Linear Algebra, CMEA I, basic familiarity with programming in C++.

Focus Project

Focus Projects in Mechatronics

Number Title Type ECTS Hours Lecturers

151-0073-10L Amphibious Robot W 0 credits 15A R. Siegwart

Abstract

This course is part of a one-year course. The 14 credit points will be issued at the end of FS2017 with new enrolling for the same Focus-Project in FS2017.

Prerequisites for the focus projects:

a. Basis examination successfully passed
b. Block 1 and 2 successfully passed

Abstract

Students develop and build a product from A-Z! They work in teams and independently, learn to structure problems, to identify solutions, system analysis and simulations, as well as presentation and documentation techniques. They build the product with access to a machine shop and state of the art engineering tools (Matlab, Simulink, etc).

Objective

The various objectives of the Focus Project are:

- Synthesizing and deepening the theoretical knowledge from the basic courses of the 1. - 4. semester
- Team organization, work in teams, increase of interpersonal skills
- Independence, initiative, independent learning of new topic contents
- Problem structuring, solution identification in indistinct problem definitions, searches of information
- System description and simulation
- Presentation methods, writing of a document
- Ability to make decisions, implementation skills
- Workshop and industrial contacts
- Learning and recess of special knowledge
- Control of most modern engineering tools (Matlab, Simulink, CAD, CAE, PDM)
- Convert and experience technical solutions

Prerequisites / notice

This Focus-Project is supervised by the following lecturers: Siegwart, R., ASL

Haas, R., ASL

151-0073-20L Mechanically-Actuated Cartoon Face W 0 credits 15A R. Siegwart

Abstract

This course is part of a one-year course. The 14 credit points will be issued at the end of FS2017 with new enrolling for the same Focus-Project in FS2017.

Prerequisites for the focus projects:

a. Basis examination successfully passed
b. Block 1 and 2 successfully passed

- Convert and experience technical solutions

Content

Several teams of 4-8 students of the ETH as well as students from other universities realize a product during two semesters. On the basis of a vision and provocative problem definition, all processes of product development are beat down close-to-reality: conception, design, engineering, simulation, draft and production. The teams are coached by experienced staff who gives them the possibility of a unique learning experience. Innovative ideas of the research labs of the ETH, of industrial partners or students are selected and realized by the teams.

- Control of most modern engineering tools (Matlab, Simulink, CAD, CAE, PDM)
- Convert and experience technical solutions

151-0079-20L SeatCase - An Innovative Airline Seat
This course is part of a one-year course. The 14 credit points will be issued at the end of FS2017 with new enrolling for the same Focus-Project in FS2017.

For MAVT BSc and ITET BSc only.

Prerequisites for the focus projects:
- Basis examination successfully passed
- Block 1 and 2 successfully passed

Abstract
Students develop and build a product from A-Z! They work in teams and independently, learn to structure problems, to identify solutions, system analysis and simulations, as well as presentation and documentation techniques. They build the product with access to a machine shop and state of the art engineering tools (Matlab, Simulink, etc).

Objective
The various objectives of the Focus Project are:
- Synthesizing and deepening the theoretical knowledge from the basic courses of the 1. - 4. semester
- Team organization, work in teams, increase of interpersonal skills
- Independence, initiative, independent learning of new topic contents
- Problem structuring, solution identification in indistinct problem definitions, searches of information
- System description and simulation
- Presentation methods, writing of a document
- Ability to make decisions, implementation skills
- Workshop and industrial contacts
- Learning and recess of special knowledge
- Control of most modern engineering tools (Matlab, Simulink, CAD, CAE, PDM)
- Convert and experience technical solutions

151-0079-30L Airborne Wind Energy System
This course is part of a one-year course. The 14 credit points will be issued at the end of FS2017 with new enrolling for the same Focus-Project in FS2017.

For MAVT BSc and ITET BSc only.

Prerequisites for the focus projects:
- Basis examination successfully passed
- Block 1 and 2 successfully passed

Abstract

Introduction in the topic of leading work forces. In the framework of szenarios competences and knowledge concerning leadership will be developed interactively with the students. Motivation, goal orientation and success will be discussed. The reliability of leaders is part of the course.

Objective

Culture of leading and corporate governance.

Content

Introduction in the topic of leading work forces.

Prerequisites / notice

Only students for focus projects or doctoral students.
151-0761-00L  Practice Course to Focus Projects on Product Development

**Abstract**
This course provides comprehensive input to ongoing focus project teams in the areas of project management, communication and presentation, as well as dealing with the media, coaches and patents and safety issues.

**Objective**
Participants will receive tips, hints and background information from experienced tutors applicable to current projects.

**Content**
- **Project Management**
  - Creating a solid project base
  - Project planning and controlling
  - Product validation and testing
  - Problem solving cycle and decision taking transparent for others
- **Communication**
  - Public Relations in a Nutshell
  - How to acquire and manage suppliers and sponsors
  - Technical reports
  - Review presentations
  - Handling of and guidance to
    - Expectation management and dealing with conflicts
    - Safety issues
    - Issues regarding patents

**Lecture notes**
Lecture notes and documentation will be electronically available.

**Prerequisites / notice**
- only for students participating in a Focus Project in the same semester

151-0763-00L  Practice Course to Focus Projects on CAD and CAE Based on Siemens NX

**Abstract**
This course provides comprehensive input to ongoing Focus Projects teams in the areas of CAD and CAE mit Siemens NX.

**Objective**
Participants will receive tips, hints and background information from experienced tutors applicable to current projects.

**Content**
- **CAD with Siemens NX**
  - 2 day of intensive training (2x4h, 1x8L)
- **CAE mit Siemens NX**
  - 2 separate days of intensive training (2x8L)

**Lecture notes**
Lecture notes and documentation will be electronically available.

**Prerequisites / notice**
- only for students participating in a Focus Project in the same semester
- use of Siemens NX CAD/CAE in the corresponding Focus Project required

151-3211-00L  Product Design for Focus Projects

**Abstract**
This course introduces students to fundamental topics in product design and development specifically directed towards focus project students. The course will be taught using the students’ focus projects as the main case study during the hands-on exercises.

**Objective**
The objectives of the course are to introduce students to the most important topics in product design and development focusing on the early design phases and conceptual design methods. A further goal is to develop design reasoning and critical thinking skills important for focus projects.

**Content**
The content of the course will follow a product design and development process that is introduced. The focus will be on the concept design phase including design task definition, understanding users, product specifications, concept design methods, product architecture, industrial design, prototyping methods, design for manufacture and a review of technical drawing and norms.

**Lecture notes**
available on Moodle

### Focus Specialization

#### Energy, Flows and Processes

Focus Coordinator: Prof. Christoph Müller

In order to achieve the required 20 credit points for the Focus Specialization Energy, Flows and Processes you need to choose at least 2 of the 4 compulsory courses (HS/FS) and at least 2 of the electives courses (HS/FS). One course could be selected among all the courses offered by D-MAVT (Bachelor and Masters).

<table>

**Abstract**
The course presents an overview of measurement tasks in engineering environments. Different concepts for the acquisition and processing of typical measurement quantities are introduced. Following an initial in-class introduction, laboratory exercises from different application areas (especially in thermofluidics and process engineering) are attended by students in small groups.
### Objective
Introduction to various aspects of measurement techniques, with particular emphasis on thermo-fluidic applications. Understanding of various sensing technologies and analysis procedures. Exposure to typical experiments, diagnostics hardware, data acquisition and processing. Study of applications in the laboratory.

### Content
In-class introduction to representative measurement techniques in the research areas of the participating institutes (fluid dynamics, energy technology, process engineering). Student participation in 8-10 laboratory experiments (study groups of 3-5 students, dependent on the number of course participants and available experiments). Lab reports for all attended experiments have to be submitted by the study groups. A final exam evaluates the acquired knowledge individually.

### Literature

### Prerequisites / notice
Basic understanding in the following areas:
- fluid mechanics, thermodynamics, heat and mass transfer
- electrical engineering / electronics
- numerical data analysis and processing (e.g. using MATLAB)

### Objective
Basic physical phenomena of turbulent flows, quantitative and statistical description, basic and averaged equations, principles of turbulent flow computation and elements of turbulence modelling.

### Content
- Properties of laminar, transitional and turbulent flows.
- Origin and control of turbulence. Instability and transition.
- Statistical description, averaging, equations for mean and fluctuating quantities, closure problem.
- Wall-bounded turbulent flows.
- Turbulent flow computation and modeling.

### Abstract
In the framework of this course we will look at a current electronic thermal and energy management strategies and novel energy conversion processes. The course will focus on component level fundamentals of these process and system level analysis of interactions among various energy conversion components.

### Objective
This course deals with liquid cooling based thermal management of electronics, reuse of waste heat and novel energy conversion and storage systems such as batteries, fuel cells and micro-fuel cells. The focus of the course is on the physics and basic understanding of those systems as well as their real-world applications. The course will also look at analysis of system level interactions between a range of energy conversion components.

### Content
Part 1: Fundamentals:
- Overview of exergy analysis, Single phase liquid cooling and micro-mixing;
- Thermodynamics of multi-component-systems (mixtures) and phase equilibrium;
- Electrochemistry;

Part 2: Applications:
- Basic principles of battery;
- Introduction to fuel cells;
- Reuse of waste heat from supercomputers
- Hotspot targeted cooling of microprocessors
- Microfluidic fuel cells

Part3: System- level analysis
- Integration of the components into the system: a case study
- Analysis of the coupled operations, identification of critical states
- Support to system-oriented design

### Licence notes
Lecture notes are available. Lecture notes will be available for some topics (in English).
The students work independently on a study of selected topics in the field of Mechatronics or Microsystems. They start with a selection of Chapters from the Tutorial: Microscale Acoustofluidics, T. Laurell and A. Lenshof, Ed., Royal Society of Chemistry, 2015.

Overview of process engineering, reactions, balances and residence time analysis; overview of the thermal separation processes; equilibria

This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

Fick's laws; application and significance of mass transfer; comparison of Fick's laws with Newton's and Fourier's laws; derivation of Fick's 2nd law; diffusion in dilute and concentrated solutions; rotating disk; dispersion; diffusion coefficients, viscosity and heat conduction (Pr and Sc numbers); Brownian motion; Stokes-Einstein equation; mass transfer coefficients (Nu and Sh numbers); mass transfer across interfaces; Reynolds- and Chilton-Colburn analogies for mass-, heat-, and momentum transfer in turbulent flows; film-, penetration-, and surface renewal theories; simultaneous mass, heat and momentum transfer (boundary layers); homogeneous and heterogenous reversible and irreversible reactions; diffusion-controlled reactions; mass transfer and first order heterogenous reaction. Applications.

Two tests are offered for practicing the course material. Participation is mandatory.

<td>Abstract</td>
<td>This course is not available to incoming exchange students. Overview of Mechatronics topics and study subjects. Identification of minimum 10 pertinent refereed articles or works in the literature in consultation with supervisor or instructor. After 4 weeks, submission of a 2-page proposal outlining the value, state-of-the-art and study plan based on these articles. After feedback on the substance and technical writing by the instructor, project commences. The students are familiar with the challenges of the fascinating and interdisciplinary field of Mechatronics and Mikrosystems. They are introduced in the basics of independent non-experimental scientific research and are able to summarize and to present the results efficiently. The students work independently on a study of selected topics in the field of Mechatronics or Microsystems. They start with a selection of scientific papers to continue literature research. The results (e.g. state-of-the-art, methods) are evaluated with respect to predefined criteria. Then the results are presented in an oral presentation and summarized in a report, which takes the discussion of the presentation into account.</td>

151-0604-00L MicroRobotics  W  4 credits  3G  B. Nelson
Abstract
MicroRobotics is an interdisciplinary field that combines aspects of robotics, micro and nanotechnology, biomedical engineering, and materials science. The aim of this course is to expose students to the fundamentals of this emerging field. Throughout the course students are expected to submit assignments. The course concludes with an end-of-semester examination.

Objective
The objective of this course is to expose students to the fundamental aspects of the emerging field of microRobotics. This includes a focus on physical laws that predominate at the microscale, technologies for fabricating small devices, bio-inspired design, and applications of the field.

Content
Main topics of the course include:
- Scaling laws at micro/nano scales
- Electrostatics
- Electromagnetism
- Low Reynolds number flows
- Observation tools
- Materials and fabrication methods
- Applications of biomedical microbots

Lecture notes
The powerpoint slides presented in the lectures will be made available in hardcopy and as pdf files. Several readings will also be made available electronically.

Prerequisites / notice
The lecture will be taught in English.

151-0621-00L Microsystems Technology  W  6 credits  4G  C. Hierold, M. Haluska
Abstract
Students are introduced to the basics of micromachining and silicon process technology and will learn about the fabrication of microsystem devices by the combination of unit process steps (process flow).

Objective
Students are introduced to the basics of micromachining and silicon process technology and will understand the fabrication of microsystem devices by the combination of unit process steps (process flow).

Content
- Introduction to microsystems technology (MST) and micro electro mechanical systems (MEMS)
- Basic silicon technologies: Thermal oxidation, photolithography and etching, diffusion and ion implantation, thin film deposition.
- Specific microsystems technologies: Bulk and surface micromachining, dry and wet etching, isotropic and anisotropic etching, beam and membrane formation, wafer bonding, thin film mechanical and thermal properties, piezoelectric and piezoresistive materials.
- Selected microsystems: Mechanical sensors and actuators, microresonators, thermal sensors and actuators, system integration and encapsulation.

Lecture notes
Handouts (available online)

Literature
- S.M. Sze: Semiconductor Devices, Physics and Technology
- W. Menz, J. Mohr, O.Paul: Microsystem Technology
- G. Kovacs: Micromachined Transducer Sourcebook

Prerequisites / notice
Prerequisites: Physics I and II

227-0113-00L Power Electronics  W  6 credits  4G  J. W. Kolar
Abstract
Fields of application of power electronic systems. Principle of operation of basic pulse-width modulated and line-commutated power electronic converters, analysis of the operating behavior and of the control oriented behavior, converter design. Reduction of effects of line-commutated rectifiers on the mains, electromagnetic compatibility.

Objective
Fields of application of power electronic systems. Principle of operation of basic pulse-width modulated and line-commutated power electronic converters, analysis of the operating behavior and of the control-oriented behavior, converter design. Reduction of effects of line-commutated rectifiers on the mains, electromagnetic compatibility.

Content

Lecture notes
Lecture notes and associated exercises including correct answers, simulation program for interactive self-learning including visualization/animation features.

Prerequisites / notice
Prerequisites: Basic knowledge of electric circuit analysis and signal theory.

227-0517-00L Electrical Drive Systems II  W  6 credits  4G  P. Steimer, G. Scheuer, C. A. Stulz
Abstract
In the course “Drive System II” the power semiconductors are repeated. The creation of converters based on the combination of switches/cells and based topologies is explained. Another main focus is on the 3-level inverter with its switching and transfer functions. Further topics are the control of the synchronous machine, of line-side converters and issues with converter-fed machines.

Objective
The students establish a deeper understanding in regards of the design of the main components of an electrical drive system. They establish knowledge on the most important interaction with the grid and the machine and their related high dynamic control.

Content
Converter topologies (switch or cell based), multi-pulse diode rectifiers, system aspects of transformer and electrical machines, 3-level inverter with its switching and transfer functions, grid side harmonics, modeling and control of synchronous machines (including permanent magnet machines), control of line-side converters, reflection effects with power cables, winding isolation and bearing stress. Field trip to ABB Semiconductors.

Lecture notes
Skrip is sold at the beginning of the lectures or can be downloaded from Ilias

Prerequisites / notice
Prerequisites: Electrical Drive Systems I (recommended), Basics in electrical engineering, power electronics, automation and mechatronics

376-1504-00L Physical Human Robot Interaction (pHRI)  W  4 credits  2V+2U  R. Gassert, O. Lambercy
Abstract
This course focuses on the emerging, interdisciplinary field of physical human-robot interaction, bringing together themes from robotics, real-time control, human factors, haptics, virtual environments, interaction design and other fields to enable the development of human-oriented robotic systems.

Number of participants limited to 26.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1010 of 1571
Objective

The objective of this course is to give an introduction to the fundamentals of physical human robot interaction, through lectures on the underlying theoretical/mechatronics aspects and application fields, in combination with a hands-on lab tutorial. The course will guide students through the design and evaluation process of such systems.

By the end of this course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and de-sign safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the defined design requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement and test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) investigate and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

Content

This course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neurophysiology and psychophysics, principles of human-robot interaction systems (kinematics, mechanical transmissions, robot sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance and force control, haptic rendering basics and issues in device design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical human-robot interaction, laboratory sessions and lab visits.

You will attend 11 lecture sessions where you will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://www.relab.ethz.ch/education/courses/phri/request-ethz-haptic-paddle-hardware-documentation.html), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, time delays, sampling rate, sensor quantization, etc.) during rendering of different mechanical properties.

Lecture notes

Will be distributed through the document repository before the lectures.

http://www.relab.ethz.ch/education/courses/phri.html

Literature

Prerequisites / notice

Notice:
The registration is limited to 26 students
There are 4 credit points for this lecture.
The lecture will be held in English.
The students are expected to have basic control knowledge from previous classes.

</tr>
<tr>
<td><strong>Abstract</strong></td>
<td>Nano is the new scale in science &amp; engineering as micro was ~150 years ago. This BSc course demands substantial effort! It gives a flavor of nanotechnology with hands-on student projects on gas-phase synthesis of nanoparticles &amp; applications in catalysis, gas sensing and biomedical engineering. Projects are conducted individually under the close supervision of MSc, PhD or post-doctoral students.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Objective</strong></td>
<td>This course aims to familiarize BSc students with some of the basic phenomena of nanoscale, thereby illustrating the links between physics, chemistry, materials science and/or biology through hands-on experience. Furthermore it aims to give an overview of the field with motivating lectures from industry and academia, including the development of technologies and processes based on or involving nanoscale phenomena. Most importantly, this course aims to develop the creativity and sharpen the communication skills of the students through their individual projects, a PERFECT preparation for the BSc thesis (e.g., effective oral/written project presentations), the future profession itself and even life, in general, as the abc questions (in the Content below) are always there!</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Content</strong></td>
<td>This is strictly a BSc course. Its objectives are met primarily through the individual student project which may involve experiments, simulations or critical &amp; quantitative reviews of the literature. Therein, a 2-page proposal (15% of the grade) is submitted within the first two semester weeks addressing explicitly, at least, 10 well-selected research articles and thoughtful meetings with the project supervisor. The proposal address 3 basic questions: a) how important is the project; b) what has been done already in that field and c) what will be done by the student. Detailed feedback on each proposal is given by the supervisor, assistant and professor two weeks later. Towards the end of the semester, a 10-minute oral presentation is given by the student followed 10 minutes Q&amp;A (30% of the grade). A 10-page final report is submitted by noon of the last day of the semester (55% of the grade). The project supervisor will provide guidance throughout the course especially when called for by the student. Detailed feedback on each proposal, presentation and final report is given by the supervisor, assistant and professor.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Prerequisites / notice</strong></td>
<td>Course lectures will include some, if not all, of the following: - Overview of Nanotechnology &amp; Project Presentation - Control of nanoparticle size &amp; structure in the gas-phase - Multi-scale design of nanomaterial synthesis - Characterization of nanostructured materials - Encapsulation technologies for active food ingredients - Aerosol manufacture of nanoparticles - Physical Chemistry of Nanoparticles (structure, molecular forces, statistical thermodynamics) - Thermodynamics of nanoparticles (the basics, thermal stability, nanophases, melting temperature) - Transport properties of nanoparticles (diffusivity, mobility, settling, adsorption) - Computer simulations of nanoparticles (from atoms, to primary particles, to agglomerates) - Thin film coatings - Cluster beam deposition - Coaching for proposal &amp; report writing as well as oral presentations</td>

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1012 of 1571
The students get familiarized with the challenges of the fascinating and interdisciplinary field of Micro- and Nanosystems. They are introduced to the basics of independent non-experimental scientific research and are able to summarize and to present the results efficiently.

**Objective**

The students get familiarized with the challenges of the fascinating and interdisciplinary field of Micro- and Nanosystems. They are introduced to the basics of independent non-experimental scientific research and are able to summarize and to present the results efficiently.

**Content**

Students work independently on a study of selected topics in the field of Micro- and Nanosystems. They start with a selection of scientific papers, and continue with an independent literature research. The results (e.g., state-of-the-art, methods) are evaluated with respect to predefined criteria. Then the results are presented in an oral presentation and summarized in a report, which takes the discussion of the presentation into account.

**Literature**

Literature will be provided.

Introduction to generic system modeling approaches for control-oriented models based on first principles and on experimental data. Examples: mechatronic, thermodynamic, chemistry, fluid dynamic, energy, and process engineering systems. Model scaling, linearization, order reduction, and balancing. Estimation techniques (least-squares methods).

Class case studies: Loud-speaker, Water-propelled rocket, geostationary satellites, etc.

The exercises address practical examples. One larger case study is to be solved.

Lecture notes

The handouts in English will be sold in the first lecture.

A list of references is included in the handouts.

151-0703-00L
Operational Simulation of Production Lines

4 credits

P. Acél

The student learns the application of the event-driven and computer-based simulation for layout and operational improvement of production facilities by means of practical examples.

Objective

The student learns the right use of (Who? When? How?) of the event-driven and computer-based simulation in the illustration of the operating procedures and the production facilities.

Operating simulation in the productions, logistic and scheduling will be shown by means of practical examples.

The student should make his first experiences in the use of computer-based simulation.

Content

- Application and application areas of the event-driven simulation
- Exemplary application of a software tool (Technomatrix-Simulation-Software)
- Internal organisation and functionality of simulation tools
- Procedure for application: optimizing, experimental design planning, analysis, data preparation
- Controlling philosophies, emergency concepts, production in sequence, line production, rescheduling
- Application on the facilities projecting

Lecture notes

The knowledge is enhanced by practice-oriented exercises and an excursion. A guest speaker will present a practical example.

Prerequisites / notice

Will be distributed simultaneously during lecture (+ PDF)

Recommended for all Bachelor-Students in the 5th semester and Master-Students in the 7th semester.

151-0717-00L
Mechanical Production: Assembly, Joining and Coating Technology

4 credits

F. Kuster, V. H. Derflinger, F. Durand, P. Jousset

Objective

To understand assembly in its full complexity and its paramount importance regarding cost and financial success. An introduction into a choice of selected joining and coating techniques.

Assembly as combination of several classes of action like, e.g., joining, handling, fine adjustments, etc. Techniques for joining objects temporarily or permanently. Assembly systems.

Coating processes and their specific applications, with particular emphasis on corrosion protection.

Content

- Machine tool capability
- Testing of drives and numerical control
- Machine tool dynamics and the engineering tools modal analysis and finite element method (FEM)
- Dynamics of mechanical systems, dynamic error sources
- Geometric and kinematic testing of machine tools
- Error uncertainty
- Metrology for production, machine tool metrology
- Basics, like principal machine tool design and machine tool coordinate system
- Principal design and errors of linear and rotational axes
- Error budgeting, influence of errors on the workpiece
- Geometric and kinematic testing of machine tools
- Reversal measurement techniques, multi-dimensional machine tool metrology
- Thermal influences on machine tools and testing these influences
- Test uncertainty, simulation
- Dynamics of mechanical systems, dynamic error sources
- Machine tool dynamics and the engineering tools modal analysis and finite element method (FEM)
- Testing of drives and numerical control
- Machine tool capability

Lecture notes

Majority of lecturers from the industry.

Prerequisites / notice

Recommended to the focus production engineering.

151-0719-00L
Quality of Machine Tools - Dynamics and Metrology at Micro and Submicro Level

4 credits

W. Knapp, F. Kuster

Objective

Knowledge of
- Principal design of machine tools
- Errors of linear and rotational axes and of machine tools
- Influence of errors on the workpiece (error budgeting)
- Dynamics of mechanical systems
- Geometric, kinematic, thermal, dynamic testing of machine tools
- Test uncertainty
- Machine tool capability

Content

Metrology for production, machine tool metrology
- Basics, like principal machine tool design and machine tool coordinate system
- Principal design and errors of linear and rotational axes
- Error budgeting, influence of errors on the workpiece
- Geometric and kinematic testing of machine tools
- Reversal measurement techniques, multi-dimensional machine tool metrology
- Thermal influences on machine tools and testing these influences
- Test uncertainty, simulation
- Dynamics of mechanical systems, dynamic error sources
- Machine tool dynamics and the engineering tools modal analysis and finite element method (FEM)
- Testing of drives and numerical control
- Machine tool capability

Lecture notes

Documents are provided during the course. English handouts available on request.

Prerequisites / notice

Exercises in the laboratories and with the machine tools of the institute for machine tools and manufacturing (IWF) provide the practical background for this course.

151-0723-00L
Manufacturing of Electronic Devices

4 credits

A. Kunz, A. Guber, R.D. Morison, F. Reichert

Abstract

The lecture follows the value added process sequence of electric and electronic components. It contains: Development of electric and electronic circuits, design of electronic circuits on printed circuit boards as well as in hybrid technology, integrated test technology, planning of production lines, production of highly integrated electronic on a wafer as well as recycling.

Objective

Knowledge about the value added process sequence for electronics manufacturing, planning of electric and electronic product as well as their production, planning of production lines, value added process sequence for photovoltaics.
Nothing works without electronics! Typical products in mechanical engineering such as machine tools, as well as any kind of vehicle contain a significant amount of electric or electronic components of more than 60%. Thus, it is important to master the value added process sequence for electric and electronic components.

The lecture starts with a brief introduction of electronic components and the planning of integrated circuits. Next, an overview will be provided about electronic functional units assembled from these electronic components, on printed circuit boards as well as in hybrid technology. Value added process steps are shown as well as their quality check and their combination for planning a complete manufacturing line. The lecture further describes the manufacturing of integrated circuits, starting from the wafer via the structuring and bonding to the packaging. As an example, the manufacturing of micro-electromechanical and electro-optical systems and actuators is described. Due to similar processes in the electronic production, the value added process sequence for photovoltaics will described too.

The lecture concludes with an excursion to a large manufacturing company. Here, students can see the application and realization of the manufacturing of electric and electronic devices.

The lecture partly given by experts from industry. It is supplemented by an excursion to one of the industry partners.

**Abstract**

- **151-0731-00L**
  - The fundamentals of forming technology are presented to Mechanical, Production and Material Engineers. The content of the lecture is:
    - Overview of manufacturing with forming techniques, deformation specific description of material properties and their experimental measurement, material laws, residual stresses, heat balance, tribological aspects of forming processes, workpiece and tool failure.
- **151-0735-00L**
  - Students will learn to apply, understand, and develop computational models of a large spectrum of engineering materials to predict their dynamic deformation response and failure in finite element simulations. Students will become familiar with important dynamic testing techniques to identify material model parameters from experiments. The ultimate goal is to provide the students with the knowledge and skills required to engineer modern multi-material solutions for high performance structures in automotive, aerospace, and naval engineering.
- **151-0833-00L**
  - Most problems in engineering are of nonlinear nature. The nonlinearities are caused basically due to the nonlinear material behavior, contact conditions and instability of structures. The principles of the nonlinear Finite-Element-Method (FEM) will be introduced in the scope of this lecture for treating such problems.

**Objective**

- **151-0731-00L**
  - Forming technology represents with its 70% global share in manufactured metal volume with respect to yield and cost, the most important manufacturing process in metal-working industries. Typical applications of forming technology range from the manufacturing of sheet metal components in auto bodies to applications in food and pharma packaging, fabrication of implants in medical technologies and to the fabrication of leads in microelectronic components. This course introduces the fundamentals which are essential to evaluate metal-forming processes and its industrial applications. This includes, together with the acquirements of the most important forming processes, the characterization of plastic material behavior and manufacturing limits.
- **151-0735-00L**
  - Topics include viscoelasticity, temperature and rate dependent plasticity, dynamic brittle and ductile fracture; impulse transfer, impact and wave propagation in solids; computational aspects of material model implementation into hydrocodes; simulation of dynamic failure of structures;
- **151-0833-00L**
  - The goal of the lecture is to provide the students with the fundamentals of the non linear Finite Element Method (FEM). The lecture focuses on the principles of the nonlinear Finite-Element-Method based on explicit and implicit formulations. Typical applications of the nonlinear Finite-Element-Methods are simulations of:
    - Crash
    - Collapse of structures
    - Materials in Biomechanics (soft materials)
    - General forming processes

**Content**

- **151-0731-00L**
  - Slides of the lectures, relevant journal papers and users manuals will be provided.
  - Various books will be recommended covering the topics discussed in class
- **151-0735-00L**
  - Slides of the lectures, relevant journal papers and users manuals will be provided.
  - Various books will be recommended covering the topics discussed in class
- **151-0833-00L**
  - Slides of the lectures, relevant journal papers and users manuals will be provided.
  - Various books will be recommended covering the topics discussed in class

**Literature**

- **151-0731-00L**
  - J. W. Kolar
- **151-0735-00L**
- **151-0833-00L**

**Prerequisites / Notice**

- **151-0731-00L**
  - Lecture notes are handed out during the individual lessons (CHF 20.-).
- **151-0735-00L**
  - Help for English speaking students on request.
- **151-0833-00L**
  - If we will have a large number of students, two dates for the exercises will be offered.
Objective
Fields of application of power electronic systems. Principle of operation of basic pulse-width modulated and line-commutated power electronic converters, analysis of the operating behavior and of the control-oriented behavior, converter design. Reduction of effects of line-commutated rectifiers on the mains, electromagnetic compatibility.

Content

Lecture notes
Lecture notes and associated exercises including correct answers, simulation program for interactive self-learning including visualization/animation features.

Prerequisites / notice
Prerequisites: Basic knowledge of electric circuit analysis and signal theory.

| 151-0509-00L| Microscale Acoustofluidics                   | W    | 4    | 3G    | J. Dual                         |
| Abstract    | In this lecture the basics as well as practical aspects (from modelling to design and fabrication) are described from a solid and fluid mechanics perspective with applications to microsystems and lab on a chip devices. |
| Objective   | Understanding acoustophoresis, the design of devices and potential applications. |
| Content     | Linear and nonlinear acoustics, foundations of fluid and solid mechanics and piezoelectricity. Gorkov potential, numerical modelling, acoustic streaming, applications from ultrasonic micro robotics to surface acoustic wave devices. |
| Prerequisites / notice| Solid and fluid continuum mechanics. Notice: The exercise part is a mixture of presentation, lab session and hand in homework. |

| 151-0524-00L| Continuum Mechanics I                      | W    | 4    | 2V+1U | E. Mazza                       |
| Abstract    | The lecture deals with constitutive models that are relevant for design and calculation of structures. These include anisotropic linear elasticity, linear viscoelasticity, plasticity, viscoplasticity. Homogenization theories and laminate theory are presented. Theoretical models are complemented by examples of engineering applications and experiments. |
| Objective   | Basic theories for solving continuum mechanics problems of engineering applications, with particular attention to material models. |
| Lecture notes| Yes |

| 151-0604-00L| Microrobotics                               | W    | 4    | 3G    | B. Nelson                      |
| Abstract    | Microrobotics is an interdisciplinary field that combines aspects of robotics, micro and nanotechnology, biomedical engineering, and materials science. The aim of this course is to expose students to the fundamentals of this emerging field. Throughout the course students are expected to submit assignments. The course concludes with an end-of-semester examination. |
| Objective   | The objective of this course is to expose students to the fundamental aspects of the emerging field of microrobotics. This includes a focus on physical laws that predominate at the microscale, technologies for fabricating small devices, bio-inspired design, and applications of the field. |
| Content     | Main topics of the course include: - Scaling laws at micro/nano scales - Electrostatics - Electromagnetism - Low Reynolds number flows - Observation tools - Materials and fabrication methods - Applications of biomedical microrobots |
| Lecture notes| The powerpoint slides presented in the lectures will be made available in hardcopy and as pdf files. Several readings will also be made available electronically. |
| Prerequisites / notice| The lecture will be taught in English. |

| 151-0619-00L| Introduction to Nanoscale Engineering       | W    | 5    | 2V+3P | S. E. Pratsinis, V. Mavrantzas, A. Teleki Sotiriou, K. Wegner |
| Abstract    | Nano is the new scale in science & engineering as micro was ~150 years ago. This BSc course demands substantial effort! It gives a flavor of nanotechnology with hands-on student projects on gas-phase synthesis of nanoparticles & applications in catalysis, gas sensing and biomedical engineering. Projects are conducted individually under the close supervision of MSc, PhD or post-doctoral students. |
**Objective**

This course aims to familiarize BSc students with some of the basic phenomena of nanoscale, thereby illustrating the links between physics, chemistry, materials science and/or biology through hands-on experience. Furthermore it aims to give an overview of the field with motivating lectures from industry and academia, including the development of technologies and processes based on or involving nanoscale phenomena. Most importantly, this course aims to develop the creativity and sharpen the communication skills of the students through their individual projects, a PERFECT preparation for the BSc thesis (e.g., efficient literature search, effective oral/written project presentations), the future profession itself and even life, in general, as the abc questions (in the Content below) are always there! The course lectures will include some, if not all, of the following:

- Overview of Nanotechnology & Project Presentation
- Control of nanoparticle size & structure in the gas-phase
- Multi-scale design of nanomaterial synthesis
- Characterization of nanostructured materials
- Encapsulation technologies for active food ingredients
- Aerosol manufacture of nanoparticles
- Physical Chemistry of Nanoparticles (structure, molecular forces, statistical thermodynamics)
- Thermodynamics of nanoparticles (the basics, thermal stability, nanophases, melting temperature)
- Transport properties of nanoparticles (diffusivity, mobility, settling, adsorption)
- Computer simulations of nanoparticles (from atoms, to primary particles, to agglomerates)
- Thin film coatings
- Cluster beam deposition

**Content**

This is strictly a BSc course. Its objectives are met primarily through the individual student project which may involve experiments, simulations or critical & quantitative reviews of the literature. Thereina, a 2-page proposal (15% of the grade) is submitted within the first two semester weeks addressing explicitly, at least, 10 well-selected research articles and thoughtful meetings with the project supervisor. The proposals might address 3 basic questions: a) how important is the project; b) what has been done already in that field and c) what will be done by the student. Detailed feedback on each proposal is given by the supervisor, assistant and professor two weeks later. Towards the end of the semester, a 10-minute oral presentation is given by the student followed 10 minutes Q&A (30% of the grade). A 10-page final report is submitted by noon of the last day of the semester (55% of the grade). The project supervisor will provide guidance throughout the course especially when called for by the student. Detailed feedback on each proposal, presentation and final report is given by the supervisor, assistant and professor.

**Prerequisites / notice**

5th semester student standing in D-MAVT. Students attending this course are expected to allocate sufficient additional time within their weekly lecture schedule in order to successfully conduct the project work. As exceptional effort will be required, having seen "Chasing Mavericks" (2012) by Apted & Henson, "Unbroken" (2014) by Angelina Jolie and, in particular, "The Salt of the Earth" (2014) by Wim Wenders might be helpful and even motivating. These movies show how methodic effort can bring superior and truly unexpected results (e.g. stay under water for 5 minutes to overcome the fear of riding huge waves or merciless Olympic athlete training that help him survive 45 days on a raft in Pacific Ocean followed by 2 years in a Japanese POW camp during WWII).

**151-0621-00L**

- **Microsystems Technology**
  - **W** 6 credits 4G
  - **C. Hierold, M. Haluska**

**Abstract**

Students are introduced to the basic concepts in biosensing and bioelectronics. The sources and use of electrical fields and currents in the context of biological systems and problems are discussed. The fundamental challenges of measuring biological signals are introduced. The most important biosensing techniques and their physical concepts are introduced in a quantitative fashion.

**Objective**

During this course the students will:

- learn the basic concepts in biosensing and bioelectronics
- be able to solve typical problems in biosensing and bioelectronics
- learn about the remaining challenges in this field

**Lecture notes**

Handouts (available online)

**Literature**

- S.M. Sze: Semiconductor Devices, Physics and Technology

Prerequisites: Physics I and II

**227-0385-10L**

- **Biomedical Imaging**
  - **W** 6 credits 5G
  - **S. Kozerke, K. P. Prüssmann, M. Rudin**

**Abstract**

Introduction and analysis of medical imaging technology including X-ray procedures, computed tomography, nuclear imaging techniques using single photon and positron emission tomography, magnetic resonance imaging and ultrasound imaging techniques.

**Objective**

To understand the physical and technical principles underlying X-ray imaging, computed tomography, single photon and positron emission tomography, magnetic resonance imaging, ultrasound and Doppler imaging techniques. The mathematical framework is developed to describe image encoding/decoding, point-spread function/modular transfer function, signal-to-noise ratio, contrast behavior for each of the methods. Matlab exercises are used to implement and study basic concepts.

**Content**

- X-ray imaging
- Computed tomography
- Single photon emission tomography
- Positron emission tomography
- Magnetic resonance imaging
- Ultrasound/Doppler imaging

**Lecture notes**

**227-0393-10L**

- **Bioelectronics and Biosensors**
  - **W** 6 credits 2V+2U
  - **J. Vörös, M. F. Yanik, T. Zambelli**

**Abstract**

The course introduces the concepts of bioelectricity and biosensing. The sources and use of electrical fields and currents in the context of biological systems and problems are discussed. The fundamental challenges of measuring biological signals are introduced. The most important biosensing techniques and their physical concepts are introduced in a quantitative fashion.

**Objective**

During this course the students will:

- learn the basic concepts in biosensing and bioelectronics
- be able to solve typical problems in biosensing and bioelectronics
- learn about the remaining challenges in this field
L1. Bioelectronics history, its applications and overview of the field
- Volta and Galvani dispute
- BMI, pacemaker, cochlear implant, retinal implant, limb replacement devices
- Fundamentals of biosensing
- Glucometer and ELISA

L2. Fundamentals of quantum and classical noise in measuring biological signals

L3. Biomeasurement techniques with photons

L4. Acoustics sensors
- Differential equation for quartz crystal resonance
- Acoustic sensors and their applications

L5. Engineering principles of optical probes for measuring and manipulating molecular and cellular processes

L6. Optical biosensors
- Differential equation for optical waveguides
- Optical sensors and their applications
- Plasmonic sensing

L7. Basic notions of molecular adsorption and electron transfer
- Quantum mechanics: Schrödinger equation energy levels from H atom to crystals, energy bands
- Electron transfer: Marcus theory, Gerischer theory

L8. Potentiometric sensors
- Fundamentals of the electrochemical cell at equilibrium (Nernst equation)
- Principles of operation of ion-selective electrodes

L9. Amperometric sensors and bioelectric potentials
- Fundamentals of the electrochemical cell with an applied overpotential to generate a faraday current
- Principles of operation of amperometric sensors
- Ion flow through a membrane (Fick equation, Nernst equation, Donnan equilibrium, Goldman equation)

L10. Action potentials and impulse propagation

L11. Action potentials and impulse propagation

L12. Functional electric stimulation and recording
- MEA and CMOS based recording
- Applying potential in liquid - simulation of fields and relevance to electric stimulation

L13. Neural networks memory and learning

Literature

Prerequisites
Supervised exercises solving real-world problems. Some Matlab based exercises in groups.

376-0021-00L Introduction to Biomedical Engineering I
W 4 credits 3G  P. Christen, R. Müller, J. G. Snedeker, M. Zenobi-Wong

Abstract
Introduction to biomechanics, biomaterials, tissue engineering, medical imaging as well as the history of biomedical engineering.

Objective
Understanding of physical and technical principles in biomechanics, biomaterials, tissue engineering, medical imaging as well as the history of biomedical engineering. Mathematical description and problem solving. Knowledge of biomedical engineering applications in research and clinical practice.

Content
Tissue and Cellular Biomechanics, Molecular Biomechanics and Biopolymers, Computational Biomechanics, Biomaterials, Tissue Engineering, Radiation and Radiographic Imaging, Diagnostic Ultrasound Imaging, Magnetic Resonance Imaging, Biomedical Optics and Lasers.

Lecture notes
Stored on ILIAS.

Literature

376-0203-00L Movement and Sport Biomechanics
W 4 credits 3G  W. R. Taylor, R. List, S. Lorenzetti

Abstract
Learning to view the human body as a (bio-) mechanical system. Making the connections between everyday movements and sports activity with injury, discomfort, prevention and rehabilitation.

Objective
Students are able to describe the human body as a mechanical system.
They analyse and describe human movement according to the laws of mechanics.

Content
Movement- and sports biomechanics deals with the attributes of the human body and their link to mechanics. The course includes topics such as functional anatomy, biomechanics of daily activities (gait, running, etc.) and looks at movement in sport from a mechanical point of view. Furthermore, simple reflections on the loading analysis of joints in various situations are discussed. Additionally, questions covering the statics and dynamics of rigid bodies, and inverse dynamics, relevant to biomechanics are investigated.

376-1504-00L Physical Human Robot Interaction (pHRI)
Number of participants limited to 26.
W 4 credits 2V+2U  R. Gassert, O. Lambercy

Abstract
This course focuses on the emerging, interdisciplinary field of physical human-robot interaction, bringing together themes from robotics, real-time control, human factors, haptics, virtual environments, interaction design and other fields to enable the development of human-oriented robotic systems.
Objective

The objective of this course is to give an introduction to the fundamentals of physical human robot interaction, through lectures on the underlying theoretical/mechatronics aspects and application fields, in combination with a hands-on lab tutorial. The course will guide students through the design and evaluation process of such systems.

By the end of this course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and de- sign safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the defined design requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement and test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) investigate and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

Content

This course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neurophysiology and psychophysics, principles of human-robot interaction systems (kinematics, mechanical transmissions, robot sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance and force control, haptic rendering basics and issues in device design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical-human-robot interaction, laboratory sessions and lab visits.

Students will attend laboratory sessions where they will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://www.relab.ethz.ch/education/courses/phri/request-ethz-haptic-paddle-hardware-documentation.html), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, time delays, sampling rate, sensor quantization, etc.) during rendering of different mechanical properties.

Lecture notes

Will be distributed through the document repository before the lectures.

Literature

Prerequisites / notice

Notice:
The registration is limited to 26 students
There are 4 credit points for this lecture.
The lecture will be held in English.
The students are expected to have basic control knowledge from previous classes.

http://www.relab.ethz.ch/education/courses/phri.html

376-1714-00L Biocompatible Materials W 4 credits 3G K. Maniura, J. Möller, M. Zenobi-Wong

Abstract

Introduction to molecules used for biomaterials, molecular interactions between different materials and biological systems (molecules, cells, tissues). The concept of biocompatibility is discussed and important techniques from biomaterials research and development are introduced.

Objective

The class consists of three parts:
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Number Title Type ECTS Hours Lecturers
151-0733-00L Forming Technology III - Forming Processes W 4 credits 2V+2U P. Hora

Abstract
The lecture teaches on the basic knowledge of major processes in sheet metal, tube and bulk metal forming technologies. In particular it focuses on fundamental computation methods, which allow a fast assessment of process behaviour and a rough layout. Process-specific states of stress and deformation are analysed and process limits are identified.

Objective
Acquaintance with forming processes. Determination of process forming. Interpretation of forming manufacturing Handouts provided during the classes and references therin.

Literature

Comprehensive Biomaterials, Ducheyne P. et al., 1st Edition, 2011 (available online via ETH library)

Additional materials are provided during classes and references therin.
The course addresses the assessment of corporate sustainability and its links to strategy, technology, and finance. Students learn why sustainability matters for managers and how businesses can act towards it. E-modules allow students to train critical thinking skills. In the 2nd half of the semester, sustainability challenges on water, energy, mobility, and food are explored in group projects.

**Objective**
Understand the limits and the potential of corporate sustainability for sustainable development

Develop critical thinking skills (argumentation, communication, evaluative judgment) that are useful in the context of corporate sustainability using an innovative writing and peer review method.

**Content**
Overview of the key concepts of corporate sustainability and topics related to Water, Energy, Mobility, and Food

Business implications of sustainable development, in particular for the assessment of sustainability performance, strategic change towards sustainability, technological innovations and sustainability, and finance and corporate sustainability.

Critical thinking skills for corporate sustainability.

In-depth case studies of corporate sustainability challenges in the track phase: How to deal with environmental pressure groups? How to use the strengths of business to solve pressing sustainability problems? How to catalyze technological innovations for sustainability? How to invest money in a sustainable way?

**Literature**

Readings will be available on the TIMGROUP website.

Slides will be available on the TIMGROUP website.

No specific background in economics or management is required.

Abstract

Finding solutions: what is complexity, problem solving cycle.

Implementing solutions: project management, critical path method, quality control feedback loop.

Controlling solutions: Vensim software, feedback cycles, control parameters, instabilities, chaos, oscillations and cycles, supply and demand, production functions, investment and consumption

Objective

A successful participant of the course is able to:
- understand why most real problems are not simple, but require solution methods that go beyond algorithmic and mathematical approaches
- apply the problem solving cycle as a systematic approach to identify problems and their solutions
- calculate project schedules according to the critical path method
- setup and run systems dynamics models by means of the Vensim software
- identify feedback cycles and reasons for unintended systems behavior
- analyse the stability of nonlinear dynamical systems and apply this to macroeconomic dynamics

Content

Why are problems not simple? Why do some systems behave in an unintended way? How can we model and control their dynamics? The course provides answers to these questions by using a broad range of methods encompassing systems oriented management, classical systems dynamics, nonlinear dynamics and macroeconomic modeling.

The course is structured along three main tasks:
1. Finding solutions
2. Implementing solutions
3. Controlling solutions

PART 1 introduces complexity as a system immanent property that cannot be simplified. It introduces the problem solving cycle, used in systems oriented management, as an approach to structure problems and to find solutions.

PART 2 discusses selected problems of project management when implementing solutions. Methods for identifying the critical path of subtasks in a project and for calculating the allocation of resources are provided. The role of quality control as an additional feedback loop and the consequences of small changes are discussed.

PART 3, by far the largest part of the course, provides more insight into the dynamics of existing systems. Examples come from biology (population dynamics), management (inventory modeling, technology adoption, production systems) and economics (supply and demand, investment and consumption). For systems dynamics models, the software program VENSIM is used to evaluate the dynamics. For economic models analytical approaches, also used in nonlinear dynamics and control theory, are applied. These together provide a systematic understanding of the role of feedback loops and instabilities in the dynamics of systems. Emphasis is on oscillating phenomena, such as business cycles and other life cycles.

Lecture notes

Weekly self-study tasks are used to apply the concepts introduced in the lectures and to come to grips with the software program VENSIM. The lecture slides are provided as handouts - including notes and literature sources - to registered students only. All material is to be found on the Moodle platform. More details during the first lecture

Prerequisites / notice

Self-study tasks (discussion exercises, Vensim exercises) are provided as home work. Weekly exercise sessions (45 min) are used to discuss selected solutions. Regular participation in the exercises is an efficient way to understand the concepts relevant for the final exam.

Only for Mechanical Engineering BSc.

Abstract

This module is an addition to the course Systems Dynamics and Complexity. It offers additional study cases to MAVT Bachelor students who enroll in the main course.

Objective

MAVT Bachelor students learn how to develop and analyze more sophisticated systems dynamics models from different areas, e.g. from biology (population dynamics, cooperation), management (inventory modeling, technology adoption and economics (supply and demand, investment and consumption), to name but a few. The goal is to apply analytical and numeric techniques to gain a deeper understanding of the dynamics of complex systems.

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 1022 of 1571
1. Modelling path dependence and formation of standards
   - Why do clocks go clockwise? Why do people in most nations drive on the right? Why do nearly all computer keyboards have the QWERTY layout, even though it is more inefficient compared to DVORAK? It turns out that many real-world processes are path dependent, i.e. small random events early in their history determine the ultimate end state, even when all end states are equally likely at the beginning. Students will learn how to model such processes, to understand the feedback mechanisms that lead to path dependence. As a case in point, we will study the ‘war’ between the Betamax and the VHS standards.

2. Optimal migration as promoter of cooperation
   - Mechanisms to promote cooperative behaviour is a vibrant research topic in various fields - economics, evolutionary biology and management science to name but a few. Students will be introduced to one such mechanism - migration. They will develop and analyse a macroscopic model to study how the rate of migration affects the long-term cooperation rate in a population.

3. Information transfer
   - Information flow in a social system (e.g. about the location of resources or appearance of a competitor) is an important component of group living. For example, it is well known that ants can achieve remarkable feats in finding an optimal route to a food patch through pheromone trails. The goal of this study case is to model information transfer in such systems by investigating the dynamics of trail formation in ants. The students will learn that the complexity in navigating to a food source may nevertheless be explained as a simple dynamical system with one control parameter only.

4. Decisions in social societies
   - In many situations individuals have to decide between two or more options. Such decisions often have a profound impact on the system as a whole, especially regarding group cohesion. Group cohesion is preferred, as individuals can benefit from living in groups, yet it may not be the underlying reason behind individual choices. In this case, students will develop and extend a macroscopic model of an animal social system faced with a decision to choose a new home, and identify the conditions which promote group cohesion versus group splitting.

5. Antigenic variation of HIV
   - One of the characteristic traits of HIV is that a host can be a carrier and a transmitter of the virus without experiencing symptoms for up to 10 years. This case is concerned with finding the mechanism of HIV disease progression. The students will develop a general population-based model for the interaction of an infectious agent with the host immune system. The model is applicable to a variety of infectious agents, ranging from acute lethal infections to chronic illness. Through analysing and simulating the model, the students will understand how the HIV virus interacts with the host and how the mutation rate of the virus is ultimately responsible for this long asymptomatic period.

6. Compartamental models in epidemiology
   - Many diffusive processes in social systems, such as epidemics, can be understood as a result of the interaction between a few groups (compartments) of individuals. The most common example is to divide a population into those who are susceptible (S) to a disease, those who are infected (I), and those who have recovered (R) and are immune, and to model their interactions. These so-called SIR models find wide application in studying non-biological diffusive processes, e.g. spread of technological innovations, fads, internet memes etc. In this study case, students will become familiar with the basic assumptions of an SIR model and the conditions under which a disease can cause the outbreak of an epidemic. Students will extend the basic model to investigate more realistic scenarios relevant to e.g. different vaccination strategies.

Abstract
Basic theories for structure integrity calculations are presented with focus on strength, stability, fatigue and elasto-plastic structural analysis. Theories and models for one dimensional and planar structures are presented based on energy theorems.

Objective
Basic principles applied in structural mechanics. Introduction to the theories of planar structures. Development of an understanding of the relationship between material properties, structural theories and design criteria.

Content
1. Basic problem of continuum mechanics and energy principles: structural theories, homogenization theories; finite elements; fracture mechanics.
3. Strength of material theories and material properties: ductile behaviour, plasticity, von Mises, Tresca, principal stress criterion; brittle behaviour; viscoplastic behaviour, creep resistance.
4. Structural design: fatigue and dynamic structural analysis.

M. Zogg, P. Ermann

Teams of 2 to 4 students have to design, size, and manufacture a lightweight structure complying with given specifications. A prototype as well as an improved component will be tested and assessed regarding to design and to structural mechanical criteria.

Objective  
To develop the skills to identify and solve typical problems of the structure mechanics on a real application. Other important aspects are to foster team work and team spirit, to link theoretical knowledge and practice, to gather practical experiences in various fields related to lightweight structures such as design, different CAE-methods and structural testing.

Content

Basic facts about nonlinear systems; stability and near-equilibrium dynamics; bifurcations; dynamical systems on the plane; non-autonomous dynamical systems; chaotic dynamics.

Objective  
This course is intended for Masters and Ph.D. students in engineering sciences, physics and applied mathematics who are interested in the behavior of nonlinear dynamical systems. It offers an introduction to the qualitative study of nonlinear physical phenomena modeled by differential equations or discrete maps. We discuss applications in classical mechanics, electrical engineering, fluid mechanics, and biology. A more advanced Part II of this class is offered every other year.

Content  
(1) Basic facts about nonlinear systems: Existence, uniqueness, and dependence on initial data.

(2) Near equilibrium dynamics: Linear and Lyapunov stability

(3) Bifurcations of equilibria: Center manifolds, normal forms, and elementary bifurcations

(4) Nonlinear dynamical systems on the plane: Phase plane techniques, limit sets, and limit cycles.

(5) Time-dependent dynamical systems: Floquet theory, Poincare maps, averaging methods, resonance

Lecture notes  
The class lecture notes will be posted electronically after each lecture. Students should not rely on these but prepare their own notes during the lecture.

- Prerequisites / notice  
- Prerequisites: Analysis, linear algebra and a basic course in differential equations.

- Exam: two-hour written exam in English.

- Homework: A homework assignment will be due roughly every other week. Hints to solutions will be posted after the homework due dates.

Forming Technology I - Basic Knowledge  
W  
4 credits  
2V+2U  
P. Hora

The fundamentals of forming technology are presented to Mechanical, Production and Material Engineers. The content of the lecture is: Overview of manufacturing with forming techniques, deformation specific description of material properties and their experimental measurement, material laws, residual stresses, heat balance, tribological aspects of forming processes, workpiece and tool failure.

Objective  
Forming technology represents with its 70% global share in manufactured metal volume with respect to yield and cost, the most important forming process in metal-working industries. Typical applications of forming technology range from the manufacturing of sheet metal components in auto bodies to applications in food and pharma packaging, fabrication of implants in medical technologies and to the fabrication of leads in microelectronic components. This course introduces the fundamentals which are essential to evaluate metal-forming processes and their industrial applications. This includes, together with the acquirements of the most important forming processes, the characterization of plastic material behavior and manufacturing limits.

Content  
Overview of the most important processes of metal-forming technology and its field of applications, characterization of the plastic metal-forming behavior, basic principles of plastic-mechanical calculations, metal-forming residual stresses, thermo-mechanical coupling of metal-forming processes, influence of tribology, Work piece failure through cracking and folding, tool failure through rupture and mechanical wear, metal-forming tools, sheet forming and massive forming processes, handling systems, metal-forming machinery.

Lecture notes  
ja
Lectures and computer labs concerned with the modeling of the deformation response and failure of engineering materials (metals, polymers and composites) subject to extreme loadings during manufacturing, crash, impact and blast events.

**Objective**

Students will learn to apply, understand and develop computational models of a large spectrum of engineering materials to predict their dynamic deformation response and failure in finite element simulations. Students will become familiar with important dynamic testing techniques to identify material model parameters from experiments. The ultimate goal is to provide the students with the knowledge and skills required to engineer modern multi-material solutions for high performance structures in automotive, aerospace and naval engineering.

**Content**

Topics include viscoelasticity, temperature and rate dependent plasticity, dynamic brittle and ductile fracture; impulse transfer, impact and wave propagation in solids; computational aspects of material model implementation into hydrocodes; simulation of dynamic failure of structures;

**Lecture notes**

Slides of the lectures, relevant journal papers and users manuals will be provided.

**Literature**

Various books will be recommended covering the topics discussed in class

**Prerequisites / notice**

Course in continuum mechanics (mandatory), finite element method (recommended)

<tr>
<td>151-3201-00L</td>
<td><strong>Studies on Engineering Design</strong></td>
<td>W+ 3</td>
<td>6A</td>
<td></td>
</tr>
<tr>
<td><strong>Abstract</strong></td>
<td>This course introduces students to the exciting world of Engineering Design research, which crosses disciplines and requires a variety of skills. Each student identifies a topic in Engineering Design for further investigation, either based on those proposed or a new, agreed topic.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Objective</strong></td>
<td>Students gain their first knowledge of Engineering Design research and carry out their first, independent scientific study. Students learn how to read scientific literature and critically analyze and discuss them, gain hands-on experience in the area and learn how to document their work concisely through a report and short presentation.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Content</strong></td>
<td>Students identify 5-10 journal articles, or scientifically equivalent, in consultation with the supervisor and can define a small, related project in the area to gain hands-on experience. In the beginning of the semester, students develop with the supervisor a 2-page proposal outlining the objective of the study, tasks to be carried out and a brief time plan for the work. Once agreed, the project starts resulting in a report combining the state-of-art literature review and project results, if carried out.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Prerequisites / notice</strong></td>
<td>Students take this course in parallel to the Lecture &quot;Grand Challenges in Engineering Design&quot;. A general meeting will be held in the beginning of the semester to propose topics for the studies. Studies are carried out individually and can be the pre-study for a Bachelor thesis.</td>
<td></td>
<td></td>
<td></td>

<td>W+ 1</td>
<td>3S</td>
<td></td>
</tr>
<tr>
<td><strong>Abstract</strong></td>
<td>The course is structured in three main blocks, each of them addressing a specific grand challenge in engineering design. Each block is composed of an introductory lecture and two to three invited talks, considering a good mix between speakers coming from academia and industry. Each talk is introduced and moderated by the students.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Objective</strong></td>
<td>The aim of the course is to introduce students to the engineering design research and practice in a multitude of Mechanical Engineering disciplines and convey knowledge from both academia and industry about state of the art methods, tools and processes.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Content</strong></td>
<td>The students are exposed to a variety of topics in the field of Engineering Design. Topics are bundled in three main grand challenges and include an introductory lecture held by one of the responsible Professors and 2-3 invited talks of 45 min. each, addressing specific issues. The success of the course is largely dependant on active involvement of the students. Accordingly, a small group of students (1-3) is asked to introduce and moderate each external talk. The group will therefore gather adequate information about the speaker and topic, read and synthesize relevant documents and scientific papers, prepare questions to motivate the interaction with the audience and summarize, at the end of the lecture, the discussed points and outcome.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>

Content
Dislocation theory:
Properties of dislocations, motion and kinetics of dislocations, dislocation-dislocation and dislocation-boundary interactions, consequences of partial dislocations, sessile dislocations

Hardening theory:
a. solid solution hardening: case studies in copper-nickel and iron-carbon alloys
b. particle hardening: case studies on aluminium-copper alloys

High temperature plasticity:
thermally activated glide
diffusional creep: Coble, Nabarro-Herring
defformation mechanism maps
Case studies in turbine blades
superplasticity
alloying effects

327-1204-00L Materials at Work I W 4 credits 4S R. Spolenak, E. Dufresne, R. Koopmans

Abstract
This course attempts to prepare the student for a job as a materials engineer in industry. The gap between fundamental materials science and the materials engineering of products should be bridged. The focus lies on the practical application of fundamental knowledge allowing the students to experience application related materials concepts with a strong emphasis on case-study mediated learning.

Objective
Teaching goals:

to learn how materials are selected for a specific application
to understand how materials around us are produced and manufactured
to understand the value chain from raw material to application
to be exposed to state of the art technologies for processing, joining and shaping
to be exposed to industry related materials issues and the corresponding language (terminology) and skills
to create an impression of how a job in industry "works", to improve the perception of the demands of a job in industry

Content
This course is designed as a two semester class and the topics reflect the contents covered in both semesters.

Lectures and case studies encompass the following topics:

Strategic Materials (where do raw materials come from, who owns them, who owns the IP and can they be substituted)
Materials Selection (what is the optimal material (class) for a specific application)
Materials systems (subdivisions include all classical materials classes)
Processing
Joining (assembly)
Shaping
Materials and process scaling (from nm to m and vice versa, from mg to tons)
Sustainable materials manufacturing (cradle to cradle)
Recycling (Energy recovery)

After a general part of materials selection, critical materials and materials and design four parts consisting of polymers, metals, ceramics and coatings will be addressed.

In the fall semester the focus is on the general part, polymers and alloy case studies in metals. The course is accompanied by hands-on analysis projects on everyday materials.

Literature
Manufacturing, Engineering & Technology
Serope Kalpakjian, Steven Schmid
ISBN: 978-0131489653

Prerequisites / notice
Profound knowledge in Physical Metallurgy and Polymer Basics and Polymer Technology required (These subjects are covered at the Bachelor Level by the following lectures: Metalle 1, 2; Polymere 1,2)

Engineering Tools IV

The participation at the Engineering Tools course is mandatory. If you miss any classes, no credit points will be awarded. For exemptions you have to contact the lecturer of the course.

Number Title Type ECTS Hours Lecturers
151-0015-10L Engineering Tool IV: Experimental Modal Analysis W 0.4 credits 1K F. Kuster, K. Wegener

Number of participants limited to 16.

Abstract
Measuring- and analysis-methods for the determination of transfer functions of mechanical structures. Evaluation and preparation of the measured data for visualisation and interpretation of the dynamic behaviour.

Objective
Introduction into the practical application of measuring- and analysis-methods for determination of transfer functions of mechanical structures. Evaluation and preparation of the measured data for visualisation and interpretation of the dynamic behaviour.

Content
Acquaintance with the acceleration- and force-sensors, measurement of transfer functions of mechanical structures, determination and description of modes of vibration by means of practical examples, introduction into the vibration theory and its fundamental terms, discrete oscillator.

Lecture notes
yes, distribution in the course (CHF 20.-)

Literature
David Ewins, Modal Testing: Theory and Practice

Prerequisites / notice
In the practical part of the course the participants self will make measurements on structures and then analyse them for eigenfrequencies and modes of vibrations.

### Prerequisites: Matlab skills; your laptop with Matlab/Simulink may be useful.

**Number of participants limited to 30.**

**Abstract**

This course covers model building and the applied stimulation of (power-assisted axles on production machinery using MATLAB/Simulink and provides a practical example of how drive parameters may be set up, how through simulation an optimal axis design can be developed and which characteristics of a production machine can be reliably estimated in advance.

**Objective**

The students are able to model servo axes considering all relevant components and process influences to simulate the achievable productivity.

**Content**

1. Introduction, complexity levels in model building for production machines.
2. Complexity level 1: Power-assisted axles, transmission systems, general structural model.
3. Complexity level 2: Robotic models, kinematics and dynamics
4. Complexity level 3: Multi-body models and finite element models
5. Regulation of power-assisted axles, cascade regulator and state regulator extensions.
7. Master slave and gantry operations with dispersed servo drive.
8. Simulation examples in MATLAB/Simulink (Swivel axle, 5-axle milling machine, parallel kinematic milling machine, industrial robots).

**Lecture notes**

**Number of participants limited to 36.**

**Abstract**

The course introduces to Six Sigma quality management and quality improvement, which aims to reduce process variation and to sustain process capability. It introduces also to the Lean production principles, aiming to reduce waste within the processes as well as aiming to a customer taked pull-production.

**Objective**

The participant gets an overview to the Operational Excellence philosophy and the working methods of these two approches. He learns the most important tools and the interaction of these two approaches.

**Content**

1. Understanding the changing environment
   - Globalization, customer requirements, production systems
   - Six Sigma quality philosophy
   - Lean Manufacturing and TPS (Toyota Production System)
2. Quality management with Six Sigma
   - What is Six Sigma
   - DMAIC problem solving cycle
   - Use of different control charts
   - Evaluate process capability, DPMO, Cp, Cpk, Taguchi
   - Cause-effect diagram
   - Control plan and sustainability, PDCA
3. Introduction to the Lean approach
   - Lean goals and principles
   - A3 project management
   - The 5 types of waste
   - Value add and non value add activities
   - The 8 Lean-Tools, whereof 4
   - 5S workplace organization
   - Value stream mapping (exercise), Little's law
   - Continuous flow vs batch
   - Pull Principles, Kanban, DBR
   - Cell design
   - Linear Programming
4. Lean and Six Sigma in practice
   - How its Lean and Six Sigma together
   - Continuous Improvement/Kaizen organization
   - Change-Management, risks
   - Inspire deployment approach

**Lecture notes**

Notes will be distributet.

**Abstract**

Participants will learn to use the open source simulation software OpenFOAM on a user level (i.e. to conduct classical CFD studies). We will also introduce the students into programming with OpenFOAM so they will be able to implement additional equations into existing solvers.

**Objective**

Participants will learn to use the open source simulation software OpenFOAM on a user level (i.e. to conduct classical CFD studies). We will also introduce the students into programming with OpenFOAM so they will be able to implement additional equations into existing solvers.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1028 of 1571
OpenFOAM is a very professional open-source simulation package which is freely (CHF 0.-) available under the GNU General Public License (GPL). It consists of a vast C++ library, many different applications and additional tools. Although most of the existing applications are flow solvers, OpenFOAM can be used in many different areas, as varied as solid dynamics, electromagnetics or pricing of financial options.

Most users make only use of the included applications. One particular strength of OpenFOAM, however, is that new applications and even extensions of the library can be developed in a rather compact and elegant way.

Prerequisites / notice
Knowing C++ or at least having some experience in another programming language will be of an advantage but is not strictly required to follow this course.

151-0057-10L Engineering Tool IV/V: Systems Engineering for Project Work
All Engineering Tool courses are for MAVT-Bachelor students only.

Number of participants limited to 60.

Abstract
The course is about a methodical basis of systematic project work, with a focus on demanding interdisciplinary problems. The participants will be shown how to use it appropriately and correctly in their projects. This short course is based on the “Systems Engineering” (SE) method, which was developed at the ETH.

Objective
The goals of this compact course are:
- Goal-oriented identification and perception of relevant problem areas and project goal setting.
- Deduction and development of procedures for a promising project, including systematic planning of the project content.
- Development of work packages including efficient methodology
- Simple embedding of the projects in the organization, including relationships with buyers, users and securing project participation.

Content
1. Nachmittag:
   - Einstieg ins Systems Engineering; Entstehung, Inhalt und Werdegang; Voraussetzungen (anspruchsvolle Fragestellungen, institutionelle Einbettung, Systemdenken und heuristische Prinzipien);
   - Grundstruktur und Inhalt Lebensphasenmodell; Grundstruktur in Inhalt Problemlösungszyklus;
   - Zusammenspiel von Lebensphasenmodell & Problemlösungszyklus in Projekten
2. Nachmittag:
   - Situationsanalyse: Systemanalyse (Systemabgrenzung (gestaltbarer Bereich, relevante Bereiche des Umsystems)), Methoden der Analyse und Modellierung, Umgang mit Vernetzung, Dynamik und Unsicherheit; wichtigste Methoden der IST-Zustands- und Zukunftsanalyse);
   - Zielformulierung (wichtigste Methoden der Zielformulieren);
   - Konzeptsynthese und Konzeptanalyse (u.a. Kreativität; wichtigste Methoden der Synthese und Analyse),
3. Nachmittag:
   - Beurteilung (u.a. Methoden für mehrdimensionale Kriterienvergleich, z.B. Kosten-Wirksamkeits-Analyse); Diskussion von Planungsbeispielen
   - Diskussion von Planungsbeispielen: Analyse des Methodeneinsatzes, Entwickeln alternativer Vorgehensschritte und Auswahl des zweckmässigsten Vorgehens

Lecture notes
Zusammenfassung wird in elektronischer Form abgegeben;
Lehrbuch: die Grundlagen sind in einem Lehrbuch beschrieben
Anwendungsbeispiele: 8 konkrete Anwendungen von Systems Engineering sind in einem Case-Book beschrieben

Prerequisites / notice
Zielpublikum: Der Kurs richtet sich insbesondere an Personen, welche anspruchsvolle Projekte initiieren, planen und leiten müssen
Lernmethode: Der Stoff wird mittels kurzer Vorträge vermittelt und an kurzen Fallbeispielen/Übungen vertieft. Zudem sollen die Lehrinhalte durch selbständiges Studium der Lehrmittel vertieft bzw. ergänzt werden.

