Abstract: General Chemistry I: Chemical bond and molecular structure, chemical thermodynamics, chemical equilibrium.

Objective: Introduction to general and inorganic chemistry. Basics of the composition and the change of the material world. Introduction to the thermodynamically controlled physico-chemical processes. Macroscopic phenomena and their explanation through atomic and molecular properties. Using the theories to solve qualitatively and quantitatively chemical and ecologically relevant problems.

Content:

1. Stoichiometry

2. Atoms and Elements (Quantenmechanical Model of the Atom)

3. Chemical Bonding

4. Thermodynamics

5. Chemical Kinetics

6. Chemical Equilibrium (Acids and Bases, Solubility Equilibria)

Lecture notes:

- Online-Skript mit durchgerechneten Beispielen.

Literature:

- Brown, LeMay, Bursten CHEMIE (deutsch)
- Housecroft and Constable, CHEMISTRY (englisch)
- Oxtoby, Gillis, Nachtrieb, MODERN CHEMISTRY (englisch)

Abstract: This course covers mathematical concepts and techniques necessary to model, solve and discuss scientific problems - notably through ordinary differential equations.

Objective: Mathematics is of ever increasing importance to the Natural Sciences and Engineering. The key is the so-called mathematical modelling cycle, i.e. the translation of problems from outside of mathematics into mathematics, the study of the mathematical problems (often with the help of high level mathematical software packages) and the interpretation of the results in the original environment.

The goal of Mathematics I and II is to provide the mathematical foundations relevant for this paradigm. Differential equations are by far the most important tool for modelling and are therefore a main focus of both of these courses.

Content:

1. Single-Variable Calculus:
   - review of differentiation, linearisation, Taylor polynomials, maxima and minima, antiderivative, fundamental theorem of calculus, integration methods, improper integrals.
   - 2. Linear Algebra and Complex Numbers:
     - systems of linear equations, Gauss-Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, cartesian and polar forms for complex numbers, complex powers, complex roots, fundamental theorem of algebra.
   - 3. Ordinary Differential Equations:
     - separable ordinary differential equations (ODEs), integration by substitution, 1st and 2nd order linear ODEs, homogeneous systems of linear ODEs with constant coefficients, introduction to 2-dimensional dynamical systems.

Literature:

- Bretscher, O.: Linear Algebra with Applications (Pearson Prentice Hall).

Prerequisites / notice:

- Bretscher, O.: Linear Algebra with Applications (Pearson Prentice Hall).

Prerequisites: familiarity with the basic notions from Calculus, in particular those of function and derivative.

Mathe-Lab (Assistance):

- Mondays 12-14, Tuesdays 17-19, Wednesdays 17-19, in Room HG E 41.
The lecture discusses the role of the environmental systems based on selected environmental problems, among these the exploration of

The lecture provides a science-based exploration of environmental aspects from three research fields: earth, climate, and health sciences.

The students are able to explain important properties of the three environmental systems, to discuss critical drivers, trends and conflicts of

Week 8-14 by Oliver Martin, Chapters 26-34

26 Diversity of Life Introduction to viruses
27 Diversity of Life Prokaryotes
28 Diversity of Life Origin & evolution of eukaryotes
29 Diversity of Life Nonvascular&seedless vascular plants
30 Diversity of Life Seed plants
31 Diversity of Life Introduction to fungi
32 Diversity of Life Overview of animal diversity
33 Diversity of Life Introduction to invertebrates
34 Diversity of Life Origin & evolution of vertebrates

The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the

A further aim of the lecture is that students achieve an understanding of biodiversity, why it is threatened and how it can be managed.

- Observations on aquatic and terrestrial life spaces with their inhabitants
  - Einfluss von Umweltfaktoren (Temperatur, Strahlung, Wasser, Nährstoffe etc.) auf Organismen; Anpassung an bestimmte
    Umweltbedingungen
- Populationsdynamik: Ursachen, Beschreibung, Vorhersage und Regulation
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartmente, Stoff- und Energieflusse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

The lecture provides a science-based exploration of environmental aspects from three research fields: earth, climate, and health sciences.

The students are able to explain important properties of the three environmental systems, to discuss critical drivers, trends and conflicts of their use, and to compare potential solutions.

The lecture discusses the role of the environmental systems based on selected environmental problems, among these the exploration of raw materials and fossil fuels, climate change and its impacts on man and environment, and the spread and control of infectious diseases in the human population and agricultural systems.

Lecture notes
no script

Literature

The lecture is the first in a series of two lectures given over two semesters for students with biology as as a basic subject.

Abstract
This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed.

Objective
The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level.

Content
- Einfluss von Umweltfaktoren (Temperatur, Strahlung, Wasser, Nährstoffe etc.) auf Organismen; Anpassung an bestimmte
  Umweltbedingungen
- Populationsdynamik: Ursachen, Beschreibung, Vorhersage und Regulation
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartmente, Stoff- und Energieflusse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

701-0027-00L Environmental Systems I O 2 credits 2V C. Schär, S. Bonhoeffer, N. Dubois

Abstract
The lecture provides a science-based exploration of environmental aspects from three research fields: earth, climate, and health sciences.

Objective
The students are able to explain important properties of the three environmental systems, to discuss critical drivers, trends and conflicts of their use, and to compare potential solutions.

Content
- Einfluss von Umweltfaktoren (Temperatur, Strahlung, Wasser, Nährstoffe etc.) auf Organismen; Anpassung an bestimmte
  Umweltbedingungen
- Populationsdynamik: Ursachen, Beschreibung, Vorhersage und Regulation
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)

- Ökosysteme: Kompartmente, Stoff- und Energieflusse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

701-0757-00L Principles of Economics O 3 credits 2G R. Schubert

Abstract
This course covers the bases for understanding micro- and macroeconomic issues and theories. Participants are given the tools to argue in economic and political terms and to evaluate the corresponding measures. Group and individual exercises deepen the knowledge gained.

Objective
Students are able to
- describe fundamental micro- and macroeconomic issues and theories.
- apply suitable economic arguments to a given theme.
- evaluate economic measures.

Content
Supply and demand behaviour of firm and households; market equilibrium and taxation; national income and indicators; inflation; unemployment; growth; macroeconomic policies available on electronic platform

Literature

Laboratory Course: Elementary Chemical Techniques

This practical course provides an introduction to elementary laboratory techniques. The experiments cover a wide range of techniques, including analytical and synthetic techniques (e.g., investigation of soil and water samples or the preparation of simple compounds). Furthermore, the handling of gaseous substances is practised.

Objective
This course is intended to provide an overview of experimental chemical methods. The handling of chemicals and proper laboratory techniques represent the main learning targets. Furthermore, the description and recording of laboratory processes is an essential part of this course.

Content
The classification and analysis of natural and artificial compounds is a key subject of this course. It provides an introduction to elementary laboratory techniques, and the experiments cover a wide range of analytic and synthetic tasks: Selected samples (e.g., soil and water) will be analysed with various methods, such as titrations, spectroscopy or ion chromatography. The chemistry of aqueous solutions (acid-base equilibria and solvation or precipitation processes) is studied. The synthesis of simple inorganic complexes or organic molecules is practised. Furthermore, the preparation and handling of environmentally relevant gaseous species like carbon dioxide or nitrogen oxides is a central subject of the Praktikum.

Lecture notes
The script will be published on the web. Details will be provided on the first day of the semester.

Literature
A thorough study of all script materials is requested before the course starts.

Additional First Year Courses

Agrarökonomie im World Food System

Diese Lerneinheit wird zum ersten Mal im FS17 angeboten

Biology I: Laboratory Exercises

Objective
Capability of preparing biological specimen, microscopy and documentation. Understanding the correlation between plant structure and function at the level of organs, tissues and cells.

Content

Lecture notes
Handouts

Informatics

Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects. The following topics are covered: modeling and simulations, visualizing multi-dimensional data, managing data with lists and tables and with relational databases, introduction to programming, universal methods for algorithm design.

Objective
The students learn to
- choose and apply appropriate tools from computer science,
- process and analyze real-world data from their subject of study,
- handle the complexity of real-world data,
- know universal methods for algorithm design.

Content
1. Modeling and simulations
2. Visualizing multidimensional data
3. Data management with lists and tables
4. Data management with a relational database
5. Introduction to macro programming
6. Introduction to programming with Python

Introduction, basics, composition of cells, biochemical units, repetition of relevant organic chemistry
Structure and function of proteins
Carbohydrates
Lipids and biological membranes
Enzymes and enzyme kinetics
Catalytic strategies
Metabolism: Basic concepts and design. Repetition of basic thermodynamics
Glycolysis, fermentation
The citric acid cycle
Oxidative phosphorylation
Fatty acid metabolism

Lecture notes
Horton et al. (Pearson) serves as lecture notes.

Prerequisites / notice
Basic knowledge in biology and chemistry is a precondition.

701-0501-00L  Pedosphere                   O   3 credits   2V   R. Kretzschmar

Abstract
Introduction to the formation and properties of soils as a function of parent rock, landscape position, climate, and soil organisms. Complex relationships between soil forming processes, physical and chemical soil properties, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

Objective
Introduction to the formation and properties of soils as a function of parent rock, landscape position, climate, and soil organisms. Complex relationships between soil forming processes, physical and chemical soil properties, soil biota, and ecological soil properties are explained and illustrated by numerous examples.

Content
Definition of the pedosphere, soil functions, rocks as parent materials, minerals and weathering, soil organisms, soil organic matter, physical soil properties and functions, chemical soil properties and functions, soil formation, principles of soil classification, global soil regions, soil fertility, land use and soil degradation.

Lecture notes
Lecture notes can be purchased during the first lecture (15.- SFr)

Literature

Prerequisites / notice
Prerequisites: Basic knowledge in chemistry, biology and geology.
Physiology of plant nutrition: M. C. Härdi-Landerer

Phytomedicine: Entomology

A general introduction explains the needs of appropriately managing nutrients in plant production. Afterwards, we will study the physiology of plant nutrition. The script and lecture material are provided at: https://moodle-app2.let.ethz.ch/course/view.php?id=140

At the end of the lecture, students know how mineral nutrients and water are taken up through roots and circulate in the plants and what their roles in plants are. They understand the importance of nutrients for yield formation and for crop product quality. They are able to propose fertilization plans adapted for field crops growing under Swiss conditions.

Objective

The aim of these lecture is to present the processes controlling the uptake and transport of nutrients and water by the plant, the assimilation of nutrients in the plant, the effect of nutrients on crop yield and quality, the role of the soil as a source of nutrients for crops, and the basic principles of fertilization of different crop types using mineral and organic fertilizers.

Abstract

The use of the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Content

A general introduction explains the needs of appropriately managing nutrients in plant production. Afterwards, we will study the physiology of plant nutrition: the assimilation of nutrients in the plant, the effect of nutrients on crop yield and quality, the role of the soil as a source of nutrients for crops, and the basic principles of fertilization of different crop types using mineral and organic fertilizers.

Objective

The use of the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Objective

The use of the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.
Objective At the end of this course in Applied Entomology, students will have (1) an overview on herbivore insects (pests) and their natural antagonists in agroecosystems, combined with an insight into ongoing research, and (2) an in-depth understanding of population dynamics and damage development based on selected examples from the areas of plant, animal and public health.

751-4501-01L Phytomedicine: Plant Pathology W 1 credit 1V S. Neuenschwander

Abstract Plant Pathology topics: plant diseases in agroecosystems, categories of pathogens, pathogen life histories, pathogen attack and plant defense, gene-for-gene systems, and disease control strategies.

Objective Gain an understanding of the causes and consequences of plant diseases in agroecosystems.

Lecture notes Lecture notes will be available for purchase at the cost of reproduction.

751-6301-00L Animal Breeding W 2 credits 2V S. Neuenschwander

Abstract Introduction to basics of animal breeding. Importance of animal production. Species of livestock and their products, performance recording, functional traits, genetic diversity, breeding goals. Qualitative and quantitative traits. Basic knowledge of breeding methods: genetic and environmental variation, heritability, genetic correlation, estimation of breeding values, selection, mating systems.

Objective Show the importance of animal production for Swiss and international agriculture. Name the livestock species, their products, systematic classification and breeding and production goals. Describe methods to measure animal performance (performance recording) and functional traits. Define the most important parameters and methods in animal breeding.

Content Evolution, domestication, history of animal breeding.

Definition, models of animal production, species of livestock, numbers, distribution.

Genetic polymorphisms and their applications in animal breeding.

Genetic diversity, breeds, production and breeding goals.

Traits: performance, functional.

Performance recording, herd replacement.

Qualitative (monogenic) and quantitative (polymorphic) traits. Mendelian genetics, quantitative genetics.

Genetic and environmental variation, heritability, genetic correlation, selection, selection response.

Lecture notes Transparencies and single chapters of textbook are made available on homepage.

751-1311-00L Introduction to Agricultural Management W* 2 credits 2V R. Finger

Abstract Vermittlung von betriebswirtschaftlichen Grundlagenwissen und Analyse- und Planungsinstrumenten mit Anwendung auf Unternehmen der Agrar- und Ernährungswirtschaft

Objective Teilnehmer des Kurses sollen am Ende der Vorlesung i) grundlegende Unternehmensentscheidete skizzieren und analyseren können, ii) verschiedene Analyse- und Planungsinstrumente auf Fragestellungen der Produktionsplanung, Investition und Finanzierung an Beispielen anwenden zu können, iii) verschiedene Werkzeuge zur unternehmerischen Entscheidungsunterstützung anwenden können und iv) die Spezifik von Unternehmen in der Agrar- und Ernährungswirtschaft kennen.

Content Die Vorlesung geht auf folgende Inhalte, mit spezifischen Anwendungen im Agrar- und Ernährungssektors ein:

- Grundlagen und Ziele unternehmerischen Entscheidens
- Kosten und Leistungsrechnung
- Produktionstheorie
- Produktionsprogrammplanung
- Investitionsplanung und Finanzierung
- Entscheidungen unter Unsicherheit und Risikomanagement

Lecture notes Vorlesungsunterlagen werden im Laufe des Semesters zur Verfügung gestellt

5. Semester

Focus Agricultural Natural Sciences

Focus Agricultural Natural Sciences
**Herbology**

 Objective: Die Studierenden werden wichtige Mischungen und Pflanzengemeinschaften mitteleuropäischer Grasslandökosysteme kennen, klassische und aktuelle Arbeiten der Bestandesökophysiologie kennen, in der Lage sein, den Einfluss von Umweltfaktoren und Bewirtschaftung nicht nur auf Einzelpflanzen, sondern auf Pflanzenbestände und ihre Erträge abzuschätzen, und üben, ein wissenschaftliches Thema schriftlich prägnant zusammenzufassen.

 Content: In diesem Kurs werden die verschiedenen Typen des Futterbaus und die wichtigsten Mischungen, aber auch natürliche Pflanzengemeinschaften in Mitteleuropa vorgestellt (Bestandesbeurteilung). Basiierend auf der Ökophysiologie von Einzelpflanzen wird die Ökophysiologie von Pflanzenbeständen erarbeitet. Es werden verschiedene Arten der Bewirtschaftung vorgestellt (z. B. Bestandeslenkung durch Düngung, Beweidung, Schnitttermine, etc.) und ihre Auswirkungen auf die Bestandeszusammensetzung und auf die Erträge diskutiert. Feedback-Mechanismen zwischen Umwelt und Futterbausystemen werden angesprochen.

 Lecture notes / Literature: Handsouts werden auf dem Netz zur Verfügung gestellt.

 Prerequisites / notice: Course will be given in German. Course builds on the Ertrags- und Ökophysiologie lecture and provides the basics for the Grasslandsysteme.

---

**Forage Cropping**

 Objective: This course is an introduction into forage cropping and grassland sciences. Topics include: extensive/-intensive use, grassland evaluation, grassland maintenance, management using fertilization, cutting, etc. Relationships between site, vegetation composition and management will be explored.

 Content: This course will be given in German. Course builds on the Ertrags- und Ökophysiologie lecture and provides the basics for the Grasslandsysteme.

 Lecture notes / Literature: Handsouts werden auf dem Netz zur Verfügung gestellt.

 Prerequisites / notice: Course will be given in German. Course builds on the Ertrags- und Ökophysiologie lecture and provides the basics for the Grasslandsysteme.

---

**Horticulture I**

 Objective: Students will acquire essential knowledge on agriculturally relevant aspects of crop biology. Via lectures and "hands-on" training, students will learn the principles of crop management, differences between species as well as common aspects of different species will be experienced. The foundations for an even more intense examination of alternative crops, cropping systems and of procedures to characterize geno- and phenotype will be laid.

 Content: The relevance of horticulture at the international level will be treated in the first block. During the semester in autumn (Horticultural Crops I), post harvest aspects in fruit production are discussed in 2 blocks of 4h. Following on this, viticulture (incl. some aspects of wine making) will be looked at in 3 blocks of 4h. During the spring semester (Horticultural Crops II), 3 blocks of 4h deal with vegetable production, and 2 blocks of 4h are addressing berry production.

 Lecture notes / Literature: Delivered during the lectures by the different teachers. ELBA upload.

 Prerequisites / notice: Not needed, maybe specific literature is specified by the different teachers.

 Language and script: German or French, maybe selected parts in English.

---

**Applied Animal Nutrition**

 Objective: The focus is on the potential to assess strategies and tactics of pest management, taking into account the demands from the economy, the protection, economics and the environment. The students will get an introduction on the mechanisms of weed management in different farming systems and crops.

 Content: The students gain a good understanding of fundamental aspects of pest management in agroecosystems. They will have the ability to assess options for action in view of requirements from the economy, the ecology and the society. Further, they will learn to perform searches on relevant issues in pest management, and to critically evaluate case studies.

 Lecture notes / Literature: Handsouts in Halbtagesform; eingeschlossen sind Betriebsbesuche. Fach mit benoteter Semesterleistung.
The knowledge of the nutrition of ruminants and of the feeds used is deepened. Particular emphasis is put on the variety of home-grown feeds, their production and conservation and their application in the nutrition of dairy cows, cattle and small ruminants. Finally, information on specific problems of animal nutrition is communicated.

**Objective**

Purchase of basic skills in agricultural livestock nutrition.

**Content**

**Lecture notes**

Script is available in German language and will be provided by each lecturer when starting his part the lecture.

**Literature**

Eine Literaturliste ist im Skript enthalten.

---

**Course description:**

Plant Pathology I will focus on pathogen-plant interactions, epidemiology, disease assessment, and disease development in agroecosystems. Themes will include:

1. How pathogens attack plants and how plants defend themselves against pathogens;
2. Factors driving the development of epidemics in agroecosystems.

**Objective**

Students will understand:

1. How pathogens attack plants and how plants defend themselves against pathogens;
2. Factors driving the development of epidemics in agroecosystems.

**Content**

Topics under the first theme will include:

1. How pathogens attack plants and how plants defend themselves against pathogens;
2. Factors driving the development of epidemics in agroecosystems.

Course description: Plant Pathology I will focus on pathogen-plant interactions, epidemiology, disease assessment, and disease development in agroecosystems.

Week 1

No Lecture: First day of autumn semester

Week 2

The nature of plant diseases, symbiosis, parasites, mutualism, biotrophs and necrotrophs, disease cycles and pathogen life cycles. Nematode attack strategies and types of damage.

Week 3

Week 4

Week 5

Symptoms and signs of fungal infection. Example fungal diseases: potato late blight, wheat stem rust, grape powdery mildew, wheat Septoria leaf blotch.

Week 6

Plant defense mechanisms, host range and non-host resistance. Passive structural and chemical defenses, preformed chemical defenses. Active structural defense, papillae, active chemical defense, hypersensitive response, pathogenesis-related (PR) proteins, phytoalexins and disease resistance.

Week 7

Pisatin and pisatin demethylase. Local and systemic acquired resistance, signal molecules.

Week 8

Pathogen effects on food quality and safety.

Week 9

Epidemiology: historical epidemics, disease pyramid, environmental effects on epidemic development. Plant effects on development of epidemics, including resistance, physiology, density, uniformity.

Week 10

Disease assessment: incidence and severity measures, keys, diagrams, scales, measurement errors. Correlations between incidence and severity.

Week 11

Molecular detection and diagnosis of pathogens. Host indexing, serology, monoclonal and polyclonal antibodies. ELISA, PCR, rDNA and rep-PCR.

Week 12

Strategies for minimizing disease risks: principles of disease control and management.

Week 13

Disease control strategies: economic thresholds, physical control methods.

Week 14

Cultural control methods: avoidance, tillage practices, crop sanitation, fertilizers, crop rotation.

---

**Lecture Topics and Tentative Schedule**

**Course Notes**

Detailed lecture notes (~160 pages) will be available for purchase at the cost of reproduction at the start of the semester.

**Title**

Managerial Economics Agri-Food Chain: Strategic

**Type**

W

**ECTS**

2

**Hours**

2G

**Lecturers**

M. Weber, B. Höltishi
Learn and exercise strategic concepts in the Agri-Food chain, i.e. theories of economics based decision making combined with entrepreneurial practice.

The main objective is to understand strategic decisions along the value chain in the Agri-Food Chain.

- Basics of strategy & strategic concepts
- Classic process of strategy process
- Selected alternative processes
- Case studies

Dokuments will be distributed per lecture.

**Literature**

Lombriser Roman & Aplanalp Peter: Strategisches Management

---

**Course Overview**

**752-2120-00L Consumer Behaviour I**

**Abstract**

Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

**Objective**

Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

**Literature**

---

**751-8001-00L Agricultural Engineering I**

**Abstract**

Presentation of basics in planning of agricultural buildings, work economics. This lecture forms the basis for the Agrartechnik II course (indoor and outdoor work processes).

**Objective**

Main objectives: The students acquire comprehensive functional knowledge about agricultural engineering systems (including construction) enabling them to plan and assess the use of those systems in practice.

**Literature**

Lombriser Roman & Aplanalp Peter: Strategisches Management

---

**751-0401-00L Optimization of Agricultural Production Systems**

**Abstract**

Introduction in to optimization of agricultural production systems with linear and non-linear programming models.

**Objective**

Students will be able to a) solve linear and non-linear optimization problems in the context of agricultural production; b) properly interpret the results; and c) critically discuss the economic implications.

**Literature**

---

**751-1307-00L Managerial Economics Agri-Food Chain: Strategic Concepts**

**Abstract**

Learn and exercise strategic concepts in the Agri-Food chain, i.e. theories of economics based decision making combined with entrepreneurial practice.

**Objective**

The main objective is to understand strategic decisions along the value chain in the Agri-Food Chain.

**Content**

- Basics of strategy & strategic concepts
- Classic process of strategy process
- Selected alternative processes
- Case studies

Die Studierenden werden wichtige Mischungen und Pflanzengemeinschaften mitteleuropäischer Graslandökosysteme kennen, klassische und aktuelle Arbeiten der Bestandesökophysiologie kennen, in der Lage sein, den Einfluss von Umweltfaktoren und Bewirtschaftung nicht nur auf Einzelpflanzen, sondern auf Pflanzenbestände und ihre Erträge abzuschätzen, und üben, ein wissenschaftliches Thema schriftlich prägnant zusammenzufassen.
Content
In diesem Kurs werden die verschiedenen Typen des Futterbaus und die wichtigsten Mischungen, aber auch natürliche Pflanzenlebensgemeinschaften in Mitteleuropa vorgestellt (Bestandesbeurteilung). Basierend auf der Ökophysiologie von Einzelpflanzen wird die Ökophysiologie von Pflanzenbeständen erarbeitet. Es werden verschiedene Arten der Bewirtschaftung vorgestellt (z. B. Bestandeslenkung durch Düngung, Beweidung, Schnitttermine, etc.) und ihre Auswirkungen auf die Bestandeszusammensetzung und auf die Erträge diskutiert. Feedback-Mechanismen zwischen Umwelt und Futterbausystemen werden angesprochen.

Lecture notes
Handouts werden auf dem Netz zur Verfügung gestellt.

Literature
Wird in der Veranstaltung angesprochen.

Prerequisites / notice
Course will be given in German. Course builds on the Ertrags- und Ökophysiologie lecture and provides the basics for the Graslandsysteme.

751-4101-00L
Crops
W 2 credits 2G
A. Walter, F. Liebisch, W. Richner

Abstract
Presentation of the central crops of our regions (cereals, oil and fibre plants, legumes, root and tuber plants) with respect to their biology, site requirements, reaction to environmental conditions and farming practice. A few crops of other regions will be discussed for these aspects as well.

Objective
During this course, students acquire essential knowledge on agriculturally relevant aspects of crop biology. Via lectures and 'hands-on' teaching elements, differences between species as well as common aspects of different species will be experienced. Thereby, the foundation will be laid for a more intense examination of alternative crops, cropping systems and of procedures to characterize genome and phenotype.

751-4201-00L
Horticulture I
W 2 credits 2V
L. Bertschinger, A. Bühleman, J.L. Spring

Abstract
Overview on horticulture (international and national), insights into principles of practical fruit production (pre- and post-harvest), viticulture (incl. some hints on wine making), berry production and vegetable production in Switzerland.

Objective
Insights into fruit production (world and Switzerland, particularly...
- Main production areas (international & national)
- Relevance (international & national)
- Key aspects of production (Switzerland), i.e. selected aspects referring to varieties, production techniques incl. physiology and plant protection, economics
- Key challenges (Switzerland)
- Selected, interesting research and development projects

Content
The relevance of horticulture at the international level will be treated in the first block. During the semester in autumn (Horticultural Crops I), pest harvest aspects in fruit production are discussed in 2 blocks of 4h. Following on this, viticulture (incl. some aspects of wine making) will be looked at in 3 blocks of 4h. During the spring semester (Horticultural Crops II), 3 blocks of 4h deal with vegetable production, and 2 blocks of 4h are addressing berry production.

Lecture notes
Delivered during the lectures by the different teachers, ELBA upload.

Literature
Language and script: German or French, maybe selected parts in English.

Prerequisites / notice
Not needed, maybe specific literature is specified by the different teachers.

751-4801-00L
System-Oriented Management of Herbivore Insects I
W 2 credits 2G
D. Mazzi

Abstract
The focus is on the potential to assess strategies and tactics of pest management, taking into account the demands from the economy, the environment and the society. Significant agricultural approaches will be explained using practical examples, including prevention using natural resources, surveillance and forecasting, resistance management, as well as product registration, incl. ecotoxicology.

Objective
The students gain a good understanding of fundamental aspects of pest management in agroecosystems. They will have the ability to assess options for action in view of requirements from the economy, the ecology and the society. Further, they will learn to perform searches on relevant issues in pest management, and to critically evaluate case studies.

Content
- Programmiert Wiederkäuer: Einführung in die Winterfütterungsplanung für Milchkühe, Betriebsbesuch (Erfassung aller notwendigen Daten inkl. Futterprobenentnahme für eine konkrete Planung auf einem Praxisbetrieb), Besonderheiten der Milchviehfütterung (Laktationsverlauf, etc.);
- Key challenges (Switzerland)
- Selected, interesting research and development projects
- Programmiert Nicht-Wiederkäuer: Der Energie- und spezifische Nährstoffbedarf beim Schwein und Geflügel; Besonderheiten der Fütterung in den verschiedenen Produktionsphasen; Fütterungsempfehlungen und -hinweise, Rationengestaltung und Rezeptoptimierung für Mischfuttermittel anhand verschiedener Beispiele; Einsatzgrenzen von Futtermittel/technologische Futterbearbeitung.

Lecture notes
Handouts in German language will be provided by each lecturer when starting his part of the lecture.

Literature
Die Dozierenden geben in der Lehrveranstaltung die relevante Literatur bekannt.

Prerequisites / notice
Blockkurs in Halbtagesform; eingeschlossen sind Betriebsbesuche. Fach mit benoteter Semesterleistung.

751-5003-00L
Sustainable Agroecosystems II
W 2 credits 2V
J. Six, A. Hofmann

Abstract
This class is intended to convey methods of agroecological research through selected case studies from current research projects and hands-on exercises. Students will gain an overview on actors in the field of sustainable agricultural development.

Objective
(1) Get to know methods for field and laboratory investigations in agroecology, (2) Analyze case studies from current agroecological research, (3) Place institutions and related projects into the context of sustainable agricultural development

Literature

Prerequisites / notice
Prior participation in the lecture Nachhaltige Agrarökosysteme I (Sustainable Agroecosystems I) 751-5000-00G (in spring semester) recommended; classes taught mostly in English.

751-4504-00L
Plant Pathology I
W 2 credits 2G
B. McDonald

Abstract
Plant Pathology I will focus on pathogen-plant interactions, epidemiology, disease assessment, and disease development in agroecosystems. Themes will include: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems.

Objective
Students will understand: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems as a basis for implementing disease management strategies in agroecosystems.
Course description: Plant Pathology I will focus on pathogen-plant interactions, epidemiology, disease assessment, and disease development in agroecosystems. Themes will include: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems. Topics under the first theme will include pathogen life cycles, disease cycles, and an overview of plant pathogenic nematodes, viruses, bacteria, and fungi. Topics under the second theme will include plant defense strategies, host range, passive and active defenses, and chemical and structural defenses. Topics under the third theme will include the disease triangle and cultural control strategies.

Lecture Topics and Tentative Schedule

Week 1  No Lecture: First day of autumn semester

Week 2  The nature of plant diseases, symbiosis, parasites, mutualism, biotrophs and necrotrophs, disease cycles and pathogen life cycles. Nematode attack strategies and types of damage.

Week 5  Symptoms and signs of fungal infection. Example fungal diseases: potato late blight, wheat stem rust, grape powdery mildew, wheat Septoria leaf blotch.

Week 6  Plant defense mechanisms, host range and non-host resistance. Passive structural and chemical defenses, preformed chemical defenses. Active structural defense, papillae, active chemical defense, hypersensitive response, pathogenesis-related (PR) proteins, phytoalexins and disease resistance.

Week 7  Pisatin and pisatin demethylase. Local and systemic acquired resistance, signal molecules.

Week 8  Pathogen effects on food quality and safety.

Week 9  Epidemiology: historical epidemics, disease pyramid, environmental effects on epidemic development. Plant effects on development of epidemics, including resistance, physiology, density, uniformity.

Week 10  Disease assessment: incidence and severity measures, keys, diagrams, scales, measurement errors. Correlations between incidence and severity.

Week 11  Molecular detection and diagnosis of pathogens. Host indexing, serology, monoclonal and polyclonal antibodies. ELISA, PCR, rDNA and rep-PCR.

Week 12  Strategies for minimizing disease risks: principles of disease control and management.

Week 13  Disease control strategies: economic thresholds, physical control methods.

Week 14  Cultural control methods: avoidance, tillage practices, crop sanitation, fertilizers, crop rotation.

Lecture notes

Detailed lecture notes (~160 pages) will be available for purchase at the cost of reproduction at the start of the semester.

Abstract

Die Studierenden kennen die Grundlagen und die Konventionen des wissenschaftlichen Schreibens in den Naturwissenschaften, können wissenschaftliche Literatur suchen und verwalten sowie wissenschaftliche Publikationen analysieren. Sie setzen das Gelernte beim Schreiben eines eigenen Textes um.

Objective

Die Studierenden kennen die Grundlagen und die Konventionen des wissenschaftlichen Schreibens in den Naturwissenschaften. Sie setzen das Gelernte beim Schreiben eines kritischen Literaturberichtes in deutscher Sprache zu einem agrarwissenschaftlichen Thema ihrer Wahl um. Die Lehrveranstaltung bereitet die Studierenden auf weitere schriftliche Arbeiten im Studium der Agrarwissenschaften vor, beispielsweise auf die Bachelor-Arbeit.

Lecture notes

Es wird ein Skript abgegeben.

**Abstract**
Das agrarwissenschaftliche Praktikum besteht aus dem Betriebsaufenthalt, der Betriebsaufnahme (Betriebsheft) und der agronomischen Fachaufgabe. Die Leistungskontrolle erfolgt über die Rückmeldung zu den einzelnen Bestandteilen des Praktikums.

**Objective**
The farm placement aims to motivate students towards a system oriented approach to agricultural science, connecting science and practice.

**Lecture notes**
Das Betriebsheft zur Betriebsaufnahme und weitere Dokumente werden vom Praktikantendienst nach Anfrage zur Verfügung gestellt.

**Literature**
Merkblätter, Lehrbücher und Software stehen den Studierenden beim Praktikantendienst Agarwissenschaft zur Verfügung.

**Prerequisites / notice**
Für die Jahrgänge mit Eintritt HS 13, HS14 und HS15 ind Bachelor-Studium gilt ein Übergangsreglement zum Agrarwissenschaftlichen Praktikum.

Abstract
This course looks into scientific theories and also empirical studies on human learning and relates them to the school.

Objective
Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

Content
Thematische Schwerpunkte:
Lernen als Verhaltensänderung und als Informationsverarbeitung: Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzerwerb unter besonderer Berücksichtigung des Wissentransfers; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen

Lernformen:

Lecture notes
Folien werden zur Verfügung gestellt.

Literature

Prerequisites / notice
This lecture is only apt for students who intend to enrol in the programs "Lehrdiplom" or "Didaktisches Zertifikat". It is about learning in childhood and adolescence.

</tbody>
</table>

Abstract
In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

Objective
- At the end of the seminar, participants will be in a position to:
  - describe the scientific fundamentals of test theory and test structure.
  - evaluate examples of scientifically-developed tests in their application context.
  - if necessary, critically question the performance assessment that they employ in practice and professionalise it still further.

Content
Die konkreten Inhalte des Seminars ergeben sich aufgrund der Präferenzen der Teilnehmenden und der daraus abgeleiteten Themenübersicht für Vorträge und Seminararbeiten. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben und erläutert. Schwerpunkte der Themenvorschläge sind:
  - Testentwicklung
  - Gütekriterien von Tests
  - Aufgabenkonstruktion
  - Datenauswertung
  - Rasch-Modell
  - Internationale Vergleichstests
  - Zulassungsstests

Lecture notes
Im Verlaufe des Semesters werden einzelne Unterlagen in den Veranstaltungen abgegeben. Dazu gehören auch die Handouts der verschiedenen, studentischen Vorträge.

Literature
Als Grundlagenliteratur werden folgende Werke empfohlen:
- Weitere Literatur wird in der Lehrveranstaltung genannt.

Prerequisites / notice
Die Leistungsanforderungen richten sich im Umfang nach der Zahl zu erwerbender ECTS-Punkte, wobei 1 ECTS-Punkt einem Zeitaufwand von ca. 30 Arbeitsstunden entspricht. ETHZ-Studierende können im Rahmen dieser Veranstaltung 3 ECTS-Punkte erwerben.

Dazu sind folgende Leistungen zu erbringen:
- Präsentation und aktive mündliche Mitarbeit in der Lehrveranstaltung
- Zulassungsstests
- Einzelschreiben und Schreiben einer schriftlichen Arbeit

Weitere Angaben zu den Leistungsanforderungen werden im Rahmen der Startveranstaltung abgegeben und erläutert.

Abstract
This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

---
Abstract

This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

Objective

- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

Prerequisites / notice

Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

Abstract

The focus will be on the book “Intelligenz: Grosse Unterschiede und ihre Folgen” by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

Objective

- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

Abstract

In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. They compile texts under supervision that are directly comprehensible to the targeted readers - generally specialist-subject teachers at high-school level.

Objective

The aim is for the students
- to familiarise themselves with a new topic by obtaining material and studying the sources, so that they can selectively extend their specialist competence in this way.
- to independently develop a text on the topic, with special focus on its mathematical comprehensibility in respect of the level of knowledge of the targeted readership.
- To try out different options for specialist further training in their profession.

Abstract
The course provides the scientific basis of the central aspects of reproduction, husbandry and nutrition physiology of ruminants, and of the implications for animal welfare, product quality, breeding programs, and organic livestock systems. Means of knowledge transfer include interdisciplinary approaches, disciplinary parts, web-based learning and self-study.

Objective
At the end of the course the students are able to apply, by a comprehensive understanding of the underlying mechanisms, their knowledge in various fields of ruminant science. They will be able to develop and recommend best strategies for breeding programs, feed formulation, improving forage quality, increasing animal health and welfare etc. They will be trained to carry out interdisciplinary and disciplinary research at the highest level. The course Ruminant Science (FS) offered in spring has a similar structure but is complementary to this course.

Content
Fields (contact hours)
- Introduction: 2 h
- Special topics: 12 h
  - Lameness
  - Fertility in Cows
  - Food Intake of Ruminants
- Disciplinary topics: 36 h
  - Ruminant Husbandry: 16 h
  - Ruminant Nutrition Physiology: 10 h
  - Reproduction in Ruminants: 8 h
- Lectures held by the students: 4 h

In summary
- Contact hours: 52 h
- Self-study within semester: 30 h (especially preparation for the interdisciplinary courses and the own lecture)
- Self-study in semester break: 38 h
Total: 120 h

Lecture notes Documentations, links and other materials will be provided at the start of the course

Literature Information on books and other references will be communicated during the course

Prerequisites / notice The specialty of this course is that for the first time the animal science disciplines are unified. This is realised with a particular emphasis on interdisciplinary special topics and new forms of teaching. At the same time the essential basics in the central fields are communicated.

The field of Ruminant Science will also be a part of the spring semester (special topics: Organic Ruminant Systems, Tropical Ruminant Systems, Mastitis; disciplinary courses: Cattle, Sheep and Goat Breeding, Ruminant Diseases and Prophylaxis, Ruminant Nutrition and the Environment). However both courses are organized independently.

Conditions for successful participation: Background on animal science from the Bachelor is desired. In order to attend the Minor in Ruminant Science without any animal science background, a realistic self-assessment concerning the need for additional self-study is recommended (e.g. by choosing an appropriate bachelor course which then may be counted as ‘optional courses’ in the master). These efforts depend on the extent to which animal science courses have already been attended in the bachelor.

The control of performance will consist of:
- an own lecture
- a final oral examination with focus on comprehension of the fundamental linkages rather than of specific details

751-6601-00L Pig Science (HS) W+ 3 credits 3V E. Hillmann, M. C. Härdi-Landerer

Abstract
The overall goal of the course is to provide the essential scientific knowledge of the genetic, physiological and special nutritional aspects of pigs metabolism, animal health and behaviour, and of the implications for environment, product quality, housing and animal welfare, and breeding programs.

Objective
Students will
- understand the complex interactions of nutrition, quality traits of products, breeding and reproduction, health management, behaviour and husbandry.
- be trained to understand interdisciplinary and disciplinary research.
- be able to critically analyze published research data.
- be able to present precise scientific reports in oral and written form.

Content
Four main topics in Pig Science:

HS
- Behaviour and Husbandry of pigs: behavioral needs, husbandry related behavioral disorders, design and construction of housing systems in accordance with welfare requirements and legal regulations.
- Planning of reproductive cycle in practice
- welfare monitoring in practice
- pigs in organic farming
- Animal Health and Diseases: animal hygiene, immunology/vaccinations, metabolic diseases, diarrhoe, legisalation, thermoregulation, important infections, prophylaxis.
- poster, exam and evaluation

FS
- Special Physiology of Pig Nutrition: food intake; growth; metabolism and digestion at different growth stages; energy and specific nutritional requirements; feeding systems; environmental aspects, efed.
- Genetics: Breeding systems, reproductive techniques, performance tests and recording, etc.
- oral presentation, exam, evaluation

Lecture notes Handouts/scripts are distributed by the the lecturers.

Literature Specific literature is indicated by the lecturers.
Livestock Biology

Number Title Type ECTS Hours Lecturers
751-7211-00L Ruminal Digestion W* 1 credit 1G A. Schwarm

Abstract
This course broadens the knowledge in one of the most important aspects of ruminant nutrition: the microbial digestion in the rumen (and in the hindgut). For a comprehensive understanding of the rumen microbial ecosystem, the mechanisms of nutrient fermentation and the synthesis of microbial protein, thorough basics are provided. Apart from lectures, group and laboratory exercises are included.

Objective
The course enables students to understand in detail how ruminal digestion works and how this knowledge can be applied to design optimal feeding diets using highly fibrous forages and a variety of other feeds. The students also are able to show how to modify the most important rumen microbes beneficially by nutritional means.

Content
Structure of the contact hour part of the course (14 h):

2 h Introduction and blackboard exercise

8 h Basic topics in ruminal digestion, lectures and group exercises:
- Systematics of the microbes involved in microbial digestion
- Measurement of microbial digestion
- Interactions of microbes and epithelium of the digestive tract
- Differences between ruminal and hindgut microbial digestion
- Microbial nutrient degradation and its modification
- Efficiency of microbial protein synthesis
- Manipulation of the ruminal digestion

2 h Laboratory exercise with a rumen fistulated cow and the Rumen Simulation Technique

2 h Final seminar

The non-contact hour part is to comprehend the information given and to prepare for the examination ("Besonderes").

Lecture notes Lecture notes are provided via Moodle

Literature Will be communicated at the start of the course.

Prerequisites / notice The course is a balanced mixture of blackboard exercise, laboratory exercise, group exercise, lecture and student seminar presentation.

Livestock Genetics

Number Title Type ECTS Hours Lecturers
751-6243-00L Conservation of Animal Genetic Resources W* 1 credit 1V H. Signer-Hasler, C. Flury

Abstract
Conservation of Animal Genetic Resources overviews the distribution, endangerment and conservation of farm animal genetic resources in Switzerland and abroad. The theory is illustrated with numerous examples and the knowledge is deepened in exercises.
Objective

- overview the distribution and endangerment of animal genetic resources on national and international level and they know, where to find the relevant information.
- can explain, what value can be assigned to biodiversity and name reasons, why biodiversity should be conserved.
- know the national and international efforts of the present and the past to conserve biodiversity in the livestock sector.
- can explain what is important concerning the management of small populations.
- can explain differences between species and breeds concerning biodiversity conservation.
- can describe different conservation activities, in particular in situ and ex situ conservation
- can describe current national and international conservation programmes for species and breeds.

Methods for analysing livestock data, in particular for the estimation of breeding values: principles of selection index, introduction to BLUP, application of common models used, relationship matrix, methods for the estimation of variance components, basics of breeding programs. The material will be illustrated via exercises and assignments.

Abstract

Objective

The students are able to set up design matrices, the relationship matrix and its inverse as well as the Mixed Model equations to estimate BLUP breeding values for smaller examples.

Content

- Selection index (various sources of information, one trait, multiple traits)
- Relationship matrix and its inverse
- BLUP: one trait, repeated observations, multiple traits, economic indices
- Introduction to methods for the estimation of variance components
- Assignments

Lecture notes
Copies of the slides are available on the net.

Literature
To be announced in the lectures.

Laboratory Practical in Molecular Animal Genetics and Inherited Diseases

Number | Title | Type | ECTS | Hours | Lecturers
---|---|---|---|---|---
751-6241-00L | Laboratory Practical in Molecular Animal Genetics and Inherited Diseases | W+ | 3 credits | 3P | S. Neuenschwander, A. Bratus-Neuenschwander, C. Schelling

Abstract

Technologies of molecular animal-, immuno- and biochemical genetics will be shown and applied to selected domestic and farm animals. The students will perform laboratory tests for genome analysis (identification of gene loci, gene mapping), expression (mRNA, proteins), diagnostics (analysis of hereditary diseases) and verification of animals and animal products (parentage control, forensics).

Objective

Get to know and apply the basic laboratory methods to systematically identify loci controlling important performance and disease traits and analysis of the molecular nature of variation at the loci. At the end of the course the students are able to understand the underlying mechanisms influencing genetic variations and to analyze gene variants in the laboratory. The students know the importance of the technologies for animal breeding, animal health and quality of animal products in Switzerland and internationally.

The matter is illustrated on practical examples.

Content

- Introduction to the course (aims, program, written examination)
- Porcine E.coli test. Determination of the mutation in FUT1
- Sequencing of DNA
- Marker-/microsatellite analyses
- Forensics
- Cytogenetics
- Cell cultures
- Inheritance of coat colour
- Gene expression and animal biotechnology

Contact hours: 42 h

Self-study (preparation for courses and examination): additionally

Lecture notes
Handouts/scripts will be distributed by the lecturers.

Literature

Specific literature will be indicated individually by the lecturers.

Experimental Design and Applied Statistics in Agroecosystem Science

Number | Title | Type | ECTS | Hours | Lecturers
---|---|---|---|---|---

Abstract

In this course, different experimental designs will be discussed and various statistical tools will be applied to research questions in agroecosystem sciences. Both manipulative (field and laboratory) experiments and surveys are addressed and students work with a selection of basic techniques and methods to analyse data using a hands-on approach. Methods range from simple t-tests to multi-factoria

Objective

Students will know various statistical analyses and their application to science problems in their study area as well as a wide range of experimental design options used in environmental and agricultural sciences. They will practice to use statistical software packages (R), understand pros and cons of various designs and statistics, and be able to statistically evaluate their own results as well as those of published studies.
The course program uses a learning-by-doing approach ("hands-on minds-on"). New topics are introduced in the lecture hall, but most of the work is done in the computer lab to allow for the different speeds of progress of the student while working with data and analyzing results. In addition to contact hours exercises must be finalized and handed in for grading. The credit points will be given based on successful assessments of selected exercises.

The tentative schedule contains the following topics:

Introduction To Experimental Design and Applied Statistics
Introduction to R / Revival of R Skills
Designs of Field and Growth Chamber Experiments
Nonlinear Regression Fits
Multivariate Techniques: Principle Component Analysis, Canonical Correspondence Analysis (CCA), Cluster Analysis
ANOVA using linear and mixed effect models
Error Analysis, Error Propagation and Error Estimation
Introduction to autoregression and autocorrelations in temporal and spatial data and how to consider them in ANOVA-type analysis

This course does not provide the mathematical background that students are expected to bring along when signing up to this course. Alternatively, students can consider some aspects of this course as a first exposure to solutions in experimental design and applied statistics and then deepen their understanding in follow-up statistical courses.

Lecturers
M. Kreuzer
S. Bauersachs, S. E. Ulbrich

751-6125-00L Practical Course in Molecular Physiology W+ 3 credits 3P S. Bauersachs, S. E. Ulbrich

Abstract
This course is intended to intensify and broaden the knowledge of molecular biology gained during the bachelor lab practical course. It directly allows students to commence a master thesis with a detailed knowledge of pitfalls in experimental setup. It will also sensitize for the awareness of biological and technical variance in experimental research.

Objective
The course will be divided in two parts:

Experimental part:
- Isolation of leukocytes from blood and milk (cattle)
- Culture of isolated cells and stimulation, e.g., with LPS
- Extraction of RNA
- Quantification and quality control of RNA (Nanodrop, Fluorometer, Bioanalyzer)
- Analysis of gene expression by the use of quantitative real-time RT-PCR

Theoretical part:
- Principles of primary cell culture and transrational control, methods for analytical detection
- Bioinformatics (scientific databases, sequence analysis, biostatistics)
- Presentations by the students (e.g. techniques for analysis of physiological regulatory processes, application examples)

Content
In this practical course the students will achieve a comprehensive understanding of molecular physiology in livestock research. A cell culture experiment using blood and milk leukocytes under pathogen-associated treatment will be performed and the analysis of differential gene expression undertaken. The primary cell culture study will give insights into the laboratory work undertaken in animal physiology research. It will include the general discussion of strategies for an appropriate experimental setup in livestock research and possible methods and tools for the analysis. Hands-on cell culture and harvesting, preanalytical sample preparation and measurement implementation as well as the analysis of differential gene expression, data analysis and statistical evaluation using bioinformatics will be performed. In addition, the students will present talks based on state-of-the-art primary literature about related topics to prepare for the course and to complement the provided information. The course will enable the students to design, perform and evaluate laboratory in vitro investigations of physiological regulatory processes on a cellular level.

751-6127-00L Practical course in Microscopy of Functional Histology W+ 3 credits 6P S. E. Ulbrich

751-6129-00L Practical course Epigenetics W+ 3 credits 6P S. E. Ulbrich

Project Management for Scientific Research

Number
751-6001-00L Forum: Livestock in the World Food System W+ 2 credits 1S M. Kreuzer, S. Bauersachs, E. Hillmann, S. Neuenschwander

Abstract
This forum is a platform for the critical reflection of highly relevant topics of livestock in the frame of the world food system comprising issues from basic knowledge to acceptance in society. The exchange is operated by scientific writing and presentation.

Objective
In the Forum "Livestock in the World Food System", a topic of significance for livestock agriculture is selected by the students and subsequently dealt with from various angles (from scientific basis to production systems, environmental aspects and to the acceptance by society). The students learn to present a scientific subject in writing and orally to an audience and to defend the presentation in a discussion.

Content
The Forum "Livestock in the World Food System" will take place in blocks of 2 hours each. Once the general topic has been selected, it comprises two elements:

Element 1. Oral Presentation: The students form small groups and are lecturers. There are chair persons (moderators) from outside of these small groups and they also head the discussion. The remaining students and lecturers are the audience.

Element 2. Scientific writing: Option 1: preparation of a short scientific type of paper from a result table offered by the lecturers; Option 2: preparation of an abstract with limited word count from a scientific paper; Option 3: writing of a critical review of a paper. The students have to select 2 of the three options each. There will be a discussion be a discussion in small groups at two dates.

Introductions to both forms of presentation will be offered by lecturers. The preparation of the oral and written presentations takes place to a small part during the 2-h blocks and mainly outside of this time.

Prerequisites / notice
- no scriptum
- Requirements for allocation of the two credit points:
  - Theatre presentation (with handout) at the forum
  - Delivery of written documents of sufficient quality
  - Active participation during the presentations by the other participants

751-6003-00L Training Course in Research Groups (Large) W+ 6 credits 13P M. Kreuzer, E. Hillmann, S. Neuenschwander, S. E. Ulbrich
Abstract
The students will learn the conceptual and methodological background of research in the animal science groups of the Institute of Plant, Animal and Agroecosystem Science. In addition to teaching the theoretical background, the major aim of the course is to integrate the students into the research groups (on job training) and, hence, to focus on the practical application of the knowledge.

Objective
- Introduction into the conceptual and methodological basis of research
- Integration of the students into the research groups (on job training)
- Application of the gained knowledge

Content
The students will be integrated into the research groups day-to-day work and will thus deal with all aspects of scientific work. This comprises the planning (conceptually and logistically), execution (data collection, laboratory analyses) and evaluation (statistics, data presentation) of experiments as well as the basics of scientific writing (aim: later publication, Master thesis). The research topics and the range of methodologies vary between the animal science research groups in the Institute of Plant, Animal and Agroecosystem Sciences.

Lecture notes
None

Literature
Specific readings after enlisting in a particular research group.

Prerequisites / notice
The number of training slots in the various groups is limited. It is therefore highly recommended to contact the group leaders early enough (first come first serve).

The full integration in a research group often means to work on weekends.

The total time budget is equivalent to about 90 hours. Active participation in group meetings (discussion, presentation) and short written reports about the work conducted are required for the 3 credit points. There are no grades, it is only pass or fail.

751-6003-01L Training Course in Research Groups (Small) W+ 3 credits 6P M. Kreuzer, E. Hillmann, S. Neuenschwander, S. E. Ulbrich

Major in Plant Sciences

Disciplinary Competences

Agronomy and Plant Breeding

Number Title Type ECTS Hours Lecturers
751-4104-00L Alternative Crops W+ 2 credits 2V A. Walter, B. Bütter, E. A. Pérez Torres

Abstract
Few crops dominate the crop rotations worldwide. Following the goal of an increased agricultural biodiversity, species such as buckwheat but also medicinal plants might become more important in future. The biology, physiology, stress tolerance and central aspects of the value-added chain of the above-mentioned and of other alternative crops will be depicted.

Objective
During this course, students learn to assess the potential of different minor or alternative crops compared to the dominant major crops based on their biological and agronomical features. Each student will assess and present a specific alternative crop of his or her choice based on information from scientific articles and Wikipedia. Wikipedia-entries will be generated.

751-4203-00L Horticultural Science: Case Studies (HS) W+ 2 credits 2G L. Bertschinger, J. Röst, V. J. U. Zufferey

Number of participants limited to 24.

Abstract
Lectures address 2 horticultural cropping systems and value chains, each one in 4 2h-lecture blocks. Afterwards, the students split in 2 groups for addressing a case study focusing on one of the cropping systems treated before. An excursion to a research site might be included. In a final colloquium, each group presents a report on their case study and their conclusions.

Objective
Achieve a deepened understanding of horticultural value chain challenges relating to ecological intensification, resource efficiency, climate change and healthy and safe food, and the problem solution strategies and scientific principles behind.

Content
In the autumn semester, the two addressed cropping systems and value chains are fruit-production and viticulture. In the spring semester, the two addressed cropping systems and value chains are vegetable-production and berry-production or glasshouse-horticulture.

Lecture notes
Documents handed out during the case studies.

Literature
As provided by the case study leaders.

Prerequisites / notice
The course builds on basic knowledge delivered in 'Horticultural Crops I' and 'Horticultural Crops II'. If these courses have not been followed by interested participants, equivalent knowledge and experience will greatly support a successful and productive participation of the participating student.

Language: spoken E, G or F. Documents: Preferably English, G/F possible.

751-3603-00L Current Challenges in Plant Breeding W+ 2 credits 2G B. Studer, A. Hund, University lecturers

Number of participants limited to 15.

Abstract
The seminar 'Current challenges in plant breeding' aims to bring together national and international experts in plant breeding to discuss current activities, latest achievements and future perspective of a selected topic/area in plant breeding.

The topic this year will be: 'Genome editing: potential and challenges for plant breeding'.
Objective

The educational objectives cover both thematic competences and soft skills:
- Thematic competences:
  - Deepening of scientific knowledge in plant breeding
  - Critical evaluation of current challenges and new concepts in plant breeding
  - Promotion of collaboration and Master thesis projects with practical plant breeders
- Soft skills:
  - Independent literature research to get familiar with the selected topic
  - Critical evaluation and consolidation of the acquired knowledge in an interdisciplinary team
  - Establishment of a scientific presentation in an interdisciplinary team
  - Presentation and discussion of the team's research
  - Establishing contacts and strengthening the network to national and international plant breeders and scientists

Content

Interesting topics related to plant breeding will be selected in close collaboration with the working group for plant breeding of the Swiss Society of Agronomy (SSA). For this year, the topic 'Genome editing: potential and challenges for plant breeding' was selected.

In the fall semester (November 29, 2016), the enrolled students will meet with the lecturers as well as four to six tutors, selected according to their expertise in the selected topic (one afternoon, for about three hours). After an input talk by the lecturers, four to six specific questions/aspect will be identified and phrased. The tutors and the enrolled students will be assigned to four to six different groups, to critically evaluate one question/aspect of the selected topic. The students, guided by tutors, will prepare a presentation of 15 minutes (plus 5 minutes discussion) covering their specific question/aspect. Participation on that afternoon will be mandatory.

By the end of January (January 31, 2017), a one-day seminar on the selected topic will be organized. After one to two keynote speakers (international experts), four invited talks will link the selected topic to practical plant breeding. In the afternoon, the four to six students groups will present and discuss with the experts their specific questions on the selected topic/area. These presentations will be evaluated by the lecturers. The seminar will be public and serve as an annual meeting of the SSA working group for plant breeding, bringing together the experts in plant breeding.

The course is designed for a maximum of 15 Master students and 10 PhD students (advertised and recruited via the Zurich-Basel Plant Science Center). For full and active participation, a total of 2 credit/ECTS points will be provided.

Lecture notes

Seminar abstracts

Literature

Peer-reviewed research articles, selected according to the selected topic/area.

Proceedings from the BSc course ‘Pflanzenzüchtung’ is strongly recommended, a completed course in ‘Molecular Plant Breeding’ is highly advantageous.

Abstract

This is an introductory course in insect ecology. Students will learn about the ways in which insects interact with and adapt to their abiotic & biotic environments and their roles in diverse ecosystems. The course will entail lectures, outside readings, and critical analysis of contemporary literature.

Objective

Students completing this course should become familiar with the application of ecological principles to the study of insects, as well as major areas of inquiry in this field. Highlighted topics will include insect behavior, chemical and sensory ecology, physiological responses to biotic and abiotic stresses, plant-insect interactions, community and food-web dynamics, and disease ecology. The course will emphasize insect evolution and adaptation in the context of specific interactions with other organisms and the abiotic environment. Examples from the literature incorporated into lectures will highlight the methods used to study insect ecology.

Literature

Selected required readings (peer-reviewed literature, selected book chapters). Optional recommended readings with additional information.

Prerequisites / notice

Provision to students through ILIAS.

Abstract

Identification based on host, symptoms and micro-morphology, completed with life cycles and related control measures of the most important fungal diseases and their causal pathogens of annual and perennial crops with agricultural significance.

Objective

The students will learn and train preparation skills for microscopy, acquire knowledge of selected diseases (identification, biology of pathogen, epidemiology) and understand the corresponding integrated control measures practiced in Swiss agriculture.

Content

The course will partly be an e-learning exercise (with computers).

Lecture notes

A script will be used on annual and perennial crops and their most important diseases. It will be updated stepwise.

Prerequisites / notice

The course will be in German (specific nomenclature).

Science Center). For full and active participation, a total of 2 credits/ECTS points will be provided.

The course is designed for a maximum of 15 Master students and 10 PhD students (advertised and recruited via the Zurich-Basel Plant Science Center). For full and active participation, a total of 2 credit/ECTS points will be provided.
The course will present the principles underlying the use of radioisotopes in soil/plant systems. It will present how the introduction of an isotope into a system can be done so as to get some information on the structure of the system. Case studies will be presented to determine element availability. Finally, published studies from other groups will be analyzed and presented by the students.

Students will gain profound knowledge about nutrient cycles and population dynamics in managed and unmanaged grassland, cropland and forest ecosystems in the field and in the lab. Responses of agro- and forest ecosystems to the environment, e.g., to climate, anthropogenic deposition, major disturbances, soil nutrients or competition of plants (including invasives) and microorganisms, but also feedback mechanisms of ecosystems on (micro)climate, soils or vegetation patterns will be studied. Different management practices will be investigated and assessed in terms of production and quality of yield (ecosystem goods and services), but also in regard to environmental regulations (including subsidies) and their effect on the environment, e.g., greenhouse gas budgets. Thus, students will learn about the complex interactions of a coupled human-environmental system.

Radio-isotopes are extensively used at the soil/plant or ecosystem level to quantify the fluxes of elements (phosphorus (P), heavy metals, radionuclides) within a given system and to assess the importance of processes controlling these fluxes (e.g. exchange reactions between the soil solution and the soil solid phase, element turnover through the microbial biomass, organic matter mineralization etc.). The course will first present the principles, the basic assumptions and the theoretical framework that underlay the work with radioisotopes. It will present how the introduction of an isotope into a system can be done so as to get information on the structure of the system (e.g. number and size of compartments). Secondly, case studies on isotopic dilution and tracer work will be presented for instance on the isotopic exchange kinetics method to determine nutrients or pollutants availability. The case studies will be adapted to the ongoing research of the group of plant nutrition and will thus give an insight into our current research. In addition, published studies will be analyzed and presented by the students. Finally, the advantages and disadvantages of work with radioisotopes will be analyzed and discussed critically.

Number of participants limited to 18.

Prerequisites: Only students who have passed the courses 751-3401-00L Pflanzenernährung I and 751-3402-00L Pflanzenernährung II - Integriertes Nährstoffmanagement can be admitted to this course.

Number of participants limited to 18.

Prerequisites: Only students who have passed the courses 751-3401-00L Pflanzenernährung I and 751-3402-00L Pflanzenernährung II - Integriertes Nährstoffmanagement can be admitted to this course.

This course is about the physical, chemical, and biological processes in the rhizosphere and their effect on plant growth. Effects of fertilisers, companion plants, and microbial symbionts, and other microbes on nutrient cycling and plant uptake are discussed. An "intercropping" experiment in the glasshouse is used as a model to check for rhizosphere effects on plant growth and mineral nutrition.

To gain a holistic understanding of resource-driven and regulatory processes in agricultural and natural ecosystems.

Develop explanatory hypotheses, identify knowledge gaps for further investigations. Carry out a multi-disciplinary experiment that involves aspects of soil, (micro-)biology, plant physiology, pathology, and ecology. Develop manual skills in the set up of a glasshouse experiment, in soil and plant analyses, and in isolation and DNA-based characterisation of rhizobia. Gain insights on basic methods to analyse (bio-)chemical, molecular genetic, and graphical data. Discuss and interpret data in the context of the literature. Prepare a research report in the format of a scientific paper and a poster in the format of a conference paper, partially alone and partially in small groups, using data obtained from the glasshouse experiment.

Develop manual skills in the set up of a glasshouse experiment, in soil and plant analyses, and in isolation and DNA-based characterisation of rhizobia. Gain insights on basic methods to analyse (bio-)chemical, molecular genetic, and graphical data. Discuss and interpret data in the context of the literature. Prepare a research report in the format of a scientific paper and a poster in the format of a conference paper, partially alone and partially in small groups, using data obtained from the glasshouse experiment.
This course is designed to stimulate thinking and promote critical analysis of important processes that occur in the rhizosphere. As part of this course, the knowledge, extraction will be used for analyzing and interpreting experimental data, as well as, preparing a scientific report and conference-type poster.

The course will cover the relative importance of spatial scales and various physicochemical and microbiological dynamics as influenced by roots. We will discuss root traits and activities that influence the immediately root-surrounding soil and thereby contribute to mineral nutrient mobilization and immobilization. An overview of the most relevant root-microbe symbioses for agroecosystems will be provided and root and microbial traits discussed, which could be of use in efforts towards utilization of intercropping and bioinoculants as a possible means of reducing energetically expensive inputs to farming systems. A special emphasis will be given to the importance of physicochemical features of soils and the chemical forms (= species) of elements important for plant uptake.

Practical experience will be gained with setting up a glasshouse experiment, soil and root sampling, basic soil and plant analyses, isolation of rhizobia, determination of the number of colony forming units (CFUs), assays to screen for phosphorus and zinc solubilizing bacteria, DNA extraction, PCR amplification, and restriction fragment length polymorphism analysis (RFLP) of host range determining symbiosis-specific genes.

In short, the processes dealt with in this course occur on a small-scale and are generally (bio)chemical and microbiological in nature. Furthermore, they are generally not taken into account using current methods of agronomic management for plant production. However, they are increasingly being recognized as a potentially useful means of obtaining a resource-efficient and hence, economically and environmentally sustainable agricultural system, including for ecosystem restoration. Therefore, the course will invite for critical reflections and exemplary challenges in translating knowledge from scientific studies and ecology into application for plant production.

Ecological understanding (Second Edition)
Prerequisites / notice
We ask all course attendees of the agricultural sciences to have passed the exams at the end of the lectures Plant Nutrition I and II (Nutrient cycling in agroecosystems) by Prof. E. Frossard. All others, have to have successfully worked through the e-learning module Plant Nutrition I by Prof. E. Frossard:
https://moodle-app2.let.ethz.ch/course/view.php?id=279

Remark: The course is designed to be complementary to those on Radioisotopes in Plant Nutrition (751-3405-00L), and Nutrient Fluxes in Soil-Plant Systems (751-3404-00L), although some thematic overlaps cannot be avoided. Special emphasis is given to plant-microbe-soil interactions and an appreciation of whole plant functioning in the ecological context. You will familiarize yourself with bacterial isolation, cultivation, enumeration, as well as, molecular detection, discrimination and identification techniques for rhizosphere and root-associated microbes.
Marking will consider the efforts and outcome of work by the individual participant as well as results of work in small groups. Activities for the course will result in posters and reports in a forum of a conference and scientific paper. Reports will be due on Friday January 6, 2017.

Maximum number of participants: 18 (Attention: Admission will be on a first come first served basis - inscribe early!).
Students of D-USYS will be reimbursed via bank transfer for train and bus tickets of the zones 121 and 122 (Please send all tickets with the bank details to Christiane Gujan (http://www.plantnutrition.ethz.ch/the-group/people-a-z/person-detail.html?persid=85593)).

Objective

Students will be familiar with basic and advanced applications of stable isotopes in studies on plants, soils, water and trace gases, know the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecological, or ecological problems, learn to design, carry out and interpret a small Isotope Project, practice to search and analyze literature as well as to give an oral presentation.

Content

The analyses of stable isotopes often provide insights into ecophysiological and ecological processes that otherwise would not be available with classical methods only. Stable isotopes proved useful to determine origin of pools and fluxes in ecosystems, to partition composite fluxes and to integrate processes spatially and temporally.

This course will provide an introduction to the applicability of stable isotopes to ecological research questions. Topics will focus on carbon (13C), nitrogen (15N), oxygen (18O) and hydrogen (2H) at natural isotope abundance and tracer levels. Lectures will be supplemented by intensive laboratory sessions, short presentations by students and computer exercises.

Abstract
In this seminar students apply their knowledge on sustainable agriculture, tropical soils and land use to a case study related to a current research project from the Sustainable Agroecosystems group. The seminar offers interactions with researchers and extension specialists working in the context of agricultural development.

Objective
(1) Students analyze concrete examples of agricultural development projects in tropical agroecosystems.
(2) Students broaden their understanding of environmental and socio-economic challenges of smallholder farmers.
(3) Students articulate complexity and challenges in agricultural development interventions.
(4) Students develop their science communication skills by producing science communication materials in the context of the given case study.

Prerequisites / notice
Students signing up for this class should have a strong interest in tropical agriculture and science communication.

751-5115-00L Current Aspects of Nutrient Cycle in Agro-Ecosystems
ECTS: 2 credits
Introduction to Marketing

751-4003-01L Current Topics in Grassland Sciences (HS)
ECTS: 2 credits

Number Title Type ECTS Hours Lecturers
751-3801-00L Experimental Design and Applied Statistics in Agroecosystem Science
O 3 credits

751-0411-00L Datenauswertung und Datenpräsentation
ECTS: 2 credits

Number Title Type ECTS Hours Lecturers
363-0403-00L Introduction to Marketing
ECTS: 3 credits
Objective After taking the lecture, students should have knowledge on
1) The definition and role of marketing (marketing basics)
2) Creating marketing insights - understanding customer behavior
   - Theoretical concepts in customer behavior (customer behavior)
   - Analytical means to extend knowledge on customer behavior (marketing research)
   - Strategic tools to quantify customer behavior (CLV, CE)
3) Strategic marketing - translating marketing insights into actionable marketing strategies
   - Segmentation, Targeting, and Positioning
   - Attracting customers (marketing mix, 4Ps)
   - Maintaining profitable customer relations (CRM)

Content The course is designed to convey a profound understanding of marketing’s role in modern firms, its interactions and interfaces with other disciplines, its main instruments and recent trends. Particular attention is given to emerging marketing concepts and instruments, and the role of marketing in technology firms.

The lecture features a short tutorial that is held at irregularly spaced intervals throughout the semester (approximately every third week). The tutorial is embedded within the lecture and consists of short sessions of about 30 minutes. It serves to illustrate theoretical and methodological concepts from the lecture by walking students through the analysis of real-world data from the telecommunications industry.

The case data will be provided so that students practice and apply the concepts of the lecture on their own. The tutorial is held jointly by two Teaching Assistants (Zhiying Cui and Jana Gross) and the professor (Prof. F. v. Wangenheim).

Weekly readings, distributed in class (via Moodle)

751-2205-00L Advanced Management in the Agri-Food-Chain W+ 2 credits 2G M. Weber

Objective After the lecture the students...

Content In the lecture the following contents will be treated:
- State, reasons and effects of complexity in the organizational world.
- A basic framework for shaping and governing intelligent organizations.
- Selected contemporary models for managing in the complex organizational world.
- Transfer and adaption of the models to organizations in the Agri-Food Chain.

Lecture notes Reader with selected contents.

Prerequisites / notice
- Vorlesung “Managerial Economics Agri-Food Chain: Strategische Konzepte” in D-USYS
- Vorlesung “Managerial Economics Agri-Food Chain: Strategische Konzepte” in D-USYS

752-2122-00L Food and Consumer Behaviour W+ 2 credits 2V M. Siegrist, C. Hartmann

Objective This course focuses on food consumer behavior, consumer’s decision-making processes and consumer’s attitudes towards food products.

Content The course provides an overview about the following topics: Factors influencing consumer’s food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues

Resource Economics and Agricultural Policy

Number Title Type ECTS Hours Lecturers

751-2903-00L Evaluation of Agricultural Policies W+ 3 credits 2G M. Stolze, S. Mann

Objective Focus: Policy Evaluation

Content The students are to...
- have a critical look at different angles of agri-economic research
- study scientific literature of the focus theme
- consider strengths, weaknesses and the application of research approaches
- apply knowledge gained from other courses with respect to the focus theme
- get insights in agricultural economic research of the national research institutions by visiting Agroscope and the Research Institute of Organic Agriculture (FiBL)
- be capable to conduct evaluations and critically reflect evaluation results

Lecture notes Handouts (power point presentations)

Literature 1) Bussmann Werner, Klüti Ulrich und Knoepfel Peter, 2004 (Hrsg). Einführung in die Politikevaluation. Helbling&Lichtenhahn. In German language. Will be provided by the lectures in unit 01.

Prerequisites / notice Unit 08: 1 day course at Agroscope in Tänikon, 8356 Ettenhausen, www.agroscope.admin.ch
Unit 09: 1 day course at FiBL in 5070 Frick, www.fibl.org

701-1651-00L Environmental Governance W 3 credits 2G E. Lieberherr, G. de Buren, R. Schweizer

Objective Number of participants limited to 30.

Abstract The course addresses environmental policies, focusing on new steering approaches, which are generally summarized as environmental governance. The course also provides students with tools to analyze environmental policy processes and assesses the key features of environmental governance by examining various practical environmental policy examples.
Objective
To understand how an environmental problem may (not) become a policy and explain political processes, using basic concepts and techniques from political science.

To analyze the evolution as well as the key elements of environmental governance.

Content
Improvements in environmental quality and sustainable management of natural resources cannot be achieved through technical solutions alone. The quality of the environment and the achievement of sustainable development strongly depend on human behavior and specifically the human uses of nature. To influence human behavior, we rely on public policies and other societal rules, which aim to steer the way humans use natural resources and their effects on the environment. Such steering can take place through government intervention alone. However, this often also involves governance, which includes the interplay between governmental and non-governmental actors, the use of diverse tools such as emission standards or financial incentives to steer actors' behavior and can occur at the local, regional, national or international level.

In this course, we will address both the practical aspects of as well as the scientific debate on environmental governance. The course gives future environmental experts a strong basis to position themselves in the governance debate, which does not preclude government but rather involves a spectrum from government to governance.

Key questions that this course seeks to answer: What are the core characteristics of environmental challenges from a policy perspective? What are key elements of 'environmental governance' and how legitimate and effective are these approaches in addressing persistent environmental challenges?

Lecture notes
Lecture slides and additional course material will be provided throughout the semester.

Prerequisites / notice
We recommend that students have (a) three-years BSc education of a (technical) university; (b) successfully completed Bachelor introductory course to environmental policy (Entwicklungen nationaler Umweltpolitik (or equivalent)) and (c) familiarity with key issues in environmental policy and some fundamental knowledge of one social science or humanities discipline (political science, economics, sociology, history, psychology, philosophy)

Agricultural production is exposed to various risks which are important for decisions taken by farmers and other actors in the agri-food sector. Students in this class develop a dynamic simulation model that represents the basic mechanisms underlying food security in developing countries in a highly aggregated way. Students then proceed to extending the simulation model with one policy to improve food security and they analyze the dynamic impacts of this policy on production and environmental outcomes.

Data: 06.01.2019 12:56  Autumn Semester 2016  Page 30 of 1571
Objective
- Students learn the basic theory and practice of dynamic simulation
- Students can develop, analyze and extend a dynamic simulation model and interpret its results.
- By applying the developed simulation model, students gain insights into food security issues. They also learn to recognize the benefits and pitfalls of dynamic simulation, both from a theoretical and an applied perspective.

Lecture notes
- slides (will be provided during the class)
- articles and papers (will be provided during the class)

363-0541-00L Systems Dynamics and Complexity

Abstract
Finding solutions: what is complexity, problem solving cycle.
Implementing solutions: project management, critical path method, quality control feedback loop.
Controlling solutions: Vensim software, feedback cycles, control parameters, instabilities, chaos, oscillations and cycles, supply and demand, production functions, investment and consumption

Objective
A successful participant of the course is able to:
- understand why most real problems are not simple, but require solution methods that go beyond algorithmic and mathematical approaches
- apply the problem solving cycle as a systematic approach to identify problems and their solutions
- calculate project schedules according to the critical path method
- setup and run systems dynamics models by means of the Vensim software
- identify feedback cycles and reasons for unintended systems behavior
- analyse the stability of nonlinear dynamical systems and apply this to macroeconomic dynamics

Content
Why are problems not simple? Why do some systems behave in an unintended way? How can we model and control their dynamics? The course provides answers to these questions by using a broad range of methods encompassing systems oriented management, classical systems dynamics, nonlinear dynamics and macroeconomic modeling.
The course is structured along three main tasks:
1. Finding solutions
2. Implementing solutions
3. Controlling solutions

PART 1 introduces complexity as a system immanent property that cannot be simplified. It introduces the problem solving cycle, used in systems oriented management, as an approach to structure problems and to find solutions.

PART 2 discusses selected problems of project management when implementing solutions. Methods for identifying the critical path of subtasks in a project and for calculating the allocation of resources are provided. The role of quality control as an additional feedback loop and the consequences of small changes are discussed.

PART 3, by far the largest part of the course, provides more insight into the dynamics of existing systems. Examples come from biology (population dynamics), management (inventory modeling, technology adoption, production systems) and economics (supply and demand, investment and consumption). For systems dynamics models, the software program VENSIM is used to evaluate the dynamics. For economic models analytical approaches, also used in nonlinear dynamics and control theory, are applied. These together provide a systematic understanding of the role of feedback loops and instabilities in the dynamics of systems. Emphasis is on oscillating phenomena, such as business cycles and other life cycles.

Lecture notes
Weekly self-study tasks are used to apply the concepts introduced in the lectures and to come to grips with the software program VENSIM.
The lecture slides are provided as handouts - including notes and literature sources - to registered students only. All material is to be found on the Moodle platform. More details during the first lecture
Prerequisites / notice
Self-study tasks (discussion exercises, Vensim exercises) are provided as home work. Weekly exercise sessions (45 min) are used to discuss selected materials. Regular participation in the exercises is an efficient way to understand the concepts relevant for the final exam.

401-0647-00L Introduction to Mathematical Optimization

Abstract
Introduction to basic techniques and problems in mathematical optimization, and their applications to problems in engineering.

Objective
The goal of the course is to obtain a good understanding of some of the most fundamental mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems. The students will also practice applying the learned models to problems in engineering.

Content
Topics covered in this course include:
- Linear programming (simplex method, duality theory, shadow prices, ...).
- Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...).
- Modelling with mathematical optimization: applications of mathematical programming in engineering.

Lecture notes
Weekly self-study tasks are used to apply the concepts introduced in the lectures and to come to grips with the software program VENSIM.

Title
Evaluation of Agricultural Policies

Data: 06.01.2019 12:56  Autumn Semester 2016  Page 31 of 1571
The course focuses on agricultural economic research with particular focus on policy evaluation. We impart insights in the issue of policy evaluation as part of agricultural economics research.

Objective
Focus: Policy Evaluation

- have a critical look at different angles of agri-economic research
- study scientific literature of the focus theme
- consider strengths, weaknesses and the application of research approaches
- apply knowledge gained from other courses with respect to the focus theme
- get insights in agricultural economic research of the national research institutions by visiting Agroscope and the Research Institute of Organic Agriculture (FiBL)
- be capable to conduct evaluations and critically reflect evaluation results

Content
Unit: Subject

- 01: Introduction in the issue of policy evaluation
- 02: The normative frame for policy evaluation
- 03: Evaluation of public policies
- 04: Context and use of evaluations
- 05: Quantitative policy evaluation
- 06: Qualitative policy evaluation
- 07: Group work
- 08: Agricultural Economics Research at ART
- 09: Agricultural Economics Research at FiBL
- 10: Examination, Feedback

751-2205-00L Advanced Management in the Agri-Food-Chain W 2 credits 2G M. Weber

Objective
After the lecture the students ...
- know the characteristics and consequences of complexity in the organizational world,
- know and can apply selected comprehensive models for managing in complex situations,
- know possible practical applications and examples of the treated contents to organizations in the Agri-Food Chain and ... are able to deepen the relevant topics in an autonomous way.

Content
In the lecture the following contents will be treated:
- State, reasons and effects of complexity in the organizational world.
- A basic framework for shaping and governing intelligent organizations.
- Selected contemporary models for managing in the complex organizational world.
- Transfer and adaption of the models to organizations in the Agri-Food Chain.

Lecture notes
Reader with selected contents.

Prerequisites / notice
- Vorlesung “Management” in D-USYS
- Vorlesung “Managerial Economics Agri-Food Chain: Strategische Konzepte” in D-USYS

---

752-2122-00L Food and Consumer Behaviour W 2 credits 2V M. Siegrist, C. Hartmann

Objective
This course focuses on food consumer behavior, consumer’s decision-making processes and consumer’s attitudes towards food products.

The course provides an overview about the following topics: Factors influencing consumer’s food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

---

751-2103-00L Socioeconomics of Agriculture W 2 credits 2V S. Mann

Objective
Students should able to describe the dynamics of hierarchies, markets and cooperation in an agricultural context.

Content
Groups, identities and utility maximization - some conceptual foundations
Micro-Socioeconomics: Hierarchy, cooperation and markets
Macro-Socioeconomics: Varieties of Capitalism
Agricultural Administration: Path dependencies and efficiency issues
Causes and Impacts of farm succession
Occupational Choice in the farming sector
System Choice and segregation (organic, GMO etc.)
The economics of rural areas
Common Resource Management in Alpine Farming
Agricultural Cooperatives
Societal perceptions of agriculture
Perceptions of farming from within
Varieties of agricultural systems and policies

Lecture notes

Prerequisites / notice
Basic economic knowledge is expected.

---

751-1573-00L Dynamic Simulation in Agricultural and Regional Economics W 1 credit 1V B. Kopainsky

Objective
Students in this class develop a dynamic simulation model that represents the basic mechanisms underlying food security in developing countries in a highly aggregated way. Students then proceed to extending the simulation model with one policy to improve food security and they analyze the dynamic impacts of this policy on production and environmental outcomes.

---
Objective
- Students learn the basic theory and practice of dynamic simulation
- Students can develop, analyze and extend a dynamic simulation model and interpret its results.
- By applying the developed simulation model, students gain insights into food security issues. They also learn to recognize the benefits and pitfalls of dynamic simulation, both from a theoretical and an applied perspective.

Lecture notes

751-0423-00L Risk Analysis and Risk Management in Agriculture

Objective
- To develop a better understanding of decision making under uncertainty and risk;
- To gain experience in different approaches to analyze risky decisions;
- To develop an understanding for different sources of risk in agricultural production;
- To understand the crucial role of subjective perceptions and preferences for risk management decisions;
- To get an overview on risk management in the agricultural sector, with a particular focus on insurance solutions.

Content
- Quantification and measurement of risk
- Risk preferences, expected utility theory and alternative models of risk behavior
- Concepts on the decision making under risk
- Production, investment and diversification decisions under risk
- Risk management in agriculture

Lecture notes
Handouts will be distributed in the lecture and available on the moodle.

Prerequisites / notice
Knowledge of basic concepts of probability theory and microeconomics

751-3003-00L Radio-Isotopes in Plant Nutrition

Objective
- Application of radioisotopes in plant nutrition and its potential to assess nutrient and water uptake and plant growth.
- Ability to interpret results and critically evaluate the use of radioisotopes in plant nutrition research.

Content
- Introduction to radioisotopes and their use in plant nutrition
- Measurement of nutrient and water uptake using radioisotopes
- Plant growth and development studies using radioisotopes
- Critical evaluation of the use of radioisotopes in plant nutrition research

Lecture notes
Slides (will be provided during the class)

Prerequisites / notice
- Courses in plant physiology and soil-plant relationships
- Previous knowledge of basic statistics

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 33 of 1571
Radio-isotopes are extensively used at the soil/plant or ecosystem level to quantify the fluxes of elements (phosphorus (P), heavy metals, radionucleides) within a given system and to assess the importance of processes controlling these fluxes (e.g., exchange reactions between the soil solution and the soil solid phase, element turnover through the microbial biomass, organic matter mineralization etc.). The course will first present the principles, the basic assumptions and the theoretical framework that underlie the work with radioisotopes. It will present how the introduction of an isotope into a system can be done so as to get information on the structure of the system (e.g., number and size of compartments). Secondly, case studies on isotopic dilution and tracer work will be presented for instance on the isotopic exchange kinetics method to determine nutrients or pollutants availability. The case studies will be adapted to the ongoing research of the group of plant nutrition and will thus give an insight into our current research. In addition, published studies will be analyzed and presented by the students. Finally, the advantages and disadvantages of work with radioisotopes will be analyzed and discussed critically.

This course is about the physical, chemical, and biological processes in the rhizosphere and their effect on plant growth. Effects of fertilisers, companion plants, and microbial symbionts, and other microbes on nutrient cycling and plant uptake are discussed. An “intercropping” experiment in the glasshouse is used as a model to check for rhizosphere effects on plant growth and mineral nutrition. Furthermore, they are generally not taken into account using current methods of agronomic management for plant production. However, they are increasingly being recognized as a potentially useful means of obtaining a resource-efficient and hence, economically and environmentally sustainable agricultural system, including for ecosystem restoration. Therefore, the course will invite for critical reflections and exemplify challenges in translating knowledge from scientific studies and ecology into application for plant production.

The course will cover the relative importance of spatial scales and various physicochemical and microbiological dynamics as influenced by roots. We will discuss root traits and activities that influence the immediately root-surrounding soil and thereby contribute to mineral nutrient mobilization and immobilization. An overview of the most relevant root-microbe symbioses for agroecosystems will be provided and root and microbial traits discussed, which could be of use in efforts towards utilization of intercropping and bioinoculants as a possible means of reducing energetically expensive inputs to farming systems. A special emphasis will be given to the importance of physicochemical features of soils and the chemical forms (= species) of elements important for plant uptake.

Practical experience will be gained with setting up a glasshouse experiment, soil and root sampling, basic soil and plant analyses, isolation of rhizobia, determination of the number of colony forming units (CFU), assays to screen for phosphorus and zinc solubilizing bacteria, DNA extraction, PCR amplification, and restriction fragment length polymorphism analysis (RFLP) of host range determining symbiosis-specific genes.

In short, the processes dealt with in this course occur on a small-scale and are generally (bio)chemical and microbiological in nature. Furthermore, they are generally not taken into account using current methods of agronomic management for plant production. However, they are increasingly being recognized as a potentially useful means of obtaining a resource-efficient and hence, economically and environmentally sustainable agricultural system, including for ecosystem restoration. Therefore, the course will invite for critical reflections and exemplify challenges in translating knowledge from scientific studies and ecology into application for plant production.
Stable Isotope Ecology of Terrestrial Ecosystems

This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to process-oriented ecological research. Topics focus on stable isotopes as indicators for the origin of pools and fluxes, partitioning of composite fluxes as well as to trace and integrate processes. In addition, students carry out a small project during lab sessions. Students will be familiar with basic and advanced applications of stable isotopes in studies on plants, soils, water and trace gases, know the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small IsoProject, practice to search and analyze literature as well as to give an oral presentation.

Data: 06.01.2019 12:56
Autumn Semester 2016
Page 35 of 1571
The analyses of stable isotopes often provide insights into ecophysiological and ecological processes that otherwise would not be available with classical methods only. Stable isotopes proved useful to determine origin of pools and fluxes in ecosystems, to partition composite fluxes and to integrate processes spatially and temporally.

This course will provide an introduction to the applicability of stable isotopes to ecological research questions. Topics will focus on carbon (13C), nitrogen (15N), oxygen (18O) and hydrogen (2H) at natural isotope abundance and tracer levels. Lectures will be supplemented by intensive laboratory sessions, short presentations by students and computer exercises.

Currently, few crops dominate the crop rotations worldwide. Following the goal of an increased agricultural biodiversity, species such as buckwheat but also medicinal plants might become more important in future. The biology, physiology, stress tolerance and central aspects of the value-added chain of the above-mentioned and of other alternative crops will be depicted.

The educational objectives cover both thematic competences and soft skills:

- Establishing contacts and strengthening the network to national and international plant breeders and scientists
- Presentation and discussion of the teamwork outcome
- Establishment of a scientific presentation in an interdisciplinary team
- Independent literature research to get familiar with the selected topic
- Critical evaluation of current challenges and new concepts in plant breeding
- Soft skills:
  - Independent literature research to get familiar with the selected topic
  - Critical evaluation and consolidation of the acquired knowledge in an interdisciplinary team
  - Establishment of a scientific presentation in an interdisciplinary team
  - Presentation and discussion of the teamwork outcome
  - Establishing contacts and strengthening the network to national and international plant breeders and scientists

Interesting topics related to plant breeding will be selected in close collaboration with the working group for plant breeding of the Swiss Society of Agronomy (SSA). For this year, the topic 'Genome editing: potential and challenges for plant breeding' was selected.

In the fall semester (November 29, 2016), the enrolled students will meet with the lecturers as well as four to six tutors, selected according to their expertise in the selected topic (one afternoon, for about three hours). After an input talk by the lecturers, four to six specific questions/aspects will be identified and phrased. The tutors and the enrolled students will be assigned to four to six different groups for addressing a case study focusing on one of the cropping systems treated before. An excursion to a research site might be included. In a final colloquium, each group presents a report on their case study and their conclusions.

The topic this year will be: 'Genome editing: potential and challenges for plant breeding'.

The selected topics address challenges with regard to ecological intensification, resource efficiency or climate change and healthy and safe food, and the problem solution strategies and scientific principles behind. Derive in a team effort a report and a presentation providing a comprehensive insight into a problem of the horticultural value chain and its science-based solution strategy.

The thematic objectives cover both thematic and soft skills:

- Promotion of collaboration and Master thesis projects with practical plant breeders
- Thematic competences:
  - Deepening of scientific knowledge in plant breeding
  - Critical evaluation of current challenges and new concepts in plant breeding
  - Promotion of collaboration and Master thesis projects with practical plant breeders
- Soft skills:
  - Independent literature research to get familiar with the selected topic
  - Critical evaluation and consolidation of the acquired knowledge in an interdisciplinary team
  - Establishment of a scientific presentation in an interdisciplinary team
  - Presentation and discussion of the teamwork outcome
  - Establishing contacts and strengthening the network to national and international plant breeders and scientists

The course builds on basic knowledge delivered in 'Horticultural Crops I' and 'Horticultural Crops II'. If these courses have not been followed by interested participants, equivalent knowledge and experience will greatly support a successful and productive participation of the participating student.

Language: spoken E, G or F. Documents: Preferably English, G/F possible.

This course will provide an introduction to the applicability of stable isotopes to ecological research questions. Topics will focus on carbon (13C), nitrogen (15N), oxygen (18O) and hydrogen (2H) at natural isotope abundance and tracer levels. Interesting topics related to plant breeding will be selected in close collaboration with the working group for plant breeding of the Swiss Society of Agronomy (SSA). For this year, the topic 'Genome editing: potential and challenges for plant breeding' was selected.

In the fall semester (November 29, 2016), the enrolled students will meet with the lecturers as well as four to six tutors, selected according to their expertise in the selected topic (one afternoon, for about three hours). After an input talk by the lecturers, four to six specific questions/aspects will be identified and phrased. The tutors and the enrolled students will be assigned to four to six different groups, to critically evaluate one question/aspect of the selected topic. The students, guided by tutors, will prepare a presentation of 15 minutes (plus 5 minutes discussion) covering their specific question/aspect. Participation on that afternoon will be mandatory.

The course is designed for a maximum of 15 Master students and 10 PhD students (admitted and recruited via the Zurich-BaseI Plant Science Center). For full and active participation, a total of 2 credit/ECTS points will be provided.
Students analyzing concrete examples of agricultural development projects in tropical agroecosystems.

**Objective**
Students completing this course should become familiar with the application of ecological principles to the study of insects, as well as major areas of inquiry in this field. Highlighted topics will include insect behavior, chemical and sensory ecology, physiological responses to biotic and abiotic stressors, plant-insect interactions, community and food-web dynamics, and disease ecology. The course will emphasize insect evolution and adaptation in the context of specific interactions with other organisms and the abiotic environment. Examples from the literature incorporated into lectures will highlight the methods used to study insect ecology.

**Lecture notes**
Provided to students through ILIAS.

**Literature**
Selected required readings (peer reviewed literature, selected book chapters). Optional recommended readings with additional information.

---

**751-4811-00L Alien Organisms in Agriculture**

**Abstract**
The course focuses on alien organisms in agriculture as well as the scientific assessment and regulatory management of their effects on the environment and agricultural production.

**Objective**
Students will understand the consequences arising from the unintentional or deliberate introduction of alien organisms into agricultural systems. They will be able to understand the concept of environmental risk assessment and be able to evaluate risk management options.

**Content**
Alien organisms in agriculture is a topic that receives an increasing awareness among farmers, agricultural scientists, regulators and the general public. Students of this course will learn about the nature of alien organisms such as invasive species, biocontrol organisms and genetically modified organisms. With a particular focus on arthropods, plants and their interactions we will look at the potential threats the novel organisms pose, the benefits they provide and how both of these effects can be scientifically assessed. Students will learn how the topic of alien organisms in agriculture is intrinsically tied to policy making and regulation and get to know current examples and future challenges in research. In the last part of the course students will be able to apply the acquired knowledge in a practical exercise (case study).

**Lecture notes**
Material will be distributed during the course.

**701-0263-01L Seminar in Evolutionary Ecology of Infectious Diseases**

**Abstract**
Students of this course will discuss current topics from the field of infectious disease biology. From a list of publications, each student chooses some themes that he/she is going to explain and discuss with all other participants and under supervision. The actual topics will change from year to year corresponding to the progress and new results occurring in the field.

**Objective**
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

**Content**
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

**Lecture notes**
Publications and class notes can be downloaded from a web page announced during the lecture.

**Literature**
Papers will be assigned and downloaded from a web page announced during the lecture.

---

**751-4506-00L Plant Pathology III**

**Abstract**
Identification based on host, symptoms and micro-morphology, completed with life cycles and related control measures of the most important fungal diseases and their causal pathogens of annual and perennial crops with agricultural significance.

**Objective**
The students will learn and train preparation skills for microscopy, acquire knowledge of selected diseases (identification, biology, pathogen, epidemiology) and understand the corresponding integrated control measures practiced in Swiss agriculture.

**Content**
The course will partly be an e-learning exercise (with computers).

**Lecture notes**
A script will be used on annual and perennial crops and their most important diseases. It will be updated stepwise.

**Prerequisites / notice**
The course will be in German (spec. nomenclature)

Radio-isotopes in Plant Nutrition

Abstract
The course will present the principles underlying the use of radioisotopes in soil/plant systems. It will present how the introduction of an isolate into a system can be done to get some information on the structure of the system. Case studies will be presented to determine element availability. Finally, published studies from other groups will be analyzed and presented by the students.

Objective
At the end of this course, participants will be familiar with the principles on which radioisotope works are based and have learned from case studies how radioisotopes can be used to obtain meaningful data. They are aware of the advantages of using radioisotopes in the element cycling studies, but also of the risks and open questions related to isolate work.

Content
Radio-isotopes are extensively used at the soil/plant or ecosystem level to quantify the fluxes of elements (phosphorus (P), heavy metals, radionuclides) within a given system and to assess the importance of processes controlling these fluxes (e.g., exchange reactions between the soil solution and the soil solid phase, element turnover through the microbial biomass, organic matter mineralization etc.).