151-0059-10L Engineering Tool IV: CAD-Methodology and PDM-Technology in the Focus Project
All Engineering Tool courses are for MAVT-Bachelor students only.

Number of participants limited to 25.

Abstract
The participants learn about the procedures and tools that are necessary to develop technical products. The focus is on computer-based design and development and the management in an integrated software environment.

Objective
The participants will deepen their existing CAD knowledge and learn new PDM knowledge, so that these may be directly applied and used in the focus project.
- CAD refresh (Modelling, Assembling, Drafting, etc.) and CAD mythology for construction (Top-Down modelling)
- Introduction to the Team Center (Siemens PDM System)
- TeamCenter data flow, in particular the process of creating and managing new Items and Parts, the approval procedure and creating different versions of Parts

The participants will learn and experiment with procedures by working on concrete examples so that they will subsequently be able to begin with independent product construction.

The following topics will be dealt with in depth in the lectures supporting the focus project (Praxiskurs): CAD-Methodology, FE calculations, motion simulation and construction methodology.
Content

1. **Afternoon: CAD refresher and top down modelling**
   - To refresh already existing knowledge of CAD functionality.
   - Sketch and features as well as manipulation and optimizing models.
   - Assembling
   - Drafting
   - Organisation. working methods, conventions.

   - Top down modelling CAD
     - Introduction to top down modelling and concept modelling

2. **Afternoon: Introduction to TC (Team Center)**
   - Introduction: Short introduction to PLM (What is the idea of PLM? PLM is more than the pure management of drawings!).
   - Lesson 1 - Team Center Rich Client Interface
   - Lesson 2 - TC data types
   - Lesson 3 - Construction from data in TC
   - Lesson 4 - Searching for and examining data.

3. **Afternoon: TC application**
   - Lesson 5 - Unit lists (PSE)
   - Lesson 6 - Cross-referencing
   - Lesson 7 - Data release
   - Lesson 8 - Product data examination

Prerequisites / notice

- at least two students of a Focus-Team should sign in for this course, if teh use of Siemens TeamCenter PLM is given for the Team.
- only for students participating in a Focus Project in the same semester
- not more than 25 students

### 151-0061-10L Engineering Tool IV/V: Scientific Writing with LaTeX and Vector Graphics

*All Engineering Tool courses are for MAVT-Bachelor students only.*

**Number of participants limited to 40.**

**Abstract**

This course provides insights into the structure and compilation of scientific papers and publications using LaTeX as well as open source software for image editing and the creation of vector graphics. LaTeX is a typesetting tool that separates text format and layout. It is widely used for reports and publications in the scientific domain.

**Objective**

By looking at specific examples during class you will obtain an overview on composing scientific papers (e.g. bachelor theses, semester theses, master theses) using LaTeX and acquire the most important commands to typeset complex formulas, tables and graphics.

**Content**

- layout of scientific reports
- writing with LaTeX (structure, formatting, formulas, tables, graphics, references, table of contents, hyperlinks, packages) based on a template for bachelor/ semester/ master theses.
- graphic design and illustration using open source software and Matlab
- including PDF files in the report (project description, data sheets)
- managing bibliography databases

**Literature**

http://www.relab.ethz.ch/education/courses/engineering-tools-latex.html

### 151-0062-10L Engineering Tool V: Computer-Aided Design Methods

*All Engineering Tool courses are for MAVT-Bachelor students only.*

**Number of participants limited to 25.**

**Abstract**

Participants will learn about the Computer-Aided Design fundamentals and methods that are necessary to model complex technical products. The focus will be placed on feature-based and parametric modelling that is common to all modern CAD tools used in mechanical engineering design.

**Objective**

CAD knowledge and skills will be further developed to enable students to recognize both the advantages and the limitations of current Computer-Aided Design tools. Examples of how to build feature-based and parametric models including design automation will be given along with common pitfalls. After taking the course students should be able to independently create effective feature-based and parametric models of mechanical parts.

**Content**

1. CAD Methods and Feature-Based Design (2 afternoons):
   - in the context of the design process
   - Feature types and their relation to mechanical design
   - Strategies for building feature-based assemblies
   - Integration of digital part libraries
   - Common issues and difficulties with feature interaction

2. CAD and Parametric Modelling (1 afternoon):
   - Designing and building parametric models
   - Design automation to create design variants
   - Common issues and difficulties with parametric modelling

### 151-0067-10L Engineering Tool IV: Sketching and Visualization of Technical Concepts

*All Engineering Tool courses are for MAVT-Bachelor students only.*

**Number of participants limited to 20.**

**Abstract**

This course is offered by the Design and Technology Lab Zurich. Effective visualizations of ideas are essential to communicate technical concepts. This course focusses on the basics of a coherent draft design through forms of sketches using various simple techniques.

**Objective**

Mastering various simple techniques for the visualization of technical ideas.
Basics in: Perspective, line drawing, proportions, implementation of the plan views of perspective

It requires no further books

Max 20 participants

Material: Paper and pens

All Engineering Tool courses are for MAVT-Bachelor students only.

Number of participants limited to 50.

Participants acquire scientific writing basics as a core competency to communicate with different audiences. They apply important methods and tools to refine a scientific question, research and evaluate the necessary information, quote and paraphrase, and to plan the structure of their own text.

Students are able to:
- derive and structure ideas for a text starting from a scientific question using simple techniques
- find literature sources, check their relevance and completeness, organize them with a suitable tool and cite correctly
- apply a reading technique for summarizing a text
- distinguish plagiarism, quotation and paraphrase in texts using the presented criteria and correctly cite or paraphrase external content
- use and cite information from the Internet correctly
- plan and structure specialized texts that refer to different target groups

1.Halbtag: Recherchieren und Lesen
(1) Auf Vorhandenem aufbauen
(2) Ideen generieren
(3) Recherchieren
(4) Quellen beurteilen

2.Halbtag: Paraphrasieren nicht Plagiariisieren
(1) Verantwortlich sein: der Wert des eigenständigen Denkens
(2) Regeln und Anweisungen: was ist ein Plagiat, wie wird es an der ETHZ gehandhabt, Eigenständigkeitserklärung, Prüfwerkzeuge
(3) Zitieren und Paraphrasieren - so geht's
(4) Paraphrasieren oder Zitieren?
(5) Lesen und verstehen
(6) Vom Umgang mit Quellen und Material aus dem Internet

3.Halbtag: Einen Text strukturieren und generieren
(1) Verwendung einer Standard-Textstruktur als Vorlage für ein Outline
(2) Ein Grundgerüst mit Abschnitten erstellen
(3) Eine Textabschnitt schreiben

Inputs: Kurzvorträge
Uebungen: während des Nachmittags selbständig in Moodle anhand von Fallstudien
Feedback und Diskussion: Lösungen der Studierenden via Moodle an Dozentenbeamer und Besprechen durch die Dozierenden

Zu allen Inhaltssteilen gibt es Übungsteile in Moodle, für die ein Laptop mit funktionierendem Internetanschluss benötigt wird.

Computer für Online-Übungen während der Veranstaltung.

Workshop Training

Students are required to conduct a workshop training outside ETH Zurich for a minimum duration of five weeks. The students learn how to operate workshop equipment, and acquire first experience in the realization of an engineering project. They summarize the workshop practice in a work and project description.

The students learn how to operate workshop equipment, and acquire first experience in the realization of an engineering project.

Students attend at least 10 Laboratory Practices during the 4th and 5th semester. 4 of these must be Physics laboratories. All laboratory work is graded "pass" or "fail". After completion of 10 laboratory training units, 2 credit points will be issued.

Please register online at www.mavt.ethz.ch/praktika

Laboratory Practice

Selected laboratory experiments in physics, mechanical and process engineering. With the Laboratory Training held during the fourth and fifth semester, the students learn how to handle and apply measurement methods and devices. Students are offered a diversified choice of laboratory experiments at least ten of which must be completed. Four of the chosen experiments must be in physics.

With the Laboratory Training held during the fourth and fifth semester, the students learn how to handle and apply measurement methods and devices.

GESS Science in Perspective

Recommended GESS Science in Perspective (Type B) for D-MAVT.

see GESS Science in Perspective: Type A: Enhancement of Reflection Capability

see GESS Science in Perspective: Language Courses ETH/UZH
The Bachelor's Thesis can be only started when the First Year Examinations, the Additional First Year Courses, the Examination Block 1 and 2 are passed. It is insistently recommended for students to only begin the Bachelor's Thesis if 150 credit points have been achieved. The thesis corresponds to a work load of 420 hours and can be done in part- or full-time.

Potential supervisors for the Bachelor's Thesis:
- All D-MAVT professors (https://www.mavt.ethz.ch/the-department/people/professors.html)
- Professors in other departments who are accredited at D-MAVT (https://www.mavt.ethz.ch/the-department/people/accredited-professors.html)
- D-MAVT titular professors (https://www.mavt.ethz.ch/the-department/people/titular-professors.html). For enrollment, please contact the D-MAVT Student Administration.

Abstract
The bachelor's thesis is the culmination of the program. The students develop, enhance, and demonstrate their methodological abilities to independently tackle and solve a given research problem. The thesis furnishes the students with their first major research experience and is a further development of the work done in the basis courses, and usually, the focused study.

Objective
The students develop, enhance and demonstrate their methodological abilities to independently tackle and solve a given research problem.

Content
The topics for the bachelor's thesis are published by the professorship or they can be set in consultation between the professors and the students. Thesis projects in cooperation with the industry are also possible.

Prerequisites / notice
Supervisors should normally be part of the D-MAVT professorship or may be professors accredited by D-MAVT.

Abstract
The bachelor's thesis is the culmination of the program. The students develop, enhance and demonstrate their methodological abilities to independently tackle and solve a given research problem. The thesis furnishes the students with their first major research experience and is a further development of the knowledge acquired in the engineering fundamentals and the focused study.

Objective
The students develop, enhance and demonstrate their methodological abilities to independently tackle and solve a given research problem.

Content
The topics for the bachelor's thesis are defined by the professorship or can be set in consultation between the professors and the students.

Prerequisites / notice
Exclusively D-MAVT students who have enrolled for the focus specialization Management, Technology and Economy are eligible for this type of bachelor's thesis. Supervisors are normally part of the D-MTEC professorship. Further prerequisites have to be discussed with the responsible professor. The bachelor's thesis must be completed within 14 weeks which is an equivalent half-time workload during a semester.

Uncertainty Quantification for Engineering & Life Sciences

Number of participants limited to 60.

Abstract
Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective
The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Content
Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes
The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature
1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
2. Probability Theory: The Logic of Science by E. T. Jaynes
3. Class Notes

Prerequisites / notice
Fundamentals of Probability, Fundamentals of Computational Modeling

Quantitative Flow Visualization

Abstract
The course provides an introduction to digital image analysis in modern flow diagnostics. Different techniques which are discussed include image velocimetry, laser induced fluorescence, liquid crystal thermography and interferometry. The physical foundations and measurement configurations are explained. Image analysis algorithms are presented in detail and programmed during the exercises.

Objective
Introduction to modern imaging techniques and post processing algorithms with special emphasis on flow analysis and visualization. Understanding of hardware and software requirements and solutions. Development of basic programming skills for (generic) imaging applications.

Content
Fundamentals of optics, flow visualization and electronic image acquisition. Frequently used image processing techniques (filtering, correlation processing, FFTs, color space transforms). Image Velocimetry (tracking, pattern matching, Doppler imaging). Surface pressure and temperature measurements (fluorescent paints, liquid crystal imaging, infrared thermography). Laser induced fluorescence. (Digital) Schlieren techniques, phase contrast imaging, interferometry, phase unwrapping. Wall shear and heat transfer measurements. Pattern recognition and feature extraction, proper orthogonal decomposition.

Lecture notes
available

Prerequisites / notice
Prerequisites: Fluidodynamics I, Numerical Mathematics, programming skills.
Language: German on request.

High Performance Computing for Science and Engineering (HPCSE) I

Abstract
This course gives an introduction into algorithms and numerical methods for parallel computing for multi and many-core architectures and for applications from problems in science and engineering.

Objective
Introduction to HPC for scientists and engineers. Fundamental of:
1. Parallel Computing Architectures
2. MultiCores
3. ManyCores

Content
Programming models and languages:
1. C++ threading (2 weeks)
2. OpenMP (4 weeks)
3. MPI (5 weeks)
Computers and methods:
1. Hardware and architectures
2. Libraries
3. Particles: N-body solvers
4. Fields: PDEs
5. Stochastics: Monte Carlo

Turbulent Flows

Abstract
Contents
- Laminar and turbulent flows, instability and origin of turbulence - Statistical description: averaging, turbulent energy, dissipation, closure problem - Scalings. Homogeneous isotropic turbulence, correlations, Fourier representation, energy spectrum - Free turbulence: wake, jet, mixing layer - Wall turbulence: Channel and boundary layer - Computation and modelling of turbulent flows

Objective
Basic physical phenomena of turbulent flows, quantitative and statistical description, basic and averaged equations, principles of turbulent flow computation and elements of turbulence modelling

Content
- Properties of laminar, transitional and turbulent flows.
- Origin and control of turbulence. Instability and transition.
- Statistical description, averaging, equations for mean and fluctuating quantities, closure problem.
- Scalings, homogeneous isotropic turbulence, energy spectrum.
- Turbulent free shear flows. Jet, wake, mixing layer.
- Wall-bounded turbulent flows.
- Turbulent flow computation and modeling.

Lecture notes
Lecture notes are available

Literature
Abstract

The methods of fluid dynamics play an important role in the description of a chain of events, involving the release, spreading and dilution of dangerous fluids in the environment. Tunnel ventilation systems and strategies are studied, which must meet severe requirements during normal operation and in emergency situations (tunnel fires etc.).

Objective

Generally applicable methods in fluid dynamics and gas dynamics are illustrated and practiced using selected current examples.

Content

Often experts fall back on the methodology of fluid dynamics when involved in the construction of environmentally friendly processing and incineration facilities, as well as when choosing safe transport and storage options for dangerous materials. As a result of accidents, but also in normal operations, dangerous gases and liquids may escape and be transported further by wind or flowing water. There are many possible forms that the resulting damage may take, including fire explosion when flammable substances are mixed.

The topics covered include: Emissions of liquids and gases from containers and pipelines, evaporation from pools and vaporization of gases kept under pressure, the spread and dilution of waste gas plumes in the wind, deflagration and detonation of inflammable gases, fireballs in gases held under pressure, pollution and exhaust gases in tunnels (tunnel fires etc.).

Lecture notes

not available

Prerequisites / notice

Requirements: successful attendance at lectures "Fluidodynamik I und II", "Thermodynamik I und II"
## Theory and Modeling of Reactive Flows

The course builds upon three parts:

1. **Lecture notes on the theoretical parts of the course will be made available.**
2. **Theory of combustion with numerical applications**
3. **Methods like molecular dynamics, DSMC, lattice Boltzmann etc are being increasingly used by engineers all over and these methods import relevance in the last years, will be dealt in detail along with its coupling with homogeneous combustion. Finally, approaches for the modeling of turbulent combustion will be presented. Available numerical codes will be used to compute the above described phenomena. Familiarity with numerical methods for the solution of partial differential equations is expected.**

### Prerequisites / notice

- Handouts
- NEW course

### Objective

Understand the principles, and learn the design procedures and the behaviour of turbomachines.

### Content

Im zweiten Teil der Vorlesung wird das Verhalten der Turbomaschinen bei veränderten Betriebsbedingungen dargestellt. Ebenfalls behandelt werden mechanische Fragestellungen des Turbomaschinenbaus wie z.B. Vibrationen, Lagerbelastungen und auftretende Spannungen in den Bauteilen.

**Aeroelasticity**  
W 4 credits  2V+1U  F. Campanile

**Abstract**  
Introduction to the basics and methods of Aeroelasticity. An overview of the main static and dynamic phenomena arising from the interaction between structural and aerodynamic loads.

**Objective**  
The course will give you a physical basic overview of current-structure phenomena. Furthermore you will get to know the most important phenomena in the statistical and dynamical aeroelastic as well as an introduction to the methods for mathematical descriptions and for the wording of quantitative formulae.

**Content**  

**Einführung in die Modalanalyse**  
Einführung in weitere Phänomene der dynamischen Aeroelastik.

**Literature**  

---

151-0709-00L  
**Stochastic Methods for Engineers and Natural Scientists**  
W 4 credits  3G  D. W. Meyer-Massetti, N. Noiray

**Abstract**  
The course provides an introduction into stochastic methods that are applicable for example for the description and modeling of turbulent and sub-surface flows. Moreover, mathematical techniques are presented that are used to quantify uncertainty in various engineering applications.

**Objective**  
By the end of the course you should be able to mathematically describe random quantities and their effect on physical systems. Moreover, you should be able to develop basic stochastic models of such systems.

**Content**  
- Probability theory, single and multiple random variables, mappings of random variables
- Stochastic differential equations, Ito calculus, PDF evolution equations
- Polynomial chaos and other expansion methods

**All topics are illustrated with application examples from engineering.**

**Lecture notes**  
Detailed lecture notes will be provided.

**Literature**  
Some textbooks related to the material covered in the course:

---

151-0851-00L  
**Robot Dynamics**  
W 4 credits  2V+1U  M. Hutter, R. Siegwart, T. Stasny

**Abstract**  
We will provide an overview on how to kinematically and dynamically model typical robotic systems such as robot arms, legged robots, rotary wing systems, or fixed wing.

**Objective**  
The primary objective of this course is that the student deepens an understood understanding of how to model the most common robotic systems. The student receives a solid background in kinematics, dynamics, and rotations of multi-body systems. On the basis of state of the art applications, he/she will learn all necessary tools to work in the field of design or control of robotic systems.

**Content**  
The course consists of three parts: First, we will refresh and deepen the student's knowledge in kinematics, dynamics, and rotations of multi-body systems. In this context, the learning material will build upon the courses for mechanics and dynamics available at ETH, with the particular focus on their application to robotic systems. The goal is to foster the conceptual understanding of similarities and differences among the various types of robots. In the second part, we will apply the learned material to classical robotic arms as well as legged systems and discuss kinematic constraints and interaction forces. In the third part, focus is put on modeling fixed wing aircraft, along with related design and control concepts. In this context, we also touch aerodynamics and flight mechanics to an extent typically required in robotics. The last part finally covers different helicopter types, with a focus on quadrrotors and the coaxial configuration which we see today in many UAV applications. Case studies on all main topics provide the link to real applications and to the state of the art in robotics.

**Prerequisites / notice**  
The contents of the following ETH Bachelor lectures or equivalent are assumed to be known: Mechanics and Dynamics, Control, Basics in Fluid Dynamics.

151-0911-00L  
**Introduction to Plasmonics**  
W 4 credits  2V+1U  D. J. Norris

**Abstract**  
This course provides fundamental knowledge of surface plasmon polaritons and discusses their applications in plasmonics.

**Objective**  
Electromagnetic oscillations known as surface plasmon polaritons have many unique properties that are useful across a broad set of applications in biology, chemistry, physics, and optics. The field of plasmonics has arisen to understand the behavior of surface plasmon polaritons and to develop applications in areas such as catalysis, imaging, photovoltaics, and sensors. In particular, metallic nanoparticles and patterned metallic interfaces have been developed to utilize plasmonic resonances. The aim of this course is to provide the basic knowledge to understand and apply the principles of plasmonics. The course will strive to be approachable to students from a diverse set of science and engineering backgrounds.

**Content**  
Fundamentals of Plasmonics
- Basic electromagnetic theory
- Optical properties of metals
- Surface plasmon polaritons on surfaces
- Surface plasmon polariton propagation
- Localized surface plasmons

Applications of Plasmonics
- Waveguides
- Extraordinary optical transmission
- Enhanced spectroscopy
- Sensing
- Metamaterials

**Mass Transfer**  
W 4 credits  2V+2U  R. Büchel, S. E. Pratsinis

**Abstract**  
This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

**Objective**  
This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.
The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life science processes in particular, fine chemistry and biotechnology.

Objective
The goal of the lecture is to expound design characteristics of systems for process engineering applications.

Content
The class covers separation techniques that are central in the purification and downstream processing of chemicals and biopharmaceuticals. Examples from both areas illustrate the utility of the methods: 1) Liquid-liquid extraction; 2) Adsorption and chromatography; 3) Membrane processes; 4) Crystalization and precipitation.

Lecture notes
Handouts during the class

Literature
Recommendations for text books will be covered in the class

Prerequisites / notice
Requirements: Thermal separation Processes I (151-0926-00) and Modelling and mathematical methods in process and chemical engineering (151-0940-00)

151-0927-00L
Rate-Controlled Separations in Fine Chemistry

Abstract
The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life science processes in particular, fine chemistry and biotechnology.

Objective
The goal of the course is to provide the students with a thorough understanding of the key concepts behind structural reliability and risk analysis. After this course the students will have refreshed their knowledge of probability theory and statistics to model uncertainties in view of engineering applications. They will be able to analyze the reliability of a structure and to use risk assessment methods for decision making under uncertain conditions. They will be aware of the state-of-the-art computational methods and software in this field.

Content
- Fick's laws; application and significance of mass transfer; comparison of Fick's laws with Newton's and Fourier's laws; derivation of Fick's 2nd law; diffusion in dilute and concentrated solutions; rotating disk; dispersion; diffusion coefficients, viscosity and heat conduction (Pr and Sc numbers); Brownian motion; Stokes-Einstein equation; mass transfer coefficients (Nu and Sh numbers); mass transfer across interfaces; Reynolds- and Chilton-Colburn analogies for mass-, heat-, and momentum transfer in turbulent flows; film-, penetration-, and surface renewal theories; simultaneous mass, heat and momentum transfer (boundary layers); homogenous and heterogenous reversible and irreversible reactions; diffusion-controlled reactions; mass transfer and first order heterogenous reaction. Applications.

Introduction to Aircraft and Car Aerodynamics

Abstract

Objective
An introduction to the basic principles and interrelationships of aircraft and automotive aerodynamics.

Content
To understand the basic relations of the origin of aerodynamic forces (ie lift, drag). To quantify the aerodynamic forces for basic configurations of aircraft and car components. Illustration of the intrinsic problems and results using examples. Using experimental and theoretical methods to illustrate possibilities and limits.

Literature
- English literature covering the content of the course:
  1.) Grundlagen der Flugtechnik (Basics of flight science, script in german language)
  2.) Einführung in die Fahrzeugaerodynamik (Introduction in car aerodynamics, script in german language)

101-0187-00L
Structural Reliability and Risk Analysis

Abstract
Structural reliability aims at quantifying the probability of failure of systems due to uncertainties in their design, manufacturing and environmental conditions. Risk analysis combines this information with the consequences of failure in view of optimal decision making. The course presents the underlying probabilistic modelling and computational methods for reliability and risk assessment.

Objective
The goal of this course is to provide the students with a thorough understanding of the key concepts behind structural reliability and risk analysis. After this course the students will have refreshed their knowledge of probability theory and statistics to model uncertainties in view of engineering applications. They will be able to analyze the reliability of a structure and use risk assessment methods for decision making under uncertain conditions. They will be aware of the state-of-the-art computational methods and software in this field.
Content

Engineers are confronted every day to decision making under limited amount of information and uncertain conditions. When designing new structures and systems, the design codes such as SIAs or Euro- codes usually provide a framework that guarantees safety and reliability. However the level of safety is not quantified explicitly, which does not allow the analyst to properly choose between design variants and evaluate a total cost in case of failure. In contrast, the framework of risk analysis allows one to incorporate the uncertainty in decision making.

The first part of the course is a reminder on probability theory that is used as a main tool for reliability and risk analysis. Classical concepts such as random variables and vectors, dependence and correlation are recalled. Basic statistical inference methods used for building a probabilistic model from the available data, e.g. the maximum likelihood method, are presented.

The second part is related to structural reliability analysis, i.e. methods that allow one to compute probabilities of failure of a given system with respect to prescribed criteria. The framework of reliability analysis is first set up. Reliability indices are introduced together with the first order-second moment method (FORM) and the first order reliability method (FORM). Methods based on Monte Carlo simulation are then reviewed and illustrated through various examples. By-products of reliability analysis such as sensitivity measures and partial safety coefficients are derived and their links to structural design codes is shown. The reliability of structural systems is also introduced as well as the methods used to reassess existing structures based on new information.

The third part of the course addresses risk assessment methods. Techniques for the identification of hazard scenarios and their representation by fault trees and event trees are described. Risk is defined with respect to the concept of expected utility in the framework of decision making. Elements of Bayesian decision making, i.e. pre-, post and pre-post risk assessment methods are presented.

The course also includes a tutorial using the UQLab software dedicated to real world structural reliability analysis.

Lecture notes

Slides of the lectures are available online every week. A printed version of the full set of slides is proposed to the students at the beginning of the semester.

Literature

S. Marelli, R. Schön, B. Sudret, UQLab user manual - Structural reliability (rare events estimation), Report UQLab-v0.92-107.

Prerequisites / notice

Basic course on probability theory and statistics

101-0499-00L Basics in Air Transport W 4 credits 2V P. Wild

Abstract

The course explains main principles of air transport in general and elaborates on simple interdisciplinary topics. Since working on broad topics like aerodynamics, manufacturers, airport operation, business aviation, business models etc. the students gets a good overview in Air Transportation.

Objective

Understand and explain basics, principles and contexts in the broader air transport industry. Lay the foundation of working in or with the air transport industry.

Ideal foundation for Aviation II - Management of Air Transport

Content

Weekly: 1h independent preparation; 2h lectures and 1 h training with an expert in the respective field

Concept: This course will be taught as Aviation I. A subsequent course is under evaluation.

Content: Transport as part of the overall transportation scheme; Aerodynamics; Aircraft (A/C) Designs & Structures; A/C Operations; Law Enforcement; Maintenance & Manufacturers; Airport Operations & Planning; Customs & Security; ATC & Airspace; Air Freight; General Aviation; Business Jet Operations; Business models within Airline Industry; Military Operations.

Technical visit: This course includes a guided tour at Zurich Airport (baggage sorting system, apron, ATC Tower).

Examination: written, 60 min, open books (Examination in German; Answers may be given in English)

Lecture notes

Slides are provided prior to each class

Literature

We will also use English papers

Prerequisites / notice

Literature will be provided by the lecturers respective there will be additional Information upon registration

227-0455-00L Terahertz: Technology & Applications W 3 credits 2V K. Sankaran

Abstract

This course will provide a solid foundation for understanding physical principles of THz applications. We will discuss various building blocks of THz technology - components dealing with generation, manipulation, and detection of THz electromagnetic radiation. We will introduce THz applications in the domain of imaging, communications, and energy harvesting.

Objective

This is an introductory course on Terahertz (THz) technology and applications. Devices operating in THz frequency range (0.1 to 10 THz) have been increasingly studied in the recent years. Progress in nonlinear optical materials, ultrafast optical and electronic techniques has strengthened research in THz application developments. Due to unique interaction of THz waves with materials, applications with new capabilities can be developed. In theory, they can penetrate somewhat like X-rays, but are not considered harmful radiation, because THz energy level is low. They should be able to provide resolution as good or better than magnetic resonance imaging (MRI), possibly with simpler equipment. Imaging, very-high bandwidth communication, and energy harvesting are the most widely explored THz application areas. We will study the basics of THz generation, manipulation, and detection. Our emphasis will be on the physical principles and applications of THz in the domain of imaging, communication and energy harvesting.

Content

INTRODUCTION
Chapter 1: Introduction to THz Physics
Chapter 2: Components of THz Technology
THz TECHNOLOGY MODULES
Chapter 3: THz Generation
Chapter 4: THz Detection
Chapter 5: THz Manipulation
APPLICATIONS
Chapter 6: THz Imaging
Chapter 7: THz Communication
Chapter 8: THz Energy Harvesting

Literature

- Yun-Shik Lee, Principles of Terahertz Science and Technology, Springer 2009

Prerequisites / notice

Good foundation in electromagnetics & knowledge of microwave or optical communication is helpful.

227-0950-00L Acoustics Z 0 credits 0.5K K. Heutschi

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 1039 of 1571
Current topics in Acoustics presented mostly by external speakers from academia and industry.

See above

### Renewable Energy Technologies I

**Objective**

- Scenarios for world energy demand and CO2 emissions, implications for climate. Methods for the assessment of energy chains. Potential and technology of renewable energies: Biomass (heat, electricity, biofuels), solar energy (low temp. heat, solar thermal and photovoltaic electricity, solar chemistry). Wind and ocean energy, heat pumps, geothermal energy, energy from waste, CO2 sequestration.

**Content**

- Scenarios for the development of world primary energy consumption are introduced. Students know the potential and limitations of renewable energies for reducing CO2 emissions, and their contribution towards a future sustainable energy system that respects climate protection goals.

**Lecture notes**

**Prerequisites / notice**

Fundamentals of chemistry, physics and thermodynamics are a prerequisite for this course.

Topics are available to carry out a Project Work (Semesterarbeit) on the contents of this course.

---

### Separations in Biotechnology and Bioprocesses

**Objective**

- Students should be able to select for a given biotechnological product a suitable set of purification operations and judge on process economy.

**Content**

- Introduction membrane operations adsorption and chromatography crystallization overall process economics

**Lecture notes**

- Handouts during course

---

### Synthetic Biology II

**Objective**

- Students are supposed to acquire a deep understanding of the process of biological design including model representation of a biological system, its thorough analysis, and the subsequent experimental implementation of the system and the related problems.

**Content**

- Presentations on advanced synthetic biology topics (eg genetic circuit design, adaptation of systems dynamics, analytical concepts, large scale de novo DNA synthesis), project selection, modeling of selected biological system, design space exploration, sensitivity analysis, conversion into DNA sequence, (DNA synthesis external,) implementation and analysis of design, summary of results in form of scientific presentation and poster, presentation of results at the iGEM international student competition (www.igem.org).

**Lecture notes**

- Handouts during course

**Prerequisites / notice**

The final presentation of the project is typically at the MIT (Cambridge, US). Other competing schools include regularly Imperial College, Cambridge University, Harvard University, UC Berkeley, Princeton University, CalTech, etc. This project takes place between end of Spring Semester and beginning of Autumn Semester. Registration in April.

Please note that the number of ECTS credits and the actual work load are disconnected.

### Mechanics, Materials, Structures

**Number**

151-0104-00L

**Title**

- Uncertainty Quantification for Engineering & Life Sciences

**Objective**

- The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

**Content**

- Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modeling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

**Lecture notes**

- The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

**Literature**

1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
2. Probability Theory: The Logic of Science by E. T. Jaynes
3. Class Notes

**Prerequisites / notice**

Fundamentals of Probability, Fundamentals of Computational Modeling

---

### High Performance Computing for Science and Engineering

**Objective**

- Students should be able to select for a given biotechnological product a suitable set of purification operations and judge on process economy.

**Content**

- Introduction membrane operations adsorption and chromatography crystallization overall process economics

### Engineering (HPCSE) I

**Abstract**
This course gives an introduction into algorithms and numerical methods for parallel computing for multi and many-core architectures and for applications from problems in science and engineering.

**Objective**
Introduction to HPC for scientists and engineers

**Fundamental of:**
1. Parallel Computing Architectures
2. MultiCores
3. ManyCores

**Content**
Programming models and languages:
1. C++ threading (2 weeks)
2. OpenMP (4 weeks)
3. MPI (5 weeks)

Computers and methods:
1. Hardware and architectures
2. Libraries
3. Particles: N-body solvers
4. Fields: PDEs
5. Stochastics: Monte Carlo

**Lecture notes**
http://www.cse-lab.ethz.ch/index.php/teaching/42-teaching/classes/615-hpcse1

### Visualization, Simulation and Interaction - Virtual Reality II

**Abstract**
This lecture provides deeper knowledge on the possible applications of virtual reality, its basic technology, and future research fields. The goal is to provide a strong knowledge on Virtual Reality for a possible future use in business processes.

**Objective**
Virtual Reality can not only be used for the visualization of 3D objects, but also offers a wide application field for small and medium enterprises (SME). This could be for instance an enabling technology for net-based collaboration, the transmission of images and other data, the interaction of the human user with the digital environment, or the use of augmented reality systems. The goal of the lecture is to provide a deeper knowledge of today’s VR environments that are used in business processes. The technical background, the algorithms, and the applied methods are explained more in detail. Finally, future tasks of VR will be discussed and an outlook on ongoing international research is given.

**Content**
Introduction into Virtual Reality; basics of augmented reality; interaction with digital data, tangible user interfaces (TUI); basics of simulation; compression procedures of image-, audio-, and video signals; new materials for force feedback devices; introduction into data security; cryptography; definition of free-form surfaces; digital factory; new research fields of virtual reality

**Lecture notes**
The handout is available in German and English.

**Prerequisites / notice**
Prerequisites:
"Visualization, Simulation and Interaction - Virtual Reality I" is recommended.

Didactical concept:
The course consists of lectures and exercises.

### Fatigue Strength of Materials, Components and Structures

**Abstract**
Fatigue of materials is playing a key role in light weight structures. All applications are affected that are exposed to oscillating loads. The lecture will present the most important methods for analyzing the fatigue strength under service load conditions. This starts with the conventional assessment of a components endurance limit and ends with the application of the damage tolerance philosophy.

**Objective**
An introduction to the most important terms and phenomena related to fatigue damages of metallic components will be given and explained by practical examples. Methods for assessment of endurance strength, finite life fatigue strength, crack initiation and crack growth will be discussed. The lecture shall demonstrate how to solve fatigue problems in practice. Examples like the ICE disaster at Eschede or structural problems of the Combino tram demonstrate the significance of this subject. The fatigue behavior of lightweight structures for vehicles and aircrafts has to be considered during the component design process. Designing the static strength of a component alone is not sufficient since fatigue damages of such components may cause extremely high costs. Structural components of modern aircraft like Airbus A380 or A400M are designed with respect to crack growth using the damage tolerance philosophy.

Understanding fatigue strength and its phenomena requires broad knowledge of material behavior, services loads, manufacturing effects as well as of analysis and test methods. Fatigue strength is a highly interdisciplinary area of work. For this the most important tools and methods shall be presented.
Content

1. INTRODUCTION, OVERVIEW, MOTIVATION
1.1 Preface (General introduction and history survey) (Schijve; Chapter 1)
1.2 Standards and Guidelines
1.3 Examples of damage events Comet-Accident (Pressure cycles, stress concentration)
   Aloha-Incident at Hawaii (Multiple site damage)
   Accident of an aerial passenger tramway (Fretting corrosion on axle)
   ICE-Accident (Wheel failure)
1.4 Presentations
   DVD "MTW Materialermüdung (1995, 21')",
   DVD "F/A-18 Full Scale Fatigue Test (2004, 12')",
   DVD "Sicherheit von Seilbahnen (1996, 7')" with discussion

2. LOADING
2.1 Fatigue strength overview
2.2 Significance of operational loading
2.3 Types of load histories (Schijve; Chapter 9)
2.4 Terms and definitions (Schijve; Chapter 9)
2.5 Measurement of operational loadings (Schijve; Chapter 9)
2.6 Counting algorithms (Schijve; Chapter 9)
2.7 Frequency distributions or spectra (Schijve; Chapter 9)
2.8 Impact of spectrum shape
2.9 Design Spectra (Schijve; Chapter 13)

3. MATERIAL
3.1 Fatigue strength overview
3.2 Evaluation of material properties for cyclic loading (Schijve; Chapter 13)
3.3 Fatigue properties (Schijve; Chapter 6)
3.4 Wöhler-Diagram (Schijve; Chapter 6, 7)
3.5 Scatter of fatigue properties (Schijve; Chapter 12)
3.6 Mean stress effect (Schijve; Chapter 6)
3.7 Damage mechanisms & material selection (Schijve; Chapter 2)
3.8 Environmental effects (Schijve; Chapter 16, 17)
3.9 Specific fatigue properties (Schijve; Chapter 6)

4. STRUCTURAL COMPONENT
4.1 Fatigue strength overview
4.2 Notches (Schijve; Chapter 3, 7)
4.3 Residual stresses (Schijve; Chapter 4)
4.4 Size effect
4.5 Surface condition and surface layers (Schijve; Chapter 7, 14)
4.6 Fretting corrosion (Schijve; Chapter 15)
4.7 Summary of fatigue strength improving methods (Schijve; Chapter 14)

5. SAFETY FACTORS (Schijve; Chapter 19)

6. FATIGUE STRENGTH ASSESSMENT
6.1 Fatigue strength overview
6.2 Assessment concepts for fatigue lifetime prediction
6.3 Assessment of the endurance strength
6.4 Finite life fatigue strength assessment using the nominal stress concept (Schijve; Chapter 10)
6.5 Local stress-strain concept (Schijve; Chapter 10)
6.6 Fracture mechanics concept (Schijve; Chapter 5, 8, 11)
6.7 Accuracy of concepts for fatigue lifetime assessment

7. STRUCTURAL INTEGRITY CONCEPTS
7.1 Safe life design (Mirage III, Pressure Vessel)
7.2 Fail safe design (modern aircraft construction)
7.3 Damage tolerance (approach according to US Air Force)
7.4 F/A-18 design philosophy
7.5 Summary

8. EXPERIMENTAL FATIGUE STRENGTH
8.1 In case of interesting current tests laboratory visitation at Empa

Lecture notes All lecture chapters are on Powerpoint presentations. The chapters will be available as presentation handouts at the first day for a fee of CHF 20.-

Literature Recommended books as supplement to the lecture:

Schijve, Jaap
Fatigue of Structures and Materials

Broek, David
The Practical Use of Fracture Mechanics

Prerequisites / notice Depending on actual fatigue tests a Laboratory visitation at Empa in Dübendorf may be organized.

151-0353-00L Mechanics of Composite Materials W 4 credits 2V+1U G. Kress

Abstract The course Mechanics of Composite Materials is dedicated to modeling problems following from the complex mechanical behavior of these anisotropic material structures, and modeling of continuous fibre reinforced composites. Participants will be able to design parts for the mechanical, automotive and aerospace industry.

Objective Understanding of the mechanical properties of fiber reinforced composites with regard to analysis and design of lightweight structures for mechanical, transportation and aerospace applications.
1. Introduction and Elastic Anisotropy
2. Laminate Theory
3. Thick-Walled Laminates and Interlaminar Stresses
4. Edge Effects at Multidirectional Laminates
5. Micromechanics
6. Failure Hypotheses and Damage Prediction
7. Fatigue Response
8. Joining and Bonding Techniques
9. Sandwich Designs

Lecture notes
Manuscript and handouts in printed form and as PDF-files:
http://www.structures.ethz.ch/education/master/intro/compulsory/mechanics

Literature
The lecture material is covered by the script and further literature is referenced in there.

151-0357-00L

Ropeway Technology
W 4 credits 3G G. Kovacs

Abstract
Ropeways represent a public transport system where steel wired ropes play a central role. Such systems come to a favorize transport solution when the costs for conventional systems become out of scale due to difficult and impossible terrestrial surface (alpine terrain).

Objective
Cable cars make use of extensive mechanical systems, which because of their operational location, are exposed to difficult meteorological and topographical conditions. In order to guarantee the requisite safety and reliability of the equipment, the components and their interaction in the system must fulfill stringent functional requirements. This is particularly the case because of the significant distance (2-4km) between the individual structures.

Content
Cable cars and cable cranes: Construction methods and areas of application. The use of mechanical principles in system engineering, Swiss building and business regulations, planning and equipment with special consideration for business and the environment: steel cables (construction, evaluation, damage, inspection), drive mechanisms, construction over an extended area. Calculation of the supporting cable with weight strain and with fixed montages on both sides. Excursions.

Lecture notes
SEILBAHNEN I

151-0360-00L

Procedures for the Analysis of Structures
W 4 credits 2V+1U G. Kress

Abstract
Basic theories for structure integrity calculations are presented with focus on strength, stability, fatigue and elasto-plastic structural analysis.

Objective
Basic principles applied in structural mechanics. Introduction to the theories of planar structures. Development of an understanding of the relationship between material properties, structural theories and design criteria.

Content
1. Basic problem of continuum mechanics and energy principles: structural theories, homogenization theories; finite elements; fracture mechanics.
3. Strength of material theories and material properties: ductile behaviour, plasticity, von Mises, Tresca, principal stress criterion; brittle behaviour; viscoplastic behaviour, creep resistance.
4. Structural design: fatigue and dynamic structural analysis.

Lecture notes
yes

151-0368-00L

Aeroelasticity
W 4 credits 2V+1U F. Campanile

Abstract
Introduction to the basics and methods of Aeroelasticity. An overview of the main static and dynamic phenomena arising from the interaction between structural and aerodynamic loads.

Objective
The course will give you a physical basic overview of current-structure phenomena. Furthemore you will get to know the most important phenomena in the statistical and dynamical aeroelastic as well as an introduction to the methods for mathematical descriptions and for the wording of quantitative forecasts.

Content

Literature

151-0509-00L

Microscale Acoustofluidics
W 4 credits 3G J. Dual

Abstract
In this lecture the basics as well as practical aspects (from modelling to design and fabrication ) are described from a solid and fluid mechanics perspective with applications to microsystems and lab on a chip devices.

Objective
Understanding acoustophoresis, the design of devices and potential applications

Content
Linear and nonlinear acoustics, foundations of fluid and solid mechanics and piezoelectricity. Gorkov potential, numerical modelling, acoustic streaming, applications from ultrasonic microrobotics to surface acoustic wave devices

Literature

Prerequisites / notice
Solid and fluid continuum mechanics. Notice: The exercise part is a mixture of presentation, lab session and hand in homework.

151-0513-00L

Mechanics of Soft Materials and Tissues
W 4 credits 3G A. E. Ehret

Abstract
An introduction to concepts for the constitutive modelling of highly deformable materials with non-linear properties is given in application to rubber-like materials and soft biological tissues. Related experimental methods for materials characterization and computational methods for simulation are addressed.

Objective
The objective of the course is to provide an overview of the wide range of non-linear mechanical behaviors displayed by soft materials and tissues together with a basic understanding of their physical origin, to familiarize students with appropriate mathematical concepts for their modelling, and to illustrate the application of these concepts in different fields in mechanics.
**Content**

- Soft solids: rubber-like materials, gels, soft biological tissues
- Non-linear continuum mechanics: kinematics, stress, balance laws
- Mechanical characterization: experiments and their interpretation
- Constitutive modeling: basic principles
- Large strain elasticity: hyperelastic materials
- Rubber-elasticity: statistical vs. phenomenological models
- Biomechanics of soft tissues: composites, anisotropy, heterogeneity
- Dissipative behavior: examples and the concept of internal variables.

**Lecture notes**

Accompanying learning materials will be provided or made available for download during the course.

**Literature**

Recommended text:

**Prerequisites / notice**

A good knowledge base in continuum mechanics, ideally a completed course in non-linear continuum mechanics, is recommended.

**151-0517-00L**

**Scientific Visualization for Engineering Applications**

**W** 4 credits 2V+2P X. Tricoche

**Abstract**

The course offers an introduction to the basic principles and most prominent methods of scientific visualization in science and engineering applications. The presentation will cover mathematical models and algorithms that support the depiction of 2D, 3D, and time-dependent datasets comprised of scalar, vector, and tensor attributes.

**Objective**

The course offers a self-contained introduction scientific visualization with an emphasis on basic principles and techniques that are most relevant to scientific and engineering applications.

The specific learning objectives are the following:

1. Basics: elementary notions of computer graphics and visual perception
2. Data processing: Relevant spatial data structures and smooth data reconstruction
3. Colors: Proper usage of colors in visualization
4. Scalar visualization: Level sets, salient surfaces, volume rendering and transfer function design
5. Vector visualization: Integral curves and surfaces, dense representation
6. Tensor visualization: Glyphs and integral curves
7. Flow visualization: automatic feature extraction and structure characterization
8. Visual abstraction: topological skeleton

**Content**

- Graphics primer
- Data structures and spatial queries
- Smooth data reconstruction
- Color perception
- Color mapping
- Isosurfaces (level sets)
- Ridges
- Direct volume rendering and transfer function design
- Integral curves and surfaces
- Texture-based flow representations
- Tensor glyphs and curves
- Topological methods for scalar, vector, and tensor fields
- Multilift techniques
- Visualization software

---

**151-0523-00L**

**Railway Vehicle Dynamics**

**W** 4 credits 2V+1U O. Polach

**Abstract**

After an introduction in to the railway vehicle design, the modelling of the contact between wheel and rail, the building of a simulation model and the fundamentals of the track guiding will be explained. The applications of simulations in the development of railway vehicles will be presented and illustrated on examples.

**Objective**

Development of the theoretical basics regarding the track guiding and the vehicle running dynamics. Understanding the background of multi-body dynamics simulation tools and their application in the development of railway vehicles.

**Content**

- Introduction in to railway vehicle technology: Vehicle concepts, bogies, suspension systems, brakes, drives.
- Use of multi-body simulations in the railway vehicle industry. Simulation programmes.
- Vehicle model: Model building, modelling of coil springs, rubber to metal springs, air springs and suspension components with friction.
- Wheel/rail contact: Contact geometry, contact area, normal forces, tangential forces.
- Track models. Modelling of track irregularities.
- Linearization of the contact geometry wheelset-track.
- Linearised and nonlinear calculation of running stability: Methods and assessment criteria. Influence of vehicle design on the running stability.
- Ride comfort assessment.
- Testing and simulations for the acceptance of running characteristics of railway vehicles. Validation of simulation models for the application in context of vehicle acceptance.

---

**151-0524-00L**

**Continuum Mechanics I**

**W** 4 credits 2V+1U E. Mazza

**Abstract**

The lecture deals with constitutive models that are relevant for design and calculation of structures. These include anisotropic linear elasticity, linear viscoelasticity, plasticity, viscoplasticity. Homogenization theories and laminate theory are presented. Theoretical models are complemented by examples of engineering applications and experiments.

**Objective**

Basic theories for solving continuum mechanics problems of engineering applications, with particular attention to material models.

**Content**

---

**Notice**

- Course slides and relevant papers
- Basic programming knowledge
- Fundamentals of mechanics and physics.
- Script will be provided.

---

**Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1044 of 1571**
### 151-0525-00L Wave Propagation in Solids

**W 4 credits 2V+1U**  
J. Dual, D. Mohr  

**Abstract**  
Plane Waves, harmonic waves, Fourier analysis and synthesis, dispersion, distortion, damping, group and phase velocity, transmission and reflection, impact, waves in linear elastic continua, elastic plastic waves, experimental and numerical methods in wave propagation.

**Objective**  
Students learn, which technical problems must be approached using the methods used in wave propagation in solids. Furthermore, they learn to use these methods and develop an intuitive feeling for phenomena that can be expected in various situations.

**Content**  
Wave Propagation in solids including applications.

**Lecture notes**  
Handouts

**Literature**  
Various books will be recommended pertaining to the topics covered.

**Prerequisites / notice**  
Language according to the wishes of students.

### 151-0532-00L Nonlinear Dynamics and Chaos I

**W 4 credits 2V+2U**  
G. Haller, F. Kogelbauer  

**Abstract**  
Basic facts about nonlinear systems; stability and near-equilibrium dynamics; bifurcations; dynamical systems on the plane; non-autonomous dynamical systems; chaotic dynamics.

**Objective**  
This course is intended for Masters and Ph.D. students in engineering sciences, physics and applied mathematics who are interested in the behavior of nonlinear dynamical systems. It offers an introduction to the qualitative study of nonlinear physical phenomena modeled by differential equations or discrete maps. We discuss applications in classical mechanics, electrical engineering, fluid mechanics, and biology. A more advanced Part II of this class is offered every other year.

**Content**  
1. Basic facts about nonlinear systems: Existence, uniqueness, and dependence on initial data.
2. Near equilibrium dynamics: Linear and Lyapunov stability
3. Bifurcations of equilibria: Center manifolds, normal forms, and elementary bifurcations
4. Nonlinear dynamical systems on the plane: Phase plane techniques, limit sets, and limit cycles.
5. Time-dependent dynamical systems: Floquet theory, Poincare maps, averaging methods, resonance

**Lecture notes**  
The class lecture notes will be posted electronically after each lecture. Students should not rely on these but prepare their own notes during the lecture.

**Prerequisites / notice**  
- Prerequisites: Analysis, linear algebra and a basic course in differential equations.
- Exam: two-hour written exam in English.
- Homework: A homework assignment will be due roughly every other week. Hints to solutions will be posted after the homework due dates.

### 151-0535-00L Optical Methods in Experimental Mechanics

**W 4 credits 3G**  
E. Hack, R. Brönnimann  

**Abstract**  
The lecture introduces a variety of optical methods to assess the mechanical behaviour of a structure, to determine material parameters, or to validate results from numerical analysis. Focus is on camera-based techniques for deformation, strain and stress analysis. Applications and limitations will be discussed. The lecture includes two afternoons of hands-on experience at Empa in Dübendorf.

**Objective**  
The students are able to design simple optical set-ups and describe the process of image formation. They understand the working principle of various camera-based techniques for shape, deformation and strain measurement. Most notably they can explain how the measurand is transformed into an interference signal, a change of polarization or surface temperature. They know the main application fields of the individual techniques. They are able to choose the most appropriate technique for solving a measurement task and to estimate its expected resolution. Through the hands-on experience the students gain a deeper and sustained understanding of the content by applying the theoretical foundations to dedicated measurement tasks.

**Content**  
After an introduction into optics and image acquisition the lecture explains how to transform mechanical quantities such as strain, stress or deformation into an image content. The imaging measurement techniques make use of a variety of optical principles:

- Triangulation (Digital Image Correlation, Fringe Projection)
- Interference (Speckle Pattern Interferometry, Shearography)
- Diffraction (Moiré-Interferometry, Fiber Bragg Gratings)
- Birefringence (Photelasticity)
- Infrared radiation (Thermal Stress Analysis)

In addition, dynamic measurements and vibration analysis are explained in the context of modal analysis or transient events. The calibration of imaging optical methods and their application to the validation of numerical simulations are described.

The content is structured as follows:
1. Imaging methods: an introduction
2. Digital Image Correlation
3. White light moiré methods
4. Interferometry
5. Deformation analysis: Speckle pattern interferometry
6. Strain analysis: Shearography
7. Modal analysis
8. Measurement of transient deformations
9. Stress analysis: Photoelasticity
10. Stress analysis: Thermoelasticity
11. Validation of FEA results and calibration of optical full-field methods
12. Fibre based methods

**Lecture notes**  
Copies of the presented slides will be made available on-line through ILIAS. You will be invited to a private blog which will stimulate the discussion of the lecture and the exercises.
Adaptive materials offer appealing ways to extend the design space of structures by introducing time-variable properties into them. In this course, the physical working principles of selected adaptive materials are analyzed and simple models for describing their behavior are presented. Some applications are illustrated, also with laboratory experiments where possible.

Prerequisites / notice
Basic knowledge of optics and interferometry as taught in basic physics courses are advantageous. Every week exercises will be distributed. Solving them is warmly recommended. The two afternoons with hands-on experience are central elements of the lecture.

151-0550-00L Adaptive Materials for Structural Applications 4 credits 3G A. Bergamini

**Abstract**
Adaptive materials offer appealing ways to extend the design space of structures by introducing time-variable properties into them. In this course, the physical working principles of selected adaptive materials are analyzed and simple models for describing their behavior are presented. Some applications are illustrated, also with laboratory experiments where possible.

**Objective**
The study of adaptive materials covers topics that range from chemistry to theoretical mechanics. The aim of this course is to convey knowledge about adaptive materials, their properties and the physical mechanisms that govern their function, so as to develop the skills to deal with this interdisciplinary subject.

**Content**
This course will provide the students with an insight into the properties and physical phenomena which lead to the features of adaptive materials. Starting from chemomechanical (skeletal muscles), the physical behavior of a wide range of adaptive materials, thermo- and photo-mechanical, electro-mechanical, magneto-mechanical and meta-materials will be thoroughly discussed and analyzed. Up-to-date results on their performance and their implementation in mechanical structures will be detailed and studied in laboratory sessions. Analytical tools and energy based considerations will provide the students with effective instruments for understanding adaptive materials and assess their performance when integrated in structures or when arranged in particular fashions.

Basic concepts: Power conjugated variables, dissipative effects, geometry- and materials-based energy conversion

Thermo-mechanical coupling: Shape memory alloys / polymers

Electromechanical coupling (1): DEA, EBL, electrorheological fluids

Shape control / morphing: Use, requirements, challenges

Morphing applications of variable stiffness structures: Lab work

Electromechanical coupling (2): Piezoelectric, electrostrictive effect

Vibration Reduction: Measurement, passive, semi-active (active) damping methods

Vibration reduction applications of piezoelectric materials: Lab work

Metamaterials: Definition of metamaterials - electromagnetic, acoustical and other metamaterials

Magneto-mechanical coupling: Magnetostrictive effect, mSMA, magnetorheological fluids, ferrofluids

Energy harvesting and sensing: Energy harvesting with EAP and piezoelectric materials, transducers as sensors: Piezo, resistive,...

Lecture notes: handwritten notes will be provided

151-0573-00L System Modeling 4 credits 3G W 2V+2U G. Ducard, C. Onder

**Abstract**

**Objective**

**Content**
Introduction to generic system modeling approaches for control-oriented models based on first principles and on experimental data. Examples: mechatronic, thermodynamic, chemistry, fluid dynamic, energy, and process engineering systems. Model scaling, linearization, order reduction, and balancing. Estimation techniques (least-squares methods). Class case studies: Loud-speaker, Water-propelled rocket, geostationary satellites, etc. The exercises address practical examples. One larger case study is to be solved.

The handouts in English will be sold in the first lecture.

A list of references is included in the handouts.

151-0555-00L Skills for Creativity and Innovation 4 credits 3G I. Goller, C. Kobe, M. Meboldt

**Abstract**
This lecture aims to enhance the knowledge and competency of students regarding their innovation capability. An overview on prerequisites of and different skills for creativity and innovation in individual & team settings is given. The focus of this lecture is clearly on building competencies - not just acquiring knowledge.

**Objective**
- Basic knowledge about creativity and skills
- Knowledge about individual prerequisites for creativity
- Development of individual skills for creativity
- Knowledge about teams
- Development of team-oriented skills for creativity
- Knowledge and know-how about transfer to idea generation teams

A good overview on the optical methods is presented in the following text books:

(available on-line through NEBIS)

Literature
- Data: 06.08.2018 12:56
- Autumn Semester 2016
- Page 1046 of 1571
Content

Basic knowledge about creativity and skills:
- Introduction into creativity & innovation: definitions and models

Knowledge about individual prerequisites for creativity:
- Personality, motivation, intelligence

Development of individual skills for creativity:
- Focus on creativity as problem analysis & solving
- Individual skills in theoretical models
- Individual competencies: exercises and reflection

Knowledge about teams:
- Definitions and models
- Roles in innovation processes

Development of team-oriented skills for creativity:
- Idea generation and development in teams
- Cooperation & communication in innovation teams

Knowledge and know-how about transfer to idea generation teams:
- Self-reflection & development planning
- Methods of knowledge transfer

Lecture notes

Slides, script and other documents will be distributed via moodle.ethz.ch (access only for students registered to this course)

Literature

Please refer to lecture script.

151-0703-00L Operational Simulation of Production Lines W 4 credits 2V+1U P. Acél

Objective

The student learns the application of the event-driven and computer-based simulation for layout and operational improvement of production facilities by means of practical examples.

Abstract

The student learns the right use of (Who? When? How?) of the event-driven and computer-based simulation in the illustration of the operating procedures and the production facilities. Operating simulation in the productions, logistic and scheduling will be shown by means of practical examples.

Content

- Application and application areas of the event-driven simulation
- Exemplary application of a software tool (Technomatrix-Simulation-Software)
- Internal organisation and functionality of simulation tools
- Procedure for application: optimizing, experimental design planning, analysis, data preparation
- Controlling philosophies, emergency concepts, production in sequence, line production, rescheduling
- Application on the facilities projecting

Lecture notes

The knowledge is enhanced by practice-oriented exercises and an excursion. A guest speaker will present a practical example.

Prerequisites / notice

Recommended for all Bachelor-Students in the 5th semester and Master-Students in the 7th semester.

151-0705-00L Manufacturing I W 4 credits 2V+2U K. Wegener, M. Boccadoro, F. Kuster

Objective

Abstract

Deeper discussion on the machining processes and their optimisation. Outlook on additional areas such as NC-Technique, dynamics of processes and machines, chatter as well as process monitoring.

Content

- Deepened insight in the machining processes and their optimisation, chip removal by undefined cutting edge such as grinding, honing and lapping, machining processes without cutting edges such as EDM, ECM, outlook on additional areas as NC-technique, machine- and process dynamics including chatter and process monitoring

Lecture notes

Recommended for all Bachelor-Students in the 5th semester and Master-Students in the 7th semester.

Prerequisites / notice

Lecture notes

Prerequisites: Recommendation: Lecture 151-0700-00L Manufacturing elective course in the 4th semester.

Language: Help for English speaking students on request as well as english translations of the slides shown.

151-0717-00L Mechanical Production: Assembly, Joining and Coating Technology W 4 credits 2V+1U F. Kuster, V. H. Derflinger, F. Durand, P. Jousset

Objective

To understand assembly in its full complexity and its paramount importance regarding cost and financial success. An introduction into a choice of selected joining and coating techniques.

Abstract

Understanding of the complexity of the assembly process as well as its meaning as success and cost factor. The assembly with the different aspects of adding, moving, adjusting, controlling parts etc. Adding techniques; solvable and unsolvable connections. Assembly plants. Coating techniques and their tasks, in particular corrosion protection.

Content

Assembly as combination of several classes of action like, e.g., joining, handling, fine adjustments, etc. Techniques for joining objects temporarily or permanently. Assembly systems. Coating processes and their specific applications, with particular emphasis on corrosion protection.

Lecture notes

Recommended to the focus production engineering.

Majority of lecturers from the industry.

Prerequisites / notice

Language: Help for English speaking students on request as well as english translations of the slides shown.

151-0719-00L Quality of Machine Tools - Dynamics and Metrology at Micro and Submicro Level W 4 credits 2V+1U W. Knapp, F. Kuster

Objective

Knowledge of
- principal design of machine tools
- errors of linear and rotational axes and of machine tools,
- influence of errors on the workpiece (error budgeting)
- dynamics of mechanical systems
- geometric, kinematic, thermal, dynamic testing of machine tools
- test uncertainty
- machine tool capability

Abstract

The course "Machine tool metrology" deals with the principal design of machine tools, their spindles and linear axes, with possible geometric, kinematic, thermal and dynamic errors of machine tools and testing these errors, with the influence of errors on the workpiece (error budgeting), with testing of drives and numerical control, as well as with checking the machine tool capability.
Colloquium on Manufacturing Technology

**Abstract**
Future training on selected current topics of the manufacturing technology. Per afternoon a selected topic is presented in several lectures, by the majority by experts from the industry. The students prepare a summary of the lectures given and prepare themselves on the basis of these lectures and own information search.

**Objective**
Continuous further training to current topics of the manufacturing technique. Exchange of experience and knowledge with the industry and other universities.

**Content**
Selected actual topics on manufacturing methods and tools, machine tools, NC-control and drives, components and measuring methods and devices. Topics are changing every year.

**Lecture notes**
No script

**Prerequisites / notice**
- Students must have participated and passed the courses Manufacturing, Production Machines I and Forming Technology III - Forming Processes.
- Further training with specialized lectures and large participation from the industry.

Language: Help for English speaking students on request.

---

Forming Technology I - Basic Knowledge

**Abstract**
The fundamentals of forming technology are presented to Mechanical, Production and Material Engineers. The content of the lecture is:
- Overview of manufacturing with forming techniques, deformation specific description of material properties and their experimental measurement, material laws, residual stresses, heat balance, tribological aspects of forming processes, workpiece and tool failure.

**Objective**
Forming technology represents with its 70% global share in manufactured metal volume with respect to yield and cost, the most important manufacturing process in metal-working industries. Typical applications of forming technology range from the manufacturing of sheet metal components in auto bodies to applications in food and pharma packaging, fabrication of implants in medical technologies and to the fabrication of leads in microelectronic components. This course introduces the fundamentals which are essential to evaluate metal-forming processes and its industrial applications. This includes, together with the acquirements of the most important forming processes, the characterization of plastic material behavior and manufacturing limits.

**Content**
Overview of the most important processes of metal-forming technology and its field of applications, characterization of the plastic metal-forming behavior, basic principles of plasto-mechanical calculations, metal-forming residual stresses, thermo-mechanical coupling of metal-forming processes, influence of tribology. Work piece failure through cracking and folding, tool failure through rupture and mechanical wear, metal-forming tools, sheet forming and massive forming processes, handling systems, metal-forming machinery.

**Lecture notes**
Ja
### Leading and Coaching Focus Project Teams (Basic Course)

**Objective:** Acquaintance with forming processes. Determination of forming processes. Interpretation of forming manufacturing processes. Manufacturing limits and machining accuracy; tools and operation; machinery and machine usage.

**Content:** The study of metal working processes: sheet metal forming, folding die cutting, cold bulk metal forming, rod extrusion, plunging, open die forging, drop forging, milling; active principle; elementary methods to estimate stress and strain; fundamentals of process design; manufacturing limits and machining accuracy; tools and operation; machinery and machine usage.

**Lecture notes:** ja

**Abstract:** The lecture teaches on the basic knowledge of major processes in sheet metal, tube and bulk metal forming technologies. In particular it focuses on fundamental computation methods, which allow a fast assessment of process behaviour and a rough layout. Process-specific states of stress and deformation are analysed and process limits are identified.

**Objectives:**
- Develop knowledge about role and mindset of a coach
- Knowledge and reflection about the classical problems in coaching of a focus project
- Development of personal coaching skills
- Knowledge and know-how about coaching methods
- Reflection and exchange of experiences about personal coaching situations
- Inspiration and learning from good cases regarding organizational and team management aspects.

**Content:**
- Development of personal coaching competencies, e.g. active listening, asking questions, giving feedback
- Competencies in theoretical models
- Coaching competencies: exercises and reflection
- Knowledge and know-how about coaching methods
- Knowledge about basic coaching methods for technical projects/innovations projects
- Know-how about usage of methods in the coaching process
- Facilitating decisions
- Using and applying coaches opinions and knowledge
- Reflection and exchange of experiences about personal coaching situations
- Self-reflection
- Exchange of experiences in the lecture group
- Good practice on organizational and management aspects
- How to do system and concurrent engineering
- Project planning and re-planning
- Facilitating conflict situations
- Discussing sample cases from former teams and actual cases of participants.

**Prerequisites / notice:**
- Course in continuum mechanics (mandatory), finite element method (recommended)
- Various books will be recommended covering the topics discussed in class.

**Literature:** Slides of the lectures, relevant journal papers and users manuals will be provided.

---

### Principles of Nonlinear Finite-Element-Methods

**Objective:** Overview of the role and mind set of a coach as, introduction into coaching methodology, building competencies by doing and exchanging good practices from former focus projects.

**Content:**
- Basic knowledge about role and mindset of a coach
- Knowledge and reflection about the classical problems in coaching of a focus project
- Development of personal coaching skills
- Knowledge and know-how about coaching methods
- Reflection and exchange of experiences about personal coaching situations
- Inspiration and learning from good cases regarding organizational and team management aspects.

**Lecture notes:** Slides, script and other documents will be distributed via electronically (access only for participants registered to this course).

**Prerequisites / notice:**
- Please refer to lecture script.
- Participants (Students, PhD Students, Postdocs) should be part of the coaching team of focus project teams.

**Literature:**
- The course "Leading and Coaching Focus Project Teams (Basic Course)" (HS) is examined together with "Leading and Coaching Focus Project Teams (Advanced Course)" (FS) in FS with 4 ECTS.

---

### Dynamic Behavior of Materials and Structures

**Objective:** Students will learn to apply, understand and develop computational models of a large spectrum of engineering materials to predict their behavior under dynamic and static loading conditions.

**Content:**
- Topics include viscoelasticity, temperature and rate dependent plasticity, dynamic brittle and ductile fracture; impulse transfer, impact and wave propagation in solids; computational aspects of material model implementation into hydrocodes; simulation of dynamic failure of structures.

**Lecture notes:** Various books will be recommended covering the topics discussed in class.

**Literature:** Slides of the lectures, relevant journal papers and users manuals will be provided.

---

**Course:**
- **151-0735-00L** Leading and Coaching Focus Project Teams (Basic Course) (HS) is examined together with Leading and Coaching Focus Project Teams (Advanced Course) (FS) with 4 ECTS.
- **151-0765-00L** Leading and Coaching Focus Project Teams (Advanced Course) (FS) is examined together with Leading and Coaching Focus Project Teams (Basic Course) (HS) with 4 ECTS.
- **151-0735-00L** Dynamic Behavior of Materials and Structures (HS) is examined together with Dynamic Behavior of Materials and Structures (FS) with 4 ECTS.
- **151-0833-00L** Principles of Nonlinear Finite-Element-Methods (HS) is examined together with Principles of Nonlinear Finite-Element-Methods (FS) with 5 ECTS.

**Lecture notes:**
- **151-0735-00L** ja
- **151-0765-00L** ja
- **151-0833-00L** ja
The course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

Fick's laws; application and significance of mass transfer; comparison of Fick's laws with Newton's and Fourier's laws; derivation of Fick's 2nd law; diffusion in dilute and concentrated solutions; rotating disk; dispersion; diffusion coefficients, viscosity and heat conduction (Pr and Sc numbers); Brownian motion; Stokes-Einstein equation; mass transfer coefficients (Nu and Sh numbers); mass transfer across interfaces; Reynolds- and Chilton-Colburn analogies for mass-, heat-, and momentum transfer in turbulent flows; film-, penetration-, and surface renewal theories; simultaneous mass, heat and momentum transfer (boundary layers); homogeneous and heterogenous reversible and irreversible reactions; diffusion-controlled reactions; mass transfer and first order heterogenous reaction. Applications.

The success of the course is largely dependant on active involvement of the students. Accordingly, a small group of students (1-3) is asked to introduce and moderate each external talk. The group will therefore gather adequate information about the speaker and topic, read and synthesize relevant documents and scientific papers, prepare questions to motivate the interaction with the audience and summarize, at the end of the lecture, the discussed points and outcome.

The course language is English.

### Literature

### Prerequisites / notice

Two tests are offered for practicing the course material. Participation is mandatory.

### Literature

Abstract

Basic characteristics of railway vehicles and their interfaces with the railway infrastructure:
- Transportation tasks and vehicle types
- Running dynamics
- Mechanical part of rail vehicles
- Brakes
- Traction chain and auxiliary supply
- Railway power supply
- Signaling systems
- Traffic control and maintenance

Objective

- Overview of the technical characteristics of railway systems
- Know-how about the design and construction principles of rail vehicles
- Interrelationship between different fields of engineering sciences (mechanics, electro and information technology, transport systems)
- Understanding tasks and opportunities of engineers working in an environment which has strong economical and political boundaries
- Insight into the activities of the railway vehicle industry and railway operators in Switzerland
- Motivation of young engineers to start a career in the railway industry or with railway operators

Content

EST I (Frühjahrsemester) - Begriffen, Grundlagen, Merkmale

1 Einführung:
1.1 Geschichte und Struktur des Bahnsystems
1.2 Fahrdynamik

2 Vollbahnfahrzeuge:
2.1 Mechanik: Kasten, Drehgestelle, Lauftechnik, Adhäsion
2.2 Bremsen
2.3 Traktionsantriebssysteme
2.4 Hilfsbetriebe und Komfortanlagen
2.5 Steuerung und Regelung

3 Infrastruktur:
3.1 Fahrweg
3.2 Bahnstromversorgung
3.3 Sicherungsanlagen

4 Betrieb:
4.1 Interoperabilität, Normen und Zulassung
4.2 RAMS, LCC
4.3 Anwendungsbeispiele

Voraussichtlich ein oder zwei Gastreferate

Geplante Exkursionen:
- Betriebszentrale SBB, Zürich Flughafen
- Reparatur und Unterhalt, SBB Zürich Altstetten
- Fahrzeugfertigung, Stadler Bussnang

Lecture notes

Abgabe der Unterlagen (gegen eine Schutzgebühr) zu Beginn des Semesters. Rechtzeitig eingeschriebene Teilnehmer können die Unterlagen auf Wunsch und gegen eine Zusatzgebühr auch in Farbe beziehen.

Prerequisites / notice

Dozent:
Dr. Markus Meyer, Emkamatik GmbH

Voraussichtlich ein oder zwei Gastvorträge von anderen Referenten.

EST I (Herbstsemester) kann als in sich geschlossene einsemestrige Vorlesung besucht werden. EST II (Frühjahrssemester) dient der weiteren Vertiefung der Fahrzeugtechnik und der Integration in die Bahinfrastruktur.

252-0535-00L Machine Learning W 8 credits 3V+2U+2A J. M. Buhmann

Abstract

Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

Objective

Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real world data.

Content

The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.

Topics covered in the lecture include:
- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non parametric density estimation: Parzen windows, nearest neighbour
- Dimension reduction: principal component analysis (PCA) and beyond

Lecture notes

No lecture notes, but slides will be made available on the course webpage.

Literature

The course introduces the students to the long-standing tradition of actively involving users of technology and other knowledge-intensive development under distributed, user-centered, or open innovation strategies. Products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies. The course offers a comprehensive introduction to the field of fracture mechanics, an engineering discipline that draws upon the principles of applied mechanics and materials science. Cracks and crack-like defects are evaluated with a view to understanding and predicting the cracks' growth tendencies. Such growth may be either stable (relatively slow and safe) or unstable (instantaneous and catastrophic). The course gives the tools to a successful application of fracture mechanics concepts to failure analysis. Fracture mechanics can be used to:

- Determine how large a crack can be in a structure before it leads to catastrophic failure
- Predict the rate at which a crack can approach a critical size due to fatigue loads or aggressive environmental conditions

The topics covered are:

- Introduction to Linear Elastic Fracture Mechanics (LEFM); crack tip stress, strain and displacement fields in linear elastic materials (Modes I, II and III); the stress-intensity factor, K; the fracture toughness KIc and their determination; fracture criterion
- Estimates of crack plastic zones in ductile materials
- The compliance method; experimental determination of compliance
- Introduction to fracture mechanics of nonlinear materials: the J-integral; the Jlc fracture criterion; Jlc testing
- Application of fracture mechanics concepts in the analysis of subcritical crack growth (fatigue, stress corrosion cracking, creep and their combinations)
- Fatigue determination and prediction; failure analysis.

Lecture notes
Copy of the overheads

Literature
K.H. Schwalbe, Bruchmechanik, Carl Hanser Verlag
Objective

The course includes both lectures and exercises alternately. The goal is to understand the opportunity of user innovation for management and develop strategies to harness the value of user-developed ideas and contributions for firms and other organizations.

The students actively participate in discussions during the lectures and contribute presentations of case studies during the exercises. The combination should allow to compare theory with practical cases from various industries.

The course presents and builds upon recent research and challenges the students to devise innovation strategies that take into account the availability of user expertise, free and public knowledge, and the interaction with communities that span beyond one organization.

Grading is based on the final exam, the class presentations (including the slides) as well as class participation.

Content

This course on user innovation extends courses on knowledge management and innovation as well as marketing. The students are introduced to the long-standing tradition of actively involving users of technology and other knowledge-intensive products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies. Theoretical underpinnings taught in the course include models of innovation, the structuration of technology, and an introduction to entrepreneurship.

This core course on Production and Operations Management provides the students insights into the basic theories, principles, concepts, and techniques used to design, analyze, and improve the operational capabilities of an organization.

Students learn why and how operations can be a competitive weapon; how to design, plan, control, and manage production and service processes; how to improve effectiveness and efficiency in operations; how to take advantage of new technological advancements; and how environmental and social concerns affect decisions in global production networks.

The course covers the most fundamental strategic and tactical concepts in production and operations management. The lectures cover: Introduction to POM; Operations strategy; Capacity management; Production planning and control; Production philosophies; Lean management; Performance measurement; Problem solving; Service operations; New technologies in POM; Servitization; Global production; and Triple-bottom line.

Relevant literature for the exam includes the slides and the reading assignments. The corresponding papers are either available from the author online or distributed during class.

Reading assignments: please consult the SMI website:

Abstract

This core course on Production and Operations Management provides the students insights into the basic theories, principles, concepts, and techniques used to design, analyze, and improve the operational capabilities of an organization.

Objective

Students learn why and how operations can be a competitive weapon; how to design, plan, control, and manage production and service processes; how to improve effectiveness and efficiency in operations; how to take advantage of new technological advancements; and how environmental and social concerns affect decisions in global production networks.

Content

The course covers the most fundamental strategic and tactical concepts in production and operations management. The lectures cover: Introduction to POM; Operations strategy; Capacity management; Production planning and control; Production philosophies; Lean management; Performance measurement; Problem solving; Service operations; New technologies in POM; Servitization; Global production; and Triple-bottom line.

Relevant literature for the exam includes the slides and the reading assignments. The corresponding papers are either available from the author online or distributed during class.

Reading assignments: please consult the SMI website:

Abstract

Finding solutions: what is complexity, problem solving cycle.

Implementing solutions: project management, critical path method, quality control feedback loop.

A successful participant of the course is able to:
- understand why most real problems are not simple, but require solution methods that go beyond algorithmic and mathematical approaches
- apply the problem solving cycle as a systematic approach to identify problems and their solutions
- calculate project schedules according to the critical path method
- setup and run systems dynamics models by means of the Vensim software
- identify feedback cycles and reasons for unintended systems behavior
- analyse the stability of nonlinear dynamical systems and apply this to macroeconomic dynamics

Why are problems not simple? Why do some systems behave in an unintended way? How can we model and control their dynamics? The course provides answers to these questions by using a broad range of methods encompassing systems oriented management, classical systems dynamics, nonlinear dynamics and macroeconomic modeling.

PART 1 introduces complexity as a system immanent property that cannot be simplified. It introduces the problem solving cycle, used in systems oriented management, as an approach to structure problems and to find solutions.

PART 2 discusses selected problems of project management when implementing solutions. Methods for identifying the critical path of subtasks in a project and for calculating the allocation of resources are provided. The role of quality control as an additional feedback loop and the consequences of small changes are discussed.

PART 3, by far the largest part of the course, provides more insight into the dynamics of existing systems. Examples come from biology (population dynamics), management (inventory modeling, technology adoption, production systems) and economics (supply and demand, investment and consumption). For systems dynamics models, the software program VENSIM is used to evaluate the dynamics. For economic models analytical approaches, also used in nonlinear dynamical model control theory, are applied. These together provide a systematic understanding of the role of feedback loops and instabilities in the dynamics of systems. Emphasis is on oscillating phenomena, such as business cycles and other life cycles.

Weekly self-study tasks are used to apply the concepts introduced in the lectures and to come to grips with the software program VENSIM.

The lecture slides are provided as handouts - including notes and literature sources - to registered students only. All material is to be found on the Moodle platform. More details during the first lecture.

Self-study tasks (discussion exercises, Vensim exercises) are provided as home work. Weekly exercise sessions (45 min) are used to discuss selected solutions. Regular participation in the exercises is an efficient way to understand the concepts relevant for the final exam.
Abstract
Overview of financial and managerial accounting
Accounting for current and fixed assets
Liabilities and owners equity
Recording change in balance sheet
Measuring financial performance
Managing financial reporting
Full and variable costing system
Using accounting information for decision making purposes

Objective
Understand the different procedures involved in the accounting system
Record change in financial position
Measure business income
Prepare final accounts
Understand the principles of cost accounting
Calculate the different product costs
Make decisions about the acceptance or rejection of a particular product

Content
Managerial Accounting: Full costing, variable costing, cost-volume profit, break-even analysis, activity-based costing

Prerequisites / notice
This course is a prerequisite for the course Financial Management.

376-1177-00L Human Factors I

Abstract
Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people’s satisfaction & overall performance.

Objective
The goal of the lecture is to empower students in better understanding the applied theories, principles, and methods in various applications. Students are expected to learn about how to enable an efficient and qualitatively high standing interaction between human and the environment, considering costs, benefits, health, and safety as well. Thus, an ergonomic design and evaluation process of products, tasks, and environments may be promoted in different disciplines. The goal is achieved in addressing a broad variety of topics and embedding the discussion in macroscopic factors such as the behavior of consumers and objectives of economy.

Content
- Physiological, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry, Digital Human Models
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

Literature
- Gavriel Salvendy, Handbook of Human Factors and Ergonomics, 4th edition (2012), is available on NEBIS as electronic version and for free to ETH students
- Further textbooks are introduced in the lecture
- Brochures, checklists, key articles etc. are uploaded in ILIAS

376-1219-00L Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions

Abstract
Rehabilitation Engng is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective
Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.

Content
- Rehabilitation of visual function
  - Anatomy and physiology of the visual sense
  - Technical aids (glasses, sensor substitution)
  - Retina and cortex implants
- Rehabilitation of hearing function
  - Anatomy and physiology of the auditory sense
  - Hearing aids
  - Cochlea Implants
- Rehabilitation of kinesthetic and tactile function
  - Anatomy and physiology of the kinesthetic and tactile sense
  - Tactile/haptic displays for motion therapy (incl. electrical stimulation)
  - Role of displays in motor learning
- Rehabilitation of vestibular function
  - Anatomy and physiology of the vestibular sense
  - Rehabilitation strategies and devices (e.g. BrainPort)
- Rehabilitation of vegetative Functions
  - Cardiac Pacemaker
  - Phrenic stimulation, artificial breathing aids
  - Bladder stimulation, artificial sphincter
  - Brain stimulation and recording
  - Deep brain stimulation for patients with Parkinson, epilepsy, depression
  - Brain-Computer Interfaces

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.
Introduction to Mathematical Optimization W 5 credits 2V+1U D. Adjashvili

Abstract
The goal of the course is to obtain a good understanding of some of the most fundamental mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems. The students will also practice applying the learned models to problems in engineering.

Content
Topics covered in this course include:
- Linear programming (simplex method, duality theory, shadow prices, ...);
- Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...);
- Modelling with mathematical optimization: applications of mathematical programming in engineering.

Information about relevant literature will be given in the lecture.

Lightning Talks
This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture covering similar topics and more.

Selected Journal Articles and Web Links:

Prerequisites / notice
Target Group:
Students of higher semesters and PhD students of:
- D-MAVT, D-ITET, D-INFK, D-HEST
- Biomedical Engineering, Robotics, Systems and Control
- Medical Faculty, University of Zurich
- Students of other departments, faculties, courses are also welcome.

This course is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

Abstract
A mechanical metamaterial derives its static or dynamic properties not from its microscopic composition but through its clever engineering at larger scales. In this course we introduce the basic principles behind the design of modern mechanical metamaterials such as the use of Bragg scattering, local resonances, topological band-structures, and non-linear effects.

Objective
The students should get acquainted with a modern toolbox in the design of mechanical metamaterials. Equipped with the knowledge of the key design principles, the students will be able to choose the appropriate approach to create a metamaterial with a pre-defined functionality either for dynamic applications such as vibration isolation, wave-guiding, or the design of a heat-diode, or static properties such as stress absorption or the design of mechanisms used in robotics.
Content

1.) Wave propagation in continuous systems
2.) Wave properties
3.) Discrete systems
4.) Local resonances
5.) Topology by example
6.) Topological classification
7.) Static systems
8.) Non-linear waves

Lecture notes
Hand-outs will be available in class.
### 151-0567-00L Engine Systems

**Abstract**
Introduction to current and future engine systems and their control systems.

**Objective**
Introduction to methods of control and optimization of dynamic systems. Application to real engines. Understand the structure and behavior of drive train systems and their quantitative descriptions.

**Content**
Physical description and mathematical models of components and subsystems (mixture formation, load control, supercharging, emissions, drive train components, etc.).

**Lecture notes**
Introduction to Modeling and Control of Internal Combustion Engine Systems
Guzzella Lino, Onder Christopher H.
ISBN: 978-3-642-10774-0

**Prerequisites / notice**
Combined homework and testbench exercise (air-to-fuel-ratio control or idle-speed control) in groups

### 151-0569-00L Vehicle Propulsion Systems

**Abstract**
Introduction to current and future propulsion systems and the electronic control of their longitudinal behavior.

**Objective**
Introduction to methods of system optimization and controller design for vehicles. Understanding the structure and working principles of conventional and new propulsion systems. Quantitative description of propulsion systems.

**Content**
Understanding of physical phenomena and mathematical models of components and subsystems (manual, automatic and continuously variable transmissions, energy storage systems, electric drive trains, batteries, hybrid systems, fuel cells, road/wheel interaction, automatic braking systems, etc.).

**Lecture notes**
Vehicle Propulsion Systems -- Introduction to Modeling and Optimization
Guzzella Lino, Sciarretta Antonio
ISBN: 978-3-642-35912-5

**Prerequisites / notice**
Lectures of Dr. Ch. Onder are also possible to be held in German

### 151-0573-00L System Modeling

**Abstract**

**Objective**

**Content**
Introduction to generic system modeling approaches for control-oriented models based on first principles and on experimental data. Examples: mechatronic, thermodynamic, chemistry, fluid dynamic, energy, and process engineering systems. Model scaling, linearization, order reduction, and balancing. Estimation techniques (least-squares methods). Case class studies: Loud-speaker, Water-propelled rocket, geostationary satellites, etc. The exercises address practical examples. One larger case study is to be solved.

**Lecture notes**
The handouts in English will be sold in the first lecture.

**Literature**
A list of references is included in the handouts.

### 151-0593-00L Embedded Control Systems

**Abstract**
This course provides a comprehensive overview of embedded control systems. The concepts introduced are implemented and verified on a microprocessor-controlled haptic device.

**Objective**
Familiarize students with main architectural principles and concepts of embedded control systems.

**Content**
An embedded system is a microprocessor used as a component in another piece of technology, such as cell phones or automobiles. In this intensive two-week block course the students are presented the principles of embedded digital control systems using a haptic device as an example for a mechatronic system. A haptic interface allows for a human to interact with a computer through the sense of touch.

**Subjects covered in lectures and practical lab exercises include:**
- Application of C-programming on a microprocessor
- Digital I/O and serial communication
- Quadrature decoding for wheel position sensing
- Queued analog-to-digital conversion to interface with the analog world
- Pulse width modulation
- Timer interrupts to create sampling time intervals
- System dynamics and virtual worlds with haptic feedback
- Introduction to rapid prototyping

**Lecture notes**
Lecture notes, lab instructions, supplemental material

**Prerequisites / notice**
Prerequisite courses are Control Systems I and Informatics I.

### 151-0601-00L Theory of Robotics and Mechatronics

**Abstract**
This course provides an introduction and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. It's a requirement for the Robotics Vertiefung and for the Masters in Mechatronics and Microsystems.

**Literature**

**Prerequisites / notice**
Requirements: Knowledge of advanced calculus, introductory probability theory, and matrix-vector algebra.
Robotics is often viewed from three perspectives: perception (sensing), manipulation (affecting changes in the world), and cognition (intelligence). Robotic systems integrate aspects of all three of these areas. This course provides an introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. This course is a requirement for the Robotics Vertiefung and for the Masters in Mechatronics and Microsystems.

An introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control.

**Notice**
The course will be taught in English.

This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated. The course consists of three parts: First, we will refresh and deepen the student’s knowledge in kinematics, dynamics, and rotations of multi-body systems. In this context, the learning material will build upon the courses for mechanics and dynamics available at ETH, with the particular focus on their application to robotic systems. The goal is to foster the conceptual understanding of similarities and differences among the various types of robots. In the second part, we will apply the learned material to classical robotic arms as well as legged systems and discuss kinematic constraints and interaction forces. In the third part, focus is put on modeling fixed wing aircraft, along with related design and control concepts. In this context, we also touch aerodynamics and flight mechanics to an extent typically required in robotics. The last part finally covers different helicopter types, with a focus on quadrotors and the coaxial configuration which we see today in many UAV applications. Case studies on all main topics provide the link to real applications and to the state of the art in robotics.

The contents of the following ETH Bachelor lectures or equivalent are assumed to be known: Mechanics and Dynamics, Control, Basics in Fluid Dynamics.

**Lecture notes**
- Slides, script and other documents will be distributed via moodle.ethz.ch (access only for students registered to this course)
- Further training with specialized lectures and large participation from the industry.

**Literature**
- K. Wegener, S. E. Pratsinis

---

### 151-0727-00L Colloquium on Manufacturing Technology

**W 4 credits 3K 3G**

**K. Wegener, F. Kuster**

**Abstract**
Future training on selected current topics of the manufacturing technology. Per afternoon a selected topic is presented in several lectures, by the majority by experts from the industry. The students prepare a summary of the lectures given and prepare themselves on the basis of these lectures and own information search.

**Objective**
Continuous further training to current topics of the manufacturing technique. Exchange of experience and knowledge with the industry and other universities.

**Content**
Selected actual topics on manufacturing methods and tools, machine tools, NC-control and drives, components and measuring methods and devices. Topics are changing every year.

**Lecture notes**
- No script

**Prerequisites / notice**
- Students must have participated and passed the courses Manufacturing, Production Machines I and Forming Technology III - Forming Processes.
- Further training with specialized lectures and large participation from the industry.

**Language:** Help for English speaking students on request.

---

### 151-0851-00L Robot Dynamics

**W 4 credits 2V+1U**

**M. Hutter, R. Siegwart, T. Stasny**

**Abstract**
We will provide an overview on how to kinematically and dynamically model typical robotic systems such as robot arms, legged robots, rotary wing systems, or fixed wing.

**Objective**
The primary objective of this course is that the student develops a basic understanding of how to model the most common robotic systems. The student receives a solid background in kinematics, dynamics, and rotations of multi-body systems. On the basis of state of the art applications, he/she will learn all necessary tools to work in the field of design or control of robotic systems.

**Content**
The course consists of three parts: First, we will refresh and deepen the student’s knowledge in kinematics, dynamics, and rotations of multi-body systems. In this context, the learning material will build upon the courses for mechanics and dynamics available at ETH, with the particular focus on their application to robotic systems. The goal is to foster the conceptual understanding of similarities and differences among the various types of robots. ### 151-0917-00L Mass Transfer

**W 4 credits 2V+2U**

**R. Büchel, S. E. Pratsinis**

**Abstract**
This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

**Objective**
This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

**Content**
Fick’s laws; application and significance of mass transfer; comparison of Fick’s laws with Newton’s and Fourier’s laws; derivation of Fick’s 2nd law; diffusion in dilute and concentrated solutions; rotating disk; dispersion; diffusion coefficients, viscosity and heat conduction (Pr and Sc numbers); Brownian motion; Stokes-Einstein equation; mass transfer coefficients (Nu and Sh numbers); mass transfer across interfaces; Reynolds- and Chilton-Colburn analogies for mass-, heat-, and momentum transfer in turbulent flows; film-, penetration-, and surface renewal theories; simultaneous mass, heat and momentum transfer (boundary layers); homogenous and heterogenous reversible and irreversible reactions; diffusion-controlled reactions; mass transfer and first order heterogenous reaction. Applications.

**Literature**

**Prerequisites / notice**
Two tests are offered for practicing the course material. Participation is mandatory.

---

### 151-1116-00L Introduction to Aircraft and Car Aerodynamics

**W 4 credits**

**J. Wildi**

**Abstract**

**Objective**
An introduction to the basic principles and interrelationships of aircraft and automotive aerodynamics. To understand the basic relations of the origin of aerodynamic forces (e.g. lift, drag). To quantify the aerodynamic forces for basic configurations of aircraft and car components. Illustration of the intrinsic problems and results using examples. Using experimental and theoretical methods to illustrate possibilities and limits.
Content

Aircraft aerodynamics: atmosphere, aerodynamic forces (ascending force; profile, wings, Resistance, residual resistance, induced resistance); thrust (overview of the propulsion system, aerodynamics of the propellers), introduction to static longitudinal stability.

Lecture notes

1.) Grundlagen der Flugtechnik (Basics of flight science, script in German language)
2.) Einführung in die Fahrzeug aerodynamik (Introduction to car aerodynamics, script in German language)

Literature

English literature covering the content of the course:
- ABB Semiconductors.

227-0225-00L Linear System Theory

W 6 credits 5G M. Kamgarpour

Abstract

The class is intended to provide a comprehensive overview of the theory of linear dynamical systems, their use in control, filtering, and estimation and their applications to areas ranging from avionics to systems biology.

Objective

By the end of the class students should be comfortable with the fundamental results in linear system theory and the mathematical tools used to derive them.

Content

- Rings, fields and linear spaces, normed linear spaces and inner product spaces.
- Ordinary differential equations, existence and uniqueness of solutions.
- Continuous and discrete time, time varying linear systems. Time domain solutions. Time invariant systems treated as a special case.
- Controllability and observability, canonical forms, Kalman decomposition. Time invariant systems treated as a special case.
- Stability and stabilization, observers, state and output feedback, separation principle.
- Realization theory.

Lecture notes

Prerequisites / notice

Prerequisites: Control Systems I (227-0103-00) or equivalent and sufficient mathematical maturity.

227-0447-00L Image Analysis and Computer Vision

W 6 credits 3V+1U L. Van Gool, O. Gökse, E. Konukoglu

Abstract

Objective

Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.

Content

The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

Lecture notes

Course material Script, computer demonstrations, exercises and problem solutions

Prerequisites / notice

Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.

The course language is English.

227-0517-00L Electrical Drive Systems II

W 6 credits 4G P. Steimer, G. Scheuer, C. A. Stulz

Abstract

In the course "Drive System II" the power semiconductors are repeated. The creation of converters based on the combination of switches/cells and based topologies is explained. Another main focus is on the 3-level inverter with its switching and transfer functions. Further topics are the control of the synchronous machine, of line-side converters and issues with converter-fed machines.

Objective

The students establish a deeper understanding in regards of the design of the main components of an electrical drive system. They establish knowledge on the most important interaction with the grid and the machine and their related high dynamic control.

Content

Converter topologies (switch or cell based), multi-pulse diode rectifiers, system aspects of transformer and electrical machines, 3-level switches/cells and based topologies is explained. Another main focus is on the 3-level inverter with its switching and transfer functions, grid side harmonics, modeling and control of synchronous machines (including permanent magnet machines), control of line-side converters, reflection effects with power cables, winding isolation and bearing stress. Field trip to ABB Semiconductors.

Lecture notes

Skrift is sold at the beginning of the lectures or can be downloaded from Ilias

Prerequisites / notice

Prerequisites: Electrical Drive Systems I (recommended), Basics in electrical engineering, power electronics, automation and mechatronics

227-0869-00L System Identification

W 4 credits 2V+1U R. Smith

Abstract

Theory and techniques for the identification of dynamic models from experimentally obtained system input-output data.

Objective

To provide a series of practical techniques for the development of dynamical models from experimental data, with the emphasis being on the development of models suitable for feedback control design purposes. To provide sufficient theory to enable the practitioner to understand the trade-offs between model accuracy, data quality and data quantity.

Content

Introduction to modeling: Black-box and grey-box models; Parametric and non-parametric models; ARX, ARMAX (etc.) models.

Predictive, open-loop, black-box identification methods. Time and frequency domain methods. Subspace identification methods.

Optimal experimental design, Cramer-Rao bounds, input signal design.

Parametric identification methods. On-line and batch approaches.

Closed-loop identification strategies. Trade-off between controller performance and information available for identification.

Prerequisites / notice

Control systems (227-0216-00L) or equivalent.
# Seminar in Systems and Control

</tr>
</tbody>
</table>

### Objective
The goal of this course is that students should understand the principles of user-centred design and be able to apply these in practice.

### Content
The course provides an introduction to the field of human-computer interaction, emphasising the central role of the user in system design. Through detailed case studies, students will be introduced to different methods used to analyse the user experience and shown how these can inform the design of new interfaces, systems and technologies.

### Prerequisites / notice
The goal of the course is that students should understand the principles of user-centred design and be able to apply these in practice. The course will introduce students to various methods of analysing the user experience, showing how these can be used at different stages of system development from requirements analysis through to usability testing. Students will get experience of designing and carrying out user studies as well as analysing results. The course will also cover the basic principles of interaction design. Practical exercises related to touch and gesture-based interaction will be used to reinforce the concepts introduced in the lecture. To get students to further think beyond traditional system design, we will discuss issues related to ambient information and awareness.

## Probabilistic Artificial Intelligence

<td>S. Tschiatschek</td>
</tr>
</tbody>
</table>

### Objective
This course introduces core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet.

### Content
How can we build systems that perform well in uncertain environments and unforeseen situations? How can we develop systems that exhibit "intelligent" behavior, without prescribing explicit rules? How can we build systems that learn from experience in order to improve their performance? We will study core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet. The course is designed for upper-level undergraduate and graduate students.

### Prerequisites / notice
Topics covered:
- Search (BFS, DFS, A*), constraint satisfaction and optimization
- Tutorial in logic (propositional, first-order)
- Probability
- Bayesian Networks (models, exact and approximate inference, learning)
- Temporal models (Hidden Markov Models, Dynamic Bayesian Networks)
- Probabilistic palning (MDPs, POMDPs)
- Reinforcement learning
- Combining logic and probability

Solid basic knowledge in statistics, algorithms and programming

## Computer Vision

<table>

<td>3V+1U+1A</td>
<td>L. Van Gool, V. Ferrari, A. Geiger</td>
</tr>
</tbody>
</table>

### Objective
The goal of this course is to provide students with a good understanding of computer vision and image analysis techniques. The main concepts and techniques will be studied in depth and practical algorithms and approaches will be discussed and explored through the exercises.

### Content
Camera models and calibration, invariant features, Multiple-view geometry, Model fitting, Stereo Matching, Segmentation, 2D Shape matching, Shape from Silhouettes, Optical flow, Structure from motion, Tracking, Object recognition, Object category recognition

It is recommended that students have taken the Visual Computing lecture or a similar course introducing basic image processing concepts before taking this course.

## Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions

### Objective
This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

### Content
Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
- Brain stimulation and recording
  - Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces
Virtual Reality has the potential to provide descriptive and practical information for medical training and therapy while relieving the patient. This lecture will derive the technical principles of multi-modal input devices, displays, and rendering techniques. Several examples are presented that are currently being developed or already applied for surgical training, intra-operative augmentation, and rehabilitation. The lecture will be accompanied by several practical courses on graphical and haptic display and rendering techniques. Examples are presented in the fields of surgical training, intra-operative augmentation, and rehabilitation. The lecture is accompanied by practical courses and excursions.

Selected Journal Articles and Web Links:

Abstract

Virtual Reality has the potential to support medical training and therapy. This lecture will derive the technical principles of multi-modal (audiovisual, haptic, tactile etc.) input devices, displays and rendering techniques. Examples are presented in the fields of surgical training, intra-operative augmentation, and rehabilitation. The lecture is accompanied by practical courses and excursions.

Objective

Provide theoretical and practical knowledge of new principles and applications of multi-modal simulation and interface technologies in medical education, therapy, and rehabilitation.

Content

Virtual Reality has the potential to provide descriptive and practical information for medical training and therapy while relieving the patient and/or the physician. Multi-modal interactions between the user and the virtual environment facilitate the generation of high-fidelity sensory impressions, by using not only visual and auditory modalities, but also kinesthetic, tactile, and even olfactory feedback. On the basis of the existing physiological constraints, this lecture will derive the technical requirements and principles of multi-modal input devices, displays, and rendering techniques. Several examples are presented that are currently being developed or already applied for surgical training, intra-operative augmentation, and rehabilitation. The lecture will be accompanied by several practical courses on graphical and haptic display devices as well as excursions to facilities equipped with large-scale VR equipment.

Target Group:

Students of higher semesters and PhD students of
- D-HEST, D-MAVT, D-ITET, D-INFK, D-PHYS
- Robotics, Systems and Control Master
- Biomedical Engineering/Movement Science and Sport
- Medical Faculty, University of Zurich

Students of other departments, faculties, courses are also welcome!

Literature

Prerequisites / notice
The course language is English.
Basic experience in Information Technology and Computer Science will be of advantage.
More details will be announced in the lecture.

376-1504-00L Physical Human Robot Interaction (pHRI)
Number of participants limited to 26.

Abstract
This course focuses on the emerging, interdisciplinary field of physical-human-robot interaction, bringing together themes from robotics, real-time control, human factors, haptics, virtual environments, interaction design and other fields to enable the development of human-oriented robotic systems.

Objective
The objective of this course is to give an introduction to the fundamentals of physical human-robot interaction, through lectures on the underlying theoretical/mechatronics aspects and application fields, in combination with a hands-on lab tutorial. The course will guide students through the design and evaluation process of such systems.

By the end of this course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and de- sign safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical-human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the defined design requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement and test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) investigate and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

Content
This course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neurophysiology and psychophysics, principles of human-robot interaction systems (kinematics, mechanical transmissions, robot sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance and force control, haptic rendering basics and issues in device design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical-human interaction, laboratory sessions and lab visits.

Students will attend periodic laboratory sessions where they will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://www.relab.ethz.ch/education/courses/phri/phy/request-ethz-haptic-paddle-hardware-documentation.html), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, damping, time delays, sampling rates, quantization, etc.) during rendering of different mechanical properties.

Lecture notes
Will be distributed through the document repository before the lectures.

</tbody>
</table>
The course addresses basic science and engineering principles ruling the nano domain. We particularly work out the links between topics that are traditionally taught separately.

Special emphasis is placed on the emerging field of molecular electronic devices, their working principles, applications, and how they may be assembled.

Topics are treated in 2 blocks:

(I) From Quantum to Continuum

From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

(II) Interaction Forces on the Micro and Nano Scale

Intermolecular forces, their macroscopic manifestations, and ways to control such interactions.

Self-assembly and directed assembly of 2D and 3D structures.

**Abstract**

Practical course: Students are introduced to the process steps required for the fabrication of MEMS (Micro Electro Mechanical System) and carry out the fabrication and testing steps in the clean rooms by themselves. Additionally, they learn the requirements for working in clean rooms. Processing and characterization will be documented and analyzed in a final report. Limited access

Students learn the individual process steps that are required to make a MEMS (Micro Electro Mechanical System). Students carry out the process steps themselves in laboratories and clean rooms. Furthermore, participants become familiar with the special requirements (cleanliness, safety, operation of equipment and handling hazardous chemicals) of working in the clean rooms and laboratories. The entire production, processing, and characterization of the MEMS is documented and evaluated in a final report.

**Content**

With guidance from a tutor, the individual silicon microsystem process steps that are required for the fabrication of an accelerometer are carried out:

- Photolithography, dry etching, wet etching, sacrificial layer etching, critical point drying, various cleaning procedures
- Packaging and electrical connection of a MEMS device
- Testing and characterization of the MEMS device
- Written documentation and evaluation of the entire production, processing and characterization

**Lecture notes Literature**

A document containing theory, background and practical course content is distributed at the first meeting of the course.

The document provides sufficient information for the participants to successfully participate in the course.

**Prerequisites / notice**

Participating students are required to attend all scheduled lectures and meetings of the course.

Participating students are required to provide proof that they have personal accident insurance prior to the start of the laboratory portion of the course.

This master's level course is limited to 15 students per semester for safety and efficiency reasons.

If there are more than 15 students registered, we regret to restrict access to this course by the following rules:

**Priority 1:** master students of the master's program in "Micro and Nanosystems"

**Priority 2:** master students of the master's program in "Mechanical Engineering" with a specialization in Microsystems and Nanoscale Engineering (MAVT-tutors Profs Daraio, Dual, Hierold, Koumoutsakos, Nelson, Norris, Park, Poulikakos, Pratsinis, Stemmer), who attended the bachelor course "151-0621-00L Microsystems Technology" successfully.

**Priority 3:** master students, who attended the bachelor course "151-0621-00L Microsystems Technology" successfully.

**Priority 4:** all other students (PhD, bachelor, master) with a background in silicon or Microsystems process technology.

If there are more students in one of these priority groups than places available, we will decide by drawing lots.

Students will be notified at the first lecture of the course (introductory lecture) as to whether they are able to participate.

The course is offered in autumn and spring semester.

**Abstract**

Scientific presentations from the field of Micro- and Nanosystems

In particular, the seminar addresses students, who are interested in scientific work in the field of Micro- and Nanosystems technologies, or who have started already with it. Respectively, current examples in the research will be discussed.

This course provides fundamental knowledge of surface plasmon polaritons and discusses their applications in plasmonics.
Electromagnetic oscillations known as surface plasmon polaritons have many unique properties that are useful across a broad set of applications in biology, chemistry, physics, and optics. The field of plasmonics has arisen to understand the behavior of surface plasmon polaritons and to develop applications in areas such as catalysis, imaging, photovoltaics, and sensing. In particular, metallic nanoparticles and patterned metallic interfaces have been developed to utilize plasmonic resonances. The aim of this course is to provide the basic knowledge to understand and apply the principles of plasmonics. The course will strive to be approachable to students from a diverse set of science and engineering backgrounds.

### Content

**Fundamentals of Plasmonics**
- Basic electromagnetic theory
- Optical properties of metals
- Surface plasmon polaritons on surfaces
- Surface plasmon polariton propagation
- Localized surface plasmons

**Applications of Plasmonics**
- Waveguides
- Extraordinary optical transmission
- Enhanced spectroscopy
- Sensing
- Metamaterials

### Literature

### Prerequisites / notice

Physics I, Physics II

### Objective

This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

### Abstract

This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

### Notice

Two tests are offered for practicing the course material. Participation is mandatory.

### Objective

Students attend and give research presentations for the research they plan to do and at the end of the semester they defend their results and answer questions from research scientists. Familiarize the students with the latest in this field.

### Abstract

Demystifies the physical principles of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

### Notice

This is an introductory course on Terahertz (THz) technology and applications. Devices operating in THz frequency range (0.1 to 10 THz) have been increasingly studied in the recent years. Progress in nonlinear optical materials, ultrafast optical and electronic techniques has strengthened research in THz application developments. Due to unique interaction of THz waves with materials, applications with new capabilities can be developed. In theory, they can penetrate somewhat like X-rays, but are not considered harmful radiation, because THz energy level is low. They should be able to provide resolution as good or better than magnetic resonance imaging (MRI), possibly with simpler equipment. Imaging, very-high bandwidth communication, and energy harvesting are the most widely explored THz application areas. We will study the basics of THz generation, manipulation, and detection. Our emphasis will be on the physical principles and applications of THz in the domain of imaging, communication and energy harvesting.

**Didactical concept:** The course consists of lectures and exercises.
The course introduces the concepts of bioelectricity and biosensing. The sources and use of electrical fields and currents in the context of biological systems and problems are discussed. The fundamental challenges of measuring biological signals are introduced. The most important biosensing techniques and their physical concepts are introduced in a quantitative fashion.

**Content**

1. Bioelectronics history, its applications and overview of the field
   - Volta and Galvani dispute
   - BMI, pacemaker, cochlear implant, retinal implant, limb replacement devices
   - Fundamentals of biosensing
   - Glucometer and ELISA

2. Fundamentals of quantum and classical noise in measuring biological signals

3. Biomeasurement techniques with photons

4. Acoustics sensors
   - Differential equation for quartz crystal resonance
   - Acoustic sensors and their applications

5. Engineering principles of optical probes for measuring and manipulating molecular and cellular processes

6. Optical biosensors
   - Differential equation for optical waveguides
   - Optical sensors and their applications
   - Plasmonic sensing

7. Basic notions of molecular adsorption and electron transfer
   - Quantum mechanics: Schrödinger equation energy levels from H atom to crystals, energy bands
   - Electron transfer: Marcus theory, Gerischer theory

8. Potentiometric sensors
   - Fundamentals of the electrochemical cell at equilibrium (Nernst equation)
   - Principles of operation of ion-selective electrodes

9. Amperometric sensors and bioelectric potentials
   - Fundamentals of the electrochemical cell with an applied overpotential to generate a faraday current
   - Principles of operation of amperometric sensors
   - Ion flow through a membrane (Fick equation, Nernst equation, Donnan equilibrium, Goldman equation)

10. Channels, amplification, signal gating, and patch clamp Y4

11. Action potentials and impulse propagation

12. Functional electric stimulation and recording
   - MEA and CMOS based recording
   - Applying potential in liquid - simulation of fields and relevance to electric stimulation

13. Neural networks memory and learning

Abstract
This course will provide a solid foundation for understanding physical principles of THz applications. We will discuss various building blocks of THz technology - components dealing with generation, manipulation, and detection of THz electromagnetic radiation. We will introduce THz applications in the domain of imaging, communications, and energy harvesting.

Objective
This is an introductory course on Terahertz (THz) technology and applications. Devices operating in THz frequency range (0.1 to 10 THz) have been increasingly studied in the recent years. Progress in nonlinear optical materials, ultrafast optical and electronic techniques has strengthened research in THz application developments. Due to unique interaction of THz waves with materials, applications with new capabilities can be developed. In theory, they can penetrate somewhat like X-rays, but are not considered harmful radiation, because THz energy level is low. They should be able to provide resolution as good or better than magnetic resonance imaging (MRI), possibly with simpler equipment. Imaging, very high bandwidth communication, and energy harvesting are the most widely explored THz application areas. We will study the basics of THz generation, manipulation, and detection. Our emphasis will be on the physical principles and applications of THz in the domain of imaging, communication and energy harvesting.

Content

Abstract
The course gives an introduction into cellular and molecular biology, specifically for students with a background in engineering. The focus will be on the basic organization of eukaryotic cells, molecular mechanisms and cellular functions. Textbook knowledge will be combined with results from recent research and technological innovations in biology.

Objective
After completing this course, engineering students will be able to apply their previous training in the quantitative and physical sciences to modern biology. Students will also learn the principles how biological models are established, and how these models can be tested.

Content
Lectures will include the following topics: DNA, chromosomes, RNA, protein, genetics, gene expression, membrane structure and function, vesicular traffic, cellular communication, energy conversion, cytoskeleton, cell cycle, cellular growth, apoptosis, autophagy, cancer, development and stem cells.

In addition, three journal clubs will be held, where one/two publications will be discussed (part I: 1 Journal club, part II: 2 Journal Clubs). For each journal club, students (alone or in groups of up to three students) have to write a summary and discussion of the publication. These written documents will be graded and count as 25% for the final grade.

Lecture notes
Scripts of all lectures will be available.

Abstract
The lecture introduces the physical and technical know-how of X-ray tomographic microscopy. Several X-ray imaging techniques (absorption-, phase- and darkfield contrast) will be discussed and their use in daily research, in particular biology, is presented. The course discusses the aspects of quantitative evaluation of tomographic data sets like segmentation, morphometry and statistics.

Objective
Introduction to the basic concepts of X-ray tomographic imaging, image analysis and data quantification at the micro and nano scale with particular emphasis on biological applications.

Content
Synchrotron-based X-ray micro- and nano-tomography is today a powerful technique for non-destructive, high-resolution investigations of a broad range of materials. The high-brilliance and high-coherence of third generation synchrotron radiation facilities allow quantitative, three-dimensional imaging at the micro and nanometer scale and extend the traditional absorption imaging technique to edge-enhanced and phase-sensitive measurements, which are particularly suited for investigating biological samples.

The lecture includes a general introduction to the principles of tomographic imaging from image formation to image reconstruction. It provides the physical and engineering basics to understand how imaging beamlines at synchrotron facilities work, looks into the recently developed phase contrast methods, and explores the first applications of X-ray nano-tomographic experiments.

The course finally provides the necessary background to understand the quantitative evaluation of tomographic data, from basic image analysis to complex morphometrical computations and 3D visualization, keeping the focus on biomedical applications.

Abstract
Cross-disciplinary collaboration between engineers and medical doctors is indispensable for innovation in health care. This course will bring together engineering students from ETH Zurich and medical students from the University of Zurich to experience the rewards and challenges of such interdisciplinary work in a project based learning environment.

Objective
The main goal of this course is to demonstrate the differences in communication between the fields of medicine and engineering. Since such differences become the most evident during actual collaborative work, the course is based on a current project in physiology research that combines medicine and engineering. For the engineering students, the specific aims of the course are to:
- Acquire a working understanding of the anatomy and physiology of the investigated system;
- Identify the engineering challenges in the project and communicate them to the medical students;
- Develop and implement, together with the medical students, solution strategies for the identified challenges;
- Present the found solutions to a cross-disciplinary audience.
After a general introduction to interdisciplinary communication and detailed background on the collaborative project, the engineering students will receive tailored lectures on the anatomy and physiology of the relevant system. They will then team up with medical students who have received a basic introduction to engineering methodology to collaborate on said project. In the process, they will be coached both by lecturers from ETH Zurich and the University of Zurich, receiving lectures customized to the project. The course will end with each team presenting their solution to a cross-disciplinary audience.

Handouts and relevant literature will be provided.

376-1177-00L  Human Factors I  W  2 credits  2V  M. Menozzi Jäckli, R. Huang, M. Siegrist

Abstract
Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people’s satisfaction & overall performance.

Objective
The goal of the lecture is to empower students in better understanding the applied theories, principles, and methods in various applications. Students are expected to learn about how to enable an efficient and qualitatively high standing interaction between human and the environment, considering costs, benefits, health, and safety as well. Thus, an ergonomic design and evaluation process of products, tasks, and environments may be promoted in different disciplines. The goal is achieved in addressing a broad variety of topics and embedding the discussion in macroscopic factors such as the behavior of consumers and objectives of economy.

Content
- Physiological, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry, Digital Human Models
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

Literature
- Gavriel Salvendy, Handbook of Human Factors and Ergonomics, 4th edition (2012), is available on NEBIS as electronic version and for free to ETH students
- Further textbooks are introduced in the lecture
- Brouchures, checklists, key articles etc. are uploaded in ILIAS

376-1219-00L  Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions  W  3 credits  2V  R. Riener, R. Gassert, L. Marchal Crespo

Abstract
Rehabilitation Engng is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective
Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

Content
Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces
Virtual Reality in Medicine

W. R. Riener

Virtual Reality has the potential to provide descriptive and practical information for medical training and therapy while relieving the patient.

Prerequisites / notice

Target Group:
- Students of higher semesters and PhD students of
- D-MAVT, D-ITET, D-INFK, D-HEST
- Biomedical Engineering, Robotics, Systems and Control
- Medical Faculty, University of Zurich
- Students of other departments, faculties, courses are also welcome

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 1072 of 1571
The course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neurophysiology and psychophysics, principles of human-robot interaction systems (kinematics, mechanical transmissions, robot sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance and force control, haptic rendering basics and issues in device design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical-human-robot interaction, laboratory sessions and lab visits.

Students will attend periodic laboratory sessions where they will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://www.relab.ethz.ch/education/courses/phri/request-ethz-haptic-paddle-hardware-documentation.html), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, damping, time delays, sampling rates, quantization, etc.) during rendering of different mechanical properties.

By the end of this course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and de- sign safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical-human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the defined design requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement and test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) investigate and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed. In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

376-1714-00L Biocompatible Materials

Abstract
Introduction to molecules used for biomaterials, molecular interactions between different materials and biological systems (molecules, cells, tissues). The concept of biocompatibility is discussed and important techniques from biomaterials research and development are introduced.

Objective
The class consists of three parts:
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Content
Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Literature

376-1985-00L Trauma Biomechanics

Abstract
Trauma biomechanics in an interdisciplinary research field investigating the biomechanics of injuries and related subjects such as prevention. The lecture provides an introduction to the basic principles of trauma biomechanics.

Objective
Introduction to the basic principles of trauma biomechanics.

Content
This lecture serves as an introduction to the field of trauma biomechanics. Emphasis is placed on the interdisciplinary nature of impact biomechanics, which uses the combination of fundamental engineering principles and advanced medical technologies to develop injury prevention measures. Topics include: accident statistics and accident reconstruction, biomechanical response of the human to impact loading, injury mechanisms and injury criteria, test methods (including crash tests), computer simulations using multi-body and finite element modelling techniques, aspects of passive safety of vehicles (focusing on restraint systems and vehicle compatibility). Real world examples mainly from automobile safety are used to augment lecture material.

Lecture notes
Handouts will be made available.

Literature

402-0341-00L Medical Physics I

Abstract
Introduction to the fundamentals of medical radiation physics. Functional chain due to radiation exposure from the primary physical effect to the radiobiological and medically manifest secondary effects. Dosimetric concepts of radiation protection in medicine. Mode of action of radiation sources used in medicine and its illustration by means of Monte Carlo simulations.

Objective
Understanding the functional chain from primary physical effects of ionizing radiation to clinical radiation effects. Dealing with dose as a quantitative measure of medical exposure. Getting familiar with methods to generate ionizing radiation in medicine and learn how they are applied for medical purposes. Eventually, the lecture aims to show the students that medical physics is a fascinating and evolving discipline where physics can directly be used for the benefits of patients and the society.

Content
The lecture is covering the basic principles of ionizing radiation and its physical and biological effects. The physical interactions of photons as well as charged particles will be reviewed and their consequences for medical applications will be discussed. The concept of Monte Carlo simulation will be introduced in the excercises and will help the student to understand the characteristics of ionizing radiation in simple and complex situations. Fundamentals in dosimetry will be provided in order to understand the physical and biological effects of ionizing radiation. Deterministic as well as stochastic effects will be discussed and fundamental knowledge about radiation protection will be provided. In the second part of the lecture series, we will consider the generation of the lecture series. By this means, the x-ray tube, the clinical linear acceleratot, and different radioactive sources in radiology, radiotherapy and nuclear medicine will be addressed. Applications in radiology, nuclear medicine and radiotherapy will be described with a special focus on the physics underlying these applications.

Lecture notes
A script will be provided.

551-0319-00L Cellular Biochemistry (Part I)

Abstract
Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

Objective
The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry. The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

Content
Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.

Lecture notes
Scripts and additional material will be provided during the semester. Please contact Dr. Alicia Smith for assistance with the learning materials. (alicia.smith@bc.biol.ethz.ch)

Literature
Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.
Experimental Ergonomics

The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in engineering and life sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multilayered architectures.

| Prerequisites / notice | To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English. |

Abstract

Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective

The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in engineering and life sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multilayered architectures.

Content

Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes

The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature

Abstract

Lectures and computer labs concerned with the modeling of the deformation response and failure of engineering materials (metals, polymers and composites) subject to extreme loadings during manufacturing, crash, impact and blast events.

Objective

Students will learn to apply, understand and develop computational models of a large spectrum of engineering materials to predict their dynamic deformation response and failure in finite element simulations. Students will become familiar with important dynamic testing techniques to identify material model parameters from experiments. The ultimate goal is to provide the students with the knowledge and skills required to engineer modern multi-material solutions for high performance structures in automotive, aerospace and naval engineering.

Content

Topics include viscoelasticity, temperature and rate dependent plasticity, dynamic brittle and ductile fracture; impulse transfer, impact and wave propagation in solids; computational aspects of material model implementation into hydrocodes; simulation of dynamic failure of structures;

Lecture notes

Slides of the lectures, relevant journal papers and users manuals will be provided.

Literature

Various books will be recommended covering the topics discussed in class

| Prerequisites / notice | Course in continuum mechanics (mandatory), finite element method (recommended) |

Abstract

You will learn how to apply the scientific discipline of ergonomics for system analysis and product development "in order to optimise human well-being and overall system performance" (www.iea.cc). The course offers the framework of models, concepts, methods and tools of applied ergonomics. Teaching is combined with learning-by-doing and research-based learning.

Objective

Knowledge of:
- Principles and rules of applied ergonomic system and product design.
- Methods and tools of ergonomic analysis and evaluation.
- Practical experiences and hands-on skills in:
  - Conducting a study in system and task analysis.
  - Analysing human-product interactions.
  - Applying ergonomic knowledge for product and system improvements.

Content

- Definition and role of applied ergonomics in engineering and design.
- Framework of ergonomic analysis and design.
- Design principles and rules.
- Methods and tools for system and task analysis.
- Hands-on experience in team work:
  - Experimental study of human-product interaction and usability through eye-tracking.
  - Field study of system and task analysis, including on-site visits of complex work stations (Hospital OR/ICU or Air traffic/Railway Control Rooms).

Lecture notes

Handout at the start of the course.

Literature

| Prerequisites / notice | Max. number of participants is 15. Experiments and field studies in teams of 2-3 students are obligatory. |

Abstract

The course covers fundamentals of computational optimization methods in the context of engineering design. It develops skills to formally state and model engineering design tasks as optimization problems and select appropriate methods to solve them.

Objective

The lecture and exercises teach the fundamentals of optimization methods in the context of engineering design. After taking the course students will be able to express engineering design problems as formal optimization problems. Students will also be able to select and apply a suitable optimization method given the nature of the optimization model. They will understand the links between optimization and engineering design in order to design more efficient and performance optimized technical products. The exercises are MATLAB based.

Lecture notes

available on Moodle

363-1065-00L Design Thinking: Human-Centred Solutions to Real  W  5 credits  5G  A. Cabello Llamas, F. Rittiner.
All interested students are invited to apply for this course by sending a one-page motivation letter until 14.9.16 to Florian Rittiner (frittiner@ethz.ch).

Additionally please enroll via mystudies. Places will be assigned after the first lecture on the basis of your motivation letter and commitment for the class.

The goal of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will work in teams to solve a set of design challenges that are organized as a one-week, a three-week, and a final six-week project in collaboration with an external project partner.

Information and application: www.sparklabs.ch/ethz

The purpose of this course is to equip the students with methods and tools to tackle a broad range of problems. Following a Design Thinking approach, the students will learn how to observe and interact with key stakeholders in order to develop an in-depth understanding of what is truly important and emotionally meaningful to the people at the center of a problem. Based on these insights, the students ideate on possible solutions and immediately validated them through quick iterations of prototyping and testing using different tools and materials.

Design Thinking is a deeply human process that taps into the creative abilities we all have, but that get often overlooked by more conventional problem solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols. Design Thinking provides an integrated way by incorporating tools, processes and techniques from design, engineering, the humanities and social sciences to identify, define and address diverse challenges. This integration leads to a highly productive collaboration between different disciplines.

For more information and the application visit: http://sparklabs.ch/ethz

Class attendance and active participation is crucial as much of the learning occurs through the work in teams during class. Therefore, attendance is obligatory for every session. Please also note that the group work outside class is an essential element of this course, so that students must expect an above-average workload.

### Multidisciplinary Courses

The students are free to choose individually from the entire course offer of ETH Zurich, ETH Lausanne and the Universities of Zurich and St. Gallen.

**Prerequisites / notice**

Class attendance and active participation is crucial as much of the learning occurs through the work in teams during class. Therefore, attendance is obligatory for every session. Please also note that the group work outside class is an essential element of this course, so that students must expect an above-average workload.

**Objectives**

- Generate deep insights through the systematic observation and interaction of key stakeholders.
- Engage in collaborative ideation with a multidisciplinary (student) team.
- Rapidly prototype and iteratively test ideas and concepts by using various materials and techniques.

Abstract
Master's programs are concluded by the master's thesis. The thesis is aimed at enhancing the student's capability to work independently toward the solution of a theoretical or applied problem. The subject of the master's thesis, as well as the project plan and roadmap, are proposed by the tutor and further elaborated with the student.

Objective
The thesis is aimed at enhancing the student's capability to work independently toward the solution of a theoretical or applied problem.

Course Units for Additional Admission Requirements

Abstract
Linear algebra is an indispensable tool of engineering mathematics. The course is an introduction to basic methods and fundamental concepts of linear algebra and its applications to engineering sciences.

Objective
After completion of this course, students are able to recognize linear structures and to apply adequate tools from linear algebra in order to solve corresponding problems from theory and applications. In addition, students have a basic knowledge of the software package Matlab.

Content

Linear maps, kernel and image, coordinates and matrices, coordinate transformations, norm of a matrix, orthogonal matrices, eigenvalues and eigenvectors, algebraic and geometric multiplicity, eigenbasis, diagonalizable matrices, symmetric matrices, orthonormal basis, condition number, linear differential equations, Jordan decomposition, singular value decomposition, examples in MATLAB, applications.

Reading:
Gilbert Strang "Introduction to linear algebra", Wellesley-Cambridge Press: Chapters 1-6, 7.1-7.3, 8.1, 8.2, 8.6

406-0353-AAL | Analysis III (Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.) | E-   | 4 credits | 9R | M. Soner |

Abstract
Introduction to partial differential equations. Differential equations which are important in applications are classified and solved. Elliptic, parabolic and hyperbolic differential equations are treated. The following mathematical tools are introduced: Laplace transforms, Fourier series, separation of variables, methods of characteristics.

Objective
Mathematical treatment of problems in science and engineering. To understand the properties of the different types of partial differential equations.

Content
Laplace Transforms:
- Laplace Transform, Inverse Laplace Transform, Linearity, s-Shifting
- Transforms of Derivatives and Integrals, ODEs
- Unit Step Function, t-Shifting
- Short Impulses, Dirac's Delta Function, Partial Fractions
- Convolution, Integral Equations
- Differentiation and Integration of Transforms

Fourier Series, Integrals and Transforms:
- Fourier Series
- Functions of Any Period p=2L
- Even and Odd Functions, Half-Range Expansions
- Forced Oscillations
- Approximation by Trigonometric Polynomials
- Fourier Integral
- Fourier Cosine and Sine Transform

Partial Differential Equations:
- Basic Concepts
- Modeling: Vibrating String, Wave Equation
- Solution by separation of variables; use of Fourier series
- D'Alembert Solution of Wave Equation, Characteristics
- Heat Equation: Solution by Fourier Series
- Heat Equation: Solutions by Fourier Integrals and Transforms
- Modeling Membrane: Two Dimensional Wave Equation
- Laplacian in Polar Coordinates: Circular Membrane, Fourier-Bessel Series
- Solution of PDEs by Laplace Transform

Abstract

This course looks into scientific theories and also empirical studies on human learning and relates them to the school.

Objective

Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

Content

Thematical Schwerpunkte:

Lernen als Verhaltensänderung und als Informationsverarbeitung: Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzerwerb unter besonderer Berücksichtigung des Wissenstransfers; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen etc.

Lernformen:

Lecture notes

Foliens werden zur Verfügung gestellt.

Literature

Prerequisites / notice

This course is only apt for students who intend to enrol in the programs "Lehrdiplom" or "Didaktisches Zertifikat". It is about learning in childhood and adolescence.

Abstract

In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

Objective

At the end of the seminar, participants will be in a position to:

- describe the scientific fundamentals of test theory and test structure.
- evaluate examples of scientifically-developed tests in their application context.
- if necessary, critically question the performance assessment that they employ in practice and professionalise it still further.

Content

Die konkreten Inhalte des Seminars ergeben sich aufgrund der Präferenzen der Teilnehmenden und der daraus abgeleiteten Themenübersicht für Vorträge und Seminararbeiten. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben und erläutert. Schwerpunkte der Themenvorschläge sind:

- Testentwicklung
- Gütekriterien von Tests
- Aufgabenkonstruktion
- Datenauswertung
- Rasch-Modell
- Internationale Vergleichstests
- Zulassungsstests

Lecture notes

Im Verlaufe des Semesters werden einzelne Unterlagen in den Veranstaltungen abgegeben. Dazu gehört auch die Handouts der verschiedenen, studentischen Vorträge.

Literature

Als Grundlagenerliteratur werden folgende Werke empfohlen:

- Weitere Literatur wird in der Lehrveranstaltung genannt.

Prerequisites / notice

Die Leistungsanforderungen richten sich im Umfang nach der Zahl zu erwerbender ECTS-Punkte, wobei 1 ECTS-Punkt einem Zeitaufwand von ca. 30 Arbeitsstunden entspricht. ETHZ-Studierende können im Rahmen dieser Veranstaltung 3 ECTS-Punkte erwerben. Dazu sind folgende Leistungen zu erbringen:

- Präsenz und aktive mündliche Mitarbeit in der Lehrveranstaltung (MA)
- Pflichtlektüre entsprechend der Angaben in der Lehrveranstaltung
- Referat (RE)
- Schreiben einer schriftlichen Arbeit

Weitere Angaben zu den Leistungsanforderungen werden im Rahmen der Startveranstaltung abgegeben und erläutert.

**Mechanical and Process Engineering TC**

Detailed information on the programme: www.didaktischeausbildung.ethz.ch
Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

This course unit can only be enrolled after successful participation in, or during enrollment in the course “Human Learning (EW 1)”.

Abstract
This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

Objective
- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

Prerequisites / notice
Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

Subject Didactics I for D-MAVT and D-ITET

Objectives:
- The students can plan, conduct and critically reflect single lessons.
- They orient themselves towards the academic goals and take into account existing knowledge, the professional environment and the ambitions of the students.
- They can apply the basic teaching principles meaningfully in their subject and suitably structure the learning phases.
- They can reduce and present complex technical content such that it is in a form suitable for the students to learn.
- They have considered examples of the common conceptual errors encountered by students.
- They reflect different forms of assessments and are able to use them appropriately.
- Based on didactical literature, they combine different teaching techniques and methods.
- They have considered examples of the common conceptual errors encountered by students.
- They can apply the basic teaching principles meaningfully in their subject and suitably structure the learning phases.
- They can reduce and present complex technical content such that it is in a form suitable for the students to learn.
- They have considered examples of the common conceptual errors encountered by students.

Content:
- Didactic analysis
- Competences and goals
- Preparation and wrap-up of lessons
- Process and structure of a typical lesson
- Teaching techniques (informative introduction to lessons, Advance Organizer, teaching questions, assignments, feedback)
- Assignments and short tests
- Media and language competence
- Conceptual change, misconceptions
- Integration of the subcomponents of a lesson

Literature:

Prerequisites / notice:
- Voraussetzung: Zulassung zur Fachdidaktik und Teilnahme an der ersten Fachdidaktikveranstaltung.
- Wird von der Praktikumslehrperson bestimmt.
- Keine Vorkenntnisse erforderlich.

**Abstract**
Differential and integral calculus for functions of one and several variables; vector analysis; ordinary differential equations of first and of higher order, systems of ordinary differential equations; power series. The mathematical methods are applied in a large number of examples from mechanics, physics and other areas which are basic to engineering.

**Objective**
Introduction to the mathematical foundations of engineering sciences, as far as concerning differential and integral calculus.

**Literature**
U. Stammbach: Analysis I/I

**Prerequisites / notice**
The Übungsaufgaben (inkl. Multiple Choice) sind ein wichtiger Bestandteil der Lehrveranstaltung. Es wird erwartet, dass Sie mindestens 75% der wöchentlichen Serien bearbeiten und zur Korrektur einreichen.

**Abstract**
General Chemistry I: Stoichiometry, atoms, molecules, chemical bond and molecular structure, gases, solutions, chemical equilibrium, solubility, acids and bases, thermodynamics, electrochemistry, kinetics.

**Objective**
Introduction to general and inorganic chemistry.

**Content**
1) Atoms, molecules, periodic table of the elements
2) Stoichiometry: Mole, chemical equations, elemental analyses
3) Reactions in water, stoichiometry in solutions
4) Thermochemistry: Energy and enthalpy, thermochemical equations, Hess theorem
5) Gases: Gas laws, reactions and stoichiometry in the gas phase, kinetic theory
6) Atomic structure and binding models: ionic, covalent and metallic bonds, Lewis- and resonance formula, electronegativity and polarity, VSEPR model
7) Liquids and solids, phase transitions
8) Solutions; dissolution processes, colligative properties
9) Kinetics: reaction rates, temperature dependence, reaction orders and reaction laws, collision theory, catalysis
11) Acid-base equilibria: acid/base-concepts, pH calculations, buffer systems, titrations
12) Dissolution and equilibria of complex formation
13) Thermodynamics: 3 laws of thermodynamics, free enthalpy and equilibrium
14) Redox reactions and electrochemistry: Faraday's laws, electrode potential and Nernst equation
15) Complexes: equilibria, structure and isomerism

**Abstract**
Introduction into the fundamental relationships between chemical composition, crystal structure, symmetry and physical properties of solids.
Objective
Introduction into the fundamental relationships between chemical composition, crystal structure, symmetry and physical properties of solids. Emphasis: group-theoretical introduction into symmetry, discussion of the factors governing the formation of crystal structures, structural dependence of physical properties, fundamentals of experimental techniques probing the crystal structure.

Content
Symmetry and order: lattices, point groups, space groups.
Crystal chemistry: geometrical, physical and chemical factors governing the formation of crystal structures; close sphere packings; typical basic crystal structures; lattice energy; magnetic crystals; quasicrystals.
Structure/property relationships: Example quartz (piezoelectricity); perovskite and derivative structures (ferroelectrics and high-temperature superconductors); magnetic materials.

Materials characterization: diffraction techniques, optical techniques.

Lecture notes
A script of the lecture until 2014 is available. New script: to be decided.

Literature

Prerequisites / notice
Organisation: Two hours of lectures per week accompanied by one hour of exercises.

Prerequisites / notice
Exercises are integrated in the lectures. In addition, attendance in the lecture 529-0289-00 "Instrumental analysis of organic compounds" (4th semester) is recommended.

327-0309-00L Organic Chemistry in Materials Science O 2 credits 1G W. R. Caseri, P. J. Walde
Abstract
This lecture allows the students to consolidate the basics of organic chemistry through selected exercises.
Objective
Consolidation of the basics of organic chemistry.
Content
This lecture consists predominantly of exercises and serves mainly to prepare the students intensively for aspects in materials science, based on the lecture Chemie II. A large number of questions will be provided, which will partially be discussed in the lecture while the other part is devoted to self-study.

402-0041-00L Physics II O 7 credits 4V+2U Y. M. Acremann, D. Pescia
Abstract
The course treats the fundamental aspects of modern Electronics, Quantum mechanics and Atomic physics.
Objective
Ziel dieser Vorlesung ist es, die grundlegenden Experimente zu kennen sowie die dazugehörende Theorie zu verstehen und sie in einfachen Problemstellungen zur Anwendung zu bringen.
Content
Die Vorlesung "Physik II" ist eine Einführung in die Grundlage der modernen Elektrotechnik, der Quantenmechanik und Atompysik.

551-0015-00L Biology I O 2 credits 2V R. Glockshuber, E. Hafen
Abstract
The lecture Biology I, together with the lecture Biology II in the following summer semester, is a basic, introductory course into Biology for Students of Materials Sciences and other students with biology as subsidiary subject.
Objective
The goal of this course is to give the students a basic understanding of the molecules that build a cell and make it function, and the basic principles of metabolism and molecular genetics.
Content
1. Aufbau der Zelle
Kapitel 5: Struktur und Funktion biologischer Makromoleküle
Kapitel 6: Eine Tour durch die Zelle
Kapitel 7: Membranstruktur und Funktion
Kapitel 8: Einführung in den Stoffwechsel
Kapitel 9: Zelluläre Atmung und Speicherung chemischer Energie
Kapitel 10: Photosynthese
Kapitel 12: Der Zellzyklus
Kapitel 17: Vom Gen zum Protein
2. Allgemeine Genetik
Kapitel 13: Meiose und Reproduktionszyklen
Kapitel 14: Mendel'sche Genetik
Kapitel 15: Die chromosomale Basis der Vererbung
Kapitel 16: Die molekulare Grundlage der Vererbung
Kapitel 18: Genetik von Bakterien und Viren
Kapitel 46: Tierische Reproduktion

Lecture notes
Ein Skript wird verteilt.
Prerequisites / notice
Prerequisites: Physics I.

Literature

Examination Block 2

401-0603-00L Stochastics (Probability and Statistics) O 4 credits 2V+1U M. H. Maathuis
Abstract
This class covers the following concepts: random variables, probability, discrete and continuous distributions, joint and conditional probabilities and distributions, the law of large numbers, the central limit theorem, descriptive statistics, statistical inference, inference for normally distributed data, point estimation, and two-sample tests.
Objective
Knowledge of the basic principles of probability and statistics.
Content
Introduction to probability theory, some basic principles from mathematical statistics and basic methods for applied statistics.

Lecture notes

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 1084 of 1571
**Analysis III**

**Abstract**

Introduction to partial differential equations. Differential equations which are important in applications are classified and solved. Elliptic, parabolic and hyperbolic differential equations are treated. The following mathematical tools are introduced: Laplace transforms, Fourier series, separation of variables, methods of characteristics.

**Objective**

Mathematical treatment of problems in science and engineering. To understand the properties of the different types of partial differential equations.

The first lecture is on Thursday, September 29 13-15 in HG F 7 and video transmitted into HG F 5.

The coordinator is Claudio Sibilia (see [https://www.math.ethz.ch/the-department/people.html?u=sibiliac](https://www.math.ethz.ch/the-department/people.html?u=sibiliac))

The first exercise session is on Thursday, September 22 or resp. Friday, September 23. If you would like feedback on your work, please give it to your course assistant or leave it in the box of your course assistant in HG F 27. The due Date is one week later the assignment.