The course will first present the principles, the basic assumptions and the theoretical framework that underlie the work with radioisotopes. It will present how the introduction of an isolate into a system can be done to get some information on the structure of the system. Case studies will be presented to determine element availability. Finally, published studies from other groups will be analyzed and presented by the students.

Lecture notes
Documents will be distributed during the lecture.

Literature
Handouts will be available on the webpage of the course.

Prerequisites / notice
Prerequisites: Attendance of introductory courses in plant ecophysiology, ecology, and grassland or forest sciences. Course will be taught in English.

751-5101-00L Biogeochemistry and Sustainable Management

W 2 credits

2G N. Buchmann, L. Hörtnagl

Abstract
This course focuses on the interactions between ecology, biogeochemistry and management of agro- and forest ecosystems, thus, coupled human-ecosystem systems. Students learn how human impacts on ecosystems via management or global change are mainly driven by effects on biogeochemical cycles and thus ecosystem functioning, but also about feedback mechanisms of terrestrial ecosystems.

Objective
Students will understand and complex and interacting processes of ecology, biogeochemistry and management of agro- and forest ecosystems, be able to analyze and evaluate the various impacts of different management practices under different environmental conditions, search literature, write and evaluate scientific reports, and be able to coordinate and work successfully in small interdisciplinary teams.

Content
Agroecosystems and forest ecosystems play a major role in all landscapes, either for production purposes, ecological areas or for recreation. The human impact of any management on the environment is mainly driven by effects on biogeochemical cycles. Effects of global change impacts will also be via biogeochemistry at the soil-biosphere-atmosphere-interface. This course, ecosystem functioning, i.e., the interactions between ecology, biogeochemistry and management of terrestrial systems, is the science topic for this course.

Students will gain profound knowledge about nutrient cycles and population dynamics in managed and unmanaged grassland, cropland and forest ecosystems in the field and in the lab. Responses of agro- and forest ecosystems to the environment, e.g., to climate, anthropogenic deposition, major disturbances, soil nutrients or competition of plants (including invasives) and microorganisms, but also feedback mechanisms of ecosystems on (micro)climate, soils or vegetation patterns will be studied. Different management practices will be investigated and assessed in terms of production and quality of yield (ecosystem goods and services), but also in regard to environmental regulations (including subsidies) and their effect on the environment, e.g., greenhouse gas budgets. Thus, students will learn about the complex interactions of a coupled human-ecosystem system.

Lecture notes
Handouts will be available on the webpage of the course.

Literature
Handouts will be available on the webpage of the course.

Prerequisites / notice
Prerequisites: Attendance of introductory courses in plant ecophysiology, ecology, and grassland or forest sciences. Course will be taught in English.

751-5115-00L Current Aspects of Nutrient Cycle in Agro-Ecosystems

W 2 credits

1S E. Frossard, A. Oberson Dräayer

Abstract
The seminar concerns current aspects and research related to nutrient cycles in agro-ecosystems. It offers to deepen the knowledge on a specific theme related to nutrients. It is composed by presentations of national and international speakers and by an excursion. The students write a report where they compile the obtained information, relate it to their own knowledge and include literature.

Objective
Listen and understand expert presentations. Ask questions and contribute to the discussion during the talk sessions and the excursion. Link the information obtained during the seminar with knowledge from previous lessons and with literature searched to complement the matter. Expand the knowledge on nutrient cycles and nutrient management in the agro-ecosystem.

Lecture notes
Documents will be distributed during the lecture.

Literature
Handouts will be available on the webpage of the course.

Prerequisites / notice
Prerequisites: Attendance of introductory courses in plant ecophysiology, ecology, and grassland or forest sciences. Course will be taught in English.

751-3405-00L Radio-isotopes in Plant Nutrition

W 3 credits

2G E. Frossard

Abstract
The course will present the principles underlying the use of radioisotopes in soil/plant systems. It will present how the introduction of an isolate into a system can be done to get some information on the structure of the system. Case studies will be presented to determine element availability. Finally, published studies from other groups will be analyzed and presented by the students.

Objective
At the end of this course, participants will be familiar with the principles on which radioisotope works are based and have learned from case studies how radioisotopes can be used to obtain meaningful data. They are aware of the advantages of using radioisotopes in the element cycling studies, but also of the risks and open questions related to isolate work.

Content
Radio-isotopes are extensively used at the soil/plant or ecosystem level to quantify the fluxes of elements (phosphorus (P), heavy metals, radionuclides) within a given system and to assess the importance of processes controlling these fluxes (e.g., exchange reactions between the soil solution and the soil solid phase, element turnover through the microbial biomass, organic matter mineralization etc.).

The course will first present the principles, the basic assumptions and the theoretical framework that underlie the work with radioisotopes. It will present how the introduction of an isolate into a system can be done so as to get information on the structure of the system (e.g., number and size of compartments). Secondly, case studies on isotopic dilution and tracer work will be presented for instance on the isotopic exchange kinetics method to determine nutrients or pollutants availability. The case studies will be adapted to the ongoing research of the group of plant nutrition and will thus give an insight into our current research. In addition, published studies will be analyzed and presented by the students. Finally, the advantages and disadvantages of work with radioisotopes will be analyzed and discussed critically.

Lecture notes
Documents will be distributed during the lecture.

Literature
Handouts will be available on the webpage of the course.

Prerequisites / notice
Prerequisites: Attendance of introductory courses in plant ecophysiology, ecology, and grassland or forest sciences. Course will be taught in English.

751-5123-00L Rhizosphere Ecology

W 4 credits

4G H. A. Gamper, T. I. McLaren

Abstract
This course is about the physical, chemical, and biological processes in the rhizosphere and their effect on plant growth. Effects of fertilisers, companion plants, and microbial symbionts, and other microbes on nutrient cycling and plant uptake are discussed. An “intercropping” experiment in the glasshouse is used as a model to check for rhizosphere effects on plant growth and mineral nutrition.
Objective
To gain a holistic understanding of resource-driven and regulatory processes in agricultural and natural ecosystems.
Develop skills on the critical analysis of scientific papers.
Define explanatory hypotheses, identify knowledge gaps for further investigations.
Carry out a multi-disciplinary experiment that involves aspects of soil, (micro-)biology, plant physiology, pathology, and ecology.
Develop manual skills in the set up of a glasshouse experiment, in soil and plant analyses, and in isolation and DNA-based characterisation of rhizobia.
Gain insights on basic methods to analyse (bio-)chemical, molecular genetic, and graphical data.
Discuss and interpret data in the context of the literature.
Prepare a research report in the format of a scientific paper and a poster in the format of a conference paper, partially alone and partially in small groups, using data obtained from the glasshouse experiment.

Content
This course is designed to stimulate thinking and promote critical analysis of important processes that occur in the rhizosphere. As part of this course, the knowledge acquired will be used for analysing and interpreting experimental data, as well as, preparing a scientific report and conference-type poster.

The course will cover the relative importance of spatial scales and various physicochemical and microbiological dynamics as influenced by roots. We will discuss root traits and activities that influence the immediately root-surrounding soil and thereby contribute to mineral nutrient mobilization and immobilization. An overview of the most relevant root-microbe symbioses for agroecosystems will be provided and root and microbial traits discussed, which could be of use in efforts towards utilization of intercropping and bioinoculants as a possible means of reducing energetically expensive inputs to farming systems. A special emphasis will be given to the importance of physicochemical features of soils and the chemical forms (= species) of elements important for plant uptake.

Practical experience will be gained with setting up a glasshouse experiment, soil and root sampling, basic soil and plant analyses, isolation of rhizobia, determination of the number of colony forming units (CFU), assays to screen for phosphorus and zinc solubilizing bacteria, DNA extraction, PCR amplification, and restriction fragment length polymorphism analysis (RFLP) of host range determining symbiosis-specific genes.

In short, the processes dealt with in this course occur on a small-scale and are generally (bio)chemical and microbiological in nature. Furthermore, they are generally not taken into account using current methods of agronomic management for plant production. However, they are increasingly being recognized as a potentially useful means of obtaining a resource-efficient and hence, economically and environmentally sustainable agricultural system, including for ecosystem restoration. Therefore, the course will invite for critical reflections and exemplify challenges in translating knowledge from scientific studies and ecology into application for plant production.

Lecture notes
For documentation, lecture slides and laboratory protocols will continuously be uploaded to the directory ‘751-5123-00L Rhizosphere Ecology’ on the electronic document exchange platform ILIAS, LDA-ELBA:
This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to the holistic rhizosphere: integrating zones, processes, and semantics in the rhizosphere. Students will be familiar with basic and advanced applications of stable isotopes in studies on plants, soils, water and trace gases, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small IsoProject, practice to search and analyze the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, and use a small project during lab sessions.

Objective

This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to process-oriented ecological research. Topics focus on stable isotopes as indicators for the origin of pools and fluxes, partitioning of composite fluxes as well as to trace and integrate processes. In addition, students carry out a small project during lab sessions.

Ecological understanding (Second Edition)

We ask all course attendees of the agricultural sciences to have passed the exams at the end of the lectures Plant Nutrition I and II (Nutrient cycling in agroecosystems) by Prof. E. Frossard. All others, have to have successfully worked through the e-learning module Plant Nutrition I by Prof. E. Frossard: https://moodle-app2.let.ethz.ch/course/view.php?id=279

Remark: The course is designed to be complementary to those on Radioisotopes in Plant Nutrition (751-3405-00L), and Nutrient Fluxes in Soil-Plant Systems (751-3404-00L), although some thematic overlaps cannot be avoided. Special emphasis is given to plant-microbe-soil interactions and an appreciation of whole plant functioning in the ecological context. You will familiarize yourself with bacterial isolation, cultivation, enumeration, as well as, molecular detection, discrimination and identification techniques for rhizosphere and root-associated microbes.

Marking will consider the efforts and outcome of work by the individual participant as well as results of work in small groups. Activities for the course will result in posters and reports in the format of a conference and scientific paper. Reports will be due on Friday January 6, 2017.

Maximum number of participants: 18 (Attention: Admission will be on a first come first served basis - inscribe early!).

Students of D-USYS will be reimbursed via bank transfer for train and bus tickets of the zones 121 and 122 (Please send all tickets with the bank details to Christiane Gujan (http://www.plantnutrition.ethz.ch/the-group/people-a-z/person-detail.html/?persid=85593).

| 751-5125-00L | Stable Isotope Ecology of Terrestrial Ecosystems | 2 credits | 2G | R. A. Werner, N. Buchmann, A. Gessler |

Abstract

This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to process-oriented ecological research. Topics focus on stable isotopes as indicators for the origin of pools and fluxes, partitioning of composite fluxes as well as to trace and integrate processes. In addition, students carry out a small project during lab sessions.

Students will be familiar with basic and advanced applications of stable isotopes in studies on plants, soils, water and trace gases, know the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small IsoProject, practice to search and analyze literature as well as to give an oral presentation.
### Content

The analyses of stable isotopes often provide insights into ecophysiological and ecological processes that otherwise would not be available with classical methods only. Stable isotopes proved useful to determine origin of pools and fluxes in ecosystems, to partition composite fluxes and to integrate processes spatially and temporally.

This course will provide an introduction to the applicability of stable isotopes to ecological research questions. Topics will focus on carbon (13C), nitrogen (15N), oxygen (18O) and hydrogen (2H) at natural isotope abundance and tracer levels. Lectures will be supplemented by intensive laboratory sessions, short presentations by students and computer exercises.

### Lecture notes Literature

**Prerequisites / notice**

This course is based on fundamental knowledge about plant ecophysiology, soil science, and ecology in general. Course will be taught in English.

**701-0533-00L**

**Soil Chemistry**

**W** 3 credits  2G  R. Kretzschmar, D. I. Christl

This course discusses chemical and biogeochemical processes in soils and their influence on the behavior and cycling of nutrients and pollutants in terrestrial systems. Approaches for quantitative modeling of the processes are introduced.

**Objective**

Understanding of important chemical soil properties and processes and their influence on the behavior (e.g., speciation, bioavailability, mobility) of nutrients and pollutants.

**Content**

Important topics include the structure and properties of clays and oxides, the chemistry of the soil solution, gas equilibria, dissolution and precipitation of mineral phases, cation exchange, surface complexion, chemistry of soil organic matter, redox reactions in flooded soils, soil acidification and soil salinization.

**Lecture notes Literature**

Handouts in lectures.

**701-0535-00L**

**Environmental Soil Physics/Vadose Zone Hydrology**

**W** 3 credits  2G+2U  D. Or

The course provides theoretical and practical foundations for understanding and characterizing physical and transport properties of soils/ near-surface earth materials, and quantifying hydrological processes and fluxes of mass and energy at multiple scales. Emphasis is given to land-atmosphere interactions, the role of plants on hydrological cycles, and biophysical processes in soils.

**Objective**

Students are able to:

- characterize quantitative knowledge needed to measure and parameterize structural, flow and transport properties of partially-saturated porous media.
- quantify driving forces and resulting fluxes of water, solute, and heat in soils.
- apply modern measurement methods and analytical tools for hydrological data collection
- conduct and interpret a limited number of experimental studies
- explain links between physical processes in the vadose-zone and major societal and environmental challenges.

**Content**

Weeks 1 to 3: Physical Properties of Soils and Other Porous Media Units and dimensions, definitions and basic mass-volume relationships.

Soil Water Content and its Measurement - Definitions; measurement methods - gravimetric, neutron scattering, gamma attenuation; and time domain reflectometry; soil water storage and water balance.

Weeks 4 to 5: Soil Water Retention and Potential (Hydrostatics) - The energy state of soil water; total water potential and its components; properties of water (molecular, surface tension, and capillary rise); modern aspects of capillarity in porous media; units and calculations and measurement of equilibrium soil water potential components; soil water characteristic curves definitions and measurements; parametric models; hysteresis. Modern aspects of capillarity

Demo-Lab: Laboratory methods for determination of soil water characteristic curve (SWC), sensor pairing

Weeks 6 to 9: Water Flow in Soil - Hydrodynamics:

Part 1 - Laminar flow in tubes (Poiseuille's Law); Darcy's Law, conditions and states of flow; saturated flow; hydraulic conductivity and its measurement.

Lab #1: Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.

Part 2 - Unsaturated steady state flow; unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximate solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties.

Midterm exam

Lab #2: Measurement of vertical infiltration into dry soil column - Green-Ampt, and Philip's approximations; infiltration rates and wetting front propagation.

Part 3 - Use of Hydrom model for simulation of unsaturated flow

Week 10 to 11: Energy Balance and Land Atmosphere Interactions - Radiation and energy balance; evapotranspiration definitions and estimation; transpiration, plant development and transpiration coefficients small and large scale influences on hydrological cycle; surface evaporation.

Week 12 to 13: Solute Transport in Soils Transport mechanisms of solutes in porous media; breakthrough curves; convection-dispersion eq.; solutions for pulse and step solute application; parameter estimation; salt balance.

Lab #3: Miscible displacement and breakthrough curves for a conservative tracer through a column; data analysis and transport parameter estimation.

Additional topics:

- Temperature and Heat Flow in Porous Media - Soil thermal properties; steady state heat flow; nonsteady heat flow; estimation of thermal properties; engineering applications.

- Biological Processes in the Vaodse Zone An overview of below-ground biological activity (plant roots, microbial, etc.); interplay between physical and biological processes. Focus on soil-atmosphere gaseous exchange; and challenges for bio- and phytoremediation.

**Lecture notes Literature**

Classnotes on website: Vadose Zone Hydrology, by Or D., J.M. Wraith, and M. Tuller (available at the beginning of the semester)

http://www.step.ethz.ch/education/active-courses/vadose-zone-hydrology

**Supplemental textbook (not mandatory)** - Environmental Soil Physics, by: D. Hillel
General Crop Science

</tbody>
</table>
Radio-isotopes are extensively used at the soil/plant or ecosystem level to quantify the fluxes of elements (phosphorus (P), heavy metals, etc.). Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases. This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

The course will first present the principles, the basic assumptions and the theoretical framework that underlie the work with radioisotopes. Students will be familiar with basic and advanced applications of stable isotopes in studies on plants, soils, water and trace gases, know the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small IsoProject, practice to search and analyze literature as well as to give an oral presentation.

Students will gain profound knowledge about nutrient cycles and population dynamics in managed and unmanaged grassland, cropland and forest ecosystems in the field and in the lab. Responses of agro- and forest ecosystems to the environment, e.g., to climate, anthropogenic deposition, major disturbances, soil nutrients or competition of plants (including invasives) and microorganisms, but also feedback mechanisms of ecosystems on (micro)climate, soils or vegetation patterns will be studied. Different management practices will be investigated and assessed in terms of production and quality of yield (ecosystem goods and services), but also in regard to environmental regulations (including subsidies) and their effect on the environment, e.g., greenhouse gas budgets. Thus, students will learn about the complex interactions of a coupled human-environmental system.

The lecture notes will be given during the lecture. Literature: Publications and class notes can be downloaded from a web page announced during the lecture. Lecture notes will be available on the webpage of the course later. Prerequisites / notice: Attendance of introductory courses in plant ecophysiology, ecology, and grassland or forest sciences. Course will be taught in English.
Content

The analyses of stable isotopes often provide insights into ecophysiological and ecological processes that otherwise would not be available with classical methods only. Stable isotopes proved useful to determine origin of pools and fluxes in ecosystems, to partition composite fluxes and to integrate processes spatially and temporally.

This course will provide an introduction to the applicability of stable isotopes to ecological research questions. Topics will focus on carbon (13C), nitrogen (15N), oxygen (18O) and hydrogen (2H) at natural isotope abundance and tracer levels. Lectures will be supplemented by intensive laboratory sessions, short presentations by students and computer exercises.

Lecture notes

Handouts will be available on the webpage of the course.

Literature

Will be discussed in class.

Prerequisites / notice

This course is based on fundamental knowledge about plant ecophysiology, soil science, and ecology in general. Course will be taught in English.

751-4805-00L Recent Advances in Biocommunication

Abstract

Students will gain insight into the role of sensory cues and signals in mediating interactions within and between species. There will be a primary, but not exclusive, focus on chemical signaling in interactions among plants, insects and microbes. The course will focus on the discussion of current literature addressing key conceptual questions and state-of-the-art research techniques and methods.

Objective

Students will gain insight into the role of sensory cues and signals in mediating interactions within and between species. There will be a primary, but not exclusive, focus on chemical signaling in interactions among plants, insects and microbes. The course will focus on the discussion of current literature addressing key conceptual questions and state-of-the-art research techniques and methods. Students will engage in discussion and critical analyses of relevant papers and present their evaluations in a seminar setting.

751-5001-00L Agroecologists without Borders

Abstract

In this seminar students apply their knowledge on sustainable agriculture, tropical soils and land use to a case study related to a current research project from the Sustainable Agroecosystems group. The seminar offers interactions with researchers and extension specialists working in the context of agricultural development.

Objective

(1) Students analyze concrete examples of agricultural development projects in tropical agroecosystems.
(2) Students broaden their understanding of environmental and socio-economic challenges of smallholder farmers.
(3) Students articulate complexity and challenges in agricultural development interventions.
(4) Students develop their science communication skills by producing science communication materials in the context of the given case study.

Prerequisites / notice

Students signing up for this class should have a strong interest in tropical agriculture and science communication.

751-5115-00L Current Aspects of Nutrient Cycle in Agro-Ecosystems

Abstract

The seminar concerns current aspects and research related to nutrient cycles in agro-ecosystems. It offers to deepen the knowledge on a specific theme related to nutrients. It is composed by presentations of national and international speakers and by an excursion. The students write a report where they compile the obtained information, relate it to their own knowledge and include literature.

Objective

Listen and understand expert's presentations. Ask questions and contribute to the discussion during the talk sessions and the excursion. Link the information obtained during the seminar with knowledge from previous lessons and with literature searched to complement the matter. Expand the knowdedge on nutrient cycles and nutrient management in the agro-ecosystem.

751-4003-01L Current Topics in Grassland Sciences (HS)

Abstract

Research results in agro- and forest ecosystem sciences will be presented by experienced researchers as well as Ph.D. and graduate students. Citation classics as well as recent research results will be discussed. Topics will range from plant ecophysiology, biodiversity and biogeochemistry to management aspects in agro- and forest ecosystems.

Objective

Students will be able to understand and evaluate experimental design and data interpretation of on-going studies, be able to critically analyze published research results, practice to present and discuss results in the public, and gain a broad knowledge of recent research and current topics in agro- and forest ecosystem sciences.

Content

Research results in agro- and forest ecosystem sciences will be presented by experienced researchers as well as Ph.D. and graduate students. Citation classics as well as recent research results will be discussed. Topics will range from plant ecophysiology, biodiversity and biogeochemistry to management aspects in agro- and forest ecosystems.

Lecture notes

none

Prerequisites / notice

Prerequisites: Basic knowledge of plant ecophysiology, terrestrial ecology and management of agro- and forest ecosystems. Course will be taught in English.

751-3801-00L Experimental Design and Applied Statistics in Agroecosystem Science

Abstract

In this course, different experimental designs will be discussed and various statistical tools will be applied to research questions in agroecosystem sciences. Both descriptive (field and laboratory) experiments and surveys are addressed and students work with a selection of basic techniques and methods to analyse data using a hands-on approach. Methods range from simple t-tests to multi-factorial ANOVA using linear and mixed effect models.

Objective

Students will know various statistical analyses and their application to science problems in their study area as well as a wide range of experimental design options used in environmental and agricultural sciences. They will practice to use statistical software packages (R), understand pros and cons of various designs and statistics, and be able to statistically evaluate their own results as well as those of published studies.

Content

The course program uses a learning-by-doing approach ("hands-on minds-on"). New topics are introduced in the lecture hall, but most of the work is done in the computer lab to allow for the different speeds of progress of the student while working with data and analyzing results. In addition to contact hours exercises must be finalized and handed in for grading. The credit points will be given based on successful assessments of selected exercises.

The tentative schedule containst the following topics:

Introduction To Experimental Design and Applied Statistics
Introduction to 'R' / Revival of 'R' Skills
Designs of Field and Growth Chamber Experiments
English
Multivariate Techniques: Principle Component Analysis, Canonical Correpondence Analysis (CCA), Cluster Analysis
ANOVA using linear and mixed effect models
Error Analysis, Error Propagation and Error Estimation
Introduction to autoregression and autocorrelations in temporal and spatial data and how to consider them in ANOVA-type analysis

This course does not provide the mathematical background that students are expected to bring along when signing up to this course. Alternatively, students can consider some aspects of this course as a first exposure to solutions in experimental design and applied statistics and then deepen their understanding in follow-up statistical courses.

Lecture notes

Handouts will be available (in English)
Conservation of Animal Genetic Resources overviews the distribution, endangerment and conservation of farm animal genetic resources in Switzerland and abroad. The theory is illustrated with numerous examples and the knowledge is deepened in exercises. The students

- overview the distribution and endangerment of animal genetic resources on national and international level and they know, where to find the relevant information.
- can explain, what value can be assigned to biodiversity and name reasons, why biodiversity should be conserved.
- know the national and international efforts of the present and the past to conserve biodiversity in the livestock sector.
- can explain what is important concerning the management of small populations.
- can explain differences between species and breeds concerning biodiversity conservation.
- can describe different conservation activities, in particular in situ and ex situ conservation
- can describe current national and international conservation programmes for species and breeds.

Identification based on host, symptoms and micro-morphology, completed with life cycles and related control measures of the most important fungal diseases and their causal pathogens of annual and perennial crops with agricultural significance.

The students will learn and train preparation skills for microscopy, acquire knowledge of selected diseases (identification, biology of pathogen, epidemiology) and understand the corresponding integrated control measures practiced in Swiss agriculture.

The course will partly be an e-learning exercise (with computers).

The course will be in German (spec. nomenclature)

The overall goal of the course is to provide the essential scientific knowledge of the genetic, physiological and special nutritional aspects of pigs metabolism, animal health and behaviour, and of the implications for environment, product quality, housing and animal welfare, and breeding programs.

Students will
- understand the complex interactions of nutrition, quality traits of products, breeding and reproduction, health management, behaviour and husbandry.
- be trained to understand interdisciplinary and disciplinary research.
- be able to critically analyze published research data.
- be able to present precise scientific reports in oral and written form.

Four main topics in Pig Science:
- HS - Behaviour and Husbandry of pigs: behavioral needs, husbandry related behavioral disorders, design and construction of housing systems in accordance with welfare requirements and legal regulations.
- Planning of reproductive cycle in practice
- welfare monitoring in practice
- pigs in organic farming
- Animal Health and Diseases: animal hygiene, immunology/vaccinations, metabolic diseases, diarrhoe, Legislation, thermoregulation, important infections, prophylaxis.
- poster, exam and evaluation

FS - Special Physiology of Pig Nutrition: food intake; growth; metabolism and digestion at different growth stages; energy and specific nutritional requirements; feeding systems; environmental aspects, e.g. heat.
- Genetics: Breeding systems, reproductive techniques, performance tests and recording, etc.
- oral presentation, exam, evaluation

Lecture notes
Handouts/scripts are distributed by the lecturers.

Literature
Specific literature is indicated by the lecturers.

Prerequisites / notice
The lecture corresponds with the lecture "Ruminant Science" and knowledge in animal health, nutrition and breeding as well as applied ethology and animal welfare are recommended.

The lecture usually is in German, but there is always the possibility to change to English.
This forum is a platform for the critical reflection of highly relevant topics of livestock in the frame of the world food system comprising issues from basic knowledge to acceptance in society. The exchange is operated by scientific writing and presentation.

The Forum "Livestock in the World Food System", a topic of significance for livestock agriculture is selected by the students and subsequently dealt with from various angles (from scientific basis to production systems, environmental aspects and to the acceptance by society). The students learn to present a scientific subject in writing and orally to an audience and to defend the presentation in a discussion.

The Forum "Livestock in the World Food System" will take place in blocks of 2 hours each. Once the general topic has been selected, it comprises two elements:

Element 1. Oral Presentation: The students form small groups and are lecturers. There are chair persons (moderators) from outside of these small groups and they also head the discussion. The remaining students and lecturers are the audience.

Element 2. Scientific writing: Option 1: preparation of a short scientific type of paper from a result table offered by the lecturers; Option 2: preparation of an abstract with limited word count from a scientific paper; Option 3: writing of a critical review of a paper. The students have to select 2 of the three options each. There will be a discussion be a discussion in small groups at two dates.

Introductions to both forms of presentation will be offered by lecturers.

The preparation of the oral and written presentations takes place to a small part during the 2-h blocks and mainly outside of this time.

Prerequisites / notice
Requirements for allocation of the two credit points:
- Theatre presentation (with handout) at the forum
- Delivery of written documents of sufficient quality
- Active participation during the presentations by the other participants

751-6125-00L Practical Course in Molecular Physiology W 3 credits 3P S. Bauersachs, S. E. Ulbrich

Abstract
This course is intended to intensify and broaden the knowledge of molecular biology gained during the bachelor lab practical course. It directly allows students to commence a master thesis with a detailed knowledge of pitfalls in experimental setup. It will also sensitize for the awareness of biological and technical variance in experimental research.

Objective
The course will be divided in two parts:

Experimental part:
- Isolation of leukocytes from blood and milk (cattle)
- Culture of isolated cells and stimulation, e.g., with LPS
- Extraction of RNA
- Quantification and quality control of RNA (Nanodrop, Fluorometer, Bioanalyzer)
- Analysis of gene expression by the use of quantitative real-time RT-PCR

Theoretical part:
- Principles of primary cell culture and transcriptional regulation, methods for analytical detection
- Bioinformatics (scientific databases, sequence analysis, biostatistics)
- Presentations by the students (e.g. techniques for analysis of physiological regulatory processes, application examples)
Content
In this practical course the students will achieve a comprehensive understanding of molecular physiology in livestock research. A cell culture experiment using blood and milk leucocytes under pathogen-associated treatment will be performed and the analysis of differential gene expression undertaken. The primary cell culture study will give insights into the laboratory work undertaken in animal physiology research. It will include the general discussion of strategies for an appropriate experimental setup in livestock research and possible methods and tools for the analysis. Hands-on cell culture and harvesting, preanalytical sample preparation and measurement implementation as well as the analysis of differential gene expression, data analysis and statistical evaluation using bioinformatics will be performed. In addition, the students will present talks based on state-of-the-art primary literature about related topics to prepare for the course and to complement the provided information. The course will enable the students to design, perform and evaluate laboratory in vitro investigations of physiological regulatory processes on a cellular level.

**Abstract**
The course provides the scientific basis of the central aspects of reproduction, husbandry and nutrition physiology of ruminants, and of the implications for animal welfare, product quality, breeding programs, and organic livestock systems. Means of knowledge transfer include interdisciplinary approaches, disciplinary parts, web-based learning and self-study.

**Objective**
At the end of the course the students are able to apply, by a comprehensive understanding of the underlying mechanisms, their knowledge in various fields of ruminant science. They will be able to develop and recommend best strategies for breeding programs, feed formulation, improving forage quality, increasing animal health and welfare etc. They will be trained to carry out interdisciplinary and disciplinary research at the highest level. The course Ruminant Science (FS) offered in spring has a similar structure but is complementary to this course.

**Content**
Fields (contact hours)
- Introduction: 2 h
- Special topics: 12 h
- Lameness
- Fertility in Cows
- Food Intake of Ruminants
- Disciplinary topics: 36 h
- Ruminant Husbandry: 16 h
- Ruminant Nutrition Physiology: 10 h
- Reproduction in Ruminants: 8 h
- Lectures held by the students: 4 h

In summary
- Contact hours: 52 h
- Self-study within semester: 30 h (especially preparation for the interdisciplinary courses and the own lecture)
- Self-study in semester break: 38 h
Total: 120 h

**Lecture notes**
Information on books and other references will be communicated during the course

**Literature**
Documents, links and other materials will be provided at the start of the course

**Prerequisites / notice**
The specialty of this course is that for the first time the animal science disciplines are unified. This is realised with a particular emphasis on interdisciplinary special topics and new forms of teaching. At the same time the essential basics in the central fields are communicated.

**Number**
The field of Ruminant Science will also be a part of the spring semester (special topics: Organic Ruminant Systems, Tropical Ruminant Systems, Mastitis; disciplinary courses: Cattle, Sheep and Goat Breeding, Ruminant Diseases and Prophylaxis, Ruminant Nutrition and the Environment). However both courses are organized independently.

**Conditions for successful participation**
Background on animal science from the Bachelor is desired. In order to attend the Minor in Ruminant Science without any animal science background, a realistic self-assessment concerning the need for additional self-study is recommended (e.g. by choosing an appropriate bachelor course which then may be counted as 'optional courses' in the master). These efforts depend on the extent to which animal science courses have already been attended in the bachelor.

The control of performance will consist of:
- an own lecture
- a final oral examination with focus on comprehension of the fundamental linkages rather than of specific details

</tbody>
</table>

**Abstract**
This course broadens the knowledge in one of the most important aspects of ruminant nutrition: the microbial digestion in the rumen (and in the hindgut). For a comprehensive understanding of the rumen microbial ecosystem, the mechanisms of nutrient fermentation and the synthesis of microbial protein, thorough basics are provided. Apart from lectures, group and laboratory exercises are included.

**Objective**
The course enables students to understand in detail how ruminal digestion works and how this knowledge can be applied to design optimal feeding diets using highly fibrous forages and a variety of other feeds. The students also are able to show how to modify the most important rumen microbes beneficially by nutritional means.
Content
Structure of the contact hour part of the course (14 h):

2 h Introduction and blackboard exercise

8 h Basic topics in ruminal digestion, lectures and group exercises:
- Systematics of the microbes involved in microbial digestion
- Measurement of microbial digestion
- Interactions of microbes and epithelium of the digestive tract
- Differences between ruminal and hindgut microbial digestion
- Microbial nutrient degradation and its modification
- Efficiency of microbial protein synthesis
- Manipulation of the ruminal digestion

2 h Laboratory exercise with a rumen fistulated cow and the Rumen Simulation Technique

2 h Final seminar

Lecture notes
The non-contact hour part is to comprehend the information given and to prepare either the written report or the oral presentation (cf. "Besonderes")

Literature
Lecture notes are provided via Moodle.

Prerequisites / notice
Will be communicated at the start of the course.

The course is a balanced mixture of blackboard exercise, laboratory exercise, group exercise, lecture and student seminar presentation.

Credit point associated with grade of either a written report or an oral presentation in the final seminar (both on a self-chosen related topic)

751-6001-00L Forum: Livestock in the World Food System W 2 credits 1S M. Kreuzer, S. Bauersachs, E. Hillmann, S. Neuenschwander

Abstract
This forum is a platform for the critical reflection of highly relevant topics of livestock in the frame of the world food system comprising issues from basic knowledge to acceptance in society. The exchange is operated by scientific writing and presentation.

Objective
In the Forum "Livestock in the World Food System", a topic of significance for livestock agriculture is selected by the students and subsequently dealt with from various angles (from scientific basis to production systems, environmental aspects and to the acceptance by society). The students learn to present a scientific subject in writing and orally to an audience and to defend the presentation in a discussion.

Content
The Forum "Livestock in the World Food System" will take place in blocks of 2 hours each. Once the general topic has been selected, it comprises two elements:

Element 1. Oral Presentation: The students form small groups and are lecturers. There are chair persons (moderators) from outside of these small groups and they also head the discussion. The remaining students and lecturers are the audience.

Element 2. Scientific writing: Option 1: preparation of a short scientific type of paper from a result table offered by the lecturers; Option 2: preparation of an abstract with limited word count from a scientific paper; Option 3: writing of a critical review of a paper. The students have to select 2 of the three options each. There will be a discussion be a discussion in small groups at two dates.

Introductions to both forms of presentation will be offered by lecturers.

The preparation of the oral and written presentations takes place to a small part during the 2-h blocks and mainly outside of this time.

The non-contact hour part is to comprehend the information given and to prepare either the written report or the oral presentation (cf. "Besonderes")

Lecture notes
no scriptum

Prerequisites / notice
Requirements for allocation of the two credit points:
- Theatre presentation (with handout) at the forum
- Delivery of written documents of sufficient quality
- Active participation during the presentations by the other participants

751-4203-00L Horticultural Science: Case Studies (HS) W 2 credits 2G L. Bertschinger, J. Rösti, V. J. U. Zufferey

Abstract
Lectures address 2 horticultural cropping systems and value chains, each one in 4 2h-lecture blocks. Afterwards, the students split in 2 groups for addressing a case study focusing on one of the cropping systems treated before. An excursion to a research site might be included. In a final colloquium, each group presents a report on their case study and their conclusions.
Objective Achieve a deepened understanding of horticultural value chain challenges relating to ecological intensification, resource efficiency, climate change and healthy and safe food, and the problem solution strategies and scientific principles behind. Deliver in a team effort a report and a presentation providing a comprehensive insight into a problem of the horticultural value chain and its science-based solution strategy.

Content In the autumn semester, the two addressed cropping systems and value chains are fruit-production and viticulture. In the spring semester, the two addressed cropping systems and value chains are vegetable-production- and berry-production or glasshouse-horticulture. The selected topics address challenges with regard to ecological intensification, resource efficiency or climate change and branch into ongoing research and development projects.

Lecture notes Documents handed out during the case studies.

Literature As provided by the case study leaders.

Prerequisites / notice The course builds on basic knowledge delivered in 'Horticultural Crops I' and 'Horticultural Crops II'. If these courses have not been followed by interested participants, equivalent knowledge and experience will greatly support a successful and productive participation of the participating student.

Language: spoken E, G or F. Documents: Preferably English, G/F possible.

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 49 of 1571
Abstract
The course deals with transdisciplinary (td) methods, concepts and their applications in the context of case studies and other problem oriented research projects. Td methods are used in research at the science-society interface and when collaborating across scientific disciplines. Students learn to apply methods within a functional framework. The format of the course is seminar-like, interactive.

Objective
At the end of the course students should:

Know:
- Function, purpose and algorithm of a selected number of transdisciplinary methods

Understand:
- Functional application in case studies and other problem oriented projects

Be able to reflect on:
- Potential, limits, and necessity of transdisciplinary methods

Be prepared for:
- Transdisciplinary Case Study 2017

Content
The lecture is structured as follows:
- Overview of concepts and methods of inter-/transdisciplinary integration of knowledge, values and interests (approx. 20%)
- Analysis of a selected number of transdisciplinary methods focusing problem framing, problem analysis, and impact (approx. 50%)
- Practical application of the methods in a broader project setting (approx. 30%)

Lecture notes
Handouts are provided by the lecturers

Literature
Selected scientific articles and book-chapters

Prerequisites / notice
This course is recommended and helpful for students participating in the Transdisciplinary Case Study 2017.

701-1551-00L Sustainability Assessment

Abstract
The course deals with the concepts and methodologies for the analysis and assessment of sustainable development. A special focus is given to the social dimension and to social justice as a guiding principle of sustainability as well as to trade-offs between the three dimensions of sustainability.

The course is seminar-like, interactive.

Objective
At the end of the course students should

Know:
- core concepts of sustainable development, and;
- the concept of social justice - normatively and empirically - as a core element of social sustainability;
- important empirical methods for the analysis and assessment of local / regional sustainability issues.

Understand and reflect on:
- the challenges of trade-offs between the different goals of sustainable development;
- and the respective impacts on individual and societal decision-making.

Content
The course is structured as follows:
- Overview of rationale, objectives, concepts and origins of sustainable development;
- Importance and application of sustainability in science, politics, society, and economy;
- Sustainable (local / regional) development in different national / international contexts;
- Analysis and evaluation methods of sustainable development with a focus on social justice;
- Trade-offs in selected examples.

Lecture notes
Handouts.

Major in Animal Science

Disciplinary Competences

Ruminant Science

Number Title Type ECTS Hours Lecturers
751-6501-00L Ruminant Science (HS) W+ 4 credits 4G M. Kreuzer, M. C. Härdi-Landerer, E. Hillmann, U. Witschi

Abstract
The course provides the scientific basis of the central aspects of reproduction, husbandry and nutrition physiology of ruminants, and of the implications for animal welfare, product quality, breeding programs, and organic livestock systems. Means of knowledge transfer include interdisciplinary approaches, disciplinary parts, web-based learning and self-study.

Objective
At the end of the course the students are able to apply, by a comprehensive understanding of the underlying mechanisms, their knowledge in various fields of ruminant science. They will be able to develop and recommend best strategies for breeding programs, feed formulation, improving forage quality, increasing animal health and welfare etc. They will be trained to carry out interdisciplinary and disciplinary research at the highest level. The course Ruminant Science (FS) offered in spring has a similar structure but is complementary to this course.
Content

Fields (contact hours)
- Introduction: 2 h
- Special topics: 12 h
- Lameness
- Fertility in Cows
- Food Intake of Ruminants
- Disciplinary topics: 36 h
- Ruminant Husbandry: 16 h
- Ruminant Nutrition Physiology: 10 h
- Reproduction in Ruminants: 8 h
- Lectures held by the students: 4 h

In summary
- Contact hours: 52 h
- Self-study within semester: 30 h (especially preparation for the interdisciplinary courses and the own lecture)
- Self-study in semester break: 38 h
Total: 120 h

The course is a balanced mixture of blackboard exercise, laboratory exercise, group exercise, lecture and student seminar presentation.

Credit point associated with grade of either a written report or an oral presentation in the final seminar (both on a self-chosen related topic)

Non-Ruminant Science

Number Title Type ECTS Hours Lecturers
751-6601-00L Pig Science (HS) W+ 3 credits 3V E. Hillmann, M. C. Härdi-Landerer

Abstract

The overall goal of the course is to provide the essential scientific knowledge of the genetic, physiological and special nutritional aspects of pigs metabolism, animal health and behaviour, and of the implications for environment, product quality, housing and animal welfare, and breeding programs.

Objective

Students will
- understand the complex interactions of nutrition, quality traits of products, breeding and reproduction, health management, behaviour and husbandry.
- be trained to understand interdisciplinary and disciplinary research.
- be able to critically analyze published research data.
- be able to present precise scientific reports in oral and written form.
The contact hour part of the course (16 h) is conceptually a block course which is subdivided into one day of lecture and one day of excursion. A documentation will be provided at the start of the course.

Handouts/scripts are distributed by the lecturers.

At the end of the course the students are able to describe the conditions of keeping unconventional livestock and to develop recommendations for farmers intending to include niche production into the farm enterprise.

The lecture corresponds with the lecture "Ruminant Science" and knowledge in animal health, nutrition and breeding as well as applied ethology and animal welfare are recommended. The lecture usually is in German, but there is always the possibility to change to English.

**Abstract**

Farm animals play an important role in most agro/eco - systems, but conditions for a successful management and nutrition in the tropics are diverse. In this course a wide range of aspects are examined.

**Objective**

The aim of this course is to know and understand animal production systems in the different zones of the tropics taking into consideration the local and social structure of the population. We will deal with different aspects of animal nutrition in the tropics.

**Content**

- Introduction to the tropics
- Special problems and challenges in tropical regions
- Importance of livestock in the tropics
- Animal production and livestock production systems in the tropics
- Special challenges for livestock in the tropics
- Feeds available in the tropics
- Tropical pasture systems and their characteristics
- Quality of feeds in the tropics
- Problems and challenges of animal nutrition in the tropics

**Abstract**

This course deals with unconventional animals or production forms and specific aspects of keeping them in Europe or, more specifically, in Switzerland. This includes e.g. rare breeds, wild cattle, deer, camels, ostrich and fish. Particular emphasis will be given to the regulations and the problems occurring with import, housing and marketing of the products.

**Objective**

At the end of the course the students are able to describe the conditions of keeping unconventional livestock and to develop recommendations for farmers intending to include niche production into the farm enterprise.

**Content**

The contact hour part of the course (16 h) is conceptually a block course which is subdivided into one day of lecture and one day of excursion.

**Prerequisites / notice**

The non-contact hour part (14 h) is to comprehend the information given and to prepare for the examination

A documentation will be provided at the start of the course.

**Lecture notes**

Will be communicated at the start of the course.

**Literature**

Lecture and excursion have the same weight with respect to time allocation.
Abstract
Methods for analysing livestock data, in particular for the estimation of breeding values: principles of selection index, introduction to BLUP, application of common models used, relationship matrix, methods for the estimation of variance components, basics of breeding programs. The material will be illustrated via exercises and assignments.

Objective
The students are able to set up design matrices, the relationship matrix and its inverse as well as the Mixed Model equations to estimate BLUP breeding values for smaller examples.

Content
- Selection index (various sources of information, one trait, multiple traits)
- Relationship matrix and its inverse
- BLUP: one trait, repeated observations, multiple traits, economic indices
- Introduction to methods for the estimation of variance components
- Assignments

Lecture notes
Copies of the slides are available on the net.

Literature
To be announced in the lectures.

Abstract
Conservation of Animal Genetic Resources overviews the distribution, endangerment and conservation of farm animal genetic resources in Switzerland and abroad. The theory is illustrated with numerous examples and the knowledge is deepened in exercises.

Objective
The students
- overview the distribution and endangerment of animal genetic resources on national and international level and they know, where to find the relevant information.
- can explain, what value can be assigned to biodiversity and name reasons, why biodiversity should be conserved.
- know the national and international efforts of the present and the past to conserve biodiversity in the livestock sector.
- can explain what is important concerning the management of small populations.
- can explain differences between species and breeds concerning biodiversity conservation.
- can describe different conservation activities, in particular in situ and ex situ conservation
- can describe current national and international conservation programmes for species and breeds.

Abstract
Endocrinologie und Reproduktionsbiologie der Säugetiere und des Menschen (Anatomie, Morphologie, Physiologie, Regelmechanismen) Die Systematik der Reproduktionshormone und der Hormonrezeptoren wird erläutert, die Wirkungsmechanismen (Bildung, orale Bioverfügbarkeit; Elimination) erklärt. Mit diesen Grundlagen wird das Verständnis der Regulation der Fortpflanzung umfassend erörtert.

Objective
Die Studierenden erlangen das grundlegende theoretische Verständnis und Fachwissen zur Endocrinologie der Reproduktion und zur weiblichen und männlichen Reproduktionsbiologie. Sie können darüber hinaus pathologische Situationen (Fortpflanzungsstörungen) und deren vielfältige Ursachen in den physiologischen Kontext einordnen.

Methodology Competences
Methods in Animal Science

Number  | Title                                      | Type | ECTS | Hours | Lecturers                  |
---------|--------------------------------------------|------|------|-------|----------------------------|
751-6241-00L  | Laboratory Practical in Molecular Animal Genetics and Inherited Diseases  | W+  | 3 credits | 3P | S. Neuenschwander, A. Bratus-Neuenschwander, C. Schelling |

Abstract
Technologies of molecular animal-, immuno- and biochemical genetics will be shown and applied to selected domestic and farm animals. The students will perform laboratory tests for genome analysis (identification of gene loci, gene mapping); gene expression (mRNA, proteins), diagnostics (analysis of hereditary diseases) and verification of animals and animal products (parentage control, forensics).

Objective
Get to know and apply the basic laboratory methods to systematically identify loci controlling important performance and disease traits and analysis of the molecular nature of variation at the loci. At the end of the course the students are able to understand the underlying mechanisms influencing genetic variations and to analyze gene variants in the laboratory. The students know the importance of the technologies for animal breeding, animal health and quality of animal products in Switzerland and internationally.

Content
- Introduction to the course (aims, program, written examination)
- Porcine E.coli test. Determination of the mutation in FUT1
- Sequencing of DNA
- Marker-/microsatellite analyses
- Forensics
- Cytogenetics
- Cell cultures
- Inheritance of coat colour
- Gene expression and animal biotechnology

Contact hours: 42 h

Self-study (preparation for courses and examination): additionally

Lecture notes
Handouts/scripts will be distributed by the lecturers.

Literature

Specific literature will be indicated individually by the lecturers.

Abstract
The students will learn the conceptual and methodological background of research in the animal science groups of the Institute of Plant, Animal and Agroecosystem Science. In addition to teaching the theoretical background, the major aim of the course is to integrate the students into the research groups (on job training) and, hence, to focus on the practical application of the knowledge.

Objective
- Introduction into the conceptual and methodological basis of research
- Integration of the students into the research groups (on job training)
- Application of the gained knowledge

Content
The students will be integrated into the research groups day-to-day work and will thus deal with all aspects of scientific work. This comprises the planning (conceptually and logistically), execution (data collection, laboratory analyses) and evaluation (statistics, data presentation) of experiments as well as the basics of scientific writing (aim: later publication, Master thesis). The research topics and the range of methodologies vary between the animal science research groups in the Institute of Plant, Animal and Agroecosystem Sciences.
### Training Course in Research Groups (Small)
- **751-6003-01L**
  - **Objective**: The students will learn the conceptual and methodological background of research in the animal science groups of the Institute of Plant, Animal and Agroecosystem Science. In addition to teaching the theoretical background, the major aim of the course is to integrate the students into the research groups (on job training) and, hence, to focus on the practical application of the knowledge.
  - **Content**: The students will be integrated into the research groups day-to-day work and will thus deal with all aspects of scientific work. This comprises the planning (conceptually and logistically), execution (data collection, laboratory analyses) and evaluation (statistics, data presentation) of experiments as well as the basics of scientific writing (aim: later publication, Master thesis). The research topics and the range of methodologies vary between the animal science research groups in the Institute of Plant, Animal and Agroecosystem Sciences.
  - **Lecture notes**: None
  - **Literature**: Specific readings after enlisting in a particular research group.

### Experimental Design and Applied Statistics in Agroecosystem Science
- **751-3801-00L**
  - **Objective**: Students will know various statistical analyses and their application to science problems in their study area as well as a wide range of experimental design options used in environmental and agricultural sciences. They will practice to use statistical software packages (R), understand pros and cons of various designs and statistics, and be able to statistically evaluate their own results as well as those of published studies.
  - **Content**: The course program uses a learning-by-doing approach ("hands-on minds-on"). New topics are introduced in the lecture hall, but most of the work is done in the computer lab to allow for the different speeds of progress of the student while working with data and analyzing results. In addition to contact hours exercises must be finalized and handed in for grading. The credit points will be given based on successful assessments of selected exercises.
  - **Lecture notes**: Handouts will be available (in English)

### Practical course Microscopy of Functional Histology
- **751-6129-00L**
  - **Objective**: The course will be divided in two parts: The course program uses a learning-by-doing approach ("hands-on minds-on"). New topics are introduced in the lecture hall, but most of the work is done in the computer lab to allow for the different speeds of progress of the student while working with data and analyzing results. In addition to contact hours exercises must be finalized and handed in for grading. The credit points will be given based on successful assessments of selected exercises.

### Practical Course in Molecular Physiology
- **751-6125-00L**
  - **Objective**: The course is intended to intensify and broaden the knowledge of molecular biology gained during the bachelor lab practical course. It directly allows students to commence a master thesis with a detailed knowledge of pitfalls in experimental setup. It will also sensitize for the awareness of biological and technical variance in experimental research.
  - **Content**: The course will be divided in two parts: Experimental part: - Isolation of leukocytes from blood and milk (cattle) - Culture of isolated cells and stimulation, e.g., with LPS - Extraction of RNA - Quantification and quality control of RNA (Nanodrop, Fluorometer, Bioanalyzer) - Analysis of gene expression by the use of quantitative real-time RT-PCR Theoretical part: - Principles of primary cell culture and transcriptional regulation, methods for analytical detection - Bioinformatics (scientific databases, sequence analysis, biostatistics) - Presentations by the students (e.g. techniques for analysis of physiological regulatory processes, application examples)
In this practical course the students will achieve a comprehensive understanding of molecular physiology in livestock research. A cell culture experiment using blood and milk leucocytes under pathogen-associated treatment will be performed and the analysis of differential gene expression undertaken. The primary cell culture study will give insights into the laboratory work undertaken in animal physiology research. It will include the general discussion of strategies for an appropriate experimental setup in livestock research and possible methods and tools for the analysis. Hands-on cell culture and harvesting, preanalytical sample preparation and measurement. Implementation as well as the analysis of differential gene expression, data analysis and statistical evaluation using bioinformatics will be performed. In addition, the students will present talks based on state-of-the-art primary literature about related topics to prepare for the course and to complement the provided information. The course will enable the students to design, perform and evaluate laboratory in vitro investigations of physiological regulatory processes on a cellular level.

### Major in Crop Science

Lectures address 2 horticultural cropping systems and value chains, one in each of the fall and spring semesters. The focus is on addressing a case study focusing on one of the cropping systems treated before. An excursion to a research site might be included. In a final colloquium, each group presents a report on their case study and their conclusions.

#### Objective

Achieve a deepened understanding of horticultural value chain challenges relating to ecological intensification, resource efficiency, climate change and healthy and safe food, and the problem solution strategies and scientific principles behind.

Deliver in a team effort a report and a presentation providing a comprehensive insight into a problem of the horticultural value chain and its science-based solution strategy.

#### Content

#### Literature

The selected topics address challenges with regard to ecological intensification, resource efficiency or climate change and branch into ongoing research and development projects.

#### Content

#### Literature

As provided by the case study leaders.

#### Prerequisites / notice

The course builds on basic knowledge delivered in ‘Horticultural Crops I’ and ‘Horticultural Crops II’. If these courses have not been followed by interested participants, equivalent knowledge and experience will greatly support a successful and productive participation of the participating student.

Language: spoken E, G or F. Documents: Preferably English, G/F possible.

Lectures address 2 cereal crop rotations worldwide. Following the goal of an increased agricultural biodiversity, species such as buckwheat but also medicinal plants might become more important in future. The biology, physiology, stress tolerance and central aspects of the value-added chain of the above-mentioned and of other alternative crops will be depicted.

#### Objective

Achieve a deepened understanding of horticultural value chain challenges relating to ecological intensification, resource efficiency, climate change and healthy and safe food, and the problem solution strategies and scientific principles behind.

Deliver in a team effort a report and a presentation providing a comprehensive insight into a problem of the horticultural value chain and its science-based solution strategy.

The seminar ‘Current challenges in plant breeding’ aims to bring together national and international experts in plant breeding to discuss current activities, latest achievements and future prospective of a selected topic/area in plant breeding. The topic this year will be: 'Genome editing: potential and challenges for plant breeding'.

#### Objective

The educational objectives cover both thematic competences and soft skills:

- **Thematic competences:**
  - Deepening of scientific knowledge in plant breeding
  - Critical evaluation of current challenges and new concepts in plant breeding
  - Promotion of collaboration and Master thesis projects with practical plant breeders

- **Soft skills:**
  - Independent literature research to get familiar with the selected topic
  - Critical evaluation and consolidation of the acquired knowledge in an interdisciplinary team
  - Establishment of a scientific presentation in an interdisciplinary team
  - Presentation and discussion of the teamwork outcome
  - Establishing contacts and strengthening the network to national and international plant breeders and scientists

The topics this year will be: 'Genome editing: potential and challenges for plant breeding'.

#### Content

The seminar ‘Current challenges in plant breeding’ aims to bring together national and international experts in plant breeding to discuss current activities, latest achievements and future prospective of a selected topic/area in plant breeding. The topic this year will be: 'Genome editing: potential and challenges for plant breeding'.

#### Literature

#### Prerequisites / notice

The course is designed for a maximum of 15 Master students and 10 PhD students (advertised and recruited via the Zurich-Basel Plant Science Center). For full and active participation, a total of 2 credit/ECTS points will be provided.

#### Lecture notes

Seminar abstracts

#### Literature

Peer-reviewed research articles, selected according to the selected topic/area.

#### Prerequisites / notice

Participation in the BSc course ‘Pflanzenzüchtung’ is strongly recommended, a completed course in ‘Molecular Plant Breeding’ is highly advantageous.

Date: 06.01.2019 12:56  Autumn Semester 2016  Page 55 of 1571
Insect Ecology

**Abstract**
This is an introductory course in insect ecology. Students will learn about the ways in which insects interact with and adapt to their abiotic & biotic environments and their roles in diverse ecosystems. The course will entail lectures, outside readings, and critical analysis of contemporary literature.

**Objective**
Students completing this course should become familiar with the application of ecological principles to the study of insects, as well as major areas of inquiry in this field. Highlighted topics will include insect behavior, chemical and sensory ecology, physiological responses to biotic and abiotic stressors, plant-insect interactions, community and food-web dynamics, and disease ecology. The course will emphasize insect evolution and adaptation in the context of specific interactions with other organisms and the abiotic environment. Examples from the literature incorporated into lectures will highlight the methods used to study insect ecology.

**Lecture notes**
Provided to students through ILIAS

**Literature**
Selected required readings (peer reviewed literature, selected book chapters). Optional recommended readings with additional information.

---

Seminar in Evolutionary Ecology of Infectious Diseases

**Abstract**
Students of this course will discuss current topics from the field of infectious disease biology. From a list of publications, each student chooses some themes that he/she is going to explain and discuss with all other participants and under supervision. The actual topics will change from year to year corresponding to the progress and new results occurring in the field.

**Objective**
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

**Content**
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans.

**Lecture notes**
Publications and class notes can be downloaded from a web page announced during the lecture.

**Literature**
Papers will be assigned and downloaded from a web page announced during the lecture.

---

Alien Organisms in Agriculture

**Abstract**
The course focuses on alien organisms in agriculture as well as the scientific assessment and regulatory management of their effects on the environment and agricultural production.

**Objective**
Students will understand the consequences arising from the unintentional or deliberate introduction of alien organisms into agricultural systems. They will be able to understand the concept of environmental risk assessment and be able to evaluate risk management options.

**Content**
Alien organisms in agriculture is a topic that receives an increasing awareness among farmers, agricultural scientists, regulators and the general public. Students of this course will learn about the nature of alien organisms such as invasive species, biocontrol organisms and genetically modified organisms. With a particular focus on arthropods, plants and their interactions we will look at the potential threats the novel organisms pose, the benefits they provide and how both of these effects can be scientifically assessed. Students will learn how the topic of alien organisms in agriculture is intrinsically tied to policy making and regulation and get to know current examples and future challenges in research. In the last part of the course students will be able to apply the acquired knowledge in a practical exercise (case study).

**Lecture notes**
Material will be distributed during the course

---

Biogeochemistry and Sustainable Management

**Abstract**
This course focuses on the interactions between ecology, biogeochemistry and management of agro- and forest ecosystems, thus, coupled human-environmental systems. Students learn how human impacts on ecosystems via management or global change are mainly driven by effects on biogeochemical cycles and thus ecosystem functioning, but also about feedback mechanisms of terrestrial ecosystems.

**Objective**
Students will know and understand the complex and interacting processes of ecology, biogeochemistry and management of agro- and forest ecosystems. They will be able to analyze and evaluate the various impacts of different management practices under different environmental conditions, search literature, write and evaluate scientific reports, and be able to coordinate and work successfully in small interdisciplinary teams.

**Content**
Agroecosystems and forest ecosystems play a major role in all landscapes, either for production purposes, ecological areas or for recreation. The human impact of any management on the environment is mainly driven by effects on biogeochemical cycles. Effects of global change impacts will also act via biogeochemistry at the soil-biosphere-atmosphere-interface. Thus, ecosystem functioning, i.e., the interactions between ecology, biogeochemistry and management of terrestrial systems, is the science topic for this course.

Students will gain profound knowledge about nutrient cycles and population dynamics in managed and unmanaged grassland, cropland and forest ecosystems in the field and in the lab. Responses of agro- and forest ecosystems to the environment, e.g., to climate, anthropogenic deposition, major disturbances, soil nutrients or competition of plants (including invasives) and microorganisms, but also feedback mechanisms of ecosystems on (micro)climate, soils or vegetation patterns will be studied. Different management practices will be investigated and assessed in terms of production and quality of yield (ecosystem goods and services), but also in regard to environmental regulations (including subsidies) and their effect on the environment, e.g., greenhouse gas budgets. Thus, students will learn about the complex interactions of a coupled human-environmental system.

**Lecture notes**
Handouts will be available on the webpage of the course.

**Literature**
Will be discussed in class.

**Prerequisites / notice**
Prerequisites: Attendance of introductory courses in plant ecophysiology, ecology, and grassland or forest sciences. Course will be taught in English.

---

Current Aspects of Nutrient Cycle in Agro-Ecosystems

**Abstract**
The seminar concerns current aspects and research related to nutrient cycles in agro-ecosystems. It offers to deepen the knowledge on a specific theme related to nutrients. It is composed by presentations of national and international speakers and by an excursion. The students write a report where they compile the obtained information, relate it to their own knowledge and include literature.

**Objective**
Listen and understand expert's presentations. Ask questions and contribute to the discussion during the talk sessions and the excursion. Link the information obtained during the seminar with knowledge from previous lessons and with literature searched to complement the matter. Expand the knowledge on nutrient cycles and nutrient management in the agro-ecosystem.

---

Current Topics in Grassland Sciences (HS)

**Abstract**
Research results in agro- and forest ecosystem sciences will be presented by experienced researchers as well as Ph.D. and graduate students. Citation classics as well as recent research results will be discussed. Topics will range from plant ecophysiology, biodiversity and biogeochemistry to management aspects in agro- and forest ecosystems.
Students will be able to understand and evaluate experimental design and data interpretation of on-going studies, be able to critically analyze published research results, practice to present and discuss results in the public, and gain a broad knowledge of recent research and current topics in agro- and forest ecosystem sciences.

Citation classics as well as recent research results will be discussed. Topics will range from plant ecophysiology, biodiversity and biogeochemistry to management aspects in agro- and forest ecosystems.

none

Prerequisites / notice

Prerequisites: Basic knowledge of plant ecophysiology, terrestrial ecology and management of agro- and forest ecosystems. Course will be taught in English.

In this seminar students apply their knowledge on sustainable agriculture, tropical soils and land use to a case study related to a current research project from the Sustainable Agroecosystems group. The seminar offers interactions with researchers and extension specialists working in the context of agricultural development.

Students will learn and train preparation skills for microscopy, acquire knowledge of selected diseases (identification, biology of pathogen, epidemiology) and understand the corresponding integrated control measures practiced in Swiss agriculture.

The course will partly be an e-learning exercise (with computers). Students will be able to understand and evaluate experimental design and data interpretation of on-going studies, be able to critically analyze published research results, practice to present and discuss results in the public, and gain a broad knowledge of recent research and current topics in agro- and forest ecosystem sciences.

The course will present the principles underlying the use of radioisotopes in soil/plant systems. It will present how the introduction of an isotope into a system can be done to get some information on the structure of the system. Case studies will be presented to determine element availability. Finally, published studies from other groups will be analyzed and presented by the students.

Finally, published studies from other groups will be analyzed and presented by the students.

The number of participants is limited to 12 students due to capacity limitations for the field project in Kenya. Selection of participants will be based on (1) the student's motivation statement, (2) successful participation in the BSc lectures "Sustainable Agroecosystems I + II" and (3) related topic for BSc thesis/ tentative topic for MSc thesis. The motivation statement is due in the first week of the semester.

--- | --- | --- | --- | --- | ---
751-3405-00L | Radio-Isotopes in Plant Nutrition | W+ | 3 credits | 2G | E. Frossard

At the end of the course the students are familiar with the principles on which radioisotope works are based and they have learned from case studies how radioisotopes can be used to obtain meaningful data. They are aware of the advantages of using radioisotopes in element cycling studies, but also of the risks and open questions related to isotope work.
Content

Radio-isotopes are extensively used at the soil/plant or ecosystem level to quantify the fluxes of elements (phosphorus (P), heavy metals, radionuclides) within a given system and to assess the importance of processes controlling these fluxes (e.g. exchange reactions between the soil solution and the soil solid phase, element turnover through the microbial biomass, organic matter mineralization etc.). The course will first present the principles, the basic assumptions and the theoretical framework that underlay the work with radioisotopes. It will present how the introduction of an isotope into a system can be done so as to get information on the structure of the system (e.g. number and size of compartments). Secondly, case studies on isotopic dilution and tracer work will be presented for instance on the isotopic exchange kinetics method to determine nutrients or pollutants availability. The case studies will be adapted to the ongoing research of the group of plant nutrition and will thus give an insight into our current research. In addition, published studies will be analyzed and presented by the students. Finally, the advantages and disadvantages of work with radioisotopes will be analyzed and discussed critically.

Lecture notes

Documents will be distributed during the lecture

Literature

Will be given during the lecture

Prerequisites / notice

The lecture will take place at the ETH experimental station in Eschikon Lindau. See the location of the station at: http://www.pe.ipw.agrl.ethz.ch/about/reach

751-5123-00L Rhizosphere Ecology W+ 4 credits 4G H. A. Gamper, T. I. McLaren

Prerequisites: Only students who have passed the courses 751-3401-00L Pflanzenernährung I and 751-3402-00L Pflanzenernährung II - Integriertes Nährstoffmanagement can be admitted to this course.

Abstract

This course is about the physical, chemical, and biological processes in the rhizosphere and their effect on plant growth. Effects of fertilisers, companion plants, and microbial symbionts, and other microbes on nutrient cycling and plant uptake are discussed. An "intercropping" experiment in the glasshouse is used as a model to check for rhizosphere effects on plant growth and mineral nutrition.

Objective

To gain a holistic understanding of resource-driven and regulatory processes in agricultural and natural ecosystems.

Develop skills on the critical analysis of scientific papers.

Define explanatory hypotheses, identify knowledge gaps for further investigations.

Carry out a multi-disciplinary experiment that involves aspects of soil, (micro-)biology, plant physiology, pathology, and ecology.

Develop manual skills in the set up of a glasshouse experiment, in soil and plant analyses, and in isolation and DNA-based characterisation of rhizobia.

Gain insights on basic methods to analyse (bio-)chemical, molecular genetic, and graphical data.

Discuss and interpret data in the context of the literature.

Prepare a research report in the format of a scientific paper and a poster in the format of a conference paper, partially alone and partially in small groups, using data obtained from the glasshouse experiment.

Content

This course is designed to stimulate thinking and promote critical analysis of important processes that occur in the rhizosphere. As part of this course, the knowledge acquired will be used for analysing and interpreting experimental data, as well as, preparing a scientific report and conference-type poster.

The course will cover the relative importance of spatial scales and various physicochemical and microbiological dynamics as influenced by roots. We will discuss root traits and activities that influence the immediately root-surrounding soil and thereby contribute to mineral nutrient mobilization and immobilization. An overview of the most relevant root-microbe symbioses for agroecosystems will be provided and root and microbial traits discussed, which could be of use in efforts towards utilization of intercropping and bioinoculants as a possible means of reducing energetically expensive inputs to farming systems. A special emphasis will be given to the importance of physicochemical features of soils and the chemical forms (= species) of elements important for plant uptake.

Practical experience will be gained with setting up a glasshouse experiment, soil and root sampling, basic soil and plant analyses, isolation of rhizobia, determination of the number of colony forming units (CFU), assays to screen for phosphorus and zinc solubilizing bacteria, DNA extraction, PCR amplification, and restriction fragment length polymorphism analysis (RFLP) of host range determining symbiosis-specific genes.

In short, the processes dealt with in this course occur on a small-scale and are generally (bio)chemical and microbiological in nature. Furthermore, they are generally not taken into account using current methods of agronomic management for plant production. However, they are increasingly being recognized as a potentially useful means of obtaining a resource-efficient and hence, economically and environmentally sustainable agricultural system, including for ecosystem restoration. Therefore, the course will invite for critical reflections and exemplify challenges in translating knowledge from scientific studies and ecology into application for plant production.

Lecture notes

For documentation, lecture slides and laboratory protocols will continuously be uploaded to the directory ‘751-5123-00L Rhizosphere Ecology’ on the electronic document exchange platform ILIAS, LDA-ELBA: https://ilias-app2.let.ethz.ch/ilias.php?ref_id=109651&cmd=view&cmdClass=ilobjcoursegui&cmdNode=ef:tv&baseClass=ilRepositoryGUI
This course provides an overview about the applicability of stable isotopes (carbon $^{13}$C, nitrogen $^{15}$N, oxygen $^{18}$O and water $^{2}$H) to

### Prerequisites / notice

We ask all course attendees of the agricultural sciences to have passed the exams at the end of the lectures Plant Nutrition I and II (Nutrient cycling in agroecosystems) by Prof. E. Frossard. All others, have to have successfully worked through the e-learning module Plant Nutrition I by Prof. E. Frossard. All others, have to have successfully worked through the e-learning module Plant Nutrition I by Prof. E. Frossard: https://moodle-app2.let.ethz.ch/course/view.php?id=279

### Marking

Marking will consider the efforts and outcome of work by the individual participant as well as results of work in small groups. Activities for the course will result in posters and reports in the format of a conference and scientific paper. Reports will be due on Friday January 6, 2017. Maximum number of participants: 18 (Attention: Admission will be on a first come first served basis - inscribe early!).

Ecological understanding (Second Edition)

### Objective

This course provides an overview about the applicability of stable isotopes (carbon $^{13}$C, nitrogen $^{15}$N, oxygen $^{18}$O and water $^{2}$H) to

### Preparatory course (if any)

None required.

### Prerequisites / notice

We ask all course attendees of the agricultural sciences to have passed the exams at the end of the lectures Plant Nutrition I and II (Nutrient cycling in agroecosystems) by Prof. E. Frossard. All others, have to have successfully worked through the e-learning module Plant Nutrition I by Prof. E. Frossard: https://moodle-app2.let.ethz.ch/course/view.php?id=279

### Remark

The course is designed to be complementary to those on Radios isotopes in Plant Nutrition (751-3405-00L), and Nutrient Fluxes in Soil-Plant Systems (751-3404-00L), although some thematic overlaps cannot be avoided. Special emphasis is given to plant-microbe-soil interactions and an appreciation of whole plant functioning in the ecological context. You will familiarize yourself with bacterial isolation, cultivation, enumeration, as well as, molecular detection, discrimination and identification techniques for rhizosphere and root-associated microbes.

Marking will consider the efforts and outcome of work by the individual participant as well as results of work in small groups. Activities for the course will result in posters and reports in the format of a conference and scientific paper. Reports will be due on Friday January 6, 2017.

Maximum number of participants: 18 (Attention: Admission will be on a first come first served basis - inscribe early!).

Students of D-USYS will be reimbursed via bank transfer for train and bus tickets of the zones 121 and 122 (Please send all tickets with the bank details to Christiane Gujan (http://www.plantnutrition.ethz.ch/the-group/people-a-z/person-detail.html?persid=85593).

### 751-5125-00L

**Stable Isotope Ecology of Terrestrial Ecosystems**

W+ 2 credits 2G

R. A. Werner, N. Buchmann, A. Gessler

This course provides an overview about the applicability of stable isotopes (carbon $^{13}$C, nitrogen $^{15}$N, oxygen $^{18}$O and water $^{2}$H) to process-oriented ecological research. Topics focus on stable isotopes as indicators for the origin of pools and fluxes, partitioning of composite fluxes as well as to trace and integrate processes. In addition, students carry out a small project during lab sessions.

Students will be familiar with basic and advanced applications of stable isotopes in studies on plants, soils, water and trace gases, know the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small IsoProject, practice to search and analyze literature as well as to give an oral presentation.
The analyses of stable isotopes often provide insights into ecophysiological and ecological processes that otherwise would not be available with classical methods only. Stable isotopes proved useful to determine origin of pools and fluxes in ecosystems, to partition composite fluxes and to integrate processes spatially and temporally.

This course will provide an introduction to the applicability of stable isotopes to ecological research questions. Topics will focus on carbon (13C), nitrogen (15N), oxygen (18O) and hydrogen (2H) at natural isotope abundance and tracer levels. Lectures will be supplemented by intensive laboratory sessions, short presentations by students and computer exercises.

### Design, Analysis and Communication of Science

#### Abstract

In this course, different experimental designs will be discussed and various statistical tools will be applied to research questions in agroecosystem sciences. Both manipulative (field and laboratory) experiments and surveys are addressed and students work with a selection of basic techniques and methods to analyse data using a hands-on approach. Methods range from simple t-tests to multi-factorial ANOVA using linear and mixed effect models.

#### Objective

Students will know various statistical analyses and their application to science problems in their study area as well as a wide range of experimental design options used in environmental and agricultural sciences. They will practice to use statistical software packages (R), understand pros and cons of various designs and statistics, and be able to statistically evaluate their own results as well as those of published studies.

#### Content

The course program uses a learning-by-doing approach ("hands-on minds-on"). New topics are introduced in the lecture hall, but most of the work is done in the computer lab to allow for the different speeds of progress of the student while working with data and analyzing results. In addition to contact hours exercises must be finalized and handed in for grading. The credit points will be given based on successful assessments of selected exercises.

The tentative schedule containst the following topics:

- Introduction to Experimental Design and Applied Statistics
- Introduction to R / Revival of R Skills
- Designs of Field and Growth Chamber Experiments
- Nonlinear Regression Fits
- Multivariate Techniques: Principle Component Analysis, Canonical Correpondence Analysis (CCA), Cluster Analysis
- Error Analysis, Error Propagation and Error Estimation
- Introduction to autoregression and autocorrelations in temporal and spatial data and how to consider them in ANOVA-type analysis

This course does not provide the mathematical background that students are expected to bring along when signing up to this course. Alternatively, students can consider some aspects of this course as a first exposure to solutions in experimental design and applied statistics and then deepen their understanding in follow-up statistical courses.

#### Lecture notes

Handouts will be available on the webpage of the course.

752-2122-00L Food and Consumer Behaviour W+ 2 credits 2V M. Siegrist, C. Hartmann
Abstract
This course focuses on food consumer behavior, consumer's decision-making processes and consumer's attitudes towards food products.

Objective
The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues

751-2205-00L Advanced Management in the Agri-Food-Chain W+ 2 credits 2G M. Weber
Abstract
Advanced Management in the Agri-Food-Chain (Vorlesung wird in deutscher Sprache abgehalten.)

Objective
After the lecture the students ...
... know the characteristics and consequences of complexity in the organizational world,
... know and can apply selected comprehensive models for managing in complex situations,
... know practical applications and examples of the treated contents to organizations in the Agri-Food Chain and
... are able to deepen the relevant topics in an autonomous way.

Content
In the lecture the following contents will be treated:
- State, reasons and effects of complexity in the organizational world.
- A basic framework for shaping and governing intelligent organizations.
- Selected contemporary models for managing in the complex organizational world.
- Transfer and adaption of the models to organizations in the Agri-Food Chain.

Lecture notes
Reader with selected contents.

Prerequisites / notice
- Vorlesung "Management" in D-USYS
- Vorlesung "Managerial Economics Agri-Food Chain: Strategische Konzepte" in D-USYS

363-0403-00L Introduction to Marketing W+ 3 credits 2G F. von Wangenheim
Abstract
The course is designed to convey a profound understanding of marketing's role in modern firms, its interactions and interfaces with other disciplines, its main instruments and recent trends. Particular attention is given to emerging marketing concepts and instruments, and the role of marketing in technology firms.

Objective
After taking the lecture, students should have knowledge on 1) The definition and role of marketing (marketing basics)
2) Creating marketing insights - understanding customer behavior
   - Theoretical concepts in customer behavior (customer behavior)
   - Analytical means to extend knowledge on customer behavior (marketing research)
   - Strategic tools to quantify customer behavior (CLV, CE)
3) Strategic marketing - translating marketing insights into actionable marketing strategies
   - Segmentation, Targeting, and Positioning
   - Attracting customers (marketing mix, 4Ps)
   - Maintaining profitable customer relations (CRM)

Content
The course is designed to convey a profound understanding of marketing's role in modern firms, its interactions and interfaces with other disciplines, its main instruments and recent trends. Particular attention is given to emerging marketing concepts and instruments, and the role of marketing in technology firms.

The lecture features a short tutorial that is held at irregularly spaced intervals throughout the semester (approximately every third week). The tutorial is embedded within the lecture and consists of short sessions of about 30 minutes. It serves to illustrate theoretical and methodological concepts from the lecture by walking students through the analysis of real-world data from the telecommunications industry.

The case data will be provided so that students practice and apply the concepts of the lecture on their own. The tutorial is held jointly by two Teaching Assistants (Zhiying Cui and Jana Gross) and the professor (Prof. F. v. Wangenheim).

Abstract
The course addresses environmental policies, focusing on new steering approaches, which are generally summarized as environmental governance. The course also provides students with tools to analyze environmental policy processes and assesses the key features of environmental governance by examining various practical environmental policy examples.
Objective
To understand how an environmental problem may (not) become a policy and explain political processes, using basic concepts and techniques from political science.
To analyze the evolution as well as the key elements of environmental governance.

Content
Improvements in environmental quality and sustainable management of natural resources cannot be achieved through technical solutions alone. The quality of the environment and the achievement of sustainable development strongly depend on human behavior and specifically the human uses of nature. To influence human behavior, we rely on public policies and other societal rules, which aim to steer the way humans use natural resources and their effects on the environment. Such steering can take place through government intervention alone. However, this often also involves governance, which includes the interplay between governmental and non-governmental actors, the use of diverse tools such as emission standards or financial incentives to steer actors’ behavior and can occur at the local, regional, national or international level.

In this course, we will address both the practical aspects of as well as the scientific debate on environmental governance. The course gives future environmental experts a strong basis to position themselves in the governance debate, which does not preclude government but rather involves a spectrum from government to governance.

Key questions that this course seeks to answer: What are the core characteristics of environmental challenges from a policy perspective? What are key elements of ‘environmental governance’ and how legitimate and effective are these approaches in addressing persistent environmental challenges?

Lecture notes
Lecture slides and additional course material will be provided throughout the semester.

Literature
We will mostly work with readings from the following books:

Prerequisites / notice
A detailed course schedule will be made available at the beginning of the semester.

We recommend that students have (a) a three-years BSc education of a (technical) university; (b) successfully completed Bachelor introductory course to environmental policy (Entwicklungen nationaler Umweltpolitik (or equivalent)) and (c) familiarity with key issues in environmental policy and some fundamental knowledge of one social science or humanities discipline (political science, economics, sociology, history, psychology, philosophy)

751-2103-00L Socioeconomics of Agriculture

Abstract
The main part of this lecture will examine constellations where hierarchies, markets or cooperation have been observed and described in the agricultural sector. On a more aggregated level, different agricultural systems will be evaluated in terms of main socioeconomic parameters like social capital or perceptions.

Objective
Students should be able to describe the dynamics of hierarchies, markets and cooperation in an agricultural context.

Content
Groups, identities and utility maximization - some conceptual foundations
Micro-Socioeconomics: Hierarchy, cooperation and markets
Macro-Socioeconomics: Varieties of Capitalism
Agricultural Administration: Path dependencies and efficiency issues
Causes and Impacts of farm succession
Occupational Choice in the farming sector
System Choice and segregation (organic, GMO etc.)
The economics of rural areas
Common Resource Management in Alpine Farming
Agricultural Cooperatives
Societal perceptions of agriculture
Perceptions of farming from within
Varieties of agricultural systems and policies

Lecture notes
see script

Literature

851-0594-00L International Environmental Politics

Abstract
This course focuses on the conditions under which cooperation in international environmental politics emerges and the conditions under which such cooperation and the respective public policies are effective and/or efficient.

Objective
The objectives of this course are to (1) gain an overview of relevant questions in the area of international environmental politics from a social sciences viewpoint; (2) learn how to identify interesting/innovative questions concerning this policy area and how to answer them in a methodologically sophisticated way; (3) gain an overview of important global and regional environmental problems.

Content
This course deals with how and why international cooperation in environmental politics emerges, and under what circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

After passing an end-of-semester test (requirement: grade 4.0 or higher) students will receive 3 ECTS credit points. The workload is around 90 hours (meetings, reading assignments, preparation of test).

Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory.

Lecture notes
Assigned reading materials and slides will be available at http://www.ib.ethz.ch/teaching.html (select link ‘Registered students, please click here for course materials’ at top of that page). Log in with your nethz name and password. Questions concerning access to course materials can be addressed to Mike Hudecheck (Mike.Hudecheck< michaehu@student.ethz.ch> ). All assigned papers must be read ahead of the respective meeting. Following the course on the basis of on-line slides and papers alone is not sufficient. Physical presence in the classroom is essential. Many books and journals covering international environmental policy issues can be found at the D-GESS library at the IFW building, Haldeneggstrasse 4, B-floor, or in the library of D-USYS.

Abstract
The course focuses on agricultural economic research with particular focus on policy evaluation. We impart insights in the issue of policy evaluation as part of agricultural economics research.

Objective
Focus: Policy Evaluation
- The students are to...
  - have a critical look at different angles of agri-economic research
  - study scientific literature of the focus theme
  - consider strengths, weaknesses and the application of research approaches
  - apply knowledge gained from other courses with respect to the focus theme
  - get insights in agricultural economic research of the national research institutions by visiting Agroscope and the Research Institute of Organic Agriculture (FiBL)
  - be capable to conduct evaluations and critically reflect evaluation results

Content
Unit: Subject

01: Introduction in the issue of policy evaluation
02: The normative frame for policy evaluation
03: Evaluation of public policies
04: Context and use of evaluations
05: Quantitative policy evaluation
06: Qualitative policy evaluation
07: Group work
08: Agricultural Economics Research at ART
09: Agricultural Economics Research at FiBL
10: Examination, Feedback

Abstract
In this course, different experimental designs will be discussed and various statistical tools will be applied to research questions in agroecosystem sciences. Both manipulative (field and laboratory) experiments and surveys are addressed and students work with a selection of basic techniques and methods to analyse data using a hands-on approach. Methods range from simple t-tests to multi-factorial ANOVA using linear and mixed effect models.

Objective
Students will know various statistical analyses and their application to science problems in their study area as well as a wide range of experimental design options used in environmental and agricultural sciences. They will practice to use statistical software packages (R), understand pros and cons of various designs and statistics, and be able to statistically evaluate their own results as well as those of published studies.

Content
This course does not provide the mathematical background that students are expected to bring along when signing up to this course. Alternatively, students can consider some aspects of this course as a first exposure to solutions in experimental design and applied statistics and then deepen their understanding in follow-up statistical courses.

The tentative schedule contains the following topics:

- Introduction To Experimental Design and Applied Statistics
- Introduction to R / Revival of R Skills
- Designs of Field and Growth Chamber Experiments
- Nonlinear Regression Fits
- Multivariate Techniques: Principle Component Analysis, Canonical Correpondence Analysis (CCA), Cluster Analysis
- ANOVA using linear and mixed effect models
- Error Analysis, Error Propagation and Error Estimation
- Introduction to autoregression and autocorrelations in temporal and spatial data and how to consider them in ANOVA-type analysis

This course does not provide the mathematical background that students are expected to bring along when signing up to this course. Alternatively, students can consider some aspects of this course as a first exposure to solutions in experimental design and applied statistics and then deepen their understanding in follow-up statistical courses.
Finding solutions: what is complexity, problem solving cycle.

Implementing solutions: project management, critical path method, quality control feedback loop.

Controlling solutions: Vensim software, feedback cycles, control parameters, instabilities, chaos, oscillations and cycles, supply and demand, production functions, investment and consumption.

A successful participant of the course is able to:
- understand why most real problems are not simple, but require solution methods that go beyond algorithmic and mathematical approaches.
- apply the problem solving cycle as a systematic approach to identify problems and their solutions.
- calculate project schedules according to the critical path method.
- setup and run systems dynamics models by means of the Vensim software.
- identify feedback cycles and reasons for unintended systems behavior.
- analyze the stability of nonlinear dynamical systems and apply this to macroeconomic dynamics.

Why are problems not simple? Why do some systems behave in an unintended way? How can we model and control their dynamics? The course provides answers to these questions by using a broad range of methods encompassing systems oriented management, classical systems dynamics, nonlinear dynamics and macroeconomic modeling.

The course is structured along three main tasks:
1. Finding solutions
2. Implementing solutions
3. Controlling solutions

PART 1 introduces complexity as a system immanent property that cannot be simplified. It introduces the problem solving cycle, used in systems oriented management, as an approach to structure problems and to find solutions.

PART 2 discusses selected problems of project management when implementing solutions. Methods for identifying the critical path of subtasks in a project and for calculating the allocation of resources are provided. The role of quality control as an additional feedback loop and the consequences of small changes are discussed.

PART 3, by far the largest part of the course, provides more insight into the dynamics of existing systems. Examples come from biology (population dynamics), management (inventory modeling, technology adoption, production systems) and economics (supply and demand, investment and consumption). For systems dynamics models, the software program VENSIM is used to evaluate the dynamics. For economic models analytical approaches, also used in nonlinear dynamics and control theory, are applied. These together provide a systematic understanding of the role of feedback loops and instabilities in the dynamics of systems. Emphasis is on oscillating phenomena, such as business cycles and other life cycles.

Weekly self-study tasks are used to apply the concepts introduced in the lectures and to come to grips with the software program VENSIM. The lecture slides are provided as handouts - including notes and literature sources - to registered students only. All material is to be found on the Moodle platform. More details during the first lecture.

Self-study tasks (discussion exercises, Vensim exercises) are provided as home work. Weekly exercise sessions (45 min) are used to discuss selected solutions. Regular participation in the exercises is an efficient way to understand the concepts relevant for the final exam.
Environmental Governance

The course addresses environmental policies, focusing on new steering approaches, which are generally summarized as environmental governance. The course also provides students with tools to analyze environmental policy processes and assesses the key features of environmental governance by examining various practical environmental policy examples.

Objective

To understand how an environmental problem may (not) become a policy and explain political processes, using basic concepts and techniques from political science.

To analyze the evolution as well as the key elements of environmental governance.

Content

Improvements in environmental quality and sustainable management of natural resources cannot be achieved through technical solutions alone. The quality of the environment and the achievement of sustainable development depend on human behavior and specifically the human uses of nature. To influence human behavior, we rely on public policies and other societal rules, which aim to steer the way humans use natural resources and their effects on the environment. Such steering can take place through government intervention alone. However, this often also involves governance, which includes the interplay between governmental and non-governmental actors, the use of diverse tools such as emission standards or financial incentives to steer actors' behavior and can occur at the local, regional, national or international level.

In this course, we will address both the practical aspects of as well as the scientific debate on environmental governance. The course gives future environmental experts a strong basis to position themselves in the governance debate, which does not preclude government but rather involves a spectrum from government to governance.

Key questions that this course seeks to answer: What are the core characteristics of environmental challenges from a policy perspective? What are key elements of 'environmental governance' and how legitimate and effective are these approaches in addressing persistent environmental challenges?

Lecture notes

Lecture slides and additional course material will be provided throughout the semester.

Literature

Food and Consumer Behaviour W 2 credits 2V M. Siegrist, C. Hartmann

Abstract
This course focuses on food consumer behavior, consumer's decision-making processes and consumer's attitudes towards food products. The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

Evaluation of Agricultural Policies W 3 credits 2G M. Stolze, S. Mann

Abstract
The course focuses on agricultural economic research with particular focus on policy evaluation. We impart insights in the issue of policy evaluation as part of agricultural economics research.

Objective

Advanced Management in the Agri-Food-Chain W 2 credits 2G M. Weber

Abstract
Advanced Management in the Agri-Food-Chain (Vorlesung wird in deutscher Sprache abgehalten.)

Objective
After the lecture the students ...

Content
In the lecture the following contents will be treated:
- State, reasons and effects of complexity in the organizational world.
- A basic framework for shaping and governing intelligent organizations.
- Selected contemporary models for managing in complex organizational world.
- Transfer and adaption of the models to organizations in the Agri-Food Chain.

Literature
Handouts with selected contents.

Agroecologists without Borders W 2 credits 2S C. Decock, A. Hofmann, J. Six

Abstract
In this seminar students apply their knowledge on sustainable agriculture, tropical soils and land use to a case study related to a current research project from the Sustainable Agroecosystems group. The seminar offers interactions with researchers and extension specialists working in the context of agricultural development.

Objective
(1) Students analyze concrete examples of agricultural development projects in tropical agroecosystems.
(2) Students broaden their understanding of environmental and socio-economic challenges of smallholder farmers.
(3) Students articulate complexity and challenges in agricultural development.
(4) Students develop their science communication skills by producing science communication materials in the context of the given case study.

International Environmental Politics W 3 credits 2V T. Bernauer

Abstract
This course focuses on the conditions under which cooperation in international environmental politics emerges and the conditions under which such cooperation and the respective public policies are effective and/or efficient.

Objective
The objectives of this course are to (1) gain an overview of relevant questions in the area of international environmental politics from a social sciences viewpoint; (2) learn how to identify interesting/innovative questions concerning this policy area and how to answer them in a methodologically sophisticated way; (3) gain an overview of important global and regional environmental problems.
This course deals with how and why international cooperation in environmental politics emerges, and under what circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

After passing an end-of-semester test (requirement: grade 4.0 or higher) students will receive 3 ECTS credit points. The workload is around 90 hours (meetings, reading assignments, preparation of test).

| 751-4805-00L | Recent Advances in Biocommunication | W+   | 2    | 2S    | C. De Moraes                  |
| **Number of participants limited to 25** |                    |
| **Abstract** | Students will gain insight into the role of sensory cues and signals in mediating interactions within and between species. There will be a primary, but not exclusive, focus on chemical signaling in interactions among plants, insects and microbes. The course will focus on the discussion of current literature addressing key conceptual questions and state-of-the-art research techniques and methods. |
| **Objective** | Students will gain insight into the role of sensory cues and signals in mediating interactions within and between species. There will be a primary, but not exclusive, focus on chemical signaling in interactions among plants, insects and microbes. The course will focus on the discussion of current literature addressing key conceptual questions and state-of-the-art research techniques and methods. |
| **Lecture notes** | The course will partly be an e-learning exercise (with computers). |
| **Literature** | Selected required readings (peer reviewed literature, selected book chapters). Optional recommended readings with additional information. |

| 751-5121-00L | Insect Ecology               | W+   | 2    | 2V    | R. R. Kariyat Ramachandran, C. De Moraes, M. Mescher |
| **Abstract** | This is an introductory course in insect ecology. Students will learn about the ways in which insects interact with and adapt to their abiotic & biotic environments and their roles in diverse ecosystems. The course will entail lectures, outside readings, and critical analysis of contemporary literature. |
| **Objective** | Students completing this course should become familiar with the application of ecological principles to the study of insects, as well as major areas of inquiry in this field. Highlighted topics will include insect behavior, chemical and sensory ecology, physiological responses to biotic and abiotic stressors, plant-insect interactions, community and food-web dynamics, and disease ecology. The course will emphasize insect evolution and adaptation in the context of specific interactions with other organisms and the abiotic environment. Examples from the literature incorporated into lectures will highlight the methods used to study insect ecology. |
| **Lecture notes** | Provided to students through ILIAS. |
| **Literature** | Selected required readings (peer reviewed literature, selected book chapters). Optional recommended readings with additional information. |

| 701-0263-01L | Seminar in Evolutionary Ecology of Infectious Diseases | W     | 3    | 2G    | D. Croll, S. Bonhoeffer, R. R. Regös |
| **Abstract** | Students of this course will discuss current topics from the field of infectious disease biology. From a list of publications, each student chooses some themes that he/she is going to explain and discuss with all other participants and under supervision. The actual topics will change from year to year corresponding to the progress and new results occurring in the field. |
| **Objective** | This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases. |
| **Content** | A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses and fungi. Hosts will include animals, plants and humans. |
| **Lecture notes** | Publications and class notes can be downloaded from a webpage announced during the lecture. |
| **Literature** | Papers will be assigned and downloaded from a webpage announced during the lecture. |

| 751-4811-00L | Alien Organisms in Agriculture | W     | 2    | 2G    | J. Collatz, M. Meissle |
| **Abstract** | The course focuses on alien organisms in agriculture as well as the scientific assessment and regulatory management of their effects on the environment and agricultural production. |
| **Objective** | Students will understand the consequences arising from the unintentional or deliberate introduction of alien organisms into agricultural systems. They will be able to understand the concept of environmental risk assessment and be able to evaluate risk management options. |

---

Data: 06.01.2019 12:56  Autumn Semester 2016  Page 67 of 1571
Content

Alien organisms in agriculture is a topic that receives an increasing awareness among farmers, agricultural scientists, regulators and the general public. Students of this course will learn about the nature of alien organisms such as invasive species, biocontrol organisms and genetically modified organisms. With a particular focus on arthropods, plants and their interactions we will look at the potential threats the novel organisms pose, the benefits they provide and how both of these effects can be scientifically assessed. Students will learn how the topic of alien organisms in agriculture is intrinsically tied to policy making and regulation and get to know current examples and future challenges in research. In the last part of the course students will be able to apply the acquired knowledge in a practical exercise (case study).

Lecture notes

Material will be distributed during the course

Agroecologists without Borders

W 2 credits 2S C. Decock, A. Hofmann, J. Six

Abstract

In this seminar students apply their knowledge on sustainable agriculture, tropical soils and land use to a case study related to a current research project from the Sustainable Agroecosystems group. The seminar offers interactions with researchers and extension specialists working in the context of agricultural development.

Objective

1. Students analyze concrete examples of agricultural development projects in tropical agroecosystems.
2. Students broaden their understanding of environmental and socio-economic challenges of smallholder farmers.
4. Students develop their science communication skills by producing science communication materials in the context of the given case study.

Prerequisites / notice

Students signing up for this class should have a strong interest in tropical agriculture and science communication.

Environmental Crop Physiology

The selected topics address challenges with regard to ecological intensification, resource efficiency or climate change and healthy and safe food, and the problem solution strategies and scientific principles behind.

In the spring semester, the two addressed cropping systems and value chains are vegetable-production- and berry-production or -horticultural systems, and the students split in two groups for addressing a case study focusing on one of the cropping systems treated before. An excursion to a research site might be planned.