**Content**

Laplace Transforms:
- Laplace Transform, Inverse Laplace Transform, Linearity, s-Shifting
- Transforms of Derivatives and Integrals, ODEs
- Unit Step Function, t-Shifting
- Short Impulses, Dirac's Delta Function, Partial Fractions
- Convolution, Integral Equations
- Differentiation and Integration of Transforms

Fourier Series, Integrals and Transforms:
- Fourier Series
- Functions of Any Period p=2L
- Even and Odd Functions, Half-Range Expansions
- Forced Oscillations
- Approximation by Trigonometric Polynomials
- Fourier Integral
- Fourier Cosine and Sine Transform

Partial Differential Equations:
- Basic Concepts
- Modeling: Vibrating String, Wave Equation
- Solution by separation of variables; use of Fourier series
- D’Alembert Solution of Wave Equation, Characteristics
- Heat Equation: Solution by Fourier Series
- Heat Equation: Solutions by Fourier Integrals and Transforms
- Modeling Membrane: Two Dimensional Wave Equation
- Laplacian in Polar Coordinates: Circular Membrane, Fourier-Bessel Series
- Solution of PDEs by Laplace Transform

### Programming Techniques in Materials Science

**Abstract**

This course introduces the general computing and programming skills which are necessary to perform numerical computations and simulations in materials science. This is achieved using the numerical computing environment Matlab and through the use of many practical examples and exercises.

**Objective**

On passing this course, the students should be able to develop their own programs for performing numerical computations and simulations, and they should be able to analyse and amend existing code.

**Content**

Introduction to Matlab; input/output; structured programming using loops and conditional execution; modular Programming using functions; flow diagrams; numerical accuracy; example: random walk model.

**Abstract**

Basic concepts of metal physics, ceramics, polymers and their technology.

**Objective**

Based on the lecture 'Introduction to Materials Science' this lecture aims to give a detailed understanding of important aspects of materials science, with special emphasis on metallic and ceramic materials.

**Content**

Thermodynamics and phase diagrams, crystal interfaces and microstructure, diffusional transformations in solids, and diffusionless transformations will be presented for metallic alloys. The basics of the ionic and covalent chemical bonds, the bond energy, the crystalline structure, four important structural ceramics, and the properties of glasses and glass ceramics will be presented for ceramic materials.
The lecture course is aimed to qualifying the student to choose the optimum characterization method according to the questions posed.

Abstract
The lecture course is aimed to qualifying the student to choose the optimum characterization method according to the questions posed.

The main topics are: Thermal Analysis (TD, TG, TM, DTA, DSC), light microscopy, diffraction methods (XRD, NRD, SAD), electron microscopy (TEM, HRTEM, STEM, HAADF-STEM, SEM, ESEM, EFEM, EDX, EELS).

Objective
The lecture course is aimed at giving the student to choose the optimum characterization method according to the questions posed.

Content
Introduction into the fundamentals of materials characterization; Thermal Analysis (TD, TG, TM, DTA, DSC), light microscopy, diffraction methods (XRD, NRD, SAD), electron microscopy (TEM, HRTEM, STEM, HAADF-STEM, SEM, ESEM, EFEM, EDX, EELS). The emphasis is on the discussion of the fundamentals of these characterization methods.

Script is provided.

Abstract
Introduction to simulation techniques that are relevant for material science. Simulation methods for continua (finite differences, finite elements), mesoscopic methods (cellular automata, mesoscopic Monte Carlo methods), microscopic methods (Molecular Dynamics, Monte-Carlo simulations, Density Functional Theory).
Materials Physics I

Only for MATL BSc, Programme Regulations 2016.

Abstract
This course introduces classical and quantum mechanical concepts for the understanding of material properties from a microscopic point of view. The lectures focus on the static and dynamic properties of crystals, the formation of chemical bonds and electronic bands in molecules, insulators, metals, and semiconductors, and on the thermal and electrical properties that emerge from this analysis.

Objective
Providing physical concepts for the understanding of material properties:

- Understanding the electronic properties of solids is at the heart of modern society and technology. The aim of this course is to provide fundamental concepts that allow the student to relate the microscopic structure of matter and the quantum mechanical behavior of electrons to the macroscopic properties of materials. Beyond fundamental curiosity, such level of understanding is required in order to develop and appropriately describe new classes of materials for future technology applications. By the end of the course the student should have developed a semi-quantitative understanding of basic concepts in solid state physics and be able to appreciate the pertinence of different models to the description of specific material properties.

Content
PART I: Structure of solid matter, real and reciprocal space

The crystal lattice, Bravais lattices, primitive cells and unit cells, Wigner-Seitz cell, primitive lattice vectors, lattice with a basis, examples of 3D and 2D lattices.

Fourier transforms and reciprocal space, reciprocal lattice vectors, Brillouin zones

PART II: Dynamics of atoms in crystals

Lattice vibrations and phonons in 1D, phonons in 1D chains with monoatomic basis, phonon in 1D chains with a diatomic basis, optical and acoustic modes, phase and group velocities, phonon dispersion and eigenvectors. Phonons in 2D and 3D.

Quantum mechanical description of lattice waves in solids, the harmonic oscillator, the concept of phonon, phonon statistics, Bose-Einstein distribution, phonon density of states, Debye and Einstein models, thermal energy, heat capacity of solids.

PART III: Electron states and energy bands in molecules and solids

Electronic properties of materials, classical concepts: electrical conductivity, Hall effect, thermoelectric effects. Drude model. Transition to quantum models and review of quantum mechanical concepts.

Introduction to molecular orbital theory and linear combination of atomic orbitals (LCAO). The H2+ molecule, homonuclear and heteronuclear molecules, benzene, sigma and pi bonds, sp3 and sp2 hybridization. From molecules to periodic crystal structures.

The free electron gas: Fermi statistics, Fermi energy and Fermi surface, density of states in k-space and as a function of energy. Inadequacy of the free electron model.

PART IV: Electrical and heat conduction

Dynamics of electrons in energy bands, phase and group velocity, crystal momentum, the effective mass concept, scattering phenomena. The equilibrium and non-equilibrium distribution function for electrons. The Boltzmann equation in the presence of external fields in the relaxation time approximation.

Electrical and thermal conductivities revisited. Electron transport due to electric fields (drift) and concentration gradients (diffusion). Einstein’s relations. Transport of heat by electrons, Seebeck effect and thermopower, Peltier effect, thermoelectric cooling, thermoelectric energy conversion.

PART V: Semiconductors: concepts and devices

Dynamics of electrons in energy bands, phase and group velocity, crystal momentum, the effective mass concept, scattering phenomena. The equilibrium and non-equilibrium distribution function for electrons. The Boltzmann equation in the presence of external fields in the relaxation time approximation.

Electrical and thermal conductivities revisited. Electron transport due to electric fields (drift) and concentration gradients (diffusion). Einstein’s relations. Transport of heat by electrons, Seebeck effect and thermopower, Peltier effect, thermoelectric cooling, thermoelectric energy conversion.

Prerequisites / notice
Physics I and II. Knowledge of basic quantum mechanical concepts. The lecture will be given in English. The script will be available in English.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1087 of 1571
### Content

**Dislocation theory:**
- Properties of dislocations, motion and kinetics of dislocations, dislocation-dislocation and dislocation-boundary interactions, consequences of partial dislocations, sessile dislocations
- Hardening theory:
  - a. solid solution hardening: case studies in copper-nickel and iron-carbon alloys
  - b. particle hardening: case studies on aluminium-copper alloys
- High temperature plasticity:
  - thermally activated glide
  - power-law creep
  - diffusional creep: Coble, Nabarro-Herring
- deformation mechanism maps
- Case studies in turbine blades
- superplasticity
- alloying effects

**Hardening theory:**
- a. solid solution hardening: case studies in copper-nickel and iron-carbon alloys
- b. particle hardening: case studies on aluminium-copper alloys

**High temperature plasticity:**
- thermally activated glide
- power-law creep
- diffusional creep: Coble, Nabarro-Herring

### 327-0502-00L Polymers I

**Abstract**

Physical foundations of single polymer molecules and interacting chains.

**Objective**

The course offers a modern approach to the understanding of universal static and dynamic properties of polymers.

**Content**

- Polymer Physics:
  1. Introduction to Polymer Physics, Random Walks
  2. Excluded Volume
  3. Structure Factor from Scattering Experiments
  4. Persistence
  5. Solvent and Temperature Effects
  6. Flory theory
  7. Self-consistent field theory
  8. Interacting Chains, Phase Separation and Critical Phenomena
  9. Rheology
  10. Numerical methods in polymer physics, computer experiments

**Lecture notes**

A script is available at http://www.polyphys.mat.ethz.ch/education/courses/polymere-I

**Literature**

- M. Kröger, Models for polymeric and anisotropic liquids (Springer, Berlin, 2005)

**Prerequisites / notice**

Computer experiments will use the simple MATLAB programming language and will be made available, if necessary or useful.

### 327-0503-00L Ceramics I

**Abstract**

Introduction to ceramic processing.

**Objective**

The aim is the understanding of the basic principles of ceramic processing.

**Content**

- Basic chemical processes for powder production.
- Liquid-phase synthesis methods.
- Sol-Gel processes.
- Classical crystallization theory.
- Gas phase reactions.
- Basics of the colloidal chemistry for suspension preparation and control.
- Characterization techniques for powders and colloids.
- Shaping techniques for bulk components and thin films.
- Sintering processes and microstructural control.

**Lecture notes**

See: http://www.multimat.mat.ethz.ch/education/lectures/ceramics.html

**Literature**

Books and references will be given on the lecture notes.

### 327-1221-00L Biological and Bio-Inspired Materials

**Students that already enroled in this course during their Bachelor's degree studies are not allowed to enrol again in their Master's.**

**Abstract**

The aim of this course is to impart knowledge on the underlying principles governing the design of biological materials and on strategies to fabricate synthetic model systems whose structural organization resembles those of natural materials.

**Objective**

The course first offers a comprehensive introduction to evolutive aspects of materials design in nature and a general overview about the most common biopolymers and biominerals found in biological materials. Next, current approaches to fabricate bio-inspired materials are presented, followed by a detailed evaluation of their structure-property relationships with focus on mechanical, optical, surface and adaptive properties.

**Content**

- This course is structured in 3 blocks:
  - Block (I): Fundamentals of engineering in biological materials
  - Biological engineering principles
  - Basic building blocks found in biological materials
  - Biological design patterns
  - Biological design principles in synthetic materials
  - Biological and bio-inspired materials: polymer-reinforced and ceramic-toughened composites
  - Lightweight biological and bio-inspired materials
  - Functional biological and bio-inspired materials: surfaces, self-healing and adaptive materials
  - Bio-inspired design and systems
  - Bio-inspiration in the building environment
  - Future developments in bio-inspired materials

**Lecture notes**

Copies of the slides will be made available for download before each lecture.

---

**Data:** 06.08.2018 12:56  
**Autumn Semester 2016**  
**Page 1088 of 1571**

Abstract
After being introduced to the physical/chemical principles and importance of surfaces and interfaces, the student is introduced to the most important techniques that can be used to characterize surfaces. Later, liquid interfaces are treated, followed by an introduction to the fields of tribology (friction, lubrication, and wear) and corrosion.

Objective
To gain an understanding of the physical and chemical principles, as well as the tools and applications of surface science, and to be able to choose appropriate surface-analytical approaches for solving problems.

Content
Introduction to Surface Science
- Physical Structure of Surfaces
- Surface Forces (static and dynamic)
- Adsorbates on Surfaces
- Surface Thermodynamics and Kinetics
- The Solid-Liquid Interface
- Electron Spectroscopy
- Vibration Spectroscopy on Surfaces
- Scanning Probe Microscopy

Introduction to Tribology
- Introduction to Corrosion Science

Lecture notes

Literature

Prerequisites / notice
Chemistry:
- General undergraduate chemistry
- including basic chemical kinetics and thermodynamics

Physics:
- General undergraduate physics
- including basic theory of diffraction and basic knowledge of crystal structures

327-1201-00L Transport Phenomena I  W Dr  4 credits  4G  H. C. Öttinger

Abstract
Phenomenological approach to “Transport Phenomena” based on balance equations supplemented by thermodynamic considerations to formulate the undetermined fluxes in the local species mass, momentum, and energy balance equations; fundamentals, applications, and simulations.

Objective
The teaching goals of this course are on five different levels:
1. Deep understanding of fundamentals: local balance equations, constitutive equations for fluxes, entropy balance, interfaces, idea of dimensionless numbers, ...
2. Ability to use the fundamental concepts in applications
3. Insight into the role of boundary conditions
4. Knowledge of a number of applications
5. Flavor of numerical techniques: finite elements, finite differences, lattice Boltzmann, Brownian dynamics, ...

Content
Approach to Transport Phenomena
- Diffusion Equation
- Brownian Dynamics
- Refreshing Topics in Equilibrium Thermodynamics
- Balance Equations
- Forces and Fluxes
- Measuring Transport Coefficients
- Pressure-Driven Flows
- Driven Separations
- Complex Fluids

Lecture notes
A detailed manuscript is provided; this manuscript will be developed into a book entitled "A Modern Course in Transport Phenomena" by David C. Venerus and Hans Christian Öttinger

Literature
- S. R. de Groot and P. Mazur, Non-Equilibrium Thermodynamics, 2nd Ed. (Dover, 1984)
- W. M. Deen, Analysis of Transport Phenomena (Oxford University Press, 1996)

Prerequisites / notice
Complex numbers, Vector analysis (integrability; Gauss’ divergence theorem), Laplace and Fourier transforms. Ordinary differential equations (basic ideas). Linear algebra (matrices; functions of matrices; eigenvectors and eigenvalues; eigenfunctions). Probability theory (Gaussian distributions; Poisson distributions; averages; moments; variances; random variables). Numerical mathematics (integration). Equilibrium thermodynamics (Gibbs’ fundamental equation; thermodynamic potentials; Legendre transforms). Maxwell equations, Programming and simulation techniques (Matlab, Monte Carlo simulations).

327-1202-00L Solid State Physics and Chemistry of Materials I  W Dr  4 credits  4G  N. Spaldin

Abstract
In this course we study the properties of solids are determined from the chemistry and arrangement of the constituent atoms, with a focus on materials that are not well described by conventional band theories because their behavior is governed by strong quantum-mechanical interactions.

Objective
Electronic properties and band theory description of conventional solids
- Electron-lattice coupling and its consequences in functional materials
- Electron-spin/orbit coupling and its consequences in functional materials
- Structure/property relationships in strongly-correlated materials

Content
In this course we study how the properties of solids are determined from the chemistry and arrangement of the constituent atoms, with a focus on materials that are not well described by conventional band theories because their behavior is governed by strong quantum-mechanical interactions. We begin with a review of the successes of band theory in describing many properties of metals, semiconductors and insulators, and we practise building up band structures from atoms and describing the resulting properties. Then we explore classes of systems in which the coupling between the electrons and the lattice is so strong that it drives structural distortions such as Peierls instabilities, John-Teller distortions, and ferroelectric transitions. Next, we move on to strong couplings between electronic charge and spin- and/or orbital- angular momentum, yielding materials with novel magnetic properties. We end with examples of the complete breakdown of single-particle band theory in so-called strongly correlated materials, which comprise for example heavy-fermion materials, frustrated magnets, materials with unusual metal-insulator transitions and the high-temperature superconductors.

Lecture notes
An electronic script for the course is provided at https://eskript.ethz.ch/catalog/matl

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1092 of 1571

<tr>
<td>Content</td>
<td>The course is divided into two parts: I) synthesis of 0-, 1-, 2-, and 3-dimensional building blocks with a length scale from nm to μm, and II) assembly of these building blocks into 1-, 2- and 3-dimensional structures over several length scales up to cm. In part I, various methodologies for the synthesis of the building blocks will be discussed, including Turkevich and Brust-Schiffrin-method for gold nanoparticles, hot-injection for semiconducting quantum dots, aqueous and nonaqueous sol-gel chemistry for metal oxides, or gas- and liquid-phase routes to carbon nanostructures. Part II is focused on self- and directed assembly methods that can be used to create higher order architectures from those building blocks connecting the microscopic with the macroscopic world. Examples include photonic crystals, nanocrystal solids, colloidal molecules, mesocrystals or particle-based foams and aerogels.</td>

327-1204-00L | Materials at Work I | W Dr | 4       | 4S   |       | R. Spolenak, E. Dufresne, R. Koopmans |
| Abstract     | This course attempts to prepare the student for a job as a materials engineer in industry. The gap between fundamental materials science and the materials engineering of products should be bridged. The focus lies on the practical application of fundamental knowledge allowing the students to experience application related materials concepts with a strong emphasis on case-study mediated learning. |
| Objective    | Teaching goals: |
|              | to learn how materials are selected for a specific application |
|              | to understand how materials around us are produced and manufactured |
|              | to understand the value chain from raw material to application |
|              | to be exposed to state of the art technologies for processing, joining and shaping |
|              | to be exposed to industry related materials issues and the corresponding language (terminology) and skills |
|              | to create an impression of how a job in industry "works", to improve the perception of the demands of a job in industry |
| Content      | This course is designed as a two semester class and the topics reflect the contents covered in both semesters. |
| Literature   | Lectures and case studies encompass the following topics: |
|              | Strategic Materials (where do raw materials come from, who owns them, who owns the IP and can they be substituted) |
|              | Materials Selection (what is the optimal material (class) for a specific application) |
|              | Materials systems (subdivisions include all classical materials classes) |
|              | Processing |
|              | Joining (assembly) |
|              | Shaping |
|              | Materials and process scaling (from nm to m and vice versa, from mg to tons) |
|              | Sustainable materials manufacturing (cradle to cradle) Recycling (Energy recovery) |
|              | After a general part of materials selection, critical materials and materials and design four parts consisting of polymers, metals, ceramics and coatings will be addressed. |
|              | In the fall semester the focus is on the general part, polymers and alloy case studies in metals. The course is accompanied by hands-on analysis projects on everyday materials. |
| Prerequisites / notice | Manufacturing, Engineering & Technology |
| Literature   | Serope Kalpakjian, Steven Schmid |
| ISBN         | 978-0131489653 |

327-1207-00L | Soft Materials II | W Dr | 4       | 4G   |       | J. Verman, L. Isa |
| Abstract     | In the second part of the course we will introduce the experimental tools to study the materials at the invariably wide range of length scales, which are embedded in the microstructures that generate the desired properties. |
| Objective    | Students should be able to learn which experimental tools may help to troubleshoot a problem. A key aspect is that students should learn to see which are the “knobs that can be turned”, by playing with the chemistry of the building blocks, the formulation, the physical chemistry or not the process technology. |
| Prerequisites / notice | Profound knowledge in Physical Metallurgy and Polymer Basics and Polymer Technology required (These subjects are covered at the Bachelor Level by the following lectures: Metallkunde 1, 2; Polymer 1,2) |

Abstract

Enables materials scientists to work in a wide range of advanced composite and adaptive material systems. Emphasis is placed on developing advanced knowledge and understanding of their design, manufacturing, structure and properties, characterisation and applications.

Objective

Enables materials scientists to work in a wide range of advanced composite and adaptive material systems. Emphasis is placed on developing advanced knowledge and understanding of their design, manufacturing, structure and properties, characterisation and applications.

Content

The course will comprise a balance of lectures, tutorials, student presentations and laboratory classes. In addition, case study site visits will be made for certain topics to illustrate the industrial application of particular technologies.

More and more, the interest in functional fibre composites is increasing. In beginning, the main focus will be on the production of functional fibres, e.g., for fibre-based sensor and actuator composites with polymers, metals and ceramics. Optical, piezoelectric, shape memory and other fibres for advanced composite applications will be treated in detail. There will be a discussion on fibre classification, fibre production (ceramic and others), adaptive and smart materials, types of sensors and actuators (e.g. made from electro-active poly-mers), and sensor networks with piezo-electric composites (e.g., Active or Macro Fibre Composites) for adaptive material systems or structural health monitoring (SHM) of advanced composite structures.

Emphasis will be put on the underlaying science of a particular process or effect rather than a detailed description of the technique or equipment.

Manufacturing of actuators driven by electro-active polymers (EAP) and sensors applications of Active Fibre Composites (AFC) will be studied in laboratory classes.

Case studies and examples drawn from structural and functional applications of advanced composite and adaptive material systems will be demonstrated.

Lecture notes will be distributed

Content

This course is structured in 3 blocks:
- Biological nanoengineering principles
- Basic building blocks found in biological materials
- Replicating biological design principles in synthetic materials
- Bio-inspired materials: polymer-reinforced and ceramic-toughened composites
- Functional biological and bio-inspired materials: surfaces, self-healing and adaptive materials
- Future developments in bio-inspired materials

Lecture notes

Copies of the slides will be made available for download before each lecture.

Literature

The course is mainly based on the books listed below. Additional references will be provided during the lectures.

327-0702-00L  EM-Practical Course in Materials Science  W  2 credits  4P  K. Kunze, F. Gramm, F. Krumeich, J. Reuteler

Abstract

Practical work on a TEM and on SEM, treatment of typical problems, data analysis, writing of a report

Objective

Application of basic electron microscopic techniques to materials science problems

Prerequisites / notice

see lecture Electron Microscopy (327-0703-00L)

327-0703-00L  Electron Microscopy in Material Science  W  4 credits  2V+2U  K. Kunze, R. Erni, S. Gerstl, F. Gramm, F. Krumeich

Abstract

A comprehensive understanding of the interaction of electrons with condensed matter and details on the instrumentation and methods designed to use these probes in the structural and chemical analysis of various materials.

Objective

This course provides a general introduction into electron microscopy of organic and inorganic materials. In the first part, the basics of transmission- and scanning electron microscopy are presented. The second part includes the most important aspects of specimen preparation, imaging and image processing. In the third part, recent applications in materials science, solid state physics, structural biology, structural geology and structural chemistry will be reported.

Prerequisites / notice

Prerequisite: the lecture Electron Microscopy (327-0703-00L) has to be attended with success, maximum number of participants 15, work in groups of 3 people.

327-2105-00L  Supramolecular Aspects of Polymers  W  2 credits  1G  P. J. Walde

Abstract

Preparation, characterization and applications of polymolecular aggregates formed from amphiphilic block copolymers.

Objective

To become acquainted with the principles of the self-assembly of amphiphilic block copolymers into micelles and vesicles and to become acquainted with some of the properties and applications of these aggregates.

Content

With selected recent examples on the self-assembly of amphiphilic block copolymers several basic aspects and possible applications will be discussed. The focus will mainly be on micelles and vesicles.

Lecture notes

no script

151-0605-00L  Nanosystems  W  4 credits  4G  A. Stemmer, J.N. Tisserant

Abstract

From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

Intermolecular forces, their macroscopic manifestations, and ways to control such interactions.

Self-assembly and directed assembly of 2D and 3D structures.

Special emphasis on the emerging field of molecular electronic devices.

Familiarize students with basic science and engineering principles governing the nano domain. The course addresses basic science and engineering principles ruling the nano domain. We particularly work out the links between topics that are traditionally taught separately.

Special emphasis is placed on the emerging field of molecular electronic devices, their working principles, applications, and how they may be assembled.

Topics are treated in 2 blocks:

(I) From Quantum to Continuum
From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

(II) Interaction Forces on the Micro and Nano Scale
Intermolecular forces, their macroscopic manifestations, and ways to control such interactions.

Self-assembly and directed assembly of 2D and 3D structures.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1095 of 1571
This course offers an introduction to computer simulation methods for physics problems and their implementation on PCs and supercomputers: classical equations of motion, partial differential equations (wave equation, diffusion equation, Maxwell's equation), Monte Carlo simulations, percolation, phase transitions.

**Materials Research Using Synchrotron Radiation**

**Prerequisites / notice**

Course format:

Lectures and Mini-Review presentations: Thursday 10-13, ML F 36

Homework: Mini-Reviews

Students select a paper (list distributed in class) and expand the topic into a Mini-Review that illuminates the particular field beyond the immediate results reported in the paper.

**Lecture notes**

A reader and a guide through the experiments at the Swiss Light Source will be made available on the web.

**Literature**

**Prerequisites / notice**

Part of the course is in the form of practical work at the Swiss Light Source. During two days (dates to be agreed), the following experiments will be performed: (1) elastic and Compton scattering, (2) liquid scattering and powder diffraction, and (4) X-ray absorption spectroscopy.

**Introduction to Computational Physics**

**Prerequisites / notice**

Lecture and exercise lessons in english, exams in German or in English

**Prerequisites / notice**

Lecture and exercise lessons in english, exams in German or in English
Biomineralization

I. General
II. Cationic polymerization
1. General
2. Some applications (macromonomer and telechelics)

III. Ziegler-Natta- and metalloocene polymerization

IV. Ring-opening metathesis polymerization
1. Comments on history
2. Monomers, catalysts, polymer structures
3. Mechanism, direct NMR monitoring
4. Termination
5. Examples

V. Controlled radical polymerization

1. Nitroxide mediated polymerization (NMP)
2. Atom transfer radical polymerization (ATRP)

Lecture notes
A script will not be provided. For all projections shown, however, paper copies will be distributed.

Literature
There is no specific literature recommendation. Numerous references will be provided for an easy access to the original literature.

Prerequisites / notice
The course will be taught in English. Complicated expressions will be explained in German. Questions can be asked in both languages.

PhD students who need recognized credit points are required to pass the written exam.

752-2314-00L

Physics of Food Colloids

W 3 credits 2V  
P. A. Fischer, R. Mezzenga

Abstract
In Physics of Food Colloids the principles of colloid science will be applied to the aggregation of food materials based on proteins, polysaccharides, and emulsifiers. Mixtures of such raw material determine the appearance and performance of our daily food. In a number of examples, colloidal laws are linked to food science and the manufacturing and processing of food.

Objective
The aggregation of food material determines the appearance and performance of complex food system as well as nutritional aspects. The underlying colloidal laws reflect the structure of the individual raw material (length scale, time scale, and interacting forces). Once these concepts are appreciated the aggregation of most food systems falls into recognizable patterns that can be used to modify and structure exiting food or to design new products. The application and use of these concepts are discussed in light of common food production.

Content
Lectures include interfacial tension (4h), protein aggregation in bulk and interfaces (4h), Pickering emulsions (2h), gels (4h), aggregation of complex mixtures (4h), and the use of light scattering in investigation complex food structures (6h). Most chapters include some hand-ons examples of the gain knowledge to common food products.

Lecture notes
Notes will be handed out during the lectures.

Literature
Provided in the lecture notes.

327-0811-00L

Industrial Research and Development at the Interface of Biomaterials and Drug Delivery

W Dr 1 credit 1V  
L. B. Uebersax, J. Goldhahn, F. Schlottig, R. Streicher

Abstract
This course will provide an up-to-date, comprehensive review of the industrial perspective at the interface of biomaterials and drugs. This covers regulatory, clinical, pre-clinical and manufacturing concepts. The presentations are provided in an effort to maximize the interaction of student and lecturer.

Objective
- The student will be able to categorize a drug-biomaterial as a "drug" or a "material" from a regulatory perspective and can summarize general regulatory pathways for material/drug development.
- The student will be able to summarize the current concepts and challenges for the industry at the material-drug interface.
- The student will actively develop innovative, industrial concepts at the drug-biomaterial interface.

Content
This course will provide an up-to-date comprehensive review of the industrial perspective at the interface of biomaterials and drugs. General concepts related to regulatory affairs or such as cost-conscious planning of manufacturing processes will be covered by interactive case-studies and in close interaction between students and lecturers. The course covers the future at the biomaterial - implant interface - as it is seen by the industry today - and will be reviewed by experienced and long-standing faculty from industry with the aim to provide a balanced, insightful perspective. From that, clinical development concepts, regulatory pathways and real-life case studies will be discussed with the students. Finally the students - working in small groups of 4-5 - will outline a development pathway for an industrial project and present it to the course and in presence of all faculty to receive maximum feedback to their approaches. The student will become familiar with the major elements required for a successful development and which challenges have to be taken into account to translate an idea into a successful product.

327-1101-00L

Biomineralization

W 2 credits 2G  
K.H. Ernst

Abstract
The course addresses undergraduate and graduate students interested in getting introduced into the basic concepts of biomineralization. The course aims to introduce the basic concepts of biomineralization and the underlying principles, such as supersaturation, nucleation and growth of minerals, the interaction of biomolecules with mineral surfaces, and cell biology of inorganic materials creation. An important part of this class is the independent study and the presentation of original literature from the field.

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 1097 of 1571
**Content**

Biominalization is a multidisciplinary field. Topics dealing with biology, molecular and cell biology, solid state physics, mineralogy, crystallography, organic and physical chemistry, biochemistry, dentistry, oceanography, geology, etc. are addressed. The course covers definition and general concepts of biominalization (BM) / types of biominerals and their function / crystal nucleation and growth / biological induction of BM / control of crystal morphology, habit, shape and orientation by organisms / strategies of compartmentalization / the interface between biomolecules (peptides, polysaccharides) and the mineral phase / modern experimental methods for studying BM phenomena / inter-, intra-, extra- and epipellular BM / organic templates and matrices for BM / structure of bone, teeth (vertebrates and invertebrates) and mollusk shells / calcification / silification in diatoms, radiolaria and plants / calcium and iron storage / impact of BM on lithosphere and atmosphere / evolution / taxonomy of organisms.

1. Introduction and overview
2. Biominerals and their functions
3. Chemical control of biominalization
4. Control of morphology: Organic templates and additives
5. Modern methods of investigation of BM
6. BM in matrices: bone and nacre
7. Vertebrate teeth
8. Invertebrate teeth
9. BM within vesicles: calcite of coccoliths
10. Silica
11. Iron storage and mineralization

**Lecture notes**

Script with more than 600 pages with many illustrations will be distributed free of charge.

**Literature**

3) P. M. Dove, J. J. DeYoreo, S. Weiner (Eds.) Biominalization, Reviews in Mineralogy & Geochemistry Vol. 54, 2003

**Prerequisites / notice**

Each attendee is required to present a publication from the field. The selection of key papers is provided by the lecturer. No special requirements are needed for attending. Basic knowledge in chemistry and cell biology is expected.

---

**Microscopy Training SEM I - Introduction to SEM**

**W** 1 credit 3P  S. Rodighiero, A. G. Bittermann, K. Kunze, J. Reuteler

**Number of participants limited to 6.**

The participants will be chosen based on a short motivation letter. Please send this letter to S. Rodighiero (main lecturer) as soon as possible.

**Abstract**

The introductory course on Scanning Electron Microscopy (SEM) emphasizes hands-on learning. Using 2 SEM instruments, students have the opportunity to study their own samples, or standard test samples, as well as solving exercises provided by ScopeM scientists.

**Objective**

- Set-up, align and operate a SEM successfully and safely.
- Accomplish imaging tasks successfully and optimize microscope performances.
- Master the operation of a low-vacuum and field-emission SEM and EDX instrument.
- Perform sample preparation with corresponding techniques and equipment for imaging and analysis.
- Acquire techniques in obtaining secondary electron and backscatter electron micrographs.
- Perform EDX qualitative and semi-quantitative analysis.

**Content**

During the course, students learn through lectures, demonstrations, and hands-on sessions how to setup and operate SEM instruments, including low-vacuum and low-voltage applications.

This course gives basic skills for students new to SEM. At the end of the course, students with no prior experience are able to align a SEM, to obtain secondary electron (SE) and backscatter electron (BSE) micrographs and to perform energy dispersive X-ray spectroscopy (EDX) qualitative and semi-quantitative analysis. The procedures to better utilize SEM to solve practical problems and to optimize SEM analysis for a wide range of materials will be emphasized.

- Discussion of students' sample/interest.
- Introduction and discussion on Electron Microscopy and instrumentation.
- Lectures on electron sources, electron lenses and probe formation.
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM.
- Brief description and demonstration of the SEM microscope.
- Practice on beam/specimen interaction, image formation, image contrast (and image processing).
- Student participation on sample preparation techniques.
- Scanning Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities.
- Lecture and demonstrations on X-ray micro-analysis (theory and detection), qualitative and semi-quantitative EDX and point analysis, linescans and spectral mapping.
- Practice on real-world samples and report results.
- Detailed course manual.

**Literature**

**Prerequisites / notice**

No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551-1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.

---

**Microscopy Training TEM I - Introduction to TEM**

**W** 1 credit 3P  S. Rodighiero, A. G. Bittermann, K. Kunze, J. Reuteler

**Number of participants limited to 6.**

The participants will be chosen based on a short motivation letter. Please send this letter to S. Rodighiero (main lecturer).

**Abstract**

The introductory course on Transmission Electron Microscopy (TEM) provides theoretical and hands-on learning for new operators, utilizing lectures, demonstrations, and hands-on sessions.

**Objective**

- Overview of TEM theory, instrumentation, operation and applications.
- Alignment and operation of a TEM, as well as acquisition and interpretation of images, diffraction patterns, accomplishing basic tasks successfully.
- Knowledge of electron imaging modes (including Scanning Transmission Electron Microscopy), magnification calibration, and image acquisition using CCD cameras.
- To set up the TEM to acquire diffraction patterns, perform camera length calibration, as well as measure and interpret diffraction patterns.
- Overview of techniques for specimen preparation.

Independent scientific work of current topics in the field of materials science. Duration 6 months. The work is documented in a written form. A Master thesis is a six month fulltime project and will encourage the students to work independently and in a structured and scientific way. It is guided by a professor of the Department of Materials.

- Physical properties and fracture mechanics of brittle materials.
- The composition and microstructures of the most important ceramic materials are introduced. Microstructures and heterogeneous phase equilibria and the properties of the four most important structural ceramics and glass are given. An introduction to fracture mechanics of brittle materials will allow to predict the survival probabilities and life time of components under static and dynamic load.

- To achieve a basic understanding for what polymers are like, how one can make them accessible and characterize them and, finally, which properties result from their chemical structure.

- The basics of the chemical bonds of ceramics and glass will be presented. Heterogeneous phase equilibria and the properties of the four most important structural ceramics are given. An introduction to fracture mechanics of brittle materials will allow to predict the survival probabilities and life time of components under static and dynamic load.

This introductory course discusses definitions, introduces types of polyreactions, and compares chain and step-growth polymerizations. It also treats the constitution of homo- and copolymers and networks as well as the configuration and conformation of polymers. Topics of interest are contour length, coil formation, the mobility in polymers, glass temperature, rubber elasticity, molecular weight distribution, energetics of polyreactions, and examples for polyreactions (polyadditions, polycondensations, polymerizations). Selected polymerization mechanisms and procedures are discussed. Some methods of molecular weight determination are introduced.

- The second part of this lecture gives an introduction to polymers, their composition and properties.

- Both literatures will be made available in the course upon request.
- In the first part of the lecture the bases are obtained for structural ceramics.

### Basic Principles of Materials Physics B

- Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

This course introduces classical and quantum mechanical concepts for the understanding of material properties from a microscopic point of view. The lectures focus on the static and dynamic properties of crystals, the formation of chemical bonds and electronic bands in molecules, insulators, metals, and semiconductors, and on the thermal and electrical properties that emerge from this analysis.

- Providing physical concepts for the understanding of materials properties.

Understanding the electronic properties of solids is at the heart of modern society and technology. The aim of this course is to provide fundamental concepts that allow the student to relate the microscopic structure of matter and the quantum mechanical behavior of electrons to the macroscopic properties of materials. Beyond fundamental curiosity, such level of understanding is required in order to develop and appropriately describe new classes of materials for future technology applications. By the end of the course the student should have developed a semi-quantitative understanding of basic concepts in solid state physics and be able to appreciate the pertinence of different models to the description of specific material properties.
The aim is the understanding of the basic principles of ceramic processing. A. R. Studart, K. Conder

PART I: Basic chemical processes for powder production.

PART II: Structure of solid matter, real and reciprocal space
The crystal lattice, Bravais lattices, primitive cells and unit cells, Wigner-Seitz cell, primitive lattice vectors, lattice with a basis, examples of 3D and 2D lattices.

PART III: Dynamics of atoms in crystals
Lattice vibrations and phonons in 1D, phonons in 1D chains with monoatomic basis, phonon in 1D chains with a diatomic basis, optical and acoustic modes, phase and group velocities, phonon dispersion and eigenvectors. Phonons in 2D and 3D.

Quantum mechanical description of lattice waves in solids, the harmonic oscillator, the concept of phonon, phonon statistics, Bose-Einstein distribution, phonon density of states, Debye and Einstein models, thermal energy, heat capacity of solids.

PART IV: Electrical and heat conduction
Dynamics of electrons in energy bands, phase and group velocity, crystal momentum, the effective mass concept, scattering phenomena. The equilibrium and non-equilibrium distribution function for electrons. The Boltzmann equation in the presence of external fields in the relaxation time approximation.

Electrical and thermal conductivities revisited. Electron transport due to electric fields (drift) and concentration gradients (diffusion).

Einstein's relations. Transport of heat by electrons, Seebeck effect and thermopower, Peltier effect, thermoelectric cooling, thermoelectric energy conversion.

PART V: Semiconductors: concepts and devices

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit. Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Additional literature:
- H. Ibach, H. Lüth: Solid-State Physics (Springer: 2003), available as eBook from the ETH library, also in German.
- C. Kittel, Introduction to Solid State Physics (Wiley, 2005), also available in German.

Lecture notes will be available. The lecture will be given in English. The script will be available in English.

Understanding of the electrical, dielectric and optical properties of functional ceramics for materials engineers, physicists and electrical engineers. An introduction is given to modern ceramics materials with multiple functions.

Ceramics II covers the basic principles of functional ceramics such as linear and non-linear dielectrics, semiconductors, ionic and mixed ionic-electronic conductors as well as materials aspects of high temperature superconductors. Examples of applications cover the range from piezo-, pyro and opto-electronic materials over sensors and solid oxide fuel cells to squids and fault current limiters with superconducting compounds.

At the end of the course, the students should be able to select the chemistry, design the microstructure and devise processing routes to fabricate functional ceramics for electronic, electromechanical, optical and magnetic applications.

- Applications of functional ceramics
- Dielectrics fundamentals & insulators
- Capacitors & resonators
- Ferroelectricity & piezoelectricity
- Pyroelectricity and electro-optic ceramics
- Defect chemistry
- Conductors
- Impedance spectroscopy
- Magnetic ceramics
- Superconductors

Polymers I

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Physical foundations of single polymer molecules and interacting chains.

Objective
The course offers a modern approach to the understanding of universal static and dynamic properties of polymers.

Content
1. Introduction to Polymer Physics, random walks, ideal chains
2. Semiflexible chains
3. Excluded volume
4. Lattice models
5. Scaling theory
6. Interacting chains
7. Structure factor and scattering experiments
8. Solvent and temperature effects
9. Phase separation and critical phenomena
10. Flory theory, self-consistent field theory
11. Dendrimers and polymer brushes
12. Bloo model
13. Polymer mixtures
14. Block copolymers
15. Polymer gels, theory of rubber elasticity
16. Rouse and reptation models
17. Rheology, viscoelasticity
18. Computer experiments
19. Dynamic light scattering
20. Fokker-Planck equations, stochastic differential equations

Prerequisites / notice
Computer experiments will use the simple MATLAB programming language and will be made available, if necessary or useful.

Lecture notes

Literature

Polymers II

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Principles of polymer technology

Objective
To obtain an understanding of the engineering aspects of structure and properties of solid polymers. Influence of polymer processing on properties of solid polymers.

Content
1. Crystallization of semi-crystalline polymers
2. Glass transition of amorphous polymers
3. Mechanical properties of solid polymers
4. Examples of polymer processing
5. Laboratory exercises

Prerequisites / notice
Computer experiments will use the simple MATLAB programming language and will be made available, if necessary or useful.

Metals I

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students,

Abstract
Repetition and advancement of dislocation theory. Mechanical properties of metals: hardening mechanisms, high temperature plasticity, alloying effects. Case studies in alloying to illustrate the mechanisms.

Objective
Repetition and advancement of dislocation theory. Mechanical properties of metals: hardening mechanisms, high temperature plasticity, alloying effects. Case studies in alloying to illustrate the mechanisms.

Content
Dislocation theory:
Properties of dislocations, motion and kinetics of dislocations, dislocation-dislocation and dislocation-boundary interactions, consequences of partial dislocations, sessile dislocations

Hardening theory:
a. solid solution hardening: case studies in copper-nickel and iron-carbon alloys
b. particle hardening: case studies on aluminium-copper alloys

High temperature plasticity:
thermally activated glide
diffusional creep: Coble, Nabarro-Herring
deforation mechanism maps
Case studies in turbine blades
superplastizity
alloying effects

Abstract
Introduction to materials selection. Basic knowledge of major metallic materials: aluminium, magnesium, titanium, copper, iron and steel. Selected topics in high temperature materials: nickel and iron-base superalloys, intermetallics and refractory metals.

Objective
Introduction to materials selection. Basic knowledge of major metallic materials: aluminium, magnesium, titanium, copper, iron and steel. Selected topics in high temperature materials: nickel and iron-base superalloys, intermetallics and refractory metals.

Content
This course is divided into five parts:

A. Materials selection
Principles of materials properties maps
Introduction to the 'Materials selector' software package
Case studies

B. Light metals and alloys
Aluminium, magnesium, titanium
Properties and hardening mechanisms
Case studies in technological applications

C. Copper and its alloys

D. Iron and steel
The seven pros for steel
Fine grained steels, heat resistant steels
Steel and corrosion phenomena
Selection and application

E. High temperature alloys
Superalloys: iron, nickel, cobalt
Intermetallics: properties and application

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Introduction of basic concepts for composites with polymer- metal- and ceramic matrix composites; production and properties of composites reinforced with particles, whiskers, short and long fibres; selection criteria, case histories of applications, recycling, future perspectives, and basic concepts for adaptive and functional composites

Objective
Gain an insight into the diversity of opportunities to change the properties of composites, learn about the most important applications and processing techniques
Content

1. Introduction
   1.1 What are advanced composites?
   1.2 What are materials by combination?
   1.3 Are composites an idea of today?
   1.4 Delphi foresight
   1.5 Why composites?
   1.6 References for chapter 1

2. Basic modules
   2.1 Particles
   2.2 Short fibres including whiskers
   2.3 Long fibres
   2.4 Matrix materials
   2.4.1 Polymers
   2.4.2 Metals
   2.4.3 Ceramics and glasses
   2.5 References for chapter 2

3. PMC: Polymer Matrix Composites
   3.1 Historical background
   3.2 Types of PMC-laminates
   3.3 Production, processing and machining operation
   3.4 Mechanics of reinforcement, microstructure, interfaces
   3.5 Failure criteria
   3.6 Fatigue behaviour of a multiply composite
   3.7 Adaptive materials systems
   3.8 References for chapter 3

4. MMC: Metal matrix composites
   4.1 Introduction: Definitions, selection criteria und "design"
   4.2 Types von MMCs - examples und typical properties
   4.3 Mechanical and physical properties of MMCs - basics of design, influencing variables and damage mechanisms
   4.4 Production processes
   4.5 Microstructure / interfaces
   4.6 Machining operations for MMC
   4.7 Applications
   4.8 References for chapter 4

5. CMC: Ceramic Matrix Composites
   5.1 Introduction and historical background
   5.2 Modes of reinforcement
   5.3 Production processes
   5.4 Mechanisms of reinforcement
   5.5 Microstructure / interfaces
   5.6 Properties
   5.7 Applications
   5.8 Materials testing and quality assurance
   5.9 References for chapter 5

Lecture notes
The script will be delivered at the begin of the semester

Literature
The script is including a comprehensive list of references

Prerequisites / notice
Before each class, students will get a handout. Students will get the power point presentation of each class by e-mail.

The exercises take place in small groups. It is their goal to deepen knowledge gained in the classes

written end of semester examination

ECTS European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.

The student is familiar with the basics in non-life insurance mathematics and statistics. This includes the basic mathematical models for insurance liability modeling, pricing concepts, stochastic claims reserving models and ruin and solvency considerations.

The classical life insurance model is presented together with the important insurance types (insurance on one and two lives, term and endowment insurance and disability). Besides that the most important terms such as mathematical reserves are introduced and calculated. The profit and loss account and the balance sheet of a life insurance company is explained and illustrated.

Investment returns are an important source of funding for social and pension insurance, and financial risk is an important threat to stability. We study short-term and long-term financial risk and its interplay with other risk factors, and we develop methods for the measurement and management of financial risk and return in an asset/liability context with the goal of assuring sustainable funding.

We study short-term and long-term financial risk and its interplay with other risk factors, and we develop methods for the measurement and management of financial risk and return in an asset/liability context with the goal of assuring sustainable funding.
Content
For pension insurance and other forms of social insurance, investment returns are an important source of funding. In order to earn these returns, substantial financial risks must be taken, and these risks represent an important threat to financial stability, in the long term and in the short term.

Risk and return of financial assets cannot be separated from one another and, hence, asset management and risk management cannot be separated either. Managing financial risk in social and pension insurance is, therefore, the task of reconciling the contradictory dimensions of

1. Required return for a sustainable funding of the institution,
2. Risk-taking capability of the institution,
3. Returns available from financial assets in the market,
4. Risks incurred by investing in these assets.

This task must be accomplished under a number of constraints. Financial risk management in social insurance also means reconciling the long time horizon of the promised insurance benefits with the short time horizon of financial markets and financial risk.

It is not the goal of this lecture to provide the students with any cookbook recipes that can readily be applied without further reflection. The goal is rather to enable the students to develop their own understanding of the problems and possible solutions associated with the management of financial risks in social and pension insurance.

Lecture notes
Since this is the first instance of this course, there is not yet a full script. However, to complement the blackboard notes, extensive handouts will be provided. Moreover, practical examples and data sets in Excel and Octave / Matlab will be made available to play around with and deepen the understanding of the subject matter.

Prerequisites / notice
Solid base knowledge of probability and statistics is indispensable. Specialized concepts from financial and insurance mathematics as well as quantitative risk management will be introduced in the lecture as needed, but some prior knowledge in some of these areas would be an advantage.

This course counts towards the diploma of "Aktuar SAV".

The exams ONLY take place during the official ETH examination period.

401-3913-01L Mathematical Foundations for Finance

This course gives a first introduction to the main modelling ideas and mathematical tools from mathematical finance. It aims at a double audience: mathematicians who want to learn the modelling ideas and concepts for finance, and non-mathematicians who need an introduction to the main tools from stochastics used in mathematical finance. The main emphasis will be on ideas, but important results will be given with (sometimes partial) proofs.

Lecture notes
Lecture notes will be sold at the beginning of the course.

Prerequisites / notice
Prerequisites: Results and facts from probability theory as in the book "Probability Essentials" by J. Jacod and P. Protter will be used freely. Especially participants without a direct mathematics background are strongly advised to familiarise themselves with those tools before (or very quickly during) the course. (A possible alternative to the above English textbook are the (German) lecture notes for the standard course "Wahrscheinlichkeitsrechnung").

For those who are not sure about their background, we suggest to look at the exercises in Chapters 8, 9, 22-25, 28 of the Jacod/Protter book. If these pose problems, you will have a hard time during the course. So be prepared.

363-0565-00L Principles of Macroeconomics

This course examines the behaviour of macroeconomic variables, such as gross domestic product, unemployment and inflation rates. It tries to answer questions like: How can we explain fluctuations of national economic activity? What can economic policy do against unemployment and inflation? What significance do international economic relations have for Switzerland?

Abstract
This lecture will introduce the fundamentals of macroeconomic theory and explain their relevance to everyday economic problems.

Objective
This course helps you understand the world in which you live. There are many questions about the macroeconomy that might spark your curiosity. Why are living standards so meagre in many African countries? Why do some countries have high rates of inflation while others have stable prices? Why have some European countries adopted a common currency? These are just a few of the questions that this course will help you answer.

Furthermore, this course will give you a better understanding of the potential and limits of economic policy. As a voter, you help choose the policies that guide the allocation of society’s resources. When deciding which policies to support, you may find yourself asking various questions about economics. What are the burdens associated with alternative forms of taxation? What are the effects of free trade with other countries? What is the best way to protect the environment? How does the government budget deficit affect the economy? These and similar questions are always on the minds of policy makers.

Lecture notes
The course webpage (to be found at https://moodle-app2.let.ethz.ch/course/view.php?id=2467) contains announcements, course information and lecture slides.

Literature

We advise you to also buy access to Aplia. This internet platform will support you in learning for this course. To save money, you should buy the book together with Aplia. This is sold as a bundle (ISBN: 9781473715998).

Besides this textbook, the slides and lecture notes will cover the content of the lectures and the exam questions.

**Abstract**

Differential Geometry I:

This course counts as a core course in the Bachelor's degree programme in Mathematics. Holders of an ETH Zurich Bachelor's degree in Mathematics who didn't use credits from neither 401-3531-00L Differential Geometry I nor 401-3532-00L Differential Geometry II for their Bachelor's degree still can have recognised this course for the Master's degree. Furthermore, at most one of the three course units 401-3461-00L Functional Analysis I 401-3531-00L Differential Geometry I or 401-3601-00L Probability Theory can be recognised for the Master's degree in Mathematics or Applied Mathematics.

Functional Analysis I:

This course counts as a core course in the Bachelor's degree programme in Mathematics. Holders of an ETH Zurich Bachelor's degree in Mathematics who didn't use credits from neither 401-3461-00L Functional Analysis I nor 401-3462-00L Functional Analysis II for their Bachelor's degree still can have recognised this course for

**Content**

- Differential geometry in R^n: theory of curves, submanifolds and immersions, inner geometry of hypersurfaces, Gauss map and curvature, Theorema Egregium, special classes of surfaces, Theorem of Gauss-Bonnet, Poincaré Index Theorem.
- The hyperbolic space.
- Differential topology: differentiable manifolds, tangent bundle, immersions and embeddings in R^n, Sard's Theorem, transversality, mapping degree and intersection number, vector bundles, vector fields and flows, differential forms, Stokes' Theorem.
- Manfredo P. do Carmo: Differential geometry of curves and surfaces
- Wolfgang Kühnel: Differentialgeometrie. Curves-surfaces-manifolds
- Christian Bär: Elementary differential geometry
- Dennis Barden & Charles Thomas: An Introduction to Differential Manifolds
- Victor Guillemin & Alan Pollack: Differential Topology
- Morris W. Hirsch: Differential Topology
the Master's degree. Furthermore, at most one of the three course units
401-3461-00L Functional Analysis I
401-3531-00L Differential Geometry I
401-3601-00L Probability Theory
can be recognised for the Master's degree in Mathematics or Applied Mathematics.

Abstract
Baire category; Banach and Hilbert spaces, bounded linear operators; three fundamental principles: Uniform boundedness, open mapping/closed graph theorem, Hahn-Banach; convexity; dual spaces; weak and weak* topologies; Banach-Alaoglu; reflexive spaces; compact operators and Fredholm theory; closed range theorem; spectral theory of self-adjoint operators in Hilbert spaces.

Lecture notes
Lecture Notes on "Funktionalanalysis I" by Michael Struwe

401-3371-00L
Abstract
This course is a broad introduction to dynamical systems. Topic covered include topological dynamics, ergodic theory and low-dimensional dynamics.

Objective
Mastery of the basic methods and principal themes of some aspects of dynamical systems.

Content
Topics covered include:
1. Topological dynamics
   (transitivity, attractors, chaos, structural stability)
2. Ergodic theory
   (Poincare recurrence theorem, Birkhoff ergodic theorem, existence of invariant measures)
3. Low-dimensional dynamics
   (Poincare rotation number, dynamical systems on (0,1])

Literature
The most relevant textbook for this course is
Introduction to Dynamical Systems, Brin and Stuck, CUP, 2002.

I will also produce full lecture notes.

Prerequisites / notice
The material of the basic courses of the first two years of the program at ETH is assumed. In particular, you should be familiar with metric spaces and elementary measure theory.

401-3001-61L
Abstract
This is an introductory course in algebraic topology. The course will cover the following main topics: introduction to homotopy theory, homology and cohomology of spaces.

Literature

Book can be downloaded for free at:
http://www.math.cornell.edu/%7ehatcher/AT/ATpage.html
See also:
http://www.math.cornell.edu/%7ehatcher/#anchor1772800
3) E. Spanier, "Algebraic topology", Springer-Verlag

General topology, linear algebra.

Prerequisites / notice
Some knowledge of differential geometry and differential topology is useful but not absolutely necessary.

401-3132-00L
Abstract
This course provides an introduction to commutative algebra as a foundation for and first steps towards algebraic geometry. The material in this course will be assumed in the lecture course "Algebraic Geometry" in the spring semester 2017.

Objective
We shall cover approximately the material from
--- most of the textbook by Atiyah-MacDonald, or
--- the first half of the textbook by Bosch.

Topics include:
* Basics about rings, ideals and modules
* Localization
* Primary decomposition
* Integral dependence and valuations
* Noetherian rings
* Completions
* Basic dimension theory

Literature
Primary Reference:
Secondary Reference:
2. "Algebraic Geometry and Commutative Algebra" by S. Bosch (Springer 2013)
Tertiary References:
3. "Commutative algebra and algebraic geometry" by D. Eisenbud (GTM 150, Springer Verlag, 1995)

Prerequisites / notice
Prerequisites: Algebra I (or a similar introduction to the basic concepts of ring theory).

Core Courses: Pure Mathematics (Mathematics Master)

Core Courses: Applied Mathematics and Further Appl.-Oriented Fields

Autumn Semester 2016
Page 1111 of 1571
Differential Equations
Course audience at ETH: 3rd year ETH BSc Mathematics and MSc Mathematics and MSc Applied Mathematics students.
Other ETH-students are advised to attend the course "Numerical Methods for Partial Differential Equations" (401-0674-00L) in the CSE curriculum during the spring semester.

Abstract
This course gives a comprehensive introduction into the numerical treatment of linear and non-linear elliptic boundary value problems, related eigenvalue problems and linear, parabolic evolution problems. Emphasis is on theory and the foundations of numerical methods. Practical exercises include MATLAB implementations of finite element methods.

Objective
Participants of the course should become familiar with
* concepts underlying the discretization of elliptic and parabolic boundary value problems
* analytical techniques for investigating the convergence of numerical methods for the approximate solution of boundary value problems
* methods for the efficient solution of discrete boundary value problems
* implementational aspects of the finite element method

Content
A selection of the following topics will be covered:

* Elliptic boundary value problems
* Galerkin discretization of linear variational problems
* The primal finite element method
* Mixed finite element methods
* Discontinuous Galerkin Methods
* Boundary element methods
* Spectral methods
* Adaptive finite element schemes
* Singularly perturbed problems
* Sparse grids
* Galerkin discretization of elliptic eigenproblems
* Non-linear elliptic boundary value problems
* Discretization of parabolic initial boundary value problems

Lecture notes
Course slides will be made available to the audience.

Literature
n.a.

Prerequisites / notice
Practical exercises based on MATLAB

### Content

This lecture gives an introduction to theoretical computer science, presenting the basic concepts and methods of computer science in its historical context. We present computer science as an interdisciplinary science which, on the one hand, investigates the border between the possible and the impossible and the quantitative laws of information processing, and, on the other hand, designs, analyzes, verifies, and implements computer systems.

The main topics of the lecture are:

- alphabets, words, languages, measuring the information content of words, representation of algorithmic tasks
- finite automata, regular and context-free grammars
- Turing machines and computability
- complexity theory and \( \text{NP}\)-completeness
- design of algorithms for hard problems

### Lecture notes

The lecture is covered in detail by the textbook "Theoretical Computer Science".

### Literature

Basic literature:

Further reading:

More exercises and examples in:

6. A. Aastroth, Ch. Baier: Theoretische Informatik

### Prerequisites / notice

During the semester, two non-obligatory test exams will be offered.

---

#### Core Courses: Further Application-Oriented Fields

**402-0205-00L Quantum Mechanics I** is eligible as an applied core course, but only if 402-0224-00L Theoretical Physics (offered for the last time in FS 2016) isn’t recognised for credits (neither in the Bachelor’s nor in the Master’s programme).

For the category assignment take contact with the Study Administration Office (www.math.ethz.ch/studiensekretariat) after having received the credits.

### Number | Title | Type | ECTS | Hours | Lecturers

--- | --- | --- | --- | --- | ---
401-3117-66L | Introduction to the Circle Method | W | 6 credits | 2V+1U | E. Kowalski

The circle method, invented by Hardy and Ramanujan and developed by Hardy and Littlewood and Kloosterman, is one of the most versatile methods currently available to determine the asymptotic behavior of the number of integral solutions to polynomial equations, when the number of solutions is sufficiently large.

### Content

The circle method, invented by Hardy and Ramanujan and developed by Hardy and Littlewood and Kloosterman, is one of the most versatile methods currently available to determine the asymptotic behavior of the number of integral solutions to polynomial equations, when the number of solutions is sufficiently large.

The lecture will present an introduction to this method. In particular, it will present the solution of Waring's Problem concerning the representability of integers as sums of a bounded numbers of (fixed) powers of integers.

### Literature

H. Iwaniec and E. Kowalski, "Analytic number theory", chapter 20; AMS

Group and Representation Theory: Beyond an Introduction

ECTS: 8 credits, Type: 3V+1U, Lecturer: T. H. Willwacher

Abstract
The goal of the course is to study several classical and important (and beautiful!) topics in group and representation theory, that are otherwise often overlooked in a standard curriculum. In particular, we plan to study reflection and Coxeter groups, classical invariant theory, and the theory of real semi simple Lie algebras and their representations.

Objective
Despite the title, the course will begin by a recollection of basic concepts of group and representation theory, in particular of finite groups and Lie groups. Hence the course should be accessible also for students who only had a brief exposure to representation theory, as for example in the MMP course.

Combinatorics II

ECTS: 4 credits, Type: 2G, Lecturer: N. Hungerbühler

Abstract
The course Combinatorics I and II is an introduction into the field of enumerative combinatorics.

Objective
Upon completion of the course, students are able to classify combinatorial problems and to apply adequate techniques to solve them.

Content
Contents of the lectures Combinatorics I and II: congruence transformation of the plane, symmetry groups of geometric figures, Euler's function, Cayley graphs, formal power series, permutation groups, cycles, Bunsdie's lemma, cycle index, Polya's theorems, applications to graph theory and isomers.

Riemann Surfaces (Part 2)

ECTS: 4 credits, Type: 2V, Lecturer: A. Buryak

Abstract
The program will be the following:
* Proof of the Serre duality;
* Riemann-Hurwitz formula;
* Functions and differential forms on a compact Riemann surface with prescribed principal parts;
* Weierstrass points on a compact Riemann surface;
* The Jacobian and the Picard group of a compact Riemann surface;
* Holomorphic vector bundles;
* Non-compact Riemann surfaces.

Literature

Selection: Analysis

Special Topics in One Complex Variable

ECTS: 6 credits, Type: 3V, Lecturer: H. Knörrer

Abstract
Hypergeometric Functions, Boundary values of holomorphic functions, Nevanlinna Theory and other special topics.

Objective
Advanced methods of one complex variables

Literature
R. Remmert: Funktionentheorie II. Springer Verlag
E. Titchmarsh: The Theory of Functions, Oxford University Press
C. Carathéodory: Funktionentheorie. Birkhaeuser
E. Hille: Analytic Function Theory. AMS Chelsea Publishing
A. Gogolin: Komplexe Integration. Springer

Special Topics in Probability: Recent Developments in Percolation Theory

ECTS: 4 credits, Type: 2V, Lecturer: P. Nolin

Abstract
The goal of this course is to present recent developments in Percolation Theory.

Objective
The goal of this course is to present recent developments in Percolation Theory.
Independent percolation is obtained by deleting randomly (and independently) the edges of a lattice, each with a given probability $p$ between 0 and 1. One is then interested in the connectivity properties of the random subgraph so-obtained. It is arguably the simplest model from statistical mechanics that displays a phase transition, a drastic change of behavior as the parameter $p$ varies.  

We will first present classical tools and properties of percolation theory: in particular correlation inequalities, exponential decay of connection probabilities, and uniqueness of the infinite connected component. We will then discuss recent developments: for example percolation on Cayley graphs, and continuum limits in two dimensions.

</table>

**Objective**

Understanding of the basic models and techniques used in time series analysis and their implementation in the statistical software R.

**Content**

This course deals with modeling and analysis of variables which change randomly in time. Their essential feature is the dependence between successive observations. Applications occur in geophysics, engineering, economics and finance. Topics covered: Stationarity, trend estimation, seasonal decomposition, autocorrelations, spectral and wavelet analysis, ARIMA-, GARCH- and state space models. The models and techniques are illustrated using the statistical software R.

**Lecture notes**

<th><strong>Abstract</strong></th>
<th>Applied Statistical Regression</th>
<th>W</th>
<th>5 credits</th>
<th>2V+1U</th>
<th>M. Dettling</th>
</tr>
</thead>
<tbody>
<tr>
<td>This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning “good practice” that can be applied in every student’s own projects and daily work life. A special focus will be laid in the use of the statistical software package R for regression analysis.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Objective**

The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.

**Content**

The course starts with the basics of linear modeling, and then proceeds to parameter estimation, tests, confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, multicollinearity problems and model interpretation, as well as general modeling strategies.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

**Lecture notes**

A script will be available.

**Literature**

Faraway (2005): Linear Models with R

Montgomery et al. (2006): Introduction to Linear Regression Analysis
The lecture aims at providing a basis in non-life insurance mathematics which forms a core subject of actuarial sciences. It discusses financial risk management in social and pension insurance.

The classical life insurance model is presented together with the important insurance types (insurance on one and two lives, term and endowment insurance and disability). Besides that the most important terms such as mathematical reserves are introduced and calculated. The profit and loss account and the balance sheet of a life insurance company is explained and illustrated.

### Prerequisites / notice

The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-3622-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

### Selection: Financial and Insurance Mathematics

*In the Bachelor's programme in Mathematics 401-3913-01L Mathematical Foundations for Finance is eligible as an elective course, but only if 401-3988-00L Introduction to Mathematical Finance isn’t recognised for credits (neither in the Bachelor's nor in the Master's programme). For the category assignment take contact with the Study Administration Office (www.math.ethz.ch/studiensekretariat) after having received the credits.*

### Number

| Selection: Financial and Insurance Mathematics

- **Objective**
  - The student is familiar with the basics in non-life insurance mathematics and statistics. This includes the basic mathematical models for insurance liability modeling, pricing concepts, stochastic claims reserving models and ruin and solvency considerations.

- **Content**
  - The following topics are treated:
    - Collective Risk Modeling
    - Individual Claim Size Modeling
    - Approximations for Compound Distributions
    - Ruin Theory in Discrete Time
    - Premium Calculation Principles
    - Tariffication and Generalized Linear Models
    - Bayesian Models and Credibility Theory
    - Claims Reserving
    - Solvency Considerations

- **Prerequisites**
  - This course will be held in English and counts towards the diploma of "Aktuar SAV". For the latter, see details under www.actuaries.ch.

- **Prerequisites / notice**
  - Prerequisites: knowledge of probability theory, statistics and applied stochastic processes.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1116 of 1571
ECTS Basic understanding of general relativity, its mathematical foundations, and some of the interesting phenomena it predicts.

Title

Type

* Classical Integrability
* Bethe Ansatz and Related Methods
* Quantum Integrability
* Integrable Statistical Mechanics
* Quantum Algebra
* Integrable Spin Chains
* Classical Integrability
* Integrable Field Theory

Suggested textbooks:

This task must be accomplished under a number of constraints. Financial risk management in social insurance also means reconciling the long time horizon of the promised insurance benefits with the short time horizon of financial markets and financial risk.

It is not the goal of this lecture to provide the students with any cookbook recipes that can readily be applied without further reflection. The goal is rather to enable the students to develop their own understanding of the problems and possible solutions associated with the management of financial risks in social and pension insurance.

To this end, a rigorous intellectual framework will be developed and a powerful set of mathematical tools from the fields of actuarial mathematics and quantitative risk management will be applied. When analyzing the properties of financial assets, an empirical viewpoint will be taken using statistical tools and considering real-world data.

Prerequisites / notice

Solid base knowledge of probability and statistics is indispensable. Specialized concepts from financial and insurance mathematics as well as quantitative risk management will be introduced in the lecture as needed, but some prior knowledge in some of these areas would be an advantage.

This course counts towards the diploma of "Aktuar SAV".

The exams ONLY take place during the official ETH examination period.

<tr>
<td>Objective</td>
<td>Integrable systems are a special class of physical models that can be solved exactly due to an exceptionally large number of symmetries. Examples of integrable models appear in many different areas of physics, including classical mechanics, condensed matter, 2d quantum field theories and lately in string- and gauge theories. They offer a unique opportunity to gain a deeper understanding of generic phenomena in a simplified, exactly solvable setting. In this course we introduce the various notions of integrability in classical mechanics, quantum mechanics and quantum field theory. We discuss efficient methods for solving such models as well as the underlying enhanced symmetries.</td>

Abstract: Game theory provides a formal model to study the behavior and interaction of self-interested users and programs in large-scale distributed computer systems without central control. The course discusses algorithmic aspects of game theory.

Objective: Learning the basic concepts of game theory and mechanism design, acquiring the computational paradigm of self-interested agents, and using these concepts in the computational and algorithmic setting.

Content: The Internet is a typical example of a large-scale distributed computer system without central control, with users that are typically only interested in their own good. For instance, they are interested in getting high bandwidth for themselves, but don't care about others, and the same is true for computational load or download rates. Game theory provides a particularly well-suited model for the behavior and interaction of such selfish users and programs. Classic game theory dates back to the 1930s and typically does not consider algorithmic aspects at all. Only a few years back, algorithms and game theory have been considered together, in an attempt to reconcile selfish behavior of independent agents with the common good.

This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.

Outline:

- Introduction to classic game-theoretic concepts.
- Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity.
- Speed of convergence of natural game playing dynamics such as best-response dynamics or regret minimization.
- Techniques for bounding the quality-loss due to selfish behavior versus optimal outcomes under central control (a.k.a. the ‘Price of Anarchy’).
- Design and analysis of mechanisms that induce truthful behavior or near-optimal outcomes at equilibrium.
- Selected current research topics, such as Google’s Sponsored Search Auction, the U.S. FCC Spectrum Auction, Kidney Exchange.

Lecture notes: No lecture notes.

Literature:

- "Game Theory and Strategy", Philip D. Straffin, The Mathematical Association of America, 5th printing, 2004

Prerequisites / notice: Several copies of both books are available in the Computer Science library.

Audience: Although this is a Computer Science course, we encourage the participation from all students who are interested in this topic.

Requirements: You should enjoy precise mathematical reasoning. You need to have passed a course on algorithms and complexity. No knowledge of game theory is required.