Number of participants limited to 24.

Lecture notes

Documents will be distributed during the lecture

Lecture notes

The lecture will take place at the ETH experimental station in Eschikon Lindau. See the location of the station at:

http://www.pe.ipw.agr.ethz.ch/about/reach

751-4003-01L

Current Topics in Grassland Sciences (HS)

W 2 credits 2S N. Buchmann

Abstract

Research results in agro- and forest ecosystem sciences will be presented by experienced researchers as well as Ph.D. and graduate students. Citation classics as well as recent research results will be discussed. Topics range from plant ecophysiology, biodiversity and biogeochemistry to management aspects in agro- and forest ecosystems.

Objective

Students will be able to understand and evaluate experimental design and data interpretation of on-going studies, be able to critically analyze published research results, practice to present and discuss results in the public, and gain a broad knowledge of recent research and current topics in agro- and forest ecosystem sciences.

Content

Research results in agro- and forest ecosystem sciences will be presented by experienced researchers as well as Ph.D. and graduate students. Citation classics as well as recent research results will be discussed. Topics range from plant ecophysiology, biodiversity and biogeochemistry to management aspects in agro- and forest ecosystems.

Lecture notes

none

Prerequisites / notice

Prerequisites: Basic knowledge of plant ecophysiology, terrestrial ecology and management of agro- and forest ecosystems. Course will be taught in English.

751-4104-00L

Alternative Crops

W 2 credits 2V A. Walter, B. Büter, E. A. Pérez Torres

Abstract

Few crops dominate the crop rotations worldwide. Following the goal of an increased agricultural biodiversity, species such as buckwheat but also medicinal plants might become more important in future. The biology, physiology, stress tolerance and central aspects of the value-added chain of the above-mentioned and of other alternative crops will be depicted.

Objective

During this course, students learn to assess the potential of different minor or alternative crops compared to the dominant major crops based on their biological and agronomical features. Each student will assess and present a specific alternative crop of his or her choice based on information from scientific articles and Wikipedia. Wikipedia-entries will be generated.

751-4203-00L

Horticultural Science: Case Studies (HS)

W 2 credits 2G L. Bertschinger, J. Rösti, V. J. U. Zufferey

Abstract

Lectures address 2 horticultural cropping systems and value chains, each one in 4 2h-lecture blocks. Afterwards, the students split in 2 groups for addressing a case study focusing on one of the cropping systems treated before. An excursion to a research site might be included. In a final colloquium, each group presents a report on their case study and their conclusions.

Objective

Achieve a deepened understanding of horticultural value chain challenges relating to ecological intensification, resource efficiency, climate change and healthy and safe food, and the problem solution strategies and scientific principles behind.

Content

In the autumn semester, the two addressed cropping systems and value chains are fruit-production and viticulture.

In the spring semester, the two addressed cropping systems and value chains are vegetable-production- and berry-production or glasshouse-horticulture.

The selected topics address challenges with regard to ecological intensification, resource efficiency or climate change and branch into ongoing research and development projects.

Lecture notes

Documents handed out during the case studies.

Lecture notes

As provided by the case study leaders.
Biogeochemistry and Sustainable Management  

**Abstract**

This course focuses on the interactions between ecology, biogeochemistry and management of agro- and forest ecosystems, thus, coupled human-environmental systems. Students learn how human impacts on ecosystems via management or global change are mainly driven by effects on biogeochemical cycles and thus ecosystem functioning, but also about feedback mechanisms of terrestrial ecosystems.

**Objective**

Students will know and understand the complex and interacting processes of ecology, biogeochemistry and management of agro- and forest ecosystems, be able to analyze and evaluate the various impacts of different management practices under different environmental conditions, search literature, write and evaluate scientific reports, and be able to coordinate and work successfully in small (interdisciplinary) teams.

**Content**

Agroecosystems and forest ecosystems play a major role in all landscapes, either for production purposes, ecological areas or for recreation. The human impact of any management on the environment is mainly driven by effects on biogeochemical cycles. Effects of global change impacts will also act via biogeochemistry at the soil-biosphere-atmosphere-interface. Thus, ecosystem functioning, i.e., the interactions between ecology, biogeochemistry and management of terrestrial systems, is the science topic for this course.

Students will gain profound knowledge about nutrient cycles and population dynamics in managed and unmanaged grassland, cropland and forest ecosystems in the field and in the lab. Responses of agro- and forest ecosystems to the environment, e.g., to climate, anthropogenic deposition, major disturbances, soil nutrients or competition of plants (including invasives) and microorganisms, but also feedback mechanisms of ecosystems on (micro)climate, soils or vegetation patterns will be studied. Different management practices will be investigated and assessed in terms of production and quality of yield (ecosystem goods and services), but also in regard to environmental regulations (including subsidies) and their effect on the environment, e.g., greenhouse gas budgets. Thus, students will learn about the complex interactions of a coupled human-environmental system.

**Lecture notes**

Handouts will be available on the webpage of the course.

**Literature**

Prerequisites: Attendance of introductory courses in plant ecophysiology, ecology, and grassland or forest sciences. Course will be taught in English.

**Prerequisites / notice**

The course builds on basic knowledge delivered in 'Horticultural Crops I' and 'Horticultural Crops II’. If these courses have not been followed by interested participants, equivalent knowledge and experience will greatly support a successful and productive participation of the participating student.

Language: spoken E, G or F, Documents: Preferably English, G/F possible.

Current Aspects of Nutrient Cycle in Agro-Ecosystems  

**Abstract**

The seminar concerns current aspects and research related to nutrient cycles in agro-ecosystems. It offers to deepen the knowledge on a specific theme related to nutrients. It is composed by presentations of national and international speakers and by an excursion. The students will be guided to develop their own knowledge and to include literature in their personal presentations.

**Objective**

Listen and understand expert's presentations. Ask questions and contribute to the discussion during the talk sessions and the excursion.

Link the information obtained during the seminar with knowledge from previous lessons and with literature searched to complete the matter. Expand the knowledge on nutrient cycles and nutrient management in the agro-ecosystem.

**Prerequisites / notice**

Prerequisites: Only students who have passed the courses 751-3401-00L Pflanzenenernährung I and 751-3402-00L Pflanzenenernährung II - Integriertes Nährstoffmanagement can be admitted to this course.

**Content**

This course is about the physical, chemical, and biological processes in the rhizosphere and their effect on plant growth. Effects of fertilisers, companion plants, and microbial symbionts, and other microbes on nutrient cycling and plant uptake are discussed. An "intercropping" experiment in the glasshouse is used as a model to check for rhizosphere effects on plant growth and mineral nutrition.

**Objective**

To gain a holistic understanding of resource-driven and regulatory processes in agricultural and natural ecosystems.

Develop skills on the critical analysis of scientific papers.

Carry out a multi-disciplinary experiment that involves aspects of soil, (micro-)biology, plant physiology, pathology, and ecology.

Develop manual skills in the set up of a glasshouse experiment, in soil and plant analyses, and in isolation and DNA-based characterisation of rhizobia.

Gain insights on basic methods to analyse (bio-)chemical, molecular genetic, and graphical data.

Discuss and interpret data in the context of the literature.

Prepare a research report in the format of a scientific paper and a poster in the format of a conference paper, partially alone and partially in small groups, using data obtained from the glasshouse experiment.

This course is designed to stimulate thinking and promote the analysis of important processes that occur in the rhizosphere. As part of this course, the knowledge acquired will be used for analysing and interpreting experimental data, as well as, preparing a scientific report and conference-type poster.

The course will cover the relative importance of spatial scales and various physicochemical and microbiological dynamics as influenced by roots. We will discuss root traits and activities that influence the immediately root-surrounding soil and thereby contribute to mineral nutrient mobilization and immobilization. An overview of the most relevant root-microbe symbioses for agroecosystems will be provided and root and microbial traits discussed, which could be of use in efforts towards utilizing intercropping and bioinoculants as a possible means of reducing energetically expensive inputs to farming systems. A special emphasis will be given to the importance of physicochemical features of soils and the chemical forms (= species) of elements important for plant uptake.

Practical experience will be gained with setting up a glasshouse experiment, soil and root sampling, basic soil and plant analyses, isolation of rhizobia, determination of the number of colony forming units (CFU), assays to screen for phosphorus and zinc solubilizing bacteria, DNA extraction, PCR amplification, and restriction fragment length polymorphism analysis (RFLP) of host range determining symbiosis-specific genes.

In short, the processes dealt with in this course occur on a small-scale and are generally (bio)chemical and microbiological in nature. Furthermore, they are generally not taken into account using current methods of agronomic management for plant production. However, they are increasingly being recognized as a potentially useful means of obtaining a resource-efficient and hence, economically and environmentally sustainable agricultural system, including for ecosystem restoration. Therefore, the course will invite for critical reflections and exemplify challenges in translating knowledge from scientific studies into ecology and application for plant production.

**Lecture notes**

For documentation, lecture slides and laboratory protocols will continuously be uploaded to the directory '751-5123-00L Rhizosphere Ecology' on the electronic document exchange platform ILIAS, LDA-ELBA: https://ilias-app2.let.ethz.ch/ilias.php?ref_id=109651&cmd=view&cmdClass=llobjcourselgi&cmdNode=ef+kv&baseClass=llRepositoryGUI
This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small IsoProject, practice to search and analyze the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to composite fluxes as well as to trace and integrate processes. In addition, students carry out a small project during lab sessions.

Objective

- We ask all course attendees of the agricultural sciences to have passed the exams at the end of the lectures Plant Nutrition I and II (Nutrient cycling in agroecosystems) by Prof. E. Frossard. All others, have to have successfully worked through the e-learning module Plant Nutrition I by Prof. E. Frossard. All others, have to have successfully worked through the e-learning module Plant Nutrition I by Prof. E. Frossard:

  - Remark: The course is designed to be complementary to those on Radioisotopes in Plant Nutrition (751-3405-00L), and Nutrient Fluxes in Soil-Plant Systems (751-3404-00L), although some thematic overlaps cannot be avoided. Special emphasis is given to plant-microbe-soil interactions.

The analyses of stable isotopes often provide insights into ecophysiological and ecological processes that otherwise would not be available with classical methods only. Stable isotopes proved useful to determine origin of pools and fluxes in ecosystems, to partition composite fluxes and to integrate processes spatially and temporally.

This course will provide an introduction to the applicability of stable isotopes to ecological research questions. Topics will focus on carbon (13C), nitrogen (15N), oxygen (18O) and hydrogen (2H) at natural isotope abundance and tracer levels. Lectures will be supplemented by intensive laboratory sessions, short presentations by students and computer exercises.

Handouts in lectures. Handouts will be available on the webpage of the course.

This course is based on fundamental knowledge about plant ecophysiology, soil science, and ecology in general. Course will be taught in English.

2 credits

Objective

- Students are able to
  - characterize quantitative knowledge needed to measure and parameterize structural, flow and transport properties of partially-saturated porous media.
  - quantify driving forces and resulting fluxes of water, solute, and heat in soils.
  - apply modern measurement methods and analytical tools for hydrological data collection
  - conduct and interpret a limited number of experimental studies
  - explain links between physical processes in the vadose-zone and major societal and environmental challenges

Content

Weeks 1 to 3: Physical Properties of Soils and Other Porous Media
- Units and dimensions, definitions and basic mass-volume relationships between the solid, liquid and gaseous phases; soil texture; particle size distributions; surface area; soil structure. Soil colloids and clay behavior

Soil Water Content and its Measurement - Definitions; measurement methods - gravimetric, neutron scattering, gamma attenuation; and time domain reflectometry; soil water storage and water balance.

Weeks 4 to 5: Soil Water Retention and Potential (Hydrostatics)
- The energy state of soil water; total water potential and its components; properties of water (molecular, surface tension, and capillary rise); modern aspects of capillarity in porous media; units and calculations and measurement of equilibrium soil water potential components; soil water characteristic curves definitions and measurements; parametric models; hysteresis. Modern aspects of capillarity

Demo-Lab: Laboratory methods for determination of soil water characteristic curve (SWC), sensor pairing

Weeks 6 to 9: Water Flow in Soil - Hydrodynamics:
- Part 1 - Laminar flow in tubes (Poiseuille's Law); Darcy's Law, conditions and states of flow; saturated flow; hydraulic conductivity and its measurement.

Lab #1: Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.

- Part 2 - Unsaturated steady state flow; unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximate solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties.

Midterm exam

Lab #2: Measurement of vertical infiltration into dry soil column - Green-Ampt, and Philip's approximations; infiltration rates and wetting front propagation.

- Part 3 - Use of Hydrus model for simulation of unsaturated flow

Week 10 to 11: Energy Balance and Land Atmosphere Interactions - Radiation and energy balance; evapotranspiration definitions and estimation; transpiration, plant development and transpiration coefficients small and large scale influences on hydrological cycle; surface evaporation.

Week 12 to 13: Solute Transport in Soils
- Transport mechanisms of solutes in porous media; breakthrough curves; convection-dispersion eq.; solutions for pulse and step solute application; parameter estimation; salt balance.

Lab #3: Miscible displacement and breakthrough curves for a conservative tracer through a column; data analysis and transport parameter estimation.

Additional topics:
- Temperature and Heat Flow in Porous Media - Soil thermal properties; steady state heat flow; nonsteady heat flow; estimation of thermal properties; engineering applications.
- Biological Processes in the Vadose Zone
  - An overview of below-ground biological activity (plant roots, microbial, etc.); interplay between physical and biological processes. Focus on soil-atmosphere gaseous exchange; and challenges for bio- and phytoremediation.

Supplemental textbook (not mandatory) - Environmental Soil Physics, by: D. Hillel

751-5101-00L Biogeochemistry and Sustainable Management

W+ 2 credits 2G  N. Buchmann, L. Hörmann

Abstract

This course focuses on the interactions between ecology, biogeochemistry and management of agro- and forest ecosystems, thus, coupled human-environmental systems. Students learn how human impacts on ecosystems via management or global change are mainly driven by effects on biogeochemical cycles and thus ecosystem functioning, but also about feedback mechanisms of terrestrial ecosystems.

Objective

Students will know and understand the complex and interacting processes of ecology, biogeochemistry and management of agro- and forest ecosystems, be able to analyze and evaluate the various impacts of different management practices under different environmental conditions, search literature, write and evaluate scientific reports, and be able to coordinate and work successfully in small (interdisciplinary) teams.

Content

Agroecosystems and forest ecosystems play a major role in all landscapes, either for production purposes, ecological areas or for recreation. The human impact of any management on the environment is mainly driven by effects on biogeochemical cycles. Effects of global change impacts will also act via biogeochemistry at the soil-biosphere-atmosphere-interface. Thus, ecosystem functioning, i.e., the interactions between ecology, biogeochemistry and management of terrestrial systems, is the science topic for this course.

Students will gain profound knowledge about nutrient cycles and population dynamics in managed and unmanaged grassland, cropland and forest ecosystems in the field and in the lab. Responses of agro- and forest ecosystems to the environment, e.g., to climate, anthropogenic deposition, major disturbances, soil nutrients or competition of plants (including invasives) and microorganisms, but also feedback mechanisms of ecosystems on (micro)climate, soils or vegetation patterns will be studied. Different management practices will be investigated and assessed in terms of production and quality of yield (ecosystem goods and services), but also in regard to environmental regulations (including subsidies) and their effect on the environment, e.g., greenhouse gas budgets. Thus, students will learn about the complex interactions of a coupled human-environmental system.

Lecture notes

Will be discussed in class.

Prerequisites / notice

Prerequisites: Attendance of introductory courses in plant ecophysiology, ecology, and grassland or forest sciences. Course will be taught in English.

751-5115-00L Current Aspects of Nutrient Cycle in Agro-Ecosystems

W+ 2 credits 1S  E. Frossard, A. Oberson Dräyer
Abstract
The seminar concerns current aspects and research related to nutrient cycles in agro-ecosystems. It offers to deepen the knowledge on a specific theme related to nutrients. It is composed by presentations of national and international speakers and by an excursion. The students write a report where they compile the obtained information, relate it to their own knowledge and include literature.

Objective
Listen and understand expert’s presentations. Ask questions and contribute to the discussion during the talk sessions and the excursion. Link the information obtained during the seminar with knowledge from previous lessons and with literature searched to complement the matter. Expand the knowledge on nutrient cycles and nutrient management in the agro-ecosystem.

751-5123-00L Rhizosphere Ecology
Number of participants limited to 18.

Prerequisites: Only students who have passed the courses 751-3401-00L Pflanzenernährung I and 751-3402-00L Pflanzenernährung II - Integriertes Nährstoffmanagement can be admitted to this course.

Abstract
This course is about the physical, chemical, and biological processes in the rhizosphere and their effect on plant growth. Effects of fertilisers, companion plants, and microbial symbionts, and other microbes on nutrient cycling and plant uptake are discussed. An “intercropping” experiment in the glasshouse is used as a model to check for rhizosphere effects on plant growth and mineral nutrition.

Objective
To gain a holistic understanding of resource-driven and regulatory processes in agricultural and natural ecosystems.

Develop skills on the critical analysis of scientific papers.

Define explanatory hypotheses, identify knowledge gaps for further investigations.

Carry out a multi-disciplinary experiment that involves aspects of soil, (micro-)biology, plant physiology, pathology, and ecology.

Develop manual skills in the setup of a glasshouse experiment, in soil and plant analyses, and in isolation and DNA-based characterisation of rhizobia.

Gain insights on basic methods to analyse (bio-)chemical, molecular genetic, and graphical data.

Discuss and interpret data in the context of the literature.

Prepare a research report in the format of a scientific paper and a poster in the format of a conference paper, partially alone and partially in small groups, using data obtained from the glasshouse experiment.

Content
This course is designed to stimulate thinking and promote critical analysis of important processes that occur in the rhizosphere. As part of this course, the knowledge acquired will be used for analysing and interpreting experimental data, as well as, preparing a scientific report and conference-type poster.

The course will cover the relative importance of spatial scales and various physicochemical and microbiological dynamics as influenced by roots. We will discuss root traits and activities that influence the immediately root-surrounding soil and thereby contribute to mineral nutrient mobilization and immobilization. An overview of the most relevant root-microbe symbioses for agroecosystems will be provided and root and microbial traits discussed, which could be of use in efforts towards utilization of intercropping and bioinoculants as a possible means of reducing energetically expensive inputs to farming systems. A special emphasis will be given to the importance of physicochemical features of soils and the chemical forms (= species) of elements important for plant uptake.

Practical experience will be gained with setting up a glasshouse experiment, soil and root sampling, basic soil and plant analyses, isolation of rhizobia, determination of the number of colony forming units (CFU), assays to screen for phosphorus and zinc solubilizing bacteria, DNA extraction, PCR amplification, and restriction fragment length polymorphism analysis (RFLP) of host range determining symbiosis-specific genes.

In short, the processes dealt with in this course occur on a small-scale and are generally (bio)chemical and microbiological in nature. Furthermore, they are generally not taken into account using current methods of agronomic management for plant production. However, they are increasingly being recognized as a potentially useful means of obtaining a resource-efficient and hence, economically and environmentally sustainable agricultural system, including for ecosystem restoration. Therefore, the course will invite for critical reflections and exemplify challenges in translating knowledge from scientific studies and ecology into application for plant production.

Lecture notes

This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to Stable Isotope Ecology of Terrestrial Ecosystems. Students will be familiar with basic and advanced applications of stable isotopes in studies on plants, soils, water and trace gases, know the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small IsoProject, practice to search and analyze literature as well as to give an oral presentation.

Objective

This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to process-oriented ecological research. Topics focus on stable isotopes as indicators for the origin of pools and fluxes, partitioning of composite fluxes as well as to trace and integrate processes. In addition, students carry out a small project during lab sessions.

Prerequisites / notice

We ask all course attendees of the agricultural sciences to have passed the exams at the end of the lectures Plant Nutrition I and II (Nutrient cycling in agroecosystems) by Prof. E. Frossard. All others, have to have successfully worked through the e-learning module Plant Nutrition I by Prof. E. Frossard: https://moodle-app2.let.ethz.ch/course/view.php?id=279

Remark: The course is designed to be complementary to those on Radioisotopes in Plant Nutrition (751-3405-00L), and Nutrient Fluxes in Soil-Plant Systems (751-3404-00L), although some thematic overlaps cannot be avoided. Special emphasis is given to plant-microbe-soil interactions and an appreciation of whole plant functioning in the ecological context. You will familiarize yourself with bacterial isolation, cultivation, enumeration, as well as, molecular detection, discrimination and identification techniques for rhizosphere and root-associated microbes.

Lectures will be supplemented by intensive laboratory sessions, short presentations by students and computer exercises.

Objective

(1) Students analyze concrete examples of agricultural development projects in tropical agroecosystems.
(2) Students broaden their understanding of environmental and socio-economic challenges of smallholder farmers.
(3) Students articulate complex issues in agricultural development and interventions.
(4) Students develop their science communication skills by producing science communication materials in the context of the given case study.

Prerequisites / notice

Students signing up for this class should have a strong interest in tropical agriculture and science communication.
Listen and understand expert’s presentations. Ask questions and contribute to the discussion during the talk sessions and the excursion.

The seminar concerns current aspects and research related to nutrient cycles in agro-ecosystems. It offers to deepen the knowledge on a specific theme related to nutrients. It is composed by presentations of national and international speakers and by an excursion. The students will gain profound knowledge about nutrient cycles and population dynamics in managed and unmanaged grassland, cropland and forest ecosystems in the field and in the lab. Responses of agro- and forest ecosystems to the environment, e.g., to climate, anthropogenic deposition, major disturbances, soil nutrients or competition of plants (including invasives) and microorganisms, but also feedback mechanisms of ecosystems on (micro)climate, soils or vegetation patterns will be studied. Different management practices will be investigated and assessed in terms of production and quality of yield (ecosystem goods and services), but also in regard to environmental regulations (including subsidies) and their effect on the environment, e.g., greenhouse gas budgets. Thus, students will learn about the complex interactions of a coupled human-environmental system.

Achieve a deepened understanding of horticultural value chain challenges relating to ecological intensification, resource efficiency, climate change and healthy and safe food, and the problem solution strategies and scientific principles behind. Deliver in a team effort a report and a presentation providing a comprehensive insight into a problem of the horticultural value chain and its science-based solution strategy.

Students will know and understand the complex and interacting processes of ecology, biogeochemistry and management of agro- and forest ecosystems, be able to analyze and evaluate the various impacts of different management practices under different environmental conditions, search literature, write and evaluate scientific reports, and be able to coordinate and work successfully in small (interdisciplinary) teams.

Handouts will be available on the webpage of the course.

Students studying up for this class should have a strong interest in tropical agriculture and science communication.
Lecture notes: no scriptum
Prerequisites / notice: Requirements for allocation of the two credit points:
- Theatre presentation (with handout) at the forum
- Delivery of written documents of sufficient quality
- Active participation during the presentations by the other participants

751-6305-00L Livestock Breeding and Genomics W 3 credits 3G P. von Rohr

Abstract: Methods for analysing livestock data, in particular for the estimation of breeding values: principles of selection index, introduction to BLUP, application of common models used, relationship matrix, methods for the estimation of variance components, basics of breeding programs. The material will be illustrated via exercises and assignments.

Objective: The students are able to set up design matrices, the relationship matrix and its inverse as well as the Mixed Model equations to estimate BLUP breeding values for smaller examples.

Content:
- Selection index (various sources of information, one trait, multiple traits)
- Relationship matrix and its inverse
- BLUP: one trait, repeated observations, multiple traits, economic indices
- Introduction to methods for the estimation of variance components
- Assignments

Lecture notes: Copies of the slides are available on the net.

Literature: To be announced in the lectures.

751-6601-00L Pig Science (HS) W 3 credits 3V E. Hillmann, M. C. Härdi-Landerer

Abstract: The overall goal of the course is to provide the essential scientific knowledge of the genetic, physiological and special nutritional aspects of pigs, metabolism, animal health and behaviour, and of the implications for environment, product quality, housing and animal welfare, and breeding programs.

Objective: Students will
- understand the complex interactions of nutrition, quality traits of products, breeding and reproduction, health management, behaviour and husbandry,
- be trained to understand interdisciplinary and disciplinary research.
- be able to critically analyze published research data.
- be able to present precise scientific reports in oral and written form.

Content: Four main topics in Pig Science:
- HS: Behaviour and Husbandry of pigs: behavioral needs, husbandry related behavioral disorders, design and construction of housing systems in accordance with welfare requirements and legal regulations.
- Planning of reproductive cycle in practice
- Welfare monitoring in practice
- Pigs in organic farming
- Animal Health and Diseases: animal hygiene, immunology/vaccinations, metabolic diseases, diarrhoe, legislation, thermoregulation, important infections, prophyaxis.
- Poster, exam and evaluation

FS: Special Physiology of Pig Nutrition: food intake; growth; metabolism and digestion at different growth stages; energy and specific nutritional requirements; feeding systems; environmental aspects, effed.
- Genetics: Breeding systems, reproductive techniques, performance tests and recording, etc.
- Oral presentation, exam, evaluation

Lecture notes: Handouts/scripts are distributed by the lecturers.

Literature: Specific literature is indicated by the lecturers.

Prerequisites / notice: Ethology and animal welfare are recommended.

The lecture usually is in German, but there is always the possibility to change to English.

751-7703-00L Tropical Animal Nutrition W 1 credit 1G S. Marquardt

Abstract: Farm animals play an important role in most agro/eco - systems, but conditions for a successful management and nutrition in the tropics are diverse. In this course a wide range of aspects are examined.

Objective: The aim of this course is to know and understand animal production systems in the different zones of the tropics taking into consideration the local and social structure of the population. We will deal with different aspects of animal nutrition in the tropics.

Content:
- Introduction to the tropics
- Special problems and challenges in tropical regions
- Importance of livestock in the tropics
- Animal production and livestock production systems in the tropics
- Special challenges for livestock in the tropics
- Feeds available in the tropics
- Tropical pasture systems and their characteristics
- Quality of feeds in the tropics
- Problems and challenges of livestock nutrition in the tropics

751-6113-00L Endocrinology and Biology of Reproduction W 3 credits 2V S. E. Ulbrich

Abstract: Die Systematik der Reproduktionshormone und der Hormonrezeptoren wird erläutert, die Wirkungsmechanismen (Bildung; orale Bioverfügbarkeit; Elimination) erklärt. Mit diesen Grundlagen wird das Verständnis der Regulation der Fortpflanzung umfassend erortert.

Objective: Die Studierenden erlangen das grundlegende theoretische Verständnis und Fachwissen zur Endokrinologie der Reproduktion und zur weiblichen und männlichen Reproduktionsbiologie. Sie können darüber hinaus pathologische Situationen (Fortpflanzungsstörungen) und deren vielfältige Ursachen in den physiologischen Kontext einordnen.

Ruminant Science

Number Title Type ECTS Hours Lecturers
751-6001-00L Forum: Livestock in the World Food System W 2 credits 1S M. Kreuzer, S. Bauersachs, E. Hillmann, S. Neuenschwander

Abstract: This forum is a platform for the critical reflection of highly relevant topics of livestock in the frame of the world food system comprising issues from basic knowledge to acceptance in society. The exchange is operated by scientific writing and presentation.
In the Forum "Livestock in the World Food System", a topic of significance for livestock agriculture is selected by the students and subsequently dealt with from various angles (from scientific basis to production systems, environmental aspects and to the acceptance by society). The students learn to present a scientific subject in writing and orally to an audience and to defend the presentation in a discussion.

The Forum "Livestock in the World Food System" will take place in blocks of 2 hours each. Once the general topic has been selected, it comprises two elements:

Element 1. Oral Presentation: The students form small groups and are lecturers. There are chair persons (moderators) from outside of these small groups and they also head the discussion. The remaining students and lecturers are the audience.

Element 2. Scientific writing: Option 1: preparation of a short scientific type of paper from a result table offered by the lecturers; Option 2: preparation of an abstract with limited word count from a scientific paper; Option 3: writing of a critical review of a paper. The students have to select 2 of the three options each. There will be a discussion be a discussion in small groups at two dates.

The preparation of the oral and written presentations takes place to a small part during the 2-h blocks and mainly outside of this time.

The students are able to set up design matrices, the relationship matrix and its inverse as well as the Mixed Model equations to estimate BLUP breeding values for smaller examples.

The students learn to present a scientific subject in writing and orally to an audience and to defend the presentation in a discussion.

In summary
- Contact hours: 52 h
- Self-study within semester: 30 h (especially preparation for the interdisciplinary courses and the own lecture)
- Self-study in semester break: 38 h
Total: 120 h

Lectures held by the students: 4 h
Ruminant Nutrition Physiology: 10 h
Ruminant Husbandry: 16 h
Food Intake of Ruminants
Disciplinary topics: 36 h
- Ruminant Husbandry: 16 h
- Ruminant Nutrition Physiology: 10 h
- Reproduction in Ruminants: 8 h
Lectures held by the students: 4 h

Assignments
- Active participation during the presentations by the other participants

The field of Ruminant Science will also be a part of the spring semester (special topics: Organic Ruminant Systems, Tropical Ruminant Systems, Mastitis; disciplinary courses: Cattle, Sheep and Goat Breeding, Ruminant Diseases and Prophylaxis, Ruminant Nutrition and the Environment). However both courses are organized independently.

Conditions for successful participation: Background on animal science from the Bachelor is desired. In order to attend the Minor in Ruminant Science without any animal science background, a realistic self-assessment concerning the need for additional self-study is recommended (e.g. by choosing an appropriate bachelor course which then may be counted as 'optional courses' in the master). These efforts depend on the extent to which animal science courses have already been attended in the bachelor.

The control of performance will consist of:
- an own lecture
- a final oral examination with focus on comprehension of the fundamental linkages rather than of specific details

This course broadens the knowledge in one of the most important aspects of ruminant nutrition: the microbial digestion in the rumen (and in the hindgut). For a comprehensive understanding of the rumen microbial ecosystem, the mechanisms of nutrient fermentation and the synthesis of microbial protein, thorough basics are provided. Apart from lectures, group and laboratory exercises are included.
Objective

The course enables students to understand in detail how ruminal digestion works and how this knowledge can be applied to design optimal feeding diets using highly fibrous forages and a variety of other feeds. The students also are able to show how to modify the most important rumen microbes beneficially by nutritional means.

Content

Structure of the contact hour part of the course (14 h):

2 h Introduction and blackboard exercise

8 h Basic topics in ruminal digestion, lectures and group exercises:
- Systematics of the microbes involved in microbial digestion
- Measurement of microbial digestion
- Interactions of microbes and epithelium of the digestive tract
- Differences between ruminal and hindgut microbial digestion
- Microbial nutrient degradation and its modification
- Efficiency of microbial protein synthesis
- Manipulation of the ruminal digestion

2 h Laboratory exercise with a rumen fistulated cow and the Rumen Simulation Technique

2 h Final seminar

The non-contact hour part is to comprehend the information given and to prepare either the written report or the oral presentation (cf. "Besonderes")

Lecture notes

Lecture notes are provided via Moodle.

Literature

Will be communicated at the start of the course.

Prerequisites / notice

The course is a balanced mixture of blackboard exercise, laboratory exercise, group exercise, lecture and student seminar presentation.

Credit point associated with grade of either a written report or an oral presentation in the final seminar (both on a self-chosen related topic)

Abstract

This course focuses on food consumer behavior, consumer’s decision-making processes and consumer’s attitudes towards food products.
The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

**752-2307-00L Nutritional Aspects of Food Composition and Processing**

**Abstract**
Lecture course with interdisciplinary approach for the evaluation of nutritional aspects of changes in food composition due to processing.

**Objective**
Students should be able to:
- describe and compare the major concepts/criteria used for the evaluation of the nutritional quality of food
- apply these criteria when assessing the effects of selected processing technologies on nutritional quality.
- evaluate recent formulation strategies aimed to achieve additional physiological benefits for targeted population groups (i.e. functional foods).

**Content**
The course gives inputs on compositional changes in food due to processing (with focus on thermal/chilling, enzymatic, chemical, emerging technologies) or new formulation strategies. Possible evaluation methods for these changes (e.g. nutritional profile) will be addressed.

**Lecture notes**
There is no script. Powerpoint presentations and relevant scientific articles will be available on-line for students. A selection of recommended readings will be given at the beginning of the course.

**Prerequisites / notice**
The course is open to Master and MAS students in food and science and nutrition or related. Basic knowledge of food chemistry and nutrition is expected, as well as an understanding of food processing.

**751-4203-00L Horticultural Science: Case Studies (HS)**

**Abstract**
Lectures address 2 horticultural cropping systems and value chains, each one in 4 2h-lecture blocks. Afterwards, the students split in 2 groups for addressing a case study focusing on one of the cropping systems treated before. An excursion to a research site might be included. In a final colloquium, each group presents a report on their case study and their conclusions.

**Objective**
Achieve a deepened understanding of horticultural value chain challenges relating to ecological intensification, resource efficiency, climate change and healthy and safe food, and the problem solution strategies and scientific principles behind.

**Content**
In the autumn semester, the two addressed cropping systems and value chains are fruit-production and viticulture. The selected topics address challenges with regard to ecological intensification, resource efficiency or climate change and branch into ongoing research and development projects.

**Lecture notes**
Documents handed out during the case studies.

**Literature**
As provided by the case study leaders.

**Prerequisites / notice**
The course builds on basic knowledge delivered in ‘Horticultural Crops I’ and ‘Horticultural Crops II’. If these courses have not been followed by interested participants, equivalent knowledge and experience will greatly support a successful and productive participation of the participating student.

**Language**: spoken E, G or F, Documents: Preferably English, G/F possible.

**751-6001-00L Forum: Livestock in the World Food System**

**Abstract**
This forum is a platform for the critical reflection of highly relevant topics of livestock in the frame of the world food system comprising issues from basic knowledge to acceptance in society. The exchange is operated by scientific writing and presentation.

**Objective**
In the forum “Livestock in the World Food System”, a topic of significance for livestock agriculture is selected by the students and subsequently dealt with from various angles (from scientific basis to production systems, environmental aspects and to the acceptance by society). The students learn to present a scientific subject in writing and orally to an audience and to defend the presentation in a discussion.

**Content**
The Forum “Livestock in the World Food System” will take place in blocks of 2 hours each. Once the general topic has been selected, it comprises two elements:

- Element 1. Oral Presentation: The students form small groups and are lecturers. There are chair persons (moderators) from outside of these small groups and they also head the discussion. The remaining students and lecturers are the audience.

- Element 2. Scientific writing: Option 1: preparation of a short scientific type of paper from a result table offered by the lecturers; Option 2: preparation of an abstract with limited word count from a scientific paper; Option 3: writing of a critical review of a paper. The students have to select 2 of the three options each. There will be a discussion be a discussion in small groups at two dates.

Lectures will be used to introduce both oral and written presentations and to give examples. The preparation of the oral and written presentations takes place to a small part during the 2-h blocks and mainly outside of this time. Introductions to both forms of presentation will be offered by lecturers. The preparation of the oral and written presentations takes place to a small part during the 2-h blocks and mainly outside of this time.

**Prerequisites / notice**
Requirements for allocation of the two credit points:
- Theatre presentation (with handout) at the forum
- Delivery of written documents of sufficient quality
- Active participation during the presentations by the other participants.

**752-5111-00L Gene Technology in Foods**

**Abstract**
This course will increase basic knowledge on biotechnological constructions and application of genetically modified organisms (GMO) which are used worldwide in food production systems. The course discusses health issues, the legislation frame and food safety aspects of GMO applications in agriculture, food production and consumption in Switzerland and EU-countries.

**Objective**
This course will provide knowledge and biological background on genetically modified organisms (GMO) and food produced with the help of GMO, especially on the molecular basis of GMO constructions with emphasis on genetically modified food in Switzerland and the EU. Criteria of rationale food safety and health assessment in agriculture and food consumption will be elaborated.

**Content**
Overview on application in gene technology, the gene transfer potential of bacteria, plants and other organisms and the mostly used transgenes in food as well as on GMO used for food production and their detection technologies in food; food safety assessment of GMO food; information on the legislation in Switzerland and EU-countries

**Lecture notes**
Copies of slides from lectures will be provided.

**Literature**
Actual publications from literature will be provided

**Prerequisites / notice**
Good knowledge in biology, especially in microbiology and molecular biology are prerequisites. Some contents will be provided by registered students who will individually or as a group present an actual publication.

**751-0021-00L World Food System Summer School**

**Number of participants limited to 25.**

It is necessary to apply and be selected in order to participate in this course. This also applies to ETH Zurich
provide the opportunity for young scientists and practitioners to understand the challenges and opportunities of sustainable agriculture and organic production systems and to connect these to the broader context of the world food system. During the two week summer school at the Gut Rheinau, one of Switzerland’s largest organic farms, participants will engage in lectures, workshops, group work, case

Further information available:
http://www.worldfoodsystem.ethz.ch/education/summer-schools/upcoming.html

### Abstract

We provide the opportunity for young scientists and practitioners to understand the challenges and opportunities of sustainable agriculture and organic production systems and to connect these to the broader context of the world food system. During the two week summer school at the Gut Rheinau, one of Switzerland’s largest organic farms, participants will engage in lectures, workshops, group work, case

### Objective

- Understand: the science, relationships, interactions and trade-offs in food systems; the role and potential of organic production systems; potential interventions; the cultural, socio-political, economic and environmental factors to be incorporated into solutions. Build skills in systems thinking, multi-cultural and multi-disciplinary collaboration, participatory processes. Connect to a network of expert faculty/scientists/practitioners.

- The course deals with transdisciplinary (td) methods, concepts and their applications in the context of case studies and other problem-oriented research projects. Td methods are used in research at the science-society interface and when collaborating across scientific disciplines. Students learn to apply methods within a functional framework. The format of the course is seminar-like, interactive.

- At the end of the course students should:
  - Know: - Function, purpose and algorithm of a selected number of transdisciplinary methods
  - Understand: - Functional application in case studies and other problem oriented projects
  - Be able to reflect on: - Potential, limits, and necessity of transdisciplinary methods
  - Be prepared for: - Transdisciplinary Case Study 2017

- The lecture is structured as follows:
  - Overview of concepts and methods of inter-transdisciplinary integration of knowledge, values and interests (approx. 20%)
  - Analysis of a selected number of transdisciplinary methods focusing problem framing, problem analysis, and impact (approx. 50%)
  - Practical application of the methods in a broader project setting (approx. 30%)

- Handouts are provided by the lecturers

- Selected scientific articles and book-chapters

- This course is recommended and helpful for students participating in the Transdisciplinary Case Study 2017.

### Prerequisites / notice

No prerequisites. Program is open to Masters, PhD and upper level Bachelor students.

### Objective

At the end of the course, students should:

- Know:
  - core concepts of sustainable development, and;
  - the concept of social justice - normatively and empirically - as a core element of social sustainability;
  - important empirical methods for the analysis and assessment of local / regional sustainability issues.

- Understand and reflect on:
  - the challenges of trade-offs between the different goals of sustainable development;
  - and the respective impacts on individual and societal decision-making.

### Content

- Overview of rationale, objectives, concepts and origins of sustainable development;
- Importance and application of sustainability in science, politics, society, and economy;
- Sustainable (local / regional) development in different national / international contexts;
- Analysis and evaluation methods of sustainable development with a focus on social justice;
- Trade-offs in selected examples.

### Literature

- Handouts
- Selected scientific articles and book-chapters

Only students who fulfill the following criteria are allowed to begin with their master thesis:

a. successful completion of the bachelor programme;

b. fulfilling of any additional requirements necessary to
gain admission to the master programme.

Abstract
The Master thesis is an independent scientific work. Normally the subject is selected among the topics of the core subject. It is written under the guidance of an agricultural science professor.

Objective
The independent writing of a scientific paper/thesis

</tr>
<tr>
<td><strong>Abstract</strong></td>
<td>The course is an introduction to structural design using graphical methods and structural models, with a focus on a creative approach rather than repetitive calculations. Cable and membrane structures, arch and shell structures and combined arch and cable systems will be used to demonstrate these methods.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Content</strong></td>
<td>After a general introduction of basic concepts, structural systems such as cable and arch structures will be analyzed with the help of graphic statics. The students will learn to understand the flow of forces in a structural system in relation to the system's form. They will be able to modify this force flow and give dimension to the structural components.</td>

Description and discussion of curves and surfaces focusing on their generation by movement: Parameterization, tangent vector, tangent plane, ruled surfaces, developable surfaces. (Methods of vector geometry and differential calculus are used.)

The lecture conveys historical knowledge about architecture and art as well as methodical knowledge as a preparation for the independent handling of historical sources and scientific literature. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

Acquisition of basic knowledge of the history of art and architecture, resp. of methodical basic knowledge of historical working.

The history of art and architecture is part of our reality: it confronts us in the historically shaped environment of the city and plays an essential role in the creation of architecture. The historical lectures are therefore part of the fundamental courses of the undergraduate programme in architecture. On the basis of cultural and art-historical research the courses impart knowledge about architecture and art from ancient times to the present. At the same time they sharpen the perception for the conditions and capabilities of building activity in history. Moreover, they convey methodical knowledge and technical language skills and are meant as a preparation for the independent handling of historical sources and scientific literature.

The first one-year course aims at these goals in the form of exemplary epoch representations which through light upon the historical continuities. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

The course can not be taken by Master students of the D-ARCH, who have already completed it within the Bachelor programme.

The lecture conveys historical knowledge about architecture and art as well as methodical knowledge as a preparation for the independent handling of historical sources and scientific literature. The main focus will be laid on the architecture of the Greco-Roman antiquity, the Middle Ages, the Renaissance and the era between Baroque, Enlightenment, and Modernity.

Urban Design I  
Competence in independent artistic thought and practice. Development of the criteria of theory and practice in the visual arts.  
Training of conscious perception of the architectonic space and the development of concepts of its basic definition.  

A. Spiro  
During the two semesters HS16/FS17 different aspects of the architectonic space and its possibilities for transposition into divers medias will be examined.  
How can a glossary of tools be used as a basis for reading cities and recognizing in them current trends and urban phenomena? The

D. Eberle  
The lectures discuss significant determining factors in architectural design based on five basic terms place, structure, shell, program and materiality. Several architectural examples are being examined within their specific societal context with an emphasis on the interrelation of architecture, science, culture and art.

H. Klumpner  
The lecture series will introduce tools for reading contemporary urban conditions, urban models and operational modes.  
Urban form cannot be reduced to the physical space. Cities are the result of social construction, under the influence of technologies, ecology, culture, the impact of experts and accidents. Urban unconcluded processes respond to political interests, economic pressure, cultural inclinations, along with the imagination of architects and planners and the informal powers at work in complex adaptive systems. Current urban phenomena are the result of an urban evolution. The facts stored in urban environments include contributions from its entire lifecycle. That is true for the physical environment, but also for non-physical aspects, the imaginary city that exists along with its potentials and problems and with the conflicts that have evolved over time. Knowledge and understanding along with a critical observation of the actions and policies are necessary to understand the diversity and instability present in the contemporary city and to understand urban form evolved to its current state. This lecture series will introduce urban knowledge and the way it has introduced urban models and operational modes within different concrete realities, therefore shaping cities. Urban knowledge will be translated into operational tools, extracted from cities where they have been tested and became exemplary samples, most relevant for providing the understanding of how urban landscape has taken shape as well as inspiration for future practice.

| 051-0159-00L | Urban Design I                                  | O    | 1    | 2V    | H. Klumpner, A. Brillembourg |
| Abstract    | The lecture series will introduce tools for reading contemporary urban conditions, urban models and operational modes. Urban design will be deciphered, presented as operational tools, extracted from cities where they have been tested and became exemplary samples, most relevant for providing the understanding of how urban landscape has taken shape as well as inspiration for future practice.  
| Objective   | How can a glossary of tools be used as a basis for reading cities and recognizing in them current trends and urban phenomena? The lectures series will produce a glossary of operational urban tools with collected urban knowledge that provides students with an 'improved' manual to navigate theories. Urban Stories is a lecture series that aims to amplify your repertoire of urban instruments and empowers you to read cities and to critically reflect on the urban environment. The course will approach a series of case studies, employing an analytical, research-based model for crosscutting scale, political, economical and social components. Through this lens, and with our toolbox, we aim to tell the fundamental story of our cities from today and provide information, analysis and knowledge to help students prepare for justifiable own contributions and interventions in the future. Also the aspect of knowledge transfer will be considered in order to sensibilize the students to understand how to operate in an international context.  
| Content     | How did cities develop into the cities we live in now? Which urban plans, instruments, visions, political decisions, economic reasonings, cultural inputs and social organization have been used to operate in urban settlements in specific moments of change? Which cities are exemplary in illustrating how these instruments have been implemented and how they have shaped urban environments? Can these instruments be transcribed into urban operational tools that we recognize within existing tested cases in contemporary cities across the globe? Urban form cannot be reduced to the physical space. Cities are the result of social construction, under the influence of technologies, ecology, culture, the impact of experts and accidents. Urban unconcluded processes respond to political interests, economic pressure, cultural inclinations, along with the imagination of architects and planners and the informal powers at work in complex adaptive systems. Current urban phenomena are the result of an urban evolution. The facts stored in urban environments include contributions from its entire lifecycle. That is true for the physical environment, but also for non-physical aspects, the imaginary city that exists along with its potentials and problems and with the conflicts that have evolved over time. Knowledge and understanding along with a critical observation of the actions and policies are necessary to understand the diversity and instability present in the contemporary city and to understand urban form evolved to its current state. This lecture series will introduce urban knowledge and the way it has introduced urban models and operational modes within different concrete realities, therefore shaping cities. Urban knowledge will be translated into operational tools, extracted from cities where they have been tested and become exemplary samples, most relevant for providing the understanding of how urban landscape has taken shape. Case studies will be identified to compile documents and an archive, that we use as templates to read the city and to critically reflect upon it. The presented contents are meant to serve as inspiration for positioning in future professional life as well as to provide instruments for valuable contributions and interventions.  
|             | The skrip can be downloaded from the student-server. |

Lecture notes

After a review of essential facts from the first year the course will examine the interplay of architectural concept and structural system by analyzing buildings of exemplary quality. The focus will be on the integration of specifics of structural systems made out reinforced concrete or steel into architectural design.

Objective
Students are enabled to integrate essential characteristics of structural systems made out reinforced concrete or steel into their architectural design.

Content
After a review of essential facts from the first year the course will examine the interplay of architectural concept and structural system by analyzing buildings of exemplary quality. The focus will be on the integration of specifics of structural systems made out reinforced concrete or steel into architectural design.

Prerequisites / notice

**EXERCISE**
After each lecture, students are asked to produce an exercise based on the presented tools. The format of the exercise is an A3 or an A4, according to the given template. Each student has one week to prepare each exercise, and it should be delivered, in form of a physical copy, in the next lecture. (Language: preferably English, German).

The Exercise tasks are a valuable preparation for the Exam (Exam only relevant for the "Jahreskurs" students) therefore it is highly recommendable to finalize all weekly Exercise tasks, as an individually conducted piece of work.

"Semesterkurs" (semester course) students from other departments or students taking this lecture as GESS / Studium Generale course as well as exchange students must submit a research paper, which will be subject to the performance assessment, "Bestanden" (pass) or "Nicht bestanden" (failed) as the performance assessment type, for "Urban Design I: Urban Stories" taken as a semester course, is categorized as "unbenotete Semesterleistung" (ungraded semester performance).

**EXAMINATION BLOCK 2**

Students are free to take the exam either in German or in French. They may choose between 851-0710-00L Introduction to Law for Civil Engineering and Architecture or 851-0709-00L Introduction to Civil Law (French).

The lectures are accompanied by a script (two semesters of the bachelor studies), that can be purchased at the chair for the history of urban architecture primarily in its existing three dimensional form as a complex human artefact. It also examines the architectural answers to the changing technical inventions and social practices. Consequently, the focus will be less on individual architects or buildings than on various themes that determined the architecture of the period.

Prerequisites / notice

Remarques
- Le cours de droit civil et le cours de droit public (2e sem.) sont l'équivalent des cours "Recht I" et "Recht II" en langue allemande et des exercices y relatifs.
- Les examens peuvent se faire en français ou en italien.
- Examens au 1er propédeutique; convient pour travail de semestre.

Abstract

The two-semester course offers an introduction to the history and theory of architecture from the industrial revolution up to now. Based on current questions a variety of case studies will be discussed.

Objective

The aim is to give an overview on crucial events, works of art, buildings and theories since the beginning of the 19th century up to today.

Content

Sont indispensables:
- le Code civil et le Code des obligations;
- Sont conseillés:
  - Nef, Urs Ch.: Le droit des obligations à l'usage des ingénieurs et des architectes, trad. Bovay, J., éd. Payot, Lausanne
  - Bollond, J.-P.: Manuel de droit, éd Statkine, Genève

Prerequisites / notice

Remarques

- Les examens peuvent se faire en français ou en italien.
- Examens au 1er propédeutique; convient pour travail de semestre.
The course target is to let the students gain an overview of a line of formative occurrences, works of art, buildings and theories from the early nineteen-seventies. The students should become sensitive for questions and problems in the field of history and theory and they should increasingly be able to relate their own praxis with historical research and conflicts which in turn helps to understand historical dynamics. The course “Lehrcanapé” (one hour) is part of the course and treats alternative methods of teaching and learning.

<tr>
<td></td>
<td>Architectural theory emerged as a product of the Renaissance worldview, which was both holistic and critical. Having developed alongside science, it shared the former's principles and premises. It aimed to explain the objective laws of beauty and to develop rules for their creation by architectural means. In the early twentieth century, modernism supplanted Classical architectural theory and attempted to replace it with the methods and axioms of the most cutting-edge branches of science, including engineering and psychology. Modernism's own principles were, however, soon condemned and rejected by its discontents. From the early 1970s onward, a variety of approaches have dominated architecture, none of them able to become its primary theory. Today, architectural theories no longer prescribe the rules of design. Instead, they offer solutions to the different problems that society poses for architecture, relying on methods and approaches of fields of inquiry that directly relate to these problems. In the course of the semester, we will seek to delineate this elusive space of contemporary architectural theory within the various intellectual contexts in which it operates in order to understand its role in architectural practice. The readings will introduce architectural theories written at different historic periods, while the lectures will situate them both theoretically and historically.</td>

### Architectural Design III: From the City to the House (D. Eberle)

- **ECTS:** 12
- **Type:** W
- **Hours:** 12U
- **Lecturers:** D. Eberle

**Abstract**
The design course is built on various exercises. During Fall Term, the students are concerned with the conversion and densification of existing building structures at three different sites in Zurich.

**Objective**
Conveying a way of thinking that is also able to understand complex contexts and act on various levels is one of the focuses of the chair. This networked thinking relates to praxis and educates the students to be competent architects. Achieving this goal requires a method that teaches a clearly structured, precisely formulated approach and communicates the simultaneity of complex tasks and processes.

**Content**
The design course is built on four exercises. Based on the existing buildings, the themes Place, Structure and Shell are being examined first separately and then combined in a final project. The extension and densification of existing building structures are being carried out at three different sites in Zurich; the new use is planned for work and living. The exercises are divided into a City Level and a House Level. At the City Level a group of students examines the three building sites according to each theme. At the House Level the students develop designs addressing the themes in groups of two.

### Architectural Design III: Constructed Nature (T. Emerson)

- **ECTS:** 12
- **Type:** W
- **Hours:** 12U
- **Lecturers:** T. Emerson

**Abstract**
Exercises will involve design and construction, from the definition of a concept to the execution of the detailed work. Work will include procedural methods for spatial designs through form, function, technology, and materials. To promote interdisciplinarity through integrated teaching.

**Objective**
Achieving the goal of competent architects requires a method that teaches a clearly structured, precisely formulated approach and communicates the simultaneity of complex tasks and processes.

**Content**
Exercises will involve design and construction, from the definition of a concept to the execution of the detailed work. Work will include procedural methods for spatial designs through form, function, technology, and materials. To promote interdisciplinarity through integrated teaching.

---

### Architectural Design III: Housing (A. Deplazes)

- **ECTS:** 12
- **Type:** W
- **Hours:** 12U
- **Lecturers:** A. Deplazes

**Abstract**
Systematic and methodical design and construction development. Full range from concept to detail. Fall semester highlights fundamentals on "collective housing", under the specific aspect of building depth. Discusses relations with current interdisciplinary sets of problems.

**Objective**
The target of the design work is to improve and widen the basic knowledge of domestic architecture and housing and also to get to the bottom of former ideas.

**Content**
At the beginning of our investigation, based on different depths of buildings (6 to 21m), we formulate first basic rules of supporting-, room- and local public infrastructure for apartments. Based hereon and still without context we design a idealtypic apartment building with apartments of different size. Only after catching the rules of the building systematically, the urbanistic context and the front of the building will be introduced into the design process. This approach to the design task allows a self-supporting research of structural and living specific questions, this without being distracted rashly from outer inherent necessities.

This studio will be conducted one single time in Fall 2016 as a collaboration between the Chilean architect Smiljan Radic and Christian Kerez. Burda (from Wikipedia, the free encyclopedia, 2016) Burda Style (formerly: Burda Moden) is a fashion magazine published in 17 different languages and distributed in over 99 countries. It was founded in 1950 by Aenne Burda and is published today by Hubert Burda Media. The magazine appears monthly and contains patterns to sew women’s and children’s clothes, at time also mens clothes.

burda (from Williams diccionario español-inglés inglés-español, 1991) burdo –da: adj coarse, clumsy, rough; f (naut.) backstay

Both contradictory notions of ‘burda’ will guide us through a semester that regards itself as a search for the textile, raw, ephemeral, adaptable, and sensual space. The students participating in the atelier will design three autonomous projects in various scales.

**Content**

Please register (www.mystudies.ethz.ch) only after the internal enrolment for the design classes (see http://www.einschreibung.arch.ethz.ch/design.php).

---

**Abstract** In the studio we will move between a landscape of ideas and the actual built landscape in East Germany, between visions and shrinking cities, between different social systems and layers of time with the goal of recovering interesting concepts from failed plans.

**Objective** Develop various analytical and notation techniques for understanding culturally/ideologically molded architectural landscape: theoretical discussion of the social and architectural types of socialism with visionary potential; critical evaluation of compiled instruments; designing relevant architecture through examination of East Germany.

**Content** "Draw from the heavens to the drawing board", this quote - the title of an essay collection by East German architect Herman Henselmann - speaks of the euphoria, the optimism of progress, and the belief in the messianic potential of architecture and city planning characteristic of the early years of the GDR (1). Particularly when it was a young socialist state, the hope reigned that a better and more equal society could be developed through urban planning and architecture. The many socialist utopias are products of this revolutionary thinking. As the state actually developed, however, an ever-greater disillusionment grew instead. The initial hope dimmed in the face of authoritarian government and economic mismanagement. Since reunification, consensus has been that the GDR's system and its social visions have failed - a condemnation that is now being questioned.

In the studio we will pursue the assumption that many of the hopeful utopian approaches and social attitudes upon which the socialist types were based could still be of interest today. In this sense, we will move between a landscape of ideas and the actual built landscape, between visions and shrinking cities, between different social systems and layers of time with the goal of recovering interesting concepts from failed plans.

The first step will be an archaeological investigation of the utopian fragments within the ruins of former visions, assembling an inventory of projects and socialist types with visionary potential. In a critical reflection from a contemporary perspective, the content of the architectural imprint of socialism is to be explored in order to find tools for dealing with today's territories of emigration and economic collapse.

In this way, could it be possible to develop a future for East Germany and elsewhere that doesn't put a false 'heaven' of growth and repopulation back on the drawing board, but rather, considerately and critically continues the past trajectory in a new light? Could we develop both visionary and pragmatic architectural interventions that enliven the landscape without actually imagining that it flourishes? (2)

Concurring with the closing of two big shipyards in the 1980s a transformation process started along the waterfront. Nowadays new
developments cover almost the entire shoreline of the IJ. Its central location right next to the central station, its proximity to the water and the
various areas abandoned by the former industries, make the waterfront an attractive development area and field of experimentation for
new actors and for the implementation of new uses. The planning vision of the ‘sprong over het IJ’ - the jump over the IJ is within reach but
the question what kind of city should emerge there is still open.
In our design studio we pursue the question of the future meaning of Amsterdam’s north based on the case study site of Draad en
Kabelfabriek (Draka). Urban design concepts should investigate the area in the context of a larger spatial vision for Amsterdam's
waterfront.
Please register (www.mystudies.ethz.ch) only after the internal enrolment for the design classes (see http://www.einschreibung.arch.ethz.ch/design.php).

Abstract
This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in
previous years. It involves the active participation of specialists from related disciplines (e.g. building structures, landscape architecture,
history of art and architecture, monuments conservation etc.).
Objective
The goal is to communicate a broad-based systemic knowledge base, methodologies and strategies, which helps to enable students to
evaluate complex urban design and planning problems and to synthesize their knowledge in an urban design project.
Content
Amsterdam Waterfront
Whether London, Boston or Copenhagen, the centers of cities move towards the water. Amsterdam too is looking for a new relationship
with its fast developing areas on the north-side of the estuary IJ, which separates Amsterdam’s north from its south.

Prerequisites / notice

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 93 of 1571
The politics and economics of renewable energy are society's contemporary topicality par excellence; a market-driven urgency around which some of the most unabashed politicized lobbying is performed.

However, the technological savvy of wind, solar, hydro, tidal, geothermal, and biomass energy hold - without exception - no fundamental spatial intelligence. These technologies are commonly applied onto the most efficient territories or structures available. The spatial output is residual and secondary. The juxtaposition of all these individual decisions clutters exponentially the limited space at hand. Moreover policy guidelines related to the spatial application of renewable energy are chiefly defensive, passive and reluctant in their ambition. Behind this political lassitude lies - amongst others - a fundamental shortage of spatial and architectural imaginations on how these new technologies can strengthen and steer near-future metropolitan landscapes.

051-1125-16L Architectural Design V-IX: Arrival "Stadtwald" Cable Car Stettbach-Zurich
W 13 credits 16U M. Sik

Abstract
Architectural design based on place, category, modification and built form.

Objective
This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines (e.g. building structures, landscape architecture, history of art and architecture, monuments conservation etc.).

Content
A new cable car will connect the public transport hub Stettbach directly with the new terminal station of the number 5 and 6 trams to the zoo. This calls for the design of a new type of terminal building with additional commercial spaces that can serve as an attractive center for every day and recreational activities.

The outdoor and landscape design includes arrival, parking and common spaces.

051-1129-16L Architectural Design: Apartment Building, Scale and City Shape (M. Peter/C. Dumont d’Ayot)
W 13 credits 16U M. Peter, C. Dumont d’Ayot

Abstract
This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines (e.g. building structures, landscape architecture, history of art and architecture, monuments conservation etc.).

Objective
Qualification to control the design process increasingly independent and with sole responsibility and to find to an individual design methodology and attitude.

051-1131-16L Architectural Design V-IX: Hermitage (GD Van Hee)
W 13 credits 16U M. J. Van Hee

Abstract
Each student individually designs a space as an alternative environment apart from the ordinary and the daily routine. The intervention reflects on the dramaturgy of the topography, on the verge between the sacred buildings of the hermitage like the Chapel of St. Verena or the St. Martin's Chapel and the secular buildings in the existing context of a beautiful gorge.

Objective
The aim of this term is to enable and assist students to take charge of their own design process. Our thematical focus lies on sacral and secular structures and on the integration of a project in the landscape. A small sized building or construction should be technically developed.

Content
For as long as there has been civilization, there have been people who want to get away from it. A hermitage usually refers to a place where a person lives for religious or ideological reasons in seclusion from society. In contrast to that way of life the idea of the 'ornamental hermits' or the 'garden hermits' enjoyed growing popularity in the English landscape gardens of the 18th century where they served mainly as entertainment to the high society.

In this semester we want to consider the role of the hermitage in a post-metaphysical world in order to reflect about nowadays retreats. We will work in the St. Verena Schlucht, a gorge that connects the city of Solothurn to the village of Rüttenen at the southern foot of the first Jura chain. The actual hermitage is an enclosed space at the end of an 800m long scenic pathway that leads through a gorge filled with pastoral romance typical for the late 18th century French romantic landscape gardening. Until this day the St. Verena Schlucht, with its steep forest slopes and its slow-flowing ditch, offers to tourists, to excursionists as well as to inhabitants of Solothurn a place for recreation in a landscape where borders between nature and architecture are vanishing.

051-1133-16L Architectural Design V-IX: Topic (N.N. Professor)
W 13 credits 16U to be announced

Abstract
The semester will start with the development of an urban vision in groups of six, which will then evolve into a proposition for a master-plan. The latter will be the base for individual projects, developed in groups of two. Working with references will be an important aspect of the studio: the typological collection of buildings gathered by the chair will provide the raw material for the own projects. Model photography will be the primary design tool, which will be professionally assisted be the photographer Roman Keller. A workshop will take place in Brussels during the second studio week, from the 22nd to the 24th of September. The trip and accommodation costs will be taken in charge by the chair.

051-1135-16L Architectural Design V-IX: Ljubljana, A Collection of Alpine Landscapes (Vogt)
W 13 credits 16U G. Vogt

Abstract
With each design semester the Chair of Professor Vogt is working its way around the Alpine arc with the thesis that it can be read as an urban Common Ground. The task of each design semester is to verify this thesis by focusing on a metropolitan region and enquiring as to its specific relationship with the Alps.
With each design semester the Chair of Professor Vogt is working its way around the Alpine arc with the thesis that it can be read as an urban Common Ground. The task of each design semester is to verify this thesis by focusing on a metropolitan region and enquiring as to its specific relationship with the Alps.

In the coming semester we shall be working with the urban territory of Ljubljana, which covers besides the high alpine landscapes (the Julian Alps, the Karavanks, the Kamnik Alps) three more alpine regions: the Dinarides (Kvarner), the Pannonian Basin and the Mediterranean Coast. Geographically almos the whole territory of Slovenia could be seen a part of Alps.

Though this supposed ubiquity of the Alps, the correlation to Ljubljana remains diffuse. This is linked to the geopolitical location of the region, which was constantly changing its territorial belonging to the neighboring great powers throughout history. Moreover, the emerging industrialization in the beginning of the century and the development of the transit axis were leading to population decrease in the high alpine area. This weakened their position compared to the lower districts considerably. Looking at major infrastructure projects that are planned like the Connecting Europe Facility (CEF), it may be assumed that this trend will continue. As a consequence, economic and living areas in Slovenia’s high Alps will soon «disappear» (Werner Bätzinger).

The task of the semester consists of the redefinition of the meaning and use of the alpine landscape ranging between extensification (landscape as a museum) and intensification (e.g. tourism, agriculture or energy production) with the purpose to establish a productive relation to the region of Ljubljana.

We understand design not as an end product but as a process. Our first step is to investigate Ljubljana’s large-scale relationships. A six-day long field trip complements this analytical gaze with a personal take on the area. Students then develop an individual programme as the foundation for their design. The proposed interventions can vary between urban planning and landscape scenarios and concrete architectural proposals.

Please register (www.mystudies.ethz.ch) only after the internal enrolment for the design classes (see http://www.einschreibung.arch.ethz.ch/design.php).

There will be a visit to Ljubljana 07.10.16 - 12.10.16. The contribution towards expenses will be 240 CHF.
Havana is a unique urban case study. Its strategic location in the Gulf of Mexico made Cuba one of the most important trading hubs of the Americas, a key node between the New and the Old World. At the center of the city is Havana's harbor. Through the centuries, it remained a crossroad of cultural exchange, generating wealth and a cosmopolitan flavor. With the imposition of the US embargo in 1960, however, as well as the economic difficulties that flowed from the dissolution of the Soviet bloc, international trade suffered immensely. The harbor transitioned slowly into a vast area lined with vacant factories, abandoned piers, and rusted cranes.

Today, with the relocation of all industrial activities to the newly opened port of Mariel on the outskirts of the city, and the possibility of the U.S. blockade being lifted at any moment, a wealth of investment is being directed at the port of Havana presenting a new challenge for this vast stretch of latent land in the center of the city. Because the political system means that the state owns all of the land, the direction of the development is up to them. Struggling between globalization, modernization, and the country's revolutionary socialist tradition, an alternative solution to the global commercially driven development is needed.

Can the city accept and direct this global investment while preserving its local cultural ideals? Will it learn from its specific experiences and develop its own creative urban solutions for a sustainable growth? Or will it replicate the usual mistakes of rapid urban development seen in many cities of today? Can we define this new urban agenda, together?

The Reader will be handed out at the first meeting and is in English only.

Abstract

The conceptual development of an architectural and urban design and its elaboration as a specific project. The appreciation of architecture as a cultural practice with a strong but unstable connection towards society i.e. the city and the history of the built environment. The ability to produce a critical contribution to a specific discourse within the discipline by successfully employing the discursive tools and techniques of architecture. Development of the capacity to work with the speculative reality of architecture.

Objective

To follow

Content

“Idyll and Ideology” is a series of critical studies that speculates about, while also interpreting, the structural inventory found within our towns and countryside.

051-1147-16L  W  13 credits  16U  M. Topalovic

Abstract

The studio series European Countryside investigates the terra incognita of the countryside, and its mutations. During the HS16 we will focus on Lac Léman and the concept of Metropolitan Countryside, investigating the possibilities of bringing the countryside and the metropolis closer together.

Objective

The semester offers an intensive fieldwork and studio program, with an opportunity for students to focus on large-scale territorial research and design projects. Architecture of Territory’s approach enables students to work with a wide range of methods and sources pertaining to territory, including ethnographic research, literature, architectural and urban design precedents, urban theory, photography and visual art.

Content

Students will work in groups of two. All projects will compose a common vision for Lac Léman. The work will be represented in the form of drawings, physical models and a book. All projects will be made public on Architecture of Territory website.

Architectural Design V-IX: Idyll and Ideology IV: A. Lehnerer

"Idyll and Ideology" is a series of critical studies that speculates about, while also reinterpreting, the structural inventory found within our towns and countryside.

The design project is rooted within the context of the discipline between the theory of architecture and the stories of the built environment - towns and countryside.

“Idyll and Ideology” is a series of critical studies that speculates about, while also reinterpreting, the structural inventory found within our towns and countryside.

The city as a cultural expression has always been the critical project of architecture. By focusing on individual elements that make up the whole, a precise architectural discussion can be developed about collective form. The design process describes the ideological reshaping of a constructed idyll and the related negotiation of its resulting contradictions. The outcome is a third typology between house and city.

The design project is rooted within the context of the discipline between the theory of architecture and the stories of the built environment - towns and countryside.

What are the benefits and potentials of agricultural land and nature for the contemporary metropolis? What are the new concepts of urban living, not only in the city, but in the extended metropolitan setting?

The city as a cultural expression has always been the critical project of architecture. By focusing on individual elements that make up the whole, a precise architectural discussion can be developed about collective form. The design process describes the ideological reshaping of a constructed idyll and the related negotiation of its resulting contradictions. The outcome is a third typology between house and city.

Lac Léman and its urban areas surrounding the lake and extending from the lakesides into the Rhone valley and up the slopes of Jura and Alps, will serve as the blueprint for the investigation of the Metropolitan Countryside. This is a territory where the high quality metropolitan living is embedded into the scenic landscapes of agricultural land and nature: the lake, the vineyards and the mountain slopes are not just a scenic urban backstage, but the key ingredients of the metropolis. The two poles of the “Léman City”, Geneva and Lausanne, define one of the most desirable international metropolises in the world, which owns its attractiveness to international institutions and businesses, and its high quality of life, precisely to the unique, countryside-like attributes of its urban landscape. Intrigued by this apparently productive contradiction, Architecture of Territory initiates a two-semester investigation on the area of Lac Léman. For autumn semester 2016, we will study the concept of Metropolitan Countryside, investigating the possibilities of bringing the countryside and the metropolis closer together:

What are the benefits and potentials of agricultural land and nature for the contemporary metropolis? What are the new concepts of urban living, not only in the city, but in the extended metropolitan setting?

The design project is rooted within the context of the discipline between the theory of architecture and the stories of the built environment - towns and countryside.

“Idyll and Ideology” is a series of critical studies that speculates about, while also reinterpreting, the structural inventory found within our towns and countryside.

The design project is rooted within the context of the discipline between the theory of architecture and the stories of the built environment - towns and countryside.

Students will work in groups of two. All projects will compose a common vision for Lac Léman. The work will be represented in the form of drawings, physical models and a book. All projects will be made public on Architecture of Territory website.

Architecture of Territory is looking for avid travellers and team workers with high motivation and independent position.
This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines (e.g., building structures, landscape architecture, history of art and architecture, monuments conservation etc.).

Objective

Qualification to control the design process increasingly independent and with sole responsibility and to find to an individual design methodology and attitude.

Architectural Design V-IX: Built Territories / Añana

W 13 credits 16U

J. M. Sánchez García

Salt Valley (J. M. Sanchez Garcia) ■

Abstract

"Built Territories Añana" explores the complementary relationship between territory and urban context, prompting students to create efficient structures for visitors and residents of Añana, but more importantly to engage in an ongoing discussion on how the construction of architecture informs cultural, social and physical landscapes.

Objective

1. Identify and analyze research resources that are adequate for the development of the project.
2. Acknowledge theoretical issues in order to develop a critical posture related to the design process.
3. Acknowledge the needs of inhabitants and translate them into a creative and sensible proposal.
4. Demonstrate advanced knowledge in representing architecture according to challenging existing conventions.
5. Defend creative proposals in reference to various contextual issues informing architectural design.

Content

The idea that humans are the main geological agent on Earth has been around for some time now, especially since in 2000 the atmospheric chemist Paul Crutzen coined the term Anthropocene to refer to the influence of human behavior on Earth's lithosphere in recent centuries.

The Salt Flats of Añana, in Northern Spain, were naturally formed in the Triassic Period as a result of a process known as diapiro, a type of geologic intrusion in which a more mobile and deformable material is forced into overlying rocks, allowing the salty water of the sea to emerge in this inland valley of the Basque Country. Romans are believed to have operated this landscape industrially, though the first documented use dates back to 822, when Añana was started to be used with economic purposes. The landscape commenced then to be transformed in order to maximize the surface area exposed to the sun, turning the valley into a territory of platforms, subtly supported underneath by an architecture of timber-frame structures. At the time of maximum splendor, there were in the valley more than five thousand platforms for evaporation, occupying an area of 95,233m². Adjacent to the exploitation, the village of Añana was progressively built as a satellite rather than as a center, turning the salt flats into the very civic space of the valley.

'Built Territories Añana' explores the complementary relationship between territory and urban context, prompting students to create efficient structures for visitors and residents of Añana, but more importantly to engage in an ongoing discussion on how the construction of architecture informs cultural, social and physical landscapes. Due to the economic development of the region over the last decades, the population of Añana has diminished. However, the role of this territory as the definer of the collective memory of the site and its society remains untouched. Far from a nostalgic vision, the salt flats behave as an elastic territory that can shrink or expand at demand.

Thematic and methodic focus:

- Design architectural landscapes taking into account a wide range of urban, socio-cultural, economic and historical issues that are inherently connected with architectural practices.
- Recognize environmental and landscape issues that are relevant to contemporary architectural agendas.
- Consider and negotiate structural, material, functional, interior and exterior space aspects as well as all urban issues that concern the project simultaneously.
- Represent idea(s) appropriately using effective means of presentation, including digital tools.

Research Work: The Seminar Week features visits to Añana + 6 built territories in Spain. In the first three weeks of the semester each student will research and compare Añana + 1 built territory, focusing on the way the encounters between city and territory, nature and artifice, topography and construction are addressed in different scales and contexts. This will help students understand the transformation of these territories, their construction and geometry as technical and economical rather than stylistic phenomena, irrespective of the particular time frame of each site.

Architectural Design V-IX: Architecture & Building Structures: Bridges! A Circle Road for Egisau

W 13 credits 16U

J. Schwartz, M. Beckh, A. Deplazes, D. Eberle, M. Schrems

Abstract

The course will focus on the constructive and structural challenges of the realization. Main topic is the quality of the architectural space in the area between physical necessity and the freedom of design. The competences of all elective courses and main courses have been merged into a single, extensive course.

Objective

As a didactic target a profound debate on supporting structure, on construction and on room creation is declared.

Content

In consequence of the historic fact that the builder's profession has been divided into the professions of an engineer and an architect, a bisection of fields came up which reflects in the various types of building tasks. Hence, nowadays engineers realize a number of structures without considering an architect's expertise. However, the functional expertise of the engineers should be merged with the design ideas of architects. That opens a field between freedom of design and functional/technical requirements.

As such buildings characterize our environment exceedingly and represent a substantial part of it, a high sophisticated design is very important for our society. Therefore structural aspects are evaluated to their spatial and tectonic qualities. For this reason the course does not deal with classic architectural design tasks. The focus is on engineering structures.

Autumn Semester 2016

Page 98 of 1571
The integrated focal work has to accompany the design, though the focal work has to be an autonomous work. The formal framework needs to be discussed with the assistants.

Work on a current design project with focus on construction.

A case study with a clear topic and a clear formulation of a question. The findings and the discoveries shall be part of the base of the design.

The integrated focal work has to accompany the design, though the focal work has to be an autonomous work. The formal framework needs to be discussed with the assistants.

Work on a current design project with focus on construction.

For students who attend the architectural design only.

The integrated design is organized and operated by both chairs engaged in close cooperation.

### Integrated Discipline Building Physics (J. Carmeliet)

**W** 3 credits 2U  J. Carmeliet

- **Objective**: The goal is that the students learn to evaluate hygrothermal performance of the building in the different stages of the design process. The students learn to evaluate and optimize their design, to choose adequate wall solutions and materials, to design details from a perspective of hygrothermal performance.
- **Abstract**: Hygrothermal analysis of a building wall component. Detailing regarding hygrothermal behaviour.
- **Prerequisites / notice**: Interested students may enroll at mystudies.ethz.ch and by email to the chair until the end of the second week of the semester. The topic and the design chair should be mentioned in this email.

### Integrated Discipline CAAD (L. Hovestadt)

**W** 3 credits 2U  L. Hovestadt

- **Abstract**: This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines (e.g. building structures, landscape architecture, history of art and architecture, monuments conservation etc.).
- **Objective**: Today architectural sketching without the employment of information technologies is only meaningful in exceptional cases. CAD plans, three-dimensional rendering, CNC model construction etc. are pervasive media for the development and presentation of architectural drafts. This elective course tries to follow questions on a new plateau: Which are the common traits of current design methods and modern information technologies and how can they symbiotically lead to a new architectural expressions in formal and constructional regard. Draft-accompanying, these questions are pursuit on a theoretical level, in order to be able to find its expression in the concrete draft. Ascertained technical applications are not ment to be of priority.
- **Content**: The integrated discipline addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines (e.g. building structures, landscape architecture, history of art and architecture, monuments conservation etc.).
- **Lecture notes**: http://www.caad.arch.ethz.ch
- **Literature**: http://www.caad.arch.ethz.ch

### Integrated Discipline Building Systems (A. Schlüter)

**W** 3 credits 2U  A. Schlüter

- **Abstract**: The integrated discipline Building Systems addresses specific questions about building systems and system concepts. Energetic analysis and system designs are carried out on the students individual design projects.
- **Objective**: The course aims for an ability to understand concepts of sustainable building technology coherently integrated into an architectural design. The focus lies on LowEx-systems.
- **Content**: The integrated discipline Building Systems addresses specific questions about building systems and system concepts. Energetic analysis and system designs are carried out on the students individual design projects.
- **Lecture notes**: Skripts are specific to the design task and distributed at the beginning of the course.
- **Prerequisites / notice**: Please contact the tutor as soon as possible at the beginning of the semester; we will set the task according to your chosen design studio.

### Integrated Discipline Architecture and Building

**W** 3 credits 2U  S. Menz

- **Abstract**: This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines.
- **Objective**: Alongside a discussion of the basic principles, trends and terminologies, a closer look will be taken at each topic.
- **Content**: This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines.
- **Literature**: Sacha Menz (Hrsg.), Drei Bücher über den Bauprozess, vdf Hochschulverlag an der ETH Zürich, 2009

### Integrated Discipline Structural Design (J. Schwartz)

**W** 3 credits 2U  J. Schwartz

- **Abstract**: This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines.
- **Objective**: Understanding of the importance of the structural system for architectural design and integration of structural thinking into the design process.
- **Content**: This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from building structure.
- **Prerequisites / notice**: Grant by lecturer is required.

### Integrated Discipline Architecture and Digital Fabrication (F. Gramazio/M. Kohler)

**W** 3 credits 2U  F. Gramazio, M. Kohler

- **Abstract**: The Integrated Discipline deals with the interrelation between material and algorithmic design. The direct control of production data opens up new possibilities for design strategies that are exempt from the limitations of standard CAD software. The Integration of process, function and design allows for a new approach to the production of architecture.
- **Objective**: Data and material, programming and construction are interwoven. This synthesis is enabled by the techniques of digital fabrication, which allows the architect to control the manufacturing process through design data. Material is thus enriched by information; material becomes informed. In the future, architects ideas will permeate the fabrication process in its entirety. This new situation transforms the possibilities and thus the professional scope of the architect.
Content

051-1227-16L Integrated Discipline Information Architecture (G. Schmitt) W 3 credits 2U G. Schmitt

Abstract
This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates sociological questions and the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines (e.g. building structures, landscape architecture, history of art and architecture, monuments conservation etc.).

Objective
Apart from learning about and experiencing Information Architecture, the course also introduces research and management skills that will distinguish the future trained ETH architect.

Content
This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in the integrated discipline. The content is related to the design process and is defined accordingly to the individual project.

051-1231-16L Integrated Discipline Sociology (C. Schmid) W 3 credits 2U C. Schmid

Abstract
This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates sociological questions and research methods.

Objective
To consider the social context in the design process!

Content
This part of the curriculum addresses design work in different areas of architecture and urbanism and integrates the knowledge acquired in previous years. It involves the active participation of specialists from related disciplines (e.g. building structures, landscape architecture, history of art and architecture, monuments conservation etc.).

051-1233-16L Integrated Discipline Architecture and Urban Design (C. Christiaanse) W 3 credits 2U K. Christiaanse

Abstract
The integrated focal work has to accompany the design, though the focal work has to be an autonomous work. The formal framework needs to be discussed with the assistants.

Objective
An urban design case study with a clear topic and a clear formulation of a question. The findings and the discoveries shall be part of the base of the design.

Content
The integrated focal work has to accompany the design, though the focal work has to be an autonomous work. The formal framework needs to be discussed with the assistants.

051-1235-16L Integrated Discipline Landscape Architecture (G. Vogt) W 3 credits 2U G. Vogt

Abstract
Enrolment only with contemporaneous enrolment of the design course of Prof. Christiaanse.

Objective
Learning objectives: introduction into landscape architectural issues and design approaches; designing in urban planning dimensions.

Content
Subject by arrangement

051-1237-16L Integrated Discipline Landscape Architecture (C. Girot) W 3 credits 2U C. Girot

Abstract
Design concepts ranging from architectural objects to urban planning are developed together with the discipline of landscape architecture. Depending on the task and hand different themes are investigated. The goal of the integrated discipline is to develop design solutions of a specific topic in landscape architecture, which have to be incorporated into the overall design submission.

Objective
Students gain an insight into the integrated discipline of design in architecture together with landscape architecture.

Content
Design concepts ranging from architectural objects to urban planning are developed together with the discipline of landscape architecture. Depending on the task and hand different themes are investigated. The goal of the integrated discipline is to develop design solutions of a specific topic in landscape architecture, which have to be incorporated into the overall design submission.

Prerequisites / notice
In order to complete the subject Integrated Discipline it is necessary that students apply at the Chair of C. Girot within the first three weeks of the semester. Thereafter no applications will be processed.

Learning aids: Pamphlets Design of the Chair of Prof. Girot. www.girot.arch.ethz.ch

051-1245-16L Integrated Discipline Structural Construction (P. Block) W 3 credits 2U P. Block

Abstract
Implementation into architectural design of the gained structural construction knowledge, in order to find best possible and holistic solutions for a construction task.

Objective
The integrated course achievement is allocated to the design course and is fulfilled under the supervision of professionals out of the field of structural teaching. The main focus, the form and the scope of the thesis are specified in agreement with the chair.

Content
The integrated course achievement is shown within the design course of Prof. Christiaanse!

Prerequisites / notice
Voraussetzung ist die Anmeldung bis zum Ende der ersten Semesterwoche unter mystudies.ethz.ch und per E-Mail an den Verantwortlichen.

Die Schlusspräsentation der Semesterarbeit erfolgt jeweils am Donnerstag der letzten Semesterwoche.

Abstract
In the integrated discipline the architectural design will be juxtaposed by artistic thinking and working. The conceptional approach will in particular be rendered more precise in the dialogue between architectural and artistic methods. There is also a focus on the technique of describing the context precisely.

Objective
Art is the discipline that is constantly creating new realities of terminology and perception. The purpose of the integrated discipline is to use this knowledge, that is produced by art, and to concern it by making design decisions.

Content
A systematic procedure for every step in the design will be supported in the integrated discipline, from the generation of new ideas through to detailing and up to presentation. Reflections on method flow into the design in an integrated manner. There will also be an emphasis on giving expression to the results of the design process using artistic means. In addition a publication should be compiled, presenting the conceptual steps developing the design.

Prerequisites / notice
Application for the coursework with the lecuturer: Nikolai von Rosen, vonrosen@arch.ethz.ch

051-1251-16L Integrated Discipline Life Cycle Analysis W 3 credits 2U R. Hischier, D. Hebel

Abstract
Implementation into architectural design of the gained structural construction knowledge, in order to find best possible and holistic solutions for a construction task.

Objective
The integrated course achievement is allocated to the design course and is fulfilled under the supervision of professionals out of the field of structural teaching. The main focus, the form and the scope of the thesis are specified in agreement with the chair.

Content
The integrated course achievement is shown within the design course of Prof. Christiaanse!

Prerequisites / notice
Voraussetzung ist die Anmeldung bis zum Ende der ersten Semesterwoche unter mystudies.ethz.ch und per E-Mail an den Verantwortlichen.

Die Schlusspräsentation der Semesterarbeit erfolgt jeweils am Donnerstag der letzten Semesterwoche.

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 101 of 1571
The Integrated Discipline LCA is based on the core idea of the overall design task - the thinking of a project within its complete life cycle. The method of LCA allows to quantify the environmental sustainability of different life stages of a building (raw materials - construction - operation - decommissioning) and thus recognize their relevance to each other as well as present them clearly.

Objective
Introduction to the topic of sustainability and teaching of fundamental method of life cycle assessment as well as its application in architecture and construction. Practical use of these method in a simplified form to assess your own planning activities within the parameters of the design studio.

Content
The Integrated Discipline LCA is divided into two phases - the first phase will conveys the methods of LCA through a mix of lectures, examples and an exercise, in order to be applied in the second phase in a simplified, yet meaningful manner in close connection with the central task of the design studio. In the center of the 2nd exercise is the specific design and constructive approach of the individual student group. Building on there design, the results of exercise 2 should be prepared so that they are suitable for integration into the final presentation wall. For this exercise should be seen as part of the overall task and relevant input for the whole semester.

Abstract
The seminar week is obligatory for students of all semesters. There are many and varied study contents.

Objective
The students will be enabled to discuss narrowly formulated factual questions in small groups and in direct contact with the professors.

GESS Science in Perspective

Abstract
The integrated focal work has to accompany the design, though the focal work has to be an autonomous work. The formal framework needs to be discussed with the assistants.

Objective
Work on a current or a passed design project in a large scale.

Content
The integrated focal work has to accompany the design, though the focal work has to be an autonomous work. The formal framework needs to be discussed with the assistants.

► Major Courses

Major courses deal with architectural problems and questions in relation to other fields and they enable students to complete their expert knowledge and their theoretical know-how apart from the architectural design courses. Details of performance assessments are defined in Art. 28 of the 2011 Master curriculum D-ARCH.

Abstract
The lecture covers the time of the 20th century and describes with theories, projects and implemented plantings the history of the modern city. The lectures emphasizes on the historical planings and methods and presents each specific urban development within a broader context.

Objective
This course analyzes the history of urban architecture primarily in its existing three dimensional form as a complex human artefact. It also explores the inspirations that prompted the creation of this artefact: philosophical and religious concepts, social conditions, property relationships and the mechanisms that exploit the economics of real estate and the influence of building technology. Intellectual, literary or artistic modes of thought will also be assessed with regard to their impact on urban development. Urbanism has its own distinctive approach as a discipline, but it is also clearly responsive to the influence of related disciplines. Study is made of actual cities and urban expansion plans which are in the process of implementation, as well as unrealized projects and visions of the future. These projects sometimes illustrate ways of thinking that are equal to, or clearer than, actual urban situations.

Content
The lecture which will be hold only in one semester includes the developments of the 20th century

1. Le Corbusier: theories, visions and clearcuts in the name of the autorité
2. The United States in the Jazz Age: Between Metropolis of Tomorrow and Broadacre City
3. Italy in the Fascist Era: Monumental ensembles and new town between assiduousness of modernization and obsession of representation
4. Urban design under totalitarian regimes: The architects of the “Tausendjährige Reich” and the “engineers of luck” of the Soviet Union of Stalin
5. Coming to terms with the past and the Cold War: Reconstruction in the two German states
6. The myth of the human scale: the 1950s in Spain, Great Britain, Scandinavia and Italy
7. Postwar Experiments: Rationalistic classicism in France
8. Two new towns in the 20th century: Chandigarh and Brasilia
9. Fictions and visions: The international utopia of the city
10. The second conquest of the North American territorium: The automobile and the city in the USA
11. Analysis, analogy and renewal: The adventure of the typological city

Lecture notes
To each lecture an overview is listet within a script, that can be purchased at the chair for the history of urban design (HIL D 75.2) at the price of CHF 25.-. The script serves as an auxiliary means to the attended lecture compiling the most important illustrations showed and the names and dates of the buildings and its builders along with a short introductory note. Aside this script the chair offers the Quellentextbände (sourcetexts) which help to extend the knowledge of theoretical discourses in the field of urban design. For the master program the institute offers one volume of texts at the price of CHF 5.-. The script is in German, the Quellentextbände are reprinted in their original languages.

Literature
Further recommended literature to consult is listet within the script.

"Design and Building Process MBS" is a brief manual for prospective architects and engineers covering the competencies and the responsibilities of all involved parties through the design and building process. Lectures on twelve compact aspects gaining importance in a increasingly specialised, complex and international surrounding.
Objective
Participants will come to understand how they can best navigate the design and building process, especially in relation to understanding their profession, gaining a thorough knowledge of rules and regulations, as well as understanding how involved parties' minds work. They will also have the opportunity to investigate ways in which they can relate to, understand, and best respond to their clients' wants and needs. Finally, course participants will come to appreciate the various tools and instruments, which are available to them when implementing their projects. The course will guide the participants, bringing the individual pieces of knowledge into a superordinate relationship.

Content
“Design and Building Process MBS” is a brief manual for prospective architects and engineers covering the competencies and the responsibilities of involved parties through the design and building process. Twelve compact aspects regarding the establishes building culture are gaining importance in an increasingly specialised, complex and international surrounding. Lectures on the topics of profession, service model, organisation, project, design quality, coordination, costing, tendering, construction management, contracts and agreements, life cycle, real estate market, and getting started will guide the participants, bringing the individual pieces of knowledge into a superordinate relationship. The course introduces the key figures, depicts the criteria of the project and highlights the provided services of the consultants. In addition to discussing the basics, the terminologies and the tendencies, the lecture units will refer to the studies as well as to the practice: Teaching-based case studies will compliment and deepen the understanding of the twelve selected aspects. The course is presented as a moderated seminar to allow students the opportunity for individual input: active collaboration between the students and their tutor therefore required.

Prerequisites / notice
The three blocks of the course are related to the lecture «The history of the architecture of the city». The course can be attended in two modes, either in combination with the above-mentioned lecture or independently as a single course. The entire course is held in german.

051-0515-16L
Building Physics IV: Urban Physics

Abstract
Urban physics: wind, wind comfort, pollutant dispersion, natural ventilation, driving rain, heat islands, climate change and weather conditions, urban acoustics and energy use in the urban context.

Objective
- Basic knowledge of the global climate and the local microclimate around buildings
- Impact of urban environment on wind, ventilation, rain, pollutants, acoustics and energy, and their relation to comfort, durability, air quality and energy demand
- Application of urban physics concepts in urban design

Content
- Climate Change. The Global Picture: global energy balance, global climate models, the IPCC process. Towards regional climate scenarios: role of spatial resolution, overview of approaches, hydrostatic RCMs, cloud-resolving RCMs
- Urban micro climate and comfort: urban heat island effect, wind flow and radiation in the built environment, convective heat transport modelling, heat balance and ventilation of urban spaces - impact of morphology, outdoor wind comfort, outdoor thermal comfort
- Urban energy and urban design. Energy performance of building quarters and cities, decentralized urban energy production and storage technologies, district heating networks, optimization of energy consumption at district level, effect of the micro climate, urban heat islands, and climate change on the energy performance of buildings and building blocks.
- Wind driving rain (WDR): WDR phenomena, WDR experimental and modeling, wind blocking effect, applications and moisture durability
- Pollutant dispersion, pollutant cycle: emission, transport and deposition, air quality
- Urban acoustics. Noise propagation through the urban environment, meteorological effects, urban acoustic modeling, noise reduction measures, urban vegetation

Building Process: Economy

W 2 credits 2G S. Menz, H. Reichel

Abstract
The demonstration of economic considerations within the design and construction process of buildings is the main focus of the diploma elective subject.

Objective
To grasp the coherences of costs, income and income return.

Content
The demonstration of economic considerations within the design and construction process of buildings is the main focus of the diploma elective subject. Alongside determining basic principles, case studies play an important role in teaching. The economic factors of building construction are examined and the specific decision process is simulated.

The case studies in the lectures as well as the processing of individual topics within the framework of elective work permit and require students active participation.

Theory of Architecture II: Architectural Theories of the 20th Century Today

W 2 credits 1V M. Gnehm

Abstract
The lecture course discusses the relevance of 19th- and 20th-century theories of architecture for present-day architectural practice.

Objective
Understanding of historical and political contingencies of theoretical issues in architecture.

Content
The lecture course, divided into two semesters, discusses theories of architecture of the last two centuries in view of current architectural practice. Theoretical issues will be analysed in context of their historical contingencies, present-day buildings confronted with historical ones. Spring semester (Architectural theories of the 19th century today) and autumn semester (Architectural theories of the 20th century today) can be attended independently. During autumn semester, topics include urbanism; organic architecture; modern architecture; technicism; anthropology; semiotics and structuralism; deconstruction, postmodernism, post-structuralism; Marxism and critical regionalism; globalisation and postcolonialism; anthropology and material culture.

**Abstract**: This course introduces students to the experimental exploration of space and structure, focusing on the use of modern software systems.

**Objective**: The course aims to provide students with a deep understanding of the structural aspects of architecture.

**Content**: The course will focus on the integration of structural and design concepts, including the use of modern software systems.

---

## 063-1357-16L Digital Urban Simulation

<table>
<thead>
<tr>
<th>W</th>
<th>4 credits</th>
<th>4G</th>
<th>E. Tapias Pedraza</th>
</tr>
</thead>
</table>

**Abstract**: This course focuses on the urban design and simulation of cities, using modern computational tools.

**Objective**: The course aims to provide students with a deep understanding of the design and planning of urban spaces.

**Content**: The course will focus on the use of modern software systems for the simulation of urban spaces.

---

## 063-0311-16L Transitional Periods: Political Iconology - Architecture

<table>
<thead>
<tr>
<th>W</th>
<th>1 credit</th>
<th>1V</th>
<th>M. Gnehm</th>
</tr>
</thead>
</table>

**Abstract**: This course focuses on the political iconology of architecture in Central Europe during the 1450-1800 period.