252-0417-00L Randomized Algorithms and Probabilistic Methods W 7 credits 3V+2U+1A A. Steger, E. Welzl

Abstract: Las Vegas & Monte Carlo algorithms: inequalities of Markov, Chebyshev, Chernoff; negative correlation; Markov chains: convergence, rapidly mixing; generating functions; Examples include: min cut, median, balls and bins, routing in hypercubes, 3SAT, card shuffling, random walks

Objective: After this course students will know fundamental techniques from probabilistic combinatorics for designing randomized algorithms and will be able to apply them to solve typical problems in these areas.

Content: Randomized Algorithms are algorithms that “flip coins” to take certain decisions. This concept extends the classical model of deterministic algorithms and has become very popular and useful within the last twenty years. In many cases, randomized algorithms are faster, simpler or just more elegant than deterministic ones. In the course, we will discuss basic principles and techniques and derive from them a number of randomized methods for problems in different areas.

Lecture notes: Yes.

Literature:

252-1425-00L Geometry: Combinatorics and Algorithms W 6 credits 2V+2U+1A B. Gärtner, E. Welzl, M. Hoffmann, A. Pilz

Abstract: Geometric structures are useful in many areas, and there is a need to understand their structural properties, and to work with them algorithmically. The lecture addresses theoretical foundations concerning geometric structures. Central objects of interest are triangulations. We study combinatorial (Does a certain object exist?) and algorithmic questions (Can we find a certain object efficiently?)

Objective: The goal is to make students familiar with fundamental concepts, techniques and results in combinatorial and computational geometry, so as to enable them to model, analyze, and solve theoretical and practical problems in the area and in various application domains. In particular, we want to prepare students for conducting independent research, for instance, within the scope of a thesis project.

Content: Planar and geometric graphs, embeddings and their representation (Whitney’s Theorem, canonical orderings, DCEL), polygon triangulations and the art gallery theorem, convexity in Rd, planar convex hull algorithms (Jarvis Wrap, Graham Scan, Chan’s Algorithm), point set triangulations, Delaunay triangulations (Lawson flips, lifting map, randomized incremental construction), Voronoi diagrams, the Crossing Lemma and incidence bounds, line arrangements (duality, Zone Theorem, ham-sandwich cuts), 3-SUM hardness, counting planar triangulations.

Lecture notes: Yes.

Literature:

Prerequisites / notice: Prerequisites: The course assumes basic knowledge of discrete mathematics and algorithms, as supplied in the first semesters of Bachelor Studies at ETH.

Outlook: In the following spring semester there is a seminar “Geometry: Combinatorics and Algorithms” that builds on this course. There are ample possibilities for Semester-, Bachelor- and Master Thesis projects in the area.

263-4655-00L Lattice Cryptography W 4 credits 2V+1U V. Lyubashevsky

Abstract: The course will introduce lattice-based cryptography, which is one of the main candidates for quantum-resistant cryptography.

Objective: The objective of the course is to bring the students up to a level where they should be able to read academic papers on state-of-the-art designs of lattice-based primitives.
Content

In this course, we will study lattice-based cryptography. We will cover the basic algorithms associated with integer lattices such as Gram-Schmidt orthogonalization, algorithms for finding short and near lattice vectors, as well as the critical algorithm for sampling lattice points according to a discrete Gaussian distribution. We will then proceed to build up a toolbox of lattice-based cryptographic primitives beginning from collision-resistant hash functions, then moving on to digital signatures, encryption, identity-based encryption, and fully-homomorphic encryption. Particular emphasis will be placed on concrete parameters and practical instantiations. For this purpose, we will also study cryptographic constructions based on the hardness of ideal lattices, which are ideals of polynomial rings.

Prerequisites / notice

There are no formal mathematical pre-requisites, but students should have "mathematical maturity", which entails dealing with abstract concepts and being comfortable with doing mathematical proofs. Some previous exposure to linear algebra, abstract algebra, and cryptography would be useful.

Electives (Mathematics Master)

➡➡ Seminars

Early enrolments for seminars in myStudies are encouraged, so that we will recognize need for additional seminars in a timely manner. Some seminars have waiting lists. Nevertheless, register for at most two mathematics seminars. In this case, you express a stronger preference for the seminar for which you register earlier.

401-3570-66L Algeabraic Number Theory W 4 credits 2S J. Fresán
Number of participants limited to 12.

Abstract
Much of the progress in algebraic number theory aimed at solving concrete Diophantine equations. At the heart of the problem lies the fact that the ring of integers of a number field does not have unique factorization. The "class group" measures how much this property fails. The seminar will present basic results around this invariant, including finiteness and the relation to zeta functions.

Content
- The quadratic reciprocity law
- The geometry of numbers
- Integral quadratic forms
- Number fields and rings of integers
- Finiteness of the class number
- Unique factorization of ideals
- The Dedekind zeta function of a number field and the class number formula

The seminar will be (probably) followed by a more advanced course on Class Field Theory on the Spring Semester.

Literature
Our basic reference will be chapters I and VII of Neukirch's book "Algebraic number theory" (Grundlehren Math. Wiss. 322. Springer-Verlag, Berlin, 1999). Additional references will be given at the beginning of the seminar.

Prerequisites
Basic knowledge of algebraic structures (groups, rings, fields) and Galois theory, at the level of Algebra I and II. More advanced topics will be explained when needed.

401-3180-66L Homological Algebra W 4 credits 2S C. Busch
Number of participants limited to 12.

Abstract
Basic concepts of homological algebra, homology and cohomology of groups.

Literature

401-3640-66L Monte Carlo and Quasi-Monte Carlo Methods: Mathematical and Numerical Analysis W 4 credits 2S C. Schwab
Number of participants limited to 6.

Abstract
Introduction and current research topics in the theory and implementation of Monte Carlo and quasi-Monte Carlo methods and applications.

Prerequisites
Completed courses Numerical Analysis of Elliptic/ Parabolic PDEs, or Numerical Analysis of Hyperbolic PDEs, or Numerical Analysis of Stochastic ODEs, and FAl, Probability Theory I.

Number of participants limited to 6.

Abstract
The seminar covers measure theoretic tools used for the analysis and approximation of nonlinear hyperbolic partial differential equations. In particular, we will discuss Young measures, compensated compactness, weak-strong uniqueness and algorithms for the approximation of measure-valued solutions. The participants will present individual topics based on the study of research papers.

Objective
- To learn some measure theoretic tools for the analysis and approximation of nonlinear PDEs.
- To read and understand a research paper and present it in an understandable way to other students.

Content
Partial differential equations can be used to model an abundance of natural and physical phenomena, as well as industrial processes. Many of the more sophisticated and more realistic models involve nonlinear PDEs, among others, PDEs in fluid dynamics, astrophysics, elasticity or weather modeling. The solutions to these often exhibit complex structures, such as shocks, oscillations, singularities that are difficult to deal with mathematically and numerically. In our seminar we aim to get a better understanding of the difficulties that arise when dealing with nonlinear PDEs. In particular, we will discuss problems related to the PDEs of fluid dynamics. Solutions to these equations may exhibit shocks and oscillations, and have less regularity than what the definition of a classical solution requires. Therefore, the solution concept has to be relaxed. One way of doing this, is to look for solutions in the space of measures instead of actual functions. Our goal in this seminar is to try to understand this concept better by studying research papers related to this issue.

Specifically, we will discuss weak convergence in general, the notion of Young measures as a means to represent weak limits of nonlinear functions, and its application to compensated compactness, existence of solutions to scalar hyperbolic conservation laws. We will also discuss algorithms to approximate solutions in the space of measures.

We are open to extend the list of topics by others that are of special interests to the attending students.

Literature
J. M. Ball. A version of the fundamental theorem for Young measures (1989).

Prerequisites
Good knowledge of real/functional analysis required, knowledge of hyperbolic partial differential equations and/or numerical analysis of advantage.
Number of participants limited to 15.

Abstract
The analysis of differential games with a large number of players finds applications in various research fields, from physics to economics and finance. The aim of Mean Field Games theory is to provide a suitable approximation of such problems with a higher tractability.

Objective
This course aims to give a broad understanding of the basic ideas of Mean Field Games, the main mathematical tools and the possible applications.

Content
We first present and analyze toy models of Mean Field Games in order to familiarize with the subject and to understand what kind of problems can be solved with this theory.

We explore two different approaches to Mean Field Games. From an analytic point of view it consists of a coupled system of PDEs. From a probabilistic point of view it amounts to a particular type of stochastic differential equations.

Literature
1) Notes on Mean Field Games. P. Cardaliaguet
2) Mean Field Games. J.M. Lasry, P.L. Lions
3) Probabilistic theory of Mean Field Games and applications. R. Carmona, F. Delarue

Prerequisites / notice
Basic knowledge of stochastic differential equations.

**Objective**

The Zurich Theoretical Physics Colloquium is jointly organized by the University of Zurich and ETH Zurich. Its mission is to bring both students and faculty with diverse interests in theoretical physics together. Leading experts explain the basic questions in their field of research and communicate the fascination for their work.

**Abstract**

Invited talks, covering the entire scope of computer science. External Listeners are welcome at no charge. A detailed schedule is published at the beginning of each semester.

Top international computer scientists take the floor at the distinguished computer science colloquium. Our guest speakers present impacting topics across various areas of the discipline. The colloquium series is held every semester and also includes inaugural and farewell lectures of the department’s professors. The colloquium is a noteworthy event for all graduate students. Outside attendance is equally welcome.

**Content**

Eingeladene Vorträge aus dem gesamten Bereich der Informatik, zu denen auch Auswärtige kostenlos eingeladen sind. Zu Semesterbeginn erscheint jeweils ein ausführliches Programm.

ECTS  European Credit Transfer and Accumulation System

- Special students and auditors need special permission from the lecturers.
In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

Abstract
This course looks into scientific theories and also empirical studies on human learning and relates them to the school.

Objective
Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way human processes information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

Content
Thematical Schwerpunkte:
Lernen als Verhaltenssänderung und als Informationsverarbeitung: Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzerwerb unter besonderer Berücksichtigung des Wissentransfers; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen

Lernformen:

Lecture notes
Foliens werden zur Verfügung gestellt.

Literature

Prerequisites / notice
This lecture is only apt for students who intend to enrol in the programs "Lerhdiplom" or "Didaktisches Zertifikat". It is about learning in childhood and adolescence.

851-0240-03L Introduction to Test Theory and Test Construction in Educational Contexts (University of Zurich)
Enrolment only possible with Teaching Diploma or DC matriculation.

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: 200a968

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

Objective
At the end of the seminar, participants will be in a position to:
- describe the scientific fundamentals of test theory and test structure.
- evaluate examples of scientifically-developed tests in their application context.
- if necessary, critically question the performance assessment that they employ in practice and professionalise it still further.

Content
Die konkreten Inhalte des Seminars ergeben sich aufgrund der Präferenzen der Teilnehmenden und der daraus abgeleiteten Themenübersicht für Vorträge und Seminararbeiten. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben und erläutert. Schwerpunkte der Themenvorschläge sind:
- Testentwicklung
- Gütekriterien von Tests
- Aufgabenkonstruktion
- Datenauswertung
- Rasch-Modell
- Internationale Vergleichstests
- Zulassungsstests

Lecture notes
Im Verlaufe des Semesters werden einzelne Unterlagen in den Veranstaltungen abgegeben. Dazu gehören auch die Handouts der verschiedenen, studentischen Vorträge.

Literature
Als Grundlagenliteratur werden folgende Werke empfohlen:
- Weitere Literatur wird in der Lehrveranstaltung genannt.

Prerequisites / notice
Die Leistungsanforderungen richten sich im Umfang nach der Zahl zu erwerbender ECTS-Punkte, wobei 1 ECTS-Punkt einem Zeitaufwand von ca. 30 Arbeitsstunden entspricht. ETHZ-Studierende können im Rahmen dieser Veranstaltung 3 ECTS-Punkte erwerben.

Dazu sind folgende Leistungen zu erbringen:
- Präsenz und aktive mündliche Mitarbeit in der Lehrveranstaltung (MA)
- Pflichtlektüre entsprechend der Angaben in der Lehrveranstaltung
- Referat (RE)
- Schreiben einer schriftlichen Arbeit

Weitere Angaben zu den Leistungsanforderungen werden im Rahmen der Startveranstaltung abgegeben und erläutert.

851-0240-15L Colloquium on the Science of Learning and Instruction

Abstract
In the colloquium we discuss scientific projects concerning the teaching in mathematics, computer science, natural sciences and technology (STEM). The colloquium is conducted by the professorships participating in the Competence Center EducETH (ETH) and in the Institute for Educational Sciences (UZH).

Objective
Participants are exemplarily introduced to different research methods used in research on learning and instruction and learn to weigh advantages and disadvantages of these approaches.

851-0240-22L Coping with Psychosocial Demands of Teaching (EW4 W

Abstract
This course looks into scientific theories and also empirical studies on human learning and relates them to the school.

Literature

Prerequisites / notice
This lecture is only apt for students who intend to enrol in the programs "Lerhdiplom" or "Didaktisches Zertifikat". It is about learning in childhood and adolescence.
This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

Prerequisites / notice
Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

- Get to know intelligence tests
- Understanding findings relevant for education

- Understanding of research methods used in the empirical educational sciences
- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

Subject Didactics and Professional Training

Important: You can only enrol in the courses of this category if you have not more than 12 CP left for possible additional requirements.

Enrolment in either Mathematics Didactics I or Mathematics Didactics II (spring semester) is compulsory.

Number Title Type ECTS Hours Lecturers
401-3971-11L Mathematics Didactics I W 4 credits 2G K. Barro

Abstract
Students learn about and learn to use findings from empirical research into mathematical didactics and best practice, as well as theoretical approaches to teaching various topics in mathematics. Methodological suggestions are compared and draft tuition concepts discussed.

Objective
On the basis of their understanding of mathematics, of the knowledge acquired from research into teaching/learning and subject teaching, and also of best practice, students who have completed this course will be in a position to draft motivating learning arrangements, with cognitive appeal, which trigger and maintain learning processes. The aim here is to implement a corresponding teaching plan, so that the mathematics tuition that is given has a general-education value, on the one hand, and ensures that pupils acquire the fundamental knowledge necessary for studying at university, on the other hand.

401-9987-00L Teaching Internship Including Examination Lessons O 4 credits 9P N. Hungerbühler

Abstract
Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.
Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contributions.
- They learn to assess pupils' work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Content
Upon completion of the course, students are able to classify combinatorial problems and to apply adequate techniques to solve them.

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to construct and analyse models of finite geometries. They are familiar with closing theorems of finite coordinate planes, division rings, finite projective planes, duality principle, finite Möbius planes, error correcting codes, block design
- They know the axioms of incidence and are able to design statistical tests by using the theory of finite geometries. They are able to construct orthogonal Latin squares and know the basic elements of the theory of block design.

Literature
- Albrecht Beutelspacher: Einführung in die endliche Geometrie I,II. Bibliographisches Institut 1983
- Margaret Lynn Batten: Combinatorics of Finite Geometries. Cambridge University Press
- Dembowski: Finite Geometries.

Abstract
The objective is to make students familiar with the theory of finite geometries and to teach them how to apply this theory to solve combinatorial problems.

Literature
- Albrecht Beutelspacher: Einführung in die endliche Geometrie I,II. Bibliographisches Institut 1983
- Margaret Lynn Batten: Combinatorics of Finite Geometries. Cambridge University Press
- Dembowski: Finite Geometries.
### Objective

Die Studierenden

+ verstehen Mathematik als Sprache zur Modellbildung und als Werkzeug zur Lösung angewandter Probleme in den Naturwissenschaften.
+ können anspruchsvolle Modelle analysieren, Lösungen qualitativ beschreiben oder allenfalls explizit berechnen: diskret/kontinuierlich in Zeit, Ebene und Raum.
+ können Beispiele und konkrete arithmetische und geometrische Situationen der Anwendungen mit Methoden der höheren Mathematik interpretieren und bearbeiten.

### Content

#### Modellbildung ####

- Einführung und Beispiele
- Mehrdimensionale Modelle
- Pocken-Modell
- SIR-Modell

#### Lineare Modelle ####

- Vektorräume
- Diagonalisierbarkeit
- Normalformen
- Exponential einer Matrix
- Lösungsraum eines Linearen DGL-Systems

#### Fourier-Reihen ####

- Euklidische Vektorräume
- Orthogonale Projektion
- Anwendungen

#### Nichtlineare Modelle ####

- Stationäre Lösungen, Qualitative Aussagen
- Mehrdimensionale Modelle: Räuber-Beute, Lotka-Volterra

#### Partielle Differentialgleichungen ####

### 401-9985-00L Mentored Work Specialised Courses in the Respective O Subject with an Educational Focus Mathematics A O Subject with an Educational Focus in Mathematics for TC and Teaching Diploma. 2 credits 4A M. Akved, K. Barro, L. Halbeisen, M. Huber, N. Hungerbühler, A. F. Müller

#### Abstract

In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. They compile texts under supervision that are directly comprehensible to the targeted readers - generally specialist-subject teachers at high-school level.
Objective
The aim is for the students
- to familiarise themselves with a new topic by obtaining material and studying the sources, so that they can selectively extend their specialist competence in this way.
- to independently develop a text on the topic, with special focus on its mathematical comprehensibility in respect of the level of knowledge of the targeted readership.
- To try out different options for specialist further training in their profession.

|             | Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport). |
|             | Number of participants limited to 30.  
|             | This course unit can only be enrolled after successful participation in, or during enrollment in the course “Human Learning (EW 1)”. |
|             | Abstract: The focus will be on the book “Intelligenz: Grosse Unterschiede und ihre Folgen” by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed. |
|             | Objective: - Understanding research methods used in the empirical human sciences  
|             | - Getting to know intelligence tests  
|             | - Understanding findings relevant for education |

| 851-0242-08L | Research Methods in Educational Science | W    | 1    | 1S    | P. Edelsbrunner, B. Rütsche, E. Stern, E. Ziegler |
|             | Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport). |
|             | Number of participants limited to 30.  
|             | This course unit can only be enrolled after successful participation in, or during enrollment in the course “Human Learning (EW 1)”. |
|             | Abstract: Literature from the learning sciences is critically discussed with a focus on research methods. At the first meeting, working groups will be assembled and meetings with those will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work. |
|             | Objective: - Understand research methods used in the empirical educational sciences  
|             | - Understand and critically examine information from scientific journals and media  
|             | - Understand pedagogically relevant findings from the empirical educational sciences |

|             | Number of participants limited to 20.  
|             | The successful completion of both course no. 851-0240-00L "Menschliches Lernen (EW 1)" and course no. 851-0239-01L "Unterstützung und Diagnose von Wissenserwerbsprozessen (EW 3)" is a necessary prerequisite for this course. |
|             | Abstract: In teams of two, participants in this seminar conduct their own research project. Each team is advised by one of the researchers serving as lecturers in this course. Basic conceptual and methodological issues are the topic of a series of plenary meetings; however, the major part of the work is done in small-group meetings with the advising researcher, and in self-directed research projects. |
|             | Objective: The course is targeted at advanced students who have taken an interest in gathering practical research experience in the field of Learning & Instruction. In teams of two, students conduct their own research projects (planning, conducting, analyzing, interpreting, and presenting research); thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students’ independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction)  
|             | Learning goals include:  
|             | - Participants can illustrate and explain basic methods and concepts for research in the fields of Learning and Instruction, e.g. with the help of practical examples.  
|             | - Participants can generate testable research questions for a topic relevant in the fields of Learning and Instruction.  
|             | - Participants can design and conduct a study that is relevant for answering their research question.  
|             | - Participants can summarize and evaluate the main results from a study in the field of learning and Instruction, with regard to the research question being asked.

Eine kurze Anleitung zur mentorierten Arbeit in Fachdidaktik wird zur Verfügung gestellt.

ECTS 4A, Introductory Internship Mathematics

During the introductory teaching practice, the students sit in on five lessons given by the teacher responsible for their teaching practice, and students learn about and learn to use findings from empirical research into mathematical didactics and best practice, as well as theoretical approaches to teaching various topics in mathematics. Methodological suggestions are compared and draft tuition concepts discussed.

M. Akveld, K. Barro, L. Halbeisen, M. Huber, N. Hungerbühler, A. F. Müller

401-9983-00L Mentored Work Subject Didactics Mathematics A O 2 credits 4A

Mentored Work Subject Didactics in Mathematics for TC, Teaching Diploma and Teaching Diploma Mathematics as Minor Subject.

In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

Objective

The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Professional Training in Mathematics

Number Title Type ECTS Hours Lecturers

401-9970-00L Introductory Internship Mathematics O 3 credits 6P N. Hungerbühler

Enrolment only possible with matriculation in Mathematics Teaching Diploma or Mathematics TC at ETH. It is advisable to enrol in this course not prior to the first Mathematics Didactics course and not after the second Mathematics Didactics course.

Abstract

During the introductory teaching practice, the students sit in on five lessons given by the teacher responsible for their teaching practice, and teach five lessons themselves. The students are given observation and reflection assignments by the teacher responsible for their teaching practice.

Objective

Right at the start of their training, students acquire initial experience with the observation of teaching, the establishment of concepts for teaching and the implementation of teaching. This early confrontation with the complexity of everything that teaching involves helps students decide whether they wish to continue, that they wish to continue, with the training. It forms a basis for the subsequent pedagogical and subject-didactics training.

Content

Den Studierenden bietet das Einführungspraktikum einen Einblick in den Berufsalltag einer Lehrperson.

Wird von der Praktikumslehrperson bestimmt.

The teaching practice takes in 50 lessons: 30 are taught by the students, and the students sit in on 20 lessons. The teaching practice lasts 4-6 weeks. It gives students the opportunity to implement the contents of their specialist-subject, educational science and subject-didactics training in the classroom. Students also conduct work assignments in parallel to their teaching practice.

### Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics in their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They acquire the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

### Content

Findet in der Regel am Schluss der Ausbildung, vor Ablegung der Prüfungslektionen statt.

---

**401-9989-00L**  
Teaching Internship Mathematics II  
Teaching Internship for students upgrading TC to Teaching Diploma  
Mathematics as Major Subject

*Abstract*

The teaching practice takes in 50 lessons: 30 are taught by the students, and the students sit in on 20 lessons. The teaching practice lasts 4-6 weeks. It gives students the opportunity to implement the contents of their specialist-subject, educational science and subject-didactics training in the classroom. Students also conduct work assignments in parallel to their teaching practice.

### Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics in their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They acquire the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

### Content
Die Studierenden können die Bedeutung von Unterrichtsthemen in ihrem Fach unter verschiedenen Blickwinkeln einschätzen. Sie kennen und beherrschen das unterrichtliche Handwerk. Sie können ein gegebenes Unterrichtsthema für eine Gruppe von Lernenden fachlich und didaktisch korrekt strukturieren und in eine adäquate Lernumgebung umsetzen. Es gelingt ihnen, die Balance zwischen Anleitung und Offenheit zu finden, sodass die Lernenden sowohl über den nötigen Freiraum wie über ausreichend Orientierung verfügen, um aktiv und effektiv flexibel nutzbares (Fach-)Wissen zu erwerben.

### Lecture notes

---

**401-9991-01L**  
Examination Lesson I Mathematics  
Simultaneous enrolment in "Examination Lesson II Mathematics" (401-9991-02L) is compulsory.

*Abstract*

In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter-based and didactic skills they have acquired in the course of their training.

### Objective
- To develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle
- To analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

Students learn about and learn to use findings from empirical research into mathematical didactics and best practice, as well as theoretical approaches to teaching mathematics. Methodological suggestions are compared and draft tuition concepts discussed.

*Objective*

On the basis of their understanding of mathematics, of the knowledge acquired from research into teaching/learning and subject teaching, and also of best practice, students who have completed this course will be in a position to draft motivating learning arrangements, with cognitive appeal, which trigger and maintain learning processes. The aim here is to implement a corresponding teaching plan, so that the mathematics tuition that is given has a general-education value, on the one hand, and ensures that pupils acquire the fundamental knowledge necessary for studying at university, on the other hand.

*Prerequisites / notice*

This course is to be chosen jointly with 401-3972-00L.

**401-9988-00L**  
Teaching Internship Mathematics  
Teaching Internship Mathematics for Teaching Diploma

*Abstract*

The teaching practice takes in 50 lessons: 30 are taught by the students, and the students sit in on 20 lessons. The teaching practice lasts 4-6 weeks. It gives students the opportunity to implement the contents of their specialist-subject, educational science and subject-didactics training in the classroom. Students also conduct work assignments in parallel to their teaching practice.

*Objective*

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics in their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They acquire the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

*Content*

Findet in der Regel am Schluss der Ausbildung, vor Ablegung der Prüfungslektionen statt.

**401-9989-00L**  
Teaching Internship Mathematics II  
Teaching Internship for students upgrading TC to Teaching Diploma.

*Abstract*

This is a suplement to the Teaching Internship required to obtain a Master of Advanced Studies in Secondary and Higher Education in the corresponding subject. It is aimed at enlarging the already acquired teaching experience. Students observe 10 lessons and teach 15 lessons independently.

*Objective*

Die Studierenden können die Bedeutung von Unterrichtsthemen in ihrem Fach unter verschiedenen Blickwinkeln einschätzen. Sie kennen und beherrschen das unterrichtliche Handwerk. Sie können ein gegebenes Unterrichtsthema für eine Gruppe von Lernenden fachlich und didaktisch korrekt strukturieren und in eine adäquate Lernumgebung umsetzen. Es gelingt ihnen, die Balance zwischen Anleitung und Offenheit zu finden, sodass die Lernenden sowohl über den nötigen Freiraum wie über ausreichend Orientierung verfügen, um aktiv und effektiv flexibel nutzbares (Fach-)Wissen zu erwerben.

Data: 06.08.2018 12:56  
Autumn Semester 2016  
Page 1131 of 1571
Objective

On the basis of a specified topic, the candidate shows that they are in a position
- to develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle
- to analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

Content

Die Studierenden erfahren das Lektionsthema in der Regel 10 Tage vor dem Prüfungstermin. Von der zuständigen Lehrperson erhalten sie Informationen über den Wissensstand der zu unterrichtenden Klasse und können sie vor dem Prüfungstermin besuchen.

Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie bis spätestens 48 Stunden vor der Prüfung den beiden Prüfungsexperten ein.

Die gehaltene Lektion wird kriteriumsbasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/ der Kandidatin über die gehaltene Lektion im Rahmen eines kurzen Kolloquiums.

Abstract

- Combinatorics II
  - The course Combinatorics I and II is an introduction into the field of enumerative combinatorics.

Objective

- Upon completion of the course, students are able to classify combinatorial problems and to apply adequate techniques to solve them.

Content

- Contents of the lectures Combinatorics I and II: congruence transformation of the plane, symmetry groups of geometric figures, Euler’s function, Cayley graphs, formal power series, permutation groups, cycles, Bunsdie’s lemma, cycle index, Polya’s theorems, applications to graph theory and isomers.

Abstract

- Finite geometries I, II: Finite geometries combine aspects of geometry, discrete mathematics and the algebra of finite fields. In particular, we will construct models of axioms of incidence and investigate closing theorems. Applications include test design in statistics, block design, and the construction of orthogonal Latin squares.

Objective

- Students will be able to construct and analyse models of finite geometries. They are familiar with closing theorems of the axioms of incidence and are able to design statistical tests by using the theory of finite geometries. They are able to construct orthogonal Latin squares and know the basic elements of the theory of block design.

Content

- Finite geometries I, II: finite fields, rings of polynomials, finite affine planes, axioms of incidence, Euler’s thirty-six officers problem, design of statistical tests, orthogonal Latin squares, transformation of finite planes, closing theorems of Desargues and Pappus-Pascal, hierarchy of closing theorems, finite coordinate planes, division rings, finite projective planes, duality principle, finite Moebius planes, error correcting codes, block design

Literature

- Albrecht Beutelspacher: Einführung in die endliche Geometrie I,II. Bibliographisches Institut 1983
- Margaret Lynn Batten: Combinatorics of Finite Geometries, Cambridge University Press
- Dembowski: Finite Geometries.

Abstract

- Mathematics III
  - Vertiefung der mehrdimensionalen Analysis mit Schwerpunkt in der Anwendung der partiellen Differentialgleichungen, Vertiefung der linearen Algebra und Einführung in die Systemanalyse und Modellbildung. X

Objective

- Die Studierenden
  + verstehen Mathematik als Sprache zur Modellbildung und als Werkzeug zur Lösung angewandter Probleme in den Naturwissenschaften.
  + können anspruchsvolle Modelle analysieren, Lösungen qualitativ beschreiben oder allfälls explizit berechnen: diskret/kontinuierlich in Zeit, Ebene und Raum.
  + können Beispiele und konkrete arithmetische und geometrische Situationen der Anwendungen mit Methoden der höheren Mathematik interpretieren und bearbeiten.
### Modellbildung ###
- Einführung und Beispiele
- Mehrdimensionale Modelle
- Pocken-Modell
- SIR-Modell

### Lineare Modelle ###
- Vektorräume
- Diagonalisierbarkeit
- Normalformen
- Exponential einer Matrix
- Lösungsräume von linearen DGL-Systemen

### Fourier-Reihen ###
- Euklidische Vektorräume
- Orthogonale Projektion
- Anwendungen

### Nichtlineare Modelle ###
- Stationäre Lösungen, Qualitative Aussagen
- Mehrdimensionale Modelle: Räuber-Beute, Lotka-Volterra

### Partielle Differentialgleichungen ###
- Einführung, Repetition, Beispiele
- Fourier-Methoden: Wärmeleitung, Laplace, Wellengleichung, Filter, Computertomographie

### Laplace-Transformation ###
- Definition und Notation
- Rechenregeln
- Anwendungsbeispiel

| Objective | The aim is for the students
- to familiarise themselves with a new topic by obtaining material and studying the sources, so that they can selectively extend their specialist competence in this way.
- to independently develop a text on the topic, with special focus on its mathematical comprehensibility in respect of the level of knowledge of the targeted readership.
- To try out different options for specialist further training in their profession.
In the teaching given at high-school level I (the first three years of the full-length high school or the first year of the reduced-length high school) a variety of different teaching forms is offered. Students are familiarised with the subjects taught at high-school level I (the first three years of the full-length high school, or the first year of the reduced-length high school). The central contents of geometry, arithmetic and algebra, and also written mathematical problems are explained.

Lecturers: M. Akveld, K. Barro, L. Halbeisen, M. Huber, N. Hungerbühler, A. F. Müller

**401-9986-00L** Mentored Work Specialised Courses in the Respective Subject with an Educational Focus in Mathematics A, B, C

- **Mentored Work Specialised Courses in the Respective Subject with an Educational Focus in Mathematics for Teaching Diploma and for students upgrading TC to Teaching Diploma.**

Abstract

In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. They compile texts under supervision that are directly comprehensible to the targeted readers - generally specialist-subject teachers at high-school level.

**401-9951-58L** | **Didactics of Mathematics at the College Level I (University of Zurich)** | W | 3 credits | 2S | R. Schelldorfer

*No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.*

**UZH Module Code:** 090MaDgU

*Enrolment only possible with matriculation in Teaching Diploma or TC at ETH or in Teaching Diploma at UZH.*

**Abstract**

Students are familiarised with the subjects taught at high-school level I (the first three years of the full-length high school, or the first year of the reduced-length high school). The central contents of geometry, arithmetic and algebra, and also written mathematical problems are explained.

**Objective**

In the teaching given at high-school level I (the first three years of the full-length high school or the first year of the reduced-length high school), central concepts and approaches adopted in mathematics are introduced and observed in greater depth. These include variables, function, proof. This calls for a careful didactic analysis on the part of the teacher, requiring them to study and reflect on the prerequisites for the pupils and the requirements in terms of mathematics and cognitive psychology.

**Content**

Beispiele von Schülerarbeiten geben in diesem Seminar einen Einblick in die mathematische Denkwelt der Schülerinnen und Schüler. Vielfältige Aufgaben zum Einsatz im Unterricht werden vorgestellt, selber gelöst und diskutiert.

**Lecture notes**

- Arithmetik und Algebra: Zahlbereiche, Form und Inhalt in der Algebra
- Geometrie: Konstruieren-Berechnen-Beweisen, dynamische Geometrie (Geogebra).
- Sachrechnen: Funktionsbegriff, mathematische Modellierung.
- Aktuelle mathematikdidaktische Aspekte wie Lernprozesse, Grundvorstellungen, Kompetenzen, offene Aufgaben.

**Prerequisites / notice**

Zahlreiche begleitende Unterlagen werden abgegeben.

**252-0855-00L** | **Computer Science in Secondary School Mathematics** | W | 4 credits | 3G | J. Hromkovic, G. Serafini

*Data: 06.08.2018 12:56 Autumn Semester 2016 Page 1134 of 1571*
The unit "Computer Science in Secondary School Mathematics" addresses key contributions of computer science to general education, the tight relations between the algorithmic and the mathematical way of thinking, and the thoughtful choice of computer science topics for high school mathematics classes.

The general goal of the course consists in presenting ways to teach fundamentals of computer science, which are closely related to contents and methods of mathematics. After attending the course unit, a mathematics teacher is able to teach selected fundamentals of computer science in mathematics classes.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

The main topics of the course unit "Computer Science in Secondary School Mathematics" represent a scientific and didactic added value for mathematics classes.

The course covers the didactics of logic, of cryptography, of finite state automata, of computability and of the introduction to programming. The students develop the understanding of fundamental scientific concepts such as algorithm, program, complexity, determinism, computation, automata, verification, testing, security of a cryptosystem and secure communication. They reflect on ways to embed them into a scientifically sound and didactically sustainable mathematics course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

Abstract

In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

Objective

The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Content

Abstract: Topological groups and Haar measure. Definition of Lie groups, examples of local fields and examples of discrete subgroups; basic properties; Lie subgroups. Lie algebras and relation with Lie groups: exponential map, adjoint representation. Semisimplicity, nilpotency, solvability, compactness: Killing form, Lie's and Engel's theorems. Definition of algebraic groups and relation with Lie groups.

Objective: The goal is to have a broad though foundational knowledge of the theory of Lie groups and their associated Lie algebras with an emphasis on the algebraic and topological aspects of it.

Prerequisites / Literature: A. Knapp: "Lie groups beyond an Introduction" (Birkhaeuser)
F. Warner: "Foundations of differentiable manifolds and Lie groups" (Springer)
H. Samelson: "Notes on Lie algebras" (Springer, '90)
S. Helgason: "Differential geometry, Lie groups and symmetric spaces" (Academic Press, '78)

Abstract: This course gives a comprehensive introduction into the numerical treatment of linear and non-linear elliptic boundary value problems, related eigenvalue problems and linear, parabolic evolution problems. Emphasis is on theory and the foundations of numerical methods.

Objective: Participants of the course should become familiar with:
- concepts underlying the discretization of elliptic and parabolic boundary value problems
- analytical techniques for investigating the convergence of numerical methods for the approximate solution of boundary value problems
- methods for the efficient solution of discrete boundary value problems
- implementation aspects of the finite element method

Content: A selection of the following topics will be covered:
- Elliptic boundary value problems
- Galerkin discretization of linear variational problems
- The primal finite element method
- Mixed finite element methods
- Discontinuous Galerkin Methods
- Boundary element methods
- Spectral methods
- Adaptive finite element schemes
- Singularly perturbed problems
- Sparse grids
- Galerkin discretization of parabolic eigenproblems
- Non-linear elliptic boundary value problems
- Discretization of parabolic initial boundary value problems

Course audience at ETH: 3rd year ETH BSc Mathematics and MSc Mathematics and MSc Applied Mathematics students. Other ETH-students are advised to attend the course "Numerical Methods for Partial Differential Equations" (401-0674-00L) in the CSE curriculum during the spring semester.

Other ETH-students are advised to attend the course "Numerical Methods for Partial Differential Equations" (401-0674-00L) in the CSE curriculum during the spring semester.

Course slides will be made available to the audience.

Prerequisites / Literature: Practical exercises based on MATLAB

Abstract: The course covers the basics of inferential statistics.

Objective: Advanced introduction to mathematical finance: absence of arbitrage and martingale measures, option pricing and hedging, optimal investment problems, additional topics.

Content: Advanced level introduction to mathematical finance, presupposing knowledge in probability theory and stochastic processes. This is an advanced level introduction to mathematical finance for students with a good background in probability. We want to give an overview of main concepts, questions and approaches, and we do this in both discrete- and continuous-time models. Topics include absence of arbitrage and martingale measures, option pricing and hedging, optimal investment problems, and probably others. Prerequisites are probability theory and stochastic processes (for which lecture notes are available).

Course webpage: http://www.math.ethz.ch/education/bachelor/lectures/hs2014/math/introlg
Mathematical Optimization

Abstract
Mathematical treatment of diverse optimization techniques.

Objective
Advanced optimization theory and algorithms.

Content
1. Linear optimization: The geometry of linear programming, the simplex method for solving linear programming problems, Farkas' Lemma and infeasibility certificates, duality theory of linear programming.
3. Integer optimization: Ties between linear and integer optimization, total unimodularity, complexity theory, cutting plane theory.
4. Combinatorial optimization: Network flow problems, structural results and algorithms for matroids, matchings and, more generally, independence systems.

(Also Bachelor) Core Courses: Pure Mathematics

Further restrictions apply, but in particular:
401-3531-00L Differential Geometry I can only be recognised for the Master Programme if 401-3532-00L Differential Geometry II has not been recognised for the Bachelor Programme.

Analogously for:
401-3461-00L Functional Analysis I - 401-3462-00L Functional Analysis II
401-3001-61L Algebraic Topology I - 401-3002-12L Algebraic Topology II
401-3132-00L Commutative Algebra - 401-3146-12L Algebraic Geometry
401-3371-00L Dynamical Systems I - 401-3372-00L Dynamical Systems II

For the category assignment take contact with the Study Administration Office (www.math.ethz.ch/studiensekretariat) after having received the credits.

</table>
Topics covered include:

1. Topological dynamics
   (transitivity, attractors, chaos, structural stability)

2. Ergodic theory
   (Poincare recurrence theorem, Birkhoff ergodic theorem, existence of invariant measures)

3. Low-dimensional dynamics
   (Poincare rotation number, dynamical systems on \([0,1]\))

The most relevant textbook for this course is
Introduction to Dynamical Systems, Brin and Stuck, CUP, 2002.

I will also produce full lecture notes.

The material of the basic courses of the first two years of the program at ETH is assumed. In particular, you should be familiar with metric spaces and elementary measure theory.

401-3001-61L
Algebraic Topology I
W 8 credits 4G P. S. Jossen

Abstract
This is an introductory course in algebraic topology. The course will cover the following main topics: introduction to homotopy theory, homology and cohomology of spaces.

Literature

http://www.math.cornell.edu/%7ehatcher/AT/ATpage.html
http://www.math.cornell.edu/%7eehatcher/#anchor1772800
3) E. Spanier, "Algebraic topology", Springer-Verlag

Prerequisites / notice
Some knowledge of differential geometry and differential topology is useful but not absolutely necessary.

401-3132-00L
Commutative Algebra
W 10 credits 4V+1U R. Pink

Abstract
This course provides an introduction to commutative algebra as a foundation for and first steps towards algebraic geometry. The material in this course will be assumed in the lecture course "Algebraic Geometry" in the spring semester 2017.

Objective
We shall cover approximately the material from
--- most of the textbook by Atiyah-MacDonald, or
--- the first half of the textbook by Bosch.

Topics include:
* Basics about rings, ideals and modules
* Localization
* Primary decomposition
* Integral dependence and valuations
* Noetherian rings
* Completions
* Basic dimension theory

Literature
Primary Reference:
Secondary Reference:
2. "Algebraic Geometry and Commutative Algebra" by S. Bosch (Springer 2013)
Tertiary References:
5. "Commutative Algebra" by N. Bourbaki (Hermann, Massion, Springer)

Prerequisites / notice
Prerequisites: Algebra I (or a similar introduction to the basic concepts of ring theory).

Further restrictions apply, but in particular:
401-3601-00L Probability Theory can only be recognised for the Master Programme if neither 401-3642-00L Brownian Motion and Stochastic Calculus nor 401-3602-00L Applied Stochastic Processes has been recognised for the Bachelor Programme.
402-0205-00L Quantum Mechanics I is eligible as an applied core course, but only if 402-0224-00L Theoretical Physics (offered for the last time in FS 2016) isn't recognised for credits (neither in the Bachelor's nor in the Master's programme).
For the category assignment take contact with the Study Administration Office (www.math.ethz.ch/studiensekretariat) after having received the credits.

This course counts as a core course in the Bachelor's degree programme in Mathematics. Holders of an ETH Zurich Bachelor's degree in Mathematics who didn't use credits from none of the three course units 401-3601-00L Probability Theory, 401-3642-00L Brownian Motion and Stochastic Calculus resp. 401-3602-00L Applied Stochastic Processes for their Bachelor's degree still can have recognised this course for the Master's degree. Furthermore, at most one of the three course units 401-3461-00L Functional Analysis I 401-3531-00L Differential Geometry I 401-3601-00L Probability Theory can be recognised for the Master's degree in Mathematics or Applied Mathematics.
The circle method, invented by Hardy and Ramanujan and developed by Hardy and Littlewood and Kloosterman, is one of the most versatile methods currently available to determine the asymptotic behavior of the number of integral solutions to polynomial equations, when the number of solutions is sufficiently large. This method is presented in the lecture. In particular, it will present the solution of Waring's Problem concerning the representability of integers by sums of a bounded numbers of (fixed) powers of integers.

**Abstract**

Basics of probability theory and the theory of stochastic processes in discrete time

**Objective**

This course presents the basics of probability theory and the theory of stochastic processes in discrete time. The following topics are planned:

- Basics in measure theory, random series, law of large numbers, weak convergence, characteristic functions, central limit theorem, conditional expectation, martingales, convergence theorems for martingales, Galton Watson chain, transition probability. Theorem of Ionescu Tulcea, Markov chains.

**Content**

This course presents the basics of probability theory and the theory of stochastic processes in discrete time. The following topics are planned:

- Basics in measure theory, random series, law of large numbers, weak convergence, characteristic functions, central limit theorem, conditional expectation, martingales, convergence theorems for martingales, Galton Watson chain, transition probability. Theorem of Ionescu Tulcea, Markov chains.

**Lecture notes**

Available, will be sold in the course

**Literature**

- D. Williams, Probability with martingales, Cambridge University Press 1991

**402-0205-00L Quantum Mechanics I**

**W 10 credits 3V+2U T. K. Gehrmann**

**Abstract**

Introduction to non-relativistic single-particle quantum mechanics. In particular, the basic concepts of quantum mechanics, such as the quantisation of classical systems, wave functions and the description of observables as operators on a Hilbert space, and the formulation of symmetries will be discussed. Basic phenomena will be analysed and illustrated by generic examples.

**Objective**

Introduction to single-particle quantum mechanics. Familiarity with basic ideas and concepts (quantisation, operator formalism, symmetries, perturbation theory) and generic examples and applications (bound states, tunneling, scattering states, in one- and three-dimensional settings). Ability to solve simple problems.

**Content**

Keywords: Schrödinger equation, basic formalism of quantum mechanics (states, operators, commutators, measuring process), symmetries (translations, rotations), quantum mechanics in one dimension, spherically symmetric problems in three dimensions, scattering theory, perturbation theory, variational techniques, spin, addition of angular momenta, relation between QM and classical physics.

**Literature**

- F. Schwabl: Quantum mechanics
- J.J. Sakurai: Modern Quantum Mechanics
- C. Cohen-Tannoudji: Quantum mechanics I
This course gives an introduction to rigidity theory, which is a set of techniques initially invented to understand the structure of a certain class of discrete subgroups of Lie groups, called lattices, and currently used in more general contexts of groups arising as isometries of non-positively curved geometries. A prominent example of a lattice in the Lie group $SL(n, \mathbb{R})$ is the group $SL(n, \mathbb{Z})$ of integer $n \times n$ matrices with determinant 1. Prominent questions concerning this group are:

- Describe all its proper quotients.
- Classify all its finite dimensional linear representations.
- More generally, can this group act by diffeomorphisms on “small” manifolds like the circle?
- Does its Cayley graph considered as a metric space at large scale contain enough information to recover the group structure? In this course we will give detailed treatment for the answers to the first two questions; they are respectively Margulis’ normal subgroup theorem and Margulis’ superrigidity theorem. These results, valid for all lattices in simple Lie groups of rank at least 2 –like $SL(n, \mathbb{R})$, with $n$ at least 3– lead to the arithmeticity theorem, which says that all lattices are obtained by an arithmetic construction.

**Literature**
- Y. Benoist: “Fives lectures on lattices in semisimple Lie groups”, available on his homepage.
- M.Burger: “Rigidity and Arithmeticity”, European School of Group Theory, 1996, handwritten notes, will be put online.

**Prerequisites / notice**
For this course some knowledge of elementary Lie theory would be good. We will however treat Lie groups by examples and avoid structure theory since this is not the point of the course nor of the techniques.

<tbody>
<tr>
<td>The course begins with characteristics, the definition of hyperbolicity, causal structure and the domain of dependence theorem. The course then focuses on nonlinear systems of equations in two independent variables, in particular the Euler equations of compressible fluids with plane symmetry and the Einstein equations on general relativity with spherical symmetry.</td>
<td></td>
</tr>
</tbody>
</table>

| Objective | The objective is to introduce students in mathematics and physics to an area of mathematical analysis involving differential geometry which is of fundamental importance for the development of classical macroscopic continuum physics. |

| Content | The course shall begin with the basic structure associated to hyperbolic partial differential equations, characteristic hypersurfaces and bicharacteristics, causal structure, and the domain of dependence theorem. The course shall then focus on nonlinear systems of equations in two independent variables. The first topic shall be the Euler equations of compressible fluids under plane symmetry where we shall study the formation of shocks, and second topic shall be the Einstein equations of structure general relativity under spherical symmetry where we shall study the formation of black holes and spacetime singularities. |

**Prerequisites / notice**
Basic real analysis and differential geometry.
041-4831-66L Mathematical Themes in General Relativity I

Abstract
First part of a one-year course offering a rigorous introduction to general relativity, with special emphasis on aspects of current interest in mathematical research. Topics covered include: initial value formulation of the Einstein equations, causality theory and singularities, constructions of data sets by gluing or conformal methods, asymptotically flat spaces and positive mass theorems.

Objective
Acquisition of a solid and broad background in general relativity and mastery of the basic mathematical methods and ideas developed in such context and successfully exploited in the field of geometric analysis.

Content
Lorentzian geometry; geometric review of special relativity; the Einstein equations and their basic classes of special solutions; the Einstein equations as an initial-value problem; causality theory and hyperbolicity; singularities and trapped domains; Penrose diagrams; asymptotically flat spaces: ADM invariants, positive mass theorems, Penrose inequalities, geometric properties.

Lecture notes
Lecture notes written by the instructor will be provided to all enrolled students.

Prerequisites / notice
The content of the basic courses of the first three years at ETH will be assumed. In particular, enrolled students are expected to be fluent both in Differential Geometry (at least at the level of Differentialgeometrie I, II) and Functional Analysis (at least at the level of Funktionalanalyse I, II). Some background on partial differential equations, mainly of elliptic and hyperbolic type, (say at the level of the monograph by L. C. Evans) would also be desirable.

041-4497-66L Free Boundary Problems

Abstract
Fourier Analysis in Function Space Theory

In the most important part of the course, we will present the notion of Singular Integrals and Calderón-Zygmund theory as well as its application to the analysis of linear elliptic operators.

Content
During the first lectures we will review the theory of tempered distributions and their Fourier transforms. We will go in particular through the notion of Fréchet spaces, Banach-Steinhaus for Fréchet spaces etc. We will then apply this theory to the Fourier characterization of Hilbert-Sobolev spaces.

Literature

3) Loukas Grafakos, "Classical Fourier Analysis" GTM 249 Springer.
4) Loukas Grafakos, "Modern Fourier Analysis" GTM 250 Springer.

Prerequisites / notice
Notions from ETH courses in Measure Theory, Functional Analysis I and II (Fundamental results in Banach and Hilbert Space theory, Fourier transform of L^2 Functions).

041-4475-66L Partial Differential Equations and Semigroups of Bounded Linear Operators

Abstract
In this course we study the concept of a semigroup of bounded linear operators and we use this concept to investigate existence, uniqueness, and regularity properties of solutions of partial differential equations (PDEs) of the evolutionary type.

Objective
The aim of this course is to teach the students a decent knowledge (i) on semigroups of bounded linear operators, (ii) on solutions of partial differential equations (PDEs) of the evolutionary type, and (iii) on the analytic concepts used to formulate and study such semigroups and such PDEs.

Content
The course includes content (i) on semigroups of bounded linear operators, (ii) on solutions of partial differential equations (PDEs) of the evolutionary type, and (iii) on the analytic concepts used to formulate and study such semigroups and such PDEs. Key example PDEs that are treated in this course are heat and wave equations.

Literature
Lecture Notes are available in the lecture homepage (please follow the link in the Learning materials section).

Prerequisites / notice
Mandatory prerequisites: Functional analysis

041-3303-00L Special Topics in One Complex Variable

Abstract
Hypergeometric Functions; Boundary values of holomorphic functions, Nevanlinna Theory and other special topics.

Objective
Advanced methods of one complex variables

Literature

Abstract
Course on numerical approximations of stochastic ordinary differential equations driven by Wiener processes. These equations have several applications, for example in financial option valuation. This course also contains an introduction to random number generation and Monte Carlo methods for random variables.

Objective
The aim of this course is to enable the students to carry out simulations and their mathematical convergence analysis for stochastic models originating from applications such as mathematical finance. For this the course teaches a decent knowledge of the different numerical methods, their underlying ideas, convergence properties and implementation issues.

Content
- Generation of random numbers
- Monte Carlo methods for the numerical integration of random variables
- Stochastic processes and Brownian motion
- Stochastic ordinary differential equations (SODEs)
- Numerical approximations of SODEs
- Multilevel Monte Carlo methods for SODEs
- Applications to computational finance: Option valuation

Mathematical and Computational Methods in Photonics

Abstract
The aim of this course is to review new and fundamental mathematical tools, computational approaches, and inversion and optimal design methods used to address challenging problems in nanophotonics. The emphasis will be on analyzing plasmon resonant nanoparticles, super-focusing & super-resolution of electromagnetic waves, photonic crystals, electromagnetic cloaking, metamaterials, and metasurfaces.

Objective
The field of photonics encompasses the fundamental science of light propagation and interactions in complex structures, and its technological applications.

The recent advances in nanoscience present great challenges for the applied and computational mathematics community. In nanophotonics, the aim is to control, manipulate, reshape, guide, and focus electromagnetic waves at nanometer length scales, beyond the resolution limit. In particular, one wants to break the resolution limit by reducing the focal spot and confine light to length scales that are significantly smaller than half the wavelength.

Interactions between the field of photonics and mathematics has led to the emergence of a multitude of new and unique solutions in which today's conventional technologies are approaching their limits in terms of speed, capacity and accuracy. Light can be used for detection and measurement in a fast, sensitive and accurate manner, and thus photonics possesses a unique potential to revolutionize healthcare. Light-based technologies can be used effectively for the very early detection of diseases, with non-invasive imaging techniques or point-of-care applications. They are also instrumental in the analysis of processes at the molecular level, giving a greater understanding of the origin of diseases, and hence allowing prevention along with new treatments. Photonic technologies also play a major role in addressing the needs of our ageing society: from pace-makers to synthetic bones, and from endoscopes to the micro-cameras used in in-vivo processes. Furthermore, photonics are also used in advanced lighting technology, and in improving energy efficiency and quality. By using photonic media to control waves across a wide band of wavelengths, we have an unprecedented ability to fabricate new materials with specific microstructures.

The main objective in this course is to report on the use of sophisticated mathematics in diffractive optics, plasmonics, super-resolution, photonic crystals, and metamaterials for electromagnetic invisibility and cloaking. The course merges highly nontrivial multi-mathematics in order to make a breakthrough in the field of mathematical modelling, imaging, and optimal design of optical nanodevices and nanostructures capable of light enhancement, and of the focusing and guiding of light at a subwavelength scale. We demonstrate the power of layer potential techniques in solving challenging problems in photonics, when they are combined with asymptotic analysis and the elegant theory of Gohberg and Sigal on meromorphic operator-valued functions.

In this course we shall consider both analytical and computational matters in photonics. The issues we consider lead to the investigation of fundamental problems in various branches of mathematics. These include asymptotic analysis, spectral analysis, mathematical imaging, optimal design, stochastic modelling, and analysis of wave propagation phenomena. On the other hand, deriving mathematical foundations, and new and efficient computational frameworks and tools in photonics, requires a deep understanding of the different scales in the wave propagation problem, an accurate mathematical modelling of the nanodevices, and fine analysis of complex wave propagation phenomena. An emphasis is put on mathematically analyzing plasmon resonant nanoparticles, diffractive optics, photonic crystals, super-resolution, and metamaterials.

### 401-3627-00L High-Dimensional Statistics

**W** 4 credits  
**2V**  
**P. L. Bühlmann**

**Abstract**  
"High-Dimensional Statistics" deals with modern methods and theory for statistical inference when the number of unknown parameters is of much larger order than sample size. Statistical estimation and algorithms for complex models and aspects of multiple testing will be discussed.

**Objective**  
Knowledge of methods and basic theory for high-dimensional statistical inference

**Content**  
- Lasso and Group Lasso for high-dimensional linear and generalized linear models; Additive models and many smooth univariate functions; Non-convex loss functions and L1-regularization; Stability selection, multiple testing and construction of p-values; Undirected graphical modeling

**Literature**  

**Prerequisites / notice**  
Knowledge of basic concepts in probability theory, and intermediate knowledge of statistics (e.g. a course in linear models or computational statistics).

### 401-4623-00L Time Series Analysis

**W** 6 credits  
**3G**  
**N. Meinshausen**

**Abstract**  
Statistical analysis and modeling of observations in temporal order, which exhibit dependence. Stationarity, trend estimation, seasonal decomposition, autocorrelations, spectral and wavelet analysis, ARIMA-, GARCH- and state space models. Implementations in the software R.

**Objective**  
Understanding of the basic models and techniques used in time series analysis and their implementation in the statistical software R.

**Content**  
- This course deals with modeling and analysis of variables which change randomly in time. Their essential feature is the dependence between successive observations. Applications occur in geophysics, engineering, economics and finance. Topics covered: Stationarity, trend estimation, seasonal decomposition, autocorrelations, spectral and wavelet analysis, ARIMA-, GARCH- and state space models. The models and techniques are illustrated using the statistical software R.

**Lecture notes**  
Not available

**Literature**  
A list of references will be distributed during the course.

**Prerequisites / notice**  
Basic knowledge in probability and statistics

### 401-3612-00L Stochastic Simulation

**W** 5 credits  
**3G**  
**F. Sigrist**

**Abstract**  
This course provides an introduction to statistical Monte Carlo methods. This includes applications of simulations in various fields (Bayesian statistics, statistical mechanics, operations research, financial mathematics), algorithms for the generation of random variables (accept-reject, importance sampling), estimating the precision, variance reduction, introduction to Markov chain Monte Carlo.

**Objective**  
Stochastic simulation (also called Monte Carlo method) is the experimental analysis of a stochastic model by implementing it on a computer. Probabilities and expected values can be approximated by averaging simulated values, and the central limit theorem gives an estimate of the error of this approximation. The course shows examples of the many applications of stochastic simulation and explains different algorithms used for simulation. These algorithms are illustrated with the statistical software R.

**Content**  
- Examples of simulations in different fields (computer science, statistics, statistical mechanics, operations research, financial mathematics).
- Generation of uniform random variables.
- Generation of random variables with arbitrary distributions (quantile transform, accept-reject, importance sampling).
- Simulation of Gaussian processes and diffusions. The precision of simulations, methods for variance reduction.
- Introduction to Markov chains and Markov chain Monte Carlo (Metropolis-Hastings, Gibbs sampler, Hamiltonian Monte Carlo, reversible jump MCMC).

**Lecture notes**  
A script will be available in English.

**Literature**  

**Prerequisites / notice**  
Familiarity with basic concepts of probability theory (random variables, joint and conditional distributions, laws of large numbers and central limit theorem) will be assumed.

### 401-3611-00L Advanced Topics in Computational Statistics

**W** 4 credits  
**2V**  
**M. H. Maathuis**

**Abstract**  
This lecture covers selected advanced topics in computational statistics, including various classification methods, the EM algorithm, clustering, handling missing data, and graphical modelling.

**Objective**  
Students learn the theoretical foundations of the selected methods, as well as practical skills to apply these methods and to interpret their outcomes.

**Content**  
The course is roughly divided in three parts: (1) Supervised learning via (variations of) nearest neighbor methods, (2) the EM algorithm and clustering, (3) handling missing data and graphical models.

**Lecture notes**  
Lecture notes.

**Prerequisites / notice**  
We assume a solid background in mathematics, an introductory lecture in probability and statistics, and at least one more advanced course in statistics.

### 401-0549-00L Applied Statistical Regression

**W** 5 credits  
**2V+1U**  
**M. Dettling**

**Abstract**  
This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning "good practice" that can be applied in every student's own projects and daily work life. A special focus will be laid in the use of the statistical software package R for regression analysis.

**Objective**  
The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.
The course starts with the basics of linear modeling, and then proceeds to parameter estimation, tests, confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, multicollinearity problems and model interpretation, as well as general modeling strategies.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

A script will be available.

Faraway (2005): Linear Models with R
Faraway (2006): Extending the Linear Model with R
Draper & Smith (1998): Applied Regression Analysis
Fox (2008): Applied Regression Analysis and GLMs
Montgomery et al. (2006): Introduction to Linear Regression Analysis

The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-3622-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

Participants will be able to plan and analyze efficient experiments in the fields of natural sciences. They will gain practical experience by using the software R.

The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software R, for which an introduction will be held.

---

### Selection: Financial and Insurance Mathematics

In the Master's programmes in Mathematics resp. Applied Mathematics 401-3913-01L Mathematical Foundations for Finance is eligible as an elective course, but Draper & Smith (1998): Applied Regression Analysis isn't recognised for credits (neither in the Bachelor's nor in the Master's programme). For the category assignment take contact with the Study Administration Office (www.math.ethz.ch/studiensekretariat) after having received the credits.

</tr>
</tbody>
</table>

The lecture aims at providing a basis in non-life insurance mathematics which forms a core subject of actuarial sciences. It discusses collective risk modeling, individual claim size modeling, approximations for compound distributions, ruin theory, premium calculation principles, tariffication with generalized linear models, credibility theory, claims reserving and solvency.

The student is familiar with the basics in non-life insurance mathematics and statistics. This includes the basic mathematical models for insurance liability modeling, pricing concepts, stochastic claims reserving models and ruin and solvency considerations.

The following topics are treated: Collective Risk Modeling

Individual Claim Size Modeling

Approximations for Compound Distributions

Ruin Theory in Discrete Time

Premium Calculation Principles

Tariffication and Generalized Linear Models

Bayesian Models and Credibility Theory

Claims Reserving

Solvency Considerations

Lecture notes

M. V. Wüthrich, Non-Life Insurance: Mathematics & Statistics

http://ssrn.com/abstract=2319328

Prerequisites / notice

The exams ONLY take place during the official ETH examination period.

This course will be held in English and counts towards the diploma of "Aktuar SAV". For the latter, see details under www.actuaries.ch.

Prerequisites: knowledge of probability theory, statistics and applied stochastic processes.

Investment returns are an important source of funding for social and pension insurance, and financial risk is an important threat to stability. We study short-term and long-term financial risk and its interplay with other risk factors, and we develop methods for the measurement and management of financial risk and return in an asset/liability context with the goal of ensuring sustainable funding.
Objective

Understand the basic asset-liability framework: essential principles and properties of social and pension insurance; cash flow matching, duration matching, valuation portfolio and loose coupling; the notion of financial risk; long-term vs. short-term risk; coherent measures of risk.

Understand the conditions for sustainable funding: derivation of required returns; interplay between return levels, contribution levels and other parameters; influence of guaranteed benefits.

Understand the notion of risk-taking capability: capital process as a random walk; measures of long-term risk and relation to capital; short-term solvency vs. long-term stability; effect of embedded options and guarantees; interplay between required return and risk-taking capability.

Be able to study empirical properties of financial assets: the Normal hypothesis and the deviations from it; statistical tools for investigating relevant risk and return properties of financial assets; time aggregation properties; be able to conduct analysis of real data for the most important asset classes.

Understand and be able to carry out portfolio construction: the concept of diversification; limitations to diversification / correlation breakdown / what happened in 2008; the Kuhn-Tucker Theorem and optimization (mean-variance, mean-downside); incorporation of constraints; sensitivity and shortcomings of optimized portfolios.

Understand and interpret the asset-liability interplay: the optimized portfolio in the asset-liability framework; short-term risk vs. long-term risk; the influence of constraints; feasible and non-feasible solutions; practical considerations.

Know about active portfolio management: practical issues when implementing an investment strategy; the notion of active management; efficient markets hypothesis and limitations to it; empirical evidence; the fundamental law of active management; Bayesian concepts and the Black-Litterman framework.

Content

For pension insurance and other forms of social insurance, investment returns are an important source of funding. In order to earn these returns, substantial financial risks must be taken, and these risks represent an important threat to financial stability, in the long term and in the short term.

Risk and return of financial assets cannot be separated from one another and, hence, asset management and risk management cannot be separated either. Managing financial risk in social and pension insurance is, therefore, the task of reconciling the contradictory dimensions of

1. Required return for a sustainable funding of the institution,
2. Risk-taking capability of the institution,
3. Returns available from financial assets in the market,
4. Risks incurred by investing in these assets.

This task must be accomplished under a number of constraints. Financial risk management in social insurance also means reconciling the long time horizon of the promised insurance benefits with the short time horizon of financial markets and financial risk.

It is not the goal of this lecture to provide the students with any cookbook recipes that can readily be applied without further reflection. The goal is rather to enable the students to develop their own understanding of the problems and possible solutions associated with the management of financial risks in social and pension insurance.

To this end, a rigorous intellectual framework will be developed and a powerful set of mathematical tools from the fields of actuarial mathematics and quantitative risk management will be applied. When analyzing the properties of financial assets, an empirical viewpoint will be taken using statistical tools and considering real-world data.

Lecture notes

Since this is the first instance of this course, there is not yet a full script. However, to complement the blackboard notes, extensive handouts will be provided. Moreover, practical examples and data sets in Excel and Octave / Matlab will be made available to play around with and deepen the understanding of the subject matter.

Prerequisites / notice

Solid base knowledge of probability and statistics is indispensable. Specialized concepts from financial and insurance mathematics as well as quantitative risk management will be introduced in the lecture as needed, but some prior knowledge in some of these areas would be an advantage.

This course counts towards the diploma of "Aktuar SAV".

The exams ONLY take place during the official ETH examination period.

### Data: 06.08.2018 12:56

Autumn Semester 2016  
Page 1149 of 1571
The course will introduce lattice-based cryptography, which is one of the main candidates for quantum-resistant cryptography.

The objective of the course is to bring the students up to a level where they should be able to read academic papers on state-of-the-art designs of lattice-based primitives.

In this course, we will study lattice-based cryptography. We will cover the basic algorithms associated with integer lattices such as Gram-Schmidt orthogonalization, algorithms for finding short and near lattice vectors, as well as the critical algorithm for sampling lattice points according to a discrete Gaussian distribution. We will then proceed to build up a toolbox of lattice-based cryptographic primitives beginning from collision-resistant hash functions, then moving on to digital signatures, encryption, identity-based encryption, and fully-homomorphic encryption. Particular emphasis will be placed on concrete parameters and practical instantiations. For this purpose, we will also study cryptographic constructions based on the hardness of ideal lattices, which are ideals of polynomial rings.

There are no formal mathematical pre-requisites, but students should have "mathematical maturity", which entails dealing with abstract concepts and being comfortable with doing mathematical proofs. Some previous exposure to linear algebra, abstract algebra, and cryptography would be useful.

Abstract
Dynamic, synoptic Meteorology

Objective
Understanding the dynamics of large-scale atmospheric flow

Content
Dynamical Meteorology is concerned with the dynamical processes of the earth's atmosphere. The fundamental equations of motion in the atmosphere will be discussed along with the dynamics and interactions of synoptic system - i.e. the low and high pressure systems that determine our weather. The motion of such systems can be understood in terms of quasi-geostrophic theory. The lecture course provides a derivation of the mathematical basis along with some interpretations and applications of the concept.

Abstract
The lecture Biology I, together with the lecture Biology II in the following summer semester, is a basic, introductory course into Biology for Students of Materials Sciences and other students with biology as subsidiary subject.

Objective
The goal of this course is to give the students a basic understanding of the molecules that build a cell and make it function, and the basic principles of metabolism and molecular genetics.
Attendees will learn which information is contained in genetic sequencing data and how to extract information from them using computational tools. The main concepts introduced are:
* stochastic models in molecular evolution
* phylogenetic & phylodynamic inference
* maximum likelihood and Bayesian statistics

Attendees will apply these concepts to a number of applications yielding biological insight into:
* epidemiology
* pathogen evolution
* macroevolution of species

The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments from the output of the sequencers. We then present methods to directly analyze this alignment (such as BLAST algorithm, GWAS approaches). Second, we introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Third, we employ evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phylodynamics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the course, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades. Students will be trained in the algorithms and their application both on paper and in silico as part of the exercises.

Prerequisites / notice
Basic knowledge in linear algebra, analysis, and statistics will be helpful. Some programming experience will be useful for the exercises, but is not required. Programming skills will not be tested in the examination.

This module consists of (a) an introduction to fundamental equations of electromagnetics, mechanics, and heat transfer, (b) a detailed overview of numerical methods for field simulations, and (c) practical examples solved in form of small projects.

Basic knowledge of the fundamental equations and effects of electromagnetics, mechanics, and heat transfer. Knowledge of the main concepts of numerical methods for physical modelling and simulation. Ability (a) to develop own simple field simulation programs, (b) to select an appropriate field solver for a given problem, (c) to perform field simulations, (d) to evaluate the obtained results, and (e) to interactively improve the models until sufficiently accurate results are obtained.

The module begins with an introduction to the fundamental equations and effects of electromagnetics, mechanics, and heat transfer. After the introduction follows a detailed overview of the available numerical methods for solving electromagnetic, thermal and mechanical boundary value problems. This part of the course contains a general introduction into numerical methods, differential and integral forms, linear equation systems, Finite Difference Method (FDM), Boundary Element Method (BEM), Method of Moments (MoM), Multiple Multipole Program (MMP) and Finite Element Method (FEM). The theoretical part of the course finishes with a presentation of multiphysics simulations through several practical examples of HF-engineering such as coupled electromagnetic-mechanical and electromagnetic-thermal analysis of MEMS. In the second part of the course the students will work in small groups on practical simulation problems. For solving practical problems the students can develop and use own simulation programs or chose an appropriate commercial field solver for their specific problem. This practical simulation work of the students is supervised by the lecturers.

Abstract
Introduction to Dynamic Programming and Optimal Control. Covers the fundamental concepts of Dynamic Programming & Optimal Control.

Objective
Understanding of the basic issues and methods in resource and environmental economics; ability to solve typical problems in the field using the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions. Topics are:
- Introduction to resource and environmental economics
- Importance of resource and environmental economics
- Main issues of resource and environmental economics
- Normative basis
- Utilitarianism
- Fairness according to Rawls
- Economic growth and environment
- Externals in the environmental sphere
- Governmental internalisation of externalities
- Private internalisation of externalities: the Coase theorem
- Free rider problem and public goods
- Types of public policy
- Efficient level of pollution
- Tax vs. permits
- Command and Control Instruments

Content
- Optimal price development: the Hotelling-rule
- Effects of exploration and Backstop-technology
- Effects of different types of markets.
- Biological growth function
- Optimal depletion of renewable resources
- Social inefficiency as result of over-use of open-access resources
- Cost-benefit analysis and the environment
- Measuring environmental benefit
- Measuring costs
- Concept of sustainability
- Technological feasibility
- Conflicts sustainability / optimality
- Indicators of sustainability
- Problem of climate change
- Cost and benefit of climate change
- Climate change as international ecological externality
- International climate policy: Kyoto protocol
- Implementation of the Kyoto protocol in Switzerland
- Economy and natural environment, welfare concepts and market failure, external effects and public goods, measuring externalities and contingent valuation, internalisation of externalities; economics of non-renewable resources, economics of renewable resources, cost-benefit analysis, sustainability, and international aspects of resource and environmental economics.

Abstract
The course introduces basic principles, problems and approaches of microeconomics.

Objective
The learning objectives of the course are:
(1) Students must be able to discuss basic principles, problems and approaches in microeconomics. (2) Students can analyse and explain simple economic principles in a market using supply and demand graphs. (3) Students can contrast different market structures and describe firm and consumer behaviour. (4) Students can identify market failures such as externalities related to market activities and illustrate how these affect the economy as a whole. (5) Students can apply simple mathematical treatment of some basic concepts and can solve utility maximization and cost minimization problems.

Lecture notes

Abstract
The course introduces basic principles, problems and approaches of microeconomics.
This course examines the behaviour of macroeconomic variables, such as gross domestic product, unemployment and inflation rates. It tries to answer questions like: How can we explain fluctuations of national economic activity? What can economic policy do against unemployment and inflation? What significance do international economic relations have for Switzerland?

This lecture will introduce the fundamentals of macroeconomic theory and explain their relevance to every-day economic problems.

This course helps you understand the world in which you live. There are many questions about the macroeconomy that might spark your curiosity. Why are living standards so meagre in many African countries? Why do some countries have high rates of inflation while others have stable prices? Why have some European countries adopted a common currency? These are just a few of the questions that this course will help you answer. Furthermore, this course will give you a better understanding of the potential and limits of economic policy. As a voter, you help choose the policies that guide the allocation of society's resources. When deciding which policies to support, you may find yourself asking various questions about economics. What are the burdens associated with alternative forms of taxation? What are the effects of free trade with other countries? What is the best way to protect the environment? How does the government budget deficit affect the economy? These and similar questions are always on the minds of policy makers.

The course webpage (to be found at https://moodle-app2.let.ethz.ch/course/view.php?id=2467) contains announcements, course information and lecture slides.

Besides this textbook, the slides and lecture notes will cover the content of the lecture and the exam questions.

The main aim of this course is to analyse the goals of monetary policy and to review the instruments available to central banks in order to pursue these goals. It will focus on the transmission mechanisms of monetary policy and the differences between monetary policy rules and discretionary policy. It will also make connections between theoretical economic concepts and current real world issues.

This lecture will introduce the fundamentals of monetary economics and explain the working and impact of monetary policy.

Basic knowledge in international economics and a good background in macroeconomics. The course website can be found at: https://moodle-app2.let.ethz.ch/course/view.php?id=2457

The course provides theoretical and practical foundations for understanding and characterizing physical and transport properties of soils/near-surface earth materials, and quantifying hydrological processes and fluxes of mass and energy at multiple scales. Emphasis is given to land-atmosphere interactions, the role of plants on hydrological cycles, and biophysical processes in soils.

Students are able to
- characterize quantitative knowledge needed to measure and parameterize structural, flow and transport properties of partially-saturated porous media.
- quantify driving forces and resulting fluxes of water, solute, and heat in soils.
- apply modern measurement methods and analytical tools for hydrological data collection
- conduct and interpret a limited number of experimental studies
- explain links between physical processes in the vadose-zone and major societal and environmental challenges
Weeks 1 to 3: Physical Properties of Soils and Other Porous Media Units and dimensions, definitions and basic mass-volume relationships between the solid, liquid and gaseous phases; soil texture; particle size distributions; surface area; soil structure. Soil colloids and clay behavior

Soil Water Content and its Measurement - Definitions; measurement methods - gravimetric, neutron scattering, gamma attenuation; and time domain reflectometry; soil water storage and water balance.

Weeks 4 to 5: Soil Water Retention and Potential (Hydrostatics) - The energy state of soil water; total water potential and its components; properties of water (molecular, surface tension, and capillary rise); modern aspects of capillarity in porous media; units and calculations and measurement of equilibrium soil water potential components; soil water characteristic curves definitions and measurements; parametric models; hysteresis. Modern aspects of capillarity

Demo-Lab: Laboratory methods for determination of soil water characteristic curve (SWC), sensor pairing

Lab #1: Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.

Part 2 - Unsaturated steady state flow: unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximate solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties.

Midterm exam

Lab #2: Measurement of vertical infiltration into dry soil column - Green-Ampt, and Philip's approximations; infiltration rates and wetting front propagation.

Part 3 - Use of Hydrus model for simulation of unsaturated flow

Week 10 to 11: Energy Balance and Land Atmosphere Interactions - Radiation and energy balance; evapotranspiration definitions and estimation; transpiration, plant development and transpiration coefficients small and large scale influences on hydrological cycle; surface evaporation.

Week 12 to 13: Solute Transport in Soils. Transport mechanisms of solutes in porous media; breakthrough curves; convection-dispersion eq.; solutions for pulse and step solute application; parameter estimation; salt balance.

Lab #3: Miscible displacement and breakthrough curves for a conservative tracer through a column; data analysis and transport parameter estimation.

Additional topics:

Temperature and Heat Flow in Porous Media - Soil thermal properties; steady state heat flow; nonsteady heat flow; estimation of thermal properties; engineering applications.

Biological Processes in the Vadose Zone An overview of below-ground biological activity (plant roots, microbial, etc.); interplay between physical and biological processes. Focus on soil-atmosphere gaseous exchange; and challenges for bio- and phytoremediation.

Lecture notes

Literature

Supplemental textbook (not mandatory) - Environmental Soil Physics, by: D. Hillel
This course develops and refines tools for evaluating investments (capital budgeting), capital structure, and corporate securities. The course seeks to deepen students' understanding of the link between corporate finance theory and practice.

### Content

**Topics covered**
1. Capital structure: Perfect markets and irrelevance
2. Risk, leverage, taxes, and the cost of capital
3. Leverage and financial ratios
4. Payout policy: Dividends and share repurchases
5. Capital structure: Taxes and bankruptcy costs
6. Capital structure: Information asymmetries, agency costs, cash holdings
7. Valuation: DCF, adjusted present value and WACC
8. Valuation using options
9. The use and pricing of convertible bonds
10. Corporate risk management

### Prerequisites / notice

This course replaces "Advanced Corporate Finance I" (MOEC0288), which will be discontinued from HS16.

### Image Processing and Computer Vision

**Abstract**

**Objective**

Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.

**Notice**

Course material Script, computer demonstrations, exercises and problem solutions.

**Prerequisites**

Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C. The course language is English.

### Information and Communication Technology

**Abstract**

Fundamentals in signal processing, detection/estimation, and machine learning.

I. Linear signal representation and approximation: Hilbert spaces, LMMSE estimation, regularization and sparsity.

**Objective**

The course is an introduction to some basic topics in signal processing, detection/estimation theory, and machine learning.

**Content**

**Notice**

Lecture notes. Prerequisites:
- local bachelors: course "Discrete-Time and Statistical Signal Processing" (5. Sem.)
- others: solid basics in linear algebra and probability theory.

**Prerequisites**

227-0101-00L Discrete-Time and Statistical Signal Processing W 6 credits 4G H.A. Loeliger
The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications: discrete-time linear filters, equalization, DFT, discrete-time stochastic processes, elements of detection theory and estimation theory, LMMSE estimation and LMMSE filtering, LMS algorithm, Viterbi algorithm.

1. Discrete-time linear systems and filters: state-space realizations, z-transform and spectrum, decimation and interpolation, digital filter design, stable realizations and robust inversion.

2. The discrete Fourier transform and its use for digital filtering.

3. The statistical perspective: probability, random variables, discrete-time stochastic processes; detection and estimation: MAP, ML, Bayesian MMSE, LMMSE; Wiener filter, LMS adaptive filter, Viterbi algorithm.

Lecture notes

227-0417-00L Information Theory I

Abstract

This course covers the basic concepts of information theory and of communication theory. Topics covered include the entropy rate of a source, mutual information, typical sequences, the asymptotic equi-partition property, Huffman coding, channel capacity, the channel coding theorem, the source-channel separation theorem, and feedback capacity.

Objective

The fundamentals of Information Theory including Shannon’s source coding and channel coding theorems

Content

The entropy rate of a source, Typical sequences, the asymptotic equi-partition property, the source coding theorem, Huffman coding, Arithmetic coding, channel capacity, the channel coding theorem, the source-channel separation theorem, feedback capacity

Literature

T.M. Cover and J. Thomas, Elements of Information Theory (second edition)

Material Modelling and Simulation

Quantum Chemistry

Abstract

Advanced, but fundamental topics central to the understanding of theory in chemistry and for solving actual chemical problems with a computer.

Examples are:

- Operators derived from principles of relativistic quantum mechanics
- Relativistic effects + methods of relativistic quantum chemistry
- Open-shell molecules + spin-density functional theory
- New electron-correlation theories

Lecture notes

529-0003-00L Advanced Quantum Chemistry

Abstract

Advanced, but fundamental topics central to the understanding of theory in chemistry and for solving actual chemical problems with a computer.

Examples are:

- Operators derived from principles of relativistic quantum mechanics
- Relativistic effects + methods of relativistic quantum chemistry
- Open-shell molecules + spin-density functional theory
- New electron-correlation theories
Objective

The aim of the course is to provide an in-depth knowledge of theory and method development in theoretical chemistry. It will be shown that this is necessary in order to be able to solve actual chemical problems on a computer with quantum chemical methods.

The relativistic re-derivation of all concepts known from (nonrelativistic) quantum mechanics and quantum chemistry lectures will finally explain the form of all operators in the molecular Hamiltonian - usually postulated rather than deduced. From this, we derive operators needed for molecular spectroscopy (like those required by magnetic resonance spectroscopy). Implications of other assumptions in standard non-relativistic quantum chemistry shall be analyzed and understood, too. Examples are the Born-Oppenheimer approximation and the expansion of the electronic wave function in a set of pre-defined many-electron basis functions (Slater determinants). Overcoming these concepts, which are so natural to the theory of chemistry, will provide deeper insights into many-particle quantum mechanics. Also revisiting the workhorse of quantum chemistry, namely density functional theory, with an emphasis on open-shell electronic structures (radicals, transition-metal complexes) will contribute to this endeavor. It will be shown how these insights allow us to make more accurate predictions in chemistry in practice - at the frontier of research in theoretical chemistry.

Content

1) Introductory lecture: basics of quantum mechanics and quantum chemistry
2) Einstein's special theory of relativity and the (classical) electromagnetic interaction of two charged particles
3) Klein-Gordon and Dirac equation; the Dirac hydrogen atom
4) Numerical methods based on the Dirac-Fock-Coulomb Hamiltonian, two-component and scalar relativistic Hamiltonians
5) Response theory and molecular properties, derivation of property operators, Breit-Pauli-Hamiltonian
6) Relativistic effects in chemistry and the emergence of spin
7) Spin in density functional theory
8) New electron-correlation theories: Tensor network and matrix product states, the density matrix renormalization group
9) Quantum chemistry without the Born-Oppenheimer approximation

A set of detailed lecture notes will be provided, which will cover the whole course.

Lecture notes

2) F. Schwabl: Quantenmechanik für Fortgeschrittene (QM II), Springer-Verlag, 1997 [english version available: F. Schwabl, Advanced Quantum Mechanics]
3) R. McWeeny: Methods of Molecular Quantum Mechanics, Academic Press, 1992

Note also the standard textbooks:

A) A. Szabo, N.S. Ostlund, Verlag, Dover Publications
B) I. N. Levine, Quantum Chemistry, Pearson

Prerequisites / notice

Strongly recommended (preparatory) courses are: quantum mechanics and quantum chemistry

Simulation of Semiconductor Devices

Abstract

The course addresses the physical principles of modern semiconductor devices and the foundations of their modeling and numerical simulation. Necessary basic knowledge on quantum-mechanics, semiconductor physics and device physics is provided. Computer simulations of the most important devices and of interesting physical effects supplement the lectures.

Objective

The course aims at the understanding of the principle physics of modern semiconductor devices, of the foundations in the physical modeling of transport and its numerical simulation. During the course also basic knowledge on quantum-mechanics, semiconductor physics and device physics is provided.

Content

The main topics are: transport models for semiconductor devices (quantum transport, Boltzmann equation, drift-diffusion model, hydrodynamic model), physical characterization of silicon (intrinsic properties, scattering processes), mobility of cold and hot carriers, recombination (Shockley-Read-Hall statistics, Auger recombination), impact ionization, metal-semiconductor contact, metal-hydrodynamic model), physical characterization of silicon (intrinsic properties, scattering processes), mobility of cold and hot carriers, recombination (Shockley-Read-Hall, Auger recombination), impact ionization, metal-semiconductor contact, metal-hydrodynamic model), physical characterization of silicon (intrinsic properties, scattering processes), mobility of cold and hot carriers, recombination (Shockley-Read-Hall, Auger recombination), impact ionization, metal-semiconductor contact, metal-insulator-semiconductor structure, and heterojunctions. The exercises are focussed on the theory and the basic understanding of the operation of special devices, as single-electron transistor, resonant tunneling diode, pn-diode, bipolar transistor, MOSFET, and laser. Numerical simulations of such devices are performed with an advanced simulation package (Sentaurus-Synopsys). This enables to understand the physical effects by means of computer experiments.

Lecture notes

Literature

The script (in book style) is sufficient. Further reading will be recommended in the lecture.

Abstract

Finding solutions: what is complexity, problem solving cycle.

Implementing solutions: project management, critical path method, quality control feedback loop.

Controlling solutions: Vensim software, feedback cycles, control parameters, instabilities, chaos, oscillations and cycles, supply and demand, production functions, investment and consumption

Objective

A successful participant of the course is able to:

- understand why most real problems are not simple, but require solution methods that go beyond algorithmic and mathematical approaches
- apply the problem solving cycle as a systematic approach to identify problems and their solutions
- calculate project schedules according to the critical path method
- setup and run systems dynamics models by means of the Vensim software
- identify feedback cycles and reasons for unintended systems behavior
- analyse the stability of nonlinear dynamical systems and apply this to macroeconomic dynamics
Content

Why are problems not simple? Why do some systems behave in an unintended way? How can we model and control their dynamics? The course provides answers to these questions by using a broad range of methods encompassing systems oriented management, classical systems dynamics, nonlinear dynamics and macroeconomic modeling. The course is structured along three main tasks:

1. Finding solutions
2. Implementing solutions
3. Controlling solutions

PART 1 introduces complexity as a system immanent property that cannot be simplified. It introduces the problem solving cycle, used in systems oriented management, as an approach to structure problems and to find solutions.

PART 2 discusses selected problems of project management when implementing solutions. Methods for identifying the critical path of subtasks in a project and for calculating the allocation of resources are provided. The role of quality control as an additional feedback loop and the consequences of small changes are discussed.

PART 3, by far the largest part of the course, provides more insight into the dynamics of existing systems. Examples come from biology (population dynamics), management (inventory modeling, technology adoption, production systems) and economics (supply and demand, investment and consumption). For systems dynamics models, the software program VENSIM is used to evaluate the dynamics. For economic models analytical approaches, also used in nonlinear dynamics and control theory, are applied. These together provide a systematic understanding of the role of feedback loops and instabilities in the dynamics of systems. Emphasis is on oscillating phenomena, such as business cycles and other life cycles.

Lecture notes

Weekly self-study tasks are used to apply the concepts introduced in the lectures and to come to grips with the software program VENSIM. The lecture slides are provided as handouts - including notes and literature sources - to registered students only. All material is to be found on the Moodle platform. More details during the first lecture.

Prerequisites / notice

Self-study tasks (discussion exercises, Vensim exercises), are provided as home work. Weekly exercise sessions (45 min) are used to discuss selected solutions. Regular participation in the exercises is an efficient way to understand the concepts relevant for the final exam.

Theoretical Physics

In the Master's programme in Applied Mathematics 402-0205-00L Quantum Mechanics I is eligible as a course unit in the application area Theoretical Physics. But only if 402-0224-00L Theoretical Physics wasn't or isn't recognised for credits (neither in the Bachelor's nor in the Master's programme).

For the category assignment take contact with the Study Administration Office (www.math.ethz.ch/studiensekretariat) after having received the credits.

Number Title Type ECTS Hours Lecturers

402-0809-00L Introduction to Computational Physics W 8 credits 2V+2U H. Herrmann

This course offers an introduction to computer simulation methods for physics problems and their implementation on PCs and super computers: classical equations of motion, partial differential equations (wave equation, diffusion equation, Maxwell's equation), Monte Carlo simulations, percolation, phase transitions.

Content

Prerequisites / notice

Lecture and exercise lessons in english, exams in German or in English.

402-2203-01L Classical Mechanics W 7 credits 4V+2U G. M. Graf

A conceptual introduction to theoretical physics: Newtonian mechanics, central force problem, oscillations, Lagrangian mechanics, symmetries and conservation laws, spinning top, relativistic space-time structure, particles in an electromagnetic field, Hamiltonian mechanics, canonical transformations, integrable systems, Hamilton-Jacob equation.

402-0861-00L Statistical Physics W 10 credits 4V+2U G. Blatter

This course covers the concepts of classical and quantum statistical physics, and some aspects of kinetic gas theory and hydrodynamics. In a more advanced part degenerate Fermions, Bose-Einstein condensation, real Bose gases, magnetism, general mean field theory and critical phenomena will be addressed.

Objective

This lecture gives an introduction in the basic concepts and applications of statistical physics for the general use in physics and, in particular, as a preparation for the theoretical solid state physics education.

Content

Lecture notes

Lecture notes available in german.

No specific book is used for the course. Relevant literature will be given in the course.

402-0843-00L Quantum Field Theory I W 10 credits 4V+2U C. Anastasiou

This course discusses the quantisation of fields in order to introduce a coherent formalism for the combination of quantum mechanics and special relativity. Topics include:

- Relativistic quantum mechanics
- Quantisation of bosonic and fermionic fields
- Interactions in perturbation theory
- Scattering processes and decays
- Radiative corrections

Objective

The goal of this course is to provide a solid introduction to the formalism, the techniques, and important physical applications of quantum field theory. Furthermore it prepares students for the advanced course in quantum field theory (Quantum Field Theory II), and for work on research projects in theoretical physics, particle physics, and condensed-matter physics.

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1159 of 1571
Abstract
Manifold, Riemannian metric, connection, curvature; Special Relativity; Lorentzian metric; Equivalence principle; Tidal force and spacetime curvature; Energy-momentum tensor, field equations, Newtonian limit; Post-Newtonian approximation; Schwarzschild solution; Mercury's perihelion precession, light deflection.

Objective
Basic understanding of general relativity, its mathematical foundations, and some of the interesting phenomena it predicts.

Abstract
The course provides the necessary knowledge to develop models supporting the solution of given planning problems. This is done by dividing the forecasting problem into sub-problems.

Objective
- Knowledge of methods and algorithms commonly used in transport planning
- Ability to independently develop a transport model able to solve / answer the given problem / questions
- Understanding of algorithms and their implementations commonly used in transport planning

Content
The course provides the necessary knowledge to develop models supporting the solution of given planning problems. Examples of such planning problems are the estimation of traffic volumes, prediction of estimated utilization of new public transport lines, and evaluation of effects (e.g. change in emissions of a city) triggered by building new infrastructure and changes to operational regulations.

To cope with the forecasting problem it is first divided into sub-problems. Then, these are solved using various algorithms like iterative proportional fitting, shortest path algorithms and the method of successive averages.

The course is composed of a lecture part, providing the theoretical knowledge, and a applied part, in which students create their own models. This part takes place in form of a tutorial and consists in the development of a computer program. The programming part is closely guided and particularly suitable for students with little programming experience.

Lecture notes
The slides of the lecture are provided electronically.

Abstract
Characteristic classes, spin structures and Dirac operators, applications of the Atiyah-Singer index theorem, elliptic genus and modular forms.

Objective
- Characteristic classes, spin structures and Dirac operators, applications of the Atiyah-Singer index theorem, elliptic genus and modular forms.

Content
Tentative Syllabus
1. Vector bundles and differential forms (1 lectures)
2. Basics for Characteristic classes such as Stiefel-Whitney classes, Wu Classes, Chern Classes and Pontryagin classes (3 lectures)
3. Spin structures and Dirac operators (2 lectures)
4. Atiyah-Singer Index theorem and its application (1-2 lectures)
5. Multiplicative sequences and various genera (1 lecture)
6. Elliptic genus and modular forms (1 lecture)
7. Miraculous cancellation formulas for Hirzebruch L genus (1 lecture)
8. Miscellaneous topics (1 lecture)

Literature
1. Characteristic Classes by Milnor
2. Differential Forms in Algebraic Topology by Bott & Tu
3. Manifolds and Modular Forms by Hirzebruch, Berger and Jung

Prerequisites / notice
Prerequisite: Algebraic Topology.

</table>

Abstract
Much of the progress in algebraic number theory aimed at solving concrete Diophantine equations. At the heart of the problem lies the fact that the ring of integers of a number field does not have unique factorization. The "class group" measures how much this property fails. The seminar will present basic results around this invariant, including finiteness and the relation to zeta functions.
The seminar is centered around a topic in probability theory which changes each semester. Our basic reference will be chapters I and VII of Neukirch's book "Algebraic number theory" (Grundlehren Math. Wiss. 322. Springer-Verlag, Berlin, 1999). Additional references will be given at the beginning of the seminar.

Basic knowledge of algebraic structures (groups, rings, fields) and Galois theory, at the level of Algebra I and II. More advanced topics will be explained when needed.

The following topics will be covered:
- The quadratic reciprocity law
- The geometry of numbers
- Integral quadratic forms
- Number fields and rings of integers
- Finiteness of the class number
- Unique factorization of ideals
- The Dedekind zeta function of a number field and the class number formula

Introduction and current research topics in the theory and implementation of Monte Carlo and quasi-Monte Carlo methods and applications.

Monte Carlo and Quasi-Monte Carlo Methods:
- To read and understand a research paper and present it in an understandable way to other students.
- The seminar covers measure theoretic tools used for the analysis and approximation of nonlinear hyperbolic partial differential equations. In particular, we will discuss Young measures, compensated compactness, weak-strong uniqueness and algorithms for the approximation of measure-valued solutions. The participants will present individual topics based on the study of research papers.

Number of participants limited to 12. Registration to the seminar will only be effective once confirmed by email from the organizers.

The number of participants to the seminar is limited. Registration to the seminar will only be effective once confirmed by email from the organizers.

Limited number of participants. Registration to the seminar will only be effective once confirmed by email from the organizers.

The student seminar in probability is held at times at the undergraduate level (typically during the spring term) and at times at the graduate level (typically during the autumn term). The themes vary each semester.

The number of participants to the seminar is limited. Registration to the seminar will only be effective once confirmed by email from the organizers.

The seminar is (probably) followed by a more advanced course on Class Field Theory on the Spring Semester. Our basic reference will be chapters I and VII of Neukirch's book "Algebraic number theory" (Grundlehren Math. Wiss. 322. Springer-Verlag, Berlin, 1999). Additional references will be given at the beginning of the seminar.

Basic knowledge of algebraic structures (groups, rings, fields) and Galois theory, at the level of Algebra I and II. More advanced topics will be explained when needed.

We are open to extend the list of topics by others that are of special interests to the attending students.

Some advanced topics may be added, if needed, and optional reading material may be provided.

The number of participants to the seminar is limited. Registration to the seminar will only be effective once confirmed by email from the organizers.

Limited number of participants.

Only students who fulfill the following criteria are allowed to begin with their master's thesis:
- a. successful completion of the bachelor programme;
- b. fulfilling of any additional requirements necessary to gain admission to the master programme.

No direct enrolment to this course unit in myStudies. Please fill in the online application form. Requirements and application form under www.math.ethz.ch/intranet/students/study-administration/theses.html (Afterwards the enrolment will be done by the Study Administration.)

Abstract
The master's thesis concludes the study programme. Writing up the master's thesis allows students to independently produce a major piece of work on a mathematical topic. It generally involves consulting the literature, solving any ensuing problems, and putting together the results in writing.

ZüKoSt: Seminar on Applied Statistics

E- 0 credits 1K

This is no lecture. There is no exam and no credit points will be awarded. The current program can be found on the web:
http://stat.ethz.ch/events/zukost
Course language is English or German and may depend on the speaker.

Talks in Financial and Insurance Mathematics

E- 0 credits 1K
P. Cheridito, M. Schweizer, M. Soner, J. Teichmann, M. V. Wüthrich

Regular research talks on various topics in mathematical finance and actuarial mathematics

Optimization Seminar

E- 0 credits 1K
R. Weismantel, R. Zenklusen

Lectures on current topics in optimization
Exposé graduate students to ongoing research activites (including applications) in the domain of optimization.
This seminar is a forum for researchers interested in optimization theory and its applications. Speakers are expected to stimulate discussions on theoretical and applied aspects of optimization and related subjects. The focus is on efficient algorithms for continuous and discrete optimization problems, complexity analysis of algorithms and associated decision problems, approximation algorithms, mathematical modeling and solution procedures for real-world optimization problems in science, engineering, industries, public sectors etc.

Colloquium on Mathematics, Computer Science, and Education

E- 0 credits
N. Hungerbühler, M. Akveld, J. Hromkovic, H. Klemenz

Subject didactics for mathematics and computer science teachers.
Didactics colloquium

The Zurich Physics Colloquium

Research colloquium
Occasionally, talks may be delivered in German.

Research colloquium
The Zurich Physics Colloquium is jointly organized by the University of Zurich and ETH Zurich. Its mission is to bring both students and faculty with diverse interests in theoretical physics together. Leading experts explain the basic questions in their field of research and communicate the fascination for their work.

Computer Science Colloquium

E- 0 credits 2K
Lecturers
Invited talks, covering the entire scope of computer science. External Listeners are welcome at no charge. A detailed schedule is published at the beginning of each semester.
Top international computer scientists take the floor at the distinguished computer science colloquium. Our guest speakers present impacting topics across various areas of the discipline. The colloquium series is held every semester and also includes inaugural and farewell lectures of the department's professors. The colloquium is a noteworthy event for all graduate students. Outside attendance is equally welcome.
Eingeladene Vorträge aus dem gesamten Bereich der Informatik, zu denen auch Auswärtige kostenlos eingeladen sind. Zu Semesterbeginn erscheint jeweils ein ausführliches Programm.

Seminar in Theoretical Computer Science

E- 2 credits 2S
E. Welzl, B. Gärtner, M. Hoffmann, J. Lengler, A. Steger, B. Sudakov
Presentation of recent publications in theoretical computer science, including results by diploma, masters and doctoral candidates.
The goal is to introduce students to current research, and to enable them to read, understand, and present scientific papers.

Course Units for Additional Admission Requirements

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1165 of 1571
doctoral students) CANNOT enrol for this course unit.

Abstract
Introduction to the abstract measure theory and integration, including the following topics: Lebesgue measure and Lebesgue integral, Lp-spaces, convergence theorems, differentiation of measures, product measures (Fubini's theorem), abstract measures, Radon-Nikodym theorem, probabilistic language.

Objective
Basic acquaintance with the theory of measure and integration, in particular, Lebesgue's measure and integral.

Literature
1. Lecture notes by Professor Michael Struwe (http://www.math.ethz.ch/~struwe/Skripten/AnalysisIII-SS2007-18-4-08.pdf)
2. L. Evans and R.F. Gariepy "Measure theory and fine properties of functions"
3. Walter Rudin "Real and complex analysis"
4. R. Bartle The elements of Integration and Lebesgue Measure

406-2554-AAL
Topology
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Topological spaces, continuous maps, connectedness, compactness, separation axioms, metric spaces, quotient spaces, homotopy, fundamental group and covering spaces, van Kampen Theorem, surfaces and manifolds.

Literature
Klaus Jänich: Topologie (Springer-Verlag)
http://www.springerlink.com/content/978-3-540-21393-2/fulltext/#section=592889&page=1
James Munkres: Topology (Prentice Hall)
William Massey: Algebraic Topology: an Introduction (Springer-Verlag)
Alan Hatcher: Algebraic Topology (Cambridge University Press)
http://www.math.cornell.edu/~hatcher/AT/ATpage.html

Prerequisites / notice
The precise content changes with the examiner. Candidates must therefore contact the examiner in person before studying the material.

406-2604-AAL
Probability and Statistics
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Introduction to probability and statistics with many examples, based on chapters from the books "Probability and Random Processes" by G. Grimmett and D. Stirzaker and "Mathematical Statistics and Data Analysis" by J. Rice.

Objective
The goal of this course is to provide an introduction to the basic ideas and concepts from probability theory and mathematical statistics. In addition to a mathematically rigorous treatment, also an intuitive understanding and familiarity with the ideas behind the definitions are emphasized. Measure theory is not used systematically, but it should become clear why and where measure theory is needed.

Content
Probability:
Chapters 1-5 (Probabilities and events, Discrete and continuous random variables, Generating functions) and Sections 7.1-7.5 (Convergence of random variables) from the book "Probability and Random Processes". Most of this material is also covered in Chap. 1-5 of "Mathematical Statistics and Data Analysis"; on a slightly easier level.

Statistics:
Sections 8.1 - 8.5 (Estimation of parameters), 9.1 - 9.4 (Testing Hypotheses), 11.1 - 11.3 (Comparing two samples) from "Mathematical Statistics and Data Analysis".

Literature

406-3461-AAL
Functional Analysis I
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Banach category; Banach spaces and linear operators; Fundamental theorems: Open Mapping Theorem, Closed Range Theorem, Uniform Boundedness Principle, Hahn-Banach Theorem; Convexity; reflexive spaces; Spectral theory.

Lecture notes
Lecture notes by Professor Michael Struwe (http://www.math.ethz.ch/~struwe/Skripten/FA-I-II-26-8-08.pdf)
or Lecture notes by Prof. Einsiedler and Ward (https://dl.dropboxusercontent.com/u/2098511/FAnotes.pdf)

Literature
Numerous texts in English or German

406-3621-AAL
Fundamentals of Mathematical Statistics
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
The course covers the basics of inferential statistics.

ECTS European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
The course advances basic knowledge in pharmacology and toxicology. Special emphasis is placed on the interrelationship between pharmaceutical, pathophysiological and clinical aspects of drug therapy in the fields of infectious diseases and cancer. The course also provides an overview of the field of pharmacogenomics, with a special focus on the role of genetic polymorphisms in disease susceptibility, drug response and adverse effects.

**Objective**

- To familiarize participants with the principle methods and applications of pharmacocoeidemiology and drug safety that is relevant for industry, regulatory affairs, but also for clinical pharmacists in hospitals and office pharmacies.
- Perform independently a causality assessment of suspected adverse drug reactions in patients
- Study designs and biostatistics used for the quantitative evaluation of drug safety
- Setup of programs that can effectively reduce medication errors and improve drug safety in clinical practice, particularly in hospitals
- Historical landmarks of drug safety
- Pharmacovigilance and causality assessment
- To familiarize participants with the principle methods and applications of pharmacocoeidemiology and drug safety that is relevant for industry, regulatory affairs, but also for clinical pharmacists in hospitals and office pharmacies.
- Perform independently a causality assessment of suspected adverse drug reactions in patients
- Study designs and biostatistics used for the quantitative evaluation of drug safety
- Setup of programs that can effectively reduce medication errors and improve drug safety in clinical practice, particularly in hospitals
- Pharmacovigilance and causality assessment
- Data safety in premarking clinical trials
- Descriptive, cohort and case-control drug safety study designs; Data analysis and control of confounding
- Pharmacocoeidemiology and regulatory decision making in drug safety; Risk management plans (RMPs)
- Medication errors, clinical pharmacology / clinical pharmacy
- Clinical Decision Support Systems, Interventional Pharmacoeidemiology
- Pharmacoeidemiological databases, 'Big Data'
- Interactive discussion of many real-life examples for each topic

**Content**

- Data: 06.08.2018 12:56  
  Autumn Semester 2016  
  Page 1168 of 1571
Drug therapy is nothing less than interference with a highly complex biological system, which is affected by various internal and external factors. A profound understanding of drug effects thus requires a transdisciplinary approach of investigation. The drug seminars provide a platform for the presentation and discussion of these transdisciplinary approaches for the investigation of drug action.

The faculty members of the Institute of Pharmaceutical Sciences offer specific projects from different areas of the pharmaceutical sciences, each of which is elaborated by a small group of students (4-8). Each group is tutored by a faculty member. The objective of this work is to achieve an in-depth understanding of the problem investigated and to present the results of the work to an audience composed of all students participating in the drug seminar and the faculty of the Institute of Pharmaceutical Sciences. Presentations will take place in the framework of a dedicated mini-symposium, which is part of the external seminar week. The possibility exists to invite external experts from industry or the public health sector to participate in the mini-symposium. Students are strongly encouraged to make use of this option and will again be supported in these efforts by the faculty members.
The lecture series provides an introduction to computer applications in medicinal chemistry. A focus is on molecular representations, Computer-Assisted Drug Design

To develop a critical understanding of the relevance and limitations of the current approaches to explaining and anticipating drug effects.

ECTS

Recommended textbooks:

Gaining insight into the glycobiology of therapeutically used glycoproteins. This implies knowing and understanding

In December 2006, Pfizer stopped a large phase III study on the use of Torcetrapib for the prevention of atherosclerosis and cardiovascular

W

V. I. Otto

Abstract

lecture plan:

1. Introduction: Carbohydrates - "life's first language"  
2. Tissue plasminogen activator (t-PA), glucocerebrosidase and the biosynthesis of N-glycans  
3. PSGL-1 and the biosynthesis of O-glycans; P-selectin and other lectins  
4. The glycoprotein hormones and the production and analysis of therapeutic glycoproteins  
5. Monoclonal antibodies and the modification of their therapeutic profile through glycoengineering  
6. EPO "the same but different"

Lecture notes

The slides used for the lectures will be provided online

Literature

Prerequisites / notice

Requirements: Basic knowledge in immunology, molecular biology, protein chemistry and analytics. Basic knowledge in pharmacology.

535-0300-00L Molecular Mechanisms of Drug Actions and Targets W 1 credit 1V V. I. Otto

Abstract

On average one drug per year is withdrawn from the market. Using selected examples of such drug failures, the course aims at analyzing and discussing the present explanations of drug actions as well as the design and predictive power of animal models and clinical trials. In addition, the ethical, societal, and economical expectations in new drugs shall be reflected.

Objective

To critically appraise the ethical, societal, economical and political expectations in the development of new drugs.

Content

In December 2006, Pfizer stopped a large phase III study on the use of Torcetrapib for the prevention of atherosclerosis and cardiovascular disease. 800 million $ in development costs and 21 billion $ in stocks were annihilated overnight. The failure of Torcetrapib has pinpointed the limitations of an extremely reductionist view of atherosclerosis and it's prevention by drug therapy. It has also highlighted what high expectations we have in a safe and wide applicability of drugs and of their economical success.

Torcetrapib is not a single case. In the last 10 years, on average one drug per year was withdrawn from the market due to lack of efficacy, unexpected side effects or toxicity. This clearly shows that the common investigations and the modern understanding of drug actions are often not sufficient to predict the effects a drug will have in large patient populations.

These are the topics of the present course. Using three particularly informative examples of drug failures, the problems encountered and the concepts and informative value of preclinical and clinical studies will be analyzed and discussed. Furthermore, the ethical, societal, economical and political expectations in new drugs shall be reflected.

Lecture notes

Printouts of the slides used for the lectures and literature for reading and discussions will be available online.

Literature

Recommended reading: John Abramson, Overdo$ed America, Harper Perennial, New York 2008

Prerequisites / notice

Requirements: basic knowledge in Medicinal Chemistry and Pharmacology. Ability to read and understand scientific publications written in English.

535-0022-00L Computer-Assisted Drug Design W 1 credit 1V G. Schneider

Abstract

The lecture series provides an introduction to computer applications in medicinal chemistry. A focus is on molecular representations, property predictions, molecular similarity concepts, virtual screening techniques, and de novo drug design. All theoretical concepts and algorithms presented are illustrated by practical applications and case studies

Objective

The students will learn how computer simulation generates ideas for drug design and development, understand the theoretical principles of property prediction and computer-generated compound generation, and understand possibilities and limitations of computer-assisted drug design in pharmaceutical chemistry. As a result, they are prepared for professional assessment of computer-assisted drug design projects in medicinal chemistry projects.

Literature

Recommended textbooks:

Prerequisites / notice

Successful participation in this course is required for a research project ("Forschungspraktikum") in the CADD group.

851-0180-00L Research Ethics ■ W 2 credits 2G G. Achermann

Particularly suitable for students of D-BIOL, D-CHAB, D-HEST

Abstract

This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Data: 06.08.2018 12:56 Autumn Semester 2016 Page 1170 of 1571
Objective

The main goal of this course is to enhance the student’s ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.

Content

I. Ethics & The Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 Rs (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes

Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.
Abstract
Discovering Management offers an introduction to the field of business management and entrepreneurship for engineers and natural scientists. The module provides an overview of the principles of management, teaches knowledge about management that is highly complementary to the students' technical knowledge, and provides a basis for advancing the knowledge of the various subjects offered at D-MTEC.

Objective
Discovering Management combines in an innovative format a set of lectures and an advanced business game. The learning model for Discovering Management involves 'learning by doing'. The objective is to introduce the students to the relevant topics of the management literature and give them a good introduction in entrepreneurship topics too. The course is a series of lectures on the topics of strategy, innovation, corporate finance, leadership, design thinking and corporate social responsibility. While the 14 different lectures provide the theoretical and conceptual foundations, the experiential learning outcomes result from the interactive business game. The purpose of the business game is to analyze the innovative needs of a large multinational company and develop a business case for the company to grow. This business case is as relevant to someone exploring innovation within an organization as it is if you are planning to start your own business. By discovering the key aspects of entrepreneurial management, the purpose of the course is to advance students' understanding of factors driving innovation, entrepreneurship, and company success.

Content
Discovering Management aims to broaden the students' understanding of the principles of business management, emphasizing the interdependence of various topics in the development and management of a firm. The lectures introduce students not only to topics relevant for managing large corporations, but also touch upon the different aspects of starting up your own venture. The lectures will be presented by the respective area specialists at D-MTEC.

The course broadens the view and understanding of technology by linking it with its commercial applications and with society. The lectures are designed to introduce students to topics related to strategy, corporate innovation, leadership, corporate and entrepreneurial finance, value chain analysis, corporate social responsibility, and business model innovation. Practical examples from industry experts will stimulate the students to critically assess these issues. Creative skills will be trained by the business game exercise, a participant-centered learning activity, which provides students with the opportunity to place themselves in the role of Chief Innovation Officer of a large multinational company. As they learn more about the specific case and identify the challenge they are faced with, the students will have to develop an innovative business case for this multinational corporation. Doing so, this exercise will provide an insight into the context of managerial problem-solving and corporate innovation, and enhance the students' appreciation for the complex tasks companies and managers deal with. The business game presents a realistic model of a company and provides a valuable learning platform to integrate the increasingly important development of the skills and competences required to identify entrepreneurial opportunities, analyse the future business environment and successfully respond to it by taking systematic decisions, e.g. critical assessment of technological possibilities.

Prerequisites / notice
Discovering Management is designed to suit the needs and expectations of Bachelor students at all levels as well as Master and PhD students not belonging to D-MTEC. By providing an overview of Business Management, this course is an ideal enrichment of the standard curriculum at ETH Zurich.

No prior knowledge of business or economics is required to successfully complete this course.

Enrolment only for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students,
doctoral students) CANNOT enrol for this course unit.

Abstract
Introduction to basic methods and fundamental concepts of statistics and probability theory for non-mathematicians. The concepts are presented on the basis of some descriptive examples. Learning the statistical program R for applying the acquired concepts will be a central theme.

Objective
The objective of this course is to build a solid foundation in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

Content
From "Statistics for research" (online)
Ch 1: Basics
Ch 2: The R Environment
Ch 3: Probability and distributions
Ch 4: Descriptive statistics and tables
Ch 5: One- and two-sample tests
Ch 6: Regression and correlation

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Abstract
Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Objective
The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

Content
The focus is animal cells and the development of multicellular organisms with a clear emphasis on the molecular basis of cellular structures and phenomena. The topics include biological membranes, the cytoskeleton, protein sorting, energy metabolism, cell cycle and division, viruses, extracellular matrix, cell signaling, embryonic development and cancer research.

535-0135-AAL Clinical Chemistry I E- 1 credit 2R M. Hersberger

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Abstract
Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Objective
Overview of the possibilities and limitations in clinical laboratory diagnostics. Indications and methods of everyday parameters are known.

Content
Introduction into medical laboratory diagnostics: immunochemical methods, diagnostics of inflammation, acute myocardial infarction, lipid metabolism, diabetes, kidney function and urinary diagnostics, blood coagulation, blood count, therapeutic drug monitoring and drugs of abuse screening, common diagnostics of liver diseases, point-of-care diagnostics.

Wearable Systems

Abstract
Context recognition in mobile communication systems like mobile phone, smart watches and wearable computer will be studied using advanced methods from sensor data fusion, pattern recognition, statistics, data mining and machine learning.

Objective
Using internal sensors and sensors in our environment including data from the wristwatch, bracelet or internet (crowd sourcing), our 'smart phone' detects our context continuously, e.g. where we are, what we are doing, with whom we are together, what is our constitution, what are our needs. Based on this information our 'smart phone' offers us the appropriate services like a personal assistant. Context comprises user's behavior, his activities, his local and social environment.

Content
Using internal sensors and sensors in our environment including data from the wristwatch, bracelet or internet (crowd sourcing), our 'smart phone' detects our context continuously, e.g. where we are, what we are doing, with whom we are together, what is our constitution, what are our needs. Based on this information our 'smart phone' offers us the appropriate services like a personal assistant. Context recognition - what is the situation of the user, his activity, his environment, how is he doing, what are his needs - as the central functionality of mobile systems constitutes the focus of the course.

The main topics of the course include
- Sensor nets, sensor signal processing, data fusion, time series (segmentation, similarity measures), supervised learning (Bayes Decision Theory, Decision Trees, Random Forest, kNN-Methods, Support Vector Machine, Adaboost, Deep Learning), clustering (k-means, dbscan, topic models), Recommender Systems, Collaborative Fitting, Crowdsourcing.
- The exercises show concrete design problems like motion and gesture recognition using distributed sensors, detection of activity patterns and identification of the local environment.
- Presentations of the PhD students and the visit at the Wearable Computing Lab introduce in current research topics and international research projects.
- Language: german/english (depending on the participants)

Analog Integrated Circuits

Abstract
Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems.

Objective
The basic elements, design issues and techniques for analog integrated circuits will be taught in this course.

Content
Review of bipolar and MOS devices and their small-signal equivalent circuit models; Building blocks in analog circuits such as current sources, active load, current mirrors, supply independent biasing etc; Amplifiers: differential amplifiers, cascode amplifier, high gain structures, output stages, gain bandwidth product of op-amps; Stability; Comparators; Second-order effects in analog circuits such as mismatch, noise and offset; A/D and D/A converters; Introduction to switched capacitor circuits.

Objective
At the end of the lecture the student should understand four key phenomena of electron transport in semiconductor nanostructures:
1. The integer quantum Hall effect
2. Conductance quantization in quantum point contacts
3. the Aharonov-Bohm effect
4. Coulomb blockade in quantum dots

Prerequisites / notice The course is taught in English.

Abstract The lecture deals with constitutive models that are relevant for design and calculation of structures. These include anisotropic linear elasticity, linear viscoelasticity, plasticity, viscoplasticity. Homogenization theories and laminate theory are presented. Theoretical models are complemented by examples of engineering applications and experiments.

Objective Basic theories for solving continuum mechanics problems of engineering applications, with particular attention to material models.

Prerequisites / notice The course is taught in English. Very ambitious students in the third year may be able to follow. The lecture is also part of the PhD-program.

Abstract
This module consists of (a) an introduction to fundamental equations of electromagnetics, mechanics and heat transfer, (b) a detailed overview of numerical methods for field simulations, and (c) practical examples solved in form of small projects.

Objective
Basic knowledge of the fundamental equations and effects of electromagnetics, mechanics, and heat transfer. Knowledge of the main concepts of numerical methods for physical modelling and simulation. Ability (a) to develop own simple field simulation programs, (b) to select an appropriate field solver for a given problem, (c) to perform field simulations, (d) to evaluate the obtained results, and (e) to interactively improve the models until sufficiently accurate results are obtained.

Content
The module begins with an introduction to the fundamental equations and effects of electromagnetics, mechanics, and heat transfer. After the introduction follows a detailed overview of the available numerical methods for solving electromagnetic, thermal and mechanical boundary value problems. This part of the course contains a general introduction into numerical methods, differential and integral forms, linear equation systems, Finite Difference Method (FDM), Boundary Element Method (BEM), Method of Moments (MoM), Multiple Multipole Program (MMP) and Finite Element Method (FEM). The theoretical part of the course finishes with a presentation of multiphysics simulations through several practical examples of HF-engineering such as coupled electromagnetic-mechanical and electromechanical-thermal analysis of MEMS.

In the second part of the course the students will work in small groups on practical simulation problems. For solving practical problems the students can develop and use own simulation programs or chose an appropriate commercial field solver for their specific problem. This practical simulation work of the students is supervised by the lecturers.

ECTS: 4 credits

Title: High Performance Computing for Science and Engineering (HPCSE) I

Abstract
This course gives an introduction into algorithms and numerical methods for parallel computing for multi and many-core architectures and for applications from problems in science and engineering.

Objective
Introduction to HPC for scientists and engineers
Fundamental of:
1. Parallel Computing Architectures
2. MultiCores
3. ManyCores

Content
Programming models and languages:
1. C++ threading (2 weeks)
2. OpenMP (4 weeks)
3. MPI (5 weeks)

Computers and methods:
1. Hardware and architectures
2. Libraries
3. Particles: N-body solvers
4. Fields: PDEs
5. Stochastics: Monte Carlo

Lecture notes: http://www.cse-lab.ethz.ch/index.php/teaching/42-teaching/classes/615-hpcse1

Class notes, handouts

Content:

Objective
Students learn the individual process steps that are required for the fabrication of MEMS (Micro Electro Mechanical System). Students carry out the production, processing and characterization of the MEMS is documented and evaluated in a final report. Limited access is given.

Content
Participating students are required to provide proof that they have personal accident insurance prior to the start of the laboratory portion of the course.

Prerequisites / notice
Participating students are required to attend all scheduled lectures and meetings of the course.

This master's level course is limited to 15 students per semester for safety and efficiency reasons.

If there are more than 15 students registered, we regret to restrict access to this course by the following rules:

Priority 1: master students of the master's program in "Micro and Nanosystems"
Priority 2: master students of the master's program in "Mechanical Engineering" with a specialization in Microsystems and Nanoscale Engineering (MAYT-tutors Profes Danko, Dual, Hierold, Kourmoutsakos, Nelson, Norris, Park, Poulikakos, Pratsinis, Stemmer), who attended the bachelor course "151-0621-00L Microsystems Technology" successfully.
Priority 3: master students, who attended the bachelor course "151-0621-00L Microsystems Technology" successfully.
Priority 4: all other students (PhD, bachelor, master) with a background in silicon or Microsystems process technology.

If there are more students in one of these priority groups than places available, we will decide by drawing lots.

Students will be notified at the first lecture of the course (introductory lecture) as to whether they are able to participate.

The course is offered in autumn and spring semester.
Abstract
Plane Waves, harmonic waves, Fourier analysis and synthesis, dispersion, distortion, damping, group and phase velocity, transmission and reflection, impact, waves in linear elastic continua, plastic waves, experimental and numerical methods in wave propagation.

Objective
Students learn, which technical problems must be approached using the methods used in wave propagation in solids. Furthermore, they learn to use these methods and develop an intuitive feeling for phenomena that can be expected in various situations.

Content
Wave Propagation in solids including applications.

Lecture notes
Handouts

Literature
Various books will be recommended pertaining to the topics covered.

Language according to the wishes of students.

151-0255-00L Energy Conversion and Transport in Biosystems W 4 credits 2V+1U D. Poulilakkos, A. Ferrar
Abstract
Theory and application of thermodynamics and energy conversion in biological systems with focus on the cellular level.

Objective
The understanding of the basic features governing solutes transport in the principal systems of the human cell. Connection of characteristics and patterns from other fields of engineering to biofluidics. Heat and mass transport processes in the cell, generation of forces, work and relation to biomedical technologies.

Content
Mass transfer models for the transport of chemical species in the human cell. Organization and function of the cell membrane and of the cell cytoskeleton. The role of molecular motors in cellular force generation and their function in cell migration. Description of the functionality of these systems and of analytical experimental and computational techniques for understanding of their operation. Introduction to cell metabolism, cellular energy transport and cellular thermodynamics.

Lecture notes
Material in the form of hand-outs will be distributed.

Literature
Lecture notes and references therein.

402-0572-00L Aerosols I: Physical and Chemical Principles W 4 credits 2V+1U M. Gysel, U. Baltensperger, H. Bartscher
Abstract
Aerosols I deals with basic physical and chemical properties of aerosol particles. The importance of aerosols in the atmosphere and in other fields is discussed.

Objective
Knowledge of basic physical and chemical properties of aerosol particles and their importance in the atmosphere and in other fields

Content
Physical and chemical properties of aerosols, aerosol dynamics (diffusion, coagulation...), optical properties (light scattering, -absorption, -extinction), aerosol production, physical and chemical characterization.

Lecture notes
Material is distributed during the lecture

Literature

151-0605-00L Nanosystems W 4 credits 4G A. Stemmer, J.N. Tisserant
Abstract
From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

Objective
Intermolecular forces, their macroscopic manifestations, and ways to control such interactions.

Content
Self-assembly and directed assembly of 2D and 3D structures.

Special emphasis is placed on the emerging field of molecular electronic devices.

Topics are treated in 2 blocks:
(I) From Quantum to Continuum
From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

(II) Interaction Forces on the Micro and Nano Scale
Intermolecular forces, their macroscopic manifestations, and ways to control such interactions.

Self-assembly and directed assembly of 2D and 3D structures.

Literature

(II) Interaction Forces on the Micro and Nano Scale
Intermolecular forces, their macroscopic manifestations, and ways to control such interactions.

Self-assembly and directed assembly of 2D and 3D structures.

Literature

Prerequisites / notice
Course format:
Lectures and Mini-Review presentations: Thursday 10-13, ML F 36

Homework: Mini-Reviews
Students select a paper (list distributed in class) and expand the topic into a Mini-Review that illuminates the particular field beyond the immediate results reported in the paper.

529-0611-00L Characterization of Catalysts and Surfaces W 7 credits 3G J. A. van Bokhoven, D. Ferri
Abstract
Basic elements of surface science important for materials and catalysis research. Physical and chemical methods important for research in surface science, material science and catalysis are considered and their application is demonstrated on practical examples.
The course addresses the physical principles of modern semiconductor devices and the foundations of their modeling and numerical simulation. Necessary basic knowledge on quantum-mechanics, semiconductor physics and device physics is provided. Computer simulations of the most important devices and of interesting physical effects supplement the lectures.

Abstract

The course aims at the understanding of the principle physics of modern semiconductor devices, of the foundations in the physical processes in semiconductors, and of the physical characterization of silicon. Transport models for semiconductor devices (quantum transport, Boltzmann equation, drift-diffusion model, hydrodynamic model), physical characterization of silicon (intrinsc properties, scattering processes), and device physics is provided.

Objective

The exercises are focussed on the theory and the basic understanding of the operation of special devices, as single-electron transistor, quantum tunneling diode, pn-diode, bipolar transistor, MOSFET, and laser. Numerical simulations of such devices are performed with an advanced simulation package (Sentaurus-Synopsys). This enables to understand the physical effects by means of computer experiments.

Content

- Rings, fields and linear spaces, normed linear spaces and inner product spaces.
- Ordinary differential equations, existence and uniqueness of solutions.
- Continuous and discrete time, time varying linear systems. Time domain solutions. Time invariant systems treated as a special case.
- Controllability and observability, canonical forms, Kalman decomposition. Time invariant systems treated as a special case.
- Stability and stabilization, observers, state and output feedback, separation principle.
- Realization theory.

**Abstract**
This course provides a comprehensive overview of embedded control systems. The concepts introduced are implemented and verified on a microprocessor-controlled haptic device.

**Objective**
Familiarize students with main architectural principles and concepts of embedded control systems.

**Content**
An embedded system is a microprocessor used as a component in another piece of technology, such as cell phones or automobiles. In this intensive two-week block course the students are presented the principles of embedded digital control systems using a haptic device as an example for a mechatronic system. A haptic interface allows for a human to interact with a computer through the sense of touch.

Subjects covered in lectures and practical lab exercises include:
- The application of C-programming on a microprocessor
- Digital I/O and serial communication
- Quadrature decoding for wheel position sensing
- Queued analog-to-digital conversion to interface with the analog world
- Pulse width modulation
- Timer interrupts to create sampling time intervals
- System dynamics and virtual worlds with haptic feedback
- Introduction to rapid prototyping

**Prerequisites**
Prerequisite courses are Control Systems I and Informatics I.

**Lecture notes**
Lecture notes, lab instructions, supplemental material

**Reference**
Detailed information can be found on the course website
http://www.idsc.ethz.ch/education/lectures/embedded-control-systems.html

**Abstract**
In the framework of this course we will look at a current electronic thermal and energy management strategies and novel energy conversion processes. The course will focus on component level fundamentals of these process and system level analysis of interactions among various energy conversion components.

**Objective**
This course deals with liquid cooling based thermal management of electronics, reuse of waste heat and novel energy conversion and storage systems such as batteries, fuel cells and micro-fuel cells. The focus of the course is on the physics and basic understanding of those systems as well as their real-world applications. The course will also look at analysis of system level interactions between a range of energy conversion components.

**Content**

**Part 1:** Fundamentals:
- Overview of exergy analysis, Single phase liquid cooling and micro-mixing;
- Thermodynamics of multi-component-systems (mixtures) and phase equilibrium;
- Electrochemistry;

**Part 2:** Applications:
- Basic principles of battery;
- Introduction to fuel cells;
- Reuse of waste heat from supercomputers;
- Hotspot targeted cooling of microprocessors;
- Microfluidic fuel cells;

**Part 3:** System-level analysis:
- Integration of the components into the system: a case study;
- Analysis of the coupled operations, identification of critical states;
- Support to system-oriented design;

**Lecture notes**
Lecture slides will be made available. Lecture notes will be available for some topics (in English).

**Prerequisites**
Recommended background:
Undergraduate physics, mathematics, semiconductor devices

**Abstract**
Students are introduced to the basics of micromachining and silicon process technology and will learn about the fabrication of microsystems and devices by a sequence of defined processing steps (process flow).

**Objective**
Students are introduced to the basics of micromachining and silicon process technology and will understand the fabrication of microsystem devices by the combination of unit process steps (process flow).

**Content**
- Introduction to microsystems technology (MST) and micro electro mechanical systems (MEMS);
- Basic silicon technologies: Thermal oxidation, photolithography and etching, diffusion and ion implantation, thin film deposition.
- Specific microsystems technologies: Bulk and surface micromachining, dry and wet etching, isotropic and anisotropic etching, beam and membrane formation, wafer bonding, thin film mechanical and thermal properties, piezoelectric and piezoresistive materials.
- Selected microsystems: Mechanical sensors and actuators, microresonators, thermal sensors and actuators, system integration and encapsulation.

151-0911-00L Uncertainty Quantification for Engineering & Life W 4 credits 2V+1U L. Novotny

Abstract: This course provides fundamental knowledge of surface plasmon polaritons and discusses their applications in plasmonics.

Objective: Electromagnetic oscillations known as surface plasmon polaritons have many unique properties that are useful across a broad set of applications in biology, chemistry, physics, and optics. The field of plasmonics has arisen to understand the behavior of surface plasmon polaritons and to develop applications in areas such as catalysis, imaging, photovoltaics, and sensing. In particular, metallic nanoparticles and patterned metallic interfaces have been developed to utilize plasmic resonances. The aim of this course is to provide the basic knowledge to understand and apply the principles of plasmonics. The course will strive to be approachable to students from a diverse set of science and engineering backgrounds.

Content: Fundamentals of Plasmonics
- Basic electromagnetic theory
- Optical properties of metals
- Surface plasmon polaritons on surfaces
- Surface plasmon polariton propagation
- Localized surface plasmons

Applications of Plasmonics
- Waveguides
- Extraordinary optical transmission
- Enhanced spectroscopy
- Sensing
- Metamaterials

Prerequisites / notice: Class notes and handouts

Lecture notes:

151-0642-00L Seminar on Micro and Nanosystems Z 0 credits 1S C. Hierold

Abstract: Scientific presentations from the field of Micro- and Nanosystems

Objective: In particular, the seminar addresses students, who are interested in scientific work in the field of Micro- and Nanosystem technologies, or who have started already with it. Respectively, current examples in the research will be discussed.

Content: Current themes in the field of Micro- and Nanosystem technologies using the examples of intern and extern research groups, as well as ongoing themes of study-, diploma- and doctoral thesis will be introduced and discussed. The scope of the seminar is broadened by occasional guest speakers.

Prerequisites / notice: Master of MNS, MAVT, ITET, Physics

Prerequisites:
- Physics I
- Physics II

Literature:
- Physics I+II
- Fundamentals of Probability
- Fundamentals of Computational Modeling
- Electrodynamics (or equivalent)
- Electrodynamics (or equivalent)
- Electrodynamics (or equivalent)

151-0104-00L Uncertainty Quantification for Engineering & Life Sciences W 4 credits 3G P. Koumoutsakos

Abstract: Quantitative uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective: The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multiverse architectures.

Content: Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Prerequisites / notice: Fundamentals of Probability, Fundamentals of Computational Modeling

Prerequisites:
- Physics I+II

Literature:
- 1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.
- 2. Probability Theory: The Logic of Science by E. T. Jaynes
- 3. Class Notes

151-0663-00L Nano-Optics W 6 credits 2V+2U L. Novotny

Abstract: Nano-Optics is the study of optical phenomena and techniques on the nanometer scale. It is an emerging field of study motivated by the rapid advance of nanoscience and technology. It embraces topics such as plasmonics, optical antennas, optical trapping, and high-resolution imaging and spectroscopy.

Objective: Understanding concepts of light localization and light-matter interactions on the nanoscale.

Content: Starting with an angular spectrum representation of optical fields the role of inhomogeneous evanescent fields is discussed. Among the topics are: theory of strongly focused light, point spread functions, resolution criteria, confocal microscopy, and near-field optical microscopy. Further topics are: optical interactions between nanoparticles, atomic decay rates in inhomogeneous environments, single molecule spectroscopy, light forces and optical trapping, photonic bandgap materials, and theoretical methods in nano-optics.

Prerequisites / notice: Electrodynamics (or equivalent)

Prerequisites:
- Physics I+II

Literature:
- Physics I+II
- Metamaterials
- Sensing
- Extraordinary optical transmission
- Waveguides
- Localized surface plasmons

151-0468-00L Analog Signal Processing and Filtering W 6 credits 2V+2U H. Schmid

Abstract: Analog signal processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers.
This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers. The way the exam is done allows for the different interests of the two groups.

The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

At the beginning, signal-flow graphs in general and driving-point signal-flow graphs in particular are introduced. We will use them during the whole term to analyze circuits and understand how signals propagate through them. The theory and CMOS implementation of active filters is then discussed in detail using the example of gm-C filters and active-RC filters. The ideal and nonideal behaviour of opamps, current conveyors, and inductor simulators follows. The link to the practical design of circuits and systems is done with an overview over different quality measures and figures of merit used in scientific literature and datasheets. Finally, an introduction to discrete-time and mixed-domain filters and circuits is given, including sensor read-out amplifiers, correlated double sampling, and chopping, and an introduction to sigma-delta A/D and D/A conversion on a system level.

The base for these lectures are lecture notes and two or three published scientific papers. From these papers we will together develop the technical content.

Details: https://people.ee.ethz.ch/~haschmid/aswiki/
The semester project is designed to train the students in the solution of specific engineering problems. This makes use of the technical and social skills acquired during the master's program. Tutors propose the subject of the project, elaborate the project plan, and define the roadmap together with their students, as well as monitor the overall execution.

**Abstract**
The main objective of the 12-week internship is to expose master's students to the industrial work environment. During this period, students have the opportunity to be involved in on-going projects at the host institution.

**Objective**
The main objective of the 12-week internship is to expose master's students to the industrial work environment.
Exchange Students

Courses for Exchange Students

Prepare a study plan
In case the course catalogue of the upcoming semester is not available yet, please expect it to be like the year before.
You can study at ETH Zurich as an exchange student for 1 or 2 semesters, starting in the autumn or in the spring semester.
Exchange students may choose courses from different curricula and years, provided that at least two thirds of all courses are taken in the ETH Zurich department they are registered in. Please be sure to coordinate your schedule with your home university.

Exam sessions and End-of-semester examinations
Like all ETH Zurich students, exchange students are obliged to sit their exams during the official examination periods. Students are requested to be present at ETH Zurich during these periods. You are therefore expected to plan your studies, internships, jobs, and financial means accordingly.

by individual arrangement

Admission only if ALL of the following apply:
a) bachelor program successfully completed;
b) acquired (if applicable) all credits from additional requirements for admission to master program;
c) successfully completed both semester projects.

Note: the conditions above are not applicable to incoming exchange students.

Registration in mystudies required!
Supervisor must be a professor at D-ITET or associated, see https://www.ee.ethz.ch/studies/main-master/projects-and-master-thesis.html.

a. successful completion of the bachelor program;
b. fulfilling of any additional requirements necessary to gain admission to the master programme;
c. successful completion of the semester project and industrial internship;
d. achievement of 28 ECTS in the category "Core Courses".

Data: 06.08.2018 12:56  Autumn Semester 2016  Page 1185 of 1571
The Master's Thesis must be approved in advance by the tutor and is supervised by a professor of ETH Zurich. To choose a titular professor as a supervisor, please contact the D-MAVT Student Administration.

Abstract
Master's programs are concluded by the master's thesis. The thesis is aimed at enhancing the student's capability to work independently toward the solution of a theoretical or applied problem. The subject of the master's thesis, as well as the project plan and roadmap, are proposed by the tutor and further elaborated with the student.

Objective
The thesis is aimed at enhancing the student's capability to work independently toward the solution of a theoretical or applied problem.

<td>Abstract</td>
<td></td>
<td></td>
<td></td>
<td>Thirteen major areas of research have been selected, which cover the key concepts that have led to our current ideas of how the nervous system is built and functions. We will read both original papers and explore the conceptual links between them and discuss the 'society' of science, the pursuit of basic science questions over a century of research.</td>
</tr>
<tr>
<td></td>
<td>Objective</td>
<td></td>
<td></td>
<td></td>
<td>It is a commonplace that scientists rarely cite literature that is older than 10 years and when they do, they usually cite one paper that serves as the representative for a larger body of work that has long since been incorporated anonymously in textbooks. Worse than that, many authors have not even read the papers they cite in their own publications. This course, Foundations of Neuroscience is one antidote. Thirteen major areas of research have been selected, which cover the key concepts that have led to our current ideas of how the nervous system is built and functions. Unusually, we will explore these areas of research by reading the original publications, instead of reading someone else's digested summary from a textbook or review. By doing this, we will learn how the discoveries were made, what instrumentation was used, how the scientists interpreted their own findings, and how their work, often over many decades and linked together with related findings from many different scientists, generate the current views of mechanism and structure of the nervous system. In Part II, students will be provided with the conceptual links between them and discuss the sociology of science, which in this case, the pursuit of basic science questions over a century of research, led to an explosion in applications. We will also explore the personalities of the scientists and the context in which they made their seminal discoveries. Each week the course members will be given original papers to read for homework, they will have to write a short abstract for each paper. We will then meet weekly with the course leader (KACM) and an assistant for an hour-or-so long interactive seminar. An intimate knowledge of the papers will be assumed so that the discussion does not center simply on an explication of the contents of the papers. Assessment will be done continuously as the individual students are asked to explain a figure, technique, or concept.</td>

The Neuroinformatics Journal club aims to train students to present cutting-edge research clearly and efficiently. It leads students to learn about current topics in neurosciences and neuroinformatics, to search the relevant literature and to critically and scholarly appraise published papers. The students learn to present complex concepts and answer critical questions.

Relevant current papers in neurosciences and neuroinformatics are covered.

This course focuses on basic aspects of central nervous system physiology, including perception, motor control, and cognitive functions.

To understand the basic concepts underlying perceptual, motor and cognitive functions.

Main emphasis sensory systems, with complements on motor and cognitive functions.

Abstract

This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

To understand the basic concepts underlying perceptual, motor and cognitive functions.

Abstract

The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

Objective

Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monographs of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

Content

This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

To understand the basic concepts underlying perceptual, motor and cognitive functions.

Abstract

This course teaches methods and models for fMRI data analysis, covering all aspects of statistical parametric mapping (SPM), incl. preprocessing, the general linear model, statistical inference, multiple comparison corrections, event-related designs, and Dynamic Causal Modelling (DCM), a Bayesian framework for identification of nonlinear neuronal systems from neurophysiological data.