**Objective**: The course aims to provide students with a deep understanding of the political and cultural context of the period.

**Content**: The course will focus on the analysis of various architectural styles and their political implications.

---

**Data**: 06.01.2019 12:56  Autumn Semester 2016  Page 105 of 1571
The lecture course discusses issues of architecture as a bearer of political meaning in central Europe from 1450 to 1800.

Understanding of political contingencies in architecture and its history.

The notion "central Europe" is a highly politicised geographical term in historiography. During the period in question (1450-1800) the history of central Europe is primarily the history of the Holy Roman Empire and the House of Habsburg. Although the huge area was shaped by the Habsburg idea of empire, it was characterized by the particularistic sovereignty of the many territorial lords. Religious wars further complicated the situation. The lecture course analyses with regard to political and historical changes to what extent secular and sacred buildings in Germany, the Czech Republic, Croatia, Poland, Hungary, Switzerland, and Austria could assume functions as a bearer of political meaning.

How can Behavioral and Cognitive Science inform architecture? In this project-oriented course, students are introduced to cognitive and analytical methods to evaluate their design projects. Existing theories are introduced and complemented with hands-on sessions, in which students learn how to implement a range of methods. The course is tailored for students from relevant design studios.

Taking the perspectives of the end user (occupants and visitors) is vital for a human-centered design approach. Students will learn about relevant theory and methods in cognitive science and environmental psychology that can be used to address human cognitive and behavioral needs in built environments. The foundations of environmental psychology and human spatial cognition will be introduced. A focus of the course will be on how people perceive their surroundings and orient in space. Students will learn about a range of methods including real-world observation, and methods of architectural analysis such as space syntax. Students will also be exposed to simulation design in real, virtual reality experiments, and eye-tracking. Students will reflect the roles of designers and other stakeholders with respect to human-centered design as well as an evidence-based design perspective. The course is tailored for students from a relevant design studio. Upon registering, students should send an email about their design studio to b emo@gess.ethz.ch. As an alternative to obtaining D-GESS credit, architecture students can obtain course credit in "Vertiefungsfach" or "Wahlfach".

This seminar will investigate intersections between architecture and climate change, one of the defining phenomena of our age. We will begin to map out the spectrum of manners in which architecture already engages with this vast and highly unsettling topic as well as how they might be more fully interrogated, invented, and instituted. For any questions, please contact Dr. Emily Eliza Scott (emily.scott@gta.arch.ethz.ch).

This seminar will investigate intersections between architecture--as a practice, set of objects, and research orientation--and climate change, one of the defining phenomena of our age. The discipline of architecture has been slow to engage with the vast and highly unsettling topic of climate change in ways beyond the technical (e.g., new materials, efficiency standards) despite the fact that issues of a social, political, economic, ethical, and even existential order are also, if not foremost, at root and at stake. Our own class discussions will indeed wrestle with a set of unwieldy and interrelated questions, including: At what scales does architecture intersect with climate change? Are planetary and highly local scales newly entwined and, if so, how might architecture respond to and elucidate this condition? Which skills do architects bring to the table, and what is their revised role, in light of this accelerating and encompassing phenomenon? Does climate change demand a reimagining of the field? What would architecture look like that, rather than sheltering us from our surroundings, instead served as an interface between the two--orienting itself toward the human and nonhuman at the same time?

With a focus on the contemporary but eye to the recent past, we will begin to map out the spectrum of manners in which architecture has already engaged with climate change as well as how these might be more fully interrogated, invented, and instituted.

Class will meet for three hours each week, comprising a lecture, discussion, and student presentations. Over the course of the semester, there will also be multiple inputs by guest speakers, a field trip, and graded exam.

This seminar will investigate intersections between architecture--as a practice, set of objects, and research orientation--and climate change, one of the defining phenomena of our age. With a focus on the contemporary but eye to the recent past, we will begin to map out the spectrum of manners in which architecture has already engaged with climate change as well as how these might be more fully interrogated, invented, and instituted.

The European spatial policy agenda includes a discussion of how European spatial policy is made and by whom, how they might be more fully interrogated, invented, and instituted. Evidence-Based Design

Keeping the general aim of exploring the European dimension of spatial planning in mind, the specific course learning objectives are as follows:
- to interpret the history of spatial planning at the transnational scale
- to understand and explain the content of the European spatial policy agenda
- to describe and analyse the role of territorial cooperation in making European spatial development patterns and planning procedures
- to discuss the changing role of planners and evaluate the ways of their engagement in European spatial policy-making

Evidence-Based Design

For further information, including literature, see: http://www.ursprung.arch.ethz.ch/lehveranstaltungen

All lectures, readings and discussions will be held in English. If you wish to participate in the course, attendance at this first meeting is compulsory. For any questions, please contact Dr. Emily Eliza Scott (emily.scott@gtc.arch.ethz.ch).

The documents for the lecture will be provided at the moodle, https://moodle-app2.let.ethz.ch/course/view.php?id=2298.
The course deals with spatial phenomena at the interface of film and architecture. The alternating influence of these two media will be analyzed, the dispositions of perception and effect will be compared and thus will sharpen the view for a architectural way of looking at space.

The objective of the course is twofold: On the one hand, students will get to know and to apply a critical approach to architecture by means of such media as oral discourse, written reviews, and the image as a tool of criticism. On the other hand, the practice of architectural criticism itself shall be reflected upon by reading and discussing theoretical and historical texts on the subject.

The seminar is structured in three sections. In a first step, theoretical foundations will be established based on immediate spatial experience. The second phase will include site visits of selected buildings in order to develop a critical vocabulary based on immediate spatial experience. The third part will be devoted to the craft of writing; students will be encouraged to develop their own arguments and hold a public discussion.

Lecture notes will be handed out at the beginning of the semester.

**SPACIAL CONCEPTS IN FILM AND ARCHITECTURE**

**Seminar Architectural Criticism: Can Images Build Cities? Development Zones in the Limmattal**

**Number**: 051-0169-16L

**Spatial Concepts in Film and Architecture (Prof. A. Gigon/M. Guyer)**

**Number**: 051-0173-16L

**Title**: Spatial Concepts in Film and Architecture (Prof. A. Gigon/M. Guyer)

**Type** W

**ECTS**: 1 credit

**Hours**: 1V

**Lecturers**: D. E. Agotai Schmid, M. Bächtiger Zwicky

**Abstract**

The course deals with spatial phenomena at the interface of film and architecture. The alternating influence of these two media will be analyzed, the dispositions of perception and effect will be compared and thus will sharpen the view for a architectural way of looking at space.

**Objective**

The examination of filmic space situations and performance discloses new perceptions of architecture which will be studied on behalf of film analyses and experimental topics. During the course space-effective creative means such as editing or framing will be introduced and discussed under perceptive aspects. Mediality within spatial perception can thus be integrated into a development of cultural history and leads towards a conception which goes beyond the limits of architecture and stimulates new processes of design.

**Content**

New perceptions of architecture are studied on behalf of film analyses and experimental topics. During the course space-effective creative means such as editing or framing will be introduced and discussed under perceptive aspects. Mediality within spatial perception can thus be integrated into a development of cultural history and leads towards a conception which goes beyond the limits of architecture and stimulates new processes of design.

**Performance and Intervention**

**Number**: 051-0193-16L

**Title**: Performance and Intervention

**Type** W

**ECTS**: 2 credits

**Hours**: 2U

**Lecturers**: S. Keller Roca

**Abstract**

The medium of performance art is the human being, whose voice and body send out messages into surrounding society. Performance art attempts to create an awareness of how such messages are sent and received. We will examine the significance of speech, posture, clothing and movement using selected examples from performance art.

**Objective**

Interpersonal relationships are regulated by political, legal, economic and cultural structures which are given representative physical form by architecture. Intervention art critiques the relationship between social structure and built-up space. We seek to develop ways of intervening in situations in which we ourselves are implicated, raising questions about the relationship between architecture and social environment.

**Content**

The medium of performance art is the human being, whose voice and body send out messages into surrounding society. Performance art attempts to create an awareness of how such messages are sent and received. We will examine the significance of speech, posture, clothing and movement using selected examples from performance art.

**Prerequisites / notice**

Only for master students, otherwise a special permission by the lecturer is required.
Participants will analyze the motivations, strategies, and technical methods of artists and photographers. These analyses will also include structure and/or strengthening of the capability to express oneself in writing on a journalist level - effortlessly, flexibly and easily, thus against the background of my self-developed ten-line-format we are going to discover thematically partly free, partly architecture related applications and understand theoretical and practical aspects of photography from fine arts, architecture and society.

The department of Architecture and Fine Arts has a 3D-Bodyscanner available for the digitalization of persons and objects, and is applying and understanding theoretical and practical aspects of photography from fine arts, architecture and society.

The aim of the course is to reach a higher competence level of the media through applying cultural techniques of photography. Through critical discussions and analyses of the medium, participants will develop their concept of photography and confront its theoretical and practical challenges.

Participants will analyze the motivations, strategies, and technical methods of artists and photographers. These analyses will also include the effectiveness and the history of reception of the given work or artist. Based on practical examples, theories of photography will be applied, i.e. through discussing reference, reproducibility, image time, etc.

For participation a motivation letter has to be handed in until Friday 16th September 2016, 12:00 noon, to send to Mr. T. Wootton, Email: wootton@arch.ethz.ch.

Places are limited. Enrolment by agreement with the lecturer. Please Motivation letter to be sent until 10.9.2015 an Wirz Mirjam <wirz@arch.ethz.ch>.

For participation the requirement is to have a motivation letter addressed to the lecturer. Application for the course with the lecturer also via e-mail: stefan.keller@arch.ethz.ch.

The seminar enables students to work out concise and coherent texts of high linguistic expression to various topics within very short time. The seminar aims at providing access to the prelinguistic space of artistic thinking and agency, in order to be able to observe the artists in their immediate working process. This space can only be entered if we successfully leave all layers of mediation behind us and cease to force an understanding.

preserves its artworks. We listen to the various protagonists of this space - cultural agents in civil service institutions, art mediators, critics, curators, gallerists, custodians; for in this space surrounding the prelinguistic one, nothing is left to chance.

After a period of training and practice, participants are asked to develop ideas and concepts for their own projects. These concepts should be used to lead and expand the system and the possibilities of its application. The process of readjustment and its realization will be a continual part of developing the individual projects.

The seminar enables students to work out concise and coherent texts of high linguistic expression to various topics within very short time. The seminar aims at providing access to the prelinguistic space of artistic thinking and agency, in order to be able to observe the artists in their immediate working process. This space can only be entered if we successfully leave all layers of mediation behind us and cease to force an understanding.

Artistic and Conceptual Thinking and Working

We approach the prelinguistic space of artistic thinking and agency from its context, which supports, mediates, criticizes, sells and preserves its artworks. We listen to the various protagonists of this space - cultural agents in civil service institutions, art mediators, critics, curators, gallerists, custodians; for in this space surrounding the prelinguistic one, nothing is left to chance.

We will approach the prelinguistic space of artistic thinking and agency from its context, which supports, mediates, criticizes, sells and preserves its productions - the artworks. We will listen to the various protagonists of this space - cultural agents in civil service institutions, art mediators, critics, curators, gallerists, custodians; for in this space surrounding the prelinguistic one, nothing is left to chance.

Brian O'Doherty: Inside the White Cube. The Ideology of the Gallery Space. When these essays first appeared in Artforum in 1976, their impact was immediate. They were discussed, annotated, cited, collected, and translated; the three issues of Artforum in which they appeared have become nearly impossible to obtain. Having Brian O'Doherty's provocative essays available again is a signal event for the art world. This edition also includes "The Gallery as Gesture," a critically important piece published ten years after the others.
number of participants limited to 35.

**Abstract**

Drawing is used to ascertain and develop the artistic ideas and abilities of students. Different techniques and methods will be tested.

**Objective**

Development of individual expression in the realm of drawing; artistic flexibility and skill in the areas of working strategy and aesthetic impact.

**Content**

Development of individual expression in the realm of drawing; artistic flexibility and skill in the areas of working strategy and aesthetic impact.

**Prerequisites / notice**

The number of participants is limited. Application for the course with the lector also via e-mail: Zilla Leutenegger <leutenegger@arch.ethz.ch>.

---

**051-0227-16L**

**Architectural Drawing**

**Number of participants limited to 136**

**Abstract**

With the architectural drawing we can refer to one of the most important and primary design tools. Imaginations, ideas, as also the observation of important scenarios and impressions could be visualized with the appropriate technique.

**Objective**

Based on the process of the concrete, practical drawing, we can sensitize our perception and enhance also the interaction between head and hand. Also the digital drawing with Wacom tablet (if available) should not be missed out as an additional challenge.

**Content**

The focus of the drawings are determined in the study of architectural references as: figure, plasticity, body, space, light, atmosphere, etc.

**Prerequisites / notice**

The number of participants is limited by 136.

---

**051-0235-16L**

**Theory of Architecture: Curating 1917 - The Architecture of Russian Revolution (a.i. Moravanszky)**

**Abstract**

In the course of this seminar, we will collectively prepare the exhibition "The Architecture of Russian Revolution" (included in the "gta 50" exhibition series, to be open in February 2017).

**Objective**

To commemorate the 100-year anniversary of the Russian Revolution (1917), this seminar examines the impact of the political revolution upon architectural education. We focus on teaching architecture at Moscow Higher Art and Technical Studios (VKhUTEOMAS; 1920-1927), a school that rivalled the Bauhaus as one of the earliest and most important "avant-garde" pedagogical institutions. This experimental-format seminar will serve as a preparation for the exhibition "The Architecture of Russian Revolution," which will open in February 2017 a part of the series of exhibitions devoted to the 50th anniversary of the gta (Institute for the History and Theory of Architecture at ETHZ). The exhibition's particular focus will be on the importance of VKhUTEOMAS legacy for architectural pedagogy (especially, at ETHZ) today.

Collectively, we will develop the concept of the exhibition and make curatorial and installation decisions.

**Content**

The Russian Revolution (1917) dramatically changed not only political system, but also the lifestyle and culture in the country, including approaches to architectural education. Student protests against old, academic system of education followed the revolution, leading to a creation, in 1920, of one of the earliest "avant-garde" architectural institutions, the Higher Art and Technical Studios (VKhUTEOMAS) in Moscow.

Instead of the old practice of moving from drawing details to smaller buildings and finally finishing their education by designing a large building, the students now started by analyzing formal elements important for different arts: "Color" served an introduction to painting, "Volume"—to sculpture, "Space"—to architecture, and "Drawing" (that is, line) as an introduction to graphic design. The most developed of the introductory courses, Ladovski's course "Space," analyzed three-dimensional reality as a combination of "elements of sensation": the basic physical, geometrical, and spatial properties of form, such as mass, volume, gravity, or dynamics. This course will be at a particular focus of our attention. We will approach it from a variety of contexts: the political situation in the aftermath of the Revolution; the changes in Russian culture and society; the developments in science (in particular, experimental psychology) and the new concept of the human that they entailed; the emergence of modernist approaches to architecture and its pedagogy; the challenges that these changes and developments posed for architectural education. As a result of our study, we will develop the concept of an exhibition on VKhUTEOMAS and its importance for architectural pedagogy today.

**Prerequisites / notice**

This is not a lecture course. Attendance and active participation is required. There will be weekly mandatory reading and creative assignments (expect circa two hours per week of homework).

Enrollment limited to 20.

---

**051-0621-16L**

**Architecture and Digital Fabrication**

**Limited number of participants.**

**Abstract**

Advance in technology revolutionizes design and fabrication processes within architecture. Digital fabrication allows immediate production from design data. The architect as author of these data takes a key role in this development. This course focuses on strategies for architectural production by means of algorithmic design tools and computer controlled fabrication methods.

**Objective**

The goal of the Wahlfach is to learn basic approaches to designing with the knowledge about digital fabrication techniques and their creative application within a specific task.

**Content**

We use the term digital materiality to describe an emergent transformation in the expression of architecture. Materiality is increasingly being enriched with digital characteristics, which substantially affect architectures physis. Digital materiality evolves through the interplay between digital and material processes in design and construction. The synthesis of two seemingly distinct worlds: the digital and the material generates new, self-evident realities. Data and material, programming and construction are interwoven. This synthesis is enabled by the techniques of digital fabrication, which allows the architect to control the manufacturing process through design data. Material is thus enriched by information, material becomes informed. In the future, architects ideas will permeate the fabrication process in its entirety. This new situation transforms the possibilities and thus the professional scope of the architect.

**Lecture notes**

The script is provided by the teaching chair and can be purchased the day the elective course starts.

**Prerequisites / notice**

Limited places (enrolment on lecturer's acceptance only).

---

**051-0731-16L**

**CAAD Theory: A Quantum City - How to Think About Cities**

**Abstract**

What if cities are not connected in space and time? You easily can talk to them. Just by taking a phone for example. But they are species in parallel universes.

**Objective**

This course will explore the role of computational power and information technologies in the creation of our imaginaries around the city. We will show you how models and theories, emerging mainly during the 19th and 20th centuries, present leaping correspondences with more ancient conceptions of the city, when observed from an informational perspective.
Computers and computer networks provide today a new kind of mobile and instant operability; a user's reach of action increases dramatically by having access to a computer online. Computer networks emit, receive, store and process information at the speed of light, in vast quantities, and regardless of the content.

This course will explore the role of computational power and information technologies in the creation of our imaginaries around the city. We will show you how models and theories, emerging mainly during the 19th and 20th centuries, present leapfrog correspondences with more ancient conceptions of the city, when observed from an informational perspective. We will establish a refreshing dialogue in times where we seem to be overwhelmed by the wide range of possibilities that technology and the abundance of information are opening up. We are bored by the oversaturated debates around urbanization as a threat, energy crisis, climate change, smart cities: the same problematic is elucidated, no matter which city you are looking at. Instead, we will explore the possibilities that the digital has to offer to us, the world citizens. Such transformations have taken place since the very inception of cities, and this is why we are convinced that each era including our own has to reinvent its City within its corresponding cultural galaxies.

This CAAD Tutorial will speculate about what Swiss architectural büro would be the best-fit to work for a fictitious character from a tv-series, like Mr. White, Sansa Stark or Elliott Anderson. For this purpose, we will first build a custom-made bot to source and index the contents of swiss-architects.com, an online platform where the community of architects of Switzerland is profiled. Similarly, we will source some relevant quotes from different fictitious characters from a number of tv-series. The comparison between these two different natures will be on the level of text analysis, we will find symmetries between the way each character articulates his/her life. The goal is to put together a program to compute a best-matching list between Swiss architects and fictitious but recognizable characters from tv.

Throughout this tutorial we will learn to code in Python and further learn to put together a number of custom-made and open source algorithms in order to operate the web programmatically.

Building labels are used to certify buildings and neighbourhoods in term of sustainability. Many different labels have been developed and can be used in Switzerland (LEED, DGNB, SNBS, Minergie). In this course the differences between the certification labels and its application on 3 emblematic case study buildings will be discussed.

After this overall general presentation and in order to have a closer look to specific aspects of sustainability, students will work in groups and assess during one or two weeks this specific criteria on one of the case studies presented before. This practical hands on the label will end with a presentation and a discussion where we will highlight differences between the labels.
101-0177-00L Building Physics: Moisture and Durability  
W 3 credits 2G J. Carmeliet, T. Defraeye

Abstract  Moisture transport and related degradation processes in building and civil engineering materials and structures; concepts of poromechanics and multiscale analysis; analysis of damage cases.

Objective  - Basic knowledge of moisture transport and related degradation processes in building and civil engineering materials and structures
- Introduction to concepts of poromechanics and multiscale analysis
- Application of knowledge by the analysis of damage cases

Content  1. Introduction
   Moisture damage: problem statement
   Durability

2. Moisture Transport
   Description of moisture transport
   Determination of moisture transport properties
   Hysteresis
   Transport in cracked materials
   Damage and moisture transport in cracked media

3. Poromechanics
   Moisture and mechanics: poro-elasticity
   Poro-elasticity and salt crystallisation
   Poro-elasticity and damage
   Case studies

4. Multiscale analysis
   Problem statement
   Multiscale transport model
   Multiscale coupled transport - damage model

101-0577-00L An Introduction to Sustainable Development in the Built Environment  
W 3 credits 2G G. Habert

Abstract  This year the UN Conference in Paris will shape future world objectives to tackle climate change. This course provides an introduction to the notion of sustainable development when applied to our built environment.

Objective  At the end of the semester, the students have an understanding of the term of sustainable development, its history, the current political and scientific discourses and its relevance for our built environment.

In order to address current challenges of climate change mitigation and resource depletion, students will learn a holistic approach of sustainable development. Ecological, economical and social constraints will be presented and students will learn about methods for argumentation and tools for assessment (i.e. life cycle assessment).

For this purpose an overview of sustainable development is presented with an introduction to the history of sustainability and its today definition as well as the role of cities, urbanisation and material resources (i.e. energy, construction material) in social economic and environmental aspects.

The course aims to promote an integral view and understanding of sustainability and describing different spheres (social/cultural, ecological, economical, and institutional) that influence our built environment.

Students will acquire critical knowledge and understand the role of involved stakeholders, their motivations and constraints, learn how to evaluate challenges, identify deficits and define strategies to promote a more sustainable construction.

After the course students should be able to define the relevance of specific local, regional or territorial aspects to achieve coherent and applicable solutions toward sustainable development.

The course offers an environmental, socio-economic and socio-technical perspective focussing on buildings, cities and their transition to resilience with sustainable development. Students will learn on theory and application of current scientific pathways towards sustainable development.

Content  The following topics give an overview of the themes that are to be worked on during the lecture.

- Overview on the history and emergence of sustainable development
- Overview on the current understanding and definition of sustainable development
- Case Study 1: Sustainable construction, the role of construction industry (national/international)
- Case Study 2: Cities, forms of settlements
- Case Study 3: Material resources, scenarios, energy, construction materials, urban metabolism
- Case Study 4: Buildings, heating/cooling, consumers, prosumers and other stakeholder, cooperations

- Method 1: Life cycle assessment (planning, construction, operation/use, deconstruction)
- Method 2: Economics for sustainable construction
- Method 3: Construction, flexibility, modularity

- Synthesis 1: Climate Change mitigation and adaptation in cities
- Synthesis 2: Transition to sustainable development

Lecture notes  All relevant information will be online available before the lectures. For each lecture slides of the lecture will be provided.

Literature  A list of the basic literature will be offered on a specific online platform, that could be used by all students attending the lectures.

051-0415-16L Negotiating Structural Forms: History of Structural Design  
W 2 credits 2G J. Schwartz

Prerequisite: Successful completion of Structural Design I-IV.

Abstract  Dealing with the structural necessity against the background of the formal intent often lead, besides discourses, to architectural and technical enrichment as well as unique buildings. This seminar focuses on the work of key figures, that will be discussed on the basis of texts, concepts and buildings.

Objective  Getting to know key designers on the borderline between architecture and structural engineering, their positions, concepts and most important buildings.

Content  Seminar focusing on the discussion of important essays and buildings of distinguished builders and architects on the basis of short presentations, models, input lectures and invited guests, as well as films and excursions.

051-0761-16L History, Theory and Methods in Historic Building  
W 2 credits 2G to be announced
**Conservation and Building Research (NF Hassler)**

**Abstract**
Timber and metal structures (historical development, manufacturing technology, documentation and evaluation, historic building conservation)

**Objective**
Timber and metal structures (historical development, manufacturing technology, documentation and evaluation, historic building conservation)

**Content**
Timber and metal structures (historical development, manufacturing technology, documentation and evaluation, historic building conservation)

---

**051-0763-16L**

**New Focal Points of Construction**

**W** 2 credits 2G D. Mettler, D. Studer

**Abstract**
The elective subject "New focal points of construction" investigates the complex interaction of construction elements by means of exemplary architectonic tender points such as base, wall, chamber, roof etc.

**Objective**
The comparative analysis of built constructions serves as a basis for further development of hypothetical future constructions.

**Content**
Lecture:
1. Comparative analysis for derivation and understanding of the construction points base, wall, chamber, roof etc.
2. Description of current level of technique, typical methods, and set of problems.
3. Final colloquiums with guests of producing and processing companies.

**Exercise:**
New formulation of a future constructive point as a result of a diagnostic work.

---

**051-0777-16L**

**Building Process: Realization**

**W** 2 credits 2G M. W. Eglin

**Limited number of participants.**
Enrolment is only possible in agreement with the lecturer.

**Abstract**
Visits to construction sites and interdisciplinary lectures on the topics of communication, complexity, landscape and investment are the main focus of the workshop. In addition, the term process is to be depicted by means of visits to manufacturers of construction components.

**Objective**
The main focus of the diploma elective subject is in showing the building process by means of current examples of urban design with architectural relevance. The Chair views itself as the facilitator between those involved in construction and students. Active participation is a prerequisite.

**051-0781-16L**

**Costruire correttamente/Constructing Correctly: Curve and Fold to Bear Loads and Forces**

**W** 2 credits 2G G. Birindelli

**Abstract**
In line with the approach of P. L. Nervi's book, our study is based on factors that, outlined by him, are still today all the more relevant as a lesson for architecturally and structurally justified buildings. We will observe selected buildings both of our time and of the past for their space, architecture and construction, understand them and interpret them according to universal values of design.

**Objective**
"Costruire correttamente" (Constructing Correctly), the 1955 book published by Pier Luigi Nervi, covers crucial factors for building that, outlined by him, are still today all the more relevant as a lesson for architecturally and structurally justified buildings. His thoughts represent valuable criteria and indispensable tools for observation and carrying out investigations of the built environment. Lessons learned from this can enrich the design work of today's and tomorrow's architects.

All of these (see abstract) i.e. analyses, observances, hypotheses, groupings and cross-comparisons, will help the students in their careers to find their own strategies and approaches to design and to be aware of them. And so, according to the advice of Pier Luigi Nervi: "...At every stage of his training, the future architect should be constantly and methodically guided to search for essential elements in each problem, be it large or small. The study of the architectural works of the past should consist in the critical examination of their functional and structural solutions and of the relation between these and form, in order to show that form is a consequence and not a determinant of functional and structural needs." [P. L. Nervi: Costruire correttamente, Milano 1955; English version titled "Structures", 1956, p.28].

**Content**
The main thread of this course, that runs over two semesters (*), are buildings of all ages that could be categorised under notions such as « most viewed », « most technically daring », « most unknown », « most discussed » or « most worthy of discussion », and carry instructive aspects of the teachings of Pier Luigi Nervi ("costruire correttamente"). In the lecture, these buildings will be investigated on-the-spot, described from the designers' point-of-view and will be commented on with reference to any redesign resulting from the interplay of architectural and structural concepts. Harmonies and discord should be discovered.

Occasionally there will be guest lectures. These people, who were directly involved with a certain building, will portray the emergence and development of the project.

In this sense, the course is also intended for civil / structural engineering students and presents a possible bridge between the two prospective project partners - architect and engineer.

(*) Begins in the autumn semester. Entry into the course in the spring is possible.

**Lecture notes**
None for the time being

---

**051-0823-16L**

**Material-Workshop**

**W** 3 credits 3G to be announced

**Number of participants limited to 20**

**Abstract**
The elective is organised as a laboratory where one particular material will be explored on a theoretical and practical level. During this study the contemporary architectural potential of the material will be tested and applied.

**Objective**
Experience, know-how and interest are the basis to explore a material and develop new ways to construct and form architecture. The objective of this course aims at exploring the correlation between material, construction method and aesthetic expression.

**Content**
The elective is organised as a laboratory where one particular material will be explored on a theoretical and practical level. During this study the contemporary architectural potential of the material will be tested and applied.

**Prerequisites / notice**

**051-0855-16L**

**Masterclass Construction: Steelwork**

**W** 2 credits 2G C. Vogt

**Number of participants limited to 24.**

---
Abstract

The ‘Meisterkurs Konstruktion’ is seeking a critical discussion on relevant constructive (and energetic) questions of our time. Alternating each semester, one of the typical construction methods will be examined: masonry, concrete, steel, woodwork and curtain wall facades. In the autumn semester 2016 we’ll focus on contemporary steel constructions.

Objective

The prospective architect shall develop necessary skills to be able to think construction in its complex relationships and to face future discussions in practice competently.

Content

The structure of the course contains:
1. Impartation of basic knowledge of construction
2. Seminar / exercises on the state of technology / research
3. Integration of practical case studies and problems

Prerequisites / notice

Enrolment on agreement with lecturer only.

051-1219-16L

Integrated Discipline Building Systems (A. Schlueter)

- W 3 credits 2U A. Schlueter

Abstract

The integrated discipline Building Systems addresses specific questions about building systems and system concepts. Energetic analysis and system designs are carried out on the students individual design projects.

Objective

The course aims for an ability to understand concepts of sustainable building technology coherently integrated into an architectural design. The focus lies on LowEx-systems.

Content

The integrated discipline Building Systems addresses specific questions about building systems and system concepts. Energetic analysis and system designs are carried out on the students individual design projects.

Lecture notes

Skripts are specific to the design task and distributed at the beginning of the course.

Theory of Urban Design:

- W 2 credits 2G to be announced

Abstract

The focus of the seminar is to understand the urban history of Zurich through selected case studies.

Objective

The aim of the seminar is to discuss the selected Zurich case studies against the background of the history of urban design.

Content

The City of Zurich rises there where Celtic tribes settled and the Romans founded a the city. In the past two millennia authorities, planners of different disciplines, merchants and craftsmen, institutions and investors have shaped the city upon the Limmat. The physical outcome of these interventions stand in close relationship with the knowledge of the time and reflect the prevailing positions and theories, which were thought, published and built elsewhere. For that matter, the history of urban design of Zurich can be well understood as a branch of the history of European urban design, as well as the individual steps of development are offsprings of international reflexions and tendencies. Presentations in the seminar room and the visit of the selected ensembles in Zurich will help to tell the story of the urban development from the Middle Ages up to today. With this basic knowledge gained in the seminar and the walks the students will have to discuss the historical theories and developments as well as the urban qualities of the ensembles. This will help the students not only to better understand the city but will also allow them to sample different urban situations and gather spatial experiences, which can also facilitate their design process.

Prerequisites / notice

The number of participants is limited to 24 persons.

051-0625-16L

Serendipity: Audiovisual Fieldwork - Gotthard Soundwalking (Ch.Girot)

- W 2 credits 4G C. Girot

Limited number of participants (limitation due to technical equipment).

Abstract

We will map the landscape above the new Gotthard Base Tunnel with sound recorders and photo cameras, and landscape interventions. Back in our AudioVisual Lab, we will work with audio editing tools, spatial sound design and photographic processing in order to compose a collective multisensory map of the Gotthard.

Objective

The goal of this elective course is to explore the perception, use and representation of landscape through the use audiovisual tools. In this process, spatial, dynamic and cultural aspects are highlighted.

Content

Above the new high-speed Gotthard Base Tunnel lies a fascinating mountain landscape steeped in myths and stories. On an alpine walking tour, we will trace the tunnel's course and mark points a hundred meters higher: alpine pastures, rugged mountains, deep forests, clear lakes, weekend cottages.

We will discover the audiovisual qualities of the mountain landscape, map our overground "tunnel journey" with sound recorders and photo cameras, and intervene in the environment at vertical points of intersection. How is our perception on the surface shaped through the awareness of the tunnel below? How do we experience the vast and lonesome mountain area at a walking pace instead of rushing through it in a secure enclosure? Using techniques from sound art, land art and "strollology", we want to examine the Gotthard, understood as both archaic nature and cultivated alpine landscape, a hightech transit area and a pre-modern refuge, the "center of Europe" and the periphery of Switzerland.

Back in our AudioVisual Lab, we will work with audio editing tools, spatial sound design and photographic processing in order to explore new ways of perceiving and portraying landscape. Through audiovisual journeys and mixed media installations we will compose a collective multisensory map of the Gotthard.

Prerequisites / notice

The course will be limited to 16 students. Participation on all dates of the course is mandatory. The costs for the excursion (traveling, overnight stay, food and drinks, ca. 200 CHF) are asked to be paid by the participants. Basic trekking experience and equipment are required (latter can be rented for ca 30 CHF).

Introduction: 22.09.2016, 12:45h, AudioVisual Lab (HIL H 40.9 / 40.5).
Weekly course dates: on Thursdays, 12:45-14:30h.
Weekend Workshop/Exkursion: 8./9.10.2016 (further information and costs will follow).
Final Crit: 1.12.2016 (End of the course)
No course: 27.10.2016 (Seminar Week)

For further details see website:
http://girot.arch.ethz.ch/blog/
A reader will provide the theoretical framework.

Specific knowledge about relation and various processes in cities and countrysides, with regard to production, handling, logistics,

At the end of the elective, we offer the possibility to extend the work of the Elective Course with a Thesis Elective ("Wahlfacharbeit" 6 ECTS). The work will finalize the study done previously towards a publication and exhibition. The thesis elective will be conducted in the form of a 2-week workshop in January 2017. The elective course is compulsive to do the thesis elective.

Lecture notes

A reader will provide the theoretical framework.

Prerequisites / notice

- Introduction: 22.09.2016, 15:00h HIL H40.9 (Foyer)
- Lectures are given 15-17h in HIL H40.8 (LVML)
- The course is limited to 22 participants
- The lectures will be in English, assistance in E/D/F
- Further information is available on www.girot.arch.ethz.ch

051-0629-16L  Pairi-Daeza: Water

Number of participants limited to 12.

Enrolment in agreement with the lecturer only:

Abstract

The term ‘pairi-daeza’, Persian for ‘a wall surrounding a garden’, is the point of origin for an elective series addressing basic elements and typologies of landscape architecture. This semester, students will deal with the appropriation of landscape as a common resource in Ljubljana and design a metropolitan park for the capital of Slovenia.

Objective

The elective course serves as an introduction to landscape architectural design on various scales including the topics of border, threshold, water, vegetation, topography, choreography, and metaphor. Architecture students develop a project based on the perception of place, knowledge of landscape-architectonic typologies, and conception of public space. They become familiar with GIS as an analytical tool, model building as a design methodology and the representation of landscape through plans. The design process is accompanied by workshops, lectures, excursions, critiques and a workbook.

Content

The term ‘paradise’ and its religious implications originate from ‘pairi-daeza’, Old Persian for ‘a wall surrounding a garden’. Pairi-daeza is the title of an elective course series addressing the appropriation of landscape as a common resource in European Metropolises while exploring new forms and types of public spaces. The elective course serves as an introduction to landscape architectural design on various scales including the topics of border, threshold, water, vegetation, topography, choreography, and metaphor. Architecture students develop a project based on the perception of place, knowledge of landscape-architectonic typologies, and conception of public space. They become familiar with GIS as an analytical tool, model building as a design methodology and the representation of landscape through plans. The design process is accompanied by workshops, lectures, excursions, critiques and a workbook.

Lecture notes

The course is accompanied by a workbook with texts and background information.

Prerequisites / notice

The participation in the course is subject to the following three conditions:

1) The course is limited to 12 students. The restriction follows the time of the inscription according to the first-come-first-served-principle.
2) A two-days trip to Ljubljana from the 7th to the 9th of October is mandatory for all students.
3) The contribution to expenses will be 200.- CHF per student.

051-0631-16L  Urban Food: The Alps as Common Ground: Ljubljana

Limited number of participants. The course is fully booked!

Enrolment in agreement with the lecturer only: Roland
Shaw shaw@arch.ethz.ch

Abstract

The term ‘Urban Food’ implicitly questions how the production, processing, distribution, consumption and disposal of food influence the relation between city and countryside.

Objective

Specific knowledge about relation and various processes in cities and countrysides, with regard to production, handling, logistics, consumption habits and disposal of foodstuff.

Content

The production, processing, distribution, consumption, and disposal of food have perpetually affected the relationship between city and countryside. In that sense, the industrialization and globalization of food systems contributed to the urbanization of the landscape. On the other hand, logistic systems and consumer behavior are strongly affected by processes of urbanization, which shows that the city and its food system have a mutual influence on each other.

Prerequisites / notice

Enrolment after Agreement only!

THE COURSE IS FULLY BOOKED!

Introduction to the workshop week in February 2017:

5th December 2016, 6 pm, HIL H 40.9.

Workshop week: 6th to 14th February 2017:

Trip to Ljubljana: 6th to 9th February 2017;

Final critics: 14th February 2017.
"What is the ideal city (...) that best expresses the power and beauty of modern technology and the most enlightened ideas of social justice?" - asks Robert Fishman in his opus, Urban Utopias in the Twentieth Century (1977). For Fishman, Ebenezer Howard's Garden City (1898), Le Corbusier's Ville Radieuse (1924) and Frank Lloyd Wright's Broadacre City (1932) stand out among utopian projects for their radically original urban designs, their revolutionary program for social change, and their authors' sustained personal commitment to realize the plans. Besides these ideal cities, Fishman suggests that utopian projects fall into two further categories: they are either utopian romances, that is, technical exercises without explicit social agenda, such as the technological utopias of Archigram or Yona Friedman; or urban ideologies, that is, projects that might bear social content but could still be carried out without revolutionary social change, as they tend to preserve an already powerful class. Such are designs produced by totalitarian regimes or dictated by powerful market conditions.

Following Fishman's theoretical grid, we will read excerpts from each of his rubrics, while considering utopian design thinking within a broader and more fundamental discussion about the means and ends of urban design. Kevin Lynch asserts that the purpose of urban design is the 'good city' (1981). What is then the role of utopias in achieving this goal? While exploring this question, we will also confront utopias with critical approaches that could be described as pragmatic. Jane Jacobs, for example, argues that utopias demand totalitarian control, whereas urban neighborhoods should be developed and rejuvenated employing bottom-up approaches.

We will ultimately link the studied concepts with various urban forms, such as the megastructure in relation to technological utopias or the Manhattan block in Rem Koolhaas' interpretation. In his book Finding Lost Space (1986) Roger Tranck identifies three major approaches to theories of urban form: the figure-ground, linkage, and place theories. We will classify each of the discussed forms into the above three categories. Thus, we will wrap up the class with a basic grid on form theories - after having started it with another one regarding utopian visions.

After an introductory lecture, we will discuss one edited text each week, and confront the different positions they represent with each other. Accordingly, participants will be expected to read one text and write a half-page response each week, to once prepare and hold a 15-minute presentation of a text (including a compact handout), and to actively participate in the discussions. Optionally, 10 to 15-page position papers can be written after the semester as elective theses, honed by additional credit points. A reader with selected texts and thematic introductions will be provided.

Interactive Seminar: Utopias in the 20th Century

W 2 credits
2G
V, G. Schmitt

In this course we will examine utopian projects of the 1920s and 1930s in the context of a historical discussion of utopian design. We will focus on three projects that stand out among them: Le Corbusier's Ville Radieuse (1924), Frank Lloyd Wright's Broadacre City (1932), and Le Corbusier's plan for the European City (1932-1934).

The course will be divided into thematic blocks that will be dedicated to the following projects:

- Le Corbusier's Ville Radieuse (1924)
- Frank Lloyd Wright's Broadacre City (1932)
- Le Corbusier's plan for the European City (1932-1934)

These projects will be discussed in the context of the historical development of urban design and planning, and the course will conclude with a discussion of the relevance of utopian design for contemporary urban planning.

Lecture notes / notice
Interactive seminar including 3 exercises
We will look at those patterns from two sides. One being the view of a planer asking to find bottle necks or the ideal place for amenities such as booths, toilets etc. Another being the view of visitors. We will program different behaviours that should compete against each other in order to compare their different strategies. As a case study we will use the Caliente Festival in Zurich.

For deepening the learnt in a semester thesis we offer to optimise the created simulations to make them available in interactive planning workshops. Additionally they could be converted into interactive web apps.

</table>
The relevance of STS in urban research is explored with three themes: problematizing, describing and assembling (cities). Participants will

prepare a plenary discussion and presentation for the final day. The final day consists of a plenary discussion of each theme opened by the

keynote. The summer school presents three areas that could mobilise sand alternatives for construction and other applications:

I. Microbiologically Induced Calcite Precipitation (MICP): Also known as bio-cementation it is a process utilised in self-healing concrete and

soil stabilisation. The application to sand will produce naturally grown structural sand bricks. This workshop will compare MICP for various

sand types, building wastes and bacterial cultures.

II. Chemical Crystallization Processes: Based on material computation experiments pioneered by architect and engineer Frei Otto, this

workshop combines form finding properties of sand with structural and thinking and chemical crystallization processes.

III. 3D Printing: 3D Printing with sand and building waste, finally, explores the potential of sand as a substrate within a binding agent. In

combination with a robotic arm, 3D printing of sand is an in situ digitally controlled construction process. It overcomes the need for

traditional form-work and transportation of material, thereby reducing the grey energy.

Planning studies can benefit from new tools of interpreting problems of interconnection and expertise. As participants are required to enrol in one of three thematic groups, their stages of research may differ per group. In other words, the three themes can be interpreted to speak to various stages of research

Participants are required to enrol in one of three thematic groups, their stages of research may differ per group. In other words, the three

themes can be interpreted to speak to various stages of research (problematizing, describing, and assembling respectively). The summer school is positioned at the intersection of science and technology

fields of urban studies (STS), urban studies and planning studies. The program emphasizes the development of conceptual and methodological insights

as part of innovative approaches to contemporary urban phenomena. To the fields of urban studies it provides a more varied and dynamic

ways of thinking through questions and answers (assembling). Specifically, participants are to write a full paper, design a poster and make

a presentation. All deliverables will be evaluated by the keynote speakers, four external reviewers, and the organizers. The poster

presentation will take place in front of a full audience, while paper presentations in the workgroup only. The organizers are inquiring for

publishing opportunities of outstanding papers (e.g. plaNext from the AESOP YA, Contour at the EPFL or Spatium at the IAUS). The

website will be updated with the posters and a review of following the event.

The Assembling Cities summer school aims to bring together an interdisciplinary group of doctoral students who treat the city as their empirical site. Academic backgrounds include, but are not limited to: anthropology, architecture, geography, history, philosophy, political science, sociology, visual arts, and urban planning. In particular, the summer school addresses research exploring the borders of the diverse fields of STS and urban studies. It will be of particular interest to PhD candidates who have already begun their research and are in the stages before or after conducting field studies. As participants are required to enrol in one of three thematic groups, their stages of research may differ per group.

To: anthropology, architecture, geography, history, philosophy, political science, sociology, visual arts, and urban planning. In particular, the summer school addresses research exploring the borders of the diverse fields of STS and urban studies. It will be of particular interest to PhD candidates who have already begun their research and are in the stages before or after conducting field studies. As participants are required to enrol in one of three thematic groups, their stages of research may differ per group.

The relevance of STS in urban research is explored with three themes: problematizing, describing and assembling (cities). Participants will

be distributed in thematic groups, and lectures will be held by keynote speakers according to theme. Following the call, participants are required to indicate which theme fits their paper best as they will be shared within the thematic groups. The first day will include a keynote presentation followed by an informal poster session for each thematic group. The poster sessions are a chance for the other two groups to learn about participants' research and ask questions. The following day two sessions will be held with the support of the respective keynote.

During the first (morning) session the participants will present their papers (max 15 min) within their thematic groups followed by a general 20 min discussion. During this time, key points will be noted and later discussed in the second (afternoon) session in which each group will prepare plenary discussion and discussion of each theme opened by the respective keynote and moderated by members of the thematic group. Each thematic group will summarize their discussions and findings in a final presentation. The framework for the discussion and presentations will be defined together with the keynotes and could be, for example, a specific question and/or obstacle, a clear toolbox, or excerpts from selected presentations related to each respective theme.

The summer school will open with an excursion to the housing project Hunzikeraleer by the housing cooperative Mehr als wohnen in Zurich. This large mixed-use area development is used as an illustration of how institutions, individuals and artefacts mediate the planning process towards an inclusive and diverse project.
You will receive full support on-site from the Polytechnic University José Antonio Echeverría, La Habana (PUJAE) and ETH tutors from your discipline. In developing the scenarios you will work side by side with young professionals with a grounded knowledge of the field, and be joined by a wide variety of local stakeholders. The program will combine site visits, expert lectures and workshops to allow you to develop the following skills:
- Conduct your own research within a limited time frame and through quantitative and qualitative analysis;
- Cross cultural understanding and skills in an international collaboration;
- Developing integrated and sustainable urban development strategies.

Cites on the border or an outpost of Western European influence, struggling between globalization, modernization and local traditions, are characterized by great social and spatial disparity. Havana is a characteristic case of such a city, which is currently undergoing rapid urbanization and experiences a critical moment of transition.

At this very moment, the political and economical situation is changing rapidly, with a contradictory process of economic and social opening that becomes now more and more visible in the streets of Havana, with new businesses, restaurants and street activities, announcing further changes in everyday life. How can such fragmented conditions within cities be tackled by integrated and inclusive solutions, rather than fragmented interventions that exclude the challenged local communities?

Moreover, the lack of resources in cities of the Global South often prevents the gathering of modern, digitalized data, while the unstable political structures prevent the implementation of durable planning strategies. These cities need a rapid assessment procedure, in order to identify relevant priorities and potentials. How can we create a comprehensive understanding of the system and propose appropriate solutions, while using quantitative and qualitative data?

The summer school will build on the current "Atlas Urbano de La Havana - Urban Atlas of Havana" and on the project SeDUT (Seminario Internacional de Desarrollo Urbano y Transporte), a three-year Swiss-Cuban cooperative research project on the urban development of Havana and its mobility potentials. The SeDUT project involved many academic, governmental and private stakeholders, such as the Polytechnic University José Antonio Echeverría, the Centro de Estudios Urbanos de La Habana, the Instituto de Planificación Física, the Dirección Provincial de Planificación Física de la Ciudad de La Habana and the design office of Metron AG. Together they represent an important expertise and a high degree of accumulated knowledge.

In a team, you will produce alternative urban scenarios for the planned redevelopment of the Old Port of Havana. You will contribute your expertise and unpack the realities of sustainable development in a tropical climate. How can knowledge from the ETH be combined with Cuban research and translated to a Caribbean context? Through debate, controversy and collaboration it is expected you produce scenarios that integrate your different disciplines and question the preconceptions of sustainable urban development.

This immersive summer school will be structured in three interlocking modules:
- In the first module you will investigate the Old Port and gain a strong understanding of the social, environmental and built context in Havana. You will employ analytical mapping to integrate and synthesize different disciplinary knowledge, ranging from quantitative data to subjective observation.
- In the second module, you will develop a series of scenarios for the Old Port, proposing alternatives for its sustainable future. You will build on the research from the first module, and explore the potential of your ideas with local stakeholders and professionals from your field. You will document these scenarios using creative and varied representational methods.
- In the final module you will pitch your scenarios to decision makers. During this event you will measure their preferences, debate the associated trade-offs, and provide a series of orientations for those planning the future of Havana.

More information on: http://u-itt.com/teaching/havana-summer-school/

Who should apply?

Enthusiastic students currently enrolled in a masters program in ETH Zurich and PUJAE Havana. A balanced group of 15 ETH master students from the D-ARCH, D-BAUG, D-GESS and D-USYS departments will be selected. They will be joined by 15 Cuban students from our partner university.

Applicants should have a strong interest in sustainable urban development and transdisciplinary collaborative research. They should be able to demonstrate their academic strength, motivation, interest and expertise. Knowledge of Spanish is welcome but not obligatory.

Dates in Cuba: 21 August to 1st of September.

Contact: Marie Grob at grob@arch.ethz.ch, enrolment procedure on our webpage.
Travellers is a series of five lectures and conversations about ways of perceiving, studying and portraying urban territories. Each of the

Project: El Portico de los Huéspedes
El Portico de los Huéspedes is the first permanent structure to be proposed in the Open City in nearly 12 years and was begun through the collaboration between Summer Chantier and the e[ad]PUCV in the summer of 2014. An initial program for the structure was developed by the Open City members and responds to a need within the community for permanent space for both the administrative secretary of the Open City and for guests conducting research. In addition, the program responded to a desire to create a space large enough for the entire e[ad] PUCV community to assemble within the Open City itself. This program is not a set of fixed guidelines but served, and serves, to guide the project at its origins. Similarly, le Portico de los Huéspedes has no fixed plan or finality. During the summer, and in the intervening school year, groups and students and faculty respond to the existing conditions with tests and interventions that develop the project. This development is also influenced by poetic acts that take place on the project site that open up or introduce new prerogatives or potentials into the work.

Project History 2014/15:
Poetic act defining the amplitude of the necessary site;
Definition of the site location, development of principal structure based on a study of Gunnar Asplund’s Woodland chapel;
Replacement of wooden pile foundations with concrete foundations;
Poetic Act defining points within the site that became manifested through flexible form-work columns;
Development of secondary structure in wood and brick plazas on northeast and south west corner of site.

Program Outline:
Lausanne Week (late July): The Lausanne week is an intense period of analysis of the existing site conditions. This first encounter with the Open City and le Portico de los Huéspedes is supplemented with lectures that introduce students to some of the ideas defining practice and pedagogy at the Open City: the role of poetry and poiesis, observacion and the open-ended project. Site analysis is done through drawing (by hand with tools supplied by the workshop) and model making. Work-days finish with informal critiques where findings are discussed. During the week there will also be an introduction to the working and safety issues related to the chantier and to living near the Open City. Students will work in teams and one of the goals of the week is to already to create a group spirit that will develop throughout the workshop.

Open City (August): The first days of the chantier is meant as a practical introduction to some of the ideas encountered during the Lausanne week. Lectures and events by members of the Open City community introduce students to the pedagogical and poetic potentials into the work.

Applications should be sent via email to summerchantier@epfl.ch and should comprise a brief letter that describes why you are interested in the project and expectations for the Summer Chantier. All candidates will also be interviewed as part of the selection process.

Summer Chantier is looking for self-motivated students who are interested in an experience that provides human, intellectual and physical challenges.

Applications will be expected until 18th March with interviews conducted in early April and decisions made shortly afterwards.

Travellers. Ocean Territories - Mapping Maritime Geopolitics, Migration and Global Trade

Travellers is a series of five lectures and conversations about ways of perceiving, studying and portraying urban territories. Each of the guest speakers is a traveler - a person who places the direct observation and experience of urban landscapes in the core of their practice.

During the autumn of 2016, we will investigate the ocean as a territory. The architectural ways of looking, concepts and techniques are unstable at large territorial scales, and yet, urban territories can be seen as crucial contexts for the production of architecture. Seeing an extended urban territory as part of the city - its mirror - can reflect back in the ways we see the city itself, and its architectures.

Once a year in autumn, with students and invited guests, we will consider: How can architects look at, study and design urban territories or the "city’s constitutive outside": the periphery, the agglomeration, the countryside and the hinterland? What are the motives (aesthetic, political) architects can have in engaging with these territories? The aim is to discuss concepts and techniques for territorial investigations and projects.

During the autumn of 2016, we will investigate the ocean as a territory through the lens of artists, researchers and architects focusing on mapping maritime geopolitics, migration and global trade.
Content

What is the ocean as a territory? Once imagined as a boundless space, largely untouched by human activity, are oceans still a common horizon bringing together the cities and peoples along their shores? Can the open nature of the sea resist the transformative forces of the carved and conflicted earthly masses it is enclosing? Is the ocean space shaped by the strategic control of resources and trade routes? What is the role of the architects in investigating, describing and visualising the urban dynamic of the ocean space? Can ocean territories be designed?

Taking different perspectives, from history, to activism, geopolitics, and design, travellers who have been crossing the global ocean following refugee migrations, onboard container ships and along ancient maritime routes, contribute elements for an urban portrait of ocean territories.

Abstract

The seminar analyses the conditions of contemporary architectural production. In doing so, the importance and meaning of architectural conventions for the design, construction as well as for the transformation of single buildings is systematically challenged.

Objective

The seminar aims at a critical analysis of both material and ideological conventions of the architectural practice. On the basis of the historical analysis the students will acquire instruments for a critical examination of the conditions of the current production of the built environment, in order to develop a sovereign theoretical position on the contemporary architecture.

Content

The seminar will deal with the conventions of the contemporary architectural practice. The proposed topics should be researched out of a twofold, historical as well as systematic perspective. A detailed description of the syllabus can be found on the homepage of the professorship: http://stalder.gta.arch.ethz.ch/seminarien.php

Seminar History of Urban Design: Elements of Urban Space

**Abstract**
Within our series «Elements of the urban space» we will focus on urban housing. In the parishes Niederdorf, Stifthof, Unterstrass, Fluntern und Hirslanden, we will look at numerous housing types on the level of the metropolis, the neighborhood, the building and the urban detail. In doing so, we aim to gather criteria, that are fundamental to an urban living situation.

**Objective**
The aim of the seminar series is to provide a sound methodological approach in analyzing urban space on the scale of the metropolis, the neighborhood, the building and the urban detail. Through a series of neighborhood walks and excursions to the four major city archives, our students gain a methodological approach to city analysis. In the discourse of the seminar, we will gain fundamental criteria for the design of urban situations.

**Lecture notes**
Our students will be provided with all material in digital form.

**Prerequisites / notice**
The number of students is limited to 60. After the introduction on 22/09 between 14:45-16:30 we will meet on 29/9 (city walk), 6/10. (discussion of the analysis results), 13/10. (consultation - doodle), 3/11 (excision plan archives), 10/11 and 1/12 (consolation - doodle) and final presentation on 8/12.

---

**History of Architecture: Colonialism, Architecture & Urbanism in Africa (P. Ursprung)**

**Abstract**
In the 19th and 20th centuries Belgium, Britain, France, Germany, Italy, Portugal, and Spain invaded and colonized the great majority of the African continent. This was coupled with the invention of an unprecedented European modern architecture that was expected to face Africa's climates and to satisfy colonial administrators, military officers, settlers, tourists, and in rare cases Africans.

**Objective**
The course examines the multifaceted relationships between colonialism, architecture, and urbanism in Africa under European rule. The aim is to explore and discuss European production, transfer, adaptation, transformation, and exchange of modern architecture and urbanism within and among African colonies and protectorsates ruled by the various European powers. Specific examples will be drawn from across the African continent in order to examine the formal, spatial, social, and political characteristics and impacts of new towns, villages, buildings, and elements designed by European architects and planners.

**Content**
The course is delivered through a series of weekly lectures, discussions of assigned readings, and students' presentations, which are centered around key themes and specific contexts. Students will be expected to complete one reading per week and one presentation per semester. Each student is invited to choose a town, a building, a personage, a construction material, or an aspect of colonialism in Africa and present it to the class.

**Literature**
All readings will be available on the course website at the beginning of the semester: http://www.ursprung.arch.ethz.ch/lehrveranstaltungen

**Prerequisites / notice**
All lectures, readings, presentations, and discussions will be held in English. Those who wish to participate in the course must attend the first introductory lecture on 22 September 2016.

---

**Sociology / Economy**

**Number**
851-0252-03L

**Title**
Cognition in Architecture - Designing Orientation and Navigation for Building Users
Number of participants limited to 40.

**Abstract**
How can behavioral and cognitive science inform architecture? This project-oriented seminar investigates contributions of cognitive science to architectural design with an emphasis on orientation and navigation in complex buildings and urban settings. It includes theories on spatial memory and decision-making as well as hands-on observations of behavior in real and virtual reality.

**Objective**
Taking the perspectives of building users (occupants and visitors) is vital for a human-centered design approach. Students will learn about relevant theory and methods in cognitive science and environmental psychology that can be used to understand human behavior in built environments. The foundations of environmental psychology and human spatial cognition will be introduced. A focus of the seminar will be on how people perceive their surroundings, how they orient in a building, how they memorize the environment and how they find their way from A to B. Students will also learn about a range of methods including real-world observation, virtual reality experiments, eye-tracking and behavior simulation for design. Students will reflect on the roles of designers and other stakeholders with respect to human-centered design and an evidence-based design perspective. The seminar is geared towards a mix of students from architecture / planning, engineering, computer science and behavioral science as well as anybody interested in the relation between design and cognition.

Architecture students can obtain course credit in "Vertiefungsfach" or "Wahlfach".

**Number**
851-0165-16L

**Title**
Housing

**Abstract**
Module 1: Suburban Housing
Module 2: Urban Housing

**Objective**
Students should be able to recognize and place in context the characteristic features of suburban and urban housing. They will get to know the architectural, socio-cultural aspects of suburban and urban housing.
Content

Housing considered in context: architectural, cultural, social, technical and economic conditions and processes influence housing and modes of habitation. To what extent have they changed in the last century? The construction and renovation of domestic space is a cultural process. What forces construct that space, and according to which criteria? What are the constructional and organizational solutions with which they confront the diversity and metamorphosis of contemporary modes of habitation? How can postulates concerning a sustainable development be implemented? Insights culled from housing research and practice, podium discussions with guests and current examples of innovative housing are included.

Urban Mutations on the Edge: Commoning

Abstract
The Urban Mutations on the Edge seminar is a series of public lectures by ETH faculty and invited guests addressing the dynamic global peripheries that we believe are most actively changing our conception of the city.

Objective
Participants should leave the course with an understanding of current urban research issues and an introduction to the political dimension of contemporary architectural production.

Content
The Urban Mutations on the Edge seminar is a series of public lectures by ETH faculty and invited guests addressing the dynamic global peripheries that we believe are most actively changing our conception of the city.

Lecture notes
Texts to accompany and provide context for each lecture are sent weekly by email.

Sociology: Urban Quality of Life - Ethnological Field Research in District 5 and in Zurich North

Abstract
In this ethnographic field research we examine the question, how people are perceiving and creating their environment, and how an urban quality of life is forming. We investigate four neighborhoods in the Zurich Region: upper District 5, Zurich West, Seebach and Glattpark.

Objective
This elective course highlights the sociological perspective on architectural practice and provides an introduction to sociological research. It focuses on two main procedures: on the one hand, a systematic reading and discussion of theoretical texts, and on the other, empirical case studies of social aspects of the production of the built environment. In this course, a wide set of qualitative research methods is used (including various forms of interview, participant observation, image and text analyses). This approach enables students to gain their own experience by dealing with the various participants and constellations in the social field of architecture and building construction, and to familiarize themselves with the approaches and perceptions of various different participants.

Content
An introduction into ethnographic field research.

Urban ethnology concentrates on the urban space, on urban actors, on the cityscape and compares cities of different continents and cultures with each other. Urban ethnology investigates symbols and practices representing and participating in the normal course of city life. Urban ethnology understands urban space not only as built environment, but also as a lived cultural and social context. With ethnographic field research the perception of actors in local milieus is investigated. How do they see and experience urban contexts? How do they move in the city area? How do they recognize houses, roads and places? How do they hear the city? The perception of local milieus, their obstinacy, creativity and their special way of life is considered significant for better understanding the city as central point of current social development. For ethnographic surveys of the built environment architects nowadays use a number of methods and techniques: participating in observation, interviews, photo and video site inspections in urban rooms, mindmapping etc.

**063-0235-16L**  
**Theory of Architecture (Thesis Elective)**  
**Abstract**  
An elective master thesis in architectural theory is a written student assignment of an architectural problem or question, which is to be elaborated in a scientific paper in consultation with the advisors of the chair. The examination of a specific problem asks for a conscious and critical reflection of interdisciplinary approaches and methods.

**Objective**  
Within the framework of an elective master thesis the student can enhance the acquired knowledge in architectural theory in written form. The objective of the master thesis is to show the system of scientific methods, the derivation, development and verbalization of conclusions and the contextualization within a theoretical setting. In a broader sense it serves the training of verbal skills, the development of a critical verbal, cognitive and imaginary access to problems in the realm of architecture and its neighboring disciplines in the humanities.

**Content**  
The contents of these elective studies are expected to link to the subject matter of the attended course.

**063-0317-16L**  
**History of Art and Architecture (Thesis Elective)**  
**Abstract**  
Independent and scientific thesis on a monographic or thematic topic within the scope of the history of art and architecture.

**Objective**  
The focus is to thus exemplify a comprehensive view of the approach and methods towards the modern history of art.

**Content**  
The objective of the elective subject is, in coordination with the advisors, to work autonomously on a subject from the history of architecture. Beside own ideas also positions of research should be considered; we set value on a correct scientific format as well as a clear language. The work should cover 30'000 signs as well as image material if needed. At the beginning and before delivery of the work an elaborate discussion will take place.

**063-0319-16L**  
**History of Art and Architecture (Thesis Elective)**  
**Abstract**  
Essay on a Subject from the Field of Architectural History

**Objective**  
The aim of the elective course paper is to discuss a topic freely selected from the field of architectural history, in agreement with the text of the according elective course.

**Content**  
The objective of the elective subject is, in coordination with the advisors, to work autonomously on a subject from the history of architecture. Beside own ideas also positions of research should be considered; we set value on a correct scientific format as well as a clear language. The work should cover 30'000 signs as well as image material if needed. At the beginning and before delivery of the work an elaborate discussion will take place.

**063-0355-16L**  
**Preservation of Cultural Heritage (Thesis Elective)**  
**Abstract**  
The Elective Subject Degree Tests are meant to enable a deeper level of individual engagement with the contents of the elective subjects. Topics of elective can be elaborated into elective degree tests.

**Objective**  
The general aim of this intensification is teaching competency in analysis and interpretation in the following areas: knowledge of artifacts, dynamics of systems, historical contexts, history of knowledge and theory as well as an approach to scholarly work.

**Content**  
Topics of electives can be elaborated into elective degree tests.

**063-0367-16L**  
**History of Urban Design (Thesis Elective)**  
**Abstract**  
Within three elective courses the students need to fulfill an elective work (seminar work). Elective works serve the independent way of dealing with the contents of the according elective course.

**Objective**  
Aim of this seminar work is to learn how to write a small thesis on a case study. This work should include a creative text, but also to obey certain rules, which turn a regular text into a scientific one.

**Content**  
The contents of these elective studies are expected to link to the subject matter of the attended course.

**063-0369-16L**  
**Theory of Urban Design (Thesis Elective)**  
**Abstract**  
The main aim of this seminar is learning the scientific handling of theoretical texts on the city. These texts range from pamphlets, to commentaries and literary products.

**Objective**  
The focus is to thus exemplify a comprehensive view of the approach and methods towards the modern history of art.

**Content**  
The contents of these elective studies are expected to link to the subject matter of the attended course.

**063-0415-16L**  
**Trial of Structural Forms: History of Structural Design (Elective Thesis)**  
**Abstract**  
The efforts for entanglements of architectonic and constructive concepts had resulted in wide discussions and in unique buildings during different time periods (i.e. ferroconcrete in the nineteen-thirtees and nineteen-fifties), furthermore to architectonic and technical enrichments.

**Objective**  
Getting to know important critical figures between architecture and engineering as well as their attitudes and concepts and the most distinguished buildings.

**Content**  
Seminar to the studies and for discussion of important texts and buildings of the most famous construction engineers and architects by listening to reviews, presentations and models, input lectures and guest speeches, films and joint surveys.

**063-0515-16L**  
**Building Physics (Thesis Elective)**  
**Prerequisites for Urban Physics: successful termination of “Building Physics IV: Urban Physics”. For Building Physics in general: Knowledge in the relevant field.**

**Abstract**  
Within three elective courses the students need to fulfill an elective work (seminar work). Elective works serve the independent way of dealing with the contents of the according elective course.

**Objective**  
The aim of the elective work is to gain comprehensive insight in specific issues related to urban physics and low-energy buildings.

**Content**  
The contents of these elective studies are expected to link to the subject matter of the attended course.
The goal of the Wahlfacharbeit is the in-depth analysis of a topic in the field of digital design and fabrication. The students should develop a personal, algorithmic design system till fabrication. A theoretic placement of the work within the current research discourse is desirable.

Within three elective courses the students need to fulfill an elective work (seminar work). Elective works serve the independent way of understanding and engagement within existing academic discourse. Work is typically conducted in teams of two.

The contents of these elective studies are expected to link to the subject matter of the attended course.

**Urban Mutations on the Edge (Thesis Elective)**

- **Abstract**: Advance in technology revolutionizes design and fabrication processes within architecture. Digital fabrication allows immediate production from design data. The architect as author of these data takes a key role in this development. This course focuses on strategies for architectural production by means of algorithmic design tools and computer controlled fabrication methods.
- **Objective**: The goal of the Wahlfacharbeit is the in-depth analysis of a topic in the field of digital design and fabrication. The students should develop a personal, algorithmic design system till fabrication. A theoretic placement of the work within the current research discourse is desirable.
- **Content**: We use the term digital materiality to describe an emergent transformation in the expression of architecture. Materiality is increasingly being enriched with digital characteristics, which substantially affect architectures physis. Digital materiality evolves through the interplay between digital and material processes in design and construction. The synthesis of two seemingly distinct worlds—the digital and the material generates new, self-evident realities. Data and material, programming and construction are interwoven. This synthesis is enabled by the techniques of digital fabrication, which allows the architect to control the manufacturing process through design data. Material is thus enriched by information; material becomes informed. In the future, architects ideas will permeate the fabrication process in its entirety. This new situation transforms the possibilities and thus the professional scope of the architect.

**Architecture and Digital Fabrication (Thesis Elective)**

- **Abstract**: The contents of these elective studies are expected to link to the subject matter of the attended course.
- **Objective**: The elective thesis HS15 will be held as part of the current edition of the Swisspearl® Summerschool, 31.08. to 11.09.2015, thus on site, in the Eternit production facilities in Payerne! Everybody can participate in the Summerschool, enrolment details will be given within due time on the chair's webpage.
- **Content**: The elective gives students the opportunity to expand their knowledge in the area of landscape architecture. The subject of the elective thesis is tied to the correspondent elective subject. Is being offered in spring semester by the TheoryLab, in autumn semester by DesignLab.

**Serendipity (Thesis Elective)**

- **Abstract**: The elective Serendipity offers students the opportunity to explore the possibilities of shaping perceptual qualities through the use of audiovisual tools.
- **Objective**: The subject of the elective thesis is tied to the correspondent elective subject.
- **Content**: Please find more information and the course schedule on our website: http://girot.arch.ethz.ch/landscape-education/bachelor-master/current-courses

**Topology (Thesis Elective)**

- **Objective**: The elective gives students the opportunity to expand their knowledge in the area of landscape architecture. The subject of the elective thesis is tied to the correspondent elective subject. Is being offered in spring semester by the TheoryLab, in autumn semester by DesignLab.

**Pairi-Daeza: Water (Elective Thesis)**

- **Objective**: The term “pairi-daeza”, Persian for “a wall surrounding a garden”, is the point of origin for an elective series addressing basic elements of landscape architecture. This semester, students will deal with the topic ‘Threshold’, developing a design for a metropolitan park in Lyon.
- **Objective**: The term ‘paradise’ and its religious implications originate from ‘pairi-daeza’, Old Persian for ‘a wall surrounding a garden’. Pairi-daeza is the title of an elective course series addressing basic elements of landscape architecture within the context of public space in European Metropolis, including the topics of border, threshold, water, vegetation, topography, choreography, and metaphor. The elective course serves as an introduction to landscape architectural design. Architecture students develop a project based on the perception of place, cognizance of landscape-architectonic typologies, and conception of public space. They become familiar with model building as a design methodology as well as with representation in plan form. The design process is accompanied by workshops, lectures, excursions, critiques, and a workbook.
- **Content**: The contents of these elective studies are expected to link to the subject matter of the attended course.

**Case Studies in Urban Design (Thesis Elective)**

- **Objective**: Within three elective courses the students need to fulfill an elective work (seminar work). Elective works serve the independent way of dealing with the contents of the according elective course.
- **Content**: The aim of the elective works is to work independently in a scientific way on a problem in contemporary urban design.

**Information Architecture (Thesis Elective)**

- **Objective**: The students can explore an ongoing subject from teaching or research of the chair “Information Architecture” in detail. In consultation with the chair individual topics are possible, too.
- **Objective**: The use and development of concepts, methods and techniques in computer-based design, simulation and analysis, in communication and in the visualization of information.
**Objective**
Within three elective courses the students need to fulfill an elective work (seminar work). Elective works serve the independent way of dealing with the contents of the according elective course.

**Content**
AUTUMN SEMESTER: In this course an introduction to programming is given with the intention to understand programming as formulation of an intention which eventually yields architectural results. In addition, fundamental techniques are explained and as well as elements of graphics programming introduced. On the other hand, methods are also taught which permit ideas to be converted into viable programs. Although in the course the programming language C++ and a special programming environment is used, a large part of the learning can be used for other programming languages.

The goal of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will work in teams to solve a set of design challenges that are organized as a one-week, a three-week, and a final six-week project in collaboration with an external project partner.

In the coming years this need for adaptability is going to be challenges even further by the even more reducing health care resources. The building structure in a better way.

The contents of these elective studies are expected to link to the subject matter of the attended course. Hence, a consequent argumentation with regard to the base, the wall, the chamber, the roof etc. follow.

All interested students are invited to apply for this course by sending a one-page motivation letter until 14.9.16 to Florian Rittiner (frittiner@ethz.ch).

Additionally please enroll via mystudies. Places will be assigned after the first lecture on the basis of your motivation letter and commitment for the class.

Objectives
- Generate deep insights through the systematic observation and interaction of key stakeholders.
- Engage in collaborative ideation with a multidisciplinary (student) team.
- Rapidly prototype and iteratively test ideas and concepts by using various materials and techniques.

The class material can be downloaded from the student-server. http://u.tt.arch.ethz.ch

Prerequisites / notice
Maximum 30 students (working in groups of 3.

Please note the course starts at 14:45 pm.

Health Care Buildings (Thesis Elective)

Abstract
Independently written scientific paper concerning a subject in the area of health facility planning and design with special focus upon the dynamic changes in health care services and the according planning and building reactions to them.

Objective
The objective is that the students engage in a debate of a differentiated functional planning as a basis for health care buildings which are to be successful medicinally, operationally and in design.

On the basis of a given scope of themes the students carry out research aiming for possible improvements in health facility planning. The scope of subjects is announced at the beginning of each semester.

Content
Health care buildings are subject to constant change. In a new hospital building 60% of the diagnostic and treatment areas are subject to building changes within the first 10 years of operation. Architecture has to develop concepts which accommodate this level of dynamics into the building structure in a better way.

In the coming years this need for adaptability is going to be challenges even further by the even more reducing health care resources.

The paper should discuss in this context a specific question in detail by analysing problems and developing and discussing potential planning solutions.

063-0823-16L Material-Lab (Thesis Elective) W 6 credits 11A A. Spiro

Abstract
The elective works serve an in depth case study through the construction of a 1:1 mock-up.

Objective
Independent in depth study and examination of the contents according to the elective course.

Content
Content and output of the study to be agreed with the lecturer of the elective course.

063-0855-16L Master Class Construction (Thesis Elective) W 6 credits 11A C. Vogt

Thesis Elective for Master class students

Abstract
Within three elective courses the students need to fulfill an elective work (seminar work). Elective works serve the independent way of dealing with the contents of the according elective course.

Objective
The aim of the Thesis Elective is an independent engagement with the subjects of the related Elective Course.

Content
The contents of these elective studies are expected to link to the subject matter of the attended course.

Abstract
This self-dependent elective thesis refers to the course "New focal points of construction" demands a rethinking of the learning matter. Hence, a consequent argumentation with regard to the base, the wall, the chamber, the roof etc. follow.

Objective
Target of this self-dependent thesis is to rethink the constructive points base, wall, chamber, roof etc. on the basis of the newly acquired skills. A structurally engineered, well-founded hypothesis is formulated, thus serving as a initial position for the conception of future constructions.

Content
In the elective thesis "New focal points of constructions" constructive points as base, wall, chamber, roof etc. are rethought reflecting the latest learning matters. A structurally engineered, well-founded hypothesis is formulated, thus serving as a initial position for the conception of future constructions.

Self-dependent work.

Seminar Science in Perspective

SeminarWeek Autumn Semester 2016

The seminar week is obligatory for students of all semesters. There are many and varied study contents.

The students will be enabled to discuss narrowly formulated factual questions in small groups and in direct contact with the professors.

Seminar Weeks

051-0911-16L Seminar Week Autumn Semester 2016 W 2 credits 3A Lecturers

GESS Science in Perspective

Number Title Type ECTS Hours Lecturers
363-1065-00L Design Thinking: Human-Centred Solutions to Real World Challenges W 5 credits 5G A. Cabello Llamas, F. Rittiner, S. Brusoni, C. Hölscher, M. Meboldt
The purpose of this course is to equip the students with methods and tools to tackle a broad range of problems. Following a Design Thinking approach, the students will learn how to observe and interact with key stakeholders in order to develop an in-depth understanding of what is truly important and emotionally meaningful to the people at the center of a problem. Based on these insights, the students ideate on possible solutions and immediately validate them through quick iterations of prototyping and testing using different tools and materials. The students will work in multidisciplinary teams on a set of challenges that are organized as a one-week, a three-week, and a final six-week project with an external project partner. In this course, the students will learn about the different Design Thinking methods and tools that are needed to generate deep insights, to engage in collaborative ideation, rapid prototyping and iterative testing.

Design Thinking is a deeply human process that taps into the creative abilities we all have, but that get often overlooked by more conventional problem solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols. Design Thinking provides an integrated way by incorporating tools, processes and techniques from design, engineering, the humanities and social sciences to identify, define and address diverse challenges. This integration leads to a highly productive collaboration between different disciplines.

For more information and the application visit: http://sparklabs.ch/ethz

Prerequisites / notice
Class attendance and active participation is crucial as much of the learning occurs through the work in teams during class. Therefore, attendance is obligatory for every session. Please also note that the group work outside class is an essential element of this course, so that students must expect an above-average workload.

Abstract

The Master-Thesis contains a written proposal due to a given master-programme within the work-field of an architect.

Objective

The Master-Thesis has to be an individual work by the students and be proof of the ability to independent design work.

Course Units for Additional Admission Requirements

The courses below are only available for MSc students with additional admission requirements.

Abstract

For Master students with additional obligations only! - Out of the offered courses "Architectural Design V-IX" the student is required to achieve 13 ECTS. There are 2 attempts only.

Objective

Qualification to control the design process increasingly independent and with sole responsibility and to find to an individual design methodology and attitude.

Content

For Master students with additional obligations only! - Out of the offered courses "Architectural Design V-IX" the student is required to achieve 13 ECTS. There are 2 attempts only.

The lecture provides an introduction to the formation of air pollutants by technical processes, the emission of these chemicals into the atmosphere and their impact on air quality. The second part covers different strategies and techniques for emission reduction. The basic knowledge of thermodynamical and kinetic basics, including bi- and termodolecular reactions, photo-dissociation, and the Chapman chemistry, is presented. This course will introduce some of the main quantitative methods available for the quantitative treatment of geochemical data, as well as discussing the technical possibilities to solve the actual air pollution problems.

**List of literature included in scrip**

- Brigitte Buchmann, Air pollution control, Part I
- Peter Hofer, Air pollution control, Part II
- Lecture slides and exercises

**Prerequisites / notice**

- College lectures on basic physics, chemistry and mathematics
- The students gain general knowledge of the factors resulting in air pollution and the techniques used for air pollution control. The students can identify major air pollution sources and understand the methods for measurement, data collection and analysis. The students can evaluate possible control methods and equipment, design a control system and estimate the efficiency and cost.

**Content**

- Part 1 Emission, Immission, Transmission
- Fluxes of pollutants and their environmental impact
- physical and chemical processes leading to emission of pollutants
- mass and energy of processes
- Emission measurement techniques and concepts
- quantification of emissions from individual and aggregated sources
- extent and development of the emissions (Switzerland and global)
- propagation and transport of pollutants (transmission)
- meteorological parameters influencing air pollution dispersion
- deterministic and stochastic models, describing the air pollution dispersion
- dispersion models (Gaussian model, box model, receptor model)
- measurement concepts for ambient air (immission level)
- extent and development of ambient air mixing ratios
- goal and instrument of air pollution control

**Part 2 Air Pollution Control Technologies**

- The reduction of the formation of pollutants is done by modifying the processes (process-integrated measures) and by different engineering operations for the cleaning of waste gas (downstream pollution control). It will be demonstrated, that the variety of these procedures can be traced back on the application of a few basic principles of physical chemistry.
- Procedures for the removal of particles (inertial separator, filtration, extraction) with their different mechanisms (field forces, impaction and diffusion processes) and the modelling of these mechanisms.
- Procedures for the removal of gaseous pollutants and the description of the driving forces involved, as well as the equilibrium and the kinetics of the relevant processes (absorption, adsorption as well as thermal, catalytic and biological conversions).

**Lecture notes**

- Brigitte Buchmann, Air pollution control, Part I
- Peter Hofer, Air pollution control, Part II
- Lecture slides and exercises

**Prerequisites / notice**

- College lectures on basic physics, chemistry and mathematics

**Literature**

**Course overview**

- The course will introduce some of the main quantitative methods available for the quantitative treatment of geochemical data, as well as the main modelling tools. Emphasis will both be on conceptual understanding of these methods as well as on their practical application, using key software packages to analyse real geochemical datasets.

**Objective**

Development of a basic knowledge and understanding of the main tools available for the quantitative analysis of geochemical data.
The following approaches will be discussed in detail: major and trace element modelling of magmas, with application to igneous systems; methods and statistics for calculation of isochrons and model ages; reservoir dynamics and one-dimensional modelling of ocean chemistry; modelling speciation in aqueous (hydrothermal, fresh water sea water) fluids.

We will discuss how these methods are applied in a range of Earth Science fields, from cosmochemistry, through mantle and crustal geochemistry, volcanology and igneous petrology, to chemical oceanography.

A special emphasis will be put on dealing with geochemical problems through modeling. Where relevant, software packages will be introduced and applied to real geochemical data.

Lecture notes
Slides of lectures will be available.

Prerequisites / notice
Pre-requisite: Geochemistry (651-3400-00L), Isotope Geochemistry and Geochronology (651-3501-00L).

651-4057-00L Climate History and Palaeoclimatology
Abstract
The course "Climate history and paleoclimatology gives an overview on climate through geological time and it provides insight into methods and tools used in palaeoclimatic research.

Objective
The student will have an understanding of evolution of climate and its major forcing factors -orbital, atmosphere chemistry, tectonics- through geological time. He or she will understand interaction between life and climate and he or she will be familiar with the use of most common geochemical climate "proxies", he or she will be able to evaluate quality of marine and terrestrial sedimentary paleoclimatic archives. The student will be able to estimate rates of changes in climate history and to recognize feedbacks between the biosphere and climate.

Content
Geological time and earth history - climate forcing factors and feedback mechanisms of the geosphere, biosphere, and hydrosphere.

Geological time, stratigraphy, geological archives, climate archives, paleoclimate proxies

Climate through geological time: "lessons from the past"
Cretaceous greenhouse climate
The Late Paleocene Thermal Maximum (PETM)
Cenozoic Cooling
Onset and Intensification of Southern Hemisphere Glaciation
Onset and Intensification of Northern Hemisphere Glaciation
Pliocene warmth
Glacial and Interglacials
Millennial-scale climate variability during glaciations
The last deglaciation(s)
The Younger Dryas
Holocene climate - climate and societies

651-4043-00L Sedimentology II: Biological and Chemical Processes in Lacustrine and Marine Systems
Prerequisite: Successful completion of the MSc-course "Sedimentology I" (651-4041-00L).

Abstract
The course will focus on biological amd chemical aspects of sedimentation in marine environments. Marine sedimentation will be traced from coast to deep-sea. The use of stable isotopes palaeoceanography will be discussed. Neritic, hemipelagic and pelagic sediments will be used as proxies for environmental change during times of major perturbations of climate and oceanography.

Objective
-You will understand chemistry and biology of the marine carbonate system
-You will be able to relate carbonate mineralogy with facies and environmental conditions
-You will be familiar with cool-water and warm-water carbonates
-You will see carbonate and organic-carbon rich sediments as part of the global carbon cycle
-You will be able to recognize links between climate and marine carbonate systems (e.g. acidification of oceans and reef growth)
-You will be able to use geological archives as source of information on global change
-You will have an overview of marine sedimentation through time

Content
-carbonates: chemistry, mineralogy, biology
-carbonate sedimentation from the shelf to the deep sea
-carbonate facies
-cool-water and warm-water carbonates
-organic-carbon and black shales
-C-cycle, carbonates, Corg : CO2 sources and sink
-Carbonates: their geochemical proxies for environmental change: stable isotopes, Mg/Ca, Sr
-marine sediments thorough geological time
-carbonates and evaporites
-lacustrine carbonates
-economic aspects of limestone

Lecture notes
no script. scientific articles will be distributed during the course

Literature
We will read and critically discuss scientific articles relevant for "biological and chemical processes in marine and lacustrine systems"

Prerequisites / notice
The grading of students is based on in-class exercises and end-semester examination.

Dynamical Meteorology is concerned with the dynamical processes of the earth's atmosphere. The fundamental equations of motion in the atmosphere will be discussed along with the dynamics and interactions of synoptic system - i.e. the low and high pressure systems that determine our weather. The motion of such systems can be understood in terms of quasi-geostrophic theory. The lecture course provides a derivation of the mathematical basis along with some interpretations and applications of the concept.

 Atmospheric Composition and Cycles

Number Title Type ECTS Hours Lecturers
701-1235-00L Cloud Microphysics W 4 credits 2V+1U U. Lohmann, Z. A. Kanji

Abstract: Clouds are a fascinating atmospheric phenomenon central to the hydrological cycle and the Earth’s climate. Interactions between cloud particles can result in precipitation, glaciation or evaporation of the cloud depending on its microstructure and microphysical processes.

Objective: The learning objective of this course is that students understand the formation of clouds and precipitation and can apply learned principles to interpret atmospheric observations of clouds and precipitation.

Content: see: http://www.iac.ethz.ch/edu/courses/master/modules/cloud-microphysics.html

Lecture notes: This course will be designed as a reading course in 1-2 small groups of 8 students maximum. It will be based on the textbook below. The students are expected to read chapters of this textbook prior to the class so that open issues, fascinating and/or difficult aspects can be discussed in depth.

Prerequisites / notice: Target group: Master students in Atmosphere and Climate

651-4053-05L Boundary Layer Meteorology W 4 credits 3G M. Rotach, P. Calanca

Abstract: The Planetary Boundary Layer (PBL) constitutes the interface between the atmosphere and the Earth's surface. Theory on transport processes in the PBL and their dynamics is provided. This course treats theoretical background and idealized concepts. These are contrasted to real world applications and current research issues.

Objective: Overall goals of this course are given below. Focus is on the theoretical background and idealised concepts.
Students have basic knowledge on atmospheric turbulence and theoretical as well as practical approaches to treat Planetary Boundary Layer flows. They are familiar with the relevant processes (turbulent transport, forcing) within, and typical states of the Planetary Boundary Layer. Idealized concepts are known as well as their adaptations under real surface conditions (as for example over complex topography).

Content: - Introduction
- Turbulence
- Statistical treatment of turbulence, turbulent transport
- Conservation equations in a turbulent flow
- Closure problem and closure assumptions
- Scaling and similarity theory
- Spectral characteristics
- Concepts for non-ideal boundary layer conditions

Lecture notes: available (i.e. in English)

Abstract
The course provides an introduction into quantitative analysis of groundwater flow and solute/heat transport. It is focussed on understanding, formulating, and solving groundwater flow and solute/heat transport problems.

Objective
a) Students understand the basic concepts of groundwater flow and solute/heat transport processes and boundary conditions.

b) Students are able to formulate simple, practical groundwater flow and solute/heat transport problems.

c) Students are able to understand and apply simple analytical and/or numerical solutions to fluid flow and solute/heat transport problems.

Content
1. Introduction to groundwater problems. Concepts to quantify properties of aquifers.

2. Flow equation. The generalised Darcy law.

3. The water balance equation.

5. Analytical solutions to flow problems I

6. Analytical solutions to flow problems II

7. Finite difference solution to flow problems.

12. Analytical solutions to transport problems I.

13. Analytical solutions to transport problems II

Lecture notes

Literature
de Marsily G., Quantitative Hydrogeology, Academic Press, 1986

102-0287-00L Fluvial Systems W 3 credits 2G P. Molnar

Abstract
The course presents a view of the processes acting on and shaping the landscape and the fluvial landforms that result. The fluvial system is viewed in terms of the production and transport of sediment on hillslopes, the structure of the river network and channel morphology, fluvial processes in the river, riparian zone and floodplain, and basics of catchment and river management.

Objective
The course has two fundamental aims: (1) it aims to provide environmental engineers with the physical process basis of fluvial system change, using the right language and terminology to describe landforms; and (2) it aims to provide quantitative skills in making simple and more complex predictions of change and the data and models required.

Content
The course consists of three sections: (1) Introduction to fluvial forms and processes and geomorphic concepts of landscape change, including climatic and human activities acting on the system. (2) The processes of sediment production, upland sheet-rill-gully erosion, basin sediment yield, rainfall-triggered landsliding, sediment budgets, and the modelling of the individual processes involved. (3) Processes in the river, floodplain and riparian zone, including river network topology, channel geometry, aquatic habitat, role of riparian vegetation, including basics of fluvial system management. The main focus of the course is hydrological and the scales of interest are field and catchment scales.

Lecture notes
There is no script.

Literature
The course materials consist of a series of 13 lecture presentations and notes to each lecture. The lectures were developed from textbooks, professional papers, and ongoing research activities of the instructor. All material is on the course webpage.

Prerequisites / notice
Prerequisites: Hydrology 1 and Hydrology 2 (or contact instructor).

701-0535-00L Environmental Soil Physics/Vadose Zone Hydrology W 3 credits 2G+2U D. Or

Abstract
The course provides theoretical and practical foundations for understanding and characterizing physical and transport properties of soils/near-surface earth materials, and quantifying hydrological processes and fluxes of mass and energy at multiple scales. Emphasis is given to land-atmosphere interactions, the role of plants on hydrological cycles, and biophysical processes in soils.
The lecture provides an introduction to atmospheric chemistry at bachelor level. It introduces the kinetics of gas phase and heterogeneous processes taking place in the gas phase as well as between different phases including aerosols and clouds. The students will also acquire a good understanding of atmospheric environmental problems including air pollution, stratospheric ozone depletion) as well as regional (e.g. urban air pollution) environmental problems.

Students are able to:
- characterize quantitative knowledge needed to measure and parameterize structural, flow and transport properties of partially-saturated porous media,
- quantify driving forces and resulting fluxes of water, solute, and heat in soils,
- apply modern measurement methods and analytical tools for hydrological data collection
- conduct and interpret a limited number of experimental studies

The definition of prerequisites is part of the admission procedure for the master studies. You are informed by the admission office as to what courses of study you have to catch up with. You are accredited for these courses in the electives block of the master studies.
This lecture introduces the theoretical principles and the observational and analytical methods of atmospheric dynamics. Based on these principles, the following aspects are discussed: the energetics of the global circulation, the basic synoptic and meso-scale flow phenomena, in particular the dynamics of extratropical cyclones, and the influence of mountains on the atmospheric flow.

The students are able to:
- explain up-to-date meteorological observation techniques and the basic methods of theoretical atmospheric dynamics
- to discuss the mathematical basis of atmospheric dynamics, based on selected atmospheric flow phenomena
- to explain the basic dynamics of the global circulation and of synoptic- and meso-scale flow features
- to explain how mountains influence the atmospheric flow on different scales

Satellite observations; analysis of vertical soundings; geostrophic and thermal wind; cyclones at mid-latitude; global circulation; north-atlantic oscillation; atmospheric blocking situations; Eulerian and Lagrangian perspective; potential vorticity; Alpine dynamics (storms, orographic wind); planetary boundary layer

Lecture notes
Lecture notes and slides

Powerpoint slides and script will be made available

Numerical Techniques in the Environmental Sciences

This course gives an introduction to programming in FORTRAN95, and is suitable for students who have only minimal programming experience, for example with MATLAB scripts. The focus will be on Fortran 95, but Fortran 77 will also be covered for those working with existing codes. A hands-on approach will be emphasized rather than abstract concepts.

Three obligatory exercises, each two hours in length, are integrated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

There is a additional tutorial right after each lecture to give you the chance to ask further questions and discuss the exercises. The participation is recommended but voluntary.

From the Microscale to Climate, Cambridge Univ. Press, 391 pp., 2016.

The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Classification of numerical problems, introduction to finite-difference methods, time integration schemes, non-linearity, conservative numerical techniques, an overview of spectral and finite-element methods. Examples and exercises from a diverse cross-section of Environmental Science.

Three obligatory exercises, each two hours in length, are integrated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

There is a additional tutorial right after each lecture to give you the chance to ask further questions and discuss the exercises. The participation is recommended but voluntary.

Numerical Methods in Environmental Sciences

This course gives an introduction to programming in FORTRAN95, and is suitable for students who have only minimal programming experience. The focus will be on Fortran 95, but Fortran 77 will also be covered for those working with already-existing codes. A hands-on approach will be emphasized rather than abstract concepts.

Three obligatory exercises, each two hours in length, are integrated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

There is a additional tutorial right after each lecture to give you the chance to ask further questions and discuss the exercises. The participation is recommended but voluntary.

From the Microscale to Climate, Cambridge Univ. Press, 391 pp., 2016.

The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Classification of numerical problems, introduction to finite-difference methods, time integration schemes, non-linearity, conservative numerical techniques, an overview of spectral and finite-element methods. Examples and exercises from a diverse cross-section of Environmental Science.

Abstract  We will explain the fundamentals of physics of glaciers which are necessary for treating applied problems. We will go into climate-glacier interactions, flow of glaciers, lake ice and hydrology of glaciers.

Objective  To understand the fundamental physical processes in glaciology.
To learn some basic numerical modelling techniques for glacier flow.
To identify glaciological hazards and to learn some assessment and mitigation possibilities.

Content  Basics in physical glaciology
Dynamics of glaciers: deformation of glacier ice, role of water in glacier motion, reaction of glaciers to climate changes, glacier calving, surges
Ice falls, ice avalanches
Glacier floods
Lake ice and bearing capacity

Lecture notes  Handouts are available

Literature  Relevantere Literatur wird während der Vorlesung angegeben.

Prerequisites / notice  Für aktuelle Fallbeispiele werden risikobasierte Massnahmen bei glaziologischen Naturgefahren diskutiert.

Voraussetzungen: Es werden Grundkenntnisse in Mechanik und Physik vorausgesetzt.

Future climate change can only be kept within reasonable bounds when CO2 emissions are drastically reduced. In this course, we will discuss the concepts and methodologies for the analysis and assessment of sustainable development. A special focus is given to the social dimension and to social justice as a guiding principle of sustainability as well as to trade-offs between the different goals of sustainable development.

<td></td>
<td>Content</td>
<td></td>
<td></td>
<td></td>
<td>The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore, legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally, unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection, etc.) will be presented and discussed.</td>

<tr>
<td></td>
<td>Abstract</td>
<td></td>
<td></td>
<td></td>
<td>The seminar is designed for students and researchers (MA, PhD, PostDoc) who use inter- and transdisciplinary elements in their projects. It addresses the challenges of this research: How to integrate disciplines? How (and in what role) to include societal actors? How to bring results to fruition? We discuss these questions based on case studies and theories and on the participant's projects.</td>
</tr>
<tr>
<td></td>
<td>Objective</td>
<td></td>
<td></td>
<td></td>
<td>The participants understand the specific challenges of inter- and transdisciplinary research in general and in the context of sustainable development in particular. They know methods and concepts to address these challenges and apply them to their research projects.</td>
</tr>
<tr>
<td></td>
<td>Content</td>
<td></td>
<td></td>
<td></td>
<td>The seminar covers the following topics:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>(1) Theories and concepts of inter- and transdisciplinary research</td>
</tr>
<tr>
<td></td>
<td></td>

Data: 06.01.2019 12:56    Autumn Semester 2016    Page 138 of 1571
Content
The course is structured as follows:
- Overview of rationale, objectives, concepts and origins of sustainable development;
- Importance and application of sustainability in science, politics, society, and economy;
- Sustainable (local / regional) development in different national / international contexts;
- Analysis and evaluation methods of sustainable development with a focus on social justice;
- Trade-offs in selected examples.

The course provides an introduction to the methods and tools for analysis of energy consumption, energy production and energy flows. Both larger systems, e.g. countries, and smaller systems, e.g. industries, homes, vehicles, are studied. The tools and methods are applied to various problems during the exercises. Different concepts of energy statistics used are introduced.

The course provides also an introduction to energy systems models for developing scenarios of future energy consumption and production. Bottom-up and Top-Down approaches are addressed and their features and applications discussed.

The course contains the following parts:
- Part I: Energy flows and energy statistics
- Part II: Environmental impacts
- Part III: Electric power systems
- Part IV: Energy in buildings
- Part V: Energy in transportation
- Part VI: Energy systems models

Attendees are promoted through the preparation of a master thesis proposal and evaluation of each other's work. Knowledge exchange between class participants is promoted through the preparation of a master thesis proposal and evaluation of each other's work.

The students are exposed to different atmospheric science topics and learn how to take part in scientific discussions.

The colloquium is a series of scientific talks by prominent invited speakers assembling interested students and researchers from around Zürich. Students take part of the scientific discussions.

The colloquium is a series of scientific talks by prominent invited speakers assembling interested students and researchers from around Zürich. Students take part of the scientific discussions.

The colloquium is a series of scientific talks by prominent invited speakers assembling interested students and researchers from around Zürich. Students take part of the scientific discussions.

In this seminar, the process of writing a scientific proposal will be introduced. The essential elements of a proposal, including the peer review process, will be outlined and class exercises will train scientific writing skills. Knowledge exchange between class participants is promoted through the preparation of a master thesis proposal and evaluation of each other's work.

### 701-1213-00L Introduction Course to Master Studies Atmosphere and Climate

**Abstract**

New master students are introduced to the atmospheric and climate research field through keynotes given by the programme's professors. In several self-assessment and networking workshops they get to know each other and find their position in the science.

**Objective**

The aims of this course are i) to welcome all students to the master program and to ETH, ii) to acquaint students with the faculty teaching in the field of atmospheric and climate science at ETH and at the University of Bern, iii) that the students get to know each other and iv) to assess needs and discuss options for training and education of soft-skills during the Master program and to give an overview of the study options in general.

---

### Laboratory and Field Courses

*The course in the category «lab and field work» are only offered in spring semester.*

</tr>
</tbody>
</table>

**Objective**

Only students who fulfill the following criteria are allowed to begin with their master thesis:

a. successful completion of the bachelor programme;
b. fulfilling of any additional requirements necessary to gain admission to the master programme.

The master thesis is under the supervision of a professor teaching in the module courses of the master programme. Please refer to the web page linked here for instructions and guidelines how to register for the master thesis (http://www.iac.ethz.ch/education/master/curriculum/master_thesis)

**Abstract**

**Objective**

Students are to prove their skills in working autonomously on a scientific project. They document their work in a scientific report.

### Course Units for Additional Admission Requirements

**Abstract**

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

**Objective**

Introduction of the most important components of the climate systems and their interactions.

**Literature**

A comprehensive list of references is provided in the class. Two books are particularly recommended:

**Prerequisites / notice**

Teaching: Reto Knutti, several keynotes to special topics by other professors

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

**Abstract**

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

**Objective**

This is a self-study course targeted at Master students who did not follow the bachelor course "atmospheric chemistry" or similar. The course provides a general introduction into atmospheric chemistry.

**Content**

- Origin and properties of the atmosphere: structure, large scale dynamics, UV radiation
- Thermodynamics and kinetics of gas phase reactions: enthalpy and free energy of reactions, rate laws, mechanisms of bimolecular and termolecular reactions.
- Tropospheric photochemistry: Photolysis reactions, photochmical C3 formation, role and budget of HOx, dry and wet deposition
- Aerosols and clouds: chemical properties, primary and secondary aerosol sources
- Multiphase chemistry: heterogeneous kinetics, solubility and hygroscopicity, N2O5 chemistry, SO2 oxidation, secondary organic aerosols
- Air quality: role of planetary boundary layer, summer- versus winter-smog, environmental problems, legislation, long-term trends
- Stratospheric chemistry: Chapman cycle, Brewer-Dobson circulation, catalytic ozone destruction cycles, polar ozone hole, Montreal protocol
- Global aspects: global budgets of ozone, methane, CO and NOx, air quality - climate interactions

**Prerequisites / notice**

Basic courses in chemistry and physics are expected.
Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
The fundamental background of cloud and precipitation formation (including thermodynamics and aerosol physics) and their relevance for climate are discussed.

Objective
The students can appreciate the processes leading to cloud and precipitation formation and their importance for climate. This lecture is the prerequisite for the MSc lectures cloud microphysics and cloud dynamics.

Content
Moist processes/thermodynamics; aerosol physics; cloud formation; precipitation processes, storms; importance of aerosols and clouds for climate; measurements of clouds (radar and satellites)

Lecture notes
Powerpoint slides and script will be made available

Literature
Rogers and Yau, A Short Course in Cloud Physics, Pergamon Press, 1989; Wallace and Hobbs, Atmospheric Science: An Introductory Survey, Elsevier, 2006

701-0473-AAL Weather Systems
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Satellite observations; analysis of vertical soundings; geostrophic and thermal wind; cyclones at mid-latitude; global circulation; north-atlantic oscillation; atmospheric blocking situations; Eulerian and Lagrangian perspective; potential vorticity; Alpine dynamics (storms, orographic wind); planetary boundary layer

Objective
Introduction to basic aspects of atmospheric dynamics. Focus is given to the global-scale atmospheric circulation, synoptic-scale processes (in particular low-pressure systems), and the influence of mountains on the atmospheric flow.

Content
Satellite observations; analysis of vertical soundings; geostrophic and thermal wind; cyclones at mid-latitude; global circulation; north-atlantic oscillation; atmospheric blocking situations; Eulerian and Lagrangian perspective; potential vorticity; Alpine dynamics (storms, orographic wind); planetary boundary layer

Lecture notes
Lecture notes and slides

Literature
Atmospheric Science, An Introductory Survey
John M. Wallace and Peter V. Hobbs, Academic Press

701-0461-AAL Numerical Methods in Environmental Sciences
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Objective
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Content
Classification of numerical problems, introduction to finite-difference methods, time integration schemes, non-linearity, conservative numerical techniques, an overview of spectral and finite-element methods. Examples and exercises from a diverse cross-section of Environmental Science.

Lecture notes
Three obligatory exercises, each two hours in length, are integrated into the lecture. The implementation language is Matlab (previous experience not necessary: a Matlab introduction is given). Example programs and graphics tools are supplied.

Literature
List of literature is provided.

701-1901-AAL Systems Analysis
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Self study course in Systems Analysis to fulfill requirements for enrollment into the master program. Topics covered include linear box models with one and several variables; non-linear box models with one or several variables; discrete-time models; and continuous models in space and time.

Objective
The aim of this course is to develop an understanding of the dynamical behavior of environmental systems and how this behavior can be captured and understood using mathematical concepts.

Lecture notes
For English Speaking students:

701-0106-AAL Mathematics V: Applied Deepening of Mathematics I-III
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Selected mathematical topics are presented for later use in more specialised lectures. Part of the topics were already discussed in the lectures Mathematics I-III. Here, they should be shortly recapitulated and most importantly applied to practical problems. If necessary, new mathematical concepts and methods will be introduced in order to solve challenging and inspiring problems from practice.

Objective
The aim of this lecture is to prepare the students for the more specialised lectures. They should become more familiar with the mathematical background, the mathematical concepts and most of all with their application and interpretation.

Content
Practical examples from the following areas will be discussed: ordinary differential equations; eigenvalue problems from linear algebra; systems of linear and nonlinear differential equations; partial differential equations (diffusion, transport, waves).

Objective
- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

851-0242-08L Research Methods in Educational Science

| W | 1 credit | 1S | P. Edelsbrunner, B. Rütsche, E. Stern, E. Ziegler |

Number of participants limited to 30

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)"

Abstract
Literature from the learning sciences is critically discussed with a focus on research methods.
At the first meeting, working groups will be assembled and meetings with those will be set up.
In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

Objective
- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

851-0240-03L Introduction to Test Theory and Test Construction in Educational Contexts (University of Zürich)

| W | 4 credits | 2S | University lecturers |

Enrolment only possible with Teaching Diploma or DC matriculation.

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
UZH Module Code: 200a968

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

Objective
At the end of the seminar, participants will be in a position to
- describe the scientific fundamentals of test theory and test structure,
- evaluate examples of scientifically-developed tests in their application context,
- if necessary, critically question the performance assessment that they employ in practice and professionalise it still further.

Content
Die konkreten Inhalte des Seminars ergeben sich aufgrund der Präferenzen der Teilnehmenden und der daraus abgeleiteten Themenübersicht für Vorträge und Seminarsitzungen. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben und erläutert. Schwerpunkte der Themenvorschläge sind:

- Testentwicklung
- Gütekriterien von Tests
- Aufgabenkonstruktion
- Datenauswertung
- Rasch-Modell
- Internationale Vergleichstests
- Zulassungsmodalitäten

Lecture notes
Im Verlaufe des Semesters werden einzelne Unterlagen in den Veranstaltungen abgegeben. Dazu gehören auch die Handouts der verschiedenen, studentischen Vorträge.

Literature
Als Grundlagenliteratur werden folgende Werke empfohlen:
- Weitere Literatur wird in der Lehrveranstaltung genannt.

Prerequisites / notice
Die Leistungsanforderungen richten sich im Umfang nach der Zahl zu erwerbender ECTS-Punkte, wobei 1 ECTS-Punkt einem Zeitaufwand von ca. 30 Arbeitsstunden entspricht. ETHZ-Studierende können im Rahmen dieser Veranstaltung 3 ECTS-Punkte erwerben.

Dazu sind folgende Leistungen zu erbringen:
- Präsentation und aktive mündliche Mitarbeit in der Lehrveranstaltung (MA)
- Pflichtlektüre entsprechend der Angaben in der Lehrveranstaltung
- Referat (RE)
- Schreiben einer schriftlichen Arbeit

Weitere Anfragen zu den Leistungsanforderungen werden im Rahmen der Startveranstaltung abgegeben und erläutert.

Educational Science Teaching Diploma

851-0240-00L Human Learning (EW1)

| O | 2 credits | 2G | E. Stern |

This lecture is only apt for students who intend to enrol in the programs "Teaching Diploma" or "Teaching Certificate". It is about learning in childhood and adolescence.

Abstract
This course looks into scientific theories and also empirical studies on human learning and relates them to the school.

Objective
Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

Content
Thematische Schwerpunkte:
Lernen als Verhaltensänderung und als Informationsverarbeitung; Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzentwicklung unter besonderer Berücksichtigung des Wissensverteilungs-; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen

Lernformen:

Lecture notes
Folien werden zur Verfügung gestellt.
Students learn principles of teaching beyond classroom and regular PE-Lessons: Designing Educational Environments in Physical Education (EW2 Sport) (851-0238-01L) 3 credits 3S, P. Edelsbrunner, S. Hofer. The students have to read the book “Lernwirksam unterrichten” from Felten/Stern and they have to answer the questions addressed on it. They will be supported by Elsbeth Stern and the students will discuss how insights from learning research can inform classroom practice.

Students learn advanced techniques to support and to diagnose knowledge acquisition processes in school. In this seminar students learn advanced techniques to support and to diagnose knowledge acquisition processes in school. (851-0240-00L) Human Learning (EW1) (851-0242-01L) Coping with Psychosocial Demands of Teaching (EW4) 3 credits 3S, A. Deilgmyr, P. Greutmann, U. Markwalder. This is a mandatory course for students of the teacher’s diploma for secondary schools, who have not completed the course 851-0238-01L. "Unterstützung und Diagnose von Wissenserwerbsprozessen" (EW3) until the end of spring semester 2014 (except for students of Sport Teaching Diploma, who have completed the sport-specific course units EW2-4). The successful completion of ALL modules relevant for the teacher's diploma is required for participation in this course.

For a smooth semester planning, it is requested to appear personally at the first teaching session.

Literature

Prerequisites / notice
This lecture is only apt for students who intend to enrol in the programs "Lehrdiplom" or "Didaktisches Zertifikat". It is about learning in childhood and adolescence.
851-0242-07L Human Intelligence
Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).
Number of participants limited to 20.
This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Objective
The focus will be on the book "Intelligenz: Grosse Unterschiede und ihre Folgen" by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

Abstract
- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

851-0242-09L Student Research Projects: Practical Research on Learning and Instruction
Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

Number of participants limited to 20.
The successful completion of both course no. 851-0240-00L "Menschliches Lernen (EW 1)" and course no. 851-0239-01L "Unterstützung und Diagnose von Wissenserwerbsprozessen (EW 3)" is a necessary prerequisite for this course.

Objective
The course is targeted at advanced students who have taken an interest in gathering practical research experience in the field of Learning & Instruction. In teams of two, students conduct their own research projects (planning, conducting, analyzing, interpreting, and presenting research); thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students’ independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction)

Abstract
- Participants can summarize and evaluate the main results from a study in the field of learning and Instruction, with regard to the research question being asked.

851-0242-06L Cognitively Activating Instructions in MINT Subjects
Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

Objective
- Participants can summarize and evaluate the main results from a study in the field of learning and Instruction, with regard to the research question being asked.

851-0242-08L Research Methods in Educational Science
Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

Objective
- Participants can illustrate and explain basic methods and concepts for research in the fields of Learning and Instruction, e.g. with the help of practical examples.
- Participants can generate testable research questions for a topic relevant in the fields of Learning and Instruction.
- Participants can design and conduct a study that is relevant for answering their research question.
- Participants can summarize and evaluate the main results from a study in the field of learning and Instruction, with regard to the research question being asked.

851-0250-05L Introduction to "Nature of Science" and "Scientific Inquiry"
Enrolment only possible with matriculation in Teaching Diploma (excluding Teaching Diploma Sport).
Number of participants limited to 20.

Objective
Student teachers will develop an understanding of the concepts of nature of science and scientific inquiry. They will design a variety of instructional materials for teaching students about these concepts.

Literature
Buch "Lernwirksam unterrichten" (Felten/Stern)

Prerequisites / notice
Detailed information: http://www.ifvll.ethz.ch/studium/lehre/ew-5.html
The module "vocational schools as sites of teaching and learning: providing encouragement and support for apprentices" aims to provide teachers at VET and professional baccalaureate institutions with ways of dealing with learners problems, particularly in connection with their being fed up with school, with job-seeking, school-to-work transition, or continuing education.

**Objective**
- Formulating learning objectives at different levels, and implementing and monitoring these.
- Steering tuition in terms of content and method to fit in with the objectives.
- Formulating examination questions and assignments on the basis of the learning objectives set out in the curriculum and the teaching given.
- Selectively deploying different examination types and procedures/structuring selected learning contents logically in terms of the subject matter and learning process (from the concrete to the abstract, from the simple to the complex) and implementing these with different didactic visual aids.

**Content**
In der Veranstaltung werden die Rahmen- und Schullehrpläne der Berufsmaturität (alle Richtungen) analysiert und deren Fachinhalt in Übungen und Hospitalitationen didaktisch umgesetzt. Der Unterricht an der Berufsmaturität wird im Hinblick auf die Herausforderung "Viel Stoff-wenig Zeit" erarbeitet.

**Lecture notes**
Von den Dozierenden.
Unterrichten an Berufsfachschulen: Berufsmaturität. hep Verlag Bern

**Literature**
G. Steiner (2007): Der Kick zum effizienten Lernen. hep Verlag

**Prerequisites / notice**
Rahmen- und Schullehrpläne der Berufsmaturität

Die Lehrveranstaltung ist seit September 2008 vom Bundesamt für Berufsbildung und Technologie akkreditiert.

**Lecture notes**
Handouts vom Dozenten und Sammlung von Arbeitsmaterialien auf dem BSCW-Server.
In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

The colloquium is conducted by the professorships participating in the Competence Center EducETH (ETH) and in the Institute for Educational Sciences (UZH).

Die Leistungsanforderungen richten sich im Umfang nach der Zahl zu erwerbender ECTS-Punkte, wobei 1 ECTS-Punkt einem Zeitaufwand von ca. 30 Arbeitsstunden entspricht. ETHZ-Studierende können im Rahmen dieser Veranstaltung 3 ECTS-Punkte erwerben.

Dazu sind folgende Leistungen zu erbringen:
- Präsenz und aktive mündliche Mitarbeit in der Lehrveranstaltung (MA)
- Referat (RE)
- Schreiben einer schriftlichen Arbeit

Die Lehrveranstaltung ist seit September 2008 vom Bundesamt für Berufsbildung und Technologie akkreditiert.

**851-0240-03L Introduction to Test Theory and Test Construction in Educational Contexts (University of Zürich)**

- **Enrolment only possible with Teaching Diploma or DC matriculation.**
- No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
- UZH Module Code: 200a968
- Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

**Abstract**
In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

**Objective**
- At the end of the seminar, participants will be in a position to
  - describe the scientific fundamentals of test theory and test structure.
  - evaluate examples of scientifically-developed tests in their application context.
  - if necessary, critically question the performance assessment that they employ in practice and professionalise it still further.

**Content**
Die konkreten Inhalte des Seminars ergeben sich aufgrund der Präferenzen der Teilnehmenden und der daraus abgeleiteten Themenübersicht für Vorträge und Seminararbeiten. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben und erläutert. Schwerpunkte der Themenvorschläge sind:
- Testentwicklung
- Gütekriterien von Tests
- Aufgabenkonstruktion
- Datenauswertung
- Rasch-Modell
- Internationale Vergleichstests
- Zulassungstests

**Lecture notes**
Im Verlaufe des Semesters werden einzelne Unterlagen in den Veranstaltungen abgegeben. Dazu gehören auch die Handouts der verschiedenen, studentischen Vorträge.

**Literature**
Als Grundlagenliteratur werden folgende Werke empfohlen:
- weitere Literatur wird in der Lehrveranstaltung genannt.

**Prerequisites / notice**
Die Leistungsanforderungen richten sich im Umfang nach der Zahl zu erwerbender ECTS-Punkte, wobei 1 ECTS-Punkt einem Zeitaufwand von ca. 30 Arbeitsstunden entspricht. ETHZ-Studierende können im Rahmen dieser Veranstaltung 3 ECTS-Punkte erwerben.

Dazu sind folgende Leistungen zu erbringen:
- Präsenz und aktive mündliche Mitarbeit in der Lehrveranstaltung (MA)
- Pflichtlektüre entsprechend der Angaben in der Lehrveranstaltung
- Referat (RE)
- Schreiben einer schriftlichen Arbeit

Die Leistungsanforderungen werden im Rahmen der Startveranstaltung abgegeben und erläutert.

**851-0240-16L Colloquium on the Science of Learning and Instruction**

- **W 1 credit 1K**
- **E. Stern, P. Greutmann, further lecturers**

**Abstract**
In the colloquium we discuss scientific projects concerning the teaching in mathematics, computer science, natural sciences and technology (STEM). The colloquium is conducted by the professorships participating in the Competence Center EducETH (ETH) and in the Institute for Educational Sciences (UZH).

**Objective**
Participants are exemplarily introduced to different research methods used in research on learning and instruction and learn to weigh advantages and disadvantages of these approaches.

**851-0242-06L Cognitively Activating Instructions in MINT Subjects**

- **W 2 credits 2S**
- **R. Schumacher**

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

**Abstract**
This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

**Objective**
- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

**Prerequisites / notice**
Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

**851-0242-07L Human Intelligence**

- **W 1 credit 1S**
- **E. Stern, P. Edelsbrunner, B. Rütsche**

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Number of participants limited to 30.
Abstract
The focus will be on the book "Intelligenz: Grosse Unterschiede und ihre Folgen" by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

Objective
- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

851-0242-08L Research Methods in Educational Science
Number of participants limited to 30
This course can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)"

Abstract
Literature from the learning sciences is critically discussed with a focus on research methods. At the first meeting, working groups will be assembled and meetings with those will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

Objective
- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

851-0242-09L Student Research Projects: Practical Research on Learning and Instruction
Number of participants limited to 20.

The successful completion of both course no. 851-0240-00L "Menschliches Lernen (EW 1)" and course no. 851-0238-01L "Unterstüztung und Diagnose von Wissenserwerbsprozessen (EW 3)" is a necessary prerequisite for this course.

Abstract
In teams of two, participants in this seminar conduct their own research project. Each team is advised by one of the researchers serving as lecturers in this course. Basic conceptual and methodological issues are the topic of a series of plenary meetings; however, the major part of the work is done in small-group meetings with the advising researcher, and in self-directed research projects.

Objective
The course is targeted at advanced students who have taken an interest in gathering practical research experience in the field of Learning & Instruction. In teams of two, students conduct their own research projects (planning, conducting, analyzing, interpreting, and presenting research); thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. During the first half of the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students' independent reading (e.g., generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction)

- Learning goals include:
  - Participants can illustrate and explain basic methods and concepts for research in the fields of Learning and Instruction, e.g., with the help of practical examples.
  - Participants can generate testable research questions for a topic relevant in the fields of Learning and Instruction.
  - Participants can design and conduct a study that is relevant for answering their research question.
  - Participants can summarize and evaluate the main results from a study in the field of learning and instruction, with regard to the research question being asked.

851-0250-05L Introduction to "Nature of Science" and "Scientific Inquiry"
Enrolment only possible with matriculation in Teaching Diploma (excluding Teaching Diploma Sport).

Abstract
This seminar will begin with a review of the literature on the teaching and learning of nature of science and scientific inquiry. It focuses on the development of adequate and functional understandings of nature of science and scientific inquiry.

Objective
Student teachers will develop an understanding of the concepts of nature of science and scientific inquiry. They will design a variety of instructional materials for teaching students about these concepts.

851-0594-00L International Environmental Politics
Particularly suitable for students of D-ITET, D-USYS

Abstract
This course focuses on the conditions under which cooperation in international environmental politics emerges and the conditions under which such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

After passing an end-of-semester test (requirement: grade 4.0 or higher) students will receive 3 ECTS credit points. The workload is around 90 hours (meetings, reading assignments, preparation of test).

Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory.

Lecture notes
Assigned reading materials and slides will be available at http://www.ib.ethz.ch/teaching.html (select link 'Registered students, please click here for course materials' at top of that page). Log in with your nethz name and password. Questions concerning access to course materials can be addressed to Mike Hudecheck (Mike Hudecheck <michaehu@student.ethz.ch>). All assigned papers must be read ahead of the respective meeting. Following the course on the basis of on-line slides and papers alone is not sufficient. Physical presence in the classroom is essential. Many books and journals covering international environmental policy issues can be found at the D-GESS library at the IPW building, Haldeneggstrasse 4, B-floor, or in the library of D-USYS.

Content
This course deals with how and why international cooperation in environmental politics emerges, and under what circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

The exercises in philosophy of science serve to develop skills in critical thinking by discussing seminal texts about the rationality of science. Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

Further optional exercises accompany the lecture and offer the opportunity for an in-depth discussion of selected texts from the reader. Students are asked to write an exam during the second last session (11.12.2015).

No enrolment to this course at ETH Zurich. Book the lectures notes here: [link](http://example.com).

Students that want to subscribe for this course also have to subscribe for the lecture 701-0701-00 V "Wissenschaftsphilosophie". Credit points are given for preparing a structure and a summary of one of the texts.
corresponding module directly at UZH.

UZH Module Code: 090MaDgU

Enrolment only possible with matriculation in Teaching Diploma or TC at ETH or in Teaching Diploma at UZH.

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
Students are familiarised with the subjects taught at high-school level I (the first three years of the full-length high school, or the first year of the reduced-length high school). The central contents of geometry, arithmetic and algebra, and also written mathematical problems are explained.

Objective
In the teaching given at high-school level I (the first three years of the full-length high school or the first year of the reduced-length high school), central concepts and approaches adopted in mathematics are introduced and observed in greater depth. These include variables, function, proof. This calls for a careful didactic analysis on the part of the teacher, requiring them to study and reflect on the prerequisites for the pupils and the requirements in terms of mathematics and cognitive psychology.

Content
Beispiele von Schülerarbeiten geben in diesem Seminar einen Einblick in die mathematische Denkwelt der Schülerinnen und Schüler. Vielfältige Aufgaben zum Einsatz im Unterricht werden vorgestellt, selber gelöst und diskutiert.

- Arithmetik und Algebra: Zahlbereiche, Form und Inhalt in der Algebra.
- Geometrie: Konstruieren-Berechnen-Beweisen, dynamische Geometrie (Geogebra).
- Sachrechnen: Funktionsbegriff, mathematische Modellierung.
- Aktuelle mathematikdidaktische Aspekte wie Lernprozesse, Grundvorstellungen, Kompetenzen, offene Aufgaben.

Lecture notes
Zahlreiche begleitende Unterlagen werden abgegeben.

**Abstract**

Professors from national and international universities, technical experts from the industry as well as research associates of the institute of structural engineering (IBK) are invited to present recent research results and specific projects from the practice. This colloquium is addressed to members of universities, practicing engineers and interested persons in general.

**Objective**

Learn about recent research results in structural engineering.

Geology and Petrography

O

4 credits

2V+1U

C. A. Heinrich, S. Löw,
This course gives an overview of the basic concepts of geology and petrography and shows some links to the application of these concepts. The course consists of lectures and exercises in groups. The lectures cover all aspects of the dynamic earth, from the history of the earth, to the formation of rocks, mountains, and oceans, and the degradation processes shaping the uppermost earth's crust.

Abstract

This course gives an overview of the basic concepts of geology and petrography and shows some links to the application of these concepts. The course consists of lectures and exercises in groups. The lectures cover all aspects of the dynamic earth, from the history of the earth, to the formation of rocks, mountains, and oceans, and the degradation processes shaping the uppermost earth's crust.

Objective

Content

The understanding of the fundamentals of Statics for engineers and their application in simple settings.

Objective

Introduction to fundamental questions of public and private law which serves as a foundation for more advanced law classes.

Content

1. Public Law
   Constitutional law: sources of law, organization of the state, fundamental rights. Administrative law: administrative decisions, organization of the administration, enforcement of administrative decisions, procedural law, basics of police, environmental and zoning law.

2. Private law

Lecture notes

There are ‘Lecture Notes’ (in German) for this course.

Literature

Further information is available at http://www.hertig.ethz.ch/education/grundzuege-des-rechts-fuer-baug-und-arch.html

851-0703-03L

Introduction to Law for Civil Engineering

Only for Civil Engineering BSc, Geomatic Engineering and Planning BSc; Environmental Engineering BSc and Spatial Development and Infrastructure Systems MSc

Students who have attended or will attend the lecture "Introduction to Law for Architecture" (851-0703-01L) cannot register for this course unit.

Abstract

This class introduces students to basic features of the legal system. Questions of constitutional and administrative law, contract law, tort law, corporate law, as well as litigation are covered.

Objective

Introduction to fundamental questions of public and private law which serves as a foundation for more advanced law classes.

Content

1. Public Law
   Constitutional law: sources of law, organization of the state, fundamental rights. Administrative law: administrative decisions, organization of the administration, enforcement of administrative decisions, procedural law, basics of police, environmental and zoning law.

2. Private law

Lecture notes

There are ‘Lecture Notes’ (in German) for this course.

Literature

Further information is available at http://www.hertig.ethz.ch/education/grundzuege-des-rechts-fuer-baug-und-arch.html

851-0709-00L

Introduction to Civil Law

The course Private Law focuses on the Swiss Code of Obligations (contracts, torts) and on Property Law (ownership, mortgage and easements). In addition, the course will provide a short overview of Civil Procedure and Enforcement.

Abstract

Objective

Le cours de droit civil porte notamment sur le droit des obligations (droit des contrats et responsabilité civile) et sur les droits réels (propriété, gages et servitudes). De plus, il est donné un bref aperçu du droit de la procédure et de l'exécution forcée.

Content

Editions officielles récentes des lois fédérales, en langue française (Code civil et Code des obligations) ou italienne (Codice civile e Codice delle obbligazioni), disponibles auprès de la plupart des librairies.

Sont indispensables:
- le Code civil et le Code des obligations;
- Nef, Urs Ch.: Le droit des obligations à l’usage des ingénieurs et des architectes, trad. Bovay, J., éd. Payot, Lausanne
- Boillod, J.-P.: Manuel de droit, éd Slatkine, Genève

Prerequisites / notice

- Le cours de droit civil et le cours de droit public (2e sem.) sont l'équivalent des cours “Recht I” et “Recht II” en langue allemande et des exercices y relatifs.
- Les examens peuvent se faire en français ou en italien.
- Examen au 1er propédéutique; convient pour travail de semestre.

Optional Colloquia

Mechanics 1: Kinematics and Statics (Colloquium)
Basics: Position of a material point, velocity, kinematics of rigid bodies, forces, reaction principle, mechanical power
Statics: Groups of forces, moments, equilibrium of rigid bodies, reactions at supports, parallel forces, center of gravity, statics of systems, principle of virtual power, trusses, frames, forces in beams and cables, friction
The understanding of the fundamentals of Statics for engineers and their application in simple settings.
Basics: Position of a material point; velocity; kinematics of rigid bodies; translation, rotation, planar motion; forces, action-reaction principle, internal and external forces, distributed forces; mechanical power.
Statics: equivalence and reduction of groups of forces; rest and equilibrium; basic theorem of statics; kinematic and static boundary conditions, applications to supports and clamps of rods and beams; procedures for determination of forces at supports and clamps; parallel forces and centre of gravity; statics of systems, solution using basic theorem and using the principle of virtual power, statically indeterminate systems; statically determinate truss structures, ideal truss structures, nodal point equilibrium, methods for truss force determination; friction, static friction, sliding friction, friction at joints and supports, rolling resistance; forces in cables; beam loading, force and moment vector.

Compulsory Courses 3. Semester

Analysis III
Basics: Position of a material point; velocity; kinematics of rigid bodies; translation, rotation, planar motion; forces, action-reaction principle, internal and external forces, distributed forces; mechanical power.
Statics: Groups of forces, moments, equilibrium of rigid bodies, reactions at supports, parallel forces, center of gravity, statics of systems, principle of virtual power, trusses, frames, forces in beams and cables, friction
The understanding of the fundamentals of Statics for engineers and their application in simple settings.

We will model and solve scientific problems with partial differential equations. Differential equations which are important in applications will be classified and solved. Elliptic, parabolic and hyperbolic differential equations will be treated. The following mathematical tools will be introduced: Laplace and Fourier transforms, Fourier series, separation of variables, methods of characteristics.

**Objective**

Learning to model scientific problems using partial differential equations and developing a good command of the mathematical methods that can be applied to them. Knowing the formulation of important problems in science and engineering with a view toward civil engineering (when possible). Understanding the properties of the different types of partial differential equations arising in science and in engineering.

**Content**

Classification of partial differential equations

Study of the Heat equation general diffusion/parabolic problems using the following tools:
- Separation of variables
- Fourier series
- Fourier transform
- Laplace transform

Study of the wave equation and general hyperbolic problems using similar tools and the method of characteristics.

**Lecture notes**

Accompanying material will be posted on the course website throughout the semester.

**Literature**

We will loosely follow the following books:

- Stanley J. Farlow - Partial Differential Equations for Scientists and Engineers (a Dover reprint and can be bought for less than 20 CHF)
- Chapters 11 and 12 of E. Kreyszig, Advanced Engineering Mathematics.

Two good sources in German are:

- Norbert Hungerbühler, "Einführung in die partiellen Differentialgleichungen"
- http://www.math.ethz.ch/u/felder/Teaching/PDG.

**Prerequisites / notice**

Analysis I and II, in particular, knowing how to solve ordinary differential equations is an important prerequisite.

---

**Abstract**

This course will cover the basic topics in Physics and will show/display/explain with a variety of experiments the most important physical effects. The course will address classical as well as modern physics, and the interplay between basic research and applications.

**Objective**

- Elektromagnetismus: Elektростatik und Magnetostatik, Strom, Spannung und Widerstand, Maxwell-Gleichungen, elektromagnetische Wellen, elektromagnetische Induktion, elektromagnetische Eigenschaften der Materie.
- Thermodynamik: Temperatur und Wärme, Zustandsgleichungen, erster und zweiter Hauptsatz der Wärmelehre, Entropie, Transportvorgänge
- Quantenphysik und Atomphysik
- Schwingungen und Wellen
- Grundlagen der speziellen Relativitätstheorie

**Literature**

Manuskript und Übungsblätter, Lehrbuch

- Hans J. Paus, Physik in Experimenten und Beispielen, Carl Hanser Verlag München Wien (als unterrichtsbegleitendes und ergänzendes Lehrbuch)

**Hydraulics I**

The course teaches the basics of hydromechanics, relevant for civil and environmental engineers.

**Abstract**

Familiarization with the basics of hydromechanics of steady state flows

**Objective**

Properties of water, hydrostatics, stability of floating bodies, continuity, Euler equation of motion, Navier-Stokes equations, similarity, Bernoulli principle, momentum equation for finite volumes, potential flows, ideal fluids vs. real fluids, boundary layer, pipe flow, open channel flow, flow measurements, demonstration experiments in the lecture hall

**Content**

- Smith's channel flow, flow measurements, demonstration experiments in the lecture hall

**Lecture notes**

Script and collection of previous problems

- Bolllrich, Technische Hydromechanik 1, Verlag Bauwesene, Berlin

**Dynamics**

- By studying motion of a single particle, systems of particles and rigid bodies, we introduce essential concepts such as work and energy, equations of motion, and forces and torques. Further topics include stability of equilibria and vibrations. Examples presented in the lectures and weekly exercise lessons help students learn basic techniques that are necessary for advanced courses and work on engineering applications.

**Abstract**

Kinematics, dynamics and oscillations: Motion of a single particle - Motion of systems of particles - 2D and 3D motion of rigid bodies

**Objective**

This course provides Bachelor students of mechanical engineering with fundamental knowledge of kinematics and dynamics of mechanical systems. By studying motion of a single particle, systems of particles and rigid bodies, we introduce essential concepts such as work and energy, equations of motion, and forces and torques. Further topics include stability of equilibria and vibrations. Examples presented in the lectures and daily exercise lessons help students learn basic techniques that are necessary for advanced courses and work on engineering applications.

**Content**

1. Motion of a single particle
2. Motion of systems of particles
3. Motion of rigid bodies
4. Vibrations

**Lecture notes**

- Hand-written slides will be downloadable after each lecture.

**Literature**

Typed course notes from the previous year

Please log in to moodle (https://moodle-app2.let.ethz.ch/auth/shibboleth/login.php), search for "Dynamics", and join the course there. All exercises sheets, lecture materials etc. will be uploaded there.

---

**Examination Block 2**

In place of the German course 851-0703-01 Grundzüge des Rechts für Bauwissenschaften students can take the French course 851-0709-00 Droit civil.
### Compulsory Courses 5. Semester

#### Examination Block 3

**Abstract**
Introduction, statically indeterminate beams and frames, stresses and deformations, application of the principle of virtual work, statically indeterminate beams and frames (force method).

**Objective**
Understanding the response of elastic beam and frame structures

- Ability to correctly apply the equilibrium conditions
- Ability to determine elastic deformations
- Ability to apply the force (flexibility) method for statically indeterminate structures

**Content**
Introduction
- Reactions, internal forces and moments
- Arches and cables
- Trusses
- Influence lines
- Stresses and deformations
- Principle of virtual work
- Flexure and axial force, shear, torsion
- Deflections, work equation
- Statically indeterminate systems

**Abstract**
The course explores the fundamental principles of Geomechanics and Geotechnical Engineering, with the following objectives:

- Recognition of the basic consequences of the ground construction;
- Understanding of the important fundamental concepts of Soil mechanics and Geotechnical Engineering;
- Independent analysis of the basic geotechnical problems.

**Objective**
The course explores the fundamental principles of Geomechanics and Geotechnical Engineering, with the following objectives:

- Recognition of the basic consequences of the ground construction;
- Understanding of the important fundamental concepts of Soil mechanics and Geotechnical Engineering;
- Independent analysis of the basic geotechnical problems.

**Content**
Overview of stability problems; Bearing capacity of shallow and deep foundations; Soil-foundation interaction; Analysis and design of shallow and deep foundations; Earth pressure on retaining structures; Analysis and design of retaining walls; Excavations: dewatering, analysis and design; Soil improvement; Safety considerations.

**Lecture notes**

**Abstract**
Theoretical basic knowledge and detailing of plate girders, trusses and composite beams and columns. Local load introduction, design structural analysis stability and detailing of buildings. A global approach including aspects of structural safety, architecture, use and durability is given. The course includes practical examples and exercises done by the students to enhance their knowledge.

**Objective**
Students know the theoretical basics and the detailing of strutural steel elements. They understand how to cope with local load introduction and redirection. They know the basics of design, detailing and dimensioning of steel structures for buildings, respecting aspects of safety, architecture, use, durability and flexibility etc.

**Content**
Basics of dimensioning of plate girders, trusses and composite beams and columns (structural modeling, detailing and selection of material). Load introduction and redirection, detailing. Design, detailing and dimensioning of steel and steel concrete composite structures including roof and façades. Interaction of different building elements including bracing and global stability of steel structures)

**Lecture notes**
Autography on plate girders, trusses, load introduction and redirection, steel concrete composite elements. Copies of presentations.

**Literature**
- Stahlbaukalender, Ernst & Sohn, Berlin

**Prerequisites / notice**
After having attended Steel structures I and II students are able to design, detail and dimension the structure of common steel buildings.

<td>Railway Infrastructures (Transportation II)</td>
<td>O</td>
<td>3 credits</td>
<td>2G</td>
<td>U. A. Weidmann</td>
</tr>
</tbody>
</table>

**Abstract**
Fundamentals of railroad technology and interactions between track and vehicles, network development and infrastructure planning, planning of rail infrastructure, planning and design of railway stations, construction and dimensioning of tracks, approval and beginning service on complex infrastructure facilities, special issues of maintenance.

**Objective**
Teaches the basic principles of public transport network and topology design, geometrical design, dimensioning and construction as well as the maintenance of rail infrastructures. Teaches students to recognize the interactions between the infrastructure design and the production processes. Provides the background for Masters degree study.

**Content**
(1) Fundamentals: Infrastructures of public transport systems; interaction between track and vehicles; passengers and goods as infrastructure users; management and financing of networks; railway standards and norms. (2) Infrastructure planning: Planning processes and decision levels in network development and infrastructure planning, planning of railway tracks and rail topologies; planning of the passenger parts of stations. (3) Infrastructure design: Fundamentals of the layout of a line; track geometry; switches and crossings; design of station platforms. (4) Construction of railway infrastructures: Assembly and evolution of the railway track; elements of the railway track; dimensioning of the track; track stability. (5) Approval and beginning service on complex infrastructure facilities: Definitions and limitations; fundamentals of the legal situation; test and approval processes; processes of putting railway systems into operation. (6) Maintenance of railway infrastructures: Fundamentals of infrastructure maintenance; kinds of deprecatations; supervision methods; steps of infrastructure maintenance; estimation of maintenance need; methods to minimize maintenance costs.

**Lecture notes**
Course notes will be provided in German. Slides are made available some days before each lecture.

**Literature**
References to technical literature will be included in the course script. An additional list of literature will be given during the course.
Introduction, historical development of structural concrete, materials and material behaviour (cement, concrete, reinforcing steel, Systems Engineering

Type

- to gain competency in methods used to plan and analyse systems
- to gain the ability to formulate, analyse and solve complex problems
- to gain competency in the methods used for the evaluation of multiple solutions

Introduction
- Introduction
- System development
- System analysis
- Networks
- Decision theory
- Economic analysis
- Cost-benefit analysis

Lecture notes
Script and transparencies as well as additional material via Moodle. The transparencies will be provided via Moodle two days before the respective class.

101-0031-01L Systems Engineering O 4 credits 3G B. T. Adey, C. Richmond

Abstract
An introduction to system development, analysis and optimization, and decision making, with focus on linear programming, networks, formal decision methods and economic analysis.

Objective
- to gain competency in methods used to plan and analyse systems
- to gain the ability to formulate, analyse and solve complex problems
- to gain competency in the methods used for the evaluation of multiple solutions

102-0293-00L Hydrology O 3 credits 2G P. Burlando

Abstract
The course introduces the students to engineering hydrology. It covers first physical hydrology, that is the description and the measurement of hydrological processes (precipitation, interception, evapotranspiration, runoff, erosion, snow), and it introduces then the basic mathematical models of the single processes and of the rainfall-runoff transformation, thereby including flood analysis.

Objective
Know the main features of engineering hydrology. Apply methods to estimate hydrological variables for dimensioning hydraulic structures and managing water resources.

Content
- Der hydrologische Kreislauf: globale Wasserressourcen, Wasserbilanz, räumliche und zeitliche Dimension der hydrologischen Prozesse.

Lecture notes
Ein internes Skript steht zur Verfügung (kostenpflichtig, nur Herstellungskosten).

Prerequisites / notice
- Cost-benefit analysis
- Decision theory
- Networks
- System analysis
- to gain competency in the methods used for the evaluation of multiple solutions
- to gain the ability to formulate, analyse and solve complex problems
- Ability to correctly dimension and detail simple structures.

Prerequisites / notice
- Vorbereitende zu Hydrologie I sind die Vorlesungen in Statistik. Der Inhalt, der um ein Teil der Übungen zu behandeln und um ein Teil der Vorlesungen zu verstehen notwendig ist, kann zusammengefasst werden, wie hintereinander es beschrieben wird:
- Elementare Datenverarbeitung: Hydrologische Messungen und Daten, Datenreduzierung (grafische Darstellungen und numerische Kenngrößen).
- Abflussabschätzung: empirische Methoden, N-A Modell, Rational Method.
- Die Kopie der Folien zur Vorlesung können auf den Webseiten der Professor für Hydrologie und Wasserwirtschaft herunterladen werden

</table>

Abstract
Contents: Introduction, historical development of structural concrete, materials and material behaviour (cement, concrete, reinforcing steel, prestressing steel), linear members (axial force, flexure and axial force, compression members and columns, shear, bending and shear, torsion and combined actions), strut-and-tie models and simple stress fields, detailing, basic aspects of membrane elements.

Objective
- Knowing the materials concrete and reinforcing steel and understanding their interaction;
- Understanding the response of typical structural members;
- Knowing elementary models and ability to apply them to practical problems;
- Ability to correctly dimension and detail simple structures.

Content
- Introduction, historical development of structural concrete, materials and material behaviour (cement, concrete, reinforcing steel, prestressing steel), linear members (axial force, flexure and axial force, compression members and columns, shear, bending and shear, torsion and combined actions), strut-and-tie models and simple stress fields, detailing.

### Bachelor Thesis

**Abstract**
The Bachelor Programme concludes with the Bachelor Thesis. This project is supervised by a professor. Writing up the Bachelor Thesis encourages students to show independence and to produce structured work.

**Objective**
Encourages students to show independence, to produce scientifically structured work and to apply engineering working methods.

**Content**
The contents base upon the fundamentals of the Bachelor Programme. Students can choose from different subjects and tasks. The thesis consists of both a written report and an oral presentation.

---

### Electives

The entire course programs of ETH Zurich and the University of Zurich are open to the students to individual selection.

**Abstract**
Introduction to computer aided design and drafting in 2D and 3D with examples from structural engineering

**Objective**
Having followed the course, students are able to develop a 2D-structure (formwork drawing) and they know the principle of a reinforcement module. They have also got an introduction to a 3D program (reinforcement in 3D). They are therefore better prepared for
- the bachelor thesis in the 6th semester,
- an eventual internship between bachelor and master course,
- the project works in the master course,
- the master thesis.
Above all they practice spatial sense and acquire contextual knowledge as future superiors of draftsmen and designers.

**Abstract**
Procurement of consistent procedures to solve typical problems of civil engineering. Consolidation of the knowledge of the bachelor courses; integration of bachelors of other universities. Practice of the holistic approach of conceptual design, parallel and iterative operations on varying levels of detailing. Integration of different fields of knowledge and experiences.

**Objective**
Procurement of consistent procedures to solve typical problems of civil engineering. Consolidation of the knowledge of the bachelor courses; integration of bachelors of other universities. Practice of the holistic approach of conceptual design, parallel and iterative operations on varying levels of detailing. Integration of different fields of knowledge and experiences.

**Content**
Basic tools:
- Literature research, quotations
- Technical report and presentations
- Basics of graphical representation

Elements of the design process:
- Service criteria and respective agreement
- Design requirements and design boundary conditions
- Design alternatives
- Preliminary dimensioning
- Cost-effectiveness
- Optimization
- Detailing

Exemplary consolidations:
- Geotechnical basics of retaining walls
- Conceptual design and shaping of retaining walls
- Drainage of structures
- Case study conceptual bridge design

Implementation with a planning tutorial:
- Presentation of the objects
- Survey and inventory
- Design options
- Intermediate review
- Final presentation

**Abstract**
This course provides an introduction to the tools that can be used to evaluate infrastructure. In particular tools:
- to measure the level of service being obtained from infrastructure,
- to predict slow changes in infrastructure over time, and
- to predict fast changes in infrastructure over time, fits of monitoring.

**Objective**
This course provides an introduction to the tools that can be used to evaluate infrastructure. In particular tools:
- to measure the level of service being obtained from infrastructure,
- to predict slow changes in infrastructure over time, and
- to predict fast changes in infrastructure over time, fits of monitoring.

**Content**
Introduction
- Levels of service
- Reliability of infrastructure
- Availability and maintainability of infrastructure
- Mechanistic-empirical models
- Regression analysis
- Event trees
- Default trees
- Markov chains
- Neural networks
- Bayesian networks

**Lecture notes**
All necessary materials (e.g. transparencies and hand-outs) will be distributed before class.

**Literature**
Appropriate reading material will be assigned when necessary.
Building Physics: Theory and Applications

Abstract
Principles of heat and mass transport, hygro-thermal performance, durability of the building envelope and interaction with indoor and outdoor climates, applications.

Objective
The students will acquire in the following fields:
- Indoor and outdoor climate and driving forces.
- Thermodynamical properties of building materials.
- Building envelope solutions and their construction.
- Hygrothermal performance and durability.

Content
Principles of heat and hygro-thermal performance, durability of the building envelope and interaction with indoor and outdoor climates, applications.

Renewable Energy Technologies I

Abstract
Scenarios for worldwide energy demand and CO₂ emissions, implications for climate. Methods for the assessment of energy chains. Potential and technology of renewable energies: Biomass (heat, electricity, biofuels), solar energy (low temp. heat, solar thermal and photovoltaic electricity, solar chemistry). Wind and ocean energy, heat pumps, geothermal energy, energy from waste. CO₂ sequestration.

Objective
Scenarios for the development of world primary energy consumption are introduced. Students know the potential and limitations of renewable energies for reducing CO₂ emissions, and their contribution towards a future sustainable energy system that respects climate protection goals.

Content

Lecture notes
Lecture notes will be distributed electronically during the course.

Literature

Prerequisites / notice
Fundamentals of chemistry, physics and thermodynamics are a prerequisite for this course.

Design and Building Process MBS

Abstract
"Design and Building Process MBS" is a brief manual for prospective architects and engineers covering the competencies and the responsibilities of all involved parties through the design and building process. Lectures on twelve compact aspects gaining importance in an increasingly specialised, complex and international surrounding.

Objective
Participants will come to understand how they can best navigate the design and building process, especially in relation to understanding their profession, gaining a thorough knowledge of rules and regulations, as well as understanding how involved parties’ minds work. They will also have the opportunity to investigate ways in which they can relate to, understand, and best respond to their clients’ wants and needs. Finally, course participants will come to appreciate the various tools and instruments, which are available to them when implementing their projects. The course will guide the participants, bringing the individual pieces of knowledge into a superordinate relationship.

Content
"Design and Building Process MBS" is a brief manual for prospective architects and engineers covering the competencies and the responsibilities of involved parties through the design and building process. Twelve compact aspects regarding the establish building culture are gaining importance in an increasingly specialised, complex and international surrounding. Lectures on the topics of profession, service model, organisation, project, design quality, coordination, costing, tendering and construction management, contracts and agreements, life cycle, real estate market, and getting started will guide the participants, bringing the individual pieces of knowledge into a superordinate relationship. The course introduces the key figures, depicts the criteria of the project and highlights the provided services of the consultants. In addition to discussing the basics, the terminologies and the tendencies, the lecture units will refer to the studios as well as the practice: Teaching-based case studies will compliment and deepen the understanding of the twelve selected aspects. The course is presented as a moderated seminar to allow students the opportunity for individual active collaboration between the students and their tutor therefore required.

System and Network Planning

Abstract
Public transports in the context of the transport systems; customer needs in the transport market; service planning processes for regular public transport services; long distance, regional and urban public transport service strategies; access to public transport and the last mile

Objective
Students will develop a basic knowledge of all stages of the public transport planning process from market demand to service planning; they will understand the most relevant planning methods and will be able to use them

Content
(1) Fundamentals of system and network planning: Mobility and transport systems; public transport systems; customer needs versus supply characteristics of regular services. (2) System and network planning in public passenger services: Goals of the system and network planning; generic planning process; demarcation, analysis of the situation, setting of targets; design of public transport services; evaluation and optimization; system planning. (3) Public transport services: long distance service offers; suburban and urban service offers; regional and local service offers; access to public transport and the last mile

Lecture notes
A script in German will be provided for the course. The slides are made available.

References to technical literature will be included in the course script. An additional list of literature will be given during the course.

Project Management: Project Execution to Closeout

Abstract
The course will give Engineering students a comprehensive overview and enduring understanding of the techniques, processes, tools and terminology to manage the Project Triangle (time, cost Quality) and to organize, analyze, control and report a complex project from start of Project Execution to Project Completion. Responsibilities will be detailed in each phase of the execution.

Objective
A student after completing the course will have the understanding of the Project Management duties, responsibilities, actions and decisions to be done during the Execution phase of a complex project.
The main content of the course is summarized in the following topics:

- Project Management for Construction Projects
- The goal is that at the end of this course students should have a good understanding of the different project management knowledge areas, the phases required for successful project management, and the role of a project manager. To demonstrate this, students will work in groups in different case studies to apply the concepts, tools and techniques presented in the class.

- Appropriate reading / and study material will be handed out during the course.
- Relevant readings will be recommended throughout the course (and made available to the students via Moodle).
- There are no pre-requisites to enroll in this course.

**Course Title:** Introduction to Construction Information Management & Modelling

**Abstract:**
This course provides an introduction to the steps included in the infrastructure management process. The lectures are given by a mixture of lecturers from engineering and construction companies in Switzerland. The course will include external lectures. Students enrolled in this course are expected to become familiar with current information modeling and management technologies and their applications to the construction industry, and to get a good understanding of new project delivery systems and technologies for integrated practice.

**Objective:**
- Reviewing the process
- Planning interventions
- Developing programs
- Selecting strategies
- Making predictions
- Establishing organization structure and processes
- Establishing goals and constraints
- Knowing the infrastructure - Dealing with data
- Interoperability
- Standards and foundations
- Implications for engineers and the construction industry
- Implications for owners and facility managers
- Information Modeling and Prefabrication
- Construction Analysis and Planning (4D modeling)
- Construction Analysis and Planning (5D modeling)
- Quantity Takeoff and Cost Estimating (5D modeling)
- Interpersonal skills
- Risk management
- Project financing
- Resource management
- Project estimating
- Project financing
- Risk management
- Interpersonal skills

**Content:**
- Introduction to information modeling and management technologies
- Integrated Project Delivery (IPD) (vs. traditional delivery methods)
- Information model execution plan
- Information modeling tools and parametric modeling
- Interoperability
- Standards and foundations
- Implications for engineers and the construction industry
- Implications for owners and facility managers
- Information Modeling and Prefabrication
- Construction Analysis and Planning (4D modeling)
- Construction Analysis and Planning (5D modeling)
- Quantity Takeoff and Cost Estimating (5D modeling)

**Lecture notes:**
The slides for the class will be available for download from Moodle at least one day before each class. Copies of all necessary documents will be distributed at appropriate times.

**Literature:**
- Relevant readings will be recommended throughout the course and made available to the students via Moodle.
- There are no pre-requisites to enroll in this course.

**Prerequisites / notice:**
- There are no pre-requisites to enroll in this course.

**Course Title:** Infrastructure Management 1: Process

**Abstract:**
The course provides an introduction to the steps included in the infrastructure management process. The lectures are given by a mixture of external people in German and internal people in English.

**Objective:**
- Upon completion of the course, students will
  - understand the steps required to manage infrastructure effectively,
  - understand the complexity of these steps, and
  - have an overview of the tools that they can use in each of the steps.

**Content:**
- The infrastructure management process and guidelines
- Knowing the infrastructure - Dealing with data
- Establishing goals and constraints
- Establishing organization structure and processes
- Making predictions
- Selecting strategies
- Developing programs
- Planning interventions
- Conducting impact analysis
- Reviewing the process

**Lecture notes:**
Appropriate reading / and study material will be handed out during the course. Transparencies will be handed out at the beginning of each class.

**Literature:**
- Appropriate literature will be handed out when required.

**Prerequisites / notice:**
- The courses will be given half in English and half in German. Students should have a minimum of level B2 in both to register for the course.

| 101-0127-00L | Structural Concrete III                   | O    | 3 credits | 2G     | W. Kaufmann |
| Abstract     | This course supplements the courses Structural Concrete I and II regarding the analysis and dimensioning of reinforced and prestressed concrete structures. It focuses on lower bound and upper bound limit analysis methods for girders, discs and shells, particularly regarding their applicability to the safety assessment of existing structures. |
| Objective    | Enhancement of the understanding of the load-deformation response of reinforced and prestressed concrete: refined knowledge of models and ability to apply them to general problems, particularly regarding the structural safety assessment of existing structures; awareness of the limits of applicability of limit analysis methods and ability to check their applicability. |
| Content      | Fundamentals (structural analysis, theorems of limit analysis, applicability of limit analysis methods); shear walls and girders (stress fields and truss models, failure mechanisms, deformation capacity, membrane elements with yield conditions and load-deformation behaviour); slabs (equilibrium solutions, yield conditions, failure mechanisms, shear in slabs); prestressed concrete for plate and shell structures; long term effects; complements (fire, watertight concrete structures). |
| Literature   |                             |      |      |       |           |

| 101-0187-00L | Structural Reliability and Risk Analysis | W    | 3 credits | 2G     | B. Sudret |
| Abstract     | Structural reliability aims at quantifying the probability of failure of systems due to uncertainties in their design, manufacturing and environmental conditions. Risk analysis combines this information with the consequences of failure in view of optimal decision making. The course presents the underlying probabilistic modelling and computational methods for reliability and risk assessment. |
| Objective    | The goal of this course is to provide the students with a thorough understanding of the key concepts behind structural reliability and risk analysis. After this course the students will have refreshed their knowledge of probability theory and statistics to model uncertainties in view of engineering applications. They will be able to analyze the reliability of a structure and to use risk assessment methods for decision making under uncertain conditions. They will be aware of the state-of-the-art computational methods and software in this field. |
| Prerequisites / notice | Prerequisites: Steel Structures I and II |

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 165 of 1571
### Content

Engineers are confronted every day to decision making under limited amount of information and uncertain conditions. When designing new structures and systems, the design codes such as SIA or Euro- cods usually provide a framework that guarantees safety and reliability. However the level of safety is not quantified explicitly, which does not allow the analyst to properly choose between design variants and evaluate a total cost in case of failure. In contrast, the framework of risk analysis allows one to incorporate the uncertainty in decision making.

The first part of the course is a reminder on probability theory that is used as a main tool for reliability and risk analysis. Classical concepts such as random variables and vectors, dependence and correlation are recalled. Basic statistical inference methods used for building a probabilistic model from the available data, e.g. the maximum likelihood method, are presented.

The second part is related to structural reliability analysis, i.e. methods that allow one to compute probabilities of failure of a given system with respect to prescribed criteria. The framework of reliability analysis is first set up. Reliability indices are introduced together with the first order-second moment method (FORM) and the first order reliability method (FORM). Methods based on Monte Carlo simulation are then reviewed and illustrated through various examples. By-products of reliability analysis such as sensitivity measures and partial safety coefficients are derived and their links to structural design codes is shown. The reliability of structural systems is also introduced as well as the methods used to reassess existing structures based on new information.

The third part of the course addresses risk assessment methods. Techniques for the identification of hazard scenarios and their representation by fault trees and event trees are described. Risk is defined with respect to the concept of expected utility in the framework of decision making. Elements of Bayesian decision making, i.e. pre-, post and pre-post risk assessment methods are presented.

The course also includes a tutorial using the UQLab software dedicated to real world structural reliability analysis.

### Lecture notes

Slides of the lectures are available online every week. A printed version of the full set of slides is proposed to the students at the beginning of the semester.

### Literature

### 101-0157-01L Structural Dynamics and Vibration Problems

<table>
<thead>
<tr>
<th>Objective</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Explain the dynamic equilibrium of structures under dynamic loading.</td>
</tr>
<tr>
<td>2. Use second-order differential equations to theoretically and numerically model the dynamic equilibrium of structural systems.</td>
</tr>
<tr>
<td>4. Compute the dynamic response of structural system to harmonic, periodic, pulse, impulse and random excitation using time-history and response-spectrum methods.</td>
</tr>
<tr>
<td>5. Apply structural dynamics principles to solve vibration problems in flexible structures excited by humans, machines, wind or explosions.</td>
</tr>
<tr>
<td>6. Use dynamics of structures to identify the basis for structural design code provisions related to dynamic loading.</td>
</tr>
</tbody>
</table>

Content

This is a course on structural dynamics, an extension of structural analysis for loads that induce significant inertial forces and vibratory response of structures. Dynamic responses of elastic and inelastic single-DOF, continuous-mass and multiple-DOF structural systems subjected to harmonic, periodic, pulse, impulse, and random excitation are discussed. Practical solutions to vibration problems in flexible structures excited by humans, machinery, wind and explosions are developed.

Lecture notes

The electronic copies of the learning material will be uploaded to LIAS and available through myStudies. The learning material includes: the lecture presentations, additional reading material, and exercise problems and solutions.

Literature

Prerequisites / notice

Knowledge of the fundamentals in structural analysis, and in structural design of reinforced concrete, steel and/or wood structures is mandatory. Working knowledge of matrix algebra and ordinary differential equations is required. Familiarity with Matlab and with structural analysis computer software is desirable.

### 051-0551-00L Energy- and Climate Systems I

<table>

Content

Moisture transport and related degradation processes in building and civil engineering materials and structures; concepts of poromechanics and multiscale analysis; analysis of damage cases.

Lecture notes

- Basic knowledge of moisture transport and related degradation processes in building and civil engineering materials and structures |
- Introduction to concepts of poromechanics and multiscale analysis |
- Application of knowledge by the analysis of damage cases

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 166 of 1571
At the end of the course, you shall be able to

Knowledge of characteristic properties of wood as an anisotropic and porous material and their consideration in structural timber design.

In this course some fundamental topics on digital signal processing will be reviewed. This includes an introduction to digital signals in time, frequency and z-domain, as well as sampling theory and digital filter design. We will then discuss the state space model of dynamic systems and introduce methods of identification of such systems, with an emphasis on using data from mobile sensors.

Fibre Reinforced Polymer (FRP) composites are increasingly being used in civil infrastructure applications, such as reinforcing rods, tendons and FRP profiles as well as wraps for seismic upgrading of columns and repair of deteriorated structures. The objective of this course is on one hand to provide new generation of engineering students with an overall awareness of the application and design of FRP reinforcing materials for internal and external strengthening (repair) of reinforced concrete structures. The FRP strengthening of other structures such as metallic, timber and masonry will also be shortly discussed. On the other hand the course will provide guidance to students seeking additional information on the topic. Many practical cases will be presented analysed and discussed. An ongoing structural health monitoring of these new materials is necessary to ensure that the structures are performing as planned, and that the safety and integrity of structures is not compromised. The course outlines some of the primary considerations to keep in mind when designing and utilizing structural health monitoring technologies. During the course, students will have the opportunity to design FRP strengthened concrete beams, apply the FRP by themselves, and finally test their samples up to failure.

The students will be able to analyse digital signals and systems in time-, z- and frequency domains, and create, implement, and identify digital systems. The examples and sample data are measured from civil structures.

Characteristic properties of wood as a anisotropic and porous material and their consideration in structural timber design. History, ecology, structure of timber, drying, material properties, influence of moisture and creep, durability and grading. Solid timber, glued laminated timber and wood composites.

Knowledge about history, ecology, structure of timber, drying, material properties, influence of moisture and creep, durability and grading. Knowledge about material properties and field of applications of solid timber, glued laminated timber and wood composites. Design of timber in fire.

Characteristic properties of wood as a anisotropic and porous material and their consideration in structural timber design. History, ecology, structure of timber, drying, material properties, influence of moisture and creep, durability and grading. Material properties and field of applications of solid timber, glued laminated timber and wood composites. Fire safety and fire design.

The students will be able to analyse digital signals and systems in time-, z- and frequency domains, and create, implement, and identify digital systems. The examples and sample data are measured from civil structures.

The students will be able to analyse digital signals and systems in time-, z- and frequency domains, and create, implement, and identify digital systems. The examples and sample data are measured from civil structures.

| 101-0437-00L  | Traffic Engineering                   | O    | 6    | 4G    | M. Menendez        |
| Abstract      | Fundamentals of traffic flow theory and operations. |
| Objective     | The objective of this course is to fully understand the fundamentals of traffic flow theory in order to effectively manage traffic operations. By the end of this course students should be able to apply basic techniques to model different aspects of urban and inter-urban traffic performance, including congestion. |
| Content       | Introduction to fundamentals of traffic flow theory and operations. Includes understanding of traffic data collection and processing techniques, as well as data analysis, and traffic modeling. |
| Lecture notes | The lecture notes and additional handouts will be provided during the lectures. |
| Literature    | Additional literature recommendations will be provided during the lectures. |
| Prerequisites / notice | Verkehr III - Road Transport Systems 6th Sem. BSc (101-0415-00L) Special permission from the instructor can be requested if the student has not taken Verkehr III. |

| 101-0417-00L  | Transport Planning Methods            | W    | 6    | 4G    | K. W. Axhausen     |
| Abstract      | The course provides the necessary knowledge to develop models supporting the solution of given planning problems. This is done by dividing the forecasting problem into sub-problems. The course is composed of a lecture part, providing the theoretical knowledge, and a applied part, in which students develop their own models. |
| Objective     | - Knowledge of methods and algorithms commonly used in transport planning |
|              | - Ability to independently develop a transport model able to solve / answer the given problem / questions |
|              | - Understanding of algorithms and their implementations commonly used in transport planning |
| Content       | The course provides the necessary knowledge to develop models supporting the solution of given planning problems. Examples of such planning problems are the estimation of traffic volumes, prediction of estimated utilization of new public transport lines, and evaluation of effects (e.g. change in emissions of a city) triggered by building new infrastructure and changes to operational regulations. |
| Lecture notes | The slides of the lecture are provided electronically. |

| 401-0647-00L  | Introduction to Mathematical Optimization | W    | 5    | 2V+1U | D. Adjishvili     |
| Abstract      | Introduction to basic techniques and problems in mathematical optimization, and their applications to problems in engineering. |
| Objective     | The goal of the course is to obtain a good understanding of some of the most fundamental mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems. The students will also practice applying the learned models to problems in engineering. |
| Content       | Topics covered in this course include: |
|              | - Linear programming (simplex method, duality theory, shadow prices, ...), |
|              | - Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...), |
|              | - Modelling with mathematical optimization: applications of mathematical programming in engineering. |
| Literature    | Information about relevant literature will be given in the lecture. |

| 103-0317-00L  | Sustainable Spatial Development I      | W    | 3    | 2G    | B. Scholl         |
| Abstract      | The lectures impart important knowledge for solving spatial relevant conflicts and problems. Case studies will be used to demonstrate the implementation in practice. |
| Objective     | Spatial development deals with the development and the design of our living space. To meet the expectations, the interests and the plans of the different actors, it is needed a planning approach considering the overview of both the actual and future situation. The concept of sustainable development in spatial planning leads necessarily to an efficient management of the resources, especially regarding the resource land. The basics of this important discipline will be the subject of this lecture, which is therefore organised in three parts: |
|              | - Inner development |
|              | - Integrated spatial and infrastructure development |
|              | - Cross-border issues in spatial development |

---

Data: 06.01.2019 12:56  Autumn Semester 2016  Page 168 of 1571
The course explains main principles of air transport in general and elaborates on simple interdisciplinary topics. Understand and explain basics, principles and contexts in the broader air transport industry.

This course provides the basic concepts of high level programming languages to students without previous programming training. The language used is Java. Since this course is preparatory for the course Agent Based Modeling in Transportation, the same simulation software, MATSim, will be used for several excercises.

MATSim will be introduced on a basic level and its basic functionalities will be explained. Weekly exercises will be focused on building Java knowledge through various examples using the MATSim environment.

Agent Based Modeling in Transportation (Additional JAVA Exercises) Recommended for students without JAVA skills in addition to LE101-0491-00 Agent Based Modeling in Transportation.

This course provides the basic concepts of high level programming languages to students without previous programming training. The language used is Java. Since this course is preparatory for the course Agent Based model in Transportation, the same simulation software, MATSim, which will be used in the lecture (Agent Based Modeling in Transportation) following this one. The programming language used in the course is Java. This course, therefore, has the main goal of providing the students without previous programming training the skills necessary for the successful completion of the Agent Based Modeling in Transportation course.

The main Java concepts explained in the course are:

1. Types, Variables, Operators
2. Methods, Conditionals, Loops, Arrays
3. Objects and Classes
4. Access control, Class scope, Packages, Java API
5. Design, Debugging, Interfaces
6. Inheritance, Exceptions, File I/O

MATSim will be introduced on a basic level and its basic functionalities will be explained. Weekly exercises will be focused on building Java knowledge through various examples using the MATSim environment.

We will also use English papers

Weirs: Weir stability, gates, inflatable dams, appurtenant structures.

4G

Hours

Slides are provided prior to each class

Technical visit: This course includes a guided tour at Zurich Airport (baggage sorting system, apron, ATC Tower).

Examination: written, 60 min, open books (Examination in German; Answers may be given in English)

Further information and the documents for the lecture can be found on the homepage of the Chair of Spatial Development.
Information: Enrolment of Hydraulic Engineering II is not recommended without having attended Hydraulic Engineering (101-0206-00L) previously since Hydraulic Engineering II is strongly based on Hydraulic Engineering (101-0206-00L).

<td>The basic equations are derived from first principles. Possible simplifications relevant for practical problems are shown and their applicability is discussed. Using the example of non-steady state pipe flow numerical methods such as the method of characteristics and finite difference methods are introduced. The finite volume method as well as the method of characteristics are used for the solution of the shallow water equations. Special aspects such as wave propagation and turbulence modelling are also treated.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>All methods discussed are applied practically in exercises. This is done using programs in MATLAB which partially are programmed by the students themselves. Further, some generally available softwares such as Hydraulic Systems and HEC RAS for non-steady flows are used.</td>

### 101-0258-00L River Engineering

**Abstract**
The lecture addresses the fundamentals to quantitatively describe the flow of water, the transport of sediments and morphological changes like erosion or deposition in watercourses. Further addressed are the design and dimensioning of river engineering works to create and ensure sufficient capacity, channel stability as well as to ensure the ecological functions of the watercourse.

**Objective**
The students shall
- be able to describe the interrelation between discharge, sediment transport and channel evolution quantitatively
- know the fundamentals and be able to apply the approaches and methods to treat river engineering problems associated with flood protection and river restoration
- be capable to design and dimension river engineering works needed to influence the processes in watercourses

**Content**
The first part of the lecture treats the fundamentals required to deal with river engineering problems. Sampling methods for the river bed material and methods to calculate the discharge in alluvial rivers are presented. The process of river bed arming and the principles of incipient motion, initiation of erosion as well as sediment transport (bed load, suspended load) are treated. In the second part of the lecture, the procedures to quantify the sediment budget and the morphologic changes (erosion, aggradation) in river systems are explained. Furthermore, the process of natural channel formation and the different plan forms of rivers (straight, meandering, braided) are discussed. Own chapters are dedicated to the topics of channel stability, bed forms, river morphology and scour. The last part of the lecture concentrates on the design and dimensioning of river engineering works. The topics focussed on are the stabilization of banks and of the longitudinal profile of rivers.

**Lecture notes**
Lecture notes "River Engineering" (in German, 470 pages, including list of references)

**Literature**
The lecture notes contain a comprehensive list of references for further reading.

**Prerequisites / notice**
Strongly recommended lectures:
- Hydrology (102-0293-AAL), Hydraulics I (101-0203-01L) and Hydraulic Engineering (101-0206-00L)

---

### 402-0809-01L Introduction to Computational Physics (for Civil Engineers)

**Abstract**
This course offers an introduction to computer simulation methods for physics problems and their implementation on PCs and super computers: classical equations of motion, partial differential equations (wave equation, diffusion equation, Maxwell's equation), Monte Carlo simulations, percolation, phase transitions.

**Content**

**Prerequisites / notice**
Lecture and exercise lessons in english

---

### 101-0577-00L Concrete Technology

**Abstract**
Opportunities and limitations of concrete technology, Commodities and leading edge specialties.

**Objective**
Advanced education in concrete technology for civil engineers who are designing, specifying and executing concrete structures.
Based on the lecture 'Werkstoffe I' students receive deep concrete technology training. A comprehensive knowledge of the most important properties of conventional concrete and the current areas of research in concrete technology will be presented. The course covers various topics.

The content of the course is:
- concrete components
- concrete properties
- concrete mix design
- production, transport, casting
- demoulding, curing and additional protective measures
- durability
- standards
- high performance concretes
  1. high strength and ultra high strength concrete
  2. fiber reinforced concrete
  3. self compacting concrete
  4. shotcrete
  5. light weight concrete
  6. low shrinkage concrete
  7. low heat concrete for mass structures
  8. frost and wear resistant concrete
  9. concrete for low and high ambient temperatures

Abstract
Moisture transport and related degradation processes in building and civil engineering materials and structures; concepts of poromechanics and multiscale analysis; analysis of damage cases.

Objective
- Basic knowledge of moisture transport and related degradation processes in building and civil engineering materials and structures
- Introduction to concepts of poromechanics and multiscale analysis
- Application of knowledge by the analysis of damage cases

Content
1. Introduction
   - Moisture damage: problem statement
   - Durability

   2. Moisture Transport
      - Description of moisture transport
      - Determination of moisture transport properties
      - Hysteresis
      - Transport in cracked materials
      - Damage and moisture transport in cracked media

   3. Poromechanics
      - Moisture and mechanics: poro-elasticity
      - Poro-elasticity and salt crystallisation
      - Poro-elasticity and damage
      - Case studies

   4. Multiscale analysis
      - Problem statement
      - Multiscale transport model
      - Multiscale coupled transport - damage model

Abstract
Metals in civil engineering (steels, high strength steel, Al-alloys, stainless steels). Mechanisms to improve the mechanical properties, plastic deformation (dislocations), mechanical tests. Corrosion, stress corrosion. The goal is the understanding of the relation between chemical composition, microstructure and mechanical properties and durability (corrosion) of metallic materials. Case studies.

Objective
Knowledge and comprehension of the fundamentals of material science of metallic materials such as the relation between chemical composition, microstructure and properties of metallic materials. Ability to critically select the appropriate materials for application in civil engineering (fixation elements, reinforcement for concrete structures, high-strength steels).

Content
- Fundamentals of metallic materials, crystal structure of metallic materials, defects, solidification.
- Properties of metallic materials, physical (electrical, magnetic), mechanical (strength, deformation, fracture), chemical (corrosion resistance).
- Most important alloys (steels, aluminium alloys, stainless steels)

Lecture notes
Lecture notes (in German) are distributed at the beginning of the course. Reprints for selected topics.

Abstract
Basic knowledge in public and private law of civil engineering. Examples of the subjects treated: space management, protection of the environment, legal procedures, standards for building technology and contracts.

Objective
- Part 1: The students shall acquire basic knowledge of the public law concerning civil engineering: space management, conception of buildings, protection of the environment, procedures
- Part 2: The students shall acquire basic knowledge of the private law concerning civil engineering
This year the UN Conference in Paris will shape future world objectives to tackle climate change.

An Introduction to Sustainable Development in the Built Environment

Abstract
This year the UN Conference in Paris will shape future world objectives to tackle climate change. This course provides an introduction to the notion of sustainable development when applied to our built environment.

Objective
At the end of the semester, the students have an understanding of the term of sustainable development, its history, the current political and scientific discourses and its relevance for our built environment.

In order to address current challenges of climate change mitigation and resource depletion, students will learn a holistic approach of sustainable development. Ecological, economical and social constraints will be presented and students will learn methods for argumentation and tools for assessment (i.e. life cycle assessment).

For this purpose an overview of sustainable development is presented with an introduction to the history of sustainability and its today definition as well as the role of cities, urbanisation and material resources (i.e. energy, construction material) in social economic and environmental aspects.

The course aims to promote an integral view and understanding of sustainability and describing different spheres (social/cultural, ecological, economical, and institutional) that influence our built environment.

Students will acquire critical knowledge and understand the role of involved stakeholders, their motivations and constraints, learn how to evaluate challenges, identify deficits and define strategies to promote a more sustainable construction.

After the course students should be able to define the relevance of specific local, regional or territorial aspects to achieve coherent and applicable solutions toward sustainable development.

The course offers an environmental, socio-economic and socio-technical perspective focussing on buildings, cities and their transition to resilience with sustainable development. Students will learn on theory and application of current scientific pathways towards sustainable development.

The following topics give an overview of the themes that are to be worked on during the lecture.

- Overview on the history and emergence of sustainable development
- Overview on the current understanding and definition of sustainable development
- Case Study 1: Sustainable construction, the role of construction industry (national/international)
- Case Study 2: Cities, forms of settlements
- Case Study 3: Material resources, scenarios, energy, construction materials, urban metabolism
- Case Study 4: Buildings, heating/cooling, consumers, prosumers and other stakeholder, cooperations
- Method 1: Life cycle assessment (planning, construction, operation/use, deconstruction)
- Method 2: Economics for sustainable construction
- Method 3: Construction, flexibility, modularity
- Synthesis 1: Climate Change mitigation and adaptation in cities
- Synthesis 2: Transition to sustainable development

Workshop on Sustainable Building Certification

Abstract
Building labels are used to certify buildings and neighbourhoods in term of sustainability. Many different labels have been developed and can be used in Switzerland (LEED, DGNB, SNBS, Minergie). In this course the differences between the certification labels and its application on 3 emblematic case study buildings will be discussed.

Objective
After this course, the students are able to understand and use the different certification labels. They have a clear view of what the labels take into consideration and what they don't.

Content
Three buildings case study will be presented.

Different certification schemes, including LEED (American standard), DGNB (German Standard with Swiss adaptation), SNBS, MINERGIE-ECO and 2000-Watt-Society (Swiss standards) will be presented and explained by experts.

After this overall general presentation and in order to have a closer look to specific aspects of sustainability, students will work in groups and assess during one or two weeks this specific criteria on one of the case studies presented before. This practical hands on the label will end with a presentation and a discussion where we will highlight differences between the labels.

This alternance of working session on one specific criteria for one specific building followed by a group presentation and discussion to compare labels is repeated for the different focus point (operation energy, mobility, daylight, indoor air quality).

The slides from the presentations will be made available.

Introductions to Economic Analysis - A Case Study Approach with Cost Benefit Analysis in Transport

Abstract
This introduces the economical perspective of sustainable building and transportation. The students are introduced to the basic methods of life cycle assessment and cost benefit analysis. In a case study, the students are supposed to work together to assess the economical impact of sustainable building and transportation of cities.

Objective
The students will learn to assess economical impacts of sustainable building and transportation within a case study. They will be introduced to life cycle assessment and cost benefit analysis. The students will work in teams to assess economical impacts of sustainable building and transportation within a case study.
The course presents cost benefit analysis and related evaluation methods in transport and introduces the survey methods used to derive the monetary values of non-market goods.

Familiarity with the essential methods of project appraisal

Cost-Benefit-Analysis; multi-criteria analysis; European guidelines; stated response methods; travel cost approach and others; Valuation of travel time savings; valuation of traffic safety

101-0367-00L Geotechnical Engineering in Transportation W 3 credits 2G C. Rabaiotti

Abstract
Road design criteria, Technology of road construction materials, geotechnical testing methods in Laboratory and in situ, Planning, monitoring and interpretation of soil field tests, Soil classification for traffic construction, Compaction of road structures and dams, Frost characteristics of soil materials, soil stabilization

Objective
Aim of the course is to teach students the most important aspects of the road structure, its building and design methods. An essential part of the course is devoted to understand the influence of the insitu conditions: soil, underground, climate, water, as well as of the characteristics of building materials and of road surface on the durability of the pavement.

Content
Road design criteria, Technology of road construction materials, geotechnical testing methods in Laboratory and in situ, Planning, monitoring and interpretation of soil field tests, Soil classification for traffic construction, Compaction of road structures and dams, Frost characteristics of soil materials, soil stabilization

Lecture notes
Autographie, Uebungsbliitter, Handouts

Literature

Prerequisites / notice
A simple soil structure interaction boundary value problem will be selected (e.g., foundation, embankment, slope) as the exercise topic, which will modelled, in various forms, throughout the course. A predictive (class A) numerical analysis will be carried out by the students, followed by a centrifuge test on the same geometry to validate the numerical calculations. Subsequently a Class C2 numerical analysis will be conducted, calibrated by the physical modelling event.

101-0119-00L Structural Masonry W 3 credits 2G N. Mojsilovic

Abstract
Knowledge of the engineering properties of materials for masonry construction. Technical understanding of the structural behaviour of load-bearing masonry structures subjected to in-plane forces and combined actions. Develop a technical competence for design procedures for load-bearing masonry structures by means of exercises.

The electronic copies of the learning material will be uploaded to ILIAS and available through myStudies. This will include the lecture notes, Power Point slides. Further literature.

The students will be able to analyse digital signals and systems in time-, z-, and frequency domains, and create, implement, and identify digital systems. The examples and sample data are measured from civil structures.

In this course, some fundamental topics on digital signal processing will be reviewed. This includes an introduction to digital signals in time-, z-, and frequency domains, as well as sampling theory and digital filter design. We will then discuss the state space model of dynamic systems and introduce methods of identification of such systems, with an emphasis on using data from mobile sensors.

The course presents cost benefit analysis and related evaluation methods in transport and introduces the survey methods used to derive travel time savings; valuation of traffic safety.

1. Gather the necessary data and conduct a probabilistic seismic hazard analysis for a site.
2. Gather the necessary data and conduct a probabilistic vulnerability analysis of a building or an element of a civil infrastructure system at a site.
3. Design structural and/or financial engineering solutions to mitigate the seismic risk at a site.

Prerequisites / notice

- Familiarity with the essential methods of project appraisal
- Cost-Benefit-Analysis; multi-criteria analysis; European guidelines; stated response methods; travel cost approach and others; Valuation of non-market goods.

Objective

The students comprehend the main principles of safety, reliability and optimization for railway systems and understand the basic concepts of command and control technologies for railways.

Content

Railway safety strategies
- Safety concepts
- Command and control technologies for railway systems
  - protective functions
  - ensure the sequence-spacing of trains
  - ensure route protection
  - ensure level crossing protection
  - technical realization for protective functions
  - European Train Control System
- operational command/control systems
  - dispatching
  - operational control systems
  - concepts of optimization
- RAMS for railway systems
  - accident investigation methods
  - RAMS standards for railways
  - risk analysis and hazard control
  - RAMS methods
  - design principles for availability and safety
  - maintenance strategies
  - Life Cycle Costs (LCC)
  - Human Factor
  - safety in long railway tunnels
- tutorials in Railway Operation Laboratory
- field trip to Siemens Wallisellen (command and control technologies)

Lecture notes

The slides will be provided in German.

Objective

The lecture gives a deeper insight into track geometry, the interaction between track and vehicles as well as in construction and dimensioning of the track. Methods for the diagnosis of the state of the track and its forecast are shown. State-of-the-art maintenance strategies and technologies are presented.

Content

Track geometry including calculation and measuring as well as related data systems; interaction between track and vehicles, vehicle dynamics, stress; track construction including special features of railway bridges and tunnels; track diagnostics and forecast; track maintenance and related methods.

Objective

The students comprehend the main principles of safety, reliability and optimization for railway systems and understand the basic concepts of command and control technologies for railways.

Content

Railway safety policies and safety concepts, command and control technologies for railways, optimization systems, European Train Control System, reliability availability maintainability safety (RAMS) of railway systems.

Lecture notes

The slides will be made available.
**Content**

(1) Transport and administrative policy: Goals of the state related to public transports, governmental activities in public transport, regulation.
(2) Business management in public transport enterprises: goals of public transport companies, goals of the business management; management of public transport on the different management levels, business organization. (3) Marketing, advertising and pricing: Fundamentals and goals; marketing strategies and concepts in public transports; marketing tools; putting marketing into action. (4) Quality control: Quality in transport systems; goals of quality management; structuring quality control measures; collecting quality data in an operating service; use of quality control systems for service optimization.

**Lecture notes**

Course notes will be provided in German. Slides will be made available.

**Literature**

References to technical literature will be included in the course script. An additional list of literature will be given during the course.

**Prerequisites / notice**

Lectures System and Network Planning as well as Systems Dimensioning and Capacity recommended.

**Abstract**

This course provides an introduction to the tools that can be used to evaluate infrastructure. In particular tools:
- to measure the level of service being obtained from infrastructure,
- to predict slow changes in infrastructure over time, and
- to predict fast changes in infrastructure over time, fits of monitoring.

**Objective**

to equip students with tools to be used to evaluate infrastructure and the level of service being provided from infrastructure

**Content**

Introduction
Levels of service
Reliability of infrastructure
Availability and maintainability of infrastructure
Mechanistic-empirical models
Regression analysis
Event trees
Fault trees
Markov chains
Neural networks
Bayesian networks
Conclusion

**Literature**

All necessary materials (e.g. transparencies and hand-outs) will be distributed before class.

**Course notes**

appropriate reading material will be assigned when necessary.
The course introduces basics of microscopic traffic simulation, including model development, calibration, validation, data analysis, and simulation of traffic operations. Additional literature recommendations will be provided at the lectures.

H. He

Type
Lecturers
3 credits
2G, I. Albayrak, L. Schmocker
M. Funk

Prerequisites / notice
There are no strict preconditions in terms of which lectures the students should have previously attended. However, it is expected that the students have some experience with some high level programming language (i.e. C, C++, Fortran or Java). If this is not the case, attending the additional java exercises (101-0491-00U) is strongly encouraged.

101-0492-00L Simulation of Traffic Operations W 3 credits 2G H. He

Abstract
The course introduces basics of microscopic traffic simulation, including model development, calibration, validation, data analysis, and simulation of traffic operations. The modelling software used is VISSIM.

Objective
The objective of this course is to introduce basic concepts in microscopic traffic simulation and conduct a realistic traffic engineering project from beginning to end. The students will first familiarize themselves with microscopic traffic simulation models. They will then use a simulation for modeling and analyzing the traffic operations. The emphasis is not only on building the simulation model, but also understanding of the models behind and logically evaluating results. The final goal is to make valid and concrete engineering proposals based on the simulation model.

Content
In this course the students will first learn some microscopic simulation concepts and then complete a traffic engineering project with microscopic traffic simulator VISSIM.

Microscopic simulation concepts will include:
1) Car following models
2) Lane change models

Specific tasks for the project will include:
1) Building a model with the simulator VISSIM in order to replicate and analyze the traffic conditions measured/observed.
2) Calibrating and validating the simulation model.
3) Redesigning/extend the model to improve the traffic performance.

Lecture notes
The lecture notes and additional handouts will be provided before the lectures.

Literature
Additional literature recommendations will be provided at the lectures.

Prerequisites / notice
Additional relevant readings, mostly scientific articles, will be recommended throughout the course.

101-0249-00L Selected Topics on Hydraulic Engineering W 3 credits 2S R. Boes, I. Albayrak

Abstract
The lecture focuses on selected topics in hydraulic engineering, water management and aquatic ecology relating to hydropower and flood protection projects.

Objective
To deepen knowledge on special aspects in hydraulic engineering and to understand the procedures and the planning sequence of hydropower projects.

Content
Different selected topics in hydraulic engineering will be focused on, e.g. dam safety, possible problems at reservoirs like sedimentation or natural hazards by impulse waves, the hydraulics of river flows, spillways and intake structures at dams and weirs, hydropower and ecology like fish-ecological aspects at low-head hydropower plants and eco-hydraulics like flow-vegetation interaction. Another focus will be put on typical approaches and procedures in the planning process of hydropower projects.

Lecture notes
Lecture notes/handouts will be available online.

Literature
is specified in the lecture.

Prerequisites / notice
External speakers will present current topics and projects in Switzerland and abroad.

101-0289-00L Applied Glaciology W 3 credits 2G M. Funk, A. Bauder, D. Farinotti

Abstract
We will explain the fundamentals of physics of glaciers which are necessary for treating applied problems. We will go into climate-glacier interactions, flow of glaciers, lake ice and hydrology of glaciers.

Objective
To understand the fundamental physical processes in glaciology.
To relate some basic numerical modelling techniques for glacier flow.
To identify glaciological hazards and to learn some assessment and mitigation possibilities.

Content
Basics in physical glaciology
Dynamics of glaciers: deformation of glacier ice, role of water in glacier motion, reaction of glaciers to climate changes, glacier calving, surges
Lake ice and bearing capacity

Lecture notes
Handouts are available

Literature
Relevante Literatur wird während der Vorlesung angegeben.

Prerequisites / notice
Für aktuelle Fallbeispiele werden risikobasierte Massnahmen bei glaziologischen Naturgefahren diskutiert.

Voraussetzungen: Es werden Grundkenntnisse in Mechanik und Physik vorausgesetzt.

101-1249-00L Hydraulics of Engineering Structures W 3 credits 2G H. Fuchs, I. Albayrak, L. Schmocker
Hydraulic fundamentals are applied to hydraulic structures for wastewater, flood protection and hydropower. Typical case studies from engineering practice are further described.

Understanding and quantification of fundamental hydraulic processes with particular focus on hydraulic structures for wastewater, flood protection and hydropower.

1. Introduction & Basic equations
2. Losses in flow & Maximum discharge
3. Uniform flow & Critical flow
4. Hydraulic jump & Stilling basins
5. Backwater curves
6. Weirs/End overfalls & Venturi
7. Mobile discharge measurements & Culverts/restrictors/inverted siphons
8. Fall manholes & Vortex drop
9. Conjunctions & Shock waves at abrupt wall deflections
10. Air/water flows and bottom outlets
11. Driftwood retention racks
12. Vegetated flows - Introduction
13. Vegetated flows - Application
14. Summary & questions/preparations for examination

Exhaustive references are contained in the suggested text book.

Urban Water Management II

Demand Side Management versus Supply Side Management
Optimierung von Wasserverteilnetzen
Druckstösse
Kalkausfällung, Korrosion von Leitungen
Hygiene in Verteilsystemen
Siedlungshydrologie: Niederschlag, Abflussbildung
Instationäre Strömungen in Kanalisationen
Stofftransport in der Kanalisation
Einleitbedingungen bei Regenwetter
Versickerung von Regenwasser
Generelle Entwässerungsplanung (GEP)

Written material and copies of the overheads will be available.

Prerequisite: Introduction to Urban Water Management

Mechanics of Building Materials

Material models comprise our knowledge on the physical behavior of materials. Based on a short introduction to solid mechanics, 3D material laws for elastic, visco-elastic, plasticity and damage mechanics are discussed. We focus on material laws for concrete, metals, wood and other composites, how to obtain parameters from mechanical tests and their application in FEM calculations.

This introductory course aims to bridge the gap between phenomenological, qualitative comprehension of processes in building materials, their characterization in mechanical testing and the ability to apply those for practical design purposes via constitutive models.

Upon completion of the course you should be able to:
- classify different material behavior (e.g. linear/non-linear elastic, elasto-plastic, creep) with respect to types of constitutive material models (total /incremental strain models, damage / plasticity models, linear visco-elasticity),
- review how incremental strain models (e.g. elasto-plastic) are algorithmically implemented in Finite Element software (UMat of Abaqus),
- formulate the main approach and assumptions to the most important models for building materials and discuss their limitations,
- propose experimental campaigns for obtaining relevant material parameters for non-linear material models.

Introduction to constitutive models for materials
- Fundaments of mechanics of materials
- Cauchy-, hyper- and hypoelastic material descriptions
- Constitutive Models for Concrete (non-linear elastic)
- Introduction to metal and concrete plasticity
- Introduction to ABAQUS UMAT Programming
- Damage continuum mechanics
- Linear visco-elastic materials

Will be provided during the lecture.

Science and Engineering of Glass and Natural Stone in Construction

The course offers an overview of relevant practical issues and present technological challenges for glass and natural stones in constructions. Students gain a good knowledge of the basics of glasses and natural stones, their potential as engineering materials and learn to apply them in the design of civil engineering constructions and to evaluate concepts.
Glass is increasingly used in constructions to ease the construction process, as functional insulation barrier, even for structural applications of impressive size. While everyone has experienced the innovation potential of glass in the last decade, products from natural stone suffer from an unjustified traditional image that often originates from a lack of understanding of the material and its combination with other materials. Culturally important structures often are made from natural stone and their conservation demands an understanding of their deterioration mechanisms, the concept of which can be applied to other civil engineering materials. Designers and engineers need the knowledge to reconcile materials and system behavior with the entire processing, handling, integration and life time in mind.

In this module students are provided with a broad fundamental as well as practice-oriented education on glass and natural stone in civil engineering applications. Present and future construction and building concepts demand for such materials with optimized properties.

Based on the fundamentals from the Bachelor course in materials by the end of this module, you should be able to:

- recognize and choose specific applications from the broad overview you were provided with,
- relate processing technologies to typical products and building applications and recognize (and explain typical damage related to wrong material choice or application,
- explain the nature of glassy and crystalline materials and interpret their physical behavior against this background,
- explain the major deterioration mechanisms in natural stone and how this relates to durability,
- analyze material combinations and appraise their application in future products as well as integration in existing constructions,
- summarize with appropriate guidance publications on a related topic in an oral presentation and short report.