Objective

To obtain in-depth knowledge of the theoretical foundations of SPM and DCM and of their application to empirical fMRI data.

Content

This course teaches state-of-the-art methods and models for fMRI data analysis. It covers all aspects of statistical parametric mapping (SPM) incl. preprocessing, the general linear model, frequentist and Bayesian inference, multiple comparison corrections, and event-related designs, and Dynamic Causal Modelling (DCM), a Bayesian framework for identification of nonlinear neuronal systems from neurophysiological data. A particular emphasis of the course will be on methodological questions arising in the context of studies in psychiatry, neurology and neuroeconomics.

Abstract

This course covers analog circuits with emphasis on neuromorphic engineering: MOS transistors in CMOS technology, static circuits, dynamic circuits, systems (silicon neuron, silicon retina, silicon cochlea) with an introduction to multi-chip systems. The lectures are accompanied by weekly laboratory sessions.

Objective

Understanding of the characteristics of neuromorphic circuit elements.

**References**

- "Principles of Neural Science", Kandel, Schwartz, and Jessel.
- "Neuroinformatics: An introduction to the science of the mind", D. Kiper.
Neuromorphic circuits are inspired by the organizing principles of biological neural circuits. Their computational primitives are based on physics of semiconductor circuits. Neuromorphic architectures often rely on collective computation in parallel networks. Adaptation, learning and memory are implemented locally within the individual computational elements. Transistors are often operated in weak inversion (below threshold), where they exhibit exponential I-V characteristics and low currents. These properties lead to the feasibility of high-density, low-power implementations of functions that are computationally intensive in other paradigms. Application domains of neuromorphic circuits include silicon retinas and cochleas for machine vision and audition, real-time emulations of networks of biological neurons, and the development of autonomous robotic systems. This course covers devices in CMOS technology (MOS transistor below and above threshold, floating-gate MOS transistor, phototransducers), static circuits (differential pair, current mirror, transconductance amplifiers, etc.), dynamic circuits (linear and nonlinear filters, adaptive circuits), systems (silicon neuron, silicon retina and cochlea) and an introduction to multi-chip systems that communicate events analogous to spikes. The lectures are accompanied by weekly laboratory sessions on the characterization of neuromorphic circuits, from elementary devices to systems.

Literature

The lecture is covering the basic principles of ionizing radiation and its physical and biological effects. The physical interactions of photons as well as of charged particles will be reviewed and their consequences for medical applications will be discussed. The concept of Monte Carlo simulation will be introduced in the exercises and will help the student to understand the characteristics of ionizing radiation in simple and complex situations. Fundamentals in dosimetry will be provided in order to understand the physical and biological effects of ionizing radiation. Deterministic as well as stochastic effects will be discussed and fundamental knowledge about radiation protection will be provided. In the second part of the lecture series, we will cover the generation of ionizing radiation. By this means, the x-ray tube, the clinical linear accelerator, and different radioactive sources in radiology, radiotherapy and nuclear medicine will be addressed. Applications in radiology, nuclear medicine and radiotherapy will be described with a special focus on the physics underlying these applications.

A script will be provided.

Consciousness: From Philosophy to Neuroscience

(University of Zurich)

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: INI410

Mind the enrolment deadlines at UZH:

http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract

This seminar reviews the philosophical and phenomenological as well as the neurobiological aspects of consciousness. The subjective features of consciousness are explored, and modern research into its neural substrate, particularly in the visual domain, is explained.

Emphasis is placed on students developing their own thinking through a discussion-centered course structure.

Objective

The course's goal is to give an overview of the contemporary state of consciousness research, with emphasis on the contributions brought by modern cognitive neuroscience. We aim to clarify concepts, explain their philosophical and scientific backgrounds, and to present experimental protocols that shed light on a variety of consciousness related issues.

Content

The course includes discussions of scientific as well as philosophical articles. We review current schools of thought, models of consciousness, and proposals for the neural correlate of consciousness (NCC).

Lecture notes

None

Literature

We display articles pertaining to the issues we cover in the class on the course's webpage.

Prerequisites / notice

Since we are all experts on consciousness, we expect active participation and discussions!

Physics in Medical Research: From Atoms to Cells

W 6 credits

B. K. R. Müller

Abstract

Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epifacial growth. For

quantitative descriptive, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.

Objective

The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering. Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body. Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

227-0427-00L

Signal and Information Processing: Modeling, Filtering, Learning

W 6 credits

H.A. Loeliger

Abstract

Fundamentals in signal processing, detection/estimation, and machine learning.

I. Linear signal representation and approximation: Hilbert spaces, LMMSE estimation, regularization and sparsity.

Objective

The course is an introduction to some basic topics in signal processing, detection/estimation theory, and machine learning.

Content

Lecture notes

Lecture notes.

Prerequisites / notice

- local bachelors: course "Discrete-Time and Statistical Signal Processing" (5. Sem.)
- others: solid basics in linear algebra and probability theory.
Abstract
Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

Objective
Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real-world data.

Content
The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.

Topics covered in the lecture include:
- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non-parametric density estimation: Parzen windows, nearest neighbour
- Dimension reduction: principal component analysis (PCA) and beyond

Lecture notes
No lecture notes, but slides will be made available on the course webpage.

Literature

Prerequisites / notice
The course requires solid basic knowledge in analysis, statistics and numerical methods for CSE as well as practical programming experience for solving assignments.
Students should at least have followed one previous course offered by the Machine Learning Institute (e.g., CIL or LIS) or an equivalent course offered by another institution.

Content
- Fuel rod, LWR fuel elements
- Temperature field in fuel rod
- Reactor core, design
- Flux and heat source distribution, cooling channel
- Single-phase convective heat transfer, axial temperature profiles
- Boiling crisis and DNB ratio
- Pressurized water reactors, design
- Primary circuit design
- Steam generator heat transfer, steam generator types
- Boiling water reactors
- Reactor design
- LWR power plant technology
- Other types of reactors (overview)
- Generation IV systems

Required prior knowledge: Neutronics
Prerequisite for: Nuclear Safety (2nd sem.)

151-2043-00L Radiation Protection and Radiation Applications (EPFL)

Abstract
An introductory course in the basic concepts of radiation detection and interactions and energy deposition by ionizing radiation in matter, radioisotope production and its applications in medicine, industry and research. The course includes presentations, lecture notes, problem sets and seminars.

Objective
By the end of the course, the student must be able to:
- Explain the basic physics principles that underpin radiotherapy, e.g. types of radiation, atomic structure, etc.
- Explain the interaction mechanisms of ionizing radiation at keV and MeV energies with matter.
- Explain the principles of radiation dosimetry.
- Explain the principles of therapeutic radiation physics including X-rays, electron beam physics, radioactive sources, use of unsealed sources and Brachytherapy.
- Describe how to use radiotherapy equipment both for tumour localisation, planning and treatment.
- Define quality assurance and quality control, in the context of radiotherapy and the legal requirements.
- Explain the principles and practice of radiation protection, dose limits, screening and protection mechanisms.

Content
Basics: radiation sources and interaction with matter, radioisotope production using reactors and accelerators, radiation protection and shielding.
Medical applications: diagnostic tools, radiopharmaceuticals, cancer treatment methodologies such as brachytherapy, neutron capture therapy and proton therapy.
Industrial applications: radiation gauges, radiochemistry, tracer techniques, radioisotope batteries, sterilization, etc.
Applications in research: dating by nuclear methods, applications in environmental and life sciences, etc.

Literature
Bibliographie: Notes of the lectures; Borel, Favrat Thermodynamique et énergétique PPUR 2005, Haldi et al. Systèmes énergétiques PPUR 2003 (distributed course notes and partial translation of chapters of books)

Prerequisites / notice
Required prior knowledge: Neutronics
Prerequisite for: Nuclear Safety (2nd sem.)

Abstract
To understand the basic principles governing the advanced energy conversion systems and the perspective for technological progress. To present the characteristics of the main fossil and renewable energy systems from a resource and production technology viewpoint. Learning to assess the globally and locally available resources of such energies and be able to dimension roughly the installation required.

Objective
To understand the basic principles governing the advanced energy conversion systems and the perspective for technological progress. To present the essential characteristics of the main fossil and renewable energy systems from a resource and production technology viewpoint. The students will learn to assess the globally and locally available resources of such fossil or renewable energies and be able to make a rough dimensioning of the installations that will use them.

Content
- Overview of fossil and renewable energy resource characteristics
- Reminder of Thermodynamic Laws and exergy theory
- Vapour and gas cycles, combined cycles. Natural gas, coal and nuclear power plants
- Fuel cell principles and technologies. Hybrid fuel cell - turbine cycles
- Technologies of heat pumps (compression, absorption, magnetic) and Organic Rankine Cycles (ORC). Co- and tri-generation
- Biomass technologies for both fuel (liquid or gas) or renewable energies and be able to make a rough dimensioning of the installations that will use them.

Literature
Bibliographie: Notes of the lectures; Borel, Favrat Thermodynamique et énergétique PPUR 2005, Haldi et al. Systèmes énergétiques PPUR 2003 (distributed course notes and partial translation of chapters of books)

Prerequisites / notice
Required prior knowledge: Basic knowledge of physics and thermodynamics

151-2021-00L Hydraulic Turbomachines (EPFL)

Abstract

Mastering the scientific design of a hydraulic machine, pump and turbine, by using the most advanced engineering design tools. For each chapters the theoretical basis are first established and then practical solutions are discussed with the help of recent design examples.

Objective

Mastering the scientific design of a hydraulic machine, pump and turbine, by using the most advanced engineering design tools. For each chapters the theoretical basis are first established and then practical solutions are discussed with the help of recent design examples.

Content

- Turbomachine equations, mechanical power balance in a hydraulic machines, moment of momentum balance applied to the runner/impeller, generalized Euler equation.
- Hydraulic characteristic of a reaction turbine, a Pelton turbine and a pump, losses and efficiencies of a turbomachine, real hydraulic characteristics.
- Similitude laws, non dimensional coefficients, reduced scale model testing, scale effects.
- Cavitation, hydraulic machine setting, operating range, adaptation to the piping system, operating stability, start stop transient operation, runaway.
- Reaction turbine design: general procedure, general project layout, design of a Francis runner, design of the spiral casing and the distributor, draft tube role, CFD validation of the design, design fix, reduced scale model experimental validation.
- Pelton turbine design: general procedure, project layout, injector design, bucket design, mechanical problems.
- Centrifugal pump design: general architecture, energetic loss model in the diffuser and/or the volute, volute design, operating stability.

Literature

Notes de cours polycopiées et littérature spécialisée (IMHEF, industrie, associations scientifiques, congrès, etc.).
Titre / Title
Hydraulic turbomachines (ME-453)
Matière / Matter

Prerequisites / notice

Prérequis: Mécanique des milieux continus; Introduction aux turbomachines.
Préparation pour: Choix des équipements hydrauliques; Projets et travail pratique de Master

151-2023-00L Nuclear Fusion and Plasma Physics (EPFL) W 4 credits 4G external organisers

Objective

Achieve basic understanding of plasma physics concepts for fusion energy, and of basic principles of fusion reactors

Content

1) Basics of thermonuclear fusion
2) The plasma state and its collective effects
3) Charged particle motion and collisional effects
4) Fluid description of a plasma
5) Plasma equilibrium and stability
6) Magnetic confinement: Tokamak and Stellarator
7) Waves in plasma
8) Wave-particle interactions
9) Heating and non inductive current drive by radio frequency waves
10) Heating and non inductive current drive by neutral particle beams
11) Material science and technology: Low and high Temperature superconductor - Properties of material under irradiation
12) Some nuclear aspects of a fusion reactor: Tritium production
13) Licensing a fusion reactor: safety, nuclear waste
14) Inertial confinement

Literature

Prerequisites / notice

Required prior knowledge:
Basic knowledge of electricity and magnetism, and of simple concepts of fluids

151-2025-00L Introduction to Particle Accelerators (EPFL) W 4 credits 4G external organisers

Abstract

The course presents basic physics ideas underlying the workings of modern accelerators. We will examine key features and limitations of these machines as used in accelerator driven sciences like high energy physics, materials and life sciences.

Objective

By the end of the course, the student must be able to:
- Design basic linear and non-linear charged particles optics
- Elaborate basic ideas of physics of accelerators
- Use a computer code for optics design
- Optimize accelerator design for a given application
- Estimate main beam parameters of a given accelerator

Content

Overview, history and fundamentals
Transverse particle dynamics (linear and nonlinear)
Longitudinal particle dynamics
Linear accelerators
Circular accelerators
Accelration and RF-technology
Beam diagnostics
Accelerator magnets
Injection and extraction systems
Sychrotron radiation

Literature

Recommended during the course

Prerequisites / notice

Prérequis: Notion de relativité restreinte et d'électrodynamique

151-2041-00L Medical Radiation Physics (EPFL) W 4 credits 3G external organisers

No enrolment to this course at ETH Zurich. Book the corresponding module directly at EPFL.
Abstract
This course covers the physical principles underlying medical imaging using ionizing radiation (radiography, fluoroscopy, CT, SPECT, PET). The focus is not only on risk and close to the patient and staff, but also on an objective description of the image quality.

Content
- Physics of radiography: X-ray production, Radiation-patient interaction, Image detection and display
- Image quality: Wagner's taxonomy, MTF, NPS, contrast, SNR, DQE, NEO, CNR
- Dose to the patient: External irradiation, Internal contamination, compartmental models
- Physics of computer tomography (CT)
- Risk and radiation: Rational risk and state of our knowledge, Psychological aspects, Ethics and communication
- Physics of single-photon emission computed tomography (SPECT)
- Physics of mammography
- Receiver operating characteristics (ROC) and hypothesis testing: Link between medical diagnostic and statistical hypothesis testing, Sensitivity, specificity, prevalence, predictive values
- Physics of radioscopy
- Model observers in medical imaging: Human visual characteristics and their quantification, Bayesian cost and ideal model observer, Anthropomorphic model observers, Detection experiments (rating, M-AFC, yes-no)
- Physics of positron emission tomography (PET)
- Physics of resonance magnetic imaging

Grade: 3 credits
ECTS: 3

Content
- Multi-physics simulation of nuclear power plant (NPP) dynamic behavior.
- Multicomponent analysis, Reactor core analysis, Multi-physics core dynamics calculations
- Reaction, reactivity, feedback, fuel melting, growth, clad oxidation in air, discussion of occurred severe accidents (Harrisburg, Chernobyl, Fukushima), internal and external emergency response.
- Physics of resonance magnetic imaging

Grade: 3 credits
ECTS: 3

Grade: 3 credits
ECTS: 3
Content
Legal framework, project management and operations methods and tools, cost estimation approaches and methods, nuclear calculations and on-site radiological characterization and inventing, state-of-the-art technologies for decontamination and dismantling, safety considerations, state-of-the-art practice for radioactive waste treatment, packaging and transport, interface with radioactive waste management and disposal. The course will additionally include student visits to relevant nuclear sites in Switzerland and Germany.

Lecture notes
Slides will be handed out.

Literature

151-0104-00L Uncertainty Quantification for Engineering & Life Sciences
Number of participants limited to 60.

Abstract
Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective
The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Content
Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes
The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature
1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
2. Probability Theory: The Logic of Science by E. T. Jaynes
3. Class Notes

Prerequisites / notice
Fundamentals of Probability, Fundamentals of Computational Modeling

151-0105-00L Advanced Topics in Nuclear Reactor Materials
Students registered at ETH Zurich have to enroll to this course at ETH. EPFL students can enroll to this course directly at EPFL.

Abstract
The course deals with the important challenges for materials (structural and fuel) for current and advanced nuclear power plants. Experimental techniques and tools used for working with active materials are discussed in detail. Students will be well acquainted with analytical and modeling methodologies for damage assessment and residual life determination and with the behavior of high burnup fuel.

Objective
The behavior of materials in nuclear reactors determines the reliability and safety of nuclear power plants (NPPs). Life extension and the understanding of fuel behavior under high burn-up conditions is of central importance for current-day NPPs. Advanced future systems (fission and fusion) need materials meeting additional challenges such as high temperatures and/or high doses. The course will highlight the above needs from different points of view. Experimental methods for the control and analysis of nuclear components and materials in operating NPPs will be presented. Advanced analytical and modeling tools will be introduced for characterization and understanding of irradiation damage, creep, environment effects, etc. Insights acquired from recent experimental programs into high burnup fuel behavior under hypothetical accident conditions (RIA, LOCA) will be presented. Materials for advanced future nuclear plants will be discussed.

Electives
Course from the catalogue of Master courses ETH Zurich and EPFL. At least 4 credit points must be collected from the offer of Science in Perspective (SiP) compulsory electives at ETH Zurich or Management of Technology and Entrepreneurship at EPFL.

Industrial Internship

</tbody>
</table>

Abstract
The main objective of the 12-week internship is to expose master's students to the industrial work environment within the field of nuclear energy. During this period, students have the opportunity to be involved in on-going projects at the host institution.

Objective
The main objective of the 12-week internship is to expose master's students to the industrial work environment within the field of nuclear energy.

Prerequisites / notice
The internship must be approved by the tutor.

Semester Project

The subject of the Semester Project and the choice of the supervisor (ETH or EPFL professor) are to be approved in advance by the tutor.

Abstract
The semester project is designed to train the students in the solution of specific engineering problems. This makes use of the technical and social skills acquired during the master's program. Tutors propose the subject of the project, elaborate the project plan, and define the roadmap together with their students, as well as monitor the overall execution.

Objective
The semester project is designed to train the students in the solution of specific engineering problems. This makes use of the technical and social skills acquired during the master's programme.

Students who fulfill the following criteria are allowed to begin with their Master's Thesis:
a. successful completion of the bachelor programme;
b. fulfilling of any additional requirements necessary to
gain admission to the master programme.
c. successful completion of the semester project.
d. completion of minimum 72 ECTS in the categories
"Core Courses" and "Electives" in the Master studies and
completion of 8 ECTS in the "Semester Project"

For the supervision of the Master's Thesis, the following
professors can be chosen: H.-M. Prasser (ETHZ), M.Q.
Tran (EPFL), A. Pautz (EPFL)

Abstract
Master's programs are concluded by the master's thesis. The thesis is aimed at enhancing the student's capability to work independently
toward the solution of a theoretical or applied problem. The subject of the master's thesis, as well as the project plan and roadmap, are
proposed by the tutor and further elaborated with the student.

Objective
The thesis is aimed at enhancing the student's capability to work independently toward the solution of a theoretical or applied problem.

Abstract
First identification with Pharmaceutical Sciences; motivation for profiling in the Natural Sciences, which are focused on within the first two years as a preparation for the specialized studies; sensitization for the duties and the responsibilities of a person with a federal diploma in Pharmacy; information about job opportunities.

Objective
First identification with Pharmaceutical Sciences; motivation for profiling in the Natural Sciences as a preparation for the specialized studies; sensitization for the duties and the responsibilities of a person with a federal diploma in Pharmacy; information about job opportunities.

Content
Introduction to Pharmaceutical Sciences by selected milestones of research and development. Overview on research activities at the Institute of Pharmaceutical Sciences that is focussed on drug delivery and development (from concepts to prototypes). Sensitization for communication skills and information management. Demonstration of job opportunities in community pharmacies, in the hospital, in industry, and in the public sector by experts in the different fields.

Lecture notes
Handouts for individual lectures.

Prerequisites / notice
Interactive teaching

Abstract
Mathematics III is an introduction to one- and multidimensional calculus and linear algebra emphasizing on applications.

Objective
Students understand mathematics as a language for modeling and as a tool for solving practical problems in natural sciences.

Content
Students can analyze models, describe solutions qualitatively or calculate them explicitly if need be. They can solve examples as well as their practical applications manually and using computer algebra systems.

Abstract
Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects.

Objective
The following topics are covered: modeling and simulations, introduction to programming, visualizing multi-dimensional data, introduction matrices, managing data with lists and tables and with relational databases, universal methods for algorithm design.

Content
1. The role of computer science in science
2. Introduction to Programming with Python
3. Modeling and simulations
4. Introduction to Matrices with Matlab
5. Visualizing multidimensional data
6. Data management with lists and tables
7. Data management with a relational database
8. Universal methods for algorithm design

Lecture notes
All materials for the lecture are available at www.gdi.ethz.ch

Prerequisites / notice
This course is based on application-oriented learning. The students spend most of their time working through projects with data from natural science and discussing their results with teaching assistants. To learn the computer science basics there are electronic tutorials available.

529-1001-01L  | General Chemistry (for Biology/Pharmacy/HST) | O    | 4    | 4V    | W. Uhlig

Autumn Semester 2016
The course provides an introduction to the basics of molecular- and cell biology and genetics. The lecture deals with a number of basic chemistry concepts. These include (amongst others) chemical reactions, energy transfer during chemical reactions, properties of ionic and covalent bonds, Lewis structures, properties of solutions, kinetics, thermodynamics, acid-base equilibria, electrochemistry and properties of metal complexes.

The course is designed to provide an understanding of the basic principles and concepts of general and inorganic chemistry. The lecture deals with a number of basic chemistry concepts. These include (amongst others) chemical reactions, energy transfer during chemical reactions, properties of ionic and covalent bonds, Lewis structures, properties of solutions, kinetics, thermodynamics, acid-base equilibria, electrochemistry and properties of metal complexes.

529-1011-00L Organic Chemistry I (for students of Biology, Pharmaceutical Sci., and Health Sci. & Tech.)

Abstract
Fundamentals of Organic Chemistry: molecular structure. Bonding and functional groups; nomenclature; resonance and aromaticity; stereochemistry; conformation; bond strength; organic acids and bases; basic reaction thermodynamics and kinetics; reactive intermediates; carbanions, carbenium ions and radicals.

Objective
Understanding the basic concepts and definitions of organic chemistry. Knowledge of the functional groups and classes of compounds that are important in biological systems. Foundations for the understanding of the relationship between structure and reactivity.

Content

Lecture notes
Printed lecture notes are available. Exercises, answer keys and other handouts can be downloaded from the Moodle course "Organic Chemistry I" of the current semester (https://moodle-app2.let.ethz.ch).

Literature
Lecture notes are available.

Prerequisites / notice
The course consists of plenary lectures (2 h per week) and problem-solving lessons (2 h per week, groups of ca. 25 people). In addition, online exercises are available in the e-learning environment Moodle (Course OC I).

551-0105-00L Fundamentals of Biology IA

Abstract
The course provides an introduction to the basics of molecular- and cell biology and genetics.

Objective
Introduction to modern biology and to principal biological concepts.

Content
The course is divided into several chapters:
1. Basic principles of Evolution.
2. Chemistry of Life: Water; Carbon and molecular diversity; biomolecules
3. The cell: structure; membrane structure and function, cell cycle
4. Metabolism: Respiration; Photosynthesis; Fermentation
5. Inheritance: meiosis and sexual reproduction; Mendelian genetics, chromosomal basis of inheritance, molecular basis of inheritance, from gene to protein, regulation of gene expression; genomes and their evolution

Lecture notes
None.

Literature
The text-book "Biology" (Campbell, Reece) (10th edition) is the basis of the course.

The structure of the course is largely identical with that of the text-book.

Prerequisites / notice
Certain sections of the text-book must be studied by self-instruction.

Abstract
Introduction to the practical work in a chemistry laboratory. The most important manipulations and techniques are treated, as well as the
most fundamental chemical reaction types.

Objective
- Knowledge of the basic chemical laboratory methods.
- Basic knowledge of the scientific approach in experimenting.
- Observation and interpretation of real-world chemical processes.
- Keeping of a reliable laboratory journal.

Content
- Simple chemical methods and calculations.
- Separation techniques.
- Physical measurements: mass, volume, pH, optical spectra.
- Ionic solids (salts).
- Acid/base chemistry, buffers.
- Redox reactions.
- Metal complexes.
- Titration methods and quantitative spectrometry.
- Introduction to qualitative analysis.

Lecture notes
Course manual in German (is handed out to the students at the beginning of the lessons).
Language: German, English upon request.

Abstract
Knowledge of the necessary basics and the possibilities of application of the relevant spectroscopic and separation methods in analytical
chemistry.

Content
Application oriented basics of instrumental analysis in organic chemistry and the empirical employment of the methods of structure
evaluation (mass spectrometry, NMR-, IR-, UV/VIS spectroscopy). Basics and application of chromatographic and electrophoretic
separation methods. Application of the knowledge by practising.

Prerequisites / notice
Prerequisites:

535-0223-00L Pharmaceutical Analytics I | O | 1 credit | 1.5G | C. Steuer

Abstract
Theoretical and practical comprehendition of analytical chemistry in order to solve pharmaceutical problems.

Objective
Knowledge in Pharmaceutical Analytics in order to solve fundamental analytical problems. Handling of the most important pharmacopeial
texts and monographs.

Content
Introduction in Pharmaceutical Analytics. Theoretical and practical considerations concerning a lot of methods in different Pharmacopeias.
Identification, purity testing, stability testing, assays of drugs and drug formulations.

Prerequisites / notice
A passed exam of the annual course (Pharmaceutical Analytics I and II) is required for admission to the laboratory course in
Pharmaceutical Analytics 535-0219-00.

551-0103-00L Fundamentals of Biology II: Cell Biology | O | 5 credits | 5V | E. Hafen, U. Kutay, J. Matos, G. Schertler, U. Suter, S. Werner

Abstract
The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students
have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry,
 microbiology, pharmacological sciences, molecular biology, and others.

Objective
The goal of this course is to provide students with a wide general understanding cell biology. With this material as a foundation, students
have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry,
 microbiology, pharmacological sciences, molecular biology, and others.

Content
The focus is animal cells and the development of multicellular organisms with a clear emphasis on the molecular basis of cellular structures
and phenomena. The topics include biological membranes, the cytoskeleton, protein sorting, energy metabolism, cell cycle and division,
viruses, extracellular matrix, cell signaling, embryonic development and cancer research.

Prerequisites / notice
Some of the lectures are given in the English language. Certain sections of the text-book must be studied by self-instruction.
The course provides an introduction to Biochemistry / Molecular Biology with some emphasis on chemical and biophysical aspects.

Topics include the structure-function relationship of proteins / nucleic acids, protein folding, enzymatic catalysis, cellular pathways involved in bioenergetics and the biosynthesis and breakdown of amino acids, glycans, nucleotides, fatty acids and phospholipids, and steroids. There will also be a discussion of DNA replication and repair, transcription, and translation.

Understanding the fundamental thermodynamical properties of chemical and biological systems.

Introduction to database searches (Reaxys, SciFinder).

Basic knowledge of the anatomy and physiology of tissues, of the embryonal and postnatal development, of the basic terminology of pathology, the neuro-muscular system, the cardiovascular system and the respiratory system.

Basic knowledge of human anatomy and physiology and basics of clinical pathophysiology.

Short overview of human anatomy, physiology and general pathology.

Anatomy and Physiology I (fall term):
Basics of cytology, histology, embryology, general pathology; nervous system, muscles, cardiovascular system, respiratory system

Anatomy and Physiology II (spring term):
digestive system, kidney and urinary tract, endocrine system, skin, thermoregulation, sensory organs, male and female reproductive system, pregnancy and child birth.

Anatomy:
Schiebler TH, Korf H-W: Anatomie (10. vollständ überarbeitete Auflage)
Steinkopf / Springer, Heidelberg 2007

Martini FH, Timmons MJ, Tallitsch RB. Human Anatomy

Physiologie:

Voraussetzungen: 1. Jahr, naturwissenschaftlicher Teil

As a prerequisite, all participants need to pass the "Safety Test HCI Chemie_V2 English" (see https://moodle-app2.let.ethz.ch). A printout of the certificate generated by the system needs to be presented to the teaching assistants prior to starting lab work.

Abstract

The structure and biosynthesis of plant constituents and the pharmacological effects and therapeutic applications of biogenic drugs of plant origin (extract-based herbal medicines; isolated natural products) are discussed. Areas of focus are (a) major biosynthetic pathways for plant-derived natural products, (b) pharmacological effects of herbal extracts, and (c) molecular mechanisms of action.

Objective

The understanding of the biosynthesis of plant-derived natural products. Acquisition of fundamental knowledge on the medical applications of important herbal medicines and of isolated natural products (general disease areas, molecular constituents of medicinal plants and herbal medicines in general, molecular constituents responsible for pharmacological activity, possible mechanisms of action, available clinical data to support medical use).

Content

The lecture is centered around the discussion of medicinal plants and herbal medicines and their common medical applications. The main areas addressed in the lecture are (a) the structure and biosynthesis of plant constituents (i.e. plant-derived natural products) and (b) the pharmacological effects and therapeutic applications of biogenic drugs of plant origin (herbal medicines based on plant extracts as well as isolated natural products). The basic pathways for the biosynthesis of the most important classes of plant-derived natural products are discussed in detail. Likewise, the molecular basis of the pharmacological effects of medicinal plant extracts (and derived herbal medicines) and their individual constituent components (isolated natural products) is broadly addressed. As part of this discussion the availability of clinical data (or lack thereof) to support specific clinical applications of herbal medicines will be repeatedly highlighted. Potential risks associated with the use of herbal medicines are discussed for selected cases. The lecture is structured according to the major classes of natural products prevalent in medicinal plants and herbal medicines: Carbohydrates, lipids, terpenes, phenolic compounds, alkaloids, essential oils.

Lecture notes

Is provided in parts before each lecture (electronically as pdf) and also available on the Ilias platform via My Studies.

- There is no English translation of the above textbook (or any reasonably equivalent text). Students intending to take the exam for the course and are not sufficiently proficient in German should contact the lecturer before the start of the course.

Abstract

The course will provide a solid overview of the science and issues in gene technology and its pharmaceutical applications. The aim of the lecture course is to provide a solid overview of gene technology, with a special focus on drug development. Topics: Antibody phage technology, DNA-encoded chemistry, protein modification technology, genome sequencing, transcriptomics, proteomics, functional genomics, principle of drug discovery. The course is suited for advanced undergraduate and early graduate students in pharmaceutical sciences or related fields.

Autumn Semester 2016
Content

1. Antibody phage technology
   The antibody molecule
   V genes, CDRs, basics of antibody engineering
   Principles of phage display
   Phagemid and phage vectors
   Antibody libraries
   Phage display selection methodologies
   Other phage libraries (peptides, globular proteins, enzymes)
   Alternative screening/selection methodologies
   DNA-encoded chemical libraries

2. Proteins: chemical modification and detection of biomolecular interactions
   Homo- and hetero-dimerization of proteins
   Chemical modifications of proteins
   Antibody-drug conjugates
   Radioactive labeling of proteins
   Kinetic association and dissociation constants
   Affinity constant: definition and its experimental measurement

3. Genomics: Applications to Human Biology
   Protein cloning and expression
   DNA sequencing
   Some foundations of genetic analysis
   Knock-out technologies
   Transcriptomics
   Proteomics
   Recombinant vaccines

4: Pharmaceuticals: Focus on Discovery
   Ligand Discovery
   Half-life extension
   Cancer therapy
   Gene therapy

Lecture notes
   Skript "Gene Technology" by Prof. Dario Neri and slides of the lecture

535-0830-00L  Pharmaceutical Immunology  O  2 credits  2G  D. Neri, C. Halin Winter
   Objective
   Get Students familiar with basic Immunological concepts of pharmaceutical relevance.

   Content
   Chapters 1 - 11 of the Janeway's ImmunoBiology, by Kenneth Murphy (9th Edition; Garland).

   Literature
   Janeway's ImmunoBiology, by Kenneth Murphy (9th Edition).

535-0210-00L  Radiopharmaceutical Chemistry  O  2 credits  2V  R. Schibli, S. M. Ametamey
   Objective
   Introduction of basic principles of radiation, structure and function of radiopharmaceuticals, examples of radiopharmaceuticals in nuclear medicine practice, discussion of functional radiopharmaceuticals, molecular imaging, targeted radionuclide therapy, radiopharmaceutical synthesis.

   Content
   Introduction of basic principles of radiation, structure and function of radiopharmaceuticals, examples of radiopharmaceuticals in nuclear medicine practice, discussion of functional radiopharmaceuticals, molecular imaging, targeted radionuclide therapy, radiopharmaceutical synthesis.

   Literature
   Handouts: http://www.pharma.ethz.ch/scripts/index

   Prerequisites / notice
   Prerequisites: basic knowledge in physics and chemistry

535-0165-00L  Clinical Microbiology  O  1 credit  1V  K. Lucke
   Objective
   Thorough knowledge of major pathogens involved in infectious diseases; principles of laboratory diagnosis of pathogenic bacteria and fungi.

   Content
   Basics and principles of clinical microbiology:
   - host-pathogen interaction
   - symptoms and diagnosis of major bacterial pathogens
   - therapeutic regimens commonly used against bacterial disease
   - major aspects of medical mycology, virology and parasitology
   - epidemiology

   Prerequisites / notice
   Basic knowledge of biochemistry, general microbiology, immunology

Laboratory Courses 3rd Year
### Course Descriptions

#### Applied Ecotoxicology

**Abstract:** Besides regarding basic concepts, this lecture focus on applied aspects of ecotoxicology. Case studies and effects of environmental chemicals on cells, organisms up to ecosystems are regarded. In a multidisciplinary approach based on toxicological concepts, pollutants are analysed, in particular hormonally active compounds and their effects on reproduction.

**Objective:** This lecture focuses on basic concepts of ecotoxicology and their application in environmental chemicals and environmental pollution problems. Basic concepts are regarded with respect to their consequences for the environment. Toxicological effects on organisms are analysed at different levels of organisation, from the molecular to the ecosystem level. Case studies are regarded in order to understand chemical's actions and their effects. In addition bioaccumulation and their consequences, the methods in ecotoxicology and environmental effects of various compounds will be regarded. Emphasis will be placed on hormonally active compounds and their effects to aquatic organisms. Furthermore, methods of environmental risk assessment of environmental pollutants will be discussed.

**Lecture notes:** Hochschullehrbuch von K. Fent "Ökotoxikologie. Umweltchemie-Toxikologie-Ökologie" (Georg Thieme Verlag, Stuttgart, 2013, 4. Auflage)

### Compensatory Courses

#### Introduction to Biomedical Engineering I

**Abstract:** Introduction to biomechanics, biomaterials, tissue engineering, medical imaging as well as the history of biomedical engineering.

**Objective:** Understanding of physical and technical principles in biomechanics, biomaterials, tissue engineering, medical imaging as well as the history of biomedical engineering. Mathematical description and problem solving. Knowledge of biomedical engineering applications in research and clinical practice.

**Content:** Tissue and Cellular Biomechanics, Molecular Biomechanics and Biopolymers, Computational Biomechanics, Biomaterials, Tissue Engineering, Radiation and Radiographic Imaging, Diagnostic Ultrasound Imaging, Magnetic Resonance Imaging, Biomedical Optics and Lasers.

**Lecture notes:** Stored on ILIAS.

**Literature:** Introduction to Biomedical Engineering, 3rd Edition 2011. Author: John Enders, Joseph Bronzino, ISBN 9780123749796

**Additional Notes:**
- **Data:** 06.08.2018 12:56
- **Autumn Semester 2016**
- **Page:** 1208 of 1571
- **Number:** 376-0021-00L
- **Title:** Laboratory Course in Pharmaceutical Analytics
- **Type:** W
- **ECTS:** 3 credits
- **Hours:** 2V
- **Lecturers:** C. Steuer

**Objective:** Solving analytical problems; Development and interpretation of analytical methods.

**Prerequisites / notice:** Registration for the course until 15 October; Attendance of the lecture Medical Microbiology in the same semester or earlier; Basic skills in careful laboratory work.

**Abstract:** The course comprises experiments relating to concepts of medicinal chemistry including statistical processing, fitting of experimental data, solving analytical problems. Development and interpretation of analytical methods.

**Literature:** Skript Pharmazeutische Chemie Praktikum

**Requirements:** SR 2004: 2 credits Analytical Chemistry (529-1041-00), lecture Pharmaceutical Analytics SR 2013: 6 credits Analytics/Pharmaceutical Analytics or 36 credits of compulsory lectures 2nd year.
The main focus is on the development of the NS: Early development of the NS, cellular processes, nerve fiber growth, building of synapses and neuronal networks.

The course covers the structure, plasticity and regeneration of the adult nervous system (NS) with focus on: sensory systems, cognitive functions, learning and memory, molecular and cellular mechanisms, animal models, and diseases of the NS.

The aim is to give a deepened insight into the structure, plasticity and regeneration of the nervous system based on molecular, cellular and biochemical approaches.

The main focus is on the structure, plasticity and regeneration of the NS: biology of the adult nervous system; structural plasticity of the adult nervous system, regeneration and repair: networks and nerve fibers, regeneration, pathological loss of cells.

The class consists of three parts:

- The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on OLAT.

- The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on Moodle / OLAT.

- Handouts can be accessed online.

- Handouts provided during the classes and references therein.

- Parts of the course can be downloaded from OLAT: https://www.olat.uzh.ch/olat/dmz/

The course includes the following:

- (available online via ETH library)

Upon completing the class, students will be able to:

- Describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.
- Understand the current research on bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.
- Explain the molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.
- Discuss the basic concepts and important techniques from biomaterials research and development.
- Design and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.

Auxiliary tools:

- Handouts will be provided during the class.
- Further lecturers:
  - B. Kornmann, M. Peter, I. Zemp, J. Piel, M. Pilhofer

Prerequisites / literature:

- To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English.
- UZH students: Lecture notes will be provided on OLAT: https://www.olat.uzh.ch/olat/dmz/
- ETH students: Lecture notes will be provided on Moodle https://moodle-app2.let.ethz.ch/course/view.php?id=694
- Further information will be mentioned on Moodle / OLAT.
- A link between academic research and industrial entrepreneurship is established by external guest speakers.

Autumn Semester 2016
Page 1209 of 1571
The lectures are supplemented with handouts.

Recommendations will be given in the first lecture

1. History of Food Microbiology
   - Short synopsis of foodborne microorganisms
   - Spillage of Foods
   - Foodborne Disease
   - Food Preservation
   - VIPs of Food Microbiology
   - Overview of Microorganisms in Foods
   - Origin of foodborne Microorganisms
   - Bacteria
   - Yeasts
   - Molds
   - Microbial Spillage of Foods
   - Intrinsic and Extrinsic Parameters
   - Meats, Seafoods, Eggs
   - Milk and Milk Products
   - Vegetable and Fruit Products
   - Miscellaneous (baked goods, nuts, spices, ready-to-eat products)
   - Drinks and Canned Foods
   - Foodborne Disease
   - Significance and Transmission of Foodborne pathogens
   - Staphylococcus aureus
   - Gram-positive Sporeformers (Bacillus & Clostridium)
   - Listeria monocytogenes
   - Salmonella, Shigella, Escherichia coli
   - Vibrio, Yersinia, Campylobacter
   - Brucella, Mycobacterium
   - Parasites
   - Viruses and Bacteriophages
   - Mycotoxins
   - Bioactive Amines
   - Miscellaneous (Antibiotic-resistant Bacteria, Biofilms)

Lecture notes
- Electronic copies of the presentation slides (PDF) and additional material will be made available for download.

Literature
- Recommendations will be given in the first lecture

376-2017-00L  Biomechanics of Sports Injuries and Rehabilitation  W  3 credits  2V  K.U. Schmitt, J. Goldhahn

Abstract
- This lectures introduces the basic principles of injury mechanics and rehabilitation focussing on sports injuries.

Objective
- Within the scope of this lecture you will learn the basic principles of trauma biomechanics. Based on examples from sports, you will get to know different mechanisms that can possibly result in injury. Investigating the background and cause of injury should allow you to assess the injury risk for sports activities. Furthermore you should be able to develop measures to prevent such injury.

Content
- This lecture deals with the basic principles of injury mechanics and rehabilitation. Mechanisms that can result in injury are presented. Furthermore possibilities to prevent injuries are discussed. Thereby the lecture focuses on sports injuries.

Lecture notes
- Handouts will be made available.

Literature

Prerequisites / notice
- A course work is required. The mark of this course work contributes to the final credits for this lecture. Details will be given during the first lecture.

752-4009-00L  Molecular Biology of Foodborne Pathogens  W  3 credits  2V  M. Loessner, M. Schupper

Abstract
- The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
- Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganisms or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks. Another focus lies on the currently available methods and techniques useful for the various purposes, i.e., detection, differentiation (otyping), and antimicrobial agents.

Content
- Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and exotoxins be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks? Which methods are best suited for what approach? Last, but not least, the role of bacteriophages in microbial pathogenicity will be highlighted, in addition to various applications of bacteriophage for both diagnostics and antimicrobial intervention.

Lecture notes
- Electronic copies of the presentation slides (PDF) and additional material will be made available for download to registered students.

Literature
- Recommendations will be given in the first lecture.
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic diseases, T. de Wouters, L. Meile, R. Heusser, 2V, C. Lacroix, T. de Wouters, L. Meile, C. Schwab.

Basic information for understanding biotechnology applied to food processing will be presented. This will include a presentation of the application of modern molecular tools to food biotechnology. Students will learn about the physiology of important productive microorganisms (lactic acid bacteria, bifidobacteria, propionibacteria and fungi) used in food fermentations, closely related to applications in biotechnology; microbial kinetics, and design and operation of bioreactors; and application of modern molecular tools for food biotechnology. 

Objective
To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

Content
This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- Legal and Protection Issues Related Functional Foods
- Industrial Biotechnology of Flavor and Taste Development
- Safety of Food Starter Cultures and Probiotics

Lecture notes
Students will be required to complete a group project on food products and ingredients with of from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

Literature
A list of references will be given at the beginning of the course for the different topics presented during this course.

752-5103-00L

Functional Microorganisms in Foods

Objective
To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

Content
This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- Legal and Protection Issues Related Functional Foods
- Industrial Biotechnology of Flavor and Taste Development
- Safety of Food Starter Cultures and Probiotics

Lecture notes
Copy of the power point slides from lectures will be provided.

Literature
A list of references will be given at the beginning of the course for the different topics presented during this course.

752-6101-00L

Dietary Etiologies of Chronic Disease

Objective
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.

Content
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Lecture notes
There is no script. Powerpoint presentations will be made available on-line to students.

Literature
To be provided by the individual lecturers, at their discretion.

Prerequisites / notice
No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanerährung I+II) is strongly advised.

752-6105-00L

Epidemiology and Prevention

Abstract
The module Epidemiology and prevention describes the process of scientific discovery from the detection of a disease and its causes, to the development of preventive and treatment interventions and to improved population health.

Objective
The overall goal of the course is to introduce students to epidemiological thinking and methods, which are critical pillars for medical and public health research. Students will also become aware on how epidemiological facts are used in prevention, practice and politics.

Content
The module Epidemiology and prevention follows an overall framework that describes the course of scientific discovery from the detection of a disease to the development of prevention and treatment interventions and their evaluation in clinical trials and real world settings. We will discuss study designs in the context of existing knowledge and the type of evidence needed to advance knowledge. Examples form nutrition, chronic and infectious diseases will be used in order to show the underlying concepts and methods.

752-5001-00L

Food Biotechnology

Abstract
Basic information for understanding biotechnology applied to food processing will be presented. This will include a presentation of the physiology of important productive microorganisms used in food fermentations, closely related to applications in biotechnology; microbial kinetics, and design and operation of bioreactors; and application of modern molecular tools for food biotechnology.

Objective
The main goal for this course is to provide students with basic information for understanding biotechnology applied to food processing. For the students, the aim will be:
- To understand the important role of microbial physiology and molecular tools for food biotechnology;
- To understand basic principles of fermentation biotechnology, with particular emphasis on food applications.

Content
Biotechnology has been defined as any technique that uses living organisms, or substances from those organisms, to make or modify a product, to improve plants or animals, or to develop microorganisms for specific uses. In this course, basic knowledge for understanding biotechnology as applied to food processing will be presented. This course builds on the application of principles learned from other basic courses in the Bachelor program, especially microbiology and microbial metabolism, molecular biology, biochemistry, physics and engineering. Students will learn about the physiology of important productive microorganisms (lactic acid bacteria, bifidobacteria, propionibacteria and fungi) used in food fermentations, closely related to applications in biotechnology. Microbial kinetics, and design and operation of bioreactors used for both research and industrial scale production of traditional foods and modern food ingredients will be presented. This part will be illustrated by examples of food fermentation processes, representative of specific challenges. Finally, the application of modern molecular tools to food biotechnology will be discussed.

Lecture notes
A complete course document and/or a copy of the power point slides from each lecture will be provided.

Literature
A list of references will be given at the beginning of the course for the different topics presented during the course.

<tr>
<td>Abstract</td>
<td>Introduction to the principles, methods and applications of pharmacoepidemiology and drug safety. Drug safety in the pharmaceutical industry and regulatory authorities, but also for hospital and office pharmacists. Another focus is the evaluation and interpretation of pharmacoepidemiological drug safety studies in the medical literature and the evaluation of benefits vs. risks.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Objective  
Objectives:  
- To familiarize participants with the principle methods and applications of pharmacoepidemiology and drug safety that is relevant for industry, regulatory affairs, but also for clinical pharmacists in hospitals and office pharmacies.  
- Perform independently a causality assessment of suspected adverse drug reactions in patients  
- Study designs and biostatistics used for the quantitative evaluation of drug safety  
- Setup of programs that can effectively reduce medication errors and improve drug safety in clinical practice, particularly in hospitals  

Content  
- Historical landmarks of drug safety  
- Pharmacovigilance and causality assessment  
- Drug safety in premarketing clinical trials  
- Descriptive, cohort and case-control drug safety study designs; Data analysis and control of confounding  
- Pharmacokinetics and regulatory decision making in drug safety; Risk management plans (RMPs)  
- Medication errors, clinical pharmacology / clinical pharmacy  
- Clinical Decision Support Systems, Interventional Pharmacoepidemiology  
- Pharmacoepidemiological databases, “Big Data”  
- Interactive discussion of many real-life examples for each topic  

Lecture notes  
This course will be a combination of formal lectures, group discussions and self-directed studies. Course material will be taught through seminars, case studies in small groups,  
Reading material and scripts will be provided for each week.  

Literature  
- Recommended literature:  
  - Rothman: Introduction to Epidemiology  
  - Strom, Kimmel, Hennessy: Textbook of Pharmacoepidemiology  

Compensatory Courses  
Elective courses can be used as compensatory courses.

|                  | Limited number of participants.  
|                  | The practical course is open for master and graduate students to get an introduction into hands-on computer-assisted drug design. The class includes an introduction to computer-based screening of a virtual compound library, subsequent synthesis of candidate ligands, and biochemically testing for activity on pharmacologically important drug targets.  
|                  | Objective  
|                  | Participants become familiar with state-of-the-art methodologies in a real-life computer-aided medicinal chemistry project. Participants work as small teams, perform literature research and discuss recent research findings. A seminar talk is to be given presenting the molecular design strategy chosen and the results obtained during the course.  
|                  | Content  
|                  | The course offers the possibility for people with and without computational and or laboratory background to get an introduction into computer-assisted drug design, as well as practical training in a modern chemical laboratory. Using various software suites, the participants will computationally create and screen a virtual compound library for potential active small molecules. The process will involve an introduction to screening a virtual compound library, synthesizing candidate inhibitors, and biological testing against a pharmacologically important drug target.  
|                  | Lecture notes  
|                  | Detailed information will be handed out during the course.

**535-0137-00L Clinical Chemistry II**

**Abstract**
Detailed knowledge on particular aspects of clinical chemistry and medical laboratory diagnostics concerning quality control, point-of-care analytics, analytics of kidney stones, tumor markers, diagnosis of HIV and hepatitis, pharmacogenetics, thyroid function, bone metabolism and laboratory diagnosis of hypertension.

**Objective**
Detailed knowledge on the implementation and interpretation of clinical laboratory diagnostic tests. Competence to interpret selected tests.

**Content**
Internal and external quality control, point-of-care analytics, analytics of kidney stones, use of tumor marker determinations, diagnosis of HIV and hepatitis, pharmacogenetics, thyroid function, bone metabolism and laboratory diagnosis of hypertension.

**Lecture notes**
Documentation will be available before the lectures electronically.

**Literature**
- Jürgen Hallbach, Klinische Chemie und Hämatologie für den Einstieg, Thieme Verlag
- Harald Renz, Praktische Labordiagnostik, de Gruyter Verlag
- Walter Guder, Das Laborbuch für Klinik und Praxis, Elsevier Verlag
- Lothar Thomas, Labor und Diagnose, TH Books
- William Marshall, Clinical Chemistry, Mosby Ltd.
- Tran H.B. Wu, Tietz, Clinical Guide to Laboratory Tests, Saunders

**Prerequisites / notice**
Requirement: basic knowledge in clinical chemistry and laboratory diagnostics

---

**535-0015-00L History of Pharmacy**

**Abstract**
The students will receive the basic knowledge of the history of pharmacy. This knowledge will allow them to have a detailed approach to the actual pharmacy and the development of the materia medica.

**Objective**
The students will receive the basic knowledge of the history of pharmacy. This knowledge will allow them to have a detailed approach to the actual pharmacy and the development of the materia medica.

**Content**
In the first part of the lecture we will talk about the position of the pharmacist in the past and in society. We go through the milestones of the social and legal development of pharmacy. The second part will deal with the history of pharmacy with development of therapeutic theories and the evolution of the used remedies. It also includes their sometimes mystical and symbological dimension.

**Lecture notes**
Wird in der ersten Veranstaltung mitgeteilt.

**Literature**
- Jürgen Hallbach, Klinische Chemie und Hämatologie für den Einstieg, Thieme Verlag
- Harald Renz, Praktische Labordiagnostik, de Gruyter Verlag
- Walter Guder, Das Laborbuch für Klinik und Praxis, Elsevier Verlag
- Lothar Thomas, Labor und Diagnose, TH Books
- William Marshall, Clinical Chemistry, Mosby Ltd.
- Tran H.B. Wu, Tietz, Clinical Guide to Laboratory Tests, Saunders

**Prerequisites / notice**
Voraussetzungen: Keine. Interesse für die Rolle der Pharmazie und der Medikamente in der Vergangenheit von Vorteil.

---

**535-0344-00L From Ethnopharmacy to Molecular Pharmacognosy**

**Abstract**
Basic understanding and awareness of ethnopharmaceutical and ethnopharmacological issues and research. Knowledge of methods used in drug discovery from natural sources. Discussion of the issues around law and international treaties. Importance of ethnopharmaceutical knowledge for world health.

**Objective**
Basic understanding and awareness of ethnopharmaceutical and ethnopharmacological issues and research. Knowledge of methods used in drug discovery from natural sources. Discussion of the issues around law and international treaties. Importance of ethnopharmaceutical knowledge for world health.

**Content**
Introduction into ethnopharmacy and related disciplines: definitions of terms, working methods, research projects, bioprospecting.

**Lecture notes**
Handouts will be provided.

**Literature**

**Prerequisites / notice**
Prerequisites: Basic lectures in biology or biochemistry and pharmaceutical biology have been attended; not suitable for first semester students.

---

**535-0423-00L Drug Delivery and Drug Targeting**

**Abstract**
The students gain an overview on current principles, methodologies and systems for controlled delivery and targeting of drugs. This enables the students to understand and evaluate the field in terms of scientific criteria.

**Objective**
The students dispose of an overview on current principles and systems for the controlled delivery and targeting of drugs. The focus of the course lies on developing a capacity to understand the involved technologies and methods, as well as an appreciation of the chances and constraints of their therapeutic usage, with prime attention on anticancer drugs, therapeutic peptides, proteins, nucleic acids and vaccines.

**Content**
The course covers the following topics: drug targeting and delivery principles, radiopharmaceuticals, macromolecular drug carriers, liposomes, micelles, micro/nanoparticles, gels and implants, administration of vaccines, delivery of active agents in tissue engineering, targeting at the gastrointestinal level, synthetic carriers for nucleic acid drugs, ophthalmic devices and novel trends in transdermal and nasal drug delivery.

**Lecture notes**
Selected lecture notes, documents and supporting material will be directly provided or may be downloaded using http://www.galenik.ethz.ch/teaching/drug_del_drug_targ

**Literature**

Further references will be provided in the course.

---

**535-0300-00L Molecular Mechanisms of Drug Actions and Targets**

**Abstract**
On average one drug per year is withdrawn from the market. Using selected examples of such drug failures, the course aims at analyzing and discussing the present explanations of drug actions as well as the predictive power of animal models and clinical trials. In addition, the ethical, societal, and economical expectations in new drugs shall be reflected.

**Objective**
To develop a critical understanding of the relevance and limitations of the current approaches to explaining and anticipating drug effects. To critically appraise the ethical, societal, economical and political expectations in the development of new drugs.
Content

In December 2006, Pfizer stopped a large phase III study on the use of Torcetrapib for the prevention of atherosclerosis and cardiovascular disease. 800 million $ in development costs and 21 billion $ in stocks were annihilated overnight. The failure of Torcetrapib has pinpointed the limitations of an extremely reductionist view of atherosclerosis and it's prevention by drug therapy. It has also highlighted what high expectations we have in a safe and wide applicability of drugs and of their economical success.

Torcetrapib is not a single case. In the last 10 years, on average one drug per year was withdrawn from the market due to lack of efficacy, unexpected side effects or toxicity. This clearly shows that the common investigations and the modern understanding of drug actions are often not sufficient to predict the effects a drug will have in large patient populations.

These are the topics of the present course. Using three particularly informative examples of drug failures, the problems encountered and the concepts and informative value of preclinical and clinical studies will be analyzed and discussed. Furthermore, the ethical, societal, economical and political expectations in new drugs shall be reflected.

Lecture notes

Printouts of the slides used for the lectures and literature for reading and discussions will be available online.

Literature

Recommended reading: John Abramson, Overdo$ed America, Harper Perennial, New York 2008

Prerequisites / notice

Requirements: basic knowledge in Medicinal Chemistry and Pharmacology. Ability to read and understand scientific publications written in English.

535-0022-00L Computer-Assisted Drug Design

W Dr 1 credit 1V G. Schneider

Abstract

The lecture series provides an introduction to computer applications in medicinal chemistry. A focus is on molecular representations, property predictions, molecular similarity concepts, virtual screening techniques, and de novo drug design. All theoretical concepts and algorithms presented are illustrated by practical applications and case studies.

Objective

The students will learn how computer simulation generates ideas for drug design and development, understand the theoretical principles of property prediction and computer-generated compound generation, and understand possibilities and limitations of computer-assisted drug design in pharmaceutical chemistry. As a result, they are prepared for professional assessment of computer-assisted drug design studies in medicinal chemistry projects.

Literature

Recommended textbooks:

Prerequisites / notice

Successful participation in this course is required for a research project ("Forschungspraktikum") in the CADD group.

535-0546-00L Glycobiology in Drug Development

W Dr 1 credit 1V A. Koepf, P. Pliska

Abstract

Protein-based drugs constitute around 25% of all new approvals and most of them are glycoproteins. Using selected examples the course aims at providing insight into our present knowledge on glycosylation-activity relationships and the production and analysis of glycoprotein-based drugs.

Objective

Gaining insight into the glycobiology of therapeutically used glycoproteins. This implies knowing and understanding the major types of protein-linked glycans and their biosynthesis, the most important expression systems for production of recombinant glycoproteins, methods used to alter or manipulate glycosylation, the most prominent clinically used glycoproteins and how glycosylation influences their therapeutic profile, current methods for the qualitative and quantitative characterization of glycoproteins and being able to apply this knowledge in other contexts.

Content

lecture plan:
1. Introduction: Carbohydrates - "life's first language"
2. Tissue plasminogen activator (t-PA), glucocerebrosidase and the biosynthesis of N-glycans
3. PSGL-1 and the biosynthesis of O-glycans;
P-selectin and other lectins
4. The glycoprotein hormones and the production and analysis of therapeutic glycoproteins
5. Monoclonal antibodies and the modification of their therapeutic profile through glycoengineering
6. EPO "the same but different"

Prerequisites / notice

Requirements: Basic knowledge in immunology, molecular biology, protein chemistry and analytics. Basic knowledge in pharmacology.

535-0021-00L Vitamins in Health and Disease

W Dr 1 credit 1V C. Müller

Abstract

Vitamins are essential organic compounds that cannot be synthesized by an organism and hence, they have to be acquired from the diet. This lecture will give an overview about the application of vitamins in health and disease.
Objective

The aim of this lecture is a critical examination of the students with the topic of "Vitamins in Health and Disease". The students will get an overview of vitamins, of their medical applications and the role of the pharmacist with "over-the-counter" products.

Content

Deficiencies of particular vitamins result in specific diseases such as for example scurvy (vitamin C deficiency). Such disease patterns are usually easily recognized and facile to be treated. The clinical utility of supplementation concerns people with severe deficiencies and a risk of complications. Latent vitamin deficiencies might result in variable disorders and risks. As an example neurological disorders in elderly as a consequence of chronic lack of vitamin B12 should be mentioned. Subclinical deficiencies are often difficult to assess. However, these are exactly the cases where advice of a pharmacist is requested.

A large intake of vitamins by over-supplementation or food fortification might be dangerous (hypervitaminosis). This is in particular the case for fat-soluble vitamins or in the case of constant intake of high amounts of water-soluble vitamins over a long time period.

The lecture 'Vitamins in Heath and Disease' will give an overview over the history and applications of vitamins and their functions to preserve good health. The utility of vitamin supplementation during conditions of deficiencies, potential consequences of a latent deficiency as well as risks of over-supplementation will be discussed.

Lecture notes

Hand-outs will be distributed during the lecture (partly in English, partly in German).

Literature

Handouts will be distributed during the lecture.

Book recommendation: reference books:

- Handbuch Nährstoffe, Burgerstein, Trias Verlag ISBN 978-3-8304-6071-8

Prerequisites / notice

Requirements: Basic knowledge in biochemistry and pharmacology. Ability to read and understand scientific publications in English.

535-0360-00L Evidence Based Phytotherapy W Dr 1 credit 1V J. Drewes, K. Berger Büter

Abstract

Based on epidemiology, economic importance and evidence-based medicine, basic principles of rational phytotherapy will be discussed: a) Identification of drug candidates, b) registration requirements, c) criteria to assess efficacy, d) biomarkers and pharmacokinetics, e) safety and f) principles of extract generation. Important prototypes will be discussed

Objective

Students should learn the importance of rational (= evidence based) pharmacotherapy with herbal extracts:

- They should get to know the development process of herbal drugs:
  - How are interesting development candidates are being identified? What are the strategies?
  - What are the regulatory requirements (traditional use, well-established use, new herbal entities)?
  - What are the selection criteria?
  - Assessment of efficacy (animal-/human studies, biomarker)
  - Pharmacokinetics
  - Safety (Toxicity, unwanted adverse effects, drug-drug interactions)
  - Pharmaceutical quality
  - Securing of herbal identity (collections, agriculture)
  - Quality management
  - selection of appropriate extraction procedures?

Important prototypes will be presented and critically discussed:

- Cannabis sativa
- Crataegus sp.
- Echinacea
- Ginkgo biloba
- Hypericum perforatum
- Iberogast®
- Kava kava
- Pelargonium
- Punica granatum
- Serenoa repens
- Petasites
- Silybum marianum
- Hypericum perforatum (inklusive Pyrrolizidinalkaloid problematik)
- Ginkgo
- Iberogast (Beispiel eines Multikomponentenproduktes)
- Cannabis
- Pflanzliche Nahrungsergänzungsmittel versus Pflanzliche Arzneimittel
- Echinacea
- Serenoa repens
- Petasites
- Silybum marianum
- Hypericum perforatum

Content

327-0811-00L Industrial Research and Development at the Interface of Biomaterials and Drug Delivery W Dr 1 credit 1V L. B. Uebersax, J. Goldhahn, F. Schiöttig, R. Streicher
This course will provide an up-to-date, comprehensive review of the industrial perspective at the interface of biomaterials and drugs. This covers regulatory, clinical, pre-clinical and manufacturing concepts. The presentations are provided in an effort to maximize the interaction of student and lecturer.

- The student will be able to categorize a drug-biomaterial as a "drug" or a "material" from a regulatory perspective and can summarize general regulatory pathways for material/drug development.
- The student will be able to summarize the current concepts and challenges for the industry at the material-drug interface.
- The student will actively develop innovative, industrial concepts at the drug-biomaterial interface.

This course will provide an up-to-date comprehensive review of the industrial perspective at the interface of biomaterials and drugs. General concepts related to regulatory affairs or such as cost-conscious planning of manufacturing processes will be covered by interactive case-studies and in close interaction between students and lecturers. The course covers the future at the biomaterial - implant interface - as it is seen by the industry today - and will be reviewed by experienced and long-standing faculty from industry with the aim to provide a balanced, insightful perspective. From that, clinical development concepts, regulatory pathways and real-life case studies will be discussed with the students. Finally the students - working in small groups of 4-5 - will outline a development pathway for an industrial project and present it to the course and in presence of all faculty to receive maximum feedback to their approaches.

The student will become familiar with the major elements required for a successful development and which challenges have to be taken into account to translate an idea into a successful product.

**Abstract**

Only students who fulfill the following criteria are allowed to begin with their master thesis: a. successful completion of the bachelor programme; b. fulfilling of any additional requirements necessary to gain admission to the master programme.

**Objective**

In the Master thesis students prove their ability to independent, structured and scientific working. The Master thesis is usually carried out in a subject area of Pharmaceutical Sciences as chosen by the student.

**Abstract**

Overview of the most important clinical pictures: symptoms, recognition, differentiation, pharmacotherapy for the most important general and special medical indications. Groups of pharmaceutical compounds, active pharmaceutical ingredients, proprietary medicinal products: mechanisms of action, contraindication, therapeutic patterns, side effects, interactions.

**Objective**

Students have a thorough knowledge of all clinical pictures and their symptoms regarding outpatient treatment. They know the main groups of indications including active pharmaceutical self-medication and ingredients, mechanisms of action, pharmacokinetics, pharmacodynamics and dosage. They are also able to identify the relevant side effects and interactions.

**Content**

Pathophysiology of selected clinical pictures and their main symptoms and clinical parameters. Recognition of alarm symptoms and distinction between pharmaceutical self-medication and the need for medical treatment. Detailed coverage of the pharmacotherapy of all fields of indication encountered in outpatient treatment. Outlining of therapeutic strategies and patterns with regard to suitable pharmaceutical compounds, active pharmaceutical ingredients and representative range of proprietary medicinal products. Discussion of the most important mechanisms of action, contraindications, side effects and interactions.

**Abstract**

Hands-on course in pharmaceutical manufacturing in the pharmacy according to "GMP regulations for small quantities" defined in the pharmacopoeia: Design and practical approach in compounding of formulas using the most important dosage forms including their risks and quality assurance.

**Objective**

Students are able to manufacture, to package, to quality-control and document pharmaceutical compounding on their own, "best practice" and according to GMP regulations, using the appropriate techniques. They know the most important properties of active ingredients and excipients frequently used. They achieve the necessary knowledge including the relevant literature and other sources of information, as well as the legal requirements regarding pharmaceutical manufacturing in small quantities.

**Content**

To impart knowledge about the principal techniques and processes in the manufacturing of pharmaceuticals in small quantities (formulas), focusing on the design, manufacturing, quality assurance and risk based self-appraisal including the patient specific dispensing.

During the practical training periods: by means of pharmaceutical relevant examples the design, the planning, the manufacturing including the correct use of the equipment, the in-process control, the packaging and the quality assurance are practiced for various dosage forms and recipes. Quality assurance and control are mainly risk adapted considering as well hygiene regulations according to current pharmaceutical practice. The participants will thus improve their general GMP knowledge and skills.
Introduction to basic methods and fundamental concepts of statistics and probability theory for non-mathematicians. The concepts are presented on the basis of some descriptive examples. Learning the statistical program R for applying the acquired concepts will be a central theme.

The objective of this course is to build a solid fundament in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

Principals of the organisation of institutional environments (emergency hospitals), with special focus on medication processes and institutional pharmaceutical care (circulation of medication, continuum of care). Hygiene regulations, medical products, applications, drug formularies, patient files, SOAP notes, kardex study. Participation at interdisciplinary visits, internal trainings and doctors' reports as well as visitation of the emergency room. Drug interaction, generic substitution, quality management and pharmacovigilance.

The objective of this course is to build a solid fundament in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

### Compensatory Block Courses

All Elective Block Courses of the second year in Master studies are eligible as Compensatory Block Courses. Elective Block courses take place in Spring Semester.

Introduction into medical laboratory diagnostics: immunochemical methods, diagnostics of inflammation, acute myocardial infarction, lipid metabolism, diabetes, kidney function, urinary diagnostics, blood coagulation, blood count, therapeutic drug monitoring and drugs of abuse screening.

Abstract
The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

Objective
The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

Content
The focus is animal cells and the development of multicellular organisms. The course covers the molecular basis of cellular structures and phenomena. The topics include biological membranes, the cytoskeleton, protein sorting, energy metabolism, cell cycle and division, viruses, extracellular matrix, cell signaling, embryonic development, and cancer research.

<td>Quantum Mechanics I</td>
<td>O</td>
<td>10 credits</td>
<td>3V+2U</td>
<td>T. K. Gehrmann</td>
</tr>
</tbody>
</table>

**Abstract**

Introduction to non-relativistic single-particle quantum mechanics. In particular, the basic concepts of quantum mechanics, such as the quantisation of classical systems, wave functions and the description of observables as operators on a Hilbert space, and the formulation of symmetries will be discussed. Basic phenomena will be analysed and illustrated by generic examples.

**Objective**

Introduction to single-particle quantum mechanics. Familiarity with basic ideas and concepts (quantisation, operator formalism, symmetries, perturbation theory) and generic examples and applications (bound states, tunneling, scattering states, in one- and three-dimensional settings). Ability to solve simple problems.

**Content**

Keywords: Schrödinger equation, basic formalism of quantum mechanics (states, operators, commutators, measuring process), symmetries (translations, rotations), quantum mechanics in one dimension, spherically symmetric problems in three dimensions, scattering theory, perturbation theory, variational techniques, spin, addition of angular momenta, relation between QM and classical physics.

**Literature**

- F. Schwabl: Quantum mechanics
- J.J. Sakurai: Modern Quantum Mechanics
- C. Cohen-Tannoudji: Quantum mechanics I

</tbody>
</table>

**Abstract**

This introductory course will develop basic concepts in astrophysics as applied to the understanding of the physics of planets, stars, galaxies, and the Universe.

**Objective**

The course provides an overview of fundamental concepts and physical processes in astrophysics with the dual goals of: i) illustrating physical principles through a variety of astrophysical applications; and ii) providing an overview of research topics in astrophysics.

**Content**

The course provides an introduction to solid state physics, covering several topics that are later discussed in more detail in other more specialized lectures. The central topics are: solids and their lattice structures; interatomic bindings; lattice dynamics, electronic properties of insulators, metals, semiconductors, transport properties, magnetism, superconductivity.

**Literature**

- Ibach & Lüth, Festkörperphysik
- C. Kittel, Festkörperphysik
- Ashcroft & Mermin, Festkörperphysik
- W. Känzig, Kondensierte Materie

**Prerequisites / notice**

Voraussetzungen: Physik I, II, III wünschenswert

**Abstract**

Introductory lab course in experimental physics with accompanying lecture
Übergeordnetes Thema des Praktikums und der Vorlesung ist die Auseinandersetzung mit den grundlegenden Herausforderungen eines physikalischen Experimentes. Am Beispiel einfacher experimenteller Aufbauten und Aufgaben stehen vor allem folgende Gesichtspunkte im Vordergrund:
- Motivation und Herangehensweise in der Experimentalphysik
- Praktischer Aufbau von Experimenten und grundlegende Kenntnisse von Messmethoden und Instrumenten
- Einführung in relevante statistische Methoden der Datenauswertung und Fehleranalyse
- Kritische Beurteilung und Interpretation der Beobachtungen und Ergebnisse
- Darstellen und Kommunikieren der Ergebnisse mit Graphiken und Text
- Ethische Aspekte der experimentellen Forschung und wissenschaftlicher Kommunikation

Versuche zu Themen aus den Bereichen der Mechanik, Optik, Wärme, Elektrizität und Kernphysik mit begleitender Vorlesung zur Vertiefung des Verständnisses der Datenanalyse und Interpretation

Lecture notes Anleitung zum Physikalischen Praktikum; Vorlesungsskript
Prerequisites / notice Aus einer Liste von 33 Versuchen müssen 9 Versuche in Zweiergruppen durchgeführt werden.

Am ersten Termin findet nur eine dreistündige Einführungsveranstaltung im Hörsaal statt und es werden noch keine Experimente durchgeführt.

Arbeiten in einer Forschungsgruppe sind besonders gut geeignet, die Studierenden mit aktuellen Forschungsthemen und mit moderner Instrumentierung bekannt zu machen.

### Advanced Quantum Electronics Experiments

**402-0400-BSL**

**W** 9 credits 18P

**Advisors for this experimental semester paper:**
- Prof. Tilman Esslinger
- Prof. Jérôme Faist
- Prof. Rachel Grange
- Prof. Jonathan Home
- Prof. Atac Imamoglu
- Prof. Steven Johnson
- Prof. Ursula Keller

**Abstract**

Implementation of experiments in quantum electronics. Planning, design, realisation, evaluation, and interpretation of the experiments.

**Content**

### Particle Physics at PSI (Paul Scherrer Institute)

**402-0719-BSL**

**W** 9 credits 18P  C. Grab

**Abstract**

During semester break 6-12 students stay for 3 weeks at PSI and participate in a hands-on course on experimental particle physics. A small real experiment is performed in common, including apparatus design, construction, running and data analysis. The course includes some lectures, but the focus lies on the practical aspects of experimenting.

**Objective**

Students learn all the different steps it takes to perform a complete particle physics experiment in a small team. They acquire skills to do this themselves in the team, including design, construction, data taking and data analysis.

### Particle Physics at CERN

**402-0717-BSL**

**W** 9 credits 18P  F. Nessi-Tedaldi, W. Lustermann

**Abstract**

During the semester break participating students stay for 4 weeks at CERN and perform experimental work relevant to our particle physics projects. Dates to be agreed upon.

**Objective**

Students learn, by doing, the needed skills to perform a small particle physics experiment: setup, problem solving, data taking, analysis, interpretation and presentation in a written report of publication quality.

**Content**

Detailed information in: http://www@cmsdoc.cern.ch/~nessif/ETHTeilchenpraktikumCERN.html

**Prerequisites / notice**

Language of instruction: English or German

### Medical Physics

**402-0340-BSL**

**W** 9 credits 18P  A. J. Lomax, K. P. Prüssmann, M. Rudin

**Abstract**

In agreement with the lecturers a semester paper in the context of the topics discussed in the lectures can be written.

### Astronomy

**401-0351-00L**

**Z** 2 credits 2V  H. M. Schmid, W. Schmutz

**Abstract**

An overview on the important topics in modern astronomy: planets, sun, stars, milky way, galaxies, and cosmology.

**Objective**

The lecture provides a general introduction to main topics in modern astronomy. The lecture provide a basis for the more advanced lectures in astrophysics.

**Content**

Planeten, Sonne, Sterne, Milchstrasse, Galaxien und Kosmologie.

**Lecture notes**

Kopien der Präsentationen werde zur Verfügung gestellt.

**Literature**

Astronomie. Harry Nussbaumer, Hans Martin Schmid (vdf Vorlesungsskripte (8. Auflage))

### Geometry

**401-1511-00L**

**Z** 3 credits 2V+1U  T. Ilmanen

**Abstract**

We will study the topology and geometry of 2 and 3 dimensional spaces (manifolds) from an informal point of view.

**Objective**

- what is it like to live in a non-Euclidean space (for example, in a surface)?
- orientation, genus, curvature
- classification of closed orientable surfaces
- spherical, Euclidean, and hyperbolic geometry
- 3-manifolds a la Thurston

**Literature**

Jeffrey R. Weeks. The Shape of Space.

Edwin A. Abbott. Flatland. 1884.

**Abstract**
Introduction and development of some basic algebraic structures - groups, rings, fields.

**Objective**
Introduction to basic notions and results of group, ring and field theory.

**Content**
Group Theory: basic notions and examples of groups; Subgroups, Quotient groups and Homomorphisms, Sylow Theorems, Group actions and applications

Ring Theory: basic notions and examples of rings; Ring Homomorphisms, ideals and quotient rings, applications

Field Theory: basic notions and examples of fields; finite fields, applications

At the end we prove Mordell's Theorem for special elliptic curves.

Abstract
This lecture provides an overview of programming techniques for scientific simulations. The focus is on advanced C++ programming techniques and scientific software libraries. Based on an overview over the hardware components of PCs and supercomputer, optimization methods for scientific simulation codes are explained.

**Abstract**
This lecture gives an overview of the present research in the field of Astro-Particle Physics, including the different experimental techniques. In the first semester, main topics are the charged cosmic rays including the antimatter problem. The second semester focuses on the neutral components of the cosmic rays as well as on some aspects of Dark Matter.

**Objective**
Successful students know:
- experimental methods to measure cosmic ray particles over full energy range
- current knowledge about the composition of cosmic ray
- possible cosmic acceleration mechanisms
- correlation between astronomical object classes and cosmic accelerators
- information about our galaxy and cosmology gained from observations of cosmic ray

**Content**
First semester (Astro-Particle Physics I):
- definition of ‘Astro-Particle Physics’
- important historical experiments
- chemical composition of the cosmic rays
- direct observations of cosmic rays
- indirect observations of cosmic rays
- ‘extended air showers’ and ‘cosmic muons’
- ‘knee’ and ‘ankle’ in the energy spectrum
- the ‘anti-matter problem’ and the Big Bang
- ‘cosmic accelerators’

**Abstract**
The energy and related environmental problems, the physics principles of using energy and the various real and hypothetical options are discussed from a physicist point of view. The lecture is intended for students of all ages with an interest in a rational approach to the energy problem of the 21st century.

**Objective**
Scientists and espially physicists are often confronted with questions related to the problems of energy and the environment. The lecture tries to address the physical principles of todays and tomorrow energy use and the resulting global consequences for the world climate.

The lecture is for students which are interested participate in a rational and responsible debate about the energy problem of the 21. century.

**Content**
Introduction: energy types, energy carriers, energy density and energy usage. How much energy does a human needs/uses?

Energy conservation and the first and second law of thermodynamics

- Fossil fuels (our stored energy resources) and their use.
- Burning fossil fuels and the physics of the greenhouse effect.
- Physics basics of nuclear fission and fusion energy.
- Controlled nuclear fission energy today, the different types of nuclear power plants, uranium requirements and resources, natural and artificial radioactivity and the related waste problems from the nuclear fuel cycle.
- Nuclear reactor accidents and the consequences, a comparison with risks from other energy using methods.
- The problems with nuclear fusion and the ITER project.
- Nuclear fusion and fission: ”exotic” ideas.
- Hydrogen as an energy carrier: ideas and limits of a hydrogen economy.
- New clean renewable energy sources and their physical limits (wind, solar, geothermal etc)
- Energy perspectives for the next 100 years and some final remarks

**Lecture notes**
many more details (in english and german) here:

http://ihp-ix2.ethz.ch/energy21/

**Literature**

Environmental Physics: Boeker and Egbert New York Wiley 1999

**Prerequisites / notice**
Science promised us truth, or at least a knowledge of such relations as our intelligence can seize:
- If never promised us peace or happiness
- Gustave Le Bon

Physicists learned to realize that whether they like a theory or they don’t like a theory is not the essential question.
- Rather, it’s whether or not the theory gives predictions that agree with experiment.
- Richard Feynman, 1985

---
Quantum Information Theory

W 8 credits 3V+1U R. Renner

Abstract

The goal of this course is to introduce the foundations of quantum information theory. It starts with a brief introduction to the mathematical theory of information and then discusses the basic information-theoretic aspects of quantum mechanics. Further topics include applications such as quantum cryptography and quantum computing.

Objective

The course gives an insight into the notion of information and its relevance to physics and, in particular, quantum mechanics. It also serves as a preparation for further courses in the area of quantum information sciences.

Superconductivity

W 6 credits 2V+1U M. Sigrist

Abstract

Superconductivity; thermodynamics, London and Pippard theory; Ginzburg-Landau theory; spontaneous symmetry breaking, flux quantization, type I and II superconductors; microscopic BCS theory: electron-phonon mechanism, Cooper pairing, quasiparticle spectrum and tunneling, Josephson effect, superconducting quantum interference devices (SQUID), brief introduction to unconventional superconductivity.

Objective

Introduction to the most important concepts of superconductivity both on phenomenological and microscopic level, including experimental and theoretical aspects.

Content

This lecture course provides an introduction to superconductivity, covering both experimental as well as theoretical aspects. The following topics are covered:

- Basic phenomena of superconductivity: thermodynamics, electrodynamics, London and Pippard theory; Ginzburg-Landau theory;
- Spontaneous symmetry breaking, flux quantization, properties of type I and II superconductors; microscopic BCS theory: electron-phonon mechanism. Cooper pairing, coherent state, quasiparticle spectrum, quasiparticle tunnel, Josephson effects, superconducting quantum interference devices (SQUID), brief extension to unconventional superconductivity.

Lecture notes

Lecture notes and additional materials are available.

Literature

- M. Tinkham "Introduction to Superconductivity"
- H. Stolz; "Supraleitung"
- W. Kinkel & H. "Superconductivity"
- P. G. de Gennes "Superconductivity Of Metals And Alloys"
- A. A. Abrikosov "Fundamentals of the Theory of Metals"

Prerequisites / notice

The preceding attendance of the scheduled lecture courses "Introduction to Solid State Physics" and "Quantum Mechanics I" are mandatory. The courses "Quantum Mechanics II" and "Solid State Theory" provide the most optimal conditions to follow the course.

Physics in Medical Research

W 6 credits 2V+1U B. K. R. Müller

Abstract

Scanning probe and diffraction techniques allowing studying atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field models on one hand from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.

Objective

The lecture course is motivated by an overview covering the surface science, roughness analysis, protein adsorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

Introduction to Neuroinformatics

W 6 credits 2V+1U K. A. Martin, M. Cook, V. Mante, M. Pfeiffer

Abstract

The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

Objective

Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monocultures of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enforcements and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

Content

This course consists of the structure and function of biological neural networks at different levels. The function of neuronal networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.
401-3461-00L Functional Analysis I
This course counts as a core course in the Bachelor's degree programme in Mathematics. Holders of an ETH Zurich Bachelor's degree in Mathematics who didn't use credits from neither 401-3461-00L Functional Analysis I nor 401-3462-00L Functional Analysis II for their Bachelor's degree still can have recognised this course for the Master's degree. Furthermore, at most one of the three course units 401-3461-00L Functional Analysis I 401-3531-00L Differential Geometry I 401-3601-00L Probability Theory can be recognised for the Master's degree in Mathematics or Applied Mathematics.

Abstract
Curves in R^n, inner geometry of hypersurfaces in R^n, curvature, Theorema Egregium, special classes of surfaces, Theorem of Gauss-Bonnet. Hyperbolic space. Differentiable manifolds, tangent bundle, immersions and embeddings, Sard's Theorem, mapping degree and intersection number, vector bundles, vector fields and flows, differential forms, Stokes' Theorem.

Objective
Introduction to elementary differential geometry and differential topology.

Content
- Differential geometry in R^n: theory of curves, submanifolds and immersions, inner geometry of hypersurfaces, Gauss map and curvature, Theorema Egregium, special classes of surfaces, Theorem of Gauss-Bonnet, Poincaré Index Theorem.
- The hyperbolic space.
- Differential topology: differentiable manifolds, tangent bundle, immersions and embeddings in R^n, Sard's Theorem, transversality, mapping degree and intersection number, vector bundles, vector fields and flows, differential forms, Stokes' Theorem.

Literature
Differentiable Geometry in R^n:
- Manfredo P. do Carmo: Differential geometry of curves and surfaces
- Wolfgang Kühnel: Differentialgeometrie. Curves-surfaces-manifolds
- Christian Bär: Elementary differential geometry
- Dennis Barden & Charles Thomas: An Introduction to Differential Manifolds
- Victor Guillemin & Alan Pollack: Differential Topology

401-3601-00L Probability Theory
This course counts as a core course in the Bachelor's degree programme in Mathematics. Holders of an ETH Zurich Bachelor's degree in Mathematics who didn't use credits from none of the three course units 401-3601-00L Probability Theory, 401-3642-00L Brownian Motion and Stochastic Calculus resp. 401-3622-00L Applied Stochastic Processes for their Bachelor's degree still can have recognised this course for the Master's degree. Furthermore, at most one of the three course units 401-3461-00L Functional Analysis I 401-3531-00L Differential Geometry I 401-3601-00L Probability Theory can be recognised for the Master's degree in Mathematics or Applied Mathematics.

Abstract
Baire category; Banach and Hilbert spaces, bounded linear operators; three fundamental principles: Uniform boundedness, open mapping/closed graph theorem, Hahn-Banach; convexity; dual spaces; weak and weak* topologies; Banach-Alaoglu; reflexive spaces; compact operators and Fredholm theory; closed range theorem; spectral theory of self-adjoint operators in Hilbert spaces.

Objective
This course presents the basics of probability theory and the theory of stochastic processes in discrete time. The following topics are planned:
Basics in measure theory, random series, law of large numbers, weak convergence, characteristic functions, central limit theorem, conditional expectation, martingales, convergence theorems for martingales, Galton Watson chain, transition probability, Theorem of Ionescu Tulcea, Markov chains.

Content
This course presents the basics of probability theory and the theory of stochastic processes in discrete time. The following topics are planned:
Basics in measure theory, random series, law of large numbers, weak convergence, characteristic functions, central limit theorem, conditional expectation, martingales, convergence theorems for martingales, Galton Watson chain, transition probability, Theorem of Ionescu Tulcea, Markov chains.

851-0240-03L Introduction to Test Theory and Test Construction in Educational Contexts (University of Zürich) W 4 credits 2S University lecturers

Enrolment only possible with Teaching Diploma or DC matriculation.

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: 200a968

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

Objective
At the end of the seminar, participants will be in a position to:
- describe the scientific fundamentals of test theory and test structure,
- evaluate examples of scientifically-developed tests in their application context,
- if necessary, critically question the performance assessment that they employ in practice and professionalise it still further.

Content
The konkreten Inhalte des Seminars ergeben sich aufgrund der Präferenzen der Teilnehmenden und der daraus abgeleiteten

Lecturers
University lecturers
Cognitively Activating Instructions in MINT Subjects

Literature from the learning sciences is critically discussed with a focus on research methods.

In this class, students will learn concepts and skills for coping with psychosocial demands of teaching.

(1) They know the basic rules of negotiation and conflict management (e.g., mediation) and can apply them in the school context (e.g., in conversations with parents).

(2) They can apply diverse techniques of classroom management (e.g., prevention of disciplinary problems in the classroom) and know relevant authorities for further information (e.g., legal conditions).

Objective

Students possess theoretical knowledge and practical competences to be able to cope with the psychosocial demands of teaching.

851-0242-05L

Cognitively Activating Instructions in MINT Subjects

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)."

Abstract

This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

Objective

- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

Prerequisites / notice

Für eine reibungsfreie Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

851-0242-07L

Human Intelligence

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

Number of participants limited to 30.

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)."

Abstract

The focus will be on the book "Intelligenz: Grosse Unterschiede und ihre Folgen" by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

Objective

- Understanding research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

851-0242-08L

Research Methods in Educational Science

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)."

Abstract

Literature from the learning sciences is critically discussed with a focus on research methods.

At the first meeting, working groups will be assembled and meetings with those will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

Objective

- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

Simultaneous enrolment in Introductory Internship Physics

- course 402-0920-00L - is compulsory for Teaching Diploma Physic

Information for UZH students:

Enrolment to this course unit only possible at ETH. No enrolment to module 090Phy1 at UZH.

Please mind the ETH enrolment deadlines for UZH students: https://www.ethz.ch/en/studies/non-degree-courses/special-students.html

Objective

402-0915-00L Teaching Internship Including Examination Lessons O 4 credits 9P M. Mohr

Teaching Internship Physics for TC and Teaching Diploma Physics as Minor Subject.
Repetition of the Teaching Internship is excluded even if Examination Lessons are to be repeated.

Abstract
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils' work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Objective
- To be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- To show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Content

402-0917-00L Mentored Work Subject Didactics Physics A O 2 credits 4A G. Schiltz, A. Vaterlaus, C. Wagner

Mentored Work Subject Didactics in Physics for TC and Teaching Diploma.

Abstract
In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

Objective
- To be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- To show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Content
Thematic Focus
The topics of the mentored work are mostly chosen from the high school curriculum.

Methods
With the help of the mentor the students individually work on a topic and write a thesis about it.

Abstract
The energy and related environmental problems, the physics principles of using energy and the various real and hypothetical options are discussed from a physical point of view. The lecture is intended for students of all ages with an interest in a rational approach to the energy problem of the 21st century.

Objective
- Scientists and especially physicists are often confronted with questions related to the problems of energy and the environment.
- The lecture tries to address the physical principles of todays and tomorrow energy use and the resulting global consequences for the world climate.
- The lecture is for students which are interested participate in a rational and responsible debate about the energypoverty of the 21. century.
Content

Introduction: energy types, energy carriers, energy density and energy usage. How much energy does a human needs/uses?

Energy conservation and the first and second law of thermodynamics

Fossil fuels (our stored energy resources) and their use.

Burning fossil fuels and the physics of the greenhouse effect.

Physics basics of nuclear fission and fusion energy

Controlled nuclear fission energy today, the different types of nuclear power plants, uranium requirements and resources, natural and artificial radioactivity and the related waste problems from the nuclear fuel cycle.

Nuclear reactor accidents and the consequences, a comparison with risks from other energy using methods.

The problems with nuclear fusion and the ITER project.

Nuclear fusion and fission: "exotic" ideas.

Hydrogen as an energy carrier: ideas and limits of a hydrogen economy.

New clean renewable energy sources and their physical limits (wind, solar, geothermal etc)

Energy perspectives for the next 100 years and some final remarks

Lecture notes

Literature

Environmental Physics: Boeker and Egbert New York Wiley 1999

Prerequisites / notice

Science promised us truth, or at least a knowledge of such relations as our intelligence can seize:
it never promised us peace or happiness

Gustave Le Bon

Physicists learned to realize that whether they like a theory or they don't like a theory is not the essential question.

Rather, it's whether or not the theory gives predictions that agree with experiment.

Richard Feynman, 1985

Abstract

In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. They compile texts under supervision that are directly comprehensible to the targeted readers - generally specialist-subject teachers at high-school level.

Objective

Practice in the explanation of complex topics in physics as the core competence of the teaching profession

Improvement of the physics education by providing attractive recent topics with regard to future curricular decisions and the public view of physics

Content

Choice of topic by individual arrangement

**ECTS**

- European Credit Transfer and Accumulation System
- Special students and auditors need special permission from the lecturers.
This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

### Prerequisites / notice
Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

### Objective
- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

### Content
- Understanding of research methods used in the empirical human sciences
- Understanding findings relevant for education
- Getting to know intelligence tests
- Understanding findings relevant for education

### Literature from the learning sciences is critically discussed with a focus on research methods.

#### Cognitively Activating Instructions in MINT Subjects

- **Type**: W
- **ECTS**: 2
- **Hours**: 2S
- **Lecturer**: R. Schumacher

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

#### Human Intelligence

- **Type**: W
- **ECTS**: 1
- **Hours**: 1S
- **Lecturer**: E. Stern, P. Edelsbrunner, B. Rütsche

The focus will be on the book "Intelligenz: Grosse Unterschiede und ihre Folgen" by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5-10 students) will be discussed.

#### Research Methods in Educational Science

- **Type**: W
- **ECTS**: 1
- **Hours**: 1S
- **Lecturer**: P. Edelsbrunner, B. Rütsche, E. Stern, E. Ziegler

Literature from the learning sciences is critically discussed with a focus on research methods. At the first meeting, working groups will be assembled and meetings with those will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

#### Student Research Projects: Practical Research on Learning and Instruction

- **Type**: W
- **ECTS**: 2
- **Hours**: 2S
- **Lecturer**: A. Deiglmayr, P. Edelsbrunner, S. Hoser, B. Rütsche, L. Schalk, E. Stern, E. Ziegler

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

The seminar is targeted at advanced students who have taken an interest in gathering practical research experience in the field of Learning & Instruction. In teams of two, students conduct their own research projects (planning, conducting, analyzing, interpreting, and presenting research); thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students’ independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction).

Learning goals include:
- Participants can illustrate and explain basic methods and concepts for research in the field of Learning and Instruction, e.g. with the help of practical examples.
- Participants can generate testable research questions for a topic relevant in the fields of Learning and Instruction.
- Participants can design and conduct a study that is relevant for answering their research question.
- Participants can summarize and evaluate the main results from a study in the field of learning and instruction, with regard to the research question being asked.

see Educational Science Teaching Diploma

### Subject Didactics in Mathematics

- **Type**: S
- **ECTS**: 2
- **Hours**: 2S
- **Lecturer**: S. Hofer, B. Rütsche, L. Schalk, E. Stern, E. Ziegler

### Subject Didactics in Physics

- **Type**: S
- **ECTS**: 4
- **Hours**: 3G
- **Lecturer**: M. Mohr

Further information is available from the lecturer via email:
Simultaneous enrolment in Introductory Internship Physics
- course 402-0920-00L - is compulsory for Teaching Diploma Physic

Information for UZH students:
Enrolment to this course unit only possible at ETH. No enrolment to module 090Phy1 at UZH.

Please mind the ETH enrolment deadlines for UZH students: https://www.ethz.ch/en/studies/non-degree-courses/special-students/university-of-zurich.html

Objective
The objective is for the students:
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Content
The topics of the mentored work are mostly chosen from the high school curriculum.

Methods
With the help of the mentor the students individually work on a topic and write a thesis about it.

402-0917-00L Mentored Work Subject Didactics Physics A
Objectives
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.

Content
The topics of the mentored work are mostly chosen from the high school curriculum.

Methods
With the help of the mentor the students individually work on a topic and write a thesis about it.

402-0918-00L Mentored Work Subject Didactics Physics B
Objectives
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.

Content
The topics of the mentored work are mostly chosen from the high school curriculum.

Methods
With the help of the mentor the students individually work on a topic and write a thesis about it.
Die Studierenden sammeln Erfahrungen in der Unterrichtsführung, der Auseinandersetzung mit Lernenden, der Klassenbetreuung und der Examination Lesson II Physics

Die Studierenden erfahren das Lektionsthema in der Regel eine Woche vor dem Prüfungstermin. Von der zuständigen Lehrperson erhalten sie Informationen über den Wissensstand der zu unterrichtenden Klasse und können sie vor dem Prüfungstermin besuchen.

Teaching Internship Physics for Teaching Diploma

Teaching Internship Physics for Teaching Diploma

Abstract

The teaching practice takes in 50 lessons: 30 are taught by the students, and the students sit in on 20 lessons. The teaching practice lasts 4-6 weeks. It gives students the opportunity to implement the contents of their specialist-subject, educational science and subject-didactics training in the classroom. Students also conduct work assignments in parallel to their teaching practice.

Objective

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- The students are able to assess the significance of tuition topics in their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- The students acquire the skills of the teaching trade.
- The students are able to assess their own practice, the pedagogical, subject and didactic aspects and plan improvements.
- The students learn to use the instruments available to them and analyse the different aspects of the taught lessons.

Teaching Internship for students upgrading TC to Teaching Diploma

Abstract

This is a supplement to the Teaching Internship required to obtain a Master of Advanced Studies in Secondary and Higher Education in the corresponding subject. It is aimed at enlarging the already acquired teaching experience. Students observe 10 lessons and teach 15 lessons independently.

Objective

Die Studierenden können die Bedeutung von Unterrichtsthemen in ihrem Fach unter verschiedenen Blickwinkeln einschätzen. Sie können beherrschens das unterrichtliche Handwerk. Sie können ein gegebenes Unterrichtsthema für eine Gruppe von Lernenden fachlich und didaktisch korrekt strukturieren und in eine adequate Lernumgebung umsetzen. Es gelingt ihnen, die Balance zwischen Anleitung und Offenheit zu finden, sodass die Lernenden sowohl über den nötigen Freiraum wie über ausreichend Orientierung verfügen, um aktiv und effektiv flexibel nutzbaren (Fach-)Wissen zu erwerben.

Content

402-0921-01L  Examination Lesson I Physics | O  | 1 credit | 2P  | M. Mohr

Simultaneous enrolment in “Examination Lesson II Physics” (402-0921-02L) is compulsory.

Abstract

In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter-based and didactic skills they have acquired in the course of their training.

Objective

- To develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle.
- To analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

Content

Die Studierenden erfahren das Lektionsthema in der Regel eine Woche vor dem Prüfungstermin. Von der zuständigen Lehrperson erhalten sie Informationen über den Wissensstand der zu unterrichtenden Klasse und können sie vor dem Prüfungstermin besuchen.

Lecture notes

Dokument: Schriftliche Vorbereitung für Prüfungslektionen.

Prerequisites / notice

Nach Abschluss der übrigen Ausbildung.

---

Students who entered the teaching diploma in the spring semester 2014 or later have to pass the Internship in Physics Didactics. All other courses in this area can be chosen individually.

Students who entered the teaching diploma before the spring semester 2014 have to do either a Mentored Work or the Internship in Physics Didactics. Of course it is also possible to complete and count both units for the teaching diploma.

---

402-0922-00L  Mentored Work Specialised Courses in Physics with an Educational Focus A  
Mentored Work Specialised Courses in the Respective Subject with an Educational Focus in Physics for TC and Teaching Diploma.

Abstract  In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. They compile texts under supervision that are directly comprehensible to the targeted readers - generally specialist-subject teachers at high-school level.

Objective  Practice in the explanation of complex topics in physics as the core competence of the teaching profession

Content  Choice of topic by individual arrangement

402-0923-00L  Mentored Work Specialised Courses in Physics with an Educational Focus B  
Mentored Work Specialised Courses in the Respective Subject with an Educational Focus in Physics for Teaching Diploma and for students upgrading TC to Teaching Diploma.

Abstract  In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. Content  Choice of topic by individual arrangement

402-0924-00L  Internship Physics Didactics  
Internship Physics Didactics for Teaching Diploma with Physics as First Subject.

Abstract  During the Internship Physics Didactics students teach 8 lessons in the classes of an internship teaching person. Students develop, test and analyze teaching arrangement under the guidance of a mentor (one of the lecturers).

Objective  Basic knowledge for the design of teaching arrangements is the topic of the Physics Didactics I and II courses. In the subsequent Internship Physics Didactics students combine the theoretical knowledge acquired in the didactics courses with practical aspects of teaching. During the internship students learn to transform their teaching goals into a real live class room setting considering subject specific, didactical and pedagogical aspects.

Lecture notes  Wird vom Mentor bestimmt.

Prerequisites / notice  Das Fachdidaktikpraktikum kann erst nach dem Besuch der FD1 und frühestens mit der FD2 durchgeführt werden (eine gleichzeitige Belegung von Fachdidaktik 2 und Fachdidaktikpraktikum ist möglich).

▶ Compulsory Elective Courses

Richard Feynman, 1985

Enrolment in Physics Didactics I (402-0910-00L) and Physics Didactics II (402-0910-00L) is mandatory.

Abstract

The unit "Computer Science in Secondary School Mathematics" addresses key contributions of computer science to general education, the tight relations between the algorithmic and the mathematical way of thinking, and the thoughtful choice of computer science topics for high school mathematics classes.

Objective

The general goal of the course consists in presenting ways to teach fundamentals of computer science, which are closely related to contents and methods of mathematics. After attending the course unit, a mathematics teacher is able to teach selected fundamentals of computer science in mathematics classes.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.
The main topics of the course unit "Computer Science in Secondary School Mathematics" represent a scientific and didactic added value for mathematics classes.

The course covers the didactics of logic, of cryptology, of finite state automata, of computability and of the introduction to programming. The students develop the understanding of fundamental scientific concepts such as algorithm, program, complexity, determinism, computation, automata, verification, testing, security of a cryptosystem and secure communication. They reflect on ways to embed them into a scientifically sound and didactically sustainable mathematics course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

Physics Master

Core Courses

One Core Course in Experimental or Theoretical Physics from Physics Bachelor is eligible; however, this Core Course from Physics Bachelor cannot be used to compensate for the mandatory Core Course in Experimental or Theoretical Physics.

For the category assignment keep the choice "no category" and take contact with the Study Administration (www.phys.ethz.ch/studies/study-administration.html) after having received the credits.

Today's challenges and opportunities in Solid State Physics

Phase transitions and critical phenomena
- Main concepts: coherence length, symmetry, order parameter, correlation functions, generalized susceptibility
- Bragg-Williams mean field theory
- Landau theory of phase transitions
- Fluctuations in Landau theory
- Critical exponents: significance, measurement, inequalities, equalities
- Scaling and hyperscaling
- Universality
- Critical dynamics
- Quantum phase transitions and quantum criticality

Fermi surface instabilities
- The concept of the Landau Fermi liquid in metals
- Kohn anomalies
- Charge density waves
- Metallic ferromagnets and half-metals
- Spin density waves

Magnetism of insulators
- Magnetic interactions in solids and the spin Hamiltonian
- Magnetic structures and phase transitions
- Spin waves
- Quantum magnetism

Electron correlations in solids
- Mott insulating state
- Phases of the Hubbard model
- Layered cuprates (non-superconducting properties)

Lecture notes
The printed material for this course involves: (1) a self-contained script, distributed electronically at semester start. (2) experimental examples (Power Point slide-style) selected from original publications, distributed at the start of every lecture.

Literature
A list of books will be distributed. Numerous references to useful published scientific papers will be provided.

Prerequisites / notice
This course is for students who like to be engaged in active learning. The "exercise classes" are organized in a non-traditional way: following the idea of "less is more", we will work on only about half a dozen topics, and this gives students a chance to take a look at original literature (provided), and to get the grasp of a topic from a broader perspective.

Students report back that this mode of "exercise class" is more satisfying than traditional modes, even if it does not mean less effort.

402-0442-00L Quantum Optics W 10 credits 3V+2U J. Faist

Abstract
This course gives an introduction to the fundamental concepts of Quantum Optics and will highlight state-of-the-art developments in this rapidly evolving discipline. The topics covered include the quantum nature of light, semi-classical and quantum mechanical description of light-matter interaction, laser manipulation of atoms and ions, optomechanics and quantum computation.

Objective
The course aims to provide the knowledge necessary for pursuing research in the field of Quantum Optics. Fundamental concepts and techniques of Quantum Optics will be linked to modern experimental research. During the course the students should acquire the capability to understand currently published research in the field.

Content
This course gives an introduction to the fundamental concepts of Quantum Optics and will highlight state-of-the-art developments in this rapidly evolving discipline. The topics that are covered include:

- coherence properties of light
- quantum nature of light: statistics and non-classical states of light
- light matter interaction: density matrix formalism and Bloch equations
- quantum description of light matter interaction: the Jaynes-Cummings model, photon blockade
- laser manipulation of atoms and ions: laser cooling and trapping, atom interferometry,
- further topics: Rydberg atoms, optomechanics, quantum computing, complex quantum systems.

Lecture notes
Selected book chapters will be distributed.

Literature
- G. Grynberg, A. Aspect and C. Fabre, Introduction to Quantum Optics
- R. Loudon, The Quantum Theory of Light
- Atomic Physics, Christopher J. Foot
- Advances in Atomic Physics, Claude Cohen-Tannoudji and David Guéry-Odelin
- C. Cohen-Tannoudji et al., Atom-Photon-Interactions
- M. Scully and M.S. Zubairy, Quantum Optics
- Y. Yamamoto and A. Imamoglu, Mesoscopic Quantum Optics

402-0402-00L Ultrafast Laser Physics W 10 credits 3V+2U L. P. Gallmann, S. Johnson, U. Keller

Abstract
Introduction to ultrafast laser physics with an outlook into cutting edge research topics such as attosecond science and coherent ultrafast sources from THz to X-rays.

Objective
Understanding of basic physics and technology for pursuing research in ultrafast laser science. How are ultrashort laser pulses generated, how do they interact with matter, how can we measure these shortest man-made events and how can we use them to time-resolve ultrafast processes in nature? Fundamental concepts and techniques will be linked to a selection of hot topics in current research and applications.
The lecture covers the following topics:

a) Linear pulse propagation: mathematical description of pulses and their propagation in linear optical systems, effect of dispersion on ultrashort pulses, concepts of pulse carrier and envelope, time-bandwidth product

b) Dispersion compensation: technologies for controlling dispersion, pulse shaping, measurement of dispersion

c) Nonlinear pulse propagation: intensity-dependent refractive index (Kerr effect), self-phase modulation, nonlinear pulse compression, self-focusing, filamentation, nonlinear Schrödinger equation, solitons, non-instantaneous nonlinear effects (Raman/Brillouin), self-steepening, saturable gain and absorption

d) Second-order nonlinearities with ultrashort pulses: phase-matching with short pulses and real beams, quasi-phase matching, second-harmonic and sum-frequency generation, parametric amplification and generation

e) Relaxation oscillations: dynamical behavior of rate equations after perturbation

f) Q-switching: active Q-switching and its theory based on rate equations, active Q-switching technologies, passive Q-switching and theory

g) Active modelocking: introduction to modelocking, frequency comb versus axial modes, theory for various regimes of laser operation, Haus master equation formalism

h) Passive modelocking: slow, fast and ideally fast saturable absorbers, semiconductor saturable absorber mirror (SESAM), designs of and materials for SESAMs, modelocking with slow absorber and dynamic gain saturation, modelocking with ideally fast saturable absorber, Kerr-lens modelocking, soliton modelocking, Q-switching instabilities in modelocked lasers, inverse saturable absorption

i) Pulse duration measurements: rf cables and electronics, fast photodiodes, linear system theory for microwave test systems, intensity and interferometric autocorrelations and their limitations, frequency-resolved optical gating, spectral phase interferometry for direct electric-field reconstruction and more

j) Noise: microwave spectrum analyzer as laser diagnostics, amplitude noise and timing jitter of ultrafast lasers, lock-in detection

k) Ultrafast measurements: pump-probe scheme, transient absorption/differential transmission spectroscopy, four-wave mixing, optical gating and more

l) Frequency combs and carrier-envelope offset phase: measurement and stabilization of carrier-envelope offset phase (CEP), time and frequency domain applications of CEP-stabilized sources

m) High-harmonic generation and attosecond science: non-perturbative nonlinear optics / strong-field phenomena, high-harmonic generation (HHG), phase-matching in HHG, attosecond pulse generation, attosecond technology: detectors and diagnostics, attosecond metrology (streaking, RABBITT, transient absorption, attoclock), example experiments

n) Ultrafast THz science: generation and detection, physics in THz domain, weak-field and strong-field applications

o) Brief introduction to other hot topics: relativistic and ultra-high intensity ultrafast science, ultrafast electron sources, free-electron lasers, etc.

Prerequisites / notice
Prerequisites: Basic knowledge of quantum electronics (e.g., 402-0275-00L Quantenelektronik).

Lecture notes
Class notes will be made available.

402-0891-00L Phenomenology of Particle Physics I W 10 credits 3V+2U A. Gehrmann-De Ridder, R. Wallny

Abstract
Topics to be covered in Phenomenology of Particle Physics I:
- Relativistic kinematics
- Decay rates and cross sections
- The Dirac equation
- From the S-matrix to the Feynman rules of QED
- Scattering processes in QED
- Experimental tests of QED
- Hadron spectroscopy
- Unitary symmetries and QCD
- QCD and alpha_s running
- QCD in e^+e^- annihilation
- Experimental tests of QCD in e^+e^- annihilation

Objective
Introduction to modern particle physics

Number Title Type ECTS Hours Lecturers
402-0521-66L Modern Aspects in Surface Science Research: Techniques and Applications W 6 credits 2V+1U O. Gürü
Abstract
The Course will treat the subjects of the crystal structure of bulk and surfaces, imaging surfaces with electrons and ions, general scanning probe microscopy methods, Scanning Tunnelling Microscopy, Atomic force microscopy, Electronic structure of the bulk and surfaces, Photoelectric emission, STM and AFM spectroscopy. The various techniques will be illustrated with examples from modern research.

Objective
It is the aim of this course to provide a review of modern aspects in surface science research.

Content
Course description
The course will start with an overview of the fundamentals of bulk crystals and a reminder on the x-ray diffraction from crystals. We will continue with the extension of the alphabet of bulk crystal structure to surfaces and the nomenclature of surface reconstructions and interesting structures like moiré patterns will be introduced. Following the two introductory weeks, we will dwell in to the realm of imaging the surfaces. We will start with electron beam based imaging and analysis techniques of surfaces. Scanning Electron Microscopy (SEM), Low Energy Electron Diffraction (LEED) and Low Energy Electron Microscopy (LEEM) will be discussed. Imaging with ion beam based techniques like Low Energy Ion Scattering (LEIS) and He-ion microscopy will be touched upon. Following these, probe microscopy techniques will be explored starting with the topografiner and continuing with Scanning Tunnelling Microscopy (STM). Basics of Atomic Force Microscopy (AFM) will follow. Imaging is a fundamental part of efforts on understanding surfaces. Yet, a through understanding and capability of generating and manipulating novel surface and interface systems can only be achieved by studying the electronic structure of surfaces. In order to investigate the electronic structure of surface and interface systems, a basic knowledge of the bulk electronic structure is necessary. So, introductory concepts on the electronic structure of the bulk and low dimensional systems will be discussed. Then, the basics of photoelectron emission form surfaces will be given. In the final two weeks of the course an overview of the spectroscopic modes of scanning probes and atomic scale electron spectroscopy will be introduced.

Course contents
1) Introduction and reminder of bulk crystals (week 1):
Reminder of the crystal structure, x-ray diffraction and determination of the crystal structure.

2) Crystal surfaces (weeks 2 and 3):
Definitions, description of surfaces, and reconstructions; Moire patterns; quasi-crystals.

3) Imaging surfaces with electrons (week 4):
SEM, LEED, LEEM

4) Imaging surfaces with ions (week 5):
LEIS, He ion microscopy

5) Introduction to probe microscopy (week 6):
General problems, field ion microscope, topografiner

6) Scanning Tunnelling Microscopy (weeks 6, 7 and 8):
Tunnelling problem (reminder), work function derivation and measurement with STM, imaging surfaces in real space, surface reconstructions, examples form metals and semiconductors and hybrid surface systems

7) Atomic force microscopy (week 9):
Technique, basics, examples.

8) Electronic structure of the bulk (week 10):
Reminders: density of states, band structure, low dimensional systems

9) Electronic structure of surfaces (week 11):
Bulk derived states, image states, examples from STM research

10) Photoelectric emission (week 12):
Basics of spectroscopy with x-rays and electrons.

11) STM and AFM derived spectroscopy techniques (weeks 13 and 14):
Comparative studies of Scanning Tunnelling spectroscopy (STS) to other integral spectroscopic methods.

Literature
6) Charles Kittel, Introduction to Solid State Physics (8th Ed.)
7) Neil W. Ashcroft and N. David Mermin, Solid State Physics
8) Harold Ibach and Hans Lüth, Solid-State Physics: An Introduction to Principles of Materials Science
9) Further reading material will be supplied.

Prerequisites / notice
At least, 4 homework will be assigned.

402-0526-00L Ultrafast Processes in Solids
W 6 credits 2V+1U Y. M. Acremann, A. Vaterlaus

Abstract
Ultrafast processes in solids are of fundamental interest as well as relevant for modern technological applications. The dynamics of the lattice, the electron gas as well as the spin system of a solid are discussed. The focus is on time resolved experiments which provide insight into pico- and femtosecond dynamics.

Objective
After attending this course you understand the dynamics of essential excitation processes which occur in solids and you have an overview over state of the art experimental techniques used to study fast processes.
1. Introduction and overview

The course gives an introduction to the use of synchrotron radiation in materials science. It treats the generation of intense x-ray beams at synchrotron radiation sources and their use for the characterisation of materials properties at different length scales. As part of the course, experiments will be carried out at the Swiss Light Source, Paul Scherrer Institut.

2. Dynamics of the electron gas

- First experiments on electron dynamics and lattice heating
- Finite lifetime of excited states
- Detection of lifetime effects
- Dynamical properties of reactions and adsorbents

3. Dynamics of the lattice

- Phonons
- Non-thermal melting

4. Dynamics of the spin system

- Laser induced ultrafast demagnetization
- Ultrafast spin currents generated by lasers
- Landau-Lifschitz-Dynamics
- Laser induced switching

5. Correlated materials

- Spin physics in the time domain (Larmor precession, resonance phenomena, Bloch equation, Landau-Lifshitz-Gilbert equation, superparamagnetism)
- Magnetism in solids (mechanisms producing inter-atomic exchange interaction, Bloch equation, Landau-Lifshitz-Gilbert equation, superparamagnetism)
- Magnetism in atoms (quantum-mechanical origin of atomic magnetic moments, intra-atomic exchange interaction)
- Magnetism in solids (mechanisms producing inter-atomic exchange interaction, Bloch equation, Landau-Lifshitz-Gilbert equation, superparamagnetism)
- Magnetic order at finite temperatures (Ising and Heisenberg models, mean-field approximation, spin waves, magnetic phase transition, domains and domain walls, magnetization dynamics from picoseconds to human time scales.

The course is complementary to the lecture on "ultrast rapid methods for solid state physics" of the spring semester. Both lectures can be attended independently. The focus of this lecture is on the physical processes whereas the focus of the "ultrast rapid methods for solid state physics" lecture is on the experimental techniques.

402-0535-00L Introduction to Magnetism

- 6 credits
- 2V+1U
- A. Vindigni

Abstract

The lecture "Introduction to Magnetism" is the regular course on Magnetism for the Master curriculum of the Department of Physics of ETH Zurich. With respect to specialized courses related to Magnetism (such as the one held by R. Allenspach in FS16) this lecture addresses more fundamental aspects -- quantum and statistical physics of magnetism -- which are often not comprehensively spelled out in conventional lectures on solid state physics.

Preliminary contents for the HS16:
- Magnetism in atoms (quantum-mechanical origin of atomic magnetic moments, intra-atomic exchange interaction)
- Magnetism in solids (mechanisms producing inter-atomic exchange interaction, Bloch equation, Landau-Lifshitz-Gilbert equation, superparamagnetism)
- Magnetic order at finite temperatures (Ising and Heisenberg models, mean-field approximation, low-dimensional magnetism)
- Dipolar interaction in ferromagnets (shape anisotropy, frustration and modulated phases of magnetic domains)
- Spin physics in the time domain (Larmor precession, resonance phenomena, Bloch equation, Landau-Lifshitz-Gilbert equation, superparamagnetism)

402-0595-00L Semiconductor Nanostructures

- 6 credits
- 2V+1U
- T. M. Ihn

Abstract

The course covers the foundations of semiconductor nanostructures, e.g., materials, band structures, bandgap engineering and doping, field-effect transistors. The physics of the quantum Hall effect and of common nanostructures based on two-dimensional electron gases will be discussed, i.e., quantum point contacts, Aharonov-Bohm rings and quantum dots.

4.4 Laser induced switching
4.3 Landau-Lifschitz-Dynamics
4.2 Ultrafast spin currents generated by lasers
4.1 Laser induced ultrafast demagnetization
3.2 Non-thermal melting
3.1 Phonons
2.4 Dynamical properties of reactions and adsorbents
2.3 Detection of lifetime effects
2.2 The finite lifetime of excited states
2.1 First experiments on electron dynamics and lattice heating
1. Introduction and overview

402-0313-00L Materials Research Using Synchrotron Radiation

- 6 credits
- 2V+2P
- L. Heyderman, V. Scagnoli

Abstract

The course gives an introduction to the use of synchrotron radiation in materials science. It treats the generation of intense x-ray beams at synchrotron radiation sources and their use for the characterisation of materials properties at different length scales. As part of the course, experiments will be carried out at the Swiss Light Source, Paul Scherrer Institut.
A comprehensive understanding of the interaction of x-rays with condensed matter and their use in materials analysis; acquiring hands-on experience with the use of synchrotron radiation.

Interaction of x-rays with matter:
Elastic scattering from bound electron, atom and assemblies of atoms; Compton scattering; principles of diffraction from crystals and scattering from disordered systems; thermal diffuse scattering, small-angle scattering from nanometre-sized objects; X-ray absorption spectroscopy; microscopy; comparison with neutron scattering, where appropriate.

The generation of high-brilliance x-ray beams at synchrotron radiation sources:
Undulators, wigglers and bending magnets; comparison with conventional lab sources; the future x-ray free electron laser.

Instruments:
Monochromator; diffractometer; detector.

Determination of materials properties:
Crystal structure; defects and strain fields; structure of surfaces and interfaces; chemical bonding properties.

New methods:
Coherent x-ray scattering and diffractive imaging.

The lab course has been designed by J. Als-Nielsen in collaboration with staff from the SLS.

Part of the course is in the form of practical work at the Swiss Light Source. During two days (dates to be agreed), the following experiments will be performed: (1) elastic and Compton scattering, (2) liquid scattering and powder diffraction, and (4) X-ray absorption spectroscopy.

Semiconductor Materials: Fundamentals and Fabrication

Abstract
This course presents a comprehensive discussion of optical processes in semiconductors.

Objective
The rich physics of the optical properties of semiconductors, as well as the advanced processing available on these materials, enabled many applications (lasers, LEDs and solar cells) as well as the realization of new physical concepts. Systems that will be covered include quantum dots, exciton-polaritons, quantum Hall fluids and graphene-like materials.

Content
Electronic states in III-V materials and quantum structures, optical transitions, excitons and polaritons, novel two dimensional semiconductors, spin-orbit interaction and magneto-optics.

<td>Low energy particle physics provides complementary information to high energy physics with colliders. In this lecture, we will concentrate on selected experiments, using mainly neutrons and muons, which have significantly improved our understanding of particle physics today. The course aims to provide an introduction to selected advanced topics in low energy particle physics with neutrons and muons.</td>
</tr>
<tr>
<td></td>
<td>Objective</td>
<td></td>
<td></td>
<td></td>
<td>Low energy particle physics provides complementary information to high energy physics with colliders. At the Large Hadron Collider one directly searches for new particles at energies up to the TeV range. In a complementary way, low energy particle physics indirectly probes the existence of such particles and provides constraints for &quot;new physics&quot;, making use of precision and high intensities. Besides the sensitivity to effects related with new physics (e.g. lepton flavor violation, symmetry violations, CPT tests, search for electric dipole moments, new low mass exchange bosons etc.), low energy physics provides the best test of QED (electron g-2), the best tests of bound-state QED (atomic physics and exotic atoms), precise determinations of fundamental constants, information about the CKM matrix, precise information on the weak and strong force even in the non-perturbative regime etc.</td>

402-0767-00L Neutrino Physics W 6 credits 2V+1U A. Rubbia

Abstract
Theoretical basis and selected experiments to determine the properties of neutrinos and their interactions (mass, spin, helicity, chirality, oscillations, interactions with leptons and quarks).

Objective
Introduction to the physics of neutrinos with special consideration of phenomena connected with neutrino masses.

Literature

D.O. Caldwell, Current Aspects of Neutrino Physics, Springer.

402-0777-00L Particle Accelerator Physics and Modeling I W 6 credits 2V+1U A. Adelmann

Abstract
This is the first of two courses, introducing particle accelerators from a theoretical point of view and covers state-of-the-art modeling techniques. It emphasizes the multidisciplinary aspect of the field, both in methodology (numerical and computational methods) and with regard to applications such as medical, industrial, material research and particle physics.

Objective
You understand the building blocks of particle accelerators. Modern analysis tools allows you to model state-of-the-art particle accelerators. In some of the exercises you will be confronted with next generation machines. We will develop a Python simulation tool (AcceLEGOrator) that reflects the theory from the lecture.

Content
- Particle Accelerators an Overview
- Relativity for Accelerator Physicists
- Building Blocks of Particle Accelerators
- Lie Algebraic Structure of Classical Mechanics and Applications to Particle Accelerators
- Symplectic Maps & Analysis of Maps
- Particle Tracking
- Linear & Circular Machines
- Cyclotrons
- Free Electron Lasers
- Collective effects in linear approximation
- Preview of Particle Accelerator Physics and Modeling II

Literature
Particle Accelerator Physics, H. Wiedemann, ISBN-13 978-3-540-49043-2, Springer

Prerequisites / notice
Physics, Computational Science (RW) at BSc. Level

This lecture is also suited for PhD. students

402-0851-00L QCD: Theory and Experiment W 3 credits 3G G. Dissertori, University lecturers

Abstract
An introduction to the theoretical aspects and experimental tests of QCD, with emphasis on perturbative QCD and related experiments at colliders.

Objective
Knowledge acquired on basics of perturbative QCD, both of theoretical and experimental nature. Ability to perform simple calculations of perturbative QCD, as well as to understand modern publications on theoretical and experimental aspects of perturbative QCD.

Content
QCD Lagrangian and Feynman Rules
QCD running coupling
Parton model
Altarelli-Parisi equations
Basic processes
Experimental tests at lepton and hadron colliders
Measurements of the strong coupling constant

Stirling, W. J.: "QCD and Collider Physics" (Cambridge Monographs on Particle Physics, Nuclear Physics & Cosmology)

Prerequisites / notice
Will be given as block course, language: English.

For students of both ETH and University of Zurich.

402-0737-00L Energy and Environment in the 21st Century (Part I) W 6 credits 2V+1U M. Dittmar

Abstract
The energy and related environmental problems, the physics principles of using energy and the various real and hypothetical options are discussed from a physicist point of view. The lecture is intended for students of all ages with an interest in a rational approach to the energy problem of the 21st century.

Objective
Scientists and especially physicists are often confronted with questions related to the problems of energy and the environment. The lecture tries to address the physical principles of todays and tomorrow energy use and the resulting global consequences for the world climate.

The lecture is for students which are interested participate in a rational and responsible debate about the energy problem of the 21. century.
Content

Introduction: energy types, energy carriers, energy density and energy usage. How much energy does a human needs/uses?

Energy conservation and the first and second law of thermodynamics

Fossil fuels (our stored energy resources) and their use.

Burning fossil fuels and the physics of the greenhouse effect.

Physics basics of nuclear fission and fusion energy

Controlled nuclear fission energy today, the different types of nuclear power plants, uranium requirements and resources, natural and artificial radioactivity and the related waste problems from the nuclear fuel cycle.

Nuclear reactor accidents and the consequences, a comparison with risks from other energy using methods.

The problems with nuclear fusion and the ITER project.

Nuclear fusion and fission: "exotic" ideas.

Hydrogen as an energy carrier: ideas and limits of a hydrogen economy.

New clean renewable energy sources and their physical limits (wind, solar, geothermal etc)

Energy perspectives for the next 100 years and some final remarks

Lecture notes

many more details (in english and german) here:

http://ihp-lx2.ethz.ch/energy21/

Literature

Environmental Physics: Boeker and Egbert New York Wiley 1999

Prerequisites / notice

Science promised us truth, or at least a knowledge of such relations as our intelligence can seize: it never promised us peace or happiness

Gustave Le Bon

Physicists learned to realize that whether they like a theory or they don't like a theory is not the essential question. Rather, it's whether or not the theory gives predictions that agree with experiment.

Richard Feynman, 1985

Selection: Theoretical Physics

<td>N. Beisert</td>
</tr>
<tr>
<td>Abstract</td>
<td>This course gives an introduction to the theory of integrable systems, related symmetry algebras and efficient calculational methods.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>Integrable systems are a special class of physical models that can be solved exactly due to an exceptionally large number of symmetries. Examples of integrable models appear in many different areas of physics, including classical mechanics, condensed matter, 2d quantum field theories and lately in string- and gauge theories. They offer a unique opportunity to gain a deeper understanding of generic phenomena in a simplified, exactly solvable setting. In this course we introduce the various notions of integrability in classical mechanics, quantum mechanics and quantum field theory. We discuss efficient methods for solving such models as well as the underlying enhanced symmetries.</td>

| 402-0883-63L | Symmetries in Physics | W    | 6 credits | 2V+1U | M. Gaberdiel |
| Abstract   | The course gives an introduction to symmetry groups in physics. It explains the relevant mathematical background (finite groups, Lie groups and algebras as well as their representations), and illustrates their important role in modern physics. |
| Objective  | The aim of the course is to give a self-contained introduction into finite group theory as well as Lie theory from a physicists point of view. Abstract mathematical constructions will be illustrated with examples from physics. |
| 402-0898-00L | The Physics of Electroweak Symmetry Breaking | W    | 6 credits | 2V+1U | not available |
| Abstract   | The aim is to understand the need of physics beyond the Standard Model, the basic techniques of model building in theories BSM and the elements of collider physics required to analyze their phenomenological implications. After an introduction to the SM and alternative theories of electroweak symmetry breaking, we will investigate these issues in the context of models with warped extra dimensions. |
In the first part we will discuss the basic concepts of EFTs, with particular attention to the concepts of decoupling of heavy degrees of freedom, matching and renormalization, chiral Lagrangians. The Standard Model viewed as an EFT will also be discussed as a specific application. The second part of the course is devoted to Supersymmetry, starting from the discussion of the SUSY algebra and its representations, to arrive, after the presentation of the superfield formalism, to the construction of the supersymmetric version of gauge field theories. A phenomenological discussion of the mechanisms of SUSY breaking and the construction of viable supersymmetric extensions of the Standard Model will also be presented.

Topics:
- Introduction to Effective Field Theories
- The Appelquist-Carrazzone theorem
- The matching procedure
- Chiral Lagrangians
- The SM as an EFTs
- The SUSY algebra
- Superspace and superfields
- Supersymmetric field theories
- Supersymmetric gauge theories
- Supersymmetry breaking
- The Minimal supersymmetric Standard Model

Literature
J. Wess and J. Bagger, "Supersymmetry and supergravity". Mueller-Kirsten & Wiedemann, "Introduction to supersymmetry".

Prerequisites / notice

402-0899-65L Quantum Field Theory III: EFT and SUSY W 6 credits 2V+1U G. Isidori
Abstract
This course provides a comprehensive introduction to two advanced topics in Quantum Field Theory: Effective Field Theories (EFTs) and Supersymmetry (SUSY).

Content
In the first part we will discuss the basic concepts of EFTs, with particular attention to the concepts of decoupling of heavy degrees of freedom, matching and renormalization, chiral Lagrangians. The Standard Model viewed as an EFT will also be discussed as a specific application. Prerequisites / notice

402-0899-65L Higgs Physics W 6 credits 2V+1U M. Grazzini
Abstract
The course introduces the theory and phenomenology of the recently discovered Higgs boson. With this course the students will receive a detailed introduction to the physics of the Higgs boson in the Standard Model. They will acquire the necessary theoretical background to understand the main production and decay channels of the Higgs boson at high-energy colliders, and the corresponding experimental signatures.

Content
Theory part:
- the Standard Model and the mass problem: WW scattering and the no-lose theorem
- the Higgs mechanism and its implementation in the Standard Model
- radiative corrections and the screening theorem
- theoretical constraints on the Higgs mass; the hierarchy problem
- Higgs production in e+e- collisions
- Higgs production at hadron colliders
- Higgs decays to fermions and vector bosons
- Higgs differential distributions, rapidity distribution, pt spectrum and jet vetoes
- Higgs properties and beyond the Standard Model perspective
- Outlook: The Higgs sector in weakly coupled and strongly coupled new physics scenarios.

Experimental part:
- Introductory material:
  - reminders of detectors/accelerators
  - reminders of statistics: likelihoods, hypothesis testing
  - reminders of multivariate techniques: Neural Networks, Decision Trees
- Main topics:
  - pre-history (pre-LEP)
  - LEP1: measurements at the Z-pole
  - LEP2: towards the limit mH<114 GeV
  - Tevatron searches
  - LHC:
    -- main channels overview
    -- dissect on analysis
    -- combine information from all channels
    -- differential measurements
    -- off-shell measurements
  - Future:
    -- pseudo-observables / EFT
    -- Beyond Standard Model

Literature
- Higgs Hunter's Guide
  (by S.Dawson, J. Gunion, H. Haber and G. Kane)

Prerequisites / notice
Prerequisites: Quantum Field Theory I, Phenomenology of Particle Physics I
The goal of this course is to introduce the foundations of quantum information theory. It starts with a brief introduction to the mathematical theory of information and then discusses the basic information-theoretic aspects of quantum mechanics. Further topics include applications such as quantum cryptography and quantum computing.

Objective

The course gives an insight into the notion of information and its relevance to physics and, in particular, quantum mechanics. It also serves as a preparation for further courses in the area of quantum information sciences.

402-0811-00L Programming Techniques for Scientific Simulations I

Abstract

This course provides an overview of programming techniques for scientific simulations. The focus is on advances C++ programming techniques and scientific software libraries. Based on an overview over the hardware components of PCs and supercomputer, optimization methods for scientific simulation codes are explained.

402-0809-00L Introduction to Computational Physics

Abstract

This course offers an introduction to computer simulation methods for physics problems and their implementation on PCs and supercomputers: classical equations of motion, partial differential equations (wave equation, diffusion equation, Maxwell's equation), Monte Carlo simulations, percolation, phase transitions

Content

Prerequisites / notice

Lecture and exercise lessons in English, exams in German or in English

402-0865-66L Physics of Cold Atomic Gases

Abstract

The past decade has seen enormous development in nanophysics and qubit technologies for quantum computing. However, the utility of these systems is strongly limited by their coupling to the omnipresent dissipative bath. The fact that the bath typically destroys the coherence of the small open quantum system highlights the importance of understanding the effects of dissipative baths.

Objective

The principal aim of the course is to give the student an introduction to the field and a better appreciation of the impact of noise and dissipation on small quantum systems.

Content

The course will basically explore the question, "What are the effects of an external environment on the dynamics of a small system?" We will start with the simplest cases of classical Brownian motion and a classical harmonic oscillator connected to a dissipative bath. We will discuss the importance of fluctuation-dissipation theorems and discuss various physical examples. We will then discuss the quantum analogs of these systems. In particular, there will be a special focus on small quantum systems, essentially qubits, where we will study the notions of decoherence and relaxation. We will introduce the concept of density matrices and associated methods like quantum master equations. These are particularly useful for studying the dynamics of qubits which are weakly coupled to a dissipative bath. We will also briefly explore the notions of entanglement entropy and concurrence in such systems. Some of these questions are linked to more general questions of thermalisation and relaxation of open quantum systems.

Lecture notes

Hand-outs will be available in class.

402-0801-66L Mechanical Metamaterials

Abstract

A mechanical metamaterial derives its static or dynamic properties not from its microscopic composition but rather through its clever engineering at larger scales. In this course we introduce the basic principles behind the design of modern mechanical metamaterials such as the use of Bragg scattering, local resonances, topological band-structures, and non-linear effects.

Objective

The students should get acquainted with a modern toolbox in the design of mechanical metamaterials. Equipped with the knowledge of the key design principles, the students will be able to choose the appropriate approach to create a metamaterial with a pre-defined functionality either for dynamic applications such as vibration isolation, wave-guiding, or the design of a heat-diode, or static properties such as stress absorption or the design of mechanisms used in robotics.

Content

1.) Wave propagation in continuous systems
2.) Wave properties
3.) Discrete systems
4.) Local resonances
5.) Topology by example
6.) Topological classification
7.) Static systems
8.) Non-linear waves

Lecture notes

Hand-outs will be available in class.

402-0846-66L The BFKL Equation Reloaded and the Multi-Regge Kinematics in QCD and in N=4 SYM

Abstract

This lecture course provides an introduction to superconductivity, covering both experimental as well as theoretical aspects. The following topics are covered:

- Basic phenomena of superconductivity: thermodynamics, London and Pippard theory; Ginzburg-Landau theory: spontaneous symmetry breaking, flux quantization, type I and II superconductors; microscopic BCS theory: electron-phonon mechanism, Cooper pairing, quasiparticle spectrum and tunneling, Josephson effect, superconducting quantum interference devices (SQUID); brief introduction to unconventional superconductivity.

- Objective

Introduction to the most important concepts of superconductivity both on phenomenological and microscopic level, including experimental and theoretical aspects.

- Content

This lecture course provides an introduction to superconductivity, covering both experimental as well as theoretical aspects. The following topics are covered:

1. Basic phenomena of superconductivity: thermodynamics, London and Pippard theory; Ginzburg-Landau theory: spontaneous symmetry breaking, flux quantization, type I and II superconductors; microscopic BCS theory: electron-phonon mechanism, Cooper pairing, coherent state, quasiparticle spectrum, quasiparticle tunnel, Josephson effects, superconducting quantum interference devices (SQUID), brief extension to unconventional superconductivity.

2. Lecture notes

Lecture notes and additional materials are available.

3. Literature

H. Tinkham "Introduction to Superconductivity"
W. Buckel & R. Kleiner "Superconductivity"
P. G. de Gennes "Superconductivity Of Metals And Alloys"
A. A. Abrikosov "Fundamentals of the Theory of Metals"

4. Prerequisites / notice

The preceding attendance of the scheduled lecture courses "Introduction to Solid State Physics" and "Quantum Mechanics I" are mandatory. The courses "Quantum Mechanics II" and "Solid State Theory" provide the most optimal conditions to follow the course.

402-0863-62L Dissipation in Quantum Systems

Abstract

The past decade has seen enormous development in nanophysics and qubit technologies for quantum computing. However, the utility of these systems is strongly limited by their coupling to the omnipresent dissipative bath. The fact that the bath typically destroys the coherence of the small open quantum system highlights the importance of understanding the effects of dissipative baths.

The goal of the course is to help the audience to keep abreast of the strong advances there have been in the study of the high energy limit of scattering amplitudes in the last decade.

The goal of the course is to help the audience to keep abreast of the strong advances there have been in the study of the high energy limit of scattering amplitudes in the last decade.

- the BFKL Hamiltonian as an integrable model
- the analytic structure of the Mueller-Navelet jet cross sections in QCD
- the analytic properties of N=4 SYM amplitudes in multi-Regge kinematics

The goal is to acquaint students with the basics of a range of astrophysical observation techniques including the modern software tools needed to analyze data.

The themes we will discuss this year are:

(1) How do baryons and dark matter interact?
(2) Where, and in what state, do baryons reside within dark matter halos?

The goal of this course is to understand some of the phenomena that stand in the forefront of current research in astrophysics, the physical processes behind them, and how these phenomena are observed by state-of-the-art astronomical facilities. These goals will be achieved by communal discussions, led by the students and chaired by the teachers.

The course introduces analysis techniques, the basics of astronomical instruments, real-world observational tools, data reduction strategy and software packages used in astrophysics research. The course will also include discussions of current topics in astrophysics with a focus on active galaxies. The course will include the reduction and analysis of real data from a variety of observatories.

Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monocultures of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

### Objective
Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monocultures of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

### Content
This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

### Abstract
This lecture course targets physics students and students of interdisciplinary sciences (major physics) for their education in biophysics. In this course the basics of molecular biology are presented bearing in mind the special interests of the physics students.

### Objective
Basics of molecular biology and biophysics in view of the special interest of students in physics.

### Content
This lecture course targets physics students and students of interdisciplinary sciences (major physics) for their education in biophysics. In this course the basics of molecular biology are presented bearing in mind the special interests of the physics students. The topics include: properties of biological macromolecules, introduction to the genetic system of E.coli bacteria, transcription, translation, discussion of structure and function of proteins, quantitative description of enzyme function and allosteric interactions, biotechnology, introduction to optical spectroscopy, X-ray crystallography and nuclear magnetic resonance (NMR) spectroscopy of biopolymers in solution.

### Lecture notes
- additional documentation in support of text book
  
### Prerequisites / notice
small classes with active participation of students

### Abstract
Introduction to the fundamentals of medical radiation physics. Functional chain due to radiation exposure from the primary physical effect to the radiobiological and medically manifest secondary effects. Dosimetric concepts of radiation protection in medicine. Mode of action of radiation sources used in medicine and its illustration by means of Monte Carlo simulations.

### Objective
Understanding the functional chain from primary physical effects of ionizing radiation to clinical radiation effects. Dealing with dose as a quantitative measure of medical exposure. Getting familiar with methods to generate ionizing radiation in medicine and learn how they are applied for medical purposes. Eventually, the lecture aims to show the students that medical physics is a fascinating and evolving discipline where physics can directly be used for the benefits of patients and the society.

### Content
The lecture is covering the basic principles of ionizing radiation and its physical and biological effects. The physical interactions of photons and charged particles will be reviewed and their consequences for medical applications will be discussed. The concept of Monte Carlo simulation will be introduced in the exercises and will help the student to understand the characteristics of ionizing radiation in simple and complex situations. Fundamentals in dosimetry will be provided in order to understand the physical and biological effects of ionizing radiation. Deterministic as well as stochastic effects will be discussed and fundamental knowledge about radiation protection will be provided. In the second part of the lecture series, we will cover the generation of ionizing radiation. By this means, the x-ray tube, the clinical linear accelerator, and different radioactive sources in radiology, radiotherapy and nuclear medicine will be addressed. Applications in radiology, nuclear medicine and radiotherapy will be described with a special focus on the physics underlying these applications. A script will be provided.

### Abstract
Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.
Objective
The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxido and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.