Lecture 1: An introduction to science and engineering of glass and natural stone in construction (FW/TW)

Lecture 2: Glass chemistry including historical development of glass composition, use of raw materials, melts, chemical stability and corrosion. (FW)

Lecture 3: Geology and mineralogy of stones used in construction. Formation processes, chemistry, crystal structure. (TW)

Lecture 4: Microscopic models for glassy materials. Physics of glass transition. From microscopic physical models to thermodynamics, rheology and mechanics of glassy materials. (FW)

Lecture 5: Stone properties and behavior: microstructure, density, porosity, mechanical properties (TW)

Lecture 6: Glass physics: Optical properties (transmission, reflection, emission, refraction, polarization and birefringence, testing methods); Mechanical properties (density, thermal, mechanical, electric properties, glass testing) (FW)

Lecture 7: Stone properties and durability: transport, moisture and thermal cycling (FW)

Lecture 8: Forming and processing of glass: (plate and molded glass, drawing, slumping, profiling etc.; Processing: Cutting, mechanical processing, tempering, gluing, bending, laminating of glass Surface treatments: coating, sputtering, enameling, printing, etching, chemical pre-stressing.) (FW)

Lecture 9: Durability: Salt crystallization, freezing, biodeterioration (TW)

Lecture 10: Glass products for civil engineering applications: (Molded glasses, fiber glass, foam glass, plate glass); construction glass (insulation glass, structural glass, protective glass, intelligent glass, codes); (FW)

Lecture 11: Conservation: Consolidation, cleaning, and other treatments (TW). Practical aspects (guest lecturer)

Lecture 12: Glass in constructions. (modelling, application and regulation, typical damage in glass) (FW)

Lecture 13: Student presentations; exam questions (FW/TW)

Literature

Werkstoffe I/II of the bachelor studies or equivalent introductory materials lecture.

101-0659-01L Durability and Maintenance of Reinforced Concrete W 3 credits 2V B. Elsener, U. Angst

The course focuses on durability of RC structures, in particular the corrosion of steel in concrete. The main emphasis lies on understanding the mechanisms, design and execution aspects related to durability of new and existing structures. New methods and materials for preventative measures, condition assessment and repair techniques are treated with lectures and practice related exercises.

Understand the mechanism of deterioration of RC structures, in particular reinforcement corrosion.

Know the relevant parameters affecting durability of reinforced concrete, in particular cover depth, concrete quality, moisture, and the ways to control durability

Understand the current approaches for design for durability (exposure classes, prescriptive) and be aware of their limitations

Know the future performance-based models for durability design and the difficulties in defining input parameters (such as critical chloride content).

Know and understand different ways to improve durability of RC structures (e.g. stainless steel reinforcement)

Know the particular problems with post-tensioned structures and ways to overcome them (electrically isolated tendons).

Know and understand the non-destructive methods for inspection and condition assessment (especially half-cell potential mapping) and be aware of the limitations

Know and understand repair methods such as conventional repair, electrochemical methods (in particular cathodic protection)

Be aware of differences in performance of the new blended cements (especially CEM II with limestone) respect to the traditional Portland cement and the possible future problems for durability.
Reinforced concrete combines the good compressive strength of concrete with the high tensile strength of steel and has proven to be successful in terms of structural performance and durability. However, there are instances of premature failure of reinforced concrete and prestressed concrete components due to corrosion of the reinforcing steel with very high economic implications of such damage. This course focuses on the chloride and carbonation induced corrosion of steel in concrete, presenting transport mechanisms and electrochemical concepts. The main emphasis lies on design and execution aspects related to durability of new and existing structures. New methods and materials for preventative measures, condition assessment and repair techniques are discussed. The course is a point of reference for engineers and materials scientists involved in research and practice of corrosion protection, rehabilitation and maintenance of reinforced concrete structures and components.

Content of the course in detail:

Lecture 1
Administrative issues, literature, what do students expect to learn? Introduction (economic relevance of durability, transition from building to maintenance). Fundamentals of corrosion and durability / Passivity and pitting corrosion

Lecture 2
Reinforced concrete / Corrosion protection / Degradation mechanism corrosion (chlorides/carbonation) / electrochemical mechanism / controlling parameters / cracks and spalling on surface, danger of localized corrosion

Lecture 3
Other degradation mechanisms: sulphate attack, ASR, frost attack
Various examples, frequency of occurrence of individual deterioration mechanisms

Lecture 4
Service life: initiation stage & propagation stage. Durability design: prescriptive approach, constructive detailing, importance of moisture for almost all degradation mechanisms. Performance based approach, simple diffusion approach for chloride ingress, Critical chloride content (influencing parameters)

Lecture 5
Stainless steel as reinforcing steel for concrete / different types of stainless steels / mechanical properties / corrosion resistance, passivity / coupling with black reinforcing steel / examples of application / life-cycle-costs

Lecture 6
Inspection and condition assessment I: visual inspection / destructive testing (chloride profiles, carbonation depth, thin section analysis, etc.)

Lectures 7
Inspection and condition assessment II: non-destructive testing (potential mapping, cover depth measurement, resistivity measurement). Potential mapping: measurement principle / effect of carbonated cover zone / effect of moisture / examples

Lecture 8
Post-tensioned structures / problem with existing structures: no NDT method / approach for protection (multiple barrier) / new systems with polymer ducts / electrically isolated tendons / fib guidelines / Swiss guideline / Monitoring techniques / Applications

Lecture 9
Repair methods I: conventional repair / coatings / inhibitors / limitations

Lecture 10
Repair methods II: electrochemical repair methods (ECR, ER, CP) / principles / electrochemical chloride removal (theory and examples) / electrochemical realkalization (theory and examples) / when can these methods be applied ? / cost aspects

Lecture 11
Repair methods III: cathodic protection (theory, technical solutions, anode systems, etc and examples). Monitoring of CP.

Lecture 12
New cements, issue of CO2 reduction. Effects of fly ash, slag, limestone on workability, diffusion coefficient, resistivity, pH (including a discussion of the pozzolanic reaction and it's consequences with respect to pH buffering Portlandite reserve). Discuss products on the Swiss market.

Lecture 13
Summary of most important points of this course given by the students. Open discussion about durability design, use of new cements, new materials and repair methods. Expected consequences for practice ? Course evaluation and time for asking questions.

Prerequisites / notice
Students are encouraged to actively participate during the lectures. Students are expected to work on all the exercises (four). For one exercise a detailed written solution of the exercise has to be delivered (after the discussion).

Students should have passed the exams on Werkstoffe I and II.

101-0699-00L Bituminous Materials W 3 credits 2G M. Partl
Abstract
Introduction into special aspects of the mechanical and chemo-physical properties as well as the structure and application of bituminous materials for road and waterproofing application considering also new R&D trends

Objective
Introduction into special aspects of the mechanical and chemo-physical properties as well as the structure and application of bituminous materials for road and waterproofing application considering also new R&D trends

Content
Basics of mechanical behavior: Viscosity, rheological models, viscoelasticity, time-temperature superposition, fatigue, viscoplasticity.
Bituminous binders: Tar-related issues, bitumen, natural asphalt, polymer modified bitumen, technological tests, mechanical-physical properties, binder classification, bitumen emulsions, foam bitumen. Asphalt pavements: material structure and concepts, production, mixture testing and characterization, mixture types, recycling.
Waterproofing membranes: tack- coats, structure of polymer modified waterproofing membranes, production, typical tests, system-related properties, construction and application.
Concrete is generally viewed as a durable construction material. However, the long-term performance of a concrete structure can be greatly compromised by early-age cracking. This course will explain how shrinkage of concrete leads to cracking and how control of shrinkage allows increasing the expected durability of a concrete structure.

This course will begin with a brief introduction about hydration and microstructure development in cement paste and concrete. The students will learn the main causes of cracking at early ages, namely plastic, drying, thermal and autogenous shrinkage, with special emphasis on the driving mechanisms. The importance of concrete curing, especially in the first few days after casting, will be explained. Building on the knowledge of the driving forces of shrinkage, the way of action of shrinkage-reducing admixtures will be clarified and different applications illustrated. As an extension of external curing, the students will become familiar with internal water curing by means of saturated lightweight aggregate and superabsorbent polymer.

Most concrete members are restrained by adjacent structures. When shrinkage is restrained, cracks may develop. The students will learn how to apply different criteria for assessing concrete cracking and how to retrieve the mechanical properties of the concrete, especially stiffness and creep, relevant for the calculations.

In addition to macroscopic cracks, microcracking may occur in the cement paste due to internal restraint offered by the aggregates. Both macroscopic cracks and diffuse microcracking within a concrete may facilitate the ingress of harmful substances (e.g. chloride and sulfate ions) into the concrete; these may react with the concrete or with the reinforcement and create further deterioration. The students will acquire an understanding of the mechanisms of transport through cracked concrete, with special focus on experimental evidence and on techniques able to visualize the transport process and follow it in time.

As a final outcome of the course, the students will be able to estimate the impact of cracking on the expected durability of concrete structures and to implement different types of measures to reduce the extent of cracking.

Specific topics covered by the course:
- Hydration and microstructure development
- Plastic shrinkage
- Development of mechanical properties
- Thermal deformation
- Autogenous deformation
- Drying shrinkage
- Curing
- Shrinkage-reducing admixtures
- Internal curing: saturated lightweight aggregate and superabsorbent polymer
- Fracture and microcracking
- Transport in cracked concrete
- Impact of cracking on concrete durability

For each lecture, lecture notes will be provided. In addition, one or two research papers for each lecture will be indicated as supportive information.

The students will be also provided with a DVD containing the teaching material of a previous course on the same topic, including 16 hours of filmed lectures.

Copies of one to two research papers relevant to the topic of each lecture will be provided to the students as supportive information. A basic knowledge of concrete technology is preferable.
The lecture Wood structure and function conveys basic knowledge on the microstructure of softwoods and hardwoods as well as general plastic deformations. The ability to independently create a virtual model which describes the complex non linear systems will be acquired through accompanying exercises. These will include the Matlab programming of important model components such as constitutive equations.

- Fundamentals of continuum mechanics to characterize large plastic deformations
- Elasto-plastic material models
- Updated-Lagrange (UL), Euler and combined Euler-Lagrange (ALE) approaches
- FEM implementation of constitutive equations
- Element formulations
- Implicit and explicit FEM methods
- FEM formulations of coupled thermo-mechanical problems
- Modeling of tool contact and the influence of friction
- Solvers and convergence
- Modeling of crack propagation
- Introduction of advanced FE-Methods

Lecture notes yes

Abstract The lecture Wood structure and function conveys basic knowledge on the microstructure of softwoods and hardwoods as well as general and species-specific relationships between growth processes, wood properties and wood function in the living tree. Learning target is a basic understanding of the anatomy of wood and the related impact of endogenous and exogenous factors. The students can learn how to distinguish common central European wood species at the macroscopic and microscopic level. A deeper insight will be given by wood identification exercises for softwood species. Further the students will gain insight into the relationships between tree growth and wood properties with a specific focus on the wood function in the living tree.

Objective In an introduction to wood anatomy, the general structural features of softwoods and hardwoods will be explained and factors of diversity and variability will be discussed. A specific focus is laid on common central European tree species with relevance in the wood sector, which will be studied in macro- and microstructural investigations. For softwoods, exercises for the identification of species will be conducted. In the following, relationships between wood structure, properties and function in the living tree will be in the focus of the lecture. Topics covered are mechanical stability and water transport, branches, reaction wood formation (compression wood, tension wood), spiral growth, growth stresses as well as adaptive growth of trees.

Prerequisites / notice If we will have a large number of students, two dates for the exercises will be offered.

Objective
The objective of the course is to provide an overview of the wide range of non-linear mechanical behaviors displayed by soft materials and tissues together with a basic understanding of their physical origin, to familiarize students with appropriate mathematical concepts for their modelling, and to illustrate the application of these concepts in different fields in mechanics.

Content
- Soft solids: rubber-like materials, gels, soft biological tissues
- Non-linear continuum mechanics: kinematics, stress, balance laws
- Mechanical characterization: experiments and their interpretation
- Constitutive modeling: basic principles
- Large strain elasticity: hyperelastic materials
- Rubber-elasticity: statistical vs. phenomenological models
- Biomechanics of soft tissues: composites, anisotropy, heterogeneity
- Dissipative behavior: examples and the concept of internal variables.

Lecture notes
Accompanying learning materials will be provided or made available for download during the course.

Literature
- Recommended text:

Prerequisites / notice
A good knowledge base in continuum mechanics, ideally a completed course in non-linear continuum mechanics, is recommended.

Objective

'Costruire correttamente' (Constructing Correctly), the 1955 book published by Pier Luigi Nervi, covers crucial factors for building that, outlined by him, are still today all the more relevant as a lesson for architecturally and structurally justified buildings. His thoughts represent valuable criteria and indispensable tools for observation and carrying out investigations of the built environment. Lessons learned from this can enrich the design work of today's and tomorrow's architects. All of these (see abstract) i.e. analyses, observances, hypotheses, groupings and cross-comparisons, will help the students in their careers to find their own strategies and approaches to design and to be aware of them. And so, according to the advice of Pier Luigi Nervi: "...At every stage of his training, the future architect should be constantly and methodically guided to search for essential elements in each problem, be it large or small. The study of the architectural works of the past should consist in the critical examination of their functional and structural solutions and of the relation between these and form, in order to show that form is a consequence and not a determinant of functional and structural needs." [P.L. Nervi: Costruire correttamente, Milano 1955; English version titled "Structures", 1956, p.28].

Content

The main thread of this course, that runs over two semesters (*), are buildings of all ages that could be categorised under notions such as «most viewed», «most technically daring», «most unknown», «most discussed» or «most worthy of discussion», and carry instructive aspects of the teachings of Pier Luigi Nervi ('costruire correttamente'). In the lecture, these buildings will be investigated on-the-spot, described from the designers' point-of-view and will be commented on with reference to any redesign resulting from the interplay of architectural and structural concepts. Harmonies and discord should be discovered. Occasionally there will be guest lectures. These people, who were directly involved with a certain building, will portray the emergence and development of the project. In this sense, the course is also intended for civil / structural engineering students and presents a possible bridge between the two prospective project partners - architect and engineer.

Lecture notes

(*) Begins in the autumn semester. Entry into the course in the spring is possible.

Abstract

The goal of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will learn to work in teams to solve a set of design challenges that are organized as a one-week, a three-week, and a final six-week project in collaboration with an external project partner.

Information and application: www.sparklabs.ch/ethz

Objective

During the course, students will learn about different design thinking methods and tools. This will enable them to:

- Generate deep insights through the systematic observation and interaction of key stakeholders.
- Engage in collaborative ideation with a multidisciplinary (student) team.
- Rapidly prototype and iteratively test ideas and concepts by using various materials and techniques.

Content

The purpose of this course is to equip the students with methods and tools to tackle a broad range of problems. Following a Design Thinking approach, the students will learn how to observe and interact with key stakeholders in order to develop an in-depth understanding of what is truly important and emotionally meaningful to the people at the center of a problem. Based on these insights, the students ideate on possible solutions and immediately validated them through quick iterations of prototyping and testing using different tools and materials. The students will work in multidisciplinary teams on a set of challenges that are organized as a one-week, a three-week, and a final six-week project with an external project partner. In this course, the students will learn about the different Design Thinking methods and tools that are needed to generate deep insights, to engage in collaborative ideation, rapid prototyping and iterative testing.

Design Thinking is a deeply human process that taps into the creative abilities we all have, but that get often overlooked by more conventional problem solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols. Design Thinking provides an integrated way by incorporating tools, processes and techniques from design, engineering, the humanities and social sciences to identify, define and address diverse challenges. This integration leads to a highly productive collaboration between different disciplines.

For more information and the application visit: http://sparklabs.ch/ethz

Prerequisites / notice

Class attendance and active participation is crucial as much of the learning occurs through the work in teams during class. Therefore, attendance is obligatory for every session. Please also note that the group work outside class is an essential element of this course, so that students must expect an above-average workload.

</tr>
</tbody>
</table>

Abstract

The main objective of this course is to provide students with some basic tools to analyze transport policy decisions from an economic perspective. Can economics help us reduce road congestion problems? Should drivers be asked to pay for using urban roads? Should public transport tariffs depend on how roads are priced? How should the investment in transport infrastructure be financed? These are some of the questions that students should be able to tackle after completing the course.
COURSE OUTLINE (preliminary):

1. Introduction
2. Travel demand:
   a. travel cost and value of time
   b. mode choice
3. Road congestion and first-best pricing
   a. Static congestion model
   b. Dynamic congestion models
   c. Examples: London Congestion Charge, Stockholm Congestion Charge
4. Second-best pricing
   a. Pricing roads with unpriced alternatives. Examples: tolled and toll-free highways
   b. Public transport: pricing with road congestion and with (or without) road tolls
5. Investment in infrastructure: public transport and roads
   a. Roads: Investment with and without pricing
   b. induced demand
   c. Economies of scale/density in public transport
6. Topics:
   a. Political economy of road pricing: why do we see road pricing in so few cities (London, Stockholm...) and not in many other
cities (NYC, Manchester, Paris?)?
   b. What are the alternatives to road pricing to reduce congestion? Parking tariffs, traffic regulation (speed bumps, low emission
zones), road space reduction. Examples: Zurich, San Francisco (SFPark), Paris.
   c. Transport and land use: value of housing and transport services. Road congestion, transport subsidies and urban sprawl.

Lecture notes
Course slides will be made available to students prior to each class.

Literature
SYLLABUS (preliminary):
course slides will be made available to students to prior to each class.

Additional material:
Part 1 to 5: textbook: Small and Verhoef (The economics of urban transportation, 2007).
Part 6: Topics to be covered on research papers/case studies.

Abstract
The Master Programme concludes with the Master Thesis, which has to be done in one of the chosen Majors and has to be completed
within 16 weeks. The Master Thesis is supervised by a professor and shall attest the students ability to work independently and to produce
scientifically structured work.

Objective
To work independently and to produce a scientifically structured work.

Content
The topics of the Master Thesis are published by the professors. The Topic can be set also in consultation between the student and the
professor.

| Abstract     | Good work design is crucial for individual |      |      |       | and company effectiveness and a core element to be considered in          |
|              |                                           |      |      |       | organizational change. Meaning of work, organization-technology          |
|              |                                           |      |      |       | interaction, and uncertainty management are discussed with respect to       |
|              |                                           |      |      |       | work design and sustainable organizational change. As course project,      |
|              |                                           |      |      |       | students learn and apply a method for analyzing and designing work in     |
|              |                                           |      |      |       | business settings.                                                        |
| Objective    | - Know effects of work design on          |      |      |       | competence, motivation, and well-being                                   |
|              |                                           |      |      |       | - Understand links between design of individual jobs and work processes    |
|              |                                           |      |      |       | - Know basic processes involved in systematic organizational change        |
|              |                                           |      |      |       | - Understand the interaction between organization and technology and its   |
|              |                                           |      |      |       | impact on organizational change                                           |
|              |                                           |      |      |       | - Understand relevance of work design for company performance and strategy |
|              |                                           |      |      |       | - Know and apply methods for analyzing and designing work                  |

Data: 06.01.2019 12:56  Autumn Semester 2016  Page 189 of 1571
Content
- Work design: From Adam Smith to job crafting
- Effects of work design on performance and well-being
- Approaches to analyzing and designing work
- Modes of organizational change and change methods
- Balancing stability and flexibility in organizations as design criterion
- The organization-technology interaction and its impact on work design and organizational change
- Example Flexible working arrangements
- Strategic choices for work design

Literature
A list of required readings will be provided at the beginning of the course.

Prerequisites / notice
The course includes the completion of a course project to be conducted in groups of four students. The project entails applying a particular method for analyzing and designing work processes and is carried out by means of interviews and observations in companies chosen by the students.

363-0790-00L

**Abstract**
Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding.

**Objective**
This course offers the fundamentals in theory and practice of entrepreneurship in new technology ventures. Main topics covered are success factors in the creation of new firms, including founding, financing and growing a venture.

**Content**
See course website: http://www.entrepreneurship.ethz.ch/sresources/courses/tech-entrepreneurship.html

**Methods and Concepts in Human Systems Neuroscience and Motor Control**

**Abstract**
This course provides hands-on experience with measurement and analysis methods relevant for Humans Systems Neuroscience and Motor control (nerve/brain stimulation, EMG, EEG, psycho-physical paradigms etc). Students read scientific material, set up experiments, perform measurements in the lab, analyse data, apply statistics and write short reports or essays.

**Objective**
This course will prepare students for experimental work as it is typically done during the master thesis. The goal is to gain hands-on experience with measurement and analysis methods relevant for Humans Systems Neuroscience and Motor control (for example peripheral nerve stimulation, electrical and magnetic brain stimulation, EMG, EEG, psycho-physical paradigms etc). Students will learn how to perform small scientific projects in this area. Students will work individually or in small groups and solve scientific problems which require them to perform measurements in human participants, extract relevant readouts from the data, apply appropriate statistics and interpret the results. They will also be required to write small essays and reports and they will get feedback on their writing throughout the course.

**Prerequisites / notice**
Students are required to have successfully completed the course "Neural control of movement and motor learning" and to have basic knowledge of applied statistics. Self-study material about applied statistics will be available at the beginning of the course and statistical knowledge will be tested (central element) in the second course week. Passing this test is a requirement for continuing the course. Students will have to solve scientific problems, requiring them to independently study scientific material, apply statistics and report their results in the form of written reports and essays. Assessments will be made on the basis of the completed theoretical and practical work that will be performed either in small groups or individually.

376-0225-00L

**Physical Activities and Health**

**Abstract**
This course introduces/explores the complex relationship between physical activity, sedentary behavior and health. It will discuss the evolution of current physical activity recommendations. It will examine the current evidence base that has informed physical activity recommendations and that identified physical activity as a key modifiable lifestyle behavior contributing to disease and mortality.

**Objective**
On completion of this course students will be able to demonstrate:
1. knowledge of and critical awareness of the role of physical activity and sedentary behavior in the maintenance of health and the aetiology, prevention and treatment of disease.
2. thorough knowledge and critical awareness of current recommendations for physical activity, and current prevalence and trends of physical activity and associated diseases
3. awareness of current national and international physical activity policies and how these impact on global challenges

**Content**
Introduction to Physical Activity for Health, including sedentary behavior
Physical activity epidemiology; concepts principles and approaches
Physical activity and all cause morbidity and mortality
Physical activity and chronic disease; Coronary heart disease, diabetes, bone health, cancer and obesity
Physical activity and brain health
Physical activity and sedentary behavior recommendations
Population prevalence of physical activity and sedentary behavior
Physical activity policies
Physical activity assessment

**Literature**
Core texts for this course are:

Prerequisites / notice
Select journal articles from relevant journals such as Journal of Physical Activity and Health and Journal of Aging and Physical Activity from the BSc-course the following book is recommended: ‘Essentials of strength training and conditioning” T. Baechle, R. Earle (3rd Edition)

376-1033-00L

**History of Sports**

**Abstract**
Comprehension for development and changes of sports from the ancient world to the present. Description of sports in services of national idea, from education and health promotion from the middle of the 18th century till this day.

**Objective**
Understanding for the development and adaptation of sports from the ancient world to present times.

**Content**

**Lecture notes**
Ein Skript für die aktuelle Veranstaltung wird abgegeben.

**Literature**

376-1107-00L

**Sport Pedagogy**

**Abstract**
Central aspects of Sport related pedagogy will be handled in these lectures. These aspects cover, amongst others, the subject and tasks of Sport related pedagogy. Furthermore, the general and sports relevant foundations of Sport related pedagogy will be covered.

**Objective**
To gain basic knowledge of sports pedagogy and to recognize starting points for applied sports pedagogical intervention in schools.
### Content

**W 1** - Einführung in die Sportpädagogik und die pädagogische Psychologie des Sportunterrichts  
**W 1** - Bedeutung des Sports im Jugendalter  
**W 1** - Zeitgenössischer Sportunterricht  
**W 1** - Sport und Leistung  
**W 1** - Heterogenität im Sportunterricht  
**W 2** - Sport und Gesundheit  
**W 2** - Geschlechterfragen im Sport  
**W 2** - Soziale und moralische Entwicklung im Sportunterricht

#### Main Topics

- Insights of human movement sciences concerning wear, overstraining and regeneration of the musculoskeletal system form an important basis for an ergonomic working environment. The following topics are covered: Muscle fatigue during the 8-hour day, use of the computer mouse, backaches, Tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, measuring procedures.

**Content**

**Main Topics**
- Introduction to sport psychology  
- Cognitions in sports: mental rehearsal and mental training  
- Emotions and stress  
- Motivation: goal-setting in sports  
- Career and career transition in elite sport  
- Coach-Athlete-Interaction  
- Psychological aspects of sport-injury rehabilitation  
- Group dynamics in sport

#### Objective

Students are given insight into different work areas of sport psychology. In order to understand what «sport psychology» is, it is necessary to explain the essence and tasks of sport psychology and what it relates to, and to work out an underlying basis for key topics, such as cognition and emotions. Students’ expertise is furthered by presenting and providing more in-depth treatment of additional topics of sport psychology. Selected intervention forms are intended to provide insight into applied sport psychology and ensure that mental processes and their impact in sport can be recognised. Case studies and practical exercises (e.g. objective training) are intended to prompt students to reflect to a greater extent on the forms in which sport psychology can be applied in their practice of sports and to integrate these in their teaching.

#### Literature

A detailed program with additional references will be delivered at the beginning of the lecture.

### 376-1117-00L Sport Psychology

#### Abstract

This lecture is intended as an introduction to sport psychology and imparts knowledge on selected areas of the subject.

#### Objective

Students are given insight into different work areas of sport psychology. In order to understand what «sport psychology» is, it is necessary to explain the essence and tasks of sport psychology and what it relates to, and to work out an underlying basis for key topics, such as cognition and emotions. Students’ expertise is furthered by presenting and providing more in-depth treatment of additional topics of sport psychology. Selected intervention forms are intended to provide insight into applied sport psychology and ensure that mental processes and their impact in sport can be recognised. Case studies and practical exercises (e.g. objective training) are intended to prompt students to reflect to a greater extent on the forms in which sport psychology can be applied in their practice of sports and to integrate these in their teaching.

#### Literature

A detailed program with additional references will be delivered at the beginning of the lecture.

### 376-1127-00L Sociology of Sport

#### Abstract

These lectures deal with the current changes in society and sport and provide an overview of the many different problems and perspectives of sport sociology.

#### Objective

The lectures set out to:
- present the different dimensions, functions and interrelationships of present-day sport  
- provide an introduction to the central theories and models of (sport) sociology  
- show how far sport reflects society and how it changes and becomes more differentiated in the process  
- take current examples from newspapers, magazines and television to highlight the sociological view of sport.

#### Content

- Sport and social change: developments and trends  
- The economy and the media: dependencies, consequences, scandals  
- Social inequalities and distinctions: gender differences and group behavior  
- Conflicts and politics: sports organizations, doping, violence

#### Literature

A detailed program with additional references will be delivered at the beginning of the lecture.

### 376-1155-00L The Musculoskeletal System and Work

#### Abstract

Consolidated findings of movement sciences concerning deterioration, overload and regeneration of the musculoskeletal system are an important basis for an ergonomic working environment. The following topics are covered: Muscle fatigue during the 8-hour day, use of the computer mouse, backaches, Tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, measuring procedures.

#### Objective

Goal of the course is the activation of physiological and patho-physiological insights for the understanding of loads of the musculoskeletal system during work. Prevention and rehabilitation of work related musculoskeletal disease will be discussed with the help of a bio-psycho-social model. Furthermore, evidence based methods for a healthy work design will be presented.

#### Content

- Insights of human movement sciences concerning wear, overstraining and regeneration of the musculoskeletal system form an important base for an ergonomic work design. The following topics will be covered: Muscle fatigue during an 8-hours-day, mouse appliance, back pain, insertion tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, and measurement methods.

#### Literature

Skript und Folien auf NETZ als PDF-Datei zur Verfügung

#### Prerequisites

### 376-1305-00L Development of the Nervous System

#### Abstract

The course covers the development of the nervous system (NS) with a focus on neurogenesis and migration, axon growth, synapse formation, mol. & cell. mechanisms, and diseases of the developing NS.

#### Objective

The aim is to give a deepened insight on the normal development, of the nervous system based on molecular, cellular and biochemical approaches.

#### Content

The main focus is on the development of the NS: Early development of the NS, cellular processes, nerve fiber growth, building of synapses and neuronal networks.

#### Lecture notes

Must be downloaded from OLAT: https://www.olat.uzh.ch/olat/dmz/ as BIC344

#### Prerequisites

None. Bring something to write and your student ID

### 376-1305-01L Structure, Plasticity and Repair of the Nervous System

#### Abstract

The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on OLAT.

#### Objective

The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on OLAT.

#### Prerequisites

Auxiliary tools: None. Bring something to write and your student ID

### 376-1117-00L Sport Psychology

- T. Läubli
- E. Stoeckli

Must be downloaded from OLAT: https://www.olat.uzh.ch/olat/dmz/

### 376-1127-00L Sociology of Sport

- M. E. Schwab

The course covers the structure, plasticity and regeneration of the adult nervous system (NS) with focus on: sensory systems, cognitive functions, learning and memory, molecular and cellular mechanisms, animal models, and diseases of the NS.

The aim is to give a deepened insight into the structure, plasticity and regeneration of the nervous system based on molecular, cellular and biochemical approaches.

The main focus is on the structure, plasticity and regeneration of the NS: biology of the adult nervous system; structural plasticity of the adult nervous system, regeneration and repair: networks and nerve fibers, regeneration, pathological loss of cells.

ETH students: Lecture notes will be provided on Moodle https://moodle-app2.let.ethz.ch/course/view.php?id=694

Password will be provided at the beginning of the lecture.

The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on Moodle / OLAT.

Prerequisite: Anatomy and Physiology

A Laptop with MATLAB installed (v2009 or higher) and wireless internet access is mandatory. Two students can share a laptop if necessary. A MATLAB student version can be obtained at Stud-IDES for free.

The combining of training and coaching as in the example of sport analysis, which has an effect on youth training and athlete development

The members are able to transform the knowledge from the previous courses in practical situations of Sports and Exercise Therapy. They learn basic aspects to design therapy lessons.

The courses "Introduction in Sports and Exersice Therapy" has been completed successfully.

The Skript- (Lektionsunterlagen) werden im Rahmen des Semesters abgeben und auf Homepage veröffentlicht.

The Praxislektionen werden jeweils am Mittwoch von 13.00 - 15.00 abgehalten. Die Termine werden in Absprache festgelegt.

Die Semesterarbeit ist 4 Wochen nach Semesterende abzugeben.

The Praxislektionen werden jeweils am Mittwoch von 13.00 - 15.00 abgehalten. Die Termine werden in Absprache festgelegt.

Die Praxislektionen werden jeweils am Mittwoch von 13.00 - 15.00 abgehalten. Die Termine werden in Absprache festgelegt.

Die Praxislektionen werden jeweils am Mittwoch von 13.00 - 15.00 abgehalten. Die Termine werden in Absprache festgelegt.

The planung

Die Planungsunterlagen werden zu Semesterbeginn abgegeben, sind provisorisch und können vom Dozenten geändert werden. Die Praxislektionen werden jeweils am Mittwoch von 13.00 - 15.00 abgehalten. Die Termine werden in Absprache festgelegt.

Abstract

Intensive discussion concerning complications of a spinal cord injury and their consequences on trainability and exercise performance of persons sitting in a wheelchair. Overview on the clinical application of exercise testing as well as on the implementation of sport scientific findings to optimise performance of spinal cord injured subjects in rehabilitation and elite sports.

Objective

Knowledge of the pathophysiology and the concomitant complications of a spinal cord injury and the consequences for physical exercise and trainability during rehabilitation as well as in recreational and elite sport.

Content

The following issues will be discussed: Epidemiology and etiology of spinal cord injury; complications and consequences of spinal cord injury; trainability/exercise physiology and spinal cord injury; history and organisation of wheelchair sports; elite sport and spinal cord injury

Prerequisites / notice

Voraussetzung: Vorlesung Anatomie/Physiologie besucht!
Introduction to Nutritional Science

This course introduces basic concepts of micro- and macronutrient nutrition. Micronutrients include fat-soluble and water-soluble vitamins, minerals and trace elements. Macronutrients include proteins, fats and carbohydrates. Special attention is given to nutrient digestion, bioavailability, metabolism and excretion with some focus on energy metabolism.

Content
The course is divided into two parts. The lectures on micronutrients are given by Prof. Zimmermann and the lectures on macronutrients are given by Prof. Wolfrum. Prof. Zimmermann discusses the micronutrients, including fat-soluble vitamins, water-soluble vitamins, minerals and trace elements. Prof. Wolfrum introduces basic nutritional aspects of proteins, fats, carbohydrates and energy metabolism. The nutrients are described in relation to digestion, absorption and metabolism. Special aspects of homeostasis and homeorhesis are emphasized.

Handouts will be made available.

No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

**Abstract**
The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

**Objective**
To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

**Content**
The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

**Lecture notes**
Lecture slides and required handouts will be available on the ETH website.

**Literature**
Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

**Prerequisites / notice**
General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English

It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

**Abstract**
The lectures "Leadership I" (WS) and "Leadership II" (SS) have been designed as a two-semester lecture series, but may also be followed independently of one another or in reverse order. "Leadership I" covers the following fields: leadership basics, leadership theories and leadership styles, the concept of leadership responsibility and the role of communication in practical leadership.

**Objective**
The aim of this lecture is to give students an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organisation, context and situation. They should be informed about the evolution of the understanding of mankind in relation to working processes and its impact on organisations and the understanding of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate adequately in specific situations.

**Prerequisites / notice**
The 1-hour written exam will take place during the last lecture in the semester.

### Practical Training

**Abstract**
3-months practical work with topics from the major exercise in movement and training doctrines.

**Objective**
The students should obtain practical experience of 3 month length in possible job environments. The selected places (internal or external) should be as close as possible by the major exercise in movement and training doctrines.

**Abstract**
6-months research study with topics from the major exercise in movement and training doctrines.

**Objective**
The student shall apply his basic knowledge in a practical scientific study. He/she will be confronted with the requirements of scientific working. He/she must master this requirements.

**Prerequisites / notice**
The master thesis can only be started after the Bachelor Degree was obtained and the Vertiefungsleiter has approved the study.

### Major in Biomechanics

**Abstract**
Measurement and modeling of the human movement during daily activities and in a clinical environment.

**Objective**
The students are able to analyse the human movement from a technical point of view, to process the data and perform modeling with a focus towards clinical application.

**Content**
This course includes study design, measurement techniques, clinical testing, accessing movement data and analysis as well as modelling with regards to human movement.

**Abstract**
Kinematics, dynamics and oscillations: Motion of a single particle - Motion of systems of particles - 2D and 3D motion of rigid bodies - Vibrations
## Objective
This course provides Bachelor students of mechanical engineering with fundamental knowledge of kinematics and dynamics of mechanical systems. By studying motion of a single particle, systems of particles and rigid bodies, we introduce essential concepts such as work and energy, equations of motion, and forces and torques. Further topics include stability of equilibria and vibrations. Examples presented in the lectures and weekly exercise lessons help students learn basic techniques that are necessary for advanced courses and work on engineering applications.

## Content
1. Motion of a single particle || Kinematics: trajectory, velocity, acceleration, inertial frame, moving frames - Forces and torques. Active- and reaction forces. - Linear momentum principle, angular momentum principle, work-energy principle - Equations of motion;
2. Motion of systems of particles || Internal and external forces - Linear momentum principle, angular momentum principle, work-energy principle - Rigid body systems of particles; conservative systems
3. 3D motion of rigid bodies || Kinematics: angular velocity, velocity transport formula, instantaneous center of rotation - Linear momentum principle, angular momentum principle, work-energy principle - Parallel axis theorem. Angular momentum transport formula

## Lecture notes
Hand-written slides will be downloadable after each lecture.

## Literature
Typed course notes from the previous year

## Prerequisites / notice
Please log in to moodle (https://moodle-app2.let.ethz.ch/auth/shibboleth/login.php), search for "Dynamics", and join the course there. All exercises sheets, lecture materials etc. will be uploaded there.

## 227-0385-10L Biomedical Imaging

| Objective | This course provides Bachelor students of mechanical engineering with fundamental knowledge of kinematics and dynamics of mechanical systems. By studying motion of a single particle, systems of particles and rigid bodies, we introduce essential concepts such as work and energy, equations of motion, and forces and torques. Further topics include stability of equilibria and vibrations. Examples presented in the lectures and weekly exercise lessons help students learn basic techniques that are necessary for advanced courses and work on engineering applications. |

| Prerequisites / notice | Analysis, Linear Algebra, Physics, Basics of Signal Theory, Basic skills in Matlab programming |

## 227-0447-00L Image Analysis and Computer Vision

| Objective | Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises. |
| Content | The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed. |
| Lecture notes | Course material Script, computer demonstrations, exercises and problem solutions |
| Prerequisites / notice | Prerequisites: 
Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C. |

## 227-1051-00L Systems Neuroscience (University of Zurich)

| Objective | No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. |
| Lecture notes | UZH Module Code: INI415 |
| Prerequisites / notice | Prerequisites: 
Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C. |
| Content | The course language is English. |

Abstract
This course focuses on basic aspects of central nervous system physiology, including perception, motor control and cognitive functions.

Objective
To understand the basic concepts underlying perceptual, motor and cognitive functions.

Content
Main emphasis sensory systems, with complements on motor and cognitive functions.

Literature
"Principles of Neural Science", Kandel, Schwartz, and Jessel

Prerequisites / notice
none

363-0790-00L Technology Entrepreneurship W 2 credits 2V U. Claesson, B. Clarysse

Abstract
Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding. This course offers the fundamentals in theory and practice of entrepreneurship in new technology ventures. Main topics covered are success factors in the creation of new firms, including founding, financing and growing a venture.

Objective
This course provides theory-grounded knowledge and practice-driven skills for founding, financing, and growing new technology ventures. A critical understanding of dos and don'ts is provided through highlighting and discussing real life examples and cases.

Content
See course website: http://www.entrepreneurship.ethz.ch/sresources/courses/tech-entrepreneurship.html

Lecture slides and case material

376-1219-00L Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions W 3 credits 2V R. Riener, R. Gassert, L. Marchal Crespo

Abstract
Rehabilitation Engineering is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective
Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

Content
Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces
Literature

Introductory Books:

Selected Journal Articles and Web Links:

- VideoTact, ForeThought Development, LLC. http://my.execpc.com/?dwysocki/videotac.html

Prerequisites / notice

Target Group:
- Students of higher semesters and PhD students of - D-MAVT, D-ITET, D-INFK, D-HEST
- Biomedical Engineering, Robotics, Systems and Control
- Medical Faculty, University of Zurich

Students of other departments, faculties, courses are also welcome

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

376-1714-00L Biocompatible Materials W 4 credits 3G K. Maniura, J. Möller, M. Zenobi-Wong

Abstract

Introduction to molecules used for biomaterials, molecular interactions between different materials and biological systems (molecules, cells, tissues). The concept of biocompatibility is discussed and important techniques from biomaterials research and development are introduced.

Objective

The class consists of three parts:
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Content

Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.

In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

## Work Design and Organizational Change

**W** 3 credits 2G G. Grote

| Abstract | Good work design is crucial for individual and company effectiveness and a core element to be considered in organizational change. Meaning of work, organization-technology interaction, and uncertainty management are discussed with respect to work design and sustainable organizational change. As course project, students learn and apply a method for analyzing and designing work in business settings. |
| Objective | - Know effects of work design on competence, motivation, and well-being  
- Understand links between design of individual jobs and work processes  
- Know basic processes involved in systematic organizational change  
- Understand the interaction between organization and technology and its impact on organizational change  
- Understand relevance of work design for company performance and strategy  
- Know and apply methods for analyzing and designing work  |
| Content | - Work design: From Adam Smith to job crafting  
- Effects of work design on performance and well-being  
- Approaches to analyzing and designing work  
- Modes of organizational change and change methods  
- Balancing stability and flexibility in organizations as design criterion  
- The organization-technology interaction and its impact on work design and organizational change  
- Example Flexible working arrangements  
- Strategic choices for work design  |
| Literature | A list of required readings will be provided at the beginning of the course.  
| Prerequisites / notice | The course includes the completion of a course project to be conducted in groups of four students. The project entails applying a particular method for analyzing and designing work processes and is carried out by means of interviews and observations in companies chosen by the students. |

## Technology Entrepreneurship

**W** 2 credits 2V U. Claessens, B. Clarysse

| Abstract | Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding. This course offers the fundamentals in theory and practice of entrepreneurship in new technology ventures. Main topics covered are success factors in the creation of new firms, including founding, financing and growing a venture. |
| Objective | This course provides theory-grounded knowledge and practice-driven skills for founding, financing, and growing new technology ventures. A critical understanding of dos and don'ts is provided through highlighting and discussing real life examples and cases. |
| Content | See course website: http://www.entrepreneurship.ethz.ch/sresources/courses/tech-entrepreneurship.html  
| Literature |  |
| Prerequisites / notice |  |

## Laboratory Course in Exercise Physiology

**W** 3 credits 4P C. Spengler

| Abstract | Conduct physical performance tests and measurements that are typically used to assess performance of athletes and/or patients and that deepen the understanding of physiological processes in response to physical exertion.  
Gain hands-on experience in exercise physiology and consolidate knowledge on physiological adaptations to different types and degrees of physical activity and climatic influences. Learn fundamental assessment techniques of the muscular system, the cardio-respiratory system and of whole-body performance, learn scientifically correct data analysis and interpretation of results. Insight into today’s Sports Medicine.  
| Objective | Gain hands-on experience in exercise physiology and consolidate knowledge on physiological adaptations to different types and degrees of physical activity and climatic influences. Learn fundamental assessment techniques of the muscular system, the cardio-respiratory system and of whole-body performance, learn scientifically correct data analysis and interpretation of results. Insight into today’s Sports Medicine.  
| Content | Laboratory course:  
Various exercise tests assessing human performance and assessments of physiological responses to activity (examples are VO2max-test, Conconi-Tests, Determination of anaerobic threshold, Cooper-Test, 1-repetition maximum test, lactate minimum test), dynamometry, mechanography, body composition etc.). Insight into measurements in Sports Medicine.  
| Lecture notes | Tutorial on Laboratory Experiments in Exercise Physiology (Editor: Exercise Physiology Lab)  
| Literature | Schmidt/Lang/Heckmann: Physiologie des Menschen, Springer-Verlag, Heidelberg  
Kenney/Wilmore/Costill: Physiology of Sport and Exercise, Human Kinetics  
| Prerequisites / notice | Prerequisite:  
Anatomy and physiology classes and lab course in physiology successfully completed (BWS students please contact C. M. Spengler)  
Desirable: Exercise Physiology Lecture (concomitantly or passed; is selection criterion in case of more applications than lab spaces)  
| Literature | See course website: http://www.entrepreneurship.ethz.ch/sresources/courses/tech-entrepreneurship.html  
| Prerequisites / notice |  |

## Methods and Concepts in Human Systems Neuroscience and Motor Control

**W** 3 credits 3P N. Wenderoth

| Abstract | This course provides hands-on experience with measurement and analysis methods relevant for Humans Systems Neuroscience and Motor control (for example peripheral nerve stimulation, electrical and magnetic brain stimulation, EMG, EEG, psycho-physical paradigms etc). Students read scientific material, set up experiments, perform measurements in the lab, analyse data, apply statistics and write short reports or essays.  
| Objective | This course will prepare students for experimental work as it is typically done during the master thesis. The goal is to gain hands-on experience with measurement and analysis methods relevant for Humans Systems Neuroscience and Motor control (for example peripheral nerve stimulation, electrical and magnetic brain stimulation, EMG, EEG, psycho-physical paradigms etc). Students will learn how to perform small scientific projects in this area. Students will work individually or in small groups and solve scientific problems which require them to perform measurements in human participants, extract relevant readouts from the data, apply appropriate statistics and interpret the results. They will also be required to write small essays and reports and they will get feedback on their writing throughout the course.  
| Prerequisites / notice | Students are required to have successfully completed the course “Neural control of movement and motor learning” and to have basic knowledge of applied statistics. Self-study material about applied statistics will be available at the beginning of the course and statistical knowledge will be tested (central element) in the second course week. Passing this test is a requirement for continuing the course. Students will have to solve scientific problems, requiring them to independently study scientific material, apply statistics and report their results in the form of written reports and essays. Assessments will be made on the basis of the completed theoretical and practical work that will be performed either in small groups or individually.  
“Principles of Neural Science”, Kandel, Schwartz, and Jessel  
“Principles of Neural Science”, Kandel, Schwartz, and Jessel  
| Prerequisites / notice |  |

## Physical Activities and Health

**W** 3 credits 2V E. de Bruin

| Prerequisites / notice |  |

Data: 06.01.2019 12:56  Autumn Semester 2016  Page 201 of 1571
This course introduces/explores the complex relationship between physical activity, sedentary behavior and health. It will discuss the evolution of current physical activity recommendations. It will examine the current evidence base that has informed physical activity recommendations and that identified physical activity as a key modifiable lifestyle behavior contributing to disease and mortality.

On completion of this course students will be able to demonstrate:
1. knowledge of and critical awareness of the role of physical activity and sedentary behavior in the maintenance of health and the aetiology, prevention and treatment of disease.
2. thorough knowledge and critical awareness of current recommendations for physical activity, and current prevalence and trends of physical activity and associated diseases
3. awareness of current national and international physical activity policies and how these impact on global challenges

Introduction to Physical Activity for Health, including sedentary behavior
Physical activity epidemiology; concepts principles and approaches
Physical activity and all cause morbidity and mortality
Physical activity and chronic disease; Coronary heart disease, diabetes, bone health, cancer and obesity
Physical activity and brain health
Physical activity and sedentary behavior recommendations
Population prevalence of physical activity and sedentary behavior
Physical activity policies
Physical activity assessment

Core texts for this course are:

Selective journal articles from relevant journals such as Journal of Physical Activity and Health and Journal of Aging and Physical Activity

From the BSc-course the following book is recommended: ‘Essentials of strength training and conditioning’ T. Baechle, R. Earle (3rd Edition)

Prerequisites / notice

---

376-1033-00L History of Sports W 2 credits 2V M. Gisler

Abstract
Comprehension for development and changes of sports from the ancient world to the presence. Description of sports in services of national idea, from education and health promotion from the middle of the 18th century till this day.

Objective
Understanding for the development and adaptation of sports from the ancient world to present times.

Content

Lecture notes
Ein Skript für die aktuelle Veranstaltung wird abgegeben.

Literature

376-1107-00L Sport Pedagogy W 2 credits 2V D. Seiler Hubler

Abstract
Central aspects of Sport related pedagogy will be handled in these lectures. These aspects cover, amongst others, the subject and tasks of Sport related pedagogy. Furthermore, the general and sports relevant foundations of Sport related pedagogy will be covered.

Objective
To gain basic knowledge of sports pedagogy and to recognize starting points for applied sports pedagogical intervention in schools.

Content
Inhaltliche Schwerpunkte der Vorlesung sind:
- Einführung in die Sportpädagogik und die pädagogische Psychologie des Sportunterrichts
- Bedeutung des Sports im Jugendalter
- Zeitgemäßer Sportunterricht
- Sport und Leistung
- Heterogenität im Sportunterricht
- Sport und Gesundheit
- Geschlechterfragen im Sport
- Soziale und moralische Entwicklung im Sportunterricht

Lecture notes
Unterrichtsmaterialien zu den einzelnen Veranstaltungen werden den Studierenden zur Verfügung gestellt.

376-1117-00L Sport Psychology W 2 credits 2V H. Gubelmann

Abstract
This lecture is intended as an introduction to sport psychology and imparts knowledge on selected areas of the subject.

Objective
Students are given insight into different work areas of sport psychology. In order to understand what «sport psychology» is, it is necessary to explain the essence and tasks of sport psychology and what it relates to, and to work out an underlying basis for key topics, such as cognition and emotions. Students' expertise is furthered by presenting and providing more in-depth treatment of additional topics of sport psychology. Selected intervention forms are intended to provide insight into applied sport psychology and ensure that mental processes and their impact in sport can be recognised. Case studies and practical exercises (e.g. objective training) are intended to prompt students to reflect to a greater extent on the forms in which sport psychology can be applied in their practice of sports and to integrate these in their teaching.

Content
Main Topics
- Introduction to sport psychology
- Cognitions in sports: mental rehearsal and mental training
- Emotions and stress
- Motivation: goal-setting in sports
- Career and career transition in elite sport
- Coach-Athlete-Interaction
- Psychological aspects of sport-injury rehabilitation
- Group dynamics in sport

Lecture notes
Unterrichtsmaterialien zu den einzelnen Veranstaltungen werden den Studierenden zur Verfügung gestellt.

Literature

376-1127-00L Sociology of Sport W 2 credits 2V M. Lamprechtt

Abstract
These lectures deal with the current changes in society and sport and provide an overview of the many different problems and perspectives of sport sociology.

Objective
The lectures set out to:
- present the different dimensions, functions and interrelationships of present-day sport
- provide an introduction to the central theories and models of (sport) sociology
- show how far sport reflects society and how it changes and becomes more differentiated in the process
- take current examples from newspapers, magazines and television to highlight the sociological view of sport.
Sport und sozialer Wandel: Entwicklungen und Trends
Die Ökonomie und die Gesellschaft: Abhängigkeiten, Konsequenzen, Skandale
Soziale Ungleichheiten und Diskriminierung: Genderdifferenzen und Gruppenverhalten
Konflikte und Politik: Sozialorganisationen, Doping, Gewalt

Lecture notes
Selected materials for the lecture are available under www.LSSFB.ch --> Lehre

Literature

A detailed program with additional references will be delivered at the beginning of the lecture.

376-1155-00L
The Musculoskeletal System and Work
W 3 credits 2V T. Läubli

Abstract
Consolidated findings of movement sciences concerning deterioration, overload and regeneration of the musculoskeletal system are an important basis for an ergonomic working environment. The following topics are covered: Muscle fatigue during the 8-hour day, use of the computer mouse, backaches, Tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, measuring procedures, and neurological approaches.

Objective
Goal of the course is the activation of physiological and patho-physiological insights for the understanding of loads of the musculoskeletal system during work. Prevention and research will enable the development of work related musculoskeletal disease will be discussed with the help of a bio-psycho-social model. Furthermore, evidence based methods for a healthy work design will be presented.

Content
Insights of human movement sciences concerning wear, overtraining and regeneration of the musculoskeletal system form an important base for an ergonomic work design. The following topics will be covered: Muscle fatigue in an 8-hours-day, mouse appliance, back pain, insertional tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, and measurement methods.

Lecture notes
Skript und Folien auf NETZ als PDF-Datei zur Verfügung

Prerequisites / notice

376-1177-00L
Human Factors I
W 2 credits 2V M. Menozzi Jäckli, R. Huang, M. Siegrist

Abstract
Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people's satisfaction & overall performance.

Objective
The goal of the lecture is to empower students in better understanding the applied theories, principles, and methods in various applications. Students are expected to learn about how to enable an efficient and qualitatively high standing interaction between human and the environment, considering costs, benefits, health, and safety as well. Thus, an ergonomic design and evaluation process of products, tasks, and environments may be promoted in different disciplines. The goal is achieved in addressing a broad variety of topics and embedding the discussion in macroscopic factors such as the behavior of consumers and objectives of economy.

Content
- Physiological, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry, Digital Human Models
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in systems designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

Literature
- Gabriell Salvendy, Handbook of Human Factors and Ergonomics, 4th edition (2012), is available on NEBIS as electronic version and for free to ETH students
- Further textbooks are introduced in the lecture
- Brochures, checklists, key articles etc. are uploaded in ILIAS

376-1179-00L
Applications of Cybernetics in Ergonomics
W 1 credit 1U Y.Y. Hedinger Huang, R. Huang

Abstract
Cybernetics systems have been studied and applied in various research fields, such as applications in the ergonomics domain. Research interests include the man-machine interaction (MMI) topic which involving the human performance in multi-model interactions, quantification in gestalt principles in product development; or the information processing matter.

Objective
To learn and practice cybernetics principles in interface designs and product development.

Content
- Fitt's law applied in manipulation tasks
- Hick-Hyman law applied in design of the driver assistance systems - Vigilance applied in quality inspection
- Accommodation/vergence crosslink function
- Cross-link models in neurobiology- the ocular motor control system
- Human performance in optimization of production lines

Literature

376-1305-00L
Development of the Nervous System
W 3 credits 2V E. Stoecchi, further lecturers

Abstract
The course covers the development of the nervous system (NS) with a focus on neurogenesis and migration, axon growth, synapse formation, mol. & cell. mechanisms, and diseases of the developing NS.

Objective
The aim is to give a deepened insight on the normal development, of the nervous system based on molecular, cellular and biochemical approaches.

Content
The main focus is on the development of the nervous system based on molecular, cellular and biochemical approaches.

Literature
Must be downloaded from OLAT: https://www.olat.uzh.ch/olat/dmz/ as BIO344

Prerequisites / notice
None. Bring something to write and your student ID

376-1305-01L
Structure, Plasticity and Repair of the Nervous System
W 3 credits 2V M. E. Schwab, L. Filli, K. A. Martin, further lecturers

Abstract
The course covers the structure, plasticity and regeneration of the adult nervous system (NS) with focus on: sensory systems, cognitive functions, learning and memory, molecular and cellular mechanisms, animal models, and diseases of the NS.

Objective
The aim is to give a deepened insight into the structure, plasticity and regeneration of the nervous system based on molecular, cellular and biochemical approaches.

Content
The main focus is on the structure, plasticity and regeneration of the NS: biology of the adult nervous system; structural plasticity of the adult nervous system, regeneration and repair: networks and nerve fibers, regeneration, pathological loss of cells.
Lecture notes
ETH students: Lecture notes will be provided on Moodle https://moodle-app2.let.ethz.ch/course/view.php?id=694
Password will be provided at the beginning of the lecture.

UZH students: Lecture notes will be provided on OLAT: https://www.olat.uzh.ch/olat/dmz/
The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on Moodle / OLAT.

376-1665-00L Training and Coaching I

Abstract
The combining of training and coaching as in the example of sport analysis, which has an effect on youth training and athlete development

Objective
- To develop basics for a differentiate analyses of sports (model)
- To develop a profile of requirements for specific sports
- To develop competencies of training with youth and talents
- To develop the basics of talent training in theory and practice
- To observe athletes in case studies, make judgments and conclusion

Content
Das Modell der Sportartenanalyse
Die Relevanz der einzelnen Leistungsfaktoren
Das Modell der Wettkampfanalyse
Folgerungen für das Training und Coaching in der Sportart
Folgerungen für das Nachwuchstraining
Folgerungen für die Athletenauswahl, Athletenbeobachtung und -betreuung
Das Nachwuchs- und Talentraining (Sichtung, Selektion, Förderung)
Projekte aus der Praxis (Talent- und Nachwuchstraining)
Praxisinput zum Thema Koordination, motorische Grundbedürfnisse, Kraft und Gesundheit
Praxisbeispiele erarbeiten und planen
Konkrete Athletenbeobachtung

Lecture notes
Die Skript- (Lektionsunterlagen) werden im Rahmen des Semesters abgeben und auf Homepage veröffentlicht.

Literature
Struktur sportlicher Leistung (Modellansatz von Gundlach; (Trainingswissenschaften S. 45 - 49; Stiehler(Konzag/Döbler)
Leistungsdiagnostische Verfahren, Stiehler(Konzag/Döbler)
Training fundiert erklärt, Handbuch der Trainingslehre, Ingold Verlag 2006
Das sportliche Talent, W. Joch, Meyer&Meyer Verlag, 2002
Das neue Konditionstraining, Grosser/Starischka/Zimmermann, blv 2002

Prerequisites / notice
Kredit/Prüfung
Für die Kreditvergabe sind die vorgeschriebenen Semesterarbeiten und die Präsenz zwingend. Die Benotung erfolgt durch eine schriftliche Arbeit.

Planung
Die Planungsunterlagen werden zu Semesterbeginn abgegebenen, sind provisorisch und können vom Dozenten geändert werden. Die Praxislektionen werden jeweils am Mittwoch von 13.00 - 15.00 abgehalten. Die Termine werden in Absprache festgelegt.
Die Semesterarbeit ist 4 Wochen nach Semesterende abzugeben.

376-1716-00L Basics of Exercise Therapy

Abstract
Basics of Exercise Therapy:
A: diagnostic, anamnese, diagnostic of movement and funktion, assessments in exercise therapy, diagnostic of experience and behavior in relation to movement
B: biological-medical basics, pathophysiological Basics (internal, orthopedic and psychological deseases.
C: didactic knowledge, Reha-didactic

Objective
Students learn the assessments to plan an exercise-therapy-treatment.
They are able to use them. They're able to integrate biological and medical basics.
They are able to preparate a therapy-session

Content
Grundlagen der Diagnostik, Anamnese,
Bewegungsdiagnostik, Funktionsdiagnostik
Sport- und Bewegungstherapeutische Testverfahren
Motorische Basisdiagnostik
Diagnostik bewegungsbezogenen Erlebens und Verhaltens
Biologisch-medicinische Grundlagen
Biomechanik (v.a. Gelenke), Pathophysiologische Grundlagen, Modelle der Methodik und Didaktik, Lektionsplanung

Lecture notes
wird vor Semesterbeginn elektronisch zur Verfügung gestellt

Literature
- Schüle / Huber: Grundlagen der Sporttherapie, Deutscher Ärzteverlag , Köln 2012
- Deimel et al.: Neue aktive Wege in Prävention und Rehabilitation, Deutscher Ärzteverlag, Köln 2007

Prerequisites / notice
lecture "Introduction in Exercise Therapie" ist prerequisite
90% of the lections students must be present.

376-1717-00L Practical Basics in Sports and Exercise Therapy

Abstract
Impart knowledge of practical basics of Sports and Exercise Therapy

Objective
The members are able to transform the knowledge from the previous courses in practical situations of Sports and Exercise Therapy. They learn basic aspects to design therapy lessons.

**Abstract**

Students will learn to import, process and graphically present experimental data using the MATLAB computing environment. Both the data and the methods of analysis will be typical for experiments in Human Movement Science (i.e. kinematics, kinetics and electromyography).

**Objective**

Students will acquire the ability to independently load, plot, and process kinematic, kinetic and electromyographical data using the MATLAB computing environment.

**Content**

Drawbacks of Excel; Possibilities in MATLAB; Import of several data formats; Plot of one and more signals; Removing of an offset and filtering of data based on self-written functions; Normalisation and parametrisation of data; Reliability; Interpolation, Differentiation and Integration in MATLAB.

**Literature**

During the lecture, several electronically available MATLAB introductions are indicated. Course-specific scripts will be provided by the lecturer.

**Prerequisites / Notice**

A Laptop with MATLAB installed (v2009 or higher) and wireless internet access is mandatory. Two students can share a laptop if necessary. A MATLAB student version can be obtained at Stud-IDES for free.

**Abstract**

Intensive discussion concerning complications of a spinal cord injury and their consequences on trainability and exercise performance of persons sitting in a wheelchair. Overview on the clinical application of exercise testing as well as on the implementation of sport scientific findings to optimise performance of spinal cord injured subjects in rehabilitation and elite sports.

**Objective**

Knowledge of the pathophysiology and the concomitant complications of a spinal cord injury and the consequences for physical exercise and trainability during rehabilitation as well as in recreational and elite sport.

**Content**

The following issues will be discussed: Epidemiology and etiology of spinal cord injury; complications and consequences of spinal cord injury; trainability/exercise physiology and spinal cord injury; history and organisation of wheelchair sports; elite sport and spinal cord injury.

**Prerequisites / Notice**

Voraussetzung: Vorlesung Anatomie/Physiologie besucht!

**Abstract**

This lectures introduces the basic principles of injury mechanics and rehabilitation focussing on sports injuries.

**Objective**

Within the scope of this lecture you will learn the basic principles of trauma biomechanics. Based on examples from sports, you will get to know different mechanisms that can possibly result in injury. Investigating the background and cause of injury should allow you to assess the injury risk for sports activities. Furthermore you should be able to develop measures to prevent such injury.

**Content**

This lecture deals with the basic principles of injury mechanics and rehabilitation. Mechanisms that can result in injury are presented. Furthermore possibilities to prevent injuries are discussed. Thereby the lecture focuses on sports injuries.

**Literature**

**Prerequisites / Notice**

A course work is required. The mark of this course work contributes to the final credits for this lecture. Details will be given during the first lecture.

**Abstract**

This course introduces basic concepts of micro- and macronutrient nutrition. Micronutrients studied include fat-soluble and water-soluble vitamins, minerals and trace elements. Macronutrients include proteins, fat and carbohydrates. Special attention is given to nutrient digestion, bioavailability, metabolism and excretion with some focus on energy metabolism.

**Objective**

To introduce the students to the both macro- and micronutrients in relation to food and metabolism.

**Content**

The course is divided into two parts. The lectures on micronutrients are given by Prof. Zimmermann and the lectures on macronutrients are given by Prof. Wolfrum. Prof. Zimmermann discusses the micronutrients, including fat-soluble vitamins, water-soluble vitamins, minerals and trace elements. Prof. Wolfrum introduces basic nutritional aspects of proteins, fats, carbohydrates and energy metabolism. The nutrients are described in relation to digestion, absorption and metabolism. Special aspects of homeostasis and homeoeosis are emphasized.

**Literature**

There is no script. Powerpoint presentations will be made available.

UTB Ulmer, Stuttgart, 4. überarb. Ausgabe 2004

Garrow JS and James WPT: Human Nutrition and Dietetics
Churchill Livingstone, Edinburgh, 11th rev. ed. 2005

**Prerequisites / Notice**

The courses "Introduction in Sports and Exercise Therapy" and has been completed successfully.
Abstract
To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Objective
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.

Content
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Lecture notes
There is no script. Powerpoint presentations will be made available on-line to students.

Literature
To be provided by the individual lecturers, at their discretion.

Prerequisites / notice
No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

752-6105-00L Epidemiology and Prevention
Information for UZH students: Enrolment to this course unit only possible at ETH. No enrolment to module CS16_101 at UZH.

Abstract
The module Epidemiology and prevention describes the process of scientific discovery from the detection of a disease and its causes, to the development and evaluation of preventive and treatment interventions and to improved population health.

Objective
The overall goal of the course is to introduce students to epidemiological thinking and methods, which are critical pillars for medical and public health research. Students will also become aware on how epidemiological facts are used in prevention, practice and politics.

Content
The module Epidemiology and prevention follows an overall framework that describes the course of scientific discovery from the detection of a disease to the development of prevention and treatment interventions and their evaluation in clinical trials and real world settings. We will discuss study designs in the context of existing knowledge and the type of evidence needed to advance knowledge. Examples form nutrition, chronic and infectious diseases will be used in order to show the underlying concepts and methods.

752-6151-00L Public Health Concepts

Abstract
The module "public health concepts" offers an introduction to key principles of public health. Students get acquainted with the concepts and methods of epidemiology. Students also learn to use epidemiological data for prevention and health promotion purposes. Public health concepts and intervention strategies are presented, using examples from infectious and chronic diseases.

Objective
At the end of this module students are able:
- to interpret the results of epidemiological studies
- to critically assess scientific literature
- to know the definition, dimensions and determinants of health
- to plan public health interventions and health promotion projects

Content
Concepts of descriptive and analytical epidemiology, study designs, measures of effect, confounding and bias, screening, surveillance, definition of health and health promotion, health dimensions and health determinants, prevention strategies, public health interventions, public health action cycle, epidemiology and prevention of infectious and chronic diseases (HIV, Tuberculosis, Obesity, Public health nutrition).

Lecture notes
Handouts are provided to students in the classroom.

Prerequisites / notice
Language of the course is english

752-6403-00L Nutrition and Performance

Abstract
The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

Objective
To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Content
The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

Lecture notes
Lecture slides and required handouts will be available on the ETH website.

Literature
Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

Prerequisites / notice
General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English

It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

853-0033-00L Leadership I

Abstract
The lectures "Leadership I" (WS) and "Leadership II" (SS) have been designed as a two-semester lecture series, but may also be followed independently of one another or in reverse order. "Leadership I" covers the following fields: leadership basics, leadership theories and leadership styles, the concept of leadership responsibility and the role of communication in practical leadership.

Objective
The aim of this lecture is to give students an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organisation, context and situation. They should be informed about the evolution of the understanding of mankind in relation to working processes and its impact on organizations and the understanding of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate adequately in specific situations.

Prerequisites / notice
The 1-hour written exam will take place during the last lecture in the semester.

151-0104-00L Uncertainty Quantification for Engineering & Life Sciences

Notice
Number of participants limited to 60.

Data: 06.01.2019 12:56
Autumn Semester 2016
Page 206 of 1571
Abstract
Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective
The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Content
Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes
The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature
1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
2. Probability Theory: The Logic of Science by E. T. Jaynes
3. Class Notes

Prerequisites / notice

ECTS European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
The course gives an introduction to human and comparative neuroanatomy, molecular, cellular and systems neuroscience. The goal of this Advanced Course in Neurobiology is to provide students with a broader knowledge in several important areas of neuroscience.

ECTS

To become proficient in reading scientific literature, to understand how to look at publications, to understand them and to be able to put them in context. The course also trains the skills needed for the presentation of scientific contributions and the ability to put things into a broader context.

Lecture notes

Material in the form of hand-outs will be distributed.

Literature

Lecture notes and references therein.

Energy Conversion and Transport in Biosystems

Title

Energy Conversion and Transport in Biosystems

Number

151-0255-00L

Type

Z Dr

ECTS

4 credits

Hours

2V+1U

Lecturers

D. Pouliakos, A. Ferrari

Abstract

Theory and application of thermodynamics and energy conversion in biological systems with focus on the cellular level.

Objective

Theory and application of energy conversion at the cellular level. Understanding of the basic features governing solutes transport in the principal systems of the human cell. Connection of characteristics and patterns from other fields of engineering to biofluidics. Heat and mass transport processes in the cell, generation of forces, work and relation to biomedical technologies.

Content

Mass transfer models for the transport of chemical species in the human cell. Organization and function of the cell membrane and of the cell cytoskeleton. The role of molecular motors in cellular force generation and their function in cell migration. Description of the functionality of these systems and of analytical experimental and computational techniques for understanding of their operation.

Introduction to cell metabolism, cellular energy transport and cellular thermodynamics.

Abstract

The course gives an introduction to human and comparative neuroanatomy, molecular, cellular and systems neuroscience.

Objective

The course gives an introduction to human and comparative neuroanatomy, molecular, cellular and systems neuroscience.

Content

1) Human Neuroanatomy I&II
2) Comparative Neuroanatomy
3) Development I&II
4) Membran and Action Potential
5) Synaptic Transmission & Plasticity I&II
6) Glia and Blood-Brain-Barrier
7) Somatosensory and Motor System
8) Visual System
9) Auditory System
10) Circuits underlying Emotion
11) Modeling of Neural Circuits

Prerequisites / notice

For doctoral students of the Neuroscience Center Zurich (ZNZ).

Abstract

Advanced Course in Neurobiology is to provide students with a broader knowledge in several important areas of neuroscience. The course consists of four parts: Part I deals with various topics in developmental neurobiology. Part II is devoted to aspects of signal transduction. Part III focuses on synaptic transmission. Part IV gives deeper insights into systems neuroscience.

Objective

This credit point course is designed for doctoral students who have successfully completed the Introductory Course in Neuroscience at the Neuroscience Center Zürich. The goal is to provide students with a broader and deeper knowledge in several important areas of neuroscience.

Abstract

Information for UZH students:

Enrolment to this course unit only possible at ETH. No enrolment to module BIO608 at UZH.

Please mind the ETH enrolment deadlines for UZH students: https://www.ethz.ch/en/studies/non-degree-courses/special-students/university-of-zurich.html

Abstract

A course dedicated to the reading and discussion of the relevant literature. The actual list of theme papers will be proposed anew for every year. Students then choose a topic and prepare themselves for a general discussion with their colleagues and peers. In the process, current and controversial topics will be discussed and studied.

Objective

To become proficient in reading scientific literature, to understand how to look at publications, to understand them and to be able to put them in context. The course also trains the skills needed for the presentation of scientific contributions and the ability to put things into a broader context. Training in how to participate in a scientific discussion, how to make an argument and how to listen to arguments of others.

Content

All topics focus on themes from ecology and evolution, notably so on studies on adaptation of organisms, their evolutionary history, or on questions of current methodology.

Lecture notes

none
The actual content, i.e. the theme papers, will be determined and allocated to the participants at the start of the course each year. Take place at Uni Irchel. Please refer to notes on board or ask secretary Mrs. Rita Jenny (Rita.Jenny@env.ethz.ch).

Requirements: Knowledge of ecology and evolution, e.g., lectures during basic and advanced study period. The course is meant for advanced and PhD students.

**151-0927-00L**

**Rate-Controlled Separations in Fine Chemistry**

**Z Dr**

4 credits

3G

M. Mazzotti

**Abstract**

The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life science processes in particular, fine chemistry and biotechnology.

**Objective**

The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life science processes in particular, fine chemistry and biotechnology.

**Content**

The class covers separation techniques that are central in the purification and downstream processing of chemicals and biopharmaceuticals. Examples from both areas illustrate the utility of the methods: 1) Liquid-liquid extraction; 2) Adsorption and chromatography; 3) Membrane processes; 4) Crystallization and precipitation.

**Lecture notes**

Handouts during the class

**Literature**

Recommendations for text books will be covered in the class

**Prerequisites / notice**

Requirements: Thermal separation Processes I (151-0926-00) and Modelling and mathematical methods in process and chemical engineering (151-0940-00)

**401-0649-00L**

**Applied Statistical Regression**

**Z Dr**

5 credits

2V+1U

M. Dettling

**Abstract**

This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning “good practice” that can be applied in every student’s own projects and daily work life. A special focus will be laid in the use of the statistical software package R for regression analysis.

**Objective**

The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.

**Content**

The course starts with the basics of linear modeling, and then proceeds to parameter estimation, tests, confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, multicolinearity problems and model interpretation, as well as general modeling strategies.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

**Lecture notes**

A script will be available.

**Literature**

Faraway (2005): Linear Models with R

Faraway (2006): Extending the Linear Model with R

Draper & Smith (1998): Applied Regression Analysis

Fox (2008): Applied Regression Analysis and GLMs

Montgomery et al. (2006): Introduction to Linear Regression Analysis

The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-3622-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

**Structural Biology**

**Z Dr**

1 credit

1K

R. Glockshuber, F. Allain, N. Ban, K. Locher, E. Weber-Ban, G. Wider, K. Wuthrich

**Abstract**

The course consists of a series of research seminars on Structural Biology, Biochemistry and Biophysics, given by both scientists of the National Center of Competence in Research (NCCR) in Structural Biology and external speakers. Information on the individual seminars is provided on the following websites:

[http://www.structuralbiology.uzh.ch/educo02.asp](http://www.structuralbiology.uzh.ch/educo02.asp)

**Objective**

The goal of this course is to provide doctoral and postdoctoral students with a broad overview on the most recent developments in biochemistry, structural biology and biophysics.

**851-0180-00L**

**Research Ethics**

**Z Dr**

2 credits

2G

G. Achermann

**Abstract**

Particularly suitable for students of D-BIOL, D-CHAB, D-HEST

This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

**Objective**

The main goal of this course is to enhance the student’s ability to:

- recognize and identify ethical issues and conflicts.
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry
---------------------------------------
Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)
----------------------------------------------------------
Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 Rs (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks;
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access;
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

376-1581-00L Cancer: Fundamentals, Origin and Therapy Z 2 credits 2G H. Nägeli

Abstract
Students are able to describe selected chemicals, biological and molecular processes that occur in cells spontaneously or after physical or chemical exposure and resulting in a tumor. They are able to list important cancer-inducing agents and explain the respective mechanism of action. They have knowledge of significant risk factors for cancer diseases. They are confronted with the basics of toxicology and they can explain the principle of the most common therapeutic strategies.

The lecture deals with problems of tumor epidemiology (causes, mortality, incidence). Cancer is delineated as a multi-step process. Classes of chemical compounds that induce cancer are discussed as well as the reactive metabolites that may be built from. Covalent binding to DNA is discussed and different types of mutations resulting thereof. A selection of proto-oncogenes and tumor suppressor genes is presented. Their function will be discussed as well as the changes which are found in these genes in tumor cells, starting from single nucleotide exchanges up to large deletions.

The reason for genetic predisposition to cancer will be discussed as well as cancer relevant aspects of cell cycle regulation. Phenomenons like angiogenesis and metastasis are presented as well as the mechanisms that protect the genome from mutagenic damage. Further subjects address old and new strategies of cancer treatment. Personalised cancer treatment.

Several research groups from University, ETH, Basel, Bern and Konstanz meet once per month and present their work related to DNA-repair, recombination, replication, and cancer.

Discussion of current topics in DNA-repair, recombination, replication, and cancer.

About 5 talks on applied statistics.

Interaction seminar. Student-mediated presentations, guests and discussions on current themes in ecology, evolutionary and population sciences, will present a paper from the recent literature.

Advice for analyzing data by statistical methods.

Seminars by invited speakers covering selected microbiology themes.

Scientific talks and discussions on changing subjects.

Students and researchers can get advice for analyzing scientific data, often for a thesis.

Current Immunological Research in Zürich

Handouts with reproductions of all presented transparencies will be distributed.

No script

About 5 talks on applied statistics.

See how statistical methods are applied in practice.

This is a course, but a consulting service. There are no exams nor credit points will be awarded. The current program can be found on the web:

Course language is English or German and may depend on the speaker.

Students and researchers can get advice for analyzing scientific data, often for a thesis.

Abstract
This monthly meeting is a platform for Zurich-based immunology research groups to present and discuss their ongoing research projects. At each meeting three PhD students or Postdocs from the participating research groups present an ongoing research project in a 30 min seminar followed by a plenary discussion.

Objective
The aim of this monthly meeting is to provide further education for master and doctoral students as well as Postdocs in diverse topics of immunology and to give an insight in the related research. Furthermore, this platform fosters the establishment of science- and technology-based interactions between the participating research groups.

Content
Presentation and discussion of current research projects carried out by various immunology-oriented research groups in Zurich.

529-1011-00L Organic Chemistry I (for students of Biology, Pharmaceutical Sci., and Health Sci. & Tech.)

Abstract
Fundamentals of Organic Chemistry: molecular structure. Bonding and functional groups; nomenclature; resonance and aromaticity; stereochemistry; conformation; bond strength; organic acids and bases; basic reaction thermodynamics and kinetics; reactive intermediates: carbanions, carbenium ions and radicals.

Objective
Understanding the basic concepts and definitions of organic chemistry. Knowledge of the functional groups and classes of compounds that are important in biological systems. Foundations for the understanding of the relationship between structure and reactivity.

Content

Lecture notes
Printed lecture notes are available. Exercises, answer keys and other handouts can be downloaded from the Moodle course "Organic Chemistry I" of the current semester (https://moodle-app2.let.ethz.ch).

Literature
Lecture notes are available.

As a supplement, a selection of textbooks is proposed during the course.

Prerequisites / notice
This course consists of plenary lectures (2 h per week) and problem-solving lessons (2 h per week, groups of ca. 25 people). In addition, online exercises are available in the e-learning environment Moodle (Course OC I).

First Year Laboratory Courses

Number Title Type ECTS Hours Lecturers
535-1001-00L Laboratory Course General Chemistry (for Biology and Pharmacy) O 6 credits 8P R. O. Kusner, K.H. Altmann, J. Hall, D. Neri, G. Schneider, M. D. Wörle

Abstract
Introduction to the practical work in a chemistry laboratory. The most important manipulations and techniques are treated, as well as the most fundamental chemical reaction types.

Objective
- Knowledge of the basic chemical laboratory methods.
- Basic knowledge of the scientific approach in experimenting.
- Observation and interpretation of real-world chemical processes.
- Keeping of a reliable laboratory journal.

Content
- Simple chemical methods and calculations.
- Separation techniques.
- Physical measurements: mass, volume, pH, optical spectra.
- Ionic solids (salts).
- Acid/base chemistry, buffers.
- Redox reactions.
- Metal complexes.
- Titration methods and quantitative spectrometry.
- Introduction to qualitative analysis.

Lecture notes
Course manual in German (is handed out to the students at the begin of the lessons). Language: German, English upon request.

PDF files available at http://acac1.ethz.ch/praktikum/docs.html

Literature

is a suitable textbook.

Prerequisites / notice
This practical course causes costs for materials and chemicals. The costs are charged to the students at the end of semester.

2. Year, 3. Semester

Core Courses

Number Title Type ECTS Hours Lecturers
529-1023-00L Physical Chemistry I (for Biology and Pharmacy) O 3 credits 2V+1U R. Riek, H. P. Lüthi

Abstract

Objective
Understanding the fundamental thermodynamical properties of chemical and biological systems.

Content

Lecture notes
in process, will be distributed at the beginning of the first lecture

Literature

Prerequisites / notice
Prerequisite: mathematics I-II, functions of multiple variables, partial derivatives.

551-0103-00L Fundamentals of Biology II: Cell Biology O 5 credits 5V E. Hafen, U. Kutay, J. Matos, G. Schertler, U. Suter, S. Werner
Abstract
The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

Objective
The goal of this course is to provide students with a wide general understanding cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

Content
The focus is animal cells and the development of multicellular organisms with a clear emphasis on the molecular basis of cellular structures and phenomena. The topics include biological membranes, the cytoskeleton, protein sorting, energy metabolism, cell cycle and division, viruses, extracellular matrix, cell signaling, embryonic development and cancer research.

Lecture notes
The lectures are presented in the Powerpoint format. These are available on the WEB for ETH students over the nethz (Moodle). Some lectures are available on the ETH WEB site in a live format (Livestream) at the above WEB site.

Literature

Prerequisites / notice
Some of the lectures are given in the English language. Certain sections of the text-book must be studied by self-instruction.

551-1323-00L Fundamentals of Biology II: Biochemistry and Molecular Biology

Abstract
The course provides an introduction to Biochemistry / Molecular Biology with some emphasis on chemical and biophysical aspects.

Objective
Topics include the structure-function relationship of proteins / nucleic acids, protein folding, enzymatic catalysis, cellular pathways involved in bioenergetics and the biosynthesis and breakdown of amino acids, glycols, nucleotides, fatty acids and phospholipids, and steroids. There will also be a discussion of DNA replication and repair, transcription, and translation.

Lecture notes
none

Literature
mandatory: "Biochemistry".
Autoren: Berg/Tymoczko/Stryer, 8th edition, Palgrave Macmillian, International edition (the English version will be preordered at the Polybuchhandlung)

Prerequisites / notice
Some of the lectures are given in the English language.

551-1003-00L Methods of Biological Analysis

Abstract
Principles of the most important separation techniques and the interpretation of molecular spectra.

Objective
The course will teach the basis and typical applications of methods for the analysis of nucleic acid sequences, mass spectrometric analysis of proteins and proteomes and advanced light and fluorescent imaging methods.

529-1042-00
Knowledge of the necessary basics and the possibilities of application of the relevant spectroscopical and separation methods in analytical chemistry.

551-1003-00
Knowledge of the theoretical basis of the methods for nucleic acid sequence analysis, mass spectrometry based protein and proteome analysis and advanced light and fluorescent imaging methods, and an understanding of the application of these principles in experimental biology.

Content

551-1003-00
The course will consist of lectures covering the theoretical and technical base of the respective analytical methods and of exercises where typical applications of the methods in modern experimental biology are discussed.

529-1042-00
A comprehensive script is available in the HCI-Shop. A summary of the part "Spektroskopie" defines the relevant material for the exam.

529-1042-00
Materials supporting the lectures and exercises will be made available via Moodle.

Objective
Introduction to Evolutionary Biology

This course introduces important questions about the evolutionary processes involved in the generation and maintenance of biological diversity across all domains of life and how evolutionary science investigates these questions.

Topics likely to be covered in this course include research methods in evolutionary biology, adaptation, evolution of sex, evolutionary transitions, human evolution, infectious disease evolution, life history evolution, macroevolution, mechanisms of evolution, phylogenetic analysis, population dynamics, population genetics, social evolution, speciation and types of selection.

Prerequisites / notice

The exam is based on lecture and textbook.

Systematic Biology: Zoology

Lecture: The lecture provides an overview of animal diversity. Using key selected groups, phylogenetic, morphological and ecological aspects are addressed. Two priority topics are the arthropods and the vertebrates (including vertebrate fauna of Switzerland).

Objective

Lecture: The systematic classification of animals and the characteristics of the most important animal groups, basic animal body plans.

Practical: Knowledge of selected animal groups and their characteristics (supplementing the lecture) and of the basic methods.

Content

Lecture: Body plans, characteristics, diversity and phylogenetic position of the main groups of Protozoa, Invertebrates, and Vertebrates, with a special focus on Arthropods and Vertebrates (including vertebrate fauna of Switzerland).

Practical: Macroscopic and microscopic study of selected Protozoa, Invertebrates (especially insects) and Vertebrates: morphology and anatomy; behaviour, mainly locomotion, feeding, and reproduction.

Literature

A script for the course will be sold in the lecture, and additional material will be handed out (particularly in the practical).

No further literature required, the script contains suggestions for further reading.

Mycology

The lecture gives an introduction into the field of Mycology. It provides an overview of the fungal lifestyle (hyphal growth/mycelium; reproductive cycles; ecology of the fungi; use of fungi).

Objective

Understanding the fungal life form.

Knowledge of the specific properties of the fungal cell
Knowledge of the different reproductive cycles in all fungal phyla
Knowledge of the different nutritional modes of the fungi; correlation with habitat and ecology
Knowledge of the application of fungi in food production and biotechnology

Content

The lecture focuses on the following topics within Mycology:

1. The fungal lifestyle
2. Differentiation processes of the Mycelium
3. Reproductive cycles and systematic grouping of fungi
4. Ecology of the fungi
5. Use of fungi

Literature

none; hand-outs will be prepared before the lectures

Practical Course Organic Chemistry (for Students of Biology and Pharmaceutical Sciences)  ■

Latest online enrolment is 10 days before the beginning of the semester.

Abstract

Analytical part: basic operations for the separation of mixtures of organic compounds (recrystallization, distillation, extraction, chromatography)

Synthetic part (main part): at least 8 synthetic steps (one- or two-step syntheses).
Objective
Learn the basic techniques for the preparation and purification of organic compounds.
Learn to take accurate notes of the experiments.
Deepen the understanding of reaction mechanisms.

Content
Analytical part: basic operations for the separation of mixtures of organic compounds (recrystallization, distillation, extraction, chromatography).
Synthetic part (main part): at least 8 synthetic steps (one- or two-step syntheses).
Introduction to database searches (Reaxys, SciFinder).

Lecture notes
Documentation will be handed out at the beginning of the course.

Literature
1) P. Wörfel, M. Bitzer, U. Claus, H. Felber, M. Hübel, B. Vollenweider, Laborpraxis (Bd. 1: Einführung, allgemeine Methoden; Bd. 2: Messmethoden; Bd. 3: Trennungsmethoden; Bd. 4: Analytische Methoden), Birkhäuser Verlag.

Prerequisites / notice
The basic reactions of Organic Chemistry and their mechanisms should be known (cf. course 529-1012-00L Organic Chemistry II for Students of Biology, Pharmaceutical Sciences, and Health Sci. and Tech.).

As a prerequisite, all participants need to pass the "Safety Test HCI Chemie V2 English" (see https://moodle-app2.let.ethz.ch). A printout of the certificate generated by the system needs to be presented to the teaching assistants prior to starting lab work.

Abstract
The concept course 'Evolutionary Genetics' consists of two lectures that jointly provide an introduction to the fields of population and quantitative genetics (emphasis on basic concepts) and ecological genetics (more emphasis on evolutionary and ecological processes of adaptation and speciation).

Objective
The aim of the course is to provide students with a solid introduction to the fields of population genetics, quantitative genetics, and ecological genetics. The concepts and research methods developed in these fields have undergone profound transformations; they are of fundamental importance in our understanding of evolutionary processes, both past and present. Students should gain an appreciation for the concepts, methods and explanatory power of evolutionary genetics.

Content
Population genetics - Types and sources of genetic variation; randomly mating populations and the Hardy-Weinberg equilibrium; effects of inbreeding, natural selection; random genetic drift and effective population size; gene flow and hierarchical population structure; molecular population genetics: neutral theory of molecular evolution and basics of coalescent theory.
Quantitative genetics - Continuous variation; measurement of quant. characters; genes, environments and their interactions; measuring their influence; response to selection; inbreeding and crossingbreeding, effects on fitness; Fisher’s fundamental theorem.
Ecological Genetics - Concepts and methods for the study of genetic variation and its role in adaptation, reproductive isolation, hybridization and speciation.

D-BIOL BSc students are obliged to take part I and part II (next semester) as a two-semester course.

Prerequisites / notice
There will be 5 optional extra sessions for the population genetics part (following lectures 2-6) for computer simulations, designed to help understand the course material.
Abstract

Biophysics of protein folding, membrane proteins and biophysics of membranes, enzymatic catalysis, catalytic RNA and RNAi, current topics in protein biophysics and structural biology.

Objective

Understanding of structure-function relationships in proteins and in protein folding, detailed understanding of biophysics and physical methods as well as modern methods for protein purification and microanalytics.

Lecture notes

Scripts on the individual topics can be found under http://www.mol.biol.ethz.ch/teaching.

Basics:
- Creighton, T.E., Proteins, Freeman, (1993)
- Fersht, A., Enzyme, Structure and Mechanism in Protein Science (1999), Freeman.
- Berg, Tymoczko, Stryer: Biochemistry (5th edition), Freeman (2001);

Current topics: References will be given during the lectures.

551-0309-00L  Concepts in Modern Genetics

Objective

The course focuses on the concepts of classical and modern genetics and genomics.

Content

The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; mechanisms of regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

551-0311-00L  Molecular Life of Plants

Objective

The new course "Molecular Life of Plants" reflects the rapid advances that are occurring in the field of experimental plant biology as well as the changing interests of students being trained in this discipline. Contemporary plant biology courses emphasize a traditional approach to experimental plant biology by discussing discrete topics that are removed from the context of the plant life cycle. The course will take an integrative approach that focuses on developmental concepts. Whereas traditional plant physiology courses were based on research carried out on intact plants or plant organs and were often based on phenomenological observations, current research in plant biology emphasizes work at the cellular, subcellular and molecular levels.

Content

The goal of "Molecular Life of Plants" is to train students in integrative approaches to understand the function of plants in a developmental context. While the course focuses on plants, the training integrative approaches will also be useful for other organisms.

551-0313-00L  Microbiology (Part I)

Abstract

Advanced lecture class providing a broad overview on bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

Objective

This concept class will be based on common concepts and introduce to the enormous diversity among bacteria and archaea. It will cover the current research on bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

Content

Advanced class covering the state of the research in bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

551-0319-00L  Cellular Biochemistry (Part I)

Abstract

Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

Objective

The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterization of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry. The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

Data: 06.01.2019 12:56  Autumn Semester 2016  Page 219 of 1571
Introduction into structural and functional aspects of the immune system. Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

Mainly based on recent original literature, a detailed list will be distributed during the first lecture.

Abstract
Structure, function, and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

Objective
Structure, function, and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

Abstract
Study the nervous system (NS) as a whole. The NS is the coordination and control center of the body. The NS's functions are ensured by the structure and function of the neuron and the interaction of neurons to form neural networks. Biological, chemical, and computational approaches are required to elucidate the fundamental properties of the nervous system.

Objective
Study the nervous system (NS) as a whole. The NS is the coordination and control center of the body. The NS's functions are ensured by the structure and function of the neuron and the interaction of neurons to form neural networks. Biological, chemical, and computational approaches are required to elucidate the fundamental properties of the nervous system.

Content
The nervous system (NS); the adult NS, plasticity and regeneration, sensory systems, cognitive functions, learning and memory, molecular and cellular mechanisms, animal models, diseases of the NS.

Abstract

Abstract
Bioinformatics I will cover the following topics:
- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

Objective
Bioinformatics I will cover the following topics:
- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

Content
Bioinformatics I will cover the following topics:

- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation
Objectives:
- Overview of normal development, plasticity and regeneration of the nervous system based on molecular, cellular and biochemical approaches.
- Development: Early development of the nervous system, cellular level, nerve fiber growth, building of neuronal networks; biology of the adult nervous system; structural plasticity of the adult nervous system, regeneration and repair: networks and nerve fibers, regeneration, pathological loss of cells.

Lecture notes:
- Structure, Plasticity and Repair of the Nervous System (376-1305-01L): Lecture notes will be provided on Moodle https://moodle-app2.let.ethz.ch/course/view.php?id=694
- Password will be provided at the beginning of the lecture.

Literature:
- The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures.

| Content | Lectures will particularly focus on the contribution of biotechnology towards crop improvement, with examples from our own work on crops including rice and wheat. Following topics will be covered:
- Green biotechnology: status and prospects
- Plant genetic transformation (methods)
- Molecular characterization of transformed plants
- Introduction to selection marker systems (examples, antibiotic and herbicide resistance, phosphomannose-isomerase, marker-free systems, visible markers)
- Introduction to promoter types (example tissue specific promoters)
- Plant tissue culture techniques
- Crop improvement through biotechnology (examples from our work on rice, wheat and cassava)
- Gene mining from genetic resource collections
- A visit to the ETH greenhouse facilities at Eschikon will provide an opportunity to visualize and discuss different rice, wheat and cassava projects performed at the ETH Plant Biotechnology Lab. |
| Lecture notes | For the practical part, protocols will be distributed within the course and Lecture material will be made available. |
| Literature | Relevant literature information will be provided within the course. |

<td>Abstract</td>
<td>Students will use lists of genes obtained in real experiments and learn how to obtain gene-centered information from literature and databases. They will use tools for gene function prediction and visualization of protein-protein interaction networks. The work will lead to a more meaningful annotation of co-detected genes and generate a hypothesis about their functional relationship.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Many new biological analysis methods result in lists of genes or proteins related to biological structures, functions, or processes. The information available about the genes or proteins is often scattered in multiple databases and publications, making it difficult to extract and uncover common features or relationships among the biological molecules. In the course students will use lists of genes or proteins from ongoing experiments in the laboratory and learn how to find and assemble gene-centered information in the literature, different databases and with analysis tools. The training and research will lead to a better and more meaningful annotation of co-detected genes members and generate a hypothesis about their functional relationship. The work will be done exclusively using a computer. Students will work independently but with close supervision by experienced scientists. Daily discussions of the work will ensure progress. The computer work will be accompanied by lectures on theoretical and practical aspects of databases, gene networks and the project context of the gene lists that will be analyzed. Students will present their results and hypotheses at the end of the block course.

### 551-0347-00L Molecular Mechanisms of Cell Growth and Polarity

**Objective**
- During this Block-Course, the students will learn to
  1. describe and compare the principles and molecular mechanisms of cell polarity in fungi and animal cells,
  2. apply, evaluate and compare experimental strategies in the different model systems, and
  3. select the best model system to answer a particular question.

**Content**
- Students - in groups of 2 or max 3- will be integrated into a research project connected to the subject of the course, within one of the participating research groups.

**Lecture notes**
- There will be optional papers to be read before the course start. They serve as framework orientation for the practical parts of this block course and will be made accessible to you shortly before the course starts on the relevant Moodle site.

**Literature**
- Documentation and recommended literature (review articles) will be provided during the course.

### 551-1129-00L Understanding and Engineering Microbial Metabolism

**Objective**
- The course aims at introducing key principles of metabolic engineering and techniques applied in metabolism related research. The main focus of this block course is on practical work and will familiarize participants with complementary approaches, in particular genetic, biochemical and analytical techniques. Results will be presented by students in scientific presentations.

**Content**
- The course and will include topics such as pathway elucidation & engineering and related ongoing research projects in the lab.

**Lecture notes**
- None

**Literature**
- Will be provided at the beginning of the course.

### 551-0916-00L Learning and Teaching Biology

**Objective**
- Provides an overview on student's learning and shows ways to make the classroom experience more engaging and effective for students.

**Content**
- Students will learn to produce a research-based paper on a project they work on during the course.

**Lecture notes**
- None

**Literature**
- The course is not taught by a particular book, but recommended literature (review articles and selected primary literature) will be provided during the course.

See the introductory video to the course here: [http://youtu.be/GFUuNnCsdE](http://youtu.be/GFUuNnCsdE)
Introduction of the biological and ecological basics of fungi in forests. Focusing on mycorrhizal, saprobic, and pathogenic fungi and their functional relevance in the forest ecosystems. To get to know current methodological research approaches on the basis of selected examples with practical works in forest and lab as well as excursions and lectures.

Unterlagen zum Kurs werden abgegeben.

101-0359-00L Plant Biochemistry

W 6 credits 7G S. C. Zeeman, B. Pfister

In this block course, students actively participate in ongoing research projects on plant metabolism and are tutored individually by doctoral students and postdocs. In a lecture series, the theoretical background for the projects and their interrelationship is provided, and in a seminar series, students will present their projects as well as discuss topical recent publications.

Number of participants limited to 10.

This block course, students actively participate in ongoing research projects on plant metabolism and are tutored individually by doctoral students and postdocs.

Participation in the following research projects will be possible: Photosynthetic metabolism; how is photo-assimilated carbon allocated to sustain plant growth? Chloroplast biology: how is chloroplast function integrated with that to the whole cell? Starch biosynthesis and degradation; how are complex, semi-crystalline starch granules made from simple sugars, and once made, how are they degraded again to release the stored carbohydrate? Regulation of metabolism through protein-protein interaction; how and why do proteins involved in starch metabolism interact with each other to form multi-subunit enzymes and multi-enzyme complexes? Sugar sensing; How does a plant know how much sugar it has, and how does this influence development.

Number of participants limited to 10.

This course will consider the pathogenetic landscape of cancer, explore how abnormalities of cellular information management cause cancer and demonstrate how the integrated application of modern omics technologies, mouse cancer models and human pathology provides a foundation for developing individualized cancer therapeutics. The course combines practical work with discussions and presentations.

Insights into and overview about the genetic alterations that underlie different cancer types, the complex cancer cell circuitries governing tumor development, modern approaches used in contemporary basic and translational cancer research and sophisticated strategies to control individual cancers and combat drug resistance.

Number of participants limited to 10.

The course will introduce the students to the key concepts in membrane biology and will allow them to be involved in laboratory projects related to that broad field. The course will consist of lectures, literature discussions, and practical laboratory work in small groups. Results of the practical projects will be presented during the poster session at the end of the course.

Students will design and perform experiments, evaluate experimental results, analyze the current scientific literature and understand the relevance of their work in the context of the current state of the membrane biology field.

Number of participants limited to 21.

The aim of the course is to expose the students to a wide range of modern research areas encompassed by the field of membrane biology.

We will be provided for each of the projects at the beginning of the course.

The recommended literature, including reviews and primary research articles, will be provided during the course.

The course will be taught in English. All general lectures will be held at ETH Hoenggerberg; special lectures will be organized by individual participating groups. Students will be divided into small groups to carry out experiments at ETH or at the Paul Scherrer Institute. Travel to the Paul Scherrer Institute will be organized by car rental or public transportation.
Experiments within ongoing phytopathological research projects
Macro- and microscopic diagnostic of plant diseases

Theoretical courses:
Fundamentals of phytopathology, eg. interaction between plants and plant-pathogenic microorganisms, morphology and lifecycles of plant-pathogenic fungi, evolution of plant-pathogenic fungi, biological control of plant diseases

Lecture notes
529-0739-01L Biological Chemistry B: New Enzymes from Directed Evolution Experiments
Number of participants limited to 12.
Abstract
During the block course in the fall semester, we will carry out biological-chemical enzyme evolution experiments using molecular genetic mutation technologies and in vivo selection in recombinant bacterial strains. By working in parallel, teams of 2 participants each will generate a variety of different variants of a chorismate mutase. Individual enzyme catalysts will be purified and subsequently characterized using several different spectroscopic methods. The detailed chemical-physical analyses include determination of the enzymes’ kinetic parameters, their molecular mass, and the integrity of the protein structure. The results obtained from the individual evolution experiments will be compared and discussed at the end of the class in a final seminar. We expect that during this lab course we will not only generate novel enzymes, but also gain new mechanistic insights into the investigated catalyst.
Objective
All technologies used for the experiments will be explained to the students in theory and in practice with the goal that they will be able to independently apply them for the course project and in future research endeavors. After the course, an individual report about the results obtained has to be prepared.
Content
The class deals with a specifically designed and genuine research project. We intend to carry out biological-chemical enzyme evolution experiments using molecular genetic mutation technologies and in vivo selection in recombinant bacterial strains. By working in parallel, teams of 2 participants each will generate a variety of different variants of a chorismate mutase. Individual enzyme catalysts will be purified and subsequently characterized using several different spectroscopic methods. The detailed chemical-physical analyses include determination of the enzymes’ kinetic parameters, their molecular mass, and the integrity of the protein structure. The results obtained from the individual evolution experiments will be compared and discussed at the end of the class in a final seminar. We expect that during this lab course we will not only generate novel enzymes, but also gain new mechanistic insights into the investigated catalyst.
Lecture notes
A script will be distributed to the participants on the first day of the course.
Literature
General literature to “Directed Evolution” and chorismate mutases, e.g.:

Prerequisites / notice
This laboratory course will involve experiments that require a tight schedule and (sometimes) long (!) working days. The maximum number of participants for the laboratory class is limited, but surplus applicants may contact P. Kast directly to have their names added to a waiting list. A valid registration is considered a commitment for attendance of the entire course, as involved material orders and experimental preparations are necessary and, once the class has started, the flow of the experiments must not be interrupted by individual absences. In case of an emergency, please immediately notify P. Kast. For more information, see also http://www.protein.ethz.ch/kast/praktikum.html

551-0336-00L Methods in Cellular Biochemistry
Number of participants limited to 20.
Abstract
Lectures will be complemented by practical projects in small groups, lectures and literature discussions. The course concludes with the presentation of results at a poster session.
Objective
Students will learn to design, carry out and assess experiments using current biochemical and cell biological strategies to analyze cellular functions in a wide range of model systems. In particular they will learn novel imaging techniques along with biochemical approaches to understand fundamental cellular pathways. Furthermore, they will learn to assess strengths and limitations of the different approaches and be able to discuss their validity for the analysis of cellular functions.
Literature
Documentation and recommended literature (review articles and selected primary literature) will be provided during the course.

Prerequisites / notice
This course will be taught in English.

551-1515-00L Insulin Signaling
Number of participants limited to 15.
Abstract
Introduction to the physiological and biochemical action of insulin signaling and its role in the fasted/feeding response and in obesity and diabetes.
Objective
The students will obtain an overview about the current topics of research in insulin signaling and how it impacts on growth, metabolism and cell differentiation. They will learn to design experiments and use techniques necessary to analyze different aspects of insulin signaling, including physiological actions in whole animals as well as in tissue culture. Through lectures and literature seminars, they will learn about the open questions of insulin signaling research and discuss approaches to address these questions experimentally.

In practical lab projects the students will perform physiological in vivo studies as well as biochemical experiments. Finally, they will learn how to present and discuss their data. Student assessment is a graded semester performance based on individual performance in the laboratory, a written exam and the lab data presentation.

752-4020-00L Experimental Food Microbiology for Biologists
Number of participants limited to 20.
Prerequisites: It is recommended to attend the course Lebensmittel-Mikrobiologie (752-4005-00L) as a preparation.
Abstract
Teaching of basic experimental knowledge for detection and identification of microorganisms in food. Practical experiments were accompanied by theoretical introductions. Students become acquainted with classical and state-of-the-art molecular techniques for the rapid detection of food borne pathogens and experiments in dependence on current research topics of the Laboratory of Food Microbiology.
Objective
Introduction of methods and techniques of food microbiology
Content
Teaching of basic experimental knowledge for detection and identification of foodborne pathogens by applying state-of-the-art techniques as well as modern molecular techniques for the rapid identification of relevant foodborne pathogens.
Lecture notes
Handouts were provided at the start of the course
Literature
- Krämer: “Lebensmittel-Mikrobiologie“ (Ulmer; UTB)
- Süßmuth et al.: ”Mikrobiologisch-Biochemisches Praktikum“ (Thieme)
Prerequisites / notice
During the course we will work with the food-borne pathogen Listeria monocytogenes. Listeria monocytogenes represents a particular threat to pregnant women. Due to biosafety reasons participation is not allowed in case of pregnancy.

551-0363-00L Complex Carbohydrates - Biosynthesis, Structure & Function
Number of participants limited to minimum 2 and maximum 8.

Abstract
In vitro & in vivo experiments will introduce current research on the biosynthesis, structure & function of protein-bound glycans in different pro- and eukaryotic microorganisms.

Objective
Participants are familiar with the biosynthesis, structure and function of N-glycans in microorganisms and with the methods for their analysis.

Content
* Topics: biosynthesis of asparagine-linked glycans in pro- and eukaryotes; structure of glycans in different organisms; methods to analyse the structure of glycans; function of glycans in protein quality control
* Introductory lectures
* Seminar with presentation and discussion of recent publications
* Experiments that exemplify the current research done in the group

551-0117-00L Plant Volatiles in Plant Insect Interactions
Number of participants limited to 16.

Abstract
During the course students will become familiar with methods for the collection and analysis of plant-derived volatile organic compounds and explore the role of these compounds in mediating plant-insect interactions.

Objective
The course will cover six main topics that will be connected throughout the experimental phase:
1) Plant volatile biosynthesis and classification
2) Insect olfactory physiology
3) Volatile-mediated plant-herbivore interactions
4) Volatile-mediated multi-trophic interactions
5) Manipulation of plant volatile emission by vector- borne disease agents
6) Methods for volatile collection and analysis

The lab practical will be performed in a system consisting of the cabbage butterfly Pieris brassicae, its host plant Brassica oleracea (Brussels sprouts), and the parasitoid wasp Cotesia glomerata (natural enemy of P. brassicae).

Students will collect volatiles from herbivore-damaged and undamaged plants and learn how to identify and quantify these compounds through gas chromatography coupled with mass spectrometry and flame ionization detection (GG-MS-FID). Afterwards, they will be able to compare volatile emissions from herbivore-damaged and undamaged plants and identify important volatile compounds associated with herbivory. Finally, students will evaluate the effect of herbivore-induced volatile compounds on the behavior of the herbivore (P. brassicae) and its natural enemy (C. glomerata), using different behavioral assays, including Y-tube olfactometers and wind tunnels.

Lecture notes
No script

Literature
The recommended literature, including reviews and primary research articles, will be provided during the course.

551-0361-00L Biology of Bryophytes and Ferns
Number of participants limited to 20.

Abstract
Bryophytes: Basic knowledge on the morphology, ecology, biogeography and endangerment of bryophytes; knowledge of common species; skills in the determination of bryophytes; field trip.

Ferns: basic knowledge on the life cycle, evolution and ecology of ferns; identification of Swiss ferns; field trips.

Objective
Bryophytes: Basic knowledge on the morphology, ecology, biogeography and endangerment of bryophytes; knowledge of common species; skills in the determination of bryophytes.

Ferns: Basic knowledge on the life cycle, evolution and ecology of ferns; identification of Swiss ferns.

Content
Bryophytes: Systematics of hornworts, liverworts and mosses and special themes such as ecology, biogeography, diversity and endangerment of bryophytes; one full-day field trip.

Ferns: Life cycle; evolutionary groups of ferns and fern allies; breeding systems, micro- and macroevolution; ecology; full-day and half-day field trips.

Lecture notes
Hand-outs are available.

Literature

Prerequisites / notice
Students have to present a poster on a special theme.

Grade according to poster presentation and contributions during the course.

Requirements: First and second year courses in Botany and Evolution.

551-1309-00L RNA-Biology
Number of participants limited to 20.

Abstract
Introduction to the diversity of current RNA-research at all levels from structural biology to systems biology using mainly model systems like S. cerevisiae (yeast), mammalian cells.

Objective
The students will obtain an overview about the diversity of current RNA-research. They will learn to design experiments and use techniques necessary to analyze different aspects of RNA biology. Through lectures and literature seminars, they will learn about the burning questions of RNA research and discuss approaches to address these questions experimentally. In practical lab projects the students will work in one of the participating laboratories. Finally, they will learn how to present and discuss their data in an appropriate manner. Student assessment is a graded semester performance based on individual performance in the laboratory, the written exam and the poster presentation.

Literature
Documentation and recommended literature will be provided at the beginning and during the course.

Prerequisites / notice
The course will be taught in English.

551-1511-00L Parallels Between Tissue Repair and Cancer
Number of participants limited to 15.

Abstract
This course aims at the understanding of the cellular and molecular mechanisms underlying tissue repair processes in response to different insults. The focus will be on repair of the skin and the liver. In addition, we will highlight the parallels and differences between tissue repair and cancer.
This course aims at the understanding of the cellular and molecular mechanisms underlying tissue repair processes in response to different insults. The focus will be on repair of the skin and the liver. In addition, we will highlight the parallels and differences between tissue repair and cancer. Experimental approaches include biochemical studies, molecular and cellular studies using cultured cell lines and primary cells, as well as analysis of murine and human tissues. The course combines practical work with lectures, discussions, project preparations and presentations.

### Abstract

All organisms have to control their growth in accordance with environmental conditions. This course focuses on the analysis of growth regulation in the model organisms yeast and Drosophila. The participants will perform experiments in small teams to study insulin/TOR signaling as a key regulator of cellular growth. A particular focus will be the discussion of current research.

### Objective

The aims of the block course are that participants

- (I) understand the function and evolution of insulin/TOR signaling
- (II) learn how genetic approaches in different organisms contribute to the understanding of human diseases such as cancer
- (III) will get familiarized with reading and discussing research articles
- (IV) get a first exposure to current research.

The block course consists of

- (I) experiments:
  - Teams of two students each will join research labs to work on current projects focusing on growth regulation in both single-cell eukaryotes (yeast) and multicellular animals (Drosophila). The students will present their projects and results to their colleagues.
  - (II) lectures on growth regulation in yeast and Drosophila.
  - (III) journal clubs to discuss recent literature.
- (II) lectures on growth regulation in yeast and Drosophila.
- (III) journal clubs to discuss recent literature.
- (IV) get a first exposure to current research.

### Lecture Notes

Lecture handouts

Original research articles will be discussed during the course.

### Literature

Original research articles will be discussed during the course.

---

### Block Courses in the 1st Half of the Semester

**From 20.09.2016 13:00 hr to 4.11.2016 17:00 Uhr.**

<table>

**Abstract**

This course combines Limnology (the study of inland waters in its broad sense) with ecological and evolutionary concepts. It deals with rivers, groundwater and lakes. This course contains a lecture part, an experimental part, two determination courses (aquatic invertebrates and algae) as well as excursions.

**Objective**

During this course you will get an overview of the world's typical continental aquatic ecosystems. After this course you will be able to understand how aquatic organisms have adapted to their habitat, and how the interactions (e.g. food web) between organisms work. During the experimental part of this course you will learn the principles of doing research to observe interrelations in aquatic ecosystems. You will measure and interpret biological and physical data (e.g. during experiments, field work) and present the collected knowledge.

After this course you will know the most important aquatic species groups (macroinvertebrates, microinvertebrates and cryptogames) in Switzerland and the most important identification traits.

**Content**

The course contains a lecture part, an experimental part, two determination courses (aquatic invertebrates and algae) and field excursions.

**Lecture:**

The lecture part covers ecology and evolution of aquatic organisms in lentic and lotic waters. Topics include: Adaptations, distribution patterns, biotic interactions, and conceptual paradigms in freshwater ecosystems. Important aspects regarding ecosystem metabolism and habitat properties of freshwaters. Applied case studies and experiments testing ecological and evolutionary processes in freshwaters.

**Practical:**

The practical part includes excursions to Greifensee, to the river Sense (natural river system) and to the river Töss (groundwater). Additionally, you will perform in small groups an independent experiment in a research group at Eawag.

The taxonomic part will cover macroinvertebrates (e.g. Crustacean, aquatic insects), microinvertebrates and algae. The goal is to get to know the most common aquatic taxa in Switzerland, to identify them with commonly used identification literature, and to get an idea how these organisms are used in research and practice. (language: German, translation of the most important things during the course possible)

### Lecture Notes

Course notes and power point presentations provided during the course.

### Prerequisites / notice

The maximal participating number of biology students is 14.
Students actively participate in ongoing research projects on the analysis of human T and B cell response to pathogens and vaccines. They will be tutored in small groups by doctoral students and postdocs. In a lecture series, the theoretical background for the projects will be provided and the students will have the opportunity to present their projects and discuss recent publications.

To learn current methodologies in human immunology through experimental work in the lab. To learn current concepts through lectures and discussion of original papers. Requirement for obtaining the credit points: oral presentation of the research project in a ppt format.

Students will carry out defined research projects related to the current research topics of the groups of Prof. Glockshuber and Prof. Weber-Ban. The topics include mechanistic studies on the assembly of adhesive pili from pathogenic bacteria, disulfide bond formation in the bacterial periplasm, ATP-dependent chaperone-protease complexes and formation of amyloid deposits in Alzheimer's disease.

The students will be tutored in small groups by doctoral students and postdocs. In a lecture series, the theoretical background for the projects will be provided and the students will have the opportunity to present their projects and discuss recent publications.

The course should enable the students to understand and apply biophysical methods, in particular kinetic and spectroscopic methods, to unravel the mechanism of complex reactions of biological macromolecules and assemblies in a quantitative manner.

The course will consist of a series of lectures, assay assignments, project development and discussion workshops, and 2 and a half week of lab work with different mammalian cell systems embedded in real life research projects. At the end of the course students will take an exam consisting of questions on the topic of the lectures and workshops. It is expected that students will be able to apply the knowledge to concrete problems.

Biology Teaching Diploma

The programme "Teaching Diploma, Two Subjects in One-Step Procedure" will not be offered anymore since Autumn Semester 2010. Therefore new matriculations are no longer possible. The courses offered below are valid only for students who have registered before.

Detailed information on the programme at: www.didaktischeausbildung.ethz.ch

▶ Biology as First Subject

▶▶ Educational Science

Course offerings in the category Educational Science are listed under "Programme: Educational Science for Teaching Diploma and TC".

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Abstract
This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

Objective
- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

Prerequisites / notice
Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Abstract
The focus will be on the book "Intelligenz: Grosse Unterschiede und ihre Folgen" by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

Objective
- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

Number of participants limited to 30.

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Abstract
Literature from the learning sciences is critically discussed with a focus on research methods. At the first meeting, working groups will be assembled and meetings with those will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

Objective
- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

<table>

Number of participants limited to 20.

The successful completion of both course no. 851-0240-00L "Menschliches Lernen (EW 1)" and course no. 851-0238-01L "Unterstützung und Diagnose von Wissenswerbsprozessen (EW 3)" is a necessary prerequisite for this course.

Abstract
In teams of two, participants in this seminar conduct their own research project. Each team is advised by one of the researchers serving as lecturers in this course. Basic conceptual and methodological issues are the topic of a series of plenary meetings; however, the major part of the work is done in small-group meetings with the advising researcher, and in self-directed research projects.

Objective
The course is targeted at advanced students who have taken an interest in gathering practical research experience in the field of Learning & Instruction. In teams of two, students conduct their own research projects (planning, conducting, analyzing, interpreting, and presenting research); thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students’ independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction)

Learning goals include:
- Participants can illustrate and explain basic methods and concepts for research in the fields of Learning and Instruction, e.g. with the help of practical examples.
- Participants can generate testable research questions for a topic relevant in the fields of Learning and Instruction.
- Participants can design and conduct a study that is relevant for answering their research question.
- Participants can summarize and evaluate the main results from a study in the field of learning and instruction, with regard to the research question being asked.

see Educational Science Teaching Diploma

▶▶ Subject Didactics in Biology
In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Prerequisites / notice

Beginn nach Absprache jederzeit möglich, jedoch erst nach Abschluss der Fachdidaktik I und II und nach der Absolvierung allfälliger fachwissenschaftlicher Voraussetzungen.

Die Arbeit sollte vor Beginn des Unterrichtspraktikums abgeschlossen werden.

Allfällige fachwissenschaftliche Auflagen müssen alle erfüllt sein, bevor mit der Mentorierten Arbeit begonnen werden kann.
Students are able to assess in their subject the importance of teaching topics from different angles. They learn and master the teaching practice in 50 lessons: 30 are taught by the students, and the students sit in on 20 lessons. The teaching practice lasts 4-6 weeks. It gives students the opportunity to implement the contents of their specialist-subject, educational science and subject-didactics training in the classroom. Students also conduct work assignments in parallel to their teaching practice.

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics in their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They acquire the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

During the introductory teaching practice, the students sit in on five lessons given by the teacher responsible for their teaching practice, and they also receive assignments. An overview of the lessons taught, the topics and the subjects and the students’ experience of the teaching practice is to be prepared.

On the basis of a specified topic, the candidate shows that they are in a position to analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.
- They learn to assess pupils’ work.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter and didactic skills they have acquired in the course of their training.

- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.
- They learn to assess pupils’ work.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

This is a supplement to the Teaching Internship required to obtain in the corresponding subject. It is aimed at enlarging the already acquired teaching experience. Students observe 10 lessons and teach 15 lessons independently.

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics in their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They acquire the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.

Simultaneous enrolment in "Examination Lesson I Biology" (551-0969-01L) is compulsory.

Abstract
In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter-based and didactic skills they have acquired in the course of their training.

Objective
On the basis of a specified topic, the candidate shows that they are in a position
- to develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle
- to analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

Abstract
Students conduct a series of "classical" biological school experiments and therefore gain practice and experience in this area.

Objective
Implementation of Subject Didactics I and II with the focus on conducting biological experiments in schools. This includes finding, testing and further developing suitable protocols for different subject areas of school biology. Working out how to didactically embed the experiments in lessons.

Content
Students can choose from off the cuff, 12 school experiments (which they have tested themselves), from the different subject areas, and conduct these correctly in technical terms. They can incorporate these experiments in their tuition in a didactically meaningful manner.

Comments:
By contrast to the Subject Specialisation 1 and 2 course units, these are "basic tests" and do not involve the implementation of current research topics. The students' compilations are available in a data archive.

Objective
After successfully completing the module, students should be in a position:
- to call up more in-depth specialist knowledge of biology, covering a wide range of topics, and to impart this to others,
- to develop biological concepts and principles, as well as the way they fit together,
- to analyse controversial topics and to give factual explanations for these,
- to conduct more in-depth work on a research topic and to compile a tuition unit based on this topic
- to prepare tuition units involving complex learning matter at a high specialist level which are suitably tailored to the recipients, and to teach these in a manner conducive to learning.

Content
Demanding biological topics are dealt with under consideration of the specific needs of persons involved in teaching. The module comprises the parts:

1) Lecture (Tues. 08.00-09.45 hrs)
2) Colloquium (every second Tues. 10.15-12.00 hrs., begins on first lecture day)
3) Seminar with presentation (every second Tues. 10.15-12.00 hrs., begins in second lecture week)
4) Semester thesis in a research group (7 weeks)

Lecture notes
Unterlagen für den Unterricht werden online mit Hilfe der e-learning Platform OLAT abgegeben.

Literature
Literatur und Literaturhinweise werden mit der e-learning Platform OLAT abgegeben.

Prerequisites / notice
Der Teil biologische Experimente findet im Rahmen von 7 Halbtagen statt.

Abstract
Specialist aspects of biology are covered from the angle of imparting these to pupils, their historical development, and their significance for the subject, the individual and society.

Objective
After successfully completing the module, students should be in a position:
- to develop biological concepts and principles, as well as the way they fit together,
- to analyse controversial topics and to give factual explanations for these,
- to conduct more in-depth work on a research topic and to compile a tuition unit based on this topic
- to prepare tuition units involving complex learning matter at a high specialist level which are suitably tailored to the recipients, and to teach these in a manner conducive to learning.

4) Semester thesis in a research group (7 weeks)

Lecture notes
Unterlagen für den Unterricht werden online mit Hilfe der e-learning Platform OLAT abgegeben.

Literature
Literatur und Literaturhinweise werden mit der e-learning Platform OLAT abgegeben.

Prerequisites / notice
This Course lasts for two semesters. It can be started in autumn or in spring. Booking is only required once.

Performance Assessment:
Performance is assessed during the course of the entire modul, with a final test. Active participation in the colloquia and group seminars is required. The thesis report and an oral presentation have to be completed.

The Specialized Biology Course with an Educational Focus (12 CP) can be acknowledged, in agreement with the advisor of the respective elective major, as one of the two obligatory research projects (each 15 CP). In such a case, additional 3 CP must be obtained in another course.

In case of overbooking of the course, students enrolled in the Teaching Diploma in Biology will have priority for registration.

The course is organized jointly with the University of Zurich (Fachbereich Biologie) and is held at the Life Science Zurich Learning Center of the ETH Zurich and the University of Zurich.

Abstract
Specialised Courses in the Respective Subject with an Educational Focus in Biology ONLY for students upgrading TO to Teaching Diploma.

Objective
Specialized aspects of biology are dealt with under the viewpoint of their presentation, their historical development, their significance for the field, the individual and society.

The goal is to promote the ability to understand biological concepts, principles and their interrelationships and to communicate specialist knowledge to various groups of recipients in an understandable manner.
Demanding biological topics are dealt with under consideration of the special needs of persons involved in teaching. The module:

1) Lecture (Tues. 08.00-09.45 hrs)
2) Colloquium (every second Tues. 10.15-12.00 hrs., begins on first lecture day)
3) Seminar with presentation (every second Tues. 10.15-12.00 hrs., begins in second lecture week)
4) Semester thesis in a research group (3.5 weeks)

Lecture notes: None.

Literature: Specific references will be made available for the individual projects.

Prerequisites / notice: The program of this course represents one half (6 CP) of that of the Specialized Biology Course with an Educational Focus (551-0963-00, 12 CP).

Compulsory Elective Courses

Further course offerings from the category Educational Science are listed under "Programme: Educational Science for Teaching Diploma and TC".

| 851-0180-00L | Research Ethics        | W    | 2 credits | 2G | G. Achermann  | This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences. | The main goal of this course is to enhance the student's ability to:  
- recognize and identify ethical issues and conflicts.  
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.  

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.  

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises. |
Content

I. Ethics & the Process of Ethical Inquiry

---------------------------------------
Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

----------------------------------------------------------
Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 Rs (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

701-0015-00L Seminar on Transdisciplinary Research for Sustainable Development

W 2 credits 2S C. E. Pohl, M. Stauffacher

Abstract
The seminar is designed for students and researchers (MA, PhD, PostDoc) who use inter- and transdisciplinary elements in their projects. It addresses the challenges of this research: How to integrate disciplines? How (and in what role) to include societal actors? How to bring results to fruition? We discuss these questions based on case studies and theories and on the participant's projects.

Objective
The participants understand the specific challenges of inter- and transdisciplinary research in general and in the context of sustainable development in particular. They know methods and concepts to address these challenges and apply them to their research projects.
Sustainability Assessment

The course addresses environmental policies, focusing on new steering approaches, which are generally summarized as environmental governance. The course also provides students with tools to analyze environmental policy processes and assesses the key features of environmental governance by examining various practical environmental policy examples.

Objective

To understand how an environmental problem may (not) become a policy and explain political processes, using basic concepts and techniques from political science.

To analyze the evolution as well as the key elements of environmental governance.

To be able to identify the main challenges and opportunities for environmental governance and to critically discuss them with reference to various practical policy examples.

Content

Improvements in environmental quality and sustainable management of natural resources cannot be achieved through technical solutions alone. The quality of the environment and the achievement of sustainable development strongly depend on human behavior and specifically the human uses of nature. To influence human behavior, we rely on public policies and other societal rules, which aim to steer the way humans use natural resources and their effects on the environment. Such steering can take place through government intervention alone. However, this often also involves governance, which includes the interplay between governmental and non-governmental actors, the use of diverse tools such as emission standards or financial incentives to steer actors' behavior and can occur at the local, regional, national or international level.

In this course, we will address both the practical aspects of as well as the scientific debate on environmental governance. The course gives future environmental experts a strong basis to position themselves in the governance debate, which does not preclude government but rather involves a spectrum from government to governance.

Key questions that this course seeks to answer: What are the core characteristics of environmental challenges from a policy perspective? What are key elements of 'environmental governance' and how legitimate and effective are these approaches in addressing persistent environmental challenges?

Prerequisites / notice

We recommend that students have (a) three-years BSc education of a (technical) university; (b) successfully completed Bachelor introductory course to environmental policy (Entwicklungen nationaler Umweltpolitik (or equivalent)) and (c) familiarity with key issues in environmental policy and some fundamental knowledge of one social science or humanities discipline (political science, economics, sociology, history, psychology, philosophy).

Literature

A detailed course schedule will be made available at the beginning of the semester.

Selected scientific articles & book chapters

Learn: important empirical methods for the analysis and assessment of local / regional sustainability issues.

Understand and reflect on:
- the challenges of trade-offs between the different goals of sustainable development;
- and the respective impacts on individual and societal decision-making.

Course

The course is structured as follows:
- Overview of rationale, objectives, concepts and origins of sustainable development;
- Importance and application of sustainability in science, politics, society, and economy;
- Sustainable (local / regional) development in different national / international contexts;
- Analysis and evaluation methods of sustainable development with a focus on social justice;
- Trade-offs in selected examples.

Lecture notes

Handouts.

</tbody>
</table>

Abstract
- Basic conditions for tuition (MAR - recognition of Matura certificates - curricula, standards), selection of topics and reduction of the complexity of topics.
- Application of teaching methods and techniques from educational science in biology classes.
- Planning and preparation of lessons.

Objective
- Students can discuss and put into practice in their teaching work the conditions and objectives set out in the regulations governing the school-leaving examination (Matura), the framework curriculum and the conditions and objectives specified by their school.
- They are in a position to select learning objectives and formulate these on the basis of the target level model. They can plan and prepare lessons and can also develop appropriate learning assignments.
- Students can reconstruct specialist contents in didactic terms and develop teaching modules suitable for the different levels from these on the basis of the subject structure and learner requirements.
- They can reduce the complexity of subject-based specialist contents and present them in such a way that they are comprehensible and meaningful for learners.
- They can select appropriate media for their work (e.g. school books) and use these. They can employ appropriate experiments.
- The students can use different forms of examination for monitoring performance.
- Students are in a position to implement and discuss the concepts of biology teaching and learning on the basis of specific topics covered in school biology.

Content

Lecture notes
Wird laufend in der Vorlesung abgegeben.

Prerequisites / notice
- Studierende müssen LE zusammen mit dem Einführungspraktikum - LE 551-0968-00L - belegen.

551-0961-00L Mentored Work Subject Didactics Biology A (Mentored Work Subject Didactics in Biology for Teaching Diploma, Teaching Diploma Biology as Minor Subject. The Subject Didactics as well as possible branch-specific requirements must be fulfilled prior to commencing the mentored paper.)

Abstract
In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

Objective
The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Content
Themenwahl nach Vereinbarung.

Abstract
Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.

Objective
- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils' work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Abstract
Genetics, fossil remains, comparative anatomy and behavioral research prove the affiliation of humans to primates. This mammalian order represents variations of a single theme.

Objective
Upon successfully completing of the module the students can:
- interpret the main features of primates and especially of fossil hominids in the evolutionary and functional context;
- explain the genetic, phenetic and cultural diversity of modern human populations as the result of evolutionary processes;
- recognize similarities and differences in the behavior and the cognitive lines from humans and animals, in particular monkeys;
- explain why cultural evolution occurs only in humans;
- discuss the question "What are human beings?" from an evolutionary biological perspective.

Abstract
Basic knowledge of the anatomy and physiology of tissues, of the embryonal and postnatal development, of the basic terminology of pathology, the neuro-muscular system, the cardiovascular system and the respiratory system.

Objective
Basic knowledge of human anatomy and physiology and basics of clinical pathophysiology.
Content

Short overview of human anatomy, physiology and general pathology.

Anatomy and Physiology I (fall term):
Basics of cytology, histology, embryology, general pathology; nervous system, muscles, cardiovascular system, respiratory system

Anatomy and Physiology II (spring term):
digestive system, kidney and urinary tract, endocrine system, skin, thermoregulation, sensory organs, male and female reproductive system, pregnancy and child birth.

ECTS

European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
The focus is on the potential to assess strategies and tactics of pest management, taking into account the demands from the economy, the environment and the society. Significant agricultural approaches will be explained using practical examples, including prevention using natural resources, surveillance and forecasting, resistance management, as well as product registration, incl. ecotoxicology.

Objective

The students gain a good understanding of fundamental aspects of pest management in agroecosystems. They will have the ability to assess options for action in view of requirements from the economy, the ecology and the society. Further, they will learn to perform searches on relevant issues in pest management, and to critically evaluate case studies.

Content

- Growth: what determines the production of a plant?
- Nutrients: consumption or recycling: opposite strategies and feedbacks on soils;
- Clonality: collaboration and division of labour in plants;
- Plasticity: benefits and costs of plant adaptation;
- Flowering and pollination: how expensive is sex?
- Seed types, dispersal, seed banks and germination: strategies and trade-offs in the persistence of plant populations;
- Development and structure of plant populations;
- Stress, disturbance and competition as drivers of different plant strategies;
- Herbivory: plant-animal feedbacks and functioning of grazing ecosystems
- Fire: impacts on plants, vegetation and ecosystems.
- Plant functional types and rules in the assembly of plant communities.

Handouts and further reading will be available electronically at the beginning of the semester.

- General knowledge of plant biology
- Basic knowledge of plant systematics
- General ecological concepts
### 701-1441-00L Alpine Ecology and Environments

**Objective**
Knowledge of alpine environments worldwide and their ecology

**Content**
The online course is subdivided into
- 5 lessons on abiotic factors: geology, soils and their forming processes, climate, and disturbance factors
- 12 lessons on plants: diversity, patterns and processes, treeslines, water & nutrients, carbon cycle, atmospheric influences, sexual and clonal reproduction, and one specific lesson on aquatic environments
- 5 lessons on animals: habitats and adaptations, origin of species, food ecology and impact of domestic livestock
- 3 lessons on landscape evolution: quaternary paleoenvironments, methods like radiocarbon dating, pollen records, dendrochronology, stable isotopes, and historical data
- 1 lesson on global change

Students can also follow a virtual walk through alpine areas where context-based information on alpine environments can be accessed. Moreover, all major alpine areas of the world can be selected on a map and then informative pictures of those landscapes and faunistic and fluvial inhabitants will be shown.

**Prerequisites / notice**
Online exercises and tests allow to test the learned matter.

**Literature**
Selected required readings (peer reviewed literature, selected book chapters). Optional recommended readings with additional information.

**Objective**
Students prepare for the seminar by working through particular lessons. Each student has to present some special aspect of one lesson.

**Course language**
English

---

### 751-5121-00L Insect Ecology

**Objective**
This is an introductory course in insect ecology. Students will learn about the ways in which insects interact with and adapt to their abiotic & biotic environments and their roles in diverse ecosystems. The course will entail lectures, outside readings, and critical analysis of contemporary literature.

**Lecture notes**
Provided to students through ILIAS

**Literature**
Selected required readings (peer reviewed literature, selected book chapters). Optional recommended readings with additional information.

---

### 401-0625-01L Applied Analysis of Variance and Experimental Design

**Objective**
Participants will be able to plan and analyze efficient experiments in the fields of natural sciences. They will gain practical experience by using the software R.

**Content**

**Literature**

**Prerequisites / notice**
The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software R, for which an introduction will be held.

---

### 401-0649-00L Applied Statistical Regression

**Objective**
The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.

**Content**
The course starts with the basics of linear modeling, and then proceeds to parameter estimation, tests, confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, multicollinearity problems and model interpretation, as well as general modeling strategies.

**Prerequisites / notice**
The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

**Literature**
A script will be available.

**Prerequisites**
In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L “Applied Statistical Regression” and 401-3622-00L “Regression” are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

---

### 701-0301-00L Applied Systems Ecology

**Objective**
This course provides the ecological systems' knowledge needed to question applied solutions to current environmental issues. Our central aim is to balance participants' respect for complexity with a sense of possibility by providing examples from the vast solution space offered by ecological systems, such as e.g. green infrastructure to manage water.
At the end of the course...
...you know how to structure your inquiry and how to proceed the analysis when faced with a complex environmental issue. You can formulate the relevant questions, find answers (supported by discussions, input from the lecturers and the literature), and you are able to present your conclusions clearly and cautiously.
...you understand the complexity of interactions and structures in ecosystems. You know how ecosystem processes, functions and services interact and feed back across multiple spatio-temporal scales (in general, plus in depth case examples).
...you understand that biodiversity and the interaction between organisms are an integral part of ecosystems. You are aware that the link between biodiversity and process/function/service is rarely fully understood. You know how to honestly deal with this lack of understanding and can nevertheless find, critically analyse and communicate solutions.
...you understand the importance of ecosystem services for society.
...you have an overview of the methods of ecosystem research and have a deeper insight into some of them, e.g. ecosystem observation, manipulation and modelling.
...you have reflected on ecology as a young discipline at the heart of significant applied questions.

This course provides the ecological systems' knowledge needed to question applied sustainability solutions. We will critically assess the complexity of current environmental issues, illustrating basic ecological concepts and principles. Our central aim is to balance participants' respect for complexity with a sense of possibility by providing examples from the vast solution space offered by ecological systems, such as e.g. green infrastructure to manage water.

The course is structured around four larger topical areas: (1) Integrated Water Management -- Green infrastructure (land management options) as an alternative to engineered solutions (e.g. large reservoirs) in flood and drought management; (2) Fire dynamics, the water cycle and biodiversity -- The surprising dynamics of species life cycles and populations in arid landscapes; (3) Rewilding, e.g. re-introducing apex predators (e.g. wolves), or large ungulates (e.g. bisons) in protected areas -- A nature conservation trend with counterintuitive effects; (4) Coupling of aquatic and terrestrial systems: carbon, nitrogen and phosphorus transfers of global importance on landscape scale.

The course provides the first part an introduction to the statistical software R for scientists. Topics covered are data generation and selection, graphical and basic statistical functions, creating simple functions, basic types of objects.

Part I of the course covers the following topics:
- What is R?
- R Basics: reading and writing data from/to files, creating vectors & matrices, selecting elements of dataframes, vectors and matrices, arithmetics;
- Types of data: numeric, character, logical and categorical data, missing values;
- Simple (statistical) functions: summary, mean, var, etc., simple statistical tests;
- Writing simple functions;
- Introduction to graphics: scatter-, boxplots and other high-level plotting functions, embellishing plots by title, axis labels, etc., adding elements (lines, points) to existing plots.

The course focuses on practical work at the computer. We will make use of the graphical user interface RStudio: www.rstudio.org

Note: This part builds on "Using R... (Part I)", but can be taken independently if the basics of R are already known.

Part II of the course builds on part I and covers the following additional topics:
- Elements of the R language: control structures (if, else, loops), lists, overview of R objects, attributes of R objects;
- More on R functions;
- Applying functions to elements of vectors, matrices and lists;
- Object oriented programming with R: classes and methods;
- Tayloring R: options;
- Extending basic R: packages.

The course focuses on practical work at the computer. We will make use of the graphical user interface RStudio: www.rstudio.org
Plant Pathology I will focus on pathogen-plant interactions, epidemiology, disease assessment, and disease development in agroecosystems. Themes will include: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems.

Objective

Students will understand: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems. Themes will include: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems. Topics under the first theme will include pathogen life cycles, disease cycles, and an overview of plant pathogenic nematodes, viruses, bacteria, and fungi. Topics under the second theme will include plant defense strategies, host range, passive and active defenses, and chemical and structural defenses. Topics under the third theme will include the disease triangle and cultural control strategies.

Lecture Topics and Tentative Schedule

Week 1 No Lecture: First day of autumn semester

Week 2 The nature of plant diseases, symbiosis, parasites, mutualism, biotrophs and necrotrophs, disease cycles and pathogen life cycles. Nemate attack strategies and types of damage.

Week 5 Symptoms and signs of fungal infection. Example fungal diseases: potato late blight, wheat stem rust, grape powdery mildew, wheat Septoria leaf blotch.

Week 6 Plant defense mechanisms, host range and non-host resistance. Passive structural and chemical defenses, preformed chemical defenses. Active structural defense, papillae, active chemical defense, hypersensitive response, pathogenesis-related (PR) proteins, phytoalexins and disease resistance.

Week 7 Pisatin and pisatin dimethylase. Local and systemic acquired resistance, signal molecules.

Week 8 Pathogen effects on food quality and safety.

Week 9 Epidemiology: historical epidemics, disease pyramid, environmental effects on epidemic development. Plant effects on development of epidemics, including resistance, physiology, density, uniformity.

Week 10 Disease assessment: incidence and severity measures, keys, diagrams, scales, measurement errors. Correlations between incidence and severity.

Week 11 Molecular detection and diagnosis of pathogens. Host indexing, serology, monoclonal and polyclonal antibodies. ELISA, PCR, rDNA and rep-PCR.

Week 12 Strategies for minimizing disease risks: principles of disease control and management.

Week 13 Disease control strategies: economic thresholds, physical control methods.

Week 14 Cultural control methods: avoidance, tillage practices, crop sanitation, fertilizers, crop rotation.

Lecture notes

Detailed lecture notes (~160 pages) will be available for purchase at the cost of reproduction at the start of the semester.
### 701-1419-00L Analysis of Ecological Data

**Objective**
Students will be able to:
- describe the aims and principles of important techniques for the analysis of ecological data
- choose appropriate techniques for given problems and types of data
- evaluate assumptions and limitations
- implement the analyses in R
- represent the relevant results in graphs, tables and text
- interpret and evaluate the results in ecological terms

**Content**
- Linear models for experimental and observational studies
- Model selection
- Introduction to likelihood inference and Bayesian statistics
- Analysis of counts and proportions (generalised linear models)
- Models for non-linear relationships
- Grouping and correlation structures (mixed models)
- Randomisation methods

**Lecture notes**
Lecture notes and additional reading will be available electronically a few days before the course.

**Literature**
Suggested books for additional reading (available electronically)

**Prerequisites / notice**
Time schedule
The course takes place over a period of nine days from Thursday 12.01 to Friday 20.01, with classes on 12, 13, 16, 17 and 18.01. and an exam in the morning of 20.01.

**Prerequisites**
- Basic statistical training (e.g. Mathematik IV in D-USYS): Data distributions, descriptive statistics, hypothesis testing, linear regression, analysis of variance
- Basic experience in data handling and data analysis in R

**Individual preparation**
Students without the required knowledge are asked to contact the lecturer before Christmas for support with individual preparation.

### 701-1471-00L Ecological Parasitology

**Objective**
1. Identify common macro parasites in aquatic organisms.
2. Understand ecological and evolutionary processes in host-parasite interactions.
3. Conduct parasitological research.

**Content**
- Lectures:
  1. Diversity and natural history of parasites (i.e. systematic groups and life-cycles).
  2. Adaptations of parasites (e.g. evolution of life-cycles, host manipulation).
  3. Ecology of host-parasite interactions (e.g. parasite communities, effects of environmental changes).
  4. Applied parasitology (e.g. aquaculture and fisheries).
  5. Human macro parasites (schistosomiasis, malaria).
- Practical exercises:
  1. Examination of parasites in fish (identification of species and description of parasite communities).
  2. Examination of parasites in molluscs (identification and examination of host exploitation strategies).
  3. Examination of parasites in amphipods (identification and examination of effects on hosts).

**Prerequisites / notice**
Enrollment is limited to Master students of the study programme Environmental Sciences majoring Ecology and Evolution and to Master students of the study programme Biology majoring Ecology and Evolution (Elective Compulsory Master Courses), time of enrolment is decisive.
It is possible to enroll until September 12. The registration will only be effective once confirmed.

**Abstract**
Course focuses on the ecology and evolution of macro parasites and their hosts. Through lectures and practical work, students learn about diversity and natural history of parasites, adaptations of parasites, ecology of host-parasite interactions, applied parasitology, and human macro parasites in the modern world.

**Literature**
- Analysis of counts and proportions (generalised linear models)
- Models for non-linear relationships
- Grouping and correlation structures (mixed models)
- Randomisation methods

**Prerequisites**
- Basic statistical training (e.g. Mathematik IV in D-USYS): Data distributions, descriptive statistics, hypothesis testing, linear regression, analysis of variance
- Basic experience in data handling and data analysis in R

**Individual preparation**
Students without the required knowledge are asked to contact the lecturer before Christmas for support with individual preparation.

### 701-1427-00L Experimental Evolution

**Objective**
Course objectives:
- i) become familiar with a diverse sample of experimental evolution literature,
- ii) gain understanding of the strengths and limitations of experimental evolution for addressing evolutionary questions relative to other forms of evolutionary analysis, and
- iii) gain the ability to effectively design and analyze evolution experiments that address fundamental or applied questions in evolutionary biology.
Experimental evolution is a powerful and increasingly prominent approach to investigating evolutionary processes. Students will analyze experimental evolution literature covering a diverse range of topics, species and types of analysis and will lead discussions of this literature. Students will develop a written project proposal for a novel evolution experiment (or a novel analysis of a published experiment) to address an unanswered question and will also deliver an oral presentation of the project proposal. Evaluation will be based on a combination of participation in and leadership of literature discussions, in-class exams, and oral and written presentations of the project proposal.

Prerequisites / notice
701-0245-00 Introduction to Evolutionary Biology (or equivalent).

## Elective Concept Courses

<table>
<thead>

<th>Title</th>
<th>Type</th>
<th>ECTS</th>
<th>Hours</th>
<th>Lecturers</th>
</tr>
</thead>
</table>

### Abstract
Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.

### Objective
Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.

### Content
Bioinformatics I will cover the following topics:
- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

### Abstract
Advanced lecture class providing a broad overview on bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

### Objective
This core concept class will be based on common concepts and introduce to the enormous diversity among bacteria and archaea. It will cover the current research on bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

### Content
Advanced class covering the state of the research in bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

### Lecture notes
Updated handouts will be provided during the class.

### Literature
Current literature references will be provided during the lectures.

### Prerequisites / notice
English
The lecture "Grundlagen der Biologie II: Mikrobiologie" is the basis for this advanced lecture.

### Abstract
Concepts of modern genetics and genomics, including principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

### Objective
This course focuses on the concepts of classical and modern genetics and genomics.

### Content
The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

### Lecture notes
Scripts and additional material will be provided during the semester.

### Prerequisites / notice
This course is a co-production of the University of Zurich and ETH Zurich, and will be taught in English. The course takes place on Monday afternoon at ETH Hoenggerberg, and on Tuesday morning at UZH Irchel.

### Abstract
Development of the nervous system (NS): the adult NS, plasticity and regeneration, sensory systems, cognitive functions, learning and memory, molecular and cellular mechanisms, animal models, diseases of the NS.

### Objective
Overview of normal development, plasticity and regeneration of the nervous system based on molecular, cellular and biochemical approaches.
Content Development: Early development of the nervous system, cellular level, nerve fiber growth, building of neuronal networks; biology of the adult nervous system; structural plasticity of the adult nervous system, regeneration and repair: networks and nerve fibers, regeneration, pathological loss of cells.

Lecture notes Structure, Plasticity and Repair of the Nervous System (376-1305-01L): Lecture notes will be provided on Moodle https://moodle- app2.let.ethz.ch/course/view.php?id=694
Password will be provided at the beginning of the lecture.

Literature Development of the Nervous System (376-1305-00L): Lecture notes will be provided on OLAT https://www.olat.uzh.ch/olat/dmz/

The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures.

### Elective Compulsory Concept Courses

<td>Abstract</td>
<td>Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division &amp; growth, and cell migration.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>The full-year course (551-0319-00 &amp; 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry. The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.</td>

Thirteen major areas of research have been selected, which cover the key concepts that have led to our current ideas of how the nervous system is built and functions. We will read both original papers and explore the conceptual links between them and discuss the sociology of science, which in this case, the pursuit of basic science questions over a century of research, led to an explosion in applications. We will also explore the personalities of the scientists and the context in which they made their seminal discoveries. Each week the course members will be given original papers to read for homework, they will have to write a short abstract for each paper. We will then meet weekly with the course leader (KACM) and an assistant for an hour-or-so long interactive seminar. An intimate knowledge of the papers will be assumed so that the discussion does not center simply on an explication of the contents of the papers. Assessment will in the form of a written exam in which the students will be given a paper and asked to write a short abstract of the contents.

Viral and non-Viral Vectors for Human Gene-Therapy - W

 computational tools to understand this information in detail are introduced.

 Attendees will apply these concepts to a number of applications yielding biological insight into:

<table>

<tbody>
<tr>
<td>The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments from the output of the sequencers. We then present methods to directly analyze this alignment (such as BLAST algorithm, GWAS approaches). Second, we introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Third, we employ evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phylodynamics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation &amp; extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades. Students will be trained in the algorithms and their application both on paper and in silico as part of the exercises.</td>
<td>Knowledge of important viral and non-viral vector systems. Knowledge of application in human diseases. Knowledge of limiting factors.</td>
</tr>

- Allergies
- Th1 and Th2 cells, regulatory T cells
- Thymus and T cell selection
- Antigen presentation and Major Histocompatibility (MHC) antigens
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histocompatibility (MHC) antigens
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

**Prerequisites / notice**

- The students should obtain an understanding of these processes, which are at work during gene expression.
- Basic knowledge of the mechanisms and the regulation of an immune response.

**Introduction into structural and functional aspects of the immune system.**

**Basic knowledge of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.**

**Abstract**

- RNA transcription, processing, alternative splicing, editing, export, and translation.
- Basic knowledge of cellular and molecular biology.
- Introduction into structural and functional aspects of the immune system.

**Objective**

- Introduction into structural and functional aspects of the immune system.
- Basic knowledge of the mechanisms and the regulation of an immune response.

**Content**

- Structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.
- Characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry.
- Students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.
- Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.
- Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular transport and targeting; vesicular trafficking and phagocytosis; post-translational modification of gene expression.

**Lecture notes**

- Scripts and additional material will be provided during the semester.

**Literature**

- Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

The course focuses on systems biological approaches to address important biochemical processes specific to bacteria and archaea that contribute to the widespread occurrence of prokaryotes. Applied aspects of microbiological chemistry will be pointed out as well as research fields of current scientific interest. Emphasis is on concepts of energy generation and assimilation.

**List of topics:**
- Eating sugars and letting them in
- Complex: (Ligno-)Cellulose and in demand for bioenergy
- Metabolic relevance: The microbial C1 cycle
- What are AMO and Anammox?
- 20 amino acids: the making of
- Extending the genetic code
- The 21st and 22nd amino acid
- Some exotic biochemistry: nucleotides, cofactors
- Ancient biochemistry? Iron-sulfur clusters, polymers
- Secondary metabolites: playground of evolution

**Lecture notes:**
A script will be provided during the course.

---

### 551-1105-00L Glycobiology

**Abstract:**
Structural principles, nomenclature and different classes of glycosylation. The different pathways of N- and O-linked protein glycosylation and glycolipid biosynthesis in prokaryotes and eukaryotes are discussed. Specific glycan binding proteins and their role in deciphering the glycan code are presented. The role of glycans in infectious diseases, antigen mimicry and autoimmunity are discussed.

**Objective:**
Detailed knowledge in 1) the different areas of prokaryotic and eukaryotic glycosbiology, in particular in the biosynthesis of glycoproteins and glycolipids, 2) the cellular machinery required for these pathways, 3) the principles of carbohydrate/protein interaction, 4) the function of lectins, 5) the role of glycans in infectious disease.

**Content:**
- Structure and linkages:
- Analytical approaches: N-linked protein glycosylation (ER, Golgi):
- Glycan-assisted protein folding and quality control:
- O-linked protein glycosylation:
- Glucosaminylglycans:
- Glycolipids:
- Prokaryotic glycosylation pathways:
- Lectins:
- Glycans and infectious disease

**Lecture notes:**
Handouts

**Literature:**
Introduction to Glycobiology; M.E. Taylor, K. Drickamer, Oxford University Press, 2003

**Prerequisites / notice:**
The course will be in English. It will include the preparation of short essays (marked) about defined topics in Glycobiology.

---

### 551-1117-00L Cutting Edge Topics: Immunology and Infection Biology

**Abstract:**
Weekly seminar about cutting edge topics in immunology and infection biology. Internationally renowned experts present their current research followed by an open discussion.

**Objective:**
Weekly seminar about cutting edge topics in immunology and infection biology. Internationally renowned experts present their current research followed by an open discussion.

**Content:**
- Immunology and infection biology.
- The specific topics are variable and depend each semester on the list of invited experts.

**Lecture notes:**
Script and original publications will be supplied during the course.

**Prerequisites / notice:**
The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

---

### 551-1153-00L Systems Biology of Metabolism

**Abstract:**
Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

**Objective:**
Develop a deeper understanding of how relevant biological problems can be solved, thereby providing advanced insights to key experimental and computational methods in systems biology.

**Content:**
The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics. For each particular problem studied, we will work out how the various methods work and what their capabilities/limits are. The problem areas range from microbial metabolism to cancer cell metabolism and from metabolic networks to regulation networks in populations and single cells. Key methods to be covered are various modeling approaches, metabolic flux analyses, metabolomics and other omics.

**Lecture notes:**
Script and original publications will be supplied during the course.

**Prerequisites / notice:**
The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

---

### 551-1171-00L Immuno logic: from Milestones to Current Topics

**Abstract:**
Milestones in Immunology: on old concepts and modern experiments

**Objective:**
The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptual framework and critical technological advances. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

**Content:**
Milestones and current topics of innate immunity, antigen presentation, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunity.

**Lecture notes:**
Original and review articles will be distributed by the lecturer.

**Literature:**
Literaturunterlagen werden vor Beginn des Kurses auf folgender website zugänglich sein: Moodle Course https://moodle-appep2.let.ethz.ch/course/view.php?id=1002

Abstract:
During this Masters level seminar style course, students will explore current research topics in cellular biochemistry focused on the structure, function and regulation of selected cell components, and the consequences of dysregulation for pathologies. Students will work with experts toward a critical analysis of cutting-edge research in the domain of cellular biochemistry, with emphasis on normal cellular processes and the consequences of their dysregulation. At the end of the course, students will be able to introduce, present, evaluate, critically discuss and write about recent scientific articles in the research area of cellular biochemistry. Guided by an expert in the field, students will engage in classical round-table style discussions of current literature with occasional frontal presentations. Students will alternate as discussion leaders throughout the semester, with the student leader responsible to briefly summarize key general knowledge and context of the assigned primary research paper. Together with the faculty expert, all students will participate in discussion of the primary paper, including the foundation of the biological question, specific questions addressed, key methods, key results, remaining gaps and research implications.

The literature will be provided during the course. The course will be taught in English.
Course description: Plant Pathology I will focus on pathogen-plant interactions, epidemiology, disease assessment, and disease development in agroecosystems. Themes will include: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems. Topics under the first theme will include pathogen life cycles, disease cycles, and an overview of plant pathogenic nematodes, viruses, bacteria, and fungi. Topics under the second theme will include plant defense strategies, host range, passive and active defenses, and chemical and structural defenses. Topics under the third theme will include the disease triangle and cultural control strategies.

Lecture Topics and Tentative Schedule

Week 1  No Lecture: First day of autumn semester

Week 2  The nature of plant diseases, symbiosis, parasites, mutualism, biotrophs and necrotrophs, disease cycles and pathogen life cycles. Nematode attack strategies and types of damage.

Week 5  Symptoms and signs of fungal infection. Example fungal diseases: potato late blight, wheat stem rust, grape powdery mildew, wheat Septoria leaf blotch.

Week 6  Plant defense mechanisms, host range and non-host resistance. Passive structural and chemical defenses, preformed chemical defenses. Active structural defense, papillae, active chemical defense, hypersensitive response, pathogenesis-related (PR) proteins, phytoalexins and disease resistance.

Week 7  Pisatin and pisatin demethylase. Local and systemic acquired resistance, signal molecules.

Week 8  Pathogen effects on food quality and safety.

Week 9  Epidemiology: historical epidemics, disease pyramid, environmental effects on epidemic development. Plant effects on development of epidemics, including resistance, physiology, density, uniformity.

Week 10  Disease assessment: incidence and severity measures, keys, diagrams, scales, measurement errors. Correlations between incidence and severity.

Week 11  Molecular detection and diagnosis of pathogens. Host indexing, serology, monoclonal and polyclonal antibodies. ELISA, PCR, rDNA and rep-PCR.

Week 12  Strategies for minimizing disease risks: principles of disease control and management.

Week 13  Disease control strategies: economic thresholds, physical control methods.

Week 14  Cultural control methods: avoidance, tillage practices, crop sanitation, fertilizers, crop rotation.

Lecture notes
Detailed lecture notes (~160 pages) will be available for purchase at the cost of reproduction at the start of the semester.

551-1145-00L  551-1145-00L
Viral and non-Viral Vectors for Human Gene-Therapy - from Pathogens to Safe Medical Applications

W 2 credits 3V  University lecturers

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
UZH Module Code: BIO708

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
Basic aspects of virology, the viral mechanisms for transfer of genetic material into cells, different vector-systems and target cells, animal models, specific applications for inborn diseases of the immune system and of metabolism, adverse effects, and new developments of vector systems will be taught.

Objective
Knowledge of important viral and non-viral vector systems.
Knowledge of application in human diseases.
Knowledge of limiting factors.

636-0017-00L  636-0017-00L
Computational Biology

W 4 credits 3G  T. Stadler, C. Magnus

The aim of the course is to provide up-to-date knowledge on how we can study biological processes using genetic sequencing data. Computational algorithms extracting biological information from genetic sequence data are discussed, and statistical tools to understand this information in detail are introduced.

Objective
Attendees will learn which information is contained in genetic sequencing data and how to extract information from them using computational tools. The main concepts introduced are:
- stochastic models in molecular evolution
- phylogenetic & phylodynamic inference
- maximum likelihood and Bayesian statistics

Attendees will apply these concepts to a number of applications yielding biological insight into:
- epidemiology
- pathogen evolution
- macroevolution of species

Content
The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments from the output of the sequencers. We then present methods to directly analyze this alignment (such as BLAST algorithm, GWAS approaches). Second, we introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Third, we employ evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phylogenetics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades. Students will be trained in the algorithms and their application both on paper and in silico as part of the exercises.
Lecture notes

The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:
- Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST

Prerequisites / notice

Basic knowledge in linear algebra, analysis, and statistics will be helpful. Some programming experience will be useful for the exercises, but is not required. Programming skills will not be tested in the examination.

751-4805-00L Recent Advances in Biocommunication

W 2 credits 2S C. De Moraes

Abstract

Students will gain insight into the role of sensory cues and signals in mediating interactions within and between species. There will be a primary, but not exclusive, focus on chemical signaling in interactions among plants, insects and microbes. The course will focus on the discussion of current literature addressing key conceptual questions and state-of-the-art research techniques and methods.

Objective

Students will gain insight into the role of sensory cues and signals in mediating interactions within and between species. There will be a primary, but not exclusive, focus on chemical signaling in interactions among plants, insects and microbes. The course will focus on the discussion of current literature addressing key conceptual questions and state-of-the-art research techniques and methods. Students will engage in discussion and critical analyses of relevant papers and present their evaluations in a seminar setting.

Abstract

This lecture is the first part of a one-year course. It offers insights into the fundamentals and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts and molds present in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

Objective

The lecture offers insights into the basics, practical consequences and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts, molds and protozoa in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms. The focus of this first part of the lecture will be on the organisms, but also on the factors which determine spoilage and foodborne disease.

Content

1. History of Food Microbiology
   1.1. Short synopsis of foodborne microorganisms
   1.2. Spoilage of Foods
   1.3. Foodborne Disease
   1.4. Food Preservation
   1.5. VIP's of Food Microbiology
2. Overview of Microorganisms in Foods
   2.1. Origin of foodborne Microorganisms
   2.2. Bacteria
   2.3. Yeasts
   2.4. Molds
3. Microbial Spoilage of Foods
   3.1. Intrinsic and Extrinsic Parameters
   3.2. Meats, Seafoods, Eggs
   3.3. Milk and Milk Products
   3.4. Vegetable and Fruit Products
   3.5. Miscellaneous (baked goods, nuts, spices, ready-to-eat products)
   3.6. Drinks and Canned Foods
4. Foodborne Disease
   4.1. Significance and Transmission of Foodborne pathogens
   4.2. Staphylococcus aureus
   4.3. Gram-positive Sporeformers (Bacillus & Clostridium)
   4.4. Listeria monocytogenes
   4.5. Salmonella, Shigella, Escherichia coli
   4.6. Vibrio, Yersinia, Campylobacter
   4.7. Brucella, Mycobacterium
   4.8. Parasites
   4.9. Viruses and Bacteriophages
   4.10. Mycotoxins
   4.11. Bioactive Amines
   4.12. Miscellaneous (Antibiotic-resistant Bacteria, Biofilms)

Lecture notes

Electronic copies of the presentation slides (PDF) and additional material will be made available for download.

Literature

Recommendations will be given in the first lecture.

551-1295-00L Introduction to Bioinformatics: Concepts and Applications

W 6 credits 4G W. Gruissem, K. Bärenfaller, A. Callisch, G. Capitani, J. Fütterer, M. Robinson, A. Wagner

Abstract

Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.
Objective

Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentations. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.

Content

Bioinformatics I will cover the following topics:

- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

Content

Abstract

The concept course 'Evolutionary Genetics' consists of two lectures that jointly provide an introduction to the fields of population and quantitative genetics (emphasis on basic concepts) and ecological genetics (more emphasis on evolutionary and ecological processes of adaptation and speciation).

Objective

The aim of the course is to provide students with a solid introduction to the fields of population genetics, quantitative genetics, and ecological genetics. The concepts and research methods developed in these fields have undergone profound transformations; they are of fundamental importance in our understanding of evolutionary processes, both past and present. Students should gain an appreciation for the concepts, methods and explanatory power of evolutionary genetics.

Content

Population genetics - Types and sources of genetic variation; randomly mating populations and the Hardy-Weinberg equilibrium; effects of inbreeding; natural selection; random genetic drift and effective population size; gene flow and hierarchical population structure; molecular population genetics: neutral theory of molecular evolution and basics of coalescent theory.

Quantitative genetics - Continuous variation; measurement of quant. characters; genes, environments and their interactions; measuring their influence; response to selection; inbreeding and crossbreeding, effects on fitness; Fisher's fundamental theorem.

Ecological Genetics - Concepts and methods for the study of genetic variation and its role in adaptation, reproductive isolation, hybridization and speciation.

Lecture notes

Handouts

Literature

Prerequisites / notice

There will be 5 optional extra sessions for the population genetics part (following lectures 2-6) for computer simulations, designed to help understand the course material.

Content

The advanced course introduces students to plants through a concept-based discussion of developmental processes that integrates physiology and biochemistry with genetics, molecular biology, and cell biology. The course follows the life of the plant, starting with the seed, progressing through germination to the seedling and mature plant, and ending with reproduction and senescence.

Objective

The new course "Molecular Life of Plants" reflects the rapid advances that are occurring in the field of experimental plant biology as well as the changing interests of students being trained in this discipline. Contemporary plant biology courses emphasize a traditional approach to experimental plant biology by discussing discrete topics that are removed from the context of the plant life cycle. The course will take an integrative approach that focuses on developmental concepts. Whereas traditional plant physiology courses were based on research carried out on intact plants or plant organs and were often based on phenomenological observations, current research in plant biology emphasizes work at the cellular, subcellular and molecular levels.

The goal of "Molecular Life of Plants" is to train students in integrative approaches to understand the function of plants in a developmental context. While the course focuses on plants, the training integrative approaches will also be useful for other organisms.

Content

The course "Molecular Life of Plants" will cover the following topics in a developmental context:

- Plant genome organization
- Seed anatomy
- Food reserves and mobilization
- Seedling emergence
- Heterotrophic to autotrophic growth
- Chlorophyll biosynthesis, photoreceptors
- Integration of metabolism
- Hormones
- Cell cycle
- Cell differentiation and expansion
- Environmental interactions
- Environmental interactions
- Nutrient interactions
- Flower development and fertilization
- Embryo and seed development
- Fruit development
- Senescence
Abstract
Biophysics of protein folding, membrane proteins and biophysics of membranes, enzymatic catalysis, catalytic RNA and RNAi, current topics in protein biophysics and structural biology.

Objective
Understanding of structure-function relationships in proteins and in protein folding, detailed understanding of biophysics and physical methods as well as modern methods for protein purification and microanalytics.

Lecture notes
Scripts on the individual topics can be found under http://www.mol.biol.ethz.ch/teaching.

Literature
Basics:
- Creighton, T.E., Proteins, Freeman, (1993)
- Fersht, A., Enzyme, Structure and Mechanism in Protein Science (1999), Freeman.

Current topics: References will be given during the lectures.

551-0309-00L Concepts in Modern Genetics W 6 credits 4V Y. Barral, D. Bopp, A. Hajnal, M. Stoffel, O. Voïnnet

Abstract
Concepts of modern genetics and genomics, including principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

Objective
This course focuses on the concepts of classical and modern genetics and genomics.

Content
The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

Lecture notes
Scripts and additional material will be provided during the semester.

551-0319-00L Celluar Biochemistry (Part I) W 3 credits 2V U. Kutay, R. I. Enchev, B. Kornmann, M. Peter, I. Zemp, further lecturers

Abstract
Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

Objective
The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry.

Content
Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.

Lecture notes
Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

Abstract
Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines.

Objective
Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines.

Content
Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines.

Lecture notes
No script

Literature
Mainly based on recent original literature, a detailed list will be distributed during the first lecture.

Elective Major: Cell Biology

Abstract
Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 255 of 1571
Introduction into structural and functional aspects of the immune system.

Objective
The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry.

The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

Content
Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.

Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular transport and targeting; vesicular trafficking and phagocytosis; post-transcriptional regulation of gene expression.

Lecture notes
Scripts and additional material will be provided during the semester. Please contact Dr. Alicia Smith for assistance with the learning materials. (alicia.smith@bc.biol.ethz.ch)

Literature
Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

Prerequisites / notice
To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English.
Bioinformatics I will cover the following topics:

- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

### 376-1305-10L Neurobiology

**Abstract**
Development of the nervous system (NS): the adult NS, plasticity and regeneration, sensory systems, cognitive functions, learning and memory, molecular and cellular mechanisms, animal models, diseases of the NS.

**Objective**
Overview of normal development, plasticity and regeneration of the nervous system based on molecular, cellular and biochemical approaches.

**Content**
Development: Early development of the nervous system, cellular level, nerve fiber growth, building of neuronal networks; biology of the adult nervous system; structural plasticity of the adult nervous system, regeneration and repair: networks and nerve fibers, regeneration, pathological loss of cells.

**Lecture notes**
Structure, Plasticity and Repair of the Nervous System (376-1305-01L): Lecture notes will be provided on Moodle https://moodle-app2.let.ethz.ch/course/view.php?id=694
Password will be provided at the beginning of the lecture.

**Literature**
The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures.

Important biochemical processes specific to bacteria and archaea will be presented that contribute to the widespread occurrence of prokaryotes. Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest. Emphasis is on concepts of energy generation and assimilation.

List of topics:
- Eating sugars and letting them in
- Challenging: Aromatics, xenobiotics, and oil
- Complex: (Ligno-)Cellulose and in demand for bioenergy
- Living on a diet and the anaerobic fermentation
- Of climate relevance: The microbial C1 cycle
- What are AMO and Anammox?
- 20 amino acids: the making of
- Extending the genetic code
- The 21st and 22nd amino acid
- Some exotic biochemistry: nucleotides, cofactors
- Ancient biochemistry? Iron-sulfur clusters, polymers
- Secondary metabolites: playground of evolution

A script will be provided during the course.

551-1105-00L Glycobiology

W 4 credits 2V M. Aebi, T. Hennet

Abstract
Structural principles, nomenclature and different classes of glycosylation. The different pathways of N- and O-linked protein glycosylation and glycolipid biosynthesis in prokaryotes and eukaryotes are discussed. Specific glycan binding proteins and their role in deciphering the glycan code are presented. The role of glycans in infectious diseases, antigen mimicry and autoimmunity are discussed.

Objective
Detailed knowledge in 1) the different areas of prokaryotic and eukaryotic glycobiology, in particular in the biosynthesis of glycoproteins and glycolipids, 2) the cellular machinery required for these pathways, 3) the principles of carbohydrate/protein interaction, 4) the function of lectins, 5) the role of glycans in infectious disease.

Content
Structural and linkages; analytical approaches; N-linked protein glycosylation (ER, Golgi); glycan-assisted protein folding and quality control; O-linked protein glycosylation; glucosaminoglycans; glycolipids; prokaryotic glycosylation pathways; lectins; glycans and infectious disease

Lecture notes
handouts

Literature

Prerequisites / notice
The course will be in English. It will include the preparation of short essays (marked) about defined topics in Glycobiology.

551-1117-00L Cutting Edge Topics: Immunology and Infection Biology

W 2 credits 1S A. Oexenius, B. Becher, C. Halin Winter, M. Kopf, S. R. Leibundgut, C. Münz, A. Trkola, M. van den Broek

Abstract
Weekly seminar about cutting edge topics in immunology and infection biology. Internationally renowned experts present their current research followed by an open discussion.

Objective
Weekly seminar about cutting edge topics in immunology and infection biology. Internationally renowned experts present their current research followed by an open discussion.

The aim of this course is to confront students with current research topics and with scientific presentation. The course offers the opportunity to gain in depth knowledge about diverse topics which are often only briefly touched in the concept courses and to engage in discussion with experts in the field.

Content
Immunology and infection biology.

The specific topics are variable and depend each semester on the list of invited experts.

551-1153-00L Systems Biology of Metabolism

Number of participants limited to 15.

W 4 credits 2V U. Sauer, N. Zamboni, M. Zampieri

Abstract
Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

Objective
Develop a deeper understanding of how relevant biological problems can be solved, thereby providing advanced insights to key experimental and computational methods in systems biology.

Content
The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics. For each particular problem studied, we will work out how the various methods work and what their capabilities/limits are. The problem areas range from microbial metabolism to cancer cell metabolism and from metabolic networks to regulation networks in populations and single cells. Key methods to be covered are various modeling approaches, metabolic flux analyses, metabolomics and other omics.

Lecture notes
A script will be provided during the course.

Literature
Secondary metabolites: playground of evolution

Ancient biochemistry? Iron-sulfur clusters, polymers

Some exotic biochemistry: nucleotides, cofactors

The 21st and 22nd amino acid

Extending the genetic code

What are AMO and Anammox?

Eating sugars and letting them in

Challenging: Aromatics, xenobiotics, and oil

Complex: (Ligno-)Cellulose and in demand for bioenergy

Living on a diet and the anaerobic fermentation

Of climate relevance: The microbial C1 cycle

What are AMO and Anammox?

20 amino acids: the making of

Extending the genetic code

Secondary metabolites: playground of evolution

Number of participants limited to 15.

551-1177-00L Immunology: from Milestones to Current Topics

W 4 credits 2S B. Ludewig, J. Kiwelow, M. Kopf, A. Oexenius, University lecturers

Abstract
Milestones in Immunology: on old concepts and modern experiments

Objective
The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptual framework and critical technological advances. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

Content
Milestones and current topics of innate immunity, antigen presentation, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunology.

Lecture notes
Original and review articles will be distributed by the lecturer.

Literature
Literaturunterlagen werden vor Beginn des Kurses auf folgender website zugänglich sein: Moodle Course https://moodle-app2.let.ethz.ch/course/view.php?id=1002

551-1303-00L Cellular Biochemistry of Health and Disease

Number of participants limited to 15.

W 4 credits 2S P. Picotti, Y. Barral, V. Korkhov, B. Kommann, R. Kroschewski, J. Matos, M. Peter, A. E. Smith, K. Weis

Abstract
During this Masters level seminar style course, students will explore current research topics in cellular biochemistry focused on the structure, function and regulation of selected cell components, and the consequences of dysregulation for pathologies.
Objective

Students will work with experts toward a critical analysis of cutting-edge research in the domain of cellular biochemistry, with emphasis on normal cellular processes and the consequences of their dysregulation. At the end of the course, students will be able to introduce, present, evaluate, critically discuss and write about recent scientific articles in the research area of cellular biochemistry.

Content

Guided by an expert in the field, students will engage in classical round-table style discussions of current literature with occasional frontal presentations. Students will alternate as discussion leaders throughout the semester, with the student leader responsible to briefly summarize key general knowledge and context of the assigned primary research paper. Together with the faculty expert, all students will participate in discussion of the primary paper, including the foundation of the biological question, specific questions addressed, key methods, key results, remaining gaps and research implications.

Literature

The literature will be provided during the course

Prerequisites / notice

The course will be taught in English

701-1409-00L Research Seminar: Ecological Genetics W 2 credits 1S A. Widmer, S. Fior

Minimum number of participants is 4.

Abstract

In this research seminar we will critically discuss current topics in Ecological Genetics using publications from the leading scientific journals in this field.

Objective

It is our aim that participants gain insight into the current research topics and knowledge available in Ecological Genetics and learn to critically assess and appreciate scientific publications in this field.

Lecture notes

none

Literature

The course will be taught in English

Prerequisites / notice

Active participation in the discussions is a prerequisite for this course.

529-0733-00L Enzymes W 7 credits 3G D. Hilvert

Abstract

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme-catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

Objective

Overview of enzymes, enzyme-catalyzed reactions and metabolic processes.

Content

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

Lecture notes

A script will not be handed out.

Literature

General:

In addition, citations from the original literature relevant to the individual lectures will be assigned weekly.

551-1407-00L RNA Biology Lecture Series I: Transcription & Processing & Translation 4 credits 2V F. Allain, N. Ban, U. Kutay, further lecturers

Abstract

This course covers aspects of RNA biology related to gene expression at the posttranscriptional level. These include RNA transcription, processing, alternative splicing, editing, export and translation.

Objective

The students should obtain an understanding of these processes, which are at work during gene expression.

Content

Transcription & 3’end formation ; splicing, alternative splicing, RNA editing; the ribosome & translation, translation regulation, RNP biogenesis & nuclear export, mRNA surveillance & mRNA turnover; signal transduction & RNA.

Prerequisites / notice

Basic knowledge of cell and molecular biology.

Elective Major: Molecular Health Sciences

Abstract

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: BIO336

The evolution of the various body-plans is investigated by means of comparison of developmentally essential control genes of molecularly analysed model organisms.

Objective

By the end of this module, each student should be able to
- recognize the universal principles underlying the development of different animal body plans.
- explain how the genes encoding the molecular toolkit have evolved to create animal diversity.
- relate changes in gene structure or function to evolutionary changes in animal development.

Key skills:
- By the end of this module, each student should be able to
- present and discuss a relevant evolutionary topic in an oral presentation
- select and integrate key concepts in animal evolution from primary literature
- participate in discussions on topics presented by others

551-1303-00L Cellular Biochemistry of Health and Disease 4 credits 2S P. Picotti, Y. Barral, V. Korkhov, B. Kormann, R. Kroschewski, J. Matos, M. Peter, A. E. Smith, K. Weis

Number of participants limited to 15.

551-0512-00L
Current Topics in Molecular and Cellular Neurobiology

Number of participants limited to 8.

Abstract
The course is a literature seminar or "journal club". Each Friday a student, or a member of the Suter Lab in the Institute of Molecular Health Sciences, will present a paper from the recent literature.

Objective
The course introduces you to recent developments in the fields of cellular and molecular neurobiology. It also supports you to develop your skills in critically reading the scientific literature. You should be able to grasp what the authors wanted to learn i.e. their goals, why the authors chose the experimental approach they used, the strengths and weaknesses of the experiments and the data presented, and how the work fits into the wider literature in the field. You will present one paper yourself, which provides you with practice in public speaking.

Content
You will present one paper yourself. Give an introduction to the field of the paper, then show and comment on the main results (all the papers we present are available online, so you can show original figures with a beamer). Finish with a summary of the main points and a discussion of their significance.

You are expected to take part in the discussion and to ask questions. To prepare for this you should read all the papers beforehand (they will be announced a week in advance of the presentation).

Lecture notes
Presentations will be made available after the seminars.

Prerequisites / notice
You must attend at least 80% of the journal clubs, and give a presentation of your own. At the end of the semester there will be a 30 minute oral exam on the material presented during the semester. The grade will be based on the exam (45%), your presentation (45%), and a contribution based on your active participation in discussion of other presentations (10%).

551-1153-00L
Systems Biology of Metabolism

Number of participants limited to 15.

Abstract
Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

Objective
Develop a deeper understanding of how relevant biological problems can be solved, thereby providing advanced insights to key experimental and computational methods in systems biology.

The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics. For each particular problem studied, we will work out how the various methods work and what their capabilities/limits are. The problem areas range from microbial metabolism to cancer cell metabolism and from metabolic networks to regulation networks in populations and single cells. Key methods to be covered are various modeling approaches, metabolic flux analyses, metabolomics and other omics.

Lecture notes
Script and original publications will be supplied during the course.

Prerequisites / notice
The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

551-1105-00L
Glycobiology

Number of participants limited to 15.

Abstract
Structural principles, nomenclature and different classes of glycosylation. The different pathways of N- and O-linked protein glycosylation and glycolipid biosynthesis in prokaryotes and eukaryotes are discussed. Specific glycan binding proteins and their role in deciphering the glycan code are presented. The role of glycans in infectious diseases, antigen mimicry and autoimmunity are discussed.

Objective
Detailed knowledge in 1) the different areas of prokaryotic and eukaryotic glycobiology, in particular in the biosynthesis of glycoproteins and glycolipids, 2) the cellular machinery required for these pathways, 3) the principles of carbohydrate/protein interaction, 4) the function of lectins, 5) the role of glycans in infectious disease.

Content
Structure and linkages; analytical approaches; N-linked protein glycosylation (ER, Golgi); glycan-assisted protein folding and quality control; O-linked protein glycosylation; glucosaminoglycans; glycolipids; prokaryotic glycosylation pathways; lectins; glycans and infectious disease.

Lecture notes
handouts

Literature
Introduction to Glycobiology; M.E.Taylor, K.Drickamer, Oxford University Press, 2003

Prerequisites / notice
The course will be in English. It will include the preparation of short essays (marked) about defined topics in Glycobiology.

551-1171-00L
Immunology: from Milestones to Current Topics

Number of participants limited to 25.

Abstract
Milestones in Immunology: on old concepts and modern experiments

Objective
The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. 752-6105-00L
Epidemiology and Prevention

Abstract
The module Epidemiology and prevention describes the process of scientific discovery from the detection of a disease and its causes, to the development and evaluation of preventive and treatment interventions and to improved population health.
There is no script. Powerpoint presentations will be made available on-line to students. To be provided by the individual lecturers, at their discretion.

The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant microbial pathogenicity will be highlighted, in addition to various applications of bacteriophage for both diagnostics and antimicrobial intervention.

Recommendations will be given in the first lecture. This project takes place between end of Spring Semester and beginning of Autumn Semester. Registration in April.

To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

The students are supposed to acquire a deep understanding of the process of biological design including model representation of a biological system, its thorough analysis, and the subsequent experimental implementation of the system and the related problems.

7 months biological design project, during which the students are required to give presentations on advanced topics in synthetic biology (specifically genetic circuit design) and then select their own biological system to design. The system is subsequently modeled, analyzed, and experimentally implemented. Results are presented at an international student competition at the MIT (Cambridge).

Presentations on advanced synthetic biology topics (eg genetic circuit design, adaptation of systems dynamics, analytical concepts, large scale de novo DNA synthesis), project selection, modeling of selected biological system, design space exploration, sensitivity analysis, conversion into DNA sequence, (DNA synthesis external) implementation and analysis of design, summary of results in form of scientific presentation and poster, presentation of results at the iGEM international student competition (www.igem.org).

The overall goal of the course is to introduce students to epidemiological thinking and methods, which are critical pillars for medical and public health research. Students will also become aware on how epidemiological facts are used in prevention, practice and politics.

The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.

The module Epidemiology and prevention follows an overall framework that describes the course of scientific discovery from the detection of a disease to the development of prevention and treatment interventions and their evaluation in clinical trials and real world settings. We will discuss study designs in the context of existing knowledge and the type of evidence needed to advance knowledge. Examples form nutrition, chronic and infectious diseases will be used in order to show the underlying concepts and methods.

Translational science is a cross disciplinary scientific research that is motivated by the need for practical applications that help people. The course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key features into their future projects.

After completing this course, students will be able to understand: Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication)
What is translational science and what is it not?

- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
- How to measure success?
- Outcome variables
- Improving the translational process
- Challenges of communication?
- How independent is translational science?
- Academic boundary conditions vs. industrial influences

Positive and negative examples will be illustrated by distinguished guest speakers.

551-1145-00L Viral and non-Viral Vectors for Human Gene-Therapy - from Pathogens to Safe Medical Applications

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: BIO708

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
Basic aspects of virology, the viral mechanisms for transfer of genetic material into cells, different vector-systems and target cells, animal models, specific applications for inborn diseases of the immune system and of metabolism, adverse effects, and new developments of vector systems will be taught.

Objective
Knowledge of important viral and non-viral vector systems.
Knowledge of application in human diseases.
Knowledge of limiting factors.

Content

Important biochemical processes specific to bacteria and archaea will be presented that contribute to the widespread occurrence of prokaryotes. Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest. Emphasis is on concepts of energy generation and assimilation.

List of topics:
- Eating sugars and letting them in
- Challenging: Aromatics, xenobiotics, and oil
- Complex: (Ligno-)Cellulose and in demand for bioenergy
- Living on a diet and the anaerobic provocations
- Of climate relevance: The microbial C1 cycle
- What are AMO and Anammox?
- 20 amino acids: the making of
- Extending the genetic code
- The 21st and 22nd amino acid
- Some exotic biochemistry: nucleotides, cofactors
- Ancient biochemistry? Iron-sulfur clusters, polymers
- Secondary metabolites: playground of evolution

Abstract

Starting from contemporary biochemical problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

Objective

Develop a deeper understanding of how relevant biological problems can be solved, thereby providing advanced insights to key experimental and computational methods in systems biology.

Content

The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics.

For each particular problem studied, we will work out how the various methods work and what their capabilities/limits are. The problem areas range from microbial metabolism to cancer cell metabolism and from metabolic networks to regulation networks in populations and single cells. Key methods to be covered are various modeling approaches, metabolic flux analyses, metabolomics and other omics.

Lecture notes

Script and original publications will be supplied during the course.

Prerequisites / notice

The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

Abstract

Separations play an integral part of any bioprocess technological. This course aims at enabling students specifically with a chemistry/biology background to select & roughly design suitable separation processes for typical biotechnological products such as monoclonal antibodies, antibiotics, and fine chemicals and at providing a basic set of purification operations & judge on process economy.

Objective

Students should be able to select for a given biotechnological product a suitable set of purification operations and judge on process economy.

Content

Introduction membrane operations adsorption and chromatography crystallization overall process economics

Abstract

Study of fundamental concepts, models and computational methods for the analysis of complex biological networks. Topics: Systems approaches in biology, biology and reaction network fundamentals, modeling and simulation approaches (topological, probabilistic, stoichiometric, qualitative, linear / nonlinear ODEs, stochastic), and systems analysis (complexity reduction, stability, identification).

Objective

The aim of this course is to provide an introductory overview of mathematical and computational methods for the modeling, simulation and analysis of biological networks.

Content

Biology has witnessed an unprecedented increase in experimental data and, correspondingly, an increased need for computational methods to analyze this data. The explosion of sequenced genomes, and subsequently, of bioinformatics methods for the storage, analysis and comparison of genetic sequences provides a prominent example. Recently, however, an additional area of research, captured by the label "Systems Biology", focuses on how networks, which are more than the mere sum of their parts' properties, establish biological functions. This is essentially a task of reverse engineering. The aim of this course is to provide an introductory overview of corresponding computational methods for the modeling, simulation and analysis of biological networks.

We will start with an introduction into the basic units, functions and design principles that are relevant for biology at the level of individual cells. Making extensive use of example systems, the course will then focus on methods and tools for the investigation of biological networks with increasing detail. These include (i) graph theoretical approaches for revealing large-scale network organization, (ii) probabilistic (Bayesian) network representations, (iii) structural network analysis based on reaction stoichiometries, (iv) qualitative methods for dynamic modeling and simulation (Boolean and piece-wise linear approaches), (v) mechanistic modeling using ordinary differential equations (ODEs) and finally (vi) stochastic simulation methods.

</tbody>
</table>

Abstract

This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning "good practice" that can be applied in every student's own projects and daily work life. A special focus will be laid in the use of the statistical software package R for regression analysis.

Objective

The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.

Content

The course starts with the basics of linear modeling, and then proceeds to parameter estimation, tests, confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, multicollinearity problems and model interpretation, as well as general modeling strategies.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

Lecture notes

A script will be available.

Literature

Faraway (2005): Linear Models with R
Faraway (2006): Extending the Linear Model with R
Draper & Smith (1998): Applied Regression Analysis
Fox (2008): Applied Regression Analysis and GLMs
Montgomery et al. (2006): Introduction to Linear Regression Analysis
The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-3622-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

**636-0003-00L Biological Engineering and Biotechnology**

**Abstract**

Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.

**Objective**

1. Insight Into The Mammalian Cell Cycle. Cycling, The Balance Between Proliferation and Cancer - Implications For Biopharmaceutical Manufacturing.
2. The Licence To Kill. Apoptosis Regulatory Networks - Engineering of Survival Pathways To Increase Robustness of Production Cell Lines.
5. From Target To Market. An Antibody's Journey From Cell Culture to 6. Biology and Malign Applications. Do Life Sciences Enable the
7. Functional Food. Enjoy your Meal!

**Lecture notes**

Handout during the course.

**529-0041-00L Modern Mass Spectrometry, Hyphenated Methods, and Chemometrics**

**Abstract**

Modern mass spectrometry, hyphenated analytical methods, speciation, methods of surface analysis, chemometrics.

**Objective**

Comprehensive knowledge about the analytical methods introduced in this course, and their applications.

**Content**

Coulping of separation with identification methods such as GC-MS, LC-MS, GC-IR, LC-IR, LC-NMR etc.; importance of speciation.

Modern mass spectrometry: Time of flight and ion cyclotron resonance mass spectrometry, ICP-MS. Soft ionization methods, desorption methods, spray methods.

Methods of surface analysis (ESCA, Auger, SIMS, raster microscopy methods).

Employment of computer science for processing data in chemical analysis (chemometrics).

**Lecture notes**

Lecture notes will be available in the lecture at production cost.

**Literature**

Information about relevant literature will be available in the lecture & in the lecture notes.

**Prerequisites / notice**

Exercises are an integral part of the lecture.

Prerequisites:

529-0051-00 "Analytische Chemie I (3. Semester)"
529-0058-00 "Analytische Chemie II (4. Semester)"

(or equivalent)

**551-1407-00L RNA Biology Lecture Series I: Transcription & Processing & Translation**

**Abstract**

This course covers aspects of RNA biology related to gene expression at the posttranscriptional level. These include RNA transcription, processing, alternative splicing, editing, export and translation.

**Objective**

Transcription & 3'end formation ; splicing, alternative splicing, RNA editing; the ribosome & translation, translation regulation, RNP biogenesis & nuclear export, mRNA surveillance & mRNA turnover; signal transduction & RNA.

**Content**

Understanding of structure-function relationships in proteins and in protein folding, detailed understanding of biophysics and physical methods as well as modern methods for protein purification and microanlytics.

**Lecture notes**

Lectures on the individual topics can be found under http://www.mol.biol.ethz.ch/teaching. Basics:
- Creighton, T.E., Proteins, Freeman, (1993)
- Fersht, A., Enzyme, Structure and Mechanism in Protein Science (1999), Freeman.

Current topics: References will be given during the lectures.

**551-0307-00L Molecular and Structural Biology I: Protein Structure and Function**

**Abstract**

D-BIOL BSc students are obliged to take part I and part II (next semester) as a two-semester course

**Objective**

Biophysics of protein folding, membrane proteins and biophysics of membranes, enzymatic catalysis, catalytic RNA and RNAI, current topics in protein biophysics and structural biology.

**Content**

Understanding of structure-function relationships in proteins and in protein folding, detailed understanding of biophysics and physical methods as well as modern methods for protein purification and microanlytics.

**Lecture notes**

Scripts on the individual topics can be found under http://www.mol.biol.ethz.ch/teaching.

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 265 of 1571
Prerequisites / notice
This course is a co-production of the University of Zurich and ETH Zurich, and will be taught in English. The course takes place on Monday afternoon at ETH Hönggerberg, and on Tuesday morning at UZH Irchel.

551-0313-00L Microbiology (Part I) W 3 credits 2V W.D. Hardt, L. Ebert, H.M. Fischer, J. Piel, M. Pilhofer

Abstract
Advanced lecture class providing a broad overview on bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

Objective
This concept class will be based on common concepts and introduce to the enormous diversity among bacteria and archaea. It will cover the current research on bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

Content
Advanced class covering the state of the research in bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

Lecture notes
Updated handouts will be provided during the class.

Literature
Current literature references will be provided during the lectures.

Prerequisites / notice
English
The lecture "Grundlagen der Biologie II: Mikrobiologie" is the basis for this advanced lecture.

551-0317-00L Immunology I W 3 credits 2V A. Oxenius, M. Kopf

Abstract
Introduction into structural and functional aspects of the immune system.

Objective
Basic knowledge of the mechanisms and the regulation of an immune response.

Contents
- Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histocompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

Lecture notes
Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien".

Literature

Prerequisites / notice
Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

551-1295-00L Introduction to Bioinformatics: Concepts and Applications W 6 credits 4G W. Gruissem, K. Bärenfaller, A. Calissi, G. Capitani, J. Fütterer, M. Robinson, A. Wagner

Abstract
Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.

Objective
Introduction to Bioinformatics: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.

Content
Bioinformatics I will cover the following topics:

- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

Abstract
Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

Objective
Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

Content
Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccine

</tr>
</tbody>
</table>

**Abstract**
The advanced course introduces students to plants through a concept-based discussion of developmental processes that integrates physiology and biochemistry with genetics, molecular biology, and cell biology. The course follows the life of the plant, starting with the seed, progressing through germination to the seedling and mature plant, and ending with reproduction and senescence.

**Objective**
The new course "Molecular Life of Plants" reflects the rapid advancements that are occurring in the field of experimental plant biology as well as the changing interests of students being trained in this discipline. Contemporary plant biology courses emphasize a traditional approach to experimental plant biology by discussing discrete topics that are removed from the context of the plant life cycle. The course will take an integrative approach that focuses on developmental concepts. Whereas traditional plant physiology courses were based on research carried out on intact plants or plant organs and were often based on phenomenological observations, current research in plant biology emphasizes work at the cellular, subcellular and molecular levels.

The goal of "Molecular Life of Plants" is to train students in integrative approaches to understand the function of plants in a developmental context. While the course focuses on plants, the training integrative approaches will also be useful for other organisms.

**Content**
The course "Molecular Life of Plants" will cover the following topics in a developmental context:

- Plant genome organization
- Seed anatomy
- Food reserves and mobilization
- Seedling emergence
- Heterotrophic to autotrophic growth
- Chlorophyll biosynthesis, photoreceptors
- Integration of metabolism
- Hormones
- Cell cycle
- Cell differentiation and expansion
- Environmental interactions
- Environmental interactions
- Flower development and fertilization
- Embryo and seed development
- Fruit development
- Senescence

551-0319-00L  Cellular Biochemistry (Part I)  W  3 credits  2V  U. Kutay, R. I. Enchev, B. Kormann, M. Peter, I. Zemp, further lecturers

Abstract
Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

Objective
The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry.

The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

Content
Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.

Lecture notes
Scripts and additional material will be provided during the semester. Please contact Dr. Alicia Smith for assistance with the learning materials. (alicia.smith@bc.biolo.ethz.ch)

Literature
Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

Prerequisites / notice
To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English.

551-1295-00L  Introduction to Bioinformatics: Concepts and Applications  W  6 credits  4G  W. Gruissem, K. Bärenfalter, A. Caflisch, G. Captanii, J. Fütterer, M. Robinson, A. Wagner

Abstract
Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.

Objective
Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although “Introduction to Bioinformatics I” will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course “Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms” that will be offered in the following semester.

Content
Bioinformatics I will cover the following topics:

- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

701-2413-00L  Evolutionary Genetics  W  6 credits  4V  T. Städler, A. Widmer, P. C. Brunner, M. C. Fischer

Abstract
The concept course 'Evolutionary Genetics' consists of two lectures that jointly provide an introduction to the fields of population and quantitative genetics (emphasis on basic concepts) and ecological genetics (more emphasis on evolutionary and ecological processes of adaptation and speciation).

Objective
The aim of the course is to provide students with a solid introduction to the fields of population genetics, quantitative genetics, and ecological genetics. The concepts and research methods developed in these fields have undergone profound transformations; they are of fundamental importance in our understanding of evolutionary processes, both past and present. Students should gain an appreciation for the concepts, methods and explanatory power of evolutionary genetics.

Content
Population genetics - Types and sources of genetic variation; randomly mating populations and the Hardy-Weinberg equilibrium; effects of inbreeding; natural selection; random genetic drift and effective population size; gene flow and hierarchical population structure; molecular population genetics: neutral theory of molecular evolution and basics of coalescent theory.
Quantitative genetics - Continuous variation; measurement of quant. characters; genes, environments and their interactions; measuring their influence; response to selection; inbreeding and crossbreeding effects on fitness; Fisher’s fundamental theorem.
Ecological Genetics - Concepts and methods for the study of genetic variation and its role in adaptation, reproductive isolation, hybridization and speciation.

Lecture notes
Handouts

Literature

Prerequisites / notice
There will be 5 optional extra sessions for the population genetics part (following lectures 2-6) for computer simulations, designed to help understand the course material.

The focus is on the potential to assess strategies and tactics of pest management, taking into account the demands from the economy, the environment and the society. Significant agricultural approaches will be explained using practical examples, including prevention using natural resources, surveillance and forecasting, resistance management, as well as product registration, incl. ecotoxicology.

The students gain a good understanding of fundamental aspects of pest management in agroecosystems. They will have the ability to assess options for action in view of requirements from the economy, the ecology and the society. Further, they will learn to perform searches on relevant issues in pest management, and to critically evaluate case studies.

Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address these. The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics.

The course will be in English. It will include the preparation of short essays (marked) about defined topics in Glycobiology.

The course aims at providing an advanced understanding of the physiology and metabolism of microorganisms. Emphasis is on processes that are specific to bacteria and archaea and that contribute to the widespread occurrence of prokaryotes. Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest.

Important biochemical processes specific to bacteria and archaea will be presented that contribute to the widespread occurrence of prokaryotes. Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest. Emphasis is on concepts of energy generation and assimilation.

The lecture course aims at providing an advanced understanding of the physiology and metabolism of microorganisms.

Important biochemical processes specific to bacteria and archaea will be presented that contribute to the widespread occurrence of prokaryotes. Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest. Emphasis is on concepts of energy generation and assimilation.

List of topics:
- Eating sugars and letting them in
- Challenging: Aromatics, xenobiotics, and oil
- Complex: (Ligno-)Cellulose and in demand for bioenergy
- Living on a diet and the anaerobic provocations
- Of climate relevance: The microbial C1 cycle
- What are AMO and Anamox?
- 20 amino acids: the making of
- Extending the generic code
- The 21st and 22nd amino acid
- Some exotic biochemistry: nucleotides, cofactors
- Secondary metabolites: playground of evolution
- Ancient biochemistry? Iron-sulfur clusters, polymers
- Metabolic networks and regulation
- Secondary metabolites: playground of evolution
- A script will be provided during the course.
The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

**Plant Pathology I**

**W** 2 credits 2G  
B. McDonald

**Abstract**  
Plant Pathology I will focus on pathogen-plant interactions, epidemiology, disease assessment, and disease development in agroecosystems. Themes will include: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems.

**Objective**  
Students will understand: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems as a basis for implementing disease management strategies in agroecosystems.

**Content**  
Course description: Plant Pathology I will focus on pathogen-plant interactions, epidemiology, disease assessment, and disease development in agroecosystems. Themes will include: 1) how pathogens attack plants and; 2) how plants defend themselves against pathogens; 3) factors driving the development of epidemics in agroecosystems. Topics under the first theme will include pathogen life cycles, disease cycles, and an overview of plant pathogenic nematodes, viruses, bacteria, and fungi. Topics under the second theme will include plant defense strategies, host range, passive and active defenses, and chemical and structural defenses. Topics under the third theme will include the disease triangle and cultural control strategies.

**Lecture Topics and Tentative Schedule**

**Week 1**  
No Lecture: First day of autumn semester

**Week 2**  
The nature of plant diseases, symbiosis, parasites, mutualism, biotrophs and necrotrophs, disease cycles and pathogen life cycles. Nematode attack strategies and types of damage.

**Week 3**  

**Week 4**  

**Week 5**  
Symptoms and signs of fungal infection. Example fungal diseases: potato late blight, wheat stem rust, grape powdery mildew, wheat Septoria leaf blotch.

**Week 6**  
Plant defense mechanisms, host range and non-host resistance. Passive structural and chemical defenses, preformed chemical defenses. Active structural defense, papillae, active chemical defense, hypersensitive response, pathogenesis-related (PR) proteins, phytoalexins and disease resistance.

**Week 7**  
Pisatin and pisatin demethylase. Local and systemic acquired resistance, signal molecules.

**Week 8**  
Pathogen effects on food quality and safety.

**Week 9**  
Epidemiology: historical epidemics, disease pyramid, environmental effects on epidemic development. Plant effects on development of epidemics, including resistance, physiology, density, uniformity.

**Week 10**  
Disease assessment: incidence and severity measures, keys, diagrams, scales, measurement errors. Correlations between incidence and severity.

**Week 11**  
Molecular detection and diagnosis of pathogens. Host indexing, serology, monoclonal and polyclonal antibodies. ELISA, PCR, rDNA and rep-PCR.

**Week 12**  
Strategies for minimizing disease risks: principles of disease control and management.

**Week 13**  
Disease control strategies: economic thresholds, physical control methods.

**Week 14**  
Cultural control methods: avoidance, tillage practices, crop sanitation, fertilizers, crop rotation.

**Recent Advances in Biocommunication**

**W** 2 credits 2S  
C. De Moraes

**Abstract**  
Number of participants limited to 25

**Objective**  
Students will gain insight into the role of sensory cues and signals in mediating interactions within and between species. There will be a primary, but not exclusive, focus on chemical signaling in interactions among plants, insects and microbes. The course will focus on the discussion of current literature addressing key conceptual questions and state-of-the-art research techniques and methods.

**Content**  
Students will gain insight into the role of sensory cues and signals in mediating interactions within and between species. There will be a primary, but not exclusive, focus on chemical signaling in interactions among plants, insects and microbes. The course will focus on the discussion of current literature addressing key conceptual questions and state-of-the-art research techniques and methods. Students will engage in discussion and critical analyses of relevant papers and present their evaluations in a seminar setting.

**RNA Biology Lecture Series I: Transcription & Processing & Translation**

**W** 4 credits 2V  
F. Allain, N. Ban, U. Kutay, further lecturers

**Abstract**  
This course covers aspects of RNA biology related to gene expression at the posttranscriptional level. These include RNA transcription, processing, alternative splicing, editing, export and translation.

**Objective**  
The students should obtain an understanding of these processes, which are at work during gene expression.

**Content**  
Transcription & 3'end formation ; splicing, alternative splicing, RNA editing; the ribosome & translation, translation regulation, RNP biogenesis & nuclear export, m/RNA surveillance & m/RNA turnover; signal transduction & RNA.

**Molecular and Structural Biology I: Protein Structure and Function**

**W** 3 credits 2V  
R. Glockshuber, K. Locher, E. Weber-Ban

**Abstract**  
D-BIOL BSc students are obliged to take part I and part II (next semester) as a two-semester course

**Prerequisites / notice**  
Basic knowledge of cell and molecular biology.

**Elective Concept Courses**

**Autumn Semester 2016**

Data: 06.01.2019 12:56  Page 270 of 1571
### 551-0309-00L  Concepts in Modern Genetics

**Objective**
Understanding of structure-function relationships in proteins and in protein folding, detailed understanding of biophysics and physical methods as well as modern methods for protein purification and microanalytic.

**Lecture notes**
Scripts on the individual topics can be found under http://www.mol.biol.ethz.ch/teaching.

**Literature**
Basics:
- Creighton, T.E., Proteins, Freeman, (1993)
- Fersht, A., Enzyme, Structure and Mechanism in Protein Science (1999), Freeman.

Current topics: References will be given during the lectures.

### 551-0313-00L  Microbiology (Part I)

**Objective**
This course focuses on the concepts of classical and modern genetics and genomics.

**Content**
- Yeast genetics
- Structure and function of eukaryotic chromosomes
- Molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination
- Analysis of developmental processes; epigenetics and RNA interference

**Lecture notes**
Scripts and additional material will be provided during the semester.

**Prerequisites / notice**
This course is a co-production of the University of Zurich and ETH Zurich, and will be taught in English. The course takes place on Monday afternoon at ETH Hoenggerberg, and on Tuesday morning at UZH Irchel.

### 551-0319-00L  Cellular Biochemistry (Part I)

**Objective**
This concept class will be based on common concepts and introduce the enormous diversity among bacteria and archaea. It will cover the current research on bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

**Content**
Advanced class covering the state of the research in bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

**Lecture notes**
Updated handouts will be provided during the class.

**Prerequisites / notice**
The lecture "Grundlagen der Biologie II: Mikrobiologie" is the basis for this advanced lecture.

### 551-1295-00L  Introduction to Bioinformatics: Concepts and Applications

**Objective**
Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the student will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentations. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.
The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular processes such as cancer.

Abstract: Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function, and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

Objective: The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry.

Content: Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes. Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular transport and targeting; vesicular trafficking and phagocytosis; post-transcriptional regulation of gene expression.

Lecture notes: Scripts and additional material will be provided during the semester. Please contact Dr. Alicia Smith for assistance with the learning materials. (alicia.smith@bc.biol.ethz.ch)

Literature: Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

Prerequisites / notice: To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English.

---

Autumn Semester 2016
Page 272 of 1571
3V+2U

Hours

Biology has witnessed an unprecedented increase in experimental data and, correspondingly, an increased need for computational
tools to analyze this data. The explosion of sequenced genomes, and subsequently, of bioinformatics methods to store, analysis
classical and comparison of genetic sequences provides a prominent example. Recently, however, an additional area of research, captured by the
label "Systems Biology", focuses on networks, which are more than the mere sum of their parts' properties, establish biological
networks that are relevant for understanding at the level of individual
cells. Making extensive use of example systems, the course will then focus on methods and algorithms that allow for the investigation of
biological, chemical and physics experiment. Bioinformatics approaches draw significant expertise from mathematics, statistics and
computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important
foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be
offered in the following semester.

Content

Bioinformatics I will cover the following topics:

From genes to databases and information
BLAST searches
Prediction of gene function and regulation
RNA structure prediction
Gene expression analysis using microarrays
Protein sequence and structure databases
WWW for bioinformatics
Protein sequence comparisons
Proteomics and de novo protein sequencing
Protein structure prediction
Cellular and protein interaction networks
Molecular dynamics simulation

Elective Compulsory Master Courses I: Computation

### Microbial Biochemistry

The course builds on introductory courses in Computational Biology. The course assumes no background in biology but a good foundation regarding mathematical and computational techniques.

- **Number of participants limited to 15.**
- **Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest.**
- **Important biochemical processes specific to bacteria and archaea will be presented that contribute to the widespread occurrence of prokaryotes.**
- **Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest.**
- **Emphasis is on concepts of energy generation and assimilation.**

### Separations in Biotechnology and Bioprocess

**Abstract**

Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

**Objective**

Develop a deeper understanding of how relevant biological problems can be solved, thereby providing advanced insights to key experimental and computational methods in systems biology.

**Content**

The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics.

**Lecture notes**

Script and original publications will be supplied during the course.

**Prerequisites / notice**

The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

### Synthetic Biology II

**Abstract**

7 months biological design project, during which the students are required to give presentations on advanced topics in synthetic biology (specifically genetic circuit design) and then select their own biological system to design. The system is subsequently modeled, analyzed, and experimentally implemented. Results are presented at an international student competition at the MIT (Cambridge).

**Objective**

The students are supposed to acquire a deep understanding of the process of biological design including model representation of a biological system, its thorough analysis, and the subsequent experimental implementation of the system and the related problems.

**Content**

Presentations on advanced synthetic biology topics (eg genetic circuit design, adaptation of systems dynamics, analytical concepts, large scale de novo DNA synthesis, project selection, modeling of selected biological system, design space exploration, sensitivity analysis, conversion into DNA sequence, (DNA synthesis external) implementation and analysis of design, summary of results in form of scientific presentation and poster, presentation of results at the iGEM international student competition (www.igem.org)).

**Lecture notes**

Handouts during course.

**Prerequisites / notice**

This project takes place between end of Spring Semester and beginning of Autumn Semester. Registration in April.

Please note that the number of ECTS credits and the actual work load are disconnected.

### From DNA to Diversity (University of Zurich)

**Abstract**

No enrollment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: BIO336

**Lecture notes**

Mind the enrolment deadlines at UZH:

- **Number of participants limited to 15.**
- **Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest.**
- **Important biochemical processes specific to bacteria and archaea will be presented that contribute to the widespread occurrence of prokaryotes.**
- **Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest.**
- **Emphasis is on concepts of energy generation and assimilation.**

### Systems Biology of Metabolism

**Abstract**

Number of participants limited to 15.

Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

**Objective**

Develop a deeper understanding of how relevant biological problems can be solved, thereby providing advanced insights to key experimental and computational methods in systems biology.

**Content**

The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics.

**Lecture notes**

Script and original publications will be supplied during the course.

**Prerequisites / notice**

The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

### Separations in Biotechnology and Bioprocess

**Economy**

Separations play an integral part of any biotechnological process. This course aims at enabling students specifically with a chemistry/biology background to select & roughly design suitable separation processes for typical biotechnological products such as monoclonal antibodies, antibiotics, and fine chemicals and at providing a basic set of purification operations & judge on process economy.

**Objective**

Students should be able to select for a given biotechnological product a suitable set of purification operations and judge on process economy.

**Content**

Introduction membrane operations adsorption and chromatography crystallization overall process economics

**Lecture notes**

Handouts during course.

### Synthetic Biology II

**Objective**

7 months biological design project, during which the students are required to give presentations on advanced topics in synthetic biology (specifically genetic circuit design) and then select their own biological system to design. The system is subsequently modeled, analyzed, and experimentally implemented. Results are presented at an international student competition at the MIT (Cambridge).

**Content**

Presentations on advanced synthetic biology topics (eg genetic circuit design, adaptation of systems dynamics, analytical concepts, large scale de novo DNA synthesis, project selection, modeling of selected biological system, design space exploration, sensitivity analysis, conversion into DNA sequence, (DNA synthesis external) implementation and analysis of design, summary of results in form of scientific presentation and poster, presentation of results at the iGEM international student competition (www.igem.org)).

**Lecture notes**

Handouts during course.

**Prerequisites / notice**

This project takes place between end of Spring Semester and beginning of Autumn Semester. Registration in April.

Please note that the number of ECTS credits and the actual work load are disconnected.

### From DNA to Diversity (University of Zurich)

**Abstract**

No enrollment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: BIO336

**Lecture notes**

Mind the enrolment deadlines at UZH:
The evolution of the various body-plans is investigated by means of comparison of developmentally essential control genes of molecularly analysed model organisms.

Objective
- By the end of this module, each student should be able to recognize the universal principles underlying the development of different animal body plans.
- Understand how the genes encoding the molecular toolkit have evolved to create animal diversity.
- Relate changes in gene structure or function to evolutionary changes in animal development.

Key skills:
- By the end of this module, each student should be able to present and discuss a relevant evolutionary topic in an oral presentation.
- Select and integrate key concepts in animal evolution from primary literature.
- Participate in discussions on topics presented by others.

ECTS
636-0009-00L Evolutionary Dynamics W 5 credits 2V+1U N. Beerenwinkel

Abstract
Evolutionary dynamics is concerned with the mathematical principles according to which life has evolved. This course offers an introduction to mathematical modeling of evolution, including deterministic and stochastic models.

Objective
The goal of this course is to understand and to appreciate mathematical models and computational methods that provide insight into the evolutionary process.

Content
Evolution is the one theory that encompasses all of biology. It provides a single, unifying concept to understand the living systems that we observe today. We will introduce several types of mathematical models of evolution to describe gene frequency changes over time in the context of different biological systems, focusing on asexual populations. Viruses and cancer cells provide the most prominent examples of such systems and they are at the same time of great biomedical interest. The course will cover some classical mathematical population genetics and population dynamics, and also introduce several new approaches. This is reflected in a diverse set of mathematical concepts which make their appearance throughout the course, all of which are introduced from scratch. Topics covered include the quasispecies equation, evolution of HIV, evolutionary game theory, birth-death processes, evolutionary stability, evolutionary graph theory, somatic evolution of cancer, stochastic tunneling, cell differentiation, hematopoietic tumor stem cells, genetic progression of cancer and the speed of adaptation, diffusion theory, fitness landscapes, neutral networks, branching processes, evolutionary escape, and epistasis.

Lecture notes
No.

Literature

Prerequisites / notice
Prerequisites: Basic mathematics (linear algebra, calculus, probability)
**Lectures**

**W.D. Hardt**  
**6 credits**  
**Microbiology (Part I)**  
3G  
4V  
Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

**Concepts in Modern Genetics**  
4G  
Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

**Introduction to Bioinformatics: Concepts and Applications**  
Y. Barral  
M. Stoffel, O. Voinnet

- Current literature references will be provided during the lectures.
- Updated handouts will be provided during the class.
- The lecture "Grundlagen der Biologie II: Mikrobiologie" is the basis for this advanced lecture.

**529-0731-00L**  
**Nucleic Acids and Carbohydrates**  
W  
6 credits  
D. Hilvert, P. A. Kast, S. J. Sturla, H.Wennemers

- Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

**Introduction to Bioinformatics I: Concepts and Applications**  
Y. Barral  
M. Stoffel, O. Voinnet

- Mainly based on recent original literature, a detailed list will be distributed during the first lecture.
- The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

- This course focuses on the concepts of classical and modern genetics and genomics.

- This course is a co-production of the University of Zurich and ETH Zurich, and will be taught in English. The course takes place on Monday afternoon at ETH Hönggerberg, and on Tuesday morning at UZH Irchel.
Abstract Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme-catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

Objective Overview of enzymes, enzyme-catalyzed reactions and metabolic processes.

Content Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

Lecture notes A script will not be handed out.

In addition, citations from the original literature relevant to the individual lectures will be assigned weekly.

<tr>
<td>401-0649-00L</td>
<td>Applied Statistical Regression</td>
<td>5 credits</td>
<td>W</td>
<td>2V+1U</td>
</tr>
</tbody>
</table>

**Abstract**  
This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning “good practice” that can be applied in every student's own projects and daily work life. A special focus will be laid in the use of the statistical software package R for regression analysis.

**Objective**  
The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.

**Content**  
The course starts with the basics of linear modeling, and then proceeds to parameter estimation, tests, confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, multicollinearity problems and model interpretation, as well as general modeling strategies.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

**Lecture notes**  
A script will be available.

**Literature**  
Faraway (2005): Linear Models with R  
Faraway (2006): Extending the Linear Model with R  
Draper & Smith (1998): Applied Regression Analysis  
Fox (2008): Applied Regression Analysis and GLMs  
Montgomery et al. (2006): Introduction to Linear Regression Analysis

**Prerequisites / notice**  
The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-3622-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

<tr>
<td>401-6215-00L</td>
<td>Using R for Data Analysis and Graphics (Part I)</td>
<td>1 credit</td>
<td>W</td>
<td>1G</td>
</tr>
</tbody>
</table>

**Abstract**  
The course provides the first part an introduction to the statistical software R for scientists. Topics covered are data generation and selection, graphical and basic statistical functions, creating simple functions, basic types of objects.

**Objective**  
The students will be able to use the software R for simple data analysis.

**Content**  
The course provides the first part of an introduction to the statistical software R for scientists. R is free software that contains a huge collection of functions with focus on statistics and graphics. If one wants to use R one has to learn the programming language R - on very rudimentary level. The course aims to facilitate this by providing a basic introduction to R.

Part I of the course covers the following topics:
- What is R?
- R Basics: reading and writing data from/to files, creating vectors & matrices, selecting elements of dataframes, vectors and matrices, arithmetics;
- Types of data: numeric, character, logical and categorical data, missing values;
- Simple (statistical) functions: summary, mean, var, etc., simple statistical tests;
- Writing simple functions;
- Introduction to graphics: scatter-, boxplots and other high-level plotting functions, embellishing plots by title, axis labels, etc., adding elements (lines, points) to existing plots.

The course focuses on practical work at the computer. We will make use of the graphical user interface RStudio: [www.rstudio.org](http://www.rstudio.org)

**Lecture notes**  

**Prerequisites / notice**  
The course resources will be provided via the Moodle web learning platform. Please login (with your ETH (or other University) username+password) at [https://moodle-app2.let.ethz.ch/enrol/users.php?id=1145](https://moodle-app2.let.ethz.ch/enrol/users.php?id=1145). Choose the course "Using R for Data Analysis and Graphics" and follow the instructions for registration.

**Abstract**  
Modern mass spectrometry, hyphenated analytical methods, speciation, methods of surface analysis, chemometrics.

**Objective**  
Comprehensive knowledge about the analytical methods introduced in this course, and their applications.

**Content**  
Coupling of separation with identification methods such as GC-MS, LC-MS, GC-IR, LC-IR, LC-NMR etc.; importance of speciation, Modern mass spectrometry: Time of flight and ion cyclotron resonance mass spectrometry, ICP-MS. Soft ionization methods, desorption methods, spray methods.

Methods of surface analysis (ESCA, Auger, SIMS, raster microscopy methods).

Employment of computer science for processing data in chemical analysis (chemometrics).
Handsout during the course. 4 credits

The students should obtain an understanding of these processes, which are at work during gene expression.

W, P. A. Kast, S. J. Sturla, P. H. Hünenberger

Enzymes

ECTS

K. Locher, F. Allain, N. Ban, R. Glöckshuber, M. Pilhofer, E. Weber-Ban

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme-catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

F. Allain, N. Ban, U. Kutay, further lecturers

Overview of enzymes, enzyme-catalyzed reactions and metabolic processes.

Structural and Functional Biology III: Current Topics

The course will only take place with a minimum of 6 participants.

W 2 credits 1V K. Locher, F. Allain, N. Ban, R. Glöckshuber, M. Pilhofer, E. Weber-Ban

The course discusses current topics and cutting edge research in the structural, molecular, and biochemical study of cellular macromolecules. Student participation is an essential component of the course and will contribute to the exam grade.

The goal is to discuss cutting edge research in the structural, molecular, and biochemical study of cellular macromolecules. Students will also have an opportunity to present and discuss recent breakthroughs relevant to the research fields presented by the faculty teaching the course (see http://www.mol.biol.ethz.ch/research.html for details on the topics).

Literature

Will be distributed by the instructors

RNA Biology Lecture Series I: Transcription & Processing & Translation

This course covers aspects of RNA biology related to gene expression at the posttranscriptional level. These include RNA transcription, processing, alternative splicing, editing, export and translation. Transcription & 3’end formation; splicing, alternative splicing, RNA editing; the ribosome & translation, translation regulation, RNP biogenesis & nuclear export, mRNA surveillance & mRNA turnover; signal transduction & RNA.

F. Allain, N. Ban, U. Kutay, further lecturers

Basic knowledge of cell and molecular biology.

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme-catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

Elective Major: Biological Chemistry

Elective Compulsory Concept Courses

Number Title Type ECTS Hours Lecturers

Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNA; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNA; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

The main goal of this course is to enhance the student's ability to:

- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.

**ECTS**

The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, vesicle rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

**Abstract**

Biophysics of protein folding, membrane proteins and biophysics of membranes, enzymatic catalysis, catalytic RNA and RNAi, current topics in protein biophysics and structural biology.

Understanding of structure-function relationships in proteins and in protein folding, detailed understanding of biophysics and physical methods as well as modern methods for protein purification and microanalytic techniques.

**Literature**

Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

**Lecture notes**

Citations from the original literature relevant to the individual lectures will be assigned weekly.

I. Ethics & the Process of Ethical Inquiry

- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 Rs (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks;
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access;
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

ECTS
European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
The objective of this course is to expose students to the fundamental aspects of the emerging field of microrobotics. This includes a focus on physical laws that predominate at the microscale, technologies for fabricating small devices, bio-inspired design, and applications of the field.

The course addresses basic science and engineering principles ruling the nano domain. We particularly work out the links between topics that are traditionally taught separately.

Topics are treated in 2 blocks:

(I) From Quantum to Continuum
From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

(II) Interaction Forces on the Micro and Nano Scale
Intermolecular forces, their macroscopic manifestations, and ways to control such interactions.

Self-assembly and directed assembly of 2D and 3D structures.

Special emphasis is placed on the emerging field of molecular electronic devices, their working principles, applications, and how they may be assembled.

The lecture will be taught in English.

- learn about the remaining challenges in this field |

Data: 06.01.2019 12:56  Autumn Semester 2016  Page 285 of 1571
This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.
The class consists of three parts:

1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Content
Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Diffuse optical properties in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed in addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

| O. Göksel, E. Konukoglu | Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells. As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced. The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes. High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering. Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue’s anisotropies within the human body. Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical processes have been described to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function. 3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented. Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

Recommended Elective Courses
These courses are particularly recommended for the Bioelectronics track. Please consult your track advisor if you wish to select other subjects.

<tr>
<td>Abstract</td>
<td>This course provides a foundation in analog integrated circuit design based on bipolar and CMOS technologies. Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems. The basic elements, design issues and techniques for analog integrated circuits will be taught in this course. Review of bipolar and MOS devices and their small-signal equivalent circuit models: Building blocks in analog circuits such as current sources, active load, current mirrors, supply independent biasing etc; Amplifiers: differential amplifiers, cascode amplifier, high gain structures, output stages, gain bandwidth product of op-amps; Stability; Comparators; Second-order effects in analog circuits such as mismatch, noise and offset; A/D and D/A converters; Introduction to switched capacitor circuits. The exercise sessions aim to reinforce the lecture material by well guided step-by-step design tasks. The circuit simulator SPECTRE is used to facilitate the tasks. There is also an external experiment on op-amp measurements. Handsouts of presented slides. No script but an accompanying textbook is recommended. Gray, Hurst, Lewis, Meyer, “Analysis and Design of Analog Integrated Circuits”, 5th Ed. Wiley, 2010.</td>

Abstract

Objective
Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.

Content
The main goal of this course is to demonstrate the differences in communication between the fields of medicine and engineering. Since understanding of the characteristics of neuromorphic circuit elements is accompanied by weekly laboratory sessions.

Lecture notes
Course material. Script, computer demonstrations, exercises and problem solutions
Prerequisites / notice
Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C. The course language is English.

227-0468-00L
Analog Signal Processing and Filtering
W 6 credits
2V+2U
H. Schmid
Suitable for Master Students as well as Doctoral Students.

Abstract
This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers.

Objective
This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers. The way the exam is done allows for the different interests of the two groups.

Content
The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

Lecture notes
The base for these lectures are lecture notes and two or three published scientific papers. From these papers we will together develop the technical content.

Prerequisites / notice
Some material is protected by password; students from ETHZ who are interested can write to haschmid@ethz.ch to ask for the password even if they do not attend the lecture.

227-0981-00L
Cross-Disciplinary Research and Development in Medicine and Engineering
W 4 credits
2V+2A
V. Kurtcuoglu, D. de Julien de Zelicourt, M. Mebodi, M. Schmid Daners, O. Ulrich
Suitable for Master Students as well as Doctoral Students.

Abstract
Cross-disciplinary collaboration between engineers and medical doctors is indispensable for innovation in health care. This course will bring together engineering students from ETH Zurich and medical students from the University of Zurich to experience the rewards and challenges of such interdisciplinary work in a project-based learning environment.

Objective
The main goal of this course is to demonstrate the differences in communication between the fields of medicine and engineering. Since such differences become the most evident during actual collaborative work, the course is based on a current project in physiology research that combines medicine and engineering. For the engineering students, the specific aims of the course are to:

- Acquire a working understanding of the anatomy and physiology of the investigated system;
- Identify the engineering challenges in the project and communicate them to the medical students;
- Develop and implement, together with the medical students, solution strategies for the identified challenges;
- Present the found solutions to a cross-disciplinary audience.

Content
After a general introduction to interdisciplinary communication and detailed background on the collaborative project, the engineering students will receive tailored lectures on the anatomy and physiology of the relevant system. They will then team up with medical students who have received a basic introduction to engineering methodology to collaborate on said project. In the process, they will be coached both by lecturers from ETH Zurich and the University of Zurich, receiving lectures customized to the project. The course will end with each team presenting their solution to a cross-disciplinary audience.

Lecture notes
Handouts and relevant literature will be provided.

227-1033-00L
Neuromorphic Engineering I
W 6 credits
2V+3U
T. Delbruck, G. Indiveri, S.C. Liu
Registration in this class requires the permission of the instructors. Class size will be limited to available lab spots. Preference is given to students that require this class as part of their major.

Abstract
This course covers analog circuits with emphasis on neuromorphic engineering: MOS transistors in CMOS technology, static circuits, dynamic circuits, systems (silicon neuron, silicon retina, silicon cochlea) with an introduction to multi-chip systems. The lectures are accompanied by weekly laboratory sessions.

Objective
Understanding of the characteristics of neuromorphic circuit elements.
Content

Neuromorphic circuits are inspired by the organizing principles of biological neural circuits. Their computational primitives are based on physics of semiconductor devices. Neuromorphic architectures often rely on collective computation in parallel networks. Adaptation, learning and memory are implemented locally within the individual computational elements. Transistors are often operated in weak inversion (below threshold), where they exhibit exponential I-V characteristics and low currents. These properties lead to the feasibility of high-density, low-power implementations of functions that are computationally intensive in other paradigms. Application domains of neuromorphic circuits include silicon retinas and cochleas for machine vision and audition, real-time emulation of networks of biological neurons, and the development of autonomous robotic systems. This course covers devices in CMOS technology (MOS transistor below and above threshold, floating-gate MOS transistor, phototransducers), static circuits (differential pair, current mirror, transconductance amplifiers, etc.), dynamic circuits (linear and nonlinear filters, adaptive circuits), systems (silicon neuron, silicon retina and cochlea) and an introduction to multi-chip systems that communicate events analogous to spikes. The lectures are accompanied by weekly laboratory sessions on the characterization of neuromorphic circuits, from elementary devices to systems.

S.-C. Liu et al.: Analog VLSI Circuits and Principles; various publications.

Prerequisites / notice

Particular: The course is highly recommended for those who intend to take the spring semester course ‘Neuromorphic Engineering II’, that teaches the conception, simulation, and physical layout of such circuits with chip design tools.

Prerequisites: Background in basics of semiconductor physics helpful, but not required.

227-2037-00L

Physical Modelling and Simulation

This module consists of (a) an introduction to fundamental equations of electromagnetics, mechanics and heat transfer, (b) a detailed overview of numerical methods for field simulations, and (c) practical examples solved in form of small projects.

Objective

Basic knowledge of the fundamental equations and effects of electromagnetics, mechanics, and heat transfer. Knowledge of the main concepts of numerical methods for physical modelling and simulation. Ability (a) to develop own simple field simulation programs, (b) to select an appropriate field solver for a given problem, (c) to perform field simulations, (d) to evaluate the obtained results, and (e) to interactively improve the models until sufficiently accurate results are obtained.

Content

The module begins with an introduction to the fundamental equations and effects of electromagnetics, mechanics, and heat transfer. After the introduction follows a detailed overview of the available numerical methods for solving electromagnetic, thermal and mechanical boundary value problems. This part of the course contains a general introduction into numerical methods, differential and integral forms, linear equation systems, Finite Difference Method (FDM), Boundary Element Method (BEM), Method of Moments (MoM), Multiple Multipole Program (MMP) and Finite Element Method (FEM). The theoretical part of the course finishes with a presentation of multiphysics simulations through several practical examples of HF-engineering such as coupled electromagnetic-mechanical and electromagnetothermal analysis of MEMS.

In the second part of the course the students will work in small groups on practical simulation problems. For solving practical problems the students can develop and use own simulation programs or chose an appropriate commercial field solver for their specific problem. This practical simulation work of the students is supervised by the lecturers.

151-0255-00L

Energy Conversion and Transport in Biosystems

Theory and application of thermodynamics and energy conversion in biological systems with focus on the cellular level.

Objective

Theory and application of energy conversion at the cellular level. Understanding of the basic features governing solutes transport in the principal systems of the human cell. Connection of characteristics and patterns from other fields of engineering to biofluidics. Heat and mass transport processes in the cell, generation of forces, work and relation to biomedical technologies.

Content

Mass transfer models for the transport of chemical species in the human cell. Organization and function of the cell membrane and of the cell cytoskeleton. The role of molecular motors in cellular force generation and their function in cell migration. Description of the functionality of these systems and of analytical experimental and computational techniques for understanding of their operation. Introduction to cell metabolism, cellular energy transport and cellular thermodynamics.

Lecture notes

Material in the form of hand-outs will be distributed.

Literature

Lecture notes and references therein.

151-0509-00L

Microscale Acoustofluidics

Number of participants limited to 30.

Abstract

In this lecture the basics as well as practical aspects (from modelling to design and fabrication ) are described from a solid and fluid mechanics perspective with applications to microsystems and lab on a chip devices.

Objective

Understanding acoustophoresis, the design of devices and potential applications

Content

Linear and nonlinear acoustics, foundations of fluid and solid mechanics and piezoelectricity. Gorkov potential, numerical modelling, acoustic streaming, applications from ultrasonic microfluidics to surface acoustic wave devices.

Lecture notes

Literature

Solid and fluid continuum mechanics. Notice: The exercise part is a mixture of presentation, lab session and hand in homework.

376-1103-00L

Frontiers in Nanotechnology

Many disciplines are meeting at the nanoscale, from physics, chemistry to engineering, from the life sciences to medicine. The course will prepare students to communicate more effectively across disciplinary boundaries, and will provide them with deep insights into the various frontiers.

Objective

Building upon advanced technologies to create, visualize, analyze and manipulate nanostructures, as well as to probe their nanochemistry, nano-mechanics and other properties within mammade and living systems, many exciting discoveries are currently made. They change the way we do science and result in so many new technologies.

Content

The goal of the course is to give Master and Graduate students from all interested departments an overview of what nanotechnology is all about, from analytical techniques to nanosystems, from physics to biology. Students will start to appreciate the extent to which scientific communities are meeting at the nanoscale. They will learn about the specific challenges and what is currently sizzling in the respective fields, and learn the vocabulary that is necessary to communicate effectively across departmental boundaries.

Each lecturer will first give an overview of the state-of-the art in his/her field, and then describe the research highlights in his/her own research group. While preparing their Final Projects and discussing them in front of the class, the students will deepen their understanding of how to apply a range of new technologies to solve specific scientific problems and technical challenges. Exposure to the different frontiers will also improve their ability to conduct effective nanoscale research, recognize the broader significance of their work and to start collaborations.

Starting with the fabrication and analysis of nanoparticles and nanostructured materials that enable a variety of scientific and technical applications, we will transition to discussing biological nanosystems, how they work and what bioinspired engineering principles can be derived, to finally discussing biomedical applications and potential health issues as well as the many of the emerging technologies will be covered that start impacting so many aspects of our lives. This includes new phenomena in physics, advanced materials, novel technologies and new methods to address major medical challenges.

Lecture notes

All the enrolled students will get access to a password protected website where they can find pdf files of the lecture notes, and typically 1-2 journal articles per lecture that cover selected topics.

376-1219-00L

Rehabilitation Engineering II: Rehabilitation of...
Abstract
Rehabilitation Engng is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective
Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

Content
Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
- Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
- Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
- Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces

Literature
Introductory Books:

Selected Journal Articles and Web Links:
VideoTact, ForeThought Development, LLC. http://my.execute.com/?dwysocki/videotac.html
This course is an introduction to techniques in micro/nanotechnology and to microfluidics. It reviews how many familiar devices are built and can be used for research and biomedical applications. Transistors for DNA sequencing, beamers for patterning proteins, hard-disk technology for biosensing and scanning microfluidics for analyzing tissue sections are just a few examples of the covered topics.

The main objective of the course is to introduce micro/nanotechnology and microfluidics to students having a background in the life sciences. The course should familiarize the students with the techniques used in micro/nanotechnology and show them how micro/nanotechnology pervades throughout life sciences. Microfluidics will be emphasized due to their increasing importance in research and medical applications. The second objective is to have life scientists less intimidated by micro/nanotechnology and make them able to link instruments and techniques to specific problems that they might have in their projects/studies. This will also help students getting access to the ETHZ/IBM Nanotech Center infrastructure if needed.

Mostly formal lectures (2 × 45 min), with a 2 hour visit and introduction to cleanroom and micro/nanotechnology instruments, last 3 sessions would be dedicated to the presentation and evaluation of projects by students (3 students per team).

Biological Engineering and Biotechnology

Number: 529-0837-00L

Biomicrofluidic Engineering

Number of participants limited to 30.

Microfluidics describes the behaviour, control and manipulation of fluids that are geometrically constrained within sub-microliter environments. The use of microfluidic devices offers an opportunity to control physical and chemical processes with unrivalled precision, and in turn provides a route to performing chemistry and biology in an ultra-fast and high-efficiency manner.

In the course students will investigate the theoretical concepts behind microfluidic device operation, the methods of microfluidic device manufacture and the application of microfluidic architectures to important problems faced in modern day chemical and biological analysis. A design workshop will allow students to develop new microscale flow processes by appreciating the dominant physics at the microscale. The application of these basic ideas will primarily focus on biological problems and will include a treatment of diagnostic devices for use at the point-of-care, advanced functional material synthesis, DNA analysis, proteomics and cell-based assays. Lectures, assignments and the design workshop will acquaint students with the state-of-the-art in applied microfluidics.

Specific topics in the course include, but not limited to:

1. Theoretical Concepts
Feasibility of mass and thermal transport on the microscale
Key scaling laws
2. Microfluidic Device Manufacture
Conventional lithographic processing of rigid materials
Soft lithographic processing of plastics and polymers
Mass fabrication of polymeric devices
3. Unit operations and functional components
Analytical separations (electrophoresis and chromatography)
Chemical and biological synthesis
Sample pre-treatment (filtration, SPE, pre-concentration)
Molecular detection
4. Design Workshop
Design of microfluidic architectures for PCR, distillation & mixing
5. Contemporary Applications in Biological Analysis
Microarrays
Cellular analyses (single cells, enzymatic assays, cell sorting)
Proteomics
6. System integration
Applications in radiochemistry, diagnostics and high-throughput experimentation

Lecture notes
Lecture handouts, background literature, problem sheets and notes will be provided electronically.

Biology Courses

Number: 636-0003-00L

Biological Engineering and Biotechnology

Biochemistry

6 credits

3V

M. Fussenegger

Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.

1. Insight Into The Mammalian Cell Cycle. Cycling, The Balance Between Proliferation and Cancer - Implications For Biopharmaceutical Manufacturing.
2. The Licence To Kill. Apoptosis Regulatory Networks - Engineering of Survival Pathways To Increase Robustness of Production Cell Lines.
7. Functional Food. Enjoy your Meal!

Lecture notes
Handsout during the course.
The goal of this laboratory course is to give students practical exposure to basic techniques of cell and molecular biology. This course is part of a two-semester course.

### Abstract
The course gives an introduction into cellular and molecular biology, specifically for students with a background in engineering. The focus will be on the basic organization of eukaryotic cells, molecular mechanisms and cellular functions. Textbook knowledge will be combined with results from recent research and technological innovations in biology.

### Objective
After completing this course, engineering students will be able to apply their previous training in the quantitative and physical sciences to modern biology. Students will also learn the principles how biological models are established, and how these models can be tested.

### Content
Lectures will include the following topics: DNA, chromosomes, RNA, protein, genetics, gene expression, membrane structure and function, vesicular traffic, cellular communication, energy conversion, cytoskeleton, cell cycle, cellular growth, apoptosis, autophagy, cancer, development and stem cells.

In addition, three journal clubs will be held, where one/two publications will be discussed (part I: 1 Journal club, part II: 2 Journal Clubs). For each journal club, students (alone or in groups of up to three students) have to write a summary and discussion of the publication. These written documents will be graded and count as 25% for the final grade.

### Literature
Scripts of all lectures will be available.

---

### Bioimaging

#### Track Core Courses

During the Master program, a minimum of 12 CP must be obtained from track core courses.

---

Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.

The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

Course material Script, computer demonstrations, exercises and problem solutions
Prerequisites:
Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.
The course language is English.

Micro and Nano-Tomography of Biological Tissues

The lecture introduces the physical and technical know-how of X-ray tomographic microscopy. Several X-ray imaging techniques (absorption-, phase- and darkfield contrast) will be discussed and their use in daily research, in particular biology, is presented. The course discusses the aspects of quantitative evaluation of tomographic data sets like segmentation, morphometry and statistics.

Introduction to the basic concepts of X-ray tomographic imaging, image analysis and data quantification at the micro and nano scale with particular emphasis on biological applications.

Synchronous-based X-ray micro- and nano-tomography is today a powerful technique for non-destructive, high-resolution investigations of a broad range of materials. The high-brilliance and high-coherence of third generation synchrotron radiation facilities allow quantitative, three-dimensional imaging at the micro and nanometer scale and extend the traditional absorption imaging technique to edge-enhanced and phase-sensitive measurements, which are particularly suited for investigating biological samples.

The lecture includes a general introduction to the principles of tomographic imaging from image formation to image reconstruction. It provides the physical and engineering basics to understand how imaging beamlines at synchrotron facilities work, looks into the recently developed phase contrast methods, and explores the first applications of X-ray nanotomographic experiments.

The course finally provides the necessary background to understand the quantitative evaluation of tomographic data, from basic image analysis to complex morphometrical computations and 3D visualization, keeping the focus on biomedical applications.

Recommended Elective Courses

These courses are particularly recommended for the Bioimaging track. Please consult your track advisor if you wish to select other subjects.

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>This is an introductory course on Terahertz (THz) technology and applications. Devices operating in THz frequency range (0.1 to 10 THz) have been increasingly studied in the recent years. Progress in nonlinear optical materials, ultrafast optical and electronic techniques has strengthened research in THz application developments. Due to unique interaction of THz waves with materials, applications with new capabilities can be developed. In theory, they can penetrate somewhat like X-rays, but are not considered harmful radiation, because THz energy level is low. They should be able to provide resolution as good or better than magnetic resonance imaging (MRI), possibly with simpler equipment. Imaging, very-high bandwidth communication, and energy harvesting are the most widely explored THz application areas. We will study the basics of THz generation, manipulation, and detection. Our emphasis will be on the physical principles and applications of THz in the domain of imaging, communication and energy harvesting.</td>

To obtain in-depth knowledge of the theoretical foundations of SPM. It covers all aspects of statistical parametric mapping (SPM), including preprocessing, the general linear model, statistical inference, multiple comparison corrections, event-related designs, and Dynamic Causal Modelling (DCM), a Bayesian framework for identification of nonlinear neuronal systems from neurophysiological data. A particular emphasis of the course will be on methodological questions arising in the context of studies in psychiatry, neurology and neuroeconomics.

Methods & Models for fMRI Data Analysis

This course teaches methods and models for fMRI data analysis. It covers all aspects of statistical parametric mapping (SPM), including preprocessing, the general linear model, statistical inference, multiple comparison corrections, event-related designs, and Dynamic Causal Modelling (DCM), a Bayesian framework for identification of nonlinear neuronal systems from neurophysiological data. A particular emphasis of the course will be on methodological questions arising in the context of studies in psychiatry, neurology and neuroeconomics.

Computational Psychiatry

This five-day course teaches state-of-the-art methods in computational psychiatry. It covers various computational models of cognition (e.g., learning and decision-making) and brain physiology (e.g., effective connectivity) of relevance for psychiatric disorders. The course not only provides theoretical background, but also demonstrates open source software in application to concrete examples.

Physical Modelling and Simulation

This module consists of (a) an introduction to fundamental equations of electromagnetics, mechanics and heat transfer, (b) a detailed overview of numerical methods for field simulations, and (c) practical examples solved in form of small projects.

Quantitative Flow Visualization

The course provides an introduction to digital image analysis in modern flow diagnostics. Different techniques which are discussed include image velocimetry, laser induced fluorescence, liquid crystal thermography and interferometry. The physical foundations and measurement configurations are explained. Image analysis algorithms are presented in detail and programmed during the exercises.
At the end of the course the students will be able to build a rendering system. The students will study the basic principles of rendering and image synthesis. In addition, the course is intended to stimulate the students' curiosity to explore the field of computer graphics in subsequent courses or on their own.
Content
This course covers fundamental concepts of modern computer graphics. Students will learn about 3D object representations and the details of how to generate photorealistic images from digital representations of 3D scenes. Starting with an introduction to 3D shape modeling and representation, texture mapping and ray-tracing, we will move on to acceleration structures, the physics of light transport, appearance modeling and global illumination principles and algorithms. We will end with an overview of modern image-based image synthesis techniques, covering topics such as lightfields and depth-image based rendering.

Prerequisites / notice
Prerequisites: Fundamentals of calculus and linear algebra, basic concepts of algorithms and data structures, programming skills in C++, Visual Computing course recommended. The programming assignments will be in C++. This will not be taught in the class.

402-0674-00L Physics in Medical Research: From Atoms to Cells W 6 credits 2V+1U B. K. R. Müller

Abstract
Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitelial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.

Objective
The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, and organic surfaces are introduced. The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinetic theory and perfectly understood by means of Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

227-1033-00L Neuromorphic Engineering I W 6 credits 2V+3U T. Delbrück, G. Indiveri, S.C. Liu

Registration in this class requires the permission of the instructors. Class size will be limited to available lab spots. Preference is given to students that require this class as part of their major.

Abstract
This course covers analog circuits with emphasis on neuromorphic engineering: MOS transistors in CMOS technology, static circuits, dynamic circuits, systems (silicon neuron, silicon retina, silicon cochlea) with an introduction to multi-chip systems. The lectures are accompanied by weekly laboratory sessions.

Objective
Understanding the characteristics of neuromorphic circuit elements.

Content
Neuromorphic circuits are inspired by the organizing principles of biological neural circuits. Their computational primitives are based on physics of semiconductor devices. Neuromorphic architectures often rely on collective computation in parallel networks. Adaptation, learning and memory are implemented locally within the individual computational elements. Transistors are often operated in weak inversion (below threshold), where they exhibit exponential I-V characteristics and low currents. These properties lead to the feasibility of high-density, low-power implementations of functions that are computationally intensive in other paradigms. Application domains of neuromorphic circuits include silicon retinas and cochleas for machine vision and audition, real-time emulations of networks of biological neurons, and the development of autonomous robotic systems. This course covers devices in CMOS technology (MOS transistor below and above threshold, floating-gate MOS transistor, phototransducers), static circuits (differential pair, current mirror, transconductance amplifiers, etc.), dynamic circuits (linear and nonlinear filters, adaptive circuits), systems (silicon neuron, silicon retina and cochlea) and an introduction to multi-chip systems that communicate events analogous to spikes. The lectures are accompanied by weekly laboratory sessions on the characterization of neuromorphic circuits, from elementary devices to systems.

Literature
S.-C. Liu et al.: Analog VLSI Circuits and Principles; various publications.

Prerequisites / notice
Particular: The course is highly recommended for those who intend to take the spring semester course 'Neuromorphic Engineering II', that teaches the conception, simulation, and physical layout of such circuits with chip design tools.

Prerequisites: Background in basics of semiconductor physics helpful, but not required.

227-1037-00L Introduction to Neuroinformatics W 6 credits 2V+1U K. A. Martin, M. Cook, V. Mante, M. Pfeiffer

Abstract
The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

Objective
Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monocoloures of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.
This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

Abstract
The lecture will be taught in English.
The course addresses basic science and engineering principles ruling the nano domain. We particularly work out the links between topics. Special emphasis is placed on the emerging field of molecular electronic devices, their working principles, applications, and how they may be assembled. Topics are treated in 2 blocks:

(I) From Quantum to Continuum
From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles.

(II) Interaction Forces on the Micro and Nano Scale
Intermolecular forces, their macroscopic manifestations, and ways to control such interactions.

Homework: Mini-Reviews
Students select a paper (list distributed in class) and expand the topic into a Mini-Review that illuminates the particular field beyond the immediate results reported in the paper.

227-2037-00L Physical Modelling and Simulation Objective
This module consists of (a) an introduction to fundamental equations of electromagnetics, mechanics, and heat transfer, (b) a detailed overview of numerical methods for field simulations, and (c) practical examples solved in form of small projects.

Content
The module begins with an introduction to the fundamental equations and effects of electromagnetics, mechanics, and heat transfer. After the introduction follows a detailed overview of the available numerical methods for solving electromagnetic, thermal and mechanical boundary value problems. This part of the course contains a general introduction into numerical methods, differential and integral forms, linear equation systems, Finite Difference Method (FDM), Boundary Element Method (BEM), Method of Moments (MoM), Multiple Multipole Program (MMP) and Finite Element Method (FEM). The theoretical part of the course finishes with a presentation of multiphysics simulations through several practical examples of HF-engineering such as coupled electromagnetic-mechanical and electromagnetic-thermal analysis of MEMS.

In the second part of the course the students will work in small groups on practical simulation problems. For solving practical problems the students can develop and use own simulation programs or chose an appropriate commercial field solver for their specific problem. This practical simulation work of the students is supervised by the lecturers.

263-5001-00L Introduction to Finite Elements and Sparse Linear System Solving
Abstract
The finite element (FE) method is the method of choice for (approximately) solving partial differential equations on complicated domains. In the first third of the lecture, we give an introduction to the method. The rest of the lecture will be devoted to methods for solving the large sparse linear systems of equation that a typical for the FE method. We will consider direct and iterative methods.

Objective
Students will know the most important direct and iterative solvers for sparse linear systems. They will be able to determine which solver to choose in particular situations.
I. THE FINITE ELEMENT METHOD

(1) Introduction, model problems.
(2) 1D problems. Piecewise polynomials in 1D.
(3) 2D problems. Triangulations. Piecewise polynomials in 2D.
(4) Variational formulations. Galerkin finite element method.
(5) Implementation aspects.

II. DIRECT SOLUTION METHODS

(6) LU and Cholesky decomposition.
(7) Sparse matrices.
(8) Fill-reducing orderings.

III. ITERATIVE SOLUTION METHODS

(9) Stationary iterative methods, preconditioning.
(10) Preconditioned conjugate gradient method (PCG).
(11) Incomplete factorization preconditioning.
(12) Multigrid preconditioning.
(13) Nonsymmetric problems (GMRES, BiCGstab).
(14) Indefinite problems (SYMMLQ, MINRES).

Literature

Prerequisites / notice

Prerequisites: Linear Algebra, Analysis, Computational Science.
The exercises are made with Matlab.

376-1103-00L Frontiers in Nanotechnology

4 credits

V. Vogel, further lecturers

Abstract

Many disciplines are meeting at the nanoscale, from physics, chemistry to engineering, from the life sciences to medicine. The course will prepare students to communicate more effectively across disciplinary boundaries, and will provide them with deep insights into the various frontiers.

Objective

Building upon advanced technologies to create, visualize, analyze and manipulate nano-structures, as well as to probe their nano-chemistry, nano-mechanics and other properties within manmade and living systems, many exciting discoveries are currently made. They change the way we do science and result in so many new technologies.

The goal of the course is to give Master and Graduate students from all interested departments an overview of what nanotechnology is all about, from analytical techniques to nanosystems, from physics to biology. Students will start to appreciate the extent to which scientific communities are meeting at the nanoscale. They will learn about the specific challenges and what is currently sizzling in the respective fields, and learn the vocabulary that is necessary to communicate effectively across departmental boundaries.

Each lecturer will first give an overview of the state-of-the-art in his/her field, and then describe the research highlights in his/her own research group. While preparing their Final Projects and discussing them in front of the class, the students will deepen their understanding of how to apply a range of new technologies to solve specific scientific problems and technical challenges. Exposure to the different frontiers will also improve their ability to conduct effective nanoscope research, recognize the broader significance of their work and to start collaborations.

Content

Starting with the fabrication and analysis of nanoparticles and nanostructured materials that enable a variety of scientific and technical applications, we will transition to discussing biological nanosystems, how they work and what bioinspired engineering principles can be derived, to finally discussing biomedical applications and potential health risk issues. Scientific aspects as well as the many of the emerging technologies will be covered that start impacting so many aspects of our lives. This includes new phenomena in physics, advanced materials, novel technologies and new methods to address major medical challenges.

Lecture notes

All the enrolled students will get access to a password protected website where they can find pdf files of the lecture notes, and typically 1-2 journal articles per lecture that cover selected topics.

376-1219-00L Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions

3 credits

R. Riener, R. Gassert, L. Marchal Crespo

Abstract

Rehabilitation Engng is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective

Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.
Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces

Literature
Introductory Books:

Selected Journal Articles and Web Links:

Prerequisites / notice
Target Group:
- Students of higher semesters and PhD students of D-MAVT, D-ITET, D-INFK, D-HEST
- Biomedical Engineering, Robotics, Systems and Control
- Medical Faculty, University of Zurich
Students of other departments, faculties, courses are also welcome
This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

376-1279-00L Virtual Reality in Medicine W 3 credits 2V R. Riener
Virtual Reality has the potential to support technical principles of multi-modal (audiovisual, haptic, tactile etc.) input devices, displays and rendering techniques. Examples are presented in the fields of surgical training, intra-operative augmentation, and rehabilitation. The lecture is accompanied by practical courses and excursions.

Provide theoretical and practical knowledge of new principles and applications of multi-modal simulation and interface technologies in medical education, therapy, and rehabilitation.

This lecture will introduce the technical requirements and principles of multi-modal input devices, displays, and rendering techniques. Several examples are presented that are currently being developed or already applied for surgical training, intra-operative augmentation, and rehabilitation. The lecture will be accompanied by several practical courses on graphical and haptic display devices as well as excursions to facilities equipped with large-scale VR equipment.

Target Group: Students of higher semesters and PhD students of
- D-HEST, D-MAVT, D-ITET, D-INFK, D-PHY
- Robotics, Systems and Control Master
- Biomedical Engineering/Movement Science and Sport
- Medical Faculty, University of Zurich

Students of other departments, faculties, courses are also welcome!

This course is an introduction to techniques in micro/nanotechnology and to microfluidics. It reviews how many familiar devices are built and in which way they work. Students will acquire the ability to independently load, plot, and process kinematic, kinetic and electromyographical data using the MATLAB computing environment. Both the data and the methods of analysis will be typical for experiments in Human Movement Science (i.e. kinematics, kinetics and electromyography).

Students will learn to import, process and graphically present experimental data using the MATLAB computing environment. Both the data and the methods of analysis will be typical for experiments in Human Movement Science (i.e. kinematics, kinetics and electromyography). Drawbacks of Excel; Possibilities in MATLAB; Import of several data formats; Plot of one and more signals; Removing of an offset and filtering of data based on self-written functions; Normalisation and parametrisation of data; Reliability; Interpolation, Differentiation and Integration in MATLAB.

Mostly formal lectures (2 × 45 min), with a 2 hour visit and introduction to cleanroom and micro/nanotechnology instruments, last 3 sessions would be dedicated to the presentation and evaluation of projects by students (3 students per team).

Nanotech center and lab visit at IBM would be mandatory, as well as attending the student project presentations.

Students of higher semesters and PhD students of
- D-HEST, D-MAVT, D-ITET, D-INFK, D-PHY
- Robotics, Systems and Control Master
- Biomedical Engineering/Movement Science and Sport
- Medical Faculty, University of Zurich

Students of other departments, faculties, courses are also welcome!

Nanotech center and lab visit at IBM would be mandatory, as well as attending the student project presentations.

The main objective of the course is to introduce micro/nanotechnology and microfluidics to students having a background in the life sciences. The course should familiarize the students with the techniques used in micro/nanotechnology and show them how micro/nanotechnology pervades throughout life sciences. Microfluidics will be emphasized due to their increasing importance in research and medical applications. The second objective is to have life students less intimidated by micro/nanotechnology and make them able to link instruments and techniques to specific problems that they might have in their projects/studies. This will also help students getting access to the ETHZ/IBM Nanotech Center infrastructure if needed.

During the lecture, several electronically available MATLAB introductions are indicated. Course-specific scripts will be provided by the lecturer.

A Laptop with MATLAB installed (v2009 or higher) and wireless internet access is mandatory. Two students can share a laptop if necessary. A MATLAB student version can be obtained at Stud-IDES for free.

Current topics in biomechanics presented by speakers from academia and industry.

Getting insight into actual areas and problems of biomechanics.
Biomechanics of Sports Injuries and Rehabilitation

Abstract
This lecture introduces the basic principles of injury mechanics and rehabilitation focusing on sports injuries.

Objective
Within the scope of this lecture you will learn the basic principles of trauma biomechanics. Based on examples from sports, you will get to know different mechanisms that could possibly result in injury. Investigating the background and cause of injury should allow you to assess the injury risk for sports activities. Furthermore you should be able to develop measures to prevent such injury.

Content
This lecture deals with the basic principles of injury mechanics and rehabilitation. Mechanisms that can result in injury are presented. Furthermore possibilities to prevent injuries are discussed. Thereby the lecture focuses on sports injuries.

Lecture notes
Handouts will be made available.

Literature

Prerequisites / notice
A course work is required. This mark of this course work contributes to the final credits for this lecture. Details will be given during the first lecture.

Medical Physics I

Abstract
Introduction to the fundamentals of medical radiation physics. Functional chain due to radiation exposure from the primary physical effect to the radiobiological and medically manifest secondary effects. Dosimetric concepts of radiation protection in medicine. Mode of action of radiation sources used in medicine and its illustration by means of Monte Carlo simulations.

Objective
Understanding the functional chain from primary physical effects of ionizing radiation to clinical radiation effects. Dealing with dose as a quantitative measure of medical exposure. Getting familiar with methods to generate ionizing radiation in medicine and learn how they are applied for medical purposes. Eventually, the lecture aims to show the students that medical physics is a fascinating and evolving discipline where physics can directly be used for the benefits of patients and the society.

Content
The lecture is covering the basic principles of ionizing radiation and its physical and biological effects. The physical interactions of photons as well as of charged particles will be reviewed and their consequences for medical applications will be discussed. The concept of Monte Carlo simulation will be introduced in the exercises and will help the student to understand the characteristics of ionizing radiation in simple and complex situations. Fundamentals in dosimetry will be provided in order to understand the physical and biological effects of ionizing radiation. Deterministic as well as stochastic effects will be discussed and fundamental knowledge about radiation protection will be provided. In the second part of the lecture series, we will cover the generation of ionizing radiation. By this means, the x-ray tube, the clinical linear accelerator, and different radioactive sources in radiology, radiotherapy and nuclear medicine will be addressed. Applications in radiology, nuclear medicine and radiotherapy will be described with a special focus on the physics underlying these applications.

Lecture notes
A script will be provided.

Physics in Medical Research: From Atoms to Cells

Abstract
Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.

Objective
The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocrybe behaviour.

Content
As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Biostatistics

Abstract
The course deals with simple quantitative and graphical as well as more complex methods of biostatistics. Contents: Descriptive statistics, probability theory and design of experiments, testing hypotheses, confidence intervals, correlation, simple and multiple linear regression, classification and prediction, diagnostic tests, measurement of agreement.

Introduction to Bioinformatics: Concepts and Applications

Abstract
Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.
Objective

Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.

Content

Bioinformatics I will cover the following topics:

- From genes to databases and information
- BLAST searches
- Prediction of gene function and regulation
- RNA structure prediction
- Gene expression analysis using microarrays
- Protein sequence and structure databases
- WWW for bioinformatics
- Protein sequence comparisons
- Proteomics and de novo protein sequencing
- Protein structure prediction
- Cellular and protein interaction networks
- Molecular dynamics simulation

The lecture series will begin with a short historical overview of medical physics and an overview of the lecture series (lecture 1). This will be followed by two lectures on the physics of medical imaging. Medical imaging is one of the most important areas of preventive medicine and diagnosis, and in these two lectures, we will summarise the physical aspects of all the most important medical imaging modalities (X-ray, computed tomography, CT, MRI, Ultrasound imaging etc.). With lectures 4 and 5, we will move onto one of the other major areas of physics in medicine, radiotherapy. As the name implies, this is a physics ‘heavy’ discipline, being dependent as it is on both accelerator and particle physics. However, what is less well known is that this is also the second most successful treatment of cancer after surgery and a great success story for the application of physics to medicine. In lectures 6 and 7 we then move on to a very different area, that of bio-photonics and bio-physics. Here we will look into the applications of lasers in medicine, from therapy to their use in particle acceleration for medical applications, as well as a variety of optical techniques for studying biological tissues, cells and structures. 

The former number of this course unit is 465-0951-00L.

Introduction to the fundamentals of medical radiation physics. Deterministic as well as stochastic effects will be discussed and fundamental knowledge about radiation protection will be provided. In the second part of the lecture series, we will cover the generation of ionizing radiation. By this means, the x-ray tube, the clinical linear accelerator, and different radioactive sources in radiology, radiotherapy and nuclear medicine will be addressed. Applications in radiology, nuclear medicine and radiotherapy will be described with a special focus on the physics underlying these applications.

Einführung in die Strahlenbiologie ionisierender Strahlen: Allgemeine Grundlagen und Begriffsbestimmungen; Mechanismen der biologischen Strahlenwirkung; Strahlenwirkung auf Zellen, Gewebe und Organe; Strahlengenetik: Chromosomenveränderungen, DNA-Defekte, Reparaturprozesse; Molekulare Strahlenbiologie: Bedeutung inter- und intrazellulärer Signalübermittlungsprozesse, Apoptose, Zellzyklus-Checkpoints; Strahlensyndrome, Krebsinduktion, Mutationsauslösung, pränatale Strahlenwirkung; Strahlenbiologische Grundlagen des Strahlenschutzes; Nutzen-Risiko-Abwägungen bei der medizinischen Strahlenanwendung; Prädiktive strahlenbiologische Methoden zur Optimierung der therapeutischen Strahlenanwendung.

These courses are particularly recommended for the Medical Physics track. Please consult your track advisor if you wish to select other subjects.

| Objective | By the end of this course the participants will be able to:  

a) interpret the 5 Rs of radiation oncology in the context of the hallmarks of cancer  
b) understand factors which underpin the differing radiosensitivities of different tumors  
c) follow rational strategies for combined treatment modalities of ionizing radiation with targeted agents  
d) understand differences in the radiation response of normal tissue versus tumor tissue  
e) understand different treatment responses of the tumor and the normal tissue to differential clinical-related parameters of radiotherapy (dose rate, LET etc.). | |

Autumn Semester 2016
Page 306 of 1571
Objective
The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidoic and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

Other Elective Courses
These courses may be suitable for the Medical Physics track. Please consult your track advisor.

Abstract
This course offers an introduction into the structure and function of the human body, and how these are interlinked with one another. Focusing on physiology, the visualization of anatomy is supported by 3D-animation, Computed Tomography and Magnetic Resonance imaging.

Objective
To understand basic principles and structure of the human body in consideration of the clinical relevance and the medical terminology used in medical work and research.

Content
- The Human Body: nomenclature, orientations, tissues
  - Musculoskeletal system, Muscle contraction
  - Blood vessels, Heart, Circulation
  - Blood, Immune system
  - Respiratory system
  - Acid-Base-Homeostasis

Abstract
The course offers an introduction into cellular and molecular biology, specifically for students with a background in engineering. The course will focus on the basic organization of eukaryotic cells, molecular mechanisms and cellular functions. Textbook knowledge will be combined with results from recent research and technological innovations in biology.

Objective
After completing this course, engineering students will be able to apply their previous training in the quantitative and physical sciences to modern biology. Students will also learn the principles how biological models are established, and how these models can be tested.

Content
Lectures will include the following topics: DNA, chromosomes, RNA, protein, genetics, gene expression, membrane structure and function, vesicular traffic, cellular communication, energy conversion, cytoskeleton, cell cycle, cellular growth, apoptosis, autophagy, cancer, development and stem cells.

In addition, three journal clubs will be held, where one/two publications will be discussed (part I: 1 Journal club, part II: 2 Journal Clubs). For each journal club, students (alone or in groups of up to three students) have to write a summary and discussion of the publication. These written documents will be graded and count as 25% for the final grade.

Lecture notes
Scripts of all lectures will be available.

Abstract
Many disciplines are meeting at the nanoscale, from physics, chemistry to engineering, from the life sciences to medicine. The course will prepare students to communicate more effectively across disciplinary boundaries, and will provide them with deep insights into the various frontiers.

Objective
Building upon advanced technologies to create, visualize, analyze and manipulate nano-structures, as well as to probe their nano-chemistry, nano-mechanics and other properties within mammalian and living systems, many exciting discoveries are currently made. They change the way we do science and result in so many new technologies.

The goal of the course is to give Master and Graduate students from all interested departments an overview of what nanotechnology is all about, from analytical techniques to nanosystems, from physics to biology. Students will start to appreciate the extent to which scientific communities are meeting at the nanoscale. They will learn about the specific challenges and what is currently sizzling in the respective fields, and learn the vocabulary that is necessary to communicate effectively across departmental boundaries.

Each lecturer will first give an overview of the state-of-the art in his/her field, and then describe the research highlights in his/her own research group. While preparing their Final Projects and discussing them in front of the class, the students will deepen their understanding of how to apply a range of new technologies to solve specific scientific problems and technical challenges. Exposure to the different frontiers will also improve their ability to conduct effective nanoscale research, recognize the broader significance of their work and to start collaborations.

Content
Starting with the fabrication and analysis of nanoparticles and nanostructured materials that enable a variety of scientific and technical applications, we will transition to discussing biological nanosystems, how they work and what bioinspired engineering principles can be derived, to finally discussing biomedical applications and potential health risk issues. Scientific aspects as well as the many of the emerging technologies will be covered that start impacting so many aspects of our lives. This includes new phenomena in physics, advanced materials, novel technologies and new methods to address major medical challenges.

Lecture notes
All the enrolled students will get access to a password protected website where they can find pdf files of the lecture notes, and typically 1-2 journal articles per lecture that cover selected topics.

Abstract
Introduction to molecules used for biomaterials, molecular interactions between different materials and biological systems (molecules, cells, tissues). The concept of biocompatibility is discussed and important techniques from biomaterials research and development are introduced.

Objective
The class consists of three parts:
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Content
Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.

In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

Lecture notes
Handouts can be accessed online.
The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). (available online via ETH library)

Handouts provided during the classes and references therein.

**402-0674-00L**

**Physics in Medical Research: From Atoms to Cells**

**Abstract**

Scanning probe and diffraction techniques allow studying activated atomic processes during early stages of epitaxial growth. For quantitative description, rate equation analysis, mean-field nucleation and scaling theories are applied on systems ranging from simple metallic to complex organic materials. The knowledge is expanded to optical and electronic properties as well as to proteins and cells.

**Objective**

The lecture series is motivated by an overview covering the skin of the crystals, roughness analysis, contact angle measurements, protein absorption/activity and monocyte behaviour.

**Literature**

- W. Gruissem, K. Bärenfaller, A. Caflisch, G. Capitani, J. Fütterer, M. Robinson, A. Wagner

**Prerequisites / notice**

Some of the lectures are given in the English language. Certain sections of the text-book must be studied by self-instruction.
Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.

Bioinformatics I will cover the following topics:

From genes to databases and information
BLAST searches
Prediction of gene function and regulation
RNA structure prediction
Gene expression analysis using microarrays
Protein sequence and structure databases
WWW for bioinformatics
Protein sequence comparisons
Proteomics and de novo protein sequencing
Protein structure prediction
Cellular and protein interaction networks
Molecular dynamics simulation

Introduction and analysis of medical imaging technology including X-ray procedures, computed tomography, nuclear imaging techniques using single photon and positron emission tomography, magnetic resonance imaging and ultrasound imaging techniques. The mathematical framework is developed to describe image encoding/decoding, point-spread function/modular transfer function, signal-to-noise ratio, contrast behavior for each of the methods. Matlab exercises are used to implement and study basic concepts.

---

Biological Engineering and Biotechnology

Objective

The course will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.

Content

Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.

227-0386-00L  Biomedical Engineering  W  4 credits  3G  J. Vörös, S. J. Ferguson, S. Kozerke, U. Moser, M. Rudin, M. P. Wolf, M. Zenobi-Wong

Abstract
Introduction into selected topics of biomedical engineering as well as their relationship with physics and physiology. The focus is on learning the concepts that govern common medical instruments and the most important organs from an engineering point of view. In addition, the most recent achievements and trends of the field of biomedical engineering are also outlined.

Objective
Introduction into selected topics of biomedical engineering as well as their relationship with physics and physiology. The course provides an overview of the various topics of the different tracks of the biomedical engineering master course and helps orienting the students in selecting their specialized classes and project locations.

Content

Practical and theoretical exercises in small groups in the laboratory.

227-0393-10L  Bioelectronics and Biosensors  W  6 credits  2V+2U  J. Vörös, M. F. Yanik, T. Zambelli

New course. Not to be confounded with 227-0393-00L last offered in the Spring Semester 2015.

Abstract
The course introduces the concepts of bioelectricity and biosensing. The sources and use of electrical fields and currents in the context of biological systems and problems are discussed. The fundamental challenges of measuring biological signals are introduced. The most important biosensing techniques and their physical concepts are introduced in a quantitative fashion.

Objective
During this course the students will:
- learn the basic concepts in biosensing and bioelectronics
- be able to solve typical problems in biosensing and bioelectronics
- learn about the remaining challenges in this field

Content
L1. Bioelectronics history, its applications and overview of the field
- Volta and Galvani dispute
- BMI, pacemaker, cochlear implant, retinal implant, limb replacement devices
- Fundamentals of biosensing
- Glucometer and ELISA

L2. Fundamentals of quantum and classical noise in measuring biological signals

L3. Bioengineering techniques with photons

L4. Acoustics sensors
- Differential equation for quartz crystal resonance
- Acoustic sensors and their applications

L5. Engineering principles of optical probes for measuring and manipulating molecular and cellular processes

L6. Optical biosensors
- Differential equation for optical waveguides
- Optical sensors and their applications
- Plasmonic sensing

L7. Basic notions of molecular adsorption and electron transfer
- Quantum mechanics: Schrödinger equation energy levels from H atom to crystals, energy bands
- Electron transfer: Marcus theory, Gerischer theory

L8. Potentiometric sensors
- Fundamentals of the electrochemical cell at equilibrium (Nernst equation)
- Principles of operation of ion-selective electrodes

L9. Amperometric sensors and bioelectric potentials
- Fundamentals of the electrochemical cell with an applied overpotential to generate a faraday current
- Principles of operation of amperometric sensors
- Ion flow through a membrane (Fick equation, Nernst equation, Donnan equilibrium, Goldman equation)

L10. Channels, amplification, signal gating, and patch clamp Y4

L11. Action potentials and impulse propagation

L12. Functional electric stimulation and recording
- MEA and CMOS based recording
- Applying potential in liquid - simulation of fields and relevance to electric stimulation

L13. Neural networks memory and learning

Literature
Plonsey and Barr, Bioelectricity: A Quantitative Approach (Third edition)
### Prerequisites / notice

**227-0965-00L**

**Micro and Nano-Tomography of Biological Tissues**

- **Objective**: Introduction to the basic concepts of X-ray tomographic imaging, image analysis and data quantification at the micro and nano scale with particular emphasis on biological applications.
- **Content**: Synchrotron-based X-ray micro- and nano-tomography is today a powerful technique for non-destructive, high-resolution investigations of a broad range of materials. The high-brilliance and high-coherence of third generation synchrotron radiation facilities allow quantitative, three-dimensional imaging at the micro and nanometer scale and extend the traditional absorption imaging technique to edge-enhanced and phase-sensitive measurements, which are particularly suited for investigating biological samples.
- **Objective**: The course includes a general introduction to the principles of tomographic imaging from image formation to image reconstruction. It provides the physical and engineering basics to understand how imaging beamlines at synchrotron facilities work, looks into the recently developed phase contrast methods, and explores the first applications of X-ray nano-tomographic experiments.
- **Lecture notes**: Will be indicated during the lecture.

**Literature**

- Available online

**227-0981-00L**

**Cross-Disciplinary Research and Development in Medicine and Engineering**

- **Objective**: The main goal of this course is to demonstrate the differences in communication between the fields of medicine and engineering. Since cross-disciplinary collaboration between engineers and medical doctors is indispensable for innovation in health care, this course will bring together engineering students from ETH Zurich and medical students from the University of Zurich to experience the rewards and challenges of such interdisciplinary work in a project based learning environment.
- **Content**: After a general introduction to interdisciplinary communication and detailed background on the collaborative project, the engineering students will receive tailored lectures on the anatomy and physiology of the investigated system. They will then team up with medical students who have received a basic introduction to engineering methodology to collaborate on said project. In the process, they will be coached both by lecturers from ETH Zurich and the University of Zurich, receiving lectures customized to the project. The course will end with each team presenting their solution to a cross-disciplinary audience.
- **Lecture notes**: Handouts and relevant literature will be provided.

**Literature**

- **Script (20 CHF)**

**Prerequisites / notice**

- Chemistry:
  - General undergraduate chemistry
  - including basic chemical kinetics and thermodynamics
- Physics:
  - General undergraduate physics
  - including basic theory of diffraction and basic knowledge of crystal structures

**327-1101-00L**

**Biomineralization**

- **Objective**: The course addresses undergraduate and graduate students interested in getting introduced into the basic concepts of biomineralization.
- **Content**: The course aims to introduce the basic concepts of biomineralization and the underlying principles, such as supersaturation, nucleation and growth of minerals, the interaction of biomolecules with mineral surfaces, and cell biology of inorganic materials creation. An important part of this class is the independent study and the presentation of original literature from the field.
Biominalization is a multidisciplinary field. Topics dealing with biology, molecular and cell biology, solid state physics, mineralogy, crystallography, organic and physical chemistry, biochemistry, dentistry, oceanography, geology, etc. are addressed. The course covers definition and general concepts of biominalization (BM)/ types of biominerals and their function / crystal nucleation and growth / biological induction of BM / control of crystal morphology, habit, shape and orientation by organisms / strategies of compartmentalization / the interface between biomolecules (peptides, polysaccharides) and the mineral phase / modern experimental methods for studying BM phenomena / inter-, intra-, extra- and epicellular BM / organic templates and matrices for BM / structure of bone, teeth (vertebrates and invertebrates) and mollusk shells / calcification / siliification in diatoms, radiolarians and plants / calcium and iron storage / impact of BM on lithosphere and atmosphere/ evolution / taxonomy of organisms.

1. Introduction and overview
2. Biominerals and their functions
3. Chemical control of biominalization
4. Geology of morphology: Organic templates and additives
5. Modern methods of investigation of BM
6. BM in matrices: bone and nacre
7. Vertebrate teeth
8. Invertebrate teeth
9. BM within vesicles: calcite of coccoliths
10. Silica
11. Iron storage and mineralization.

Lecture notes
Script with more than 600 pages with many illustrations will be distributed free of charge.

Literature
3) P. M. Dove, J. J. DeYoreo, S. Weiner (Eds.) Biominalization, Reviews in Mineralogy & Geochemistry Vol. 54, 2003

Prerequisites / notice
Each attendee is required to present a publication from the field. The selection of key papers is provided by the lecturer.

No special requirements are needed for attending. Basic knowledge in chemistry and cell biology is expected.

376-1622-00L Practical Methods in Tissue Engineering W 5 credits 4P K. Würz-Kozak, M. Zenobi-Wong

Abstract
The goal of this course is to teach MSc students the necessary skills for doing research in the fields of tissue engineering and regenerative medicine.

Objective
Practical exercises and demonstrations on topics including sterile cell culture, light microscopy and histology, protein and gene expression analysis, and viability assays are covered. The advantages of 3D cell cultures will be discussed and practical work on manufacturing and evaluating hydrogels and scaffolds for tissue engineering will be performed in small groups. In addition to practical lab work, the course will teach skills in data acquisition/analysis.

402-0341-00L Medical Physics I W 6 credits 2V+1U P. Manser

Abstract
Introduction to the fundamentals of medical radiation physics. Functional chain due to radiation exposure from the primary physical effect to the radiobiological and medically manifest secondary effects. Dosimetric concepts of radiation protection in medicine. Mode of action of radiation sources used in medicine and its illustration by means of Monte Carlo simulations.

Objective
Understanding the functional chain from primary physical effects of ionizing radiation to clinical radiation effects. Dealing with dose as a quantitative measure of medical exposure. Getting familiar with methods to generate ionizing radiation in medicine and learn how they are applied for medical purposes. Eventually, the lecture aims to teach that medical physics is a fascinating and evolving discipline where physics can directly be used for the benefits of patients and the society.

Content
The lecture is covering the basic principles of ionizing radiation and its physical and biological effects. The physical interactions of photons as well as of charged particles will be reviewed and their consequences for medical applications will be discussed. The concept of Monte Carlo simulation will be introduced in the exercises and will help the student to understand the characteristics of ionizing radiation in simple and complex situations. Fundamentals in dosimetry will be provided in order to understand the physical and biological effects of ionizing radiation. Deterministic as well as stochastic effects will be discussed and fundamental knowledge about radiation protection will be provided. In the second part of the lecture series, we will cover the generation of ionizing radiation. By this means, the x-ray tube, the clinical linear accelerator, and different radioactive sources in radiology, radiotherapy and nuclear medicine will be addressed. Applications in radiology, nuclear medicine and radiotherapy will be described with a special focus on the physics underlying these applications.

Lecture notes
A script will be provided.

535-0423-00L Drug Delivery and Drug Targeting W 2 credits 2V J.C. Leroux, D. Brambilla

Abstract
The students gain an overview on current principles, methodologies and systems for controlled delivery and targeting of drugs. This enables the students to understand and evaluate the field in terms of scientific criteria.

Objective
The students dispose of an overview on current principles and systems for the controlled delivery and targeting of drugs. The focus of the course lies on developing a capacity to understand the involved technologies and methods, as well as an appreciation of the chances and constraints of their therapeutic usage, with prime attention on anticancer drugs, therapeutic peptides, proteins, nucleic acids and vaccines.

Content
The course covers the following topics: drug targeting and delivery principles, radiopharmaceuticals, macromolecular drug carriers, liposomes, micelles, micro/nanoparticles, gels and implants, administration of vaccines, delivery of active agents in tissue engineering, targeting at the gastrointestinal level, synthetic carriers for nucleic acid drugs, ophthalmic devices and novel trends in transdermal and nasal drug delivery.

Lecture notes
Selected lecture notes, documents and supporting material will be directly provided or may be downloaded using
http://www.galenik.ethz.ch/teaching/drug_del_drug_targ

The website also displays additional information on peroral delivery systems, transdermal systems and systems for alternative routes (nasal, pulmonary) of delivery. These fields are covered in detail in the course Galenische Pharmazie II (Galenical Pharmacy II).

Literature

Further references will be provided in the course.

636-0507-00L Synthetic Biology II W 4 credits 4A S. Panke, Y. Benenson, J. Stelling

Abstract
7 months biological design project, during which the students are required to give presentations on advanced topics in synthetic biology (specifically genetic circuit design) and then select their own biological system to design. The system is subsequently modeled, analyzed, and experimentally implemented. Results are presented at an international student competition at the MIT (Cambridge).

Objective
The students are supposed to acquire a deep understanding of the process of biological design including model representation of a biological system, its thorough analysis, and the subsequent experimental implementation of the system and the related problems.

Content
Presentations on advanced synthetic biology topics (eg genetic circuit design, adaptation of systems dynamics, analytical concepts, large scale de novo DNA synthesis), project selection, modeling of selected biological system, design space exploration, sensitivity analysis, conversion into DNA sequence (DNA synthesis external) and the design of the system, summarization of results in form of scientific presentation and poster, presentation of results at the iGEM international student competition (www.igem.org).

Lecture notes
Handouts during course
The lecture course aims at providing an advanced understanding of the physiology and metabolism of microorganisms. Emphasis is on processes that are specific to bacteria and archaea and that contribute to the widespread occurrence of prokaryotes. Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest. Emphasis is on concepts of energy generation and assimilation.

### Prerequisites
English

### Objective
The lecture course aims at providing an advanced understanding of the physiology and metabolism of microorganisms.

### Content
- Important biochemical processes specific to bacteria and archaea will be presented that contribute to the widespread occurrence of prokaryotes.
- Applied aspects of microbial biochemistry will be pointed out as well as research fields of current scientific interest.
- Emphasis is on concepts of energy generation and assimilation.

### Literature
- Netter F. Atlas of human anatomy; Elsevier 2014
- Faller A., Schuenke M. The Human Body; Thieme 2004
- Silbernagl S., Despopoulos A. Color Atlas of Physiology; Thieme 2008
- Faller A., Schuenke M. The Human Body; Thieme 2004
- Nettet F. Atlas of human anatomy; Elsevier 2014

### Prerequisites / notice

### Additional Information
- The final presentation of the project is typically at the MIT (Cambridge, US). Other competing schools include regularly Imperial College, Cambridge University, Harvard University, UC Berkeley, Princeton University, CalTech, etc.

This project takes place between end of Spring Semester and beginning of Autumn Semester. Registration in April.

Please note that the number of ECTS credits and the actual work load are disconnected.

### Other Elective Courses

#### These courses may be suitable for the Molecular Bioengineering track. Please consult your track advisor.

Abstract: The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training. The lecture will be thought on two afternoons. Some exercises will be built into the lecture.

Objective: Knowledge on structure and content of a scientific text. The course further is arranged to stimulate a discussion on how to properly write a legible scientific text versus writing an interesting novel. We will further discuss the practice of properly citing and critically reflect on recent plagiarism allegations.

Content:
- Topic 1: Structure of a Scientific Text (The Title, the author list, the abstract, State-of-the Art, the "in this paper" paragraph, the scientific part, the summary, Equations, Figures).
- Topic 2: Power Point Presentations.
- Topic 3: Citation Rules and Citation Software.
- Topic 4: Guidelines for Research Integrity.

Literature:
- ETH "Citation Etiquette", see www.plagiate.ethz.ch.

Prerequisites / notice: Students should already have a Bachelor degree and plan to do either a semester project or a master thesis in the immediate future.

Abstract

Biological computers are man-made biological networks that interrogate and control biological hosts-cells and organisms-in which they operate. Their key features, inspired by computer science, are programmability, modularity and versatility. The course will show how to rationally design, implement and test biological computers using molecular engineering, DNA nanotechnology and synthetic biology.

Objective

The course has the following objectives:

* Familiarize students with parallels between theories in computer science and engineering and information-processing in live cells and organisms

* Introduce basic theories of computation

* Introduce approaches to creating novel biological computing systems in non-living environment and in living cells including bacteria, yeast and mammalian/human cells.

The covered approaches will include

- Nucleic acids engineering
- DNA and RNA nanotechnology
- Synthetic biology and gene circuit engineering
- High-throughput genome engineering and gene circuit assembly

* Equip the students with computer-aided design (CAD) tools for biocomputing circuit engineering. A number of tutorials will introduce MATLAB SimBiology toolbox for circuit design and simulations

* Foster creativity, research and communication skills through semester-long "Design challenge" assignment in the broad field of biological computing and biological circuit engineering.
Lecture 1. Introduction: what is molecular computation (part I)?

* What is computing in general?
* What is computing in the biological context (examples from development, chemotaxis and gene regulation)
* The difference between natural computing and engineered biocomputing systems

Lecture 2: What is molecular computation (part II) + State machines

1st hour

* Detailed definition of an engineered biocomputing system
* Basics of characterization
* Design challenge presentation

2nd hour

* Theories of computation: state machines (finite automata and Turing machines)

Lecture 3: Additional models of computation

* Logic circuits
* Analog circuits
* RAM machines

Basic approaches to computer science notions relevant to molecular computation. (i) State machines; (ii) Boolean networks; (iii) analog computing; (iv) distributed computing. Design Challenge presentation.

Lecture 4. Classical DNA computing

* Adleman experiment
* Maximal clique problem
* SAT problem

Lecture 5: Molecular State machines through self-assembly

* Tiling implementation of state machine
* DNA-based tiling system
* DNA/RNA origami as a spin-off of self-assembling state machines

Lecture 6: Molecular State machines that use DNA-encoded tapes

* Early theoretical work
* Tape extension system
* DNA and enzyme-based finite automata for diagnostic applications

Lecture 7: Introduction to cell-based logic and analog circuits

* Computing with (bio)chemical reaction networks
* Turing computation with ultrasensitivity and cooperativity
* Specific examples

Lecture 8: Transcriptional circuits I

* Introducing transcription-based circuits
* General features and considerations
* Guidelines for large circuit construction

Lecture 9: Transcriptional circuits II

* Large-scale distributed logic circuits in bacteria
* Toward large-scale circuits in mammalian cells

Lecture 10: RNA circuits I

* General principles of RNA-centered circuit design
* Riboswitches and sRNA regulation in bacteria
* Riboswitches in yeast and mammalian cells
* General approach to RNAi-based computing

Lecture 11: RNA circuits II

* RNAi logic circuits
* RNAi-based cell type classifiers
* Hybrid transcriptional/posttranscriptional approaches

Lecture 12: In vitro DNA-based logic circuits

* DNAzyme circuits playing tic-tac-toe against human opponents
* DNA brain

Lecture 13: Advanced topics

* Engineered cellular memory
* Counting and sequential logic
* The role of evolution
* Fail-safe design principles
Stem cells are central in tissue regeneration and repair, and hold great potential for therapy. We will discuss the role of stem cells in health and disease, and possibilities to manipulate their behavior for therapeutic application. Basic molecular and cell biology, engineering and novel technologies relevant for stem cell research and therapy will be discussed.

We will use different diseases to discuss how to potentially model, diagnose or heal them by stem cell based therapies. This will be used as a guiding framework to discuss relevant concepts and technologies in cell and molecular biology, engineering, imaging, bioinformatics, tissue engineering, that are required to manipulate stem cells for therapeutic application.

Topics will include:
- Embryonic and adult stem cells and their niches
- Induced stem cells by directed reprogramming
- Relevant basic cell biology and developmental biology
- Relevant molecular biology
- Cell culture systems
- Cell fates and their molecular control by transcription factors and signalling pathways
- Cell reprogramming
- Disease modelling
- Tissue engineering
- Bioimaging, Bioinformatics
- Single cell technologies

In this course, we will present the algorithmic foundations of data mining and its applications in computational biology. The course will feature an introduction to popular data mining problems and algorithms, reaching from classification via clustering to feature selection. This course is intended for both students who are interested in applying data mining algorithms and students who would like to gain an understanding of the key algorithmic concepts in data mining.

Tentative list of topics:
1. Distance functions
2. Classification
3. Clustering
4. Feature Selection

This course will be presented in form of slides. Will be provided during the course.

Basic understanding of mathematics, as taught in basic mathematics courses at the Bachelor's level.

Students are introduced to the basics of semiconductors, microelectronics, microtechnology, and silicon process technology. They will get to know the fabrication of silicon-based microdevices and -systems by a sequence of defined batch processing steps as well as dedicated microfabrication processes.

Students are introduced to the basics of semiconductors, microelectronics, microtechnology, and silicon process technology. They will get to know the different fabrication methods for various microdevices and systems.

Introduction to semiconductors, microelectronics, microtechnology, and micro electro mechanical systems (MEMS)
This course intends to enable all students to:

Prerequisites / notice
The information on the web can be updated until the beginning of the semester.

---

**Electives**

*The MSc Electives will be held in Zürich or Basel*

<tr>
<td>Content</td>
<td>Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.</td>

Microfluidics describes the behaviour, control and manipulation of fluids that are geometrically constrained within sub-microliter environments. The use of microfluidic devices offers an opportunity to control physical and chemical processes with unrivalled precision, and in turn provides a route to performing chemistry and biology in an ultra-fast and high-efficiency manner.

### Course Overview

**Microfluidic Engineering**

**Objective**

Students know and understand:
- **Basic Concepts**
  - Key scaling laws
- **Microfluidic Device Manufacture**
  - Conventional lithographic processing of rigid materials
  - Soft lithographic processing of plastics and polymers
- **Unit Operations and Functional Components**
  - Chemical and biological synthesis
  - Sample pre-treatment (filtration, SPE, pre-concentration)
  - Molecular detection
- **Design Workshop**
  - Design of microfluidic architectures for PCR, distillation & mixing
  - Contemporary Applications in Biological Analysis
  - Microarrays
  - Cellular analyses (single cells, enzymatic assays, cell sorting)
  - Proteomics
- **System Integration**
  - Applications in radiochemistry, diagnostics and high-throughput experimentation

**Content**

Specific topics in the course include, but not limited to:

1. **Theoretical Concepts**
   - Features of mass and thermal transport on the microscale
   - Key scaling laws
2. **Microfluidic Device Manufacture**
   - Conventional lithographic processing of rigid materials
   - Soft lithographic processing of plastics and polymers
3. **Unit Operations and Functional Components**
   - Chemical and biological synthesis
   - Sample pre-treatment (filtration, SPE, pre-concentration)
   - Molecular detection
4. **Design Workshop**
   - Design of microfluidic architectures for PCR, distillation & mixing
5. **Contemporary Applications in Biological Analysis**
   - Microarrays
   - Cellular analyses (single cells, enzymatic assays, cell sorting)
   - Proteomics
6. **System Integration**
   - Applications in radiochemistry, diagnostics and high-throughput experimentation

### Lecture Notes

Lecture handouts, background literature, problem sheets and notes will be provided electronically.

### Literature

- **J.C. Leroux, D. Brambilla**
- **EMEA Dossier for Humira**
- **Lecture Handouts**
- **Handouts to the lectures will be available for downloading under [http://www.galenik.ethz.ch/teaching/drug_del_drug_targ](http://www.galenik.ethz.ch/teaching/drug_del_drug_targ)**
The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments. Detailed knowledge in (1) the different areas of prokaryotic and eukaryotic genomics, in particular in the biosynthesis of genes and proteins, and the principles of carbohydrate/protein interaction, 4) the function of lectins, 5) the role of glycans in infectious disease.

Objective

Structure and linkages; analytical approaches; N-linked protein glycosylation (ER, Golgi); glycan-assisted protein folding and quality control; O-linked protein glycosylation; glucosaminoglycans; glycolipids; prokaryotic glycosylation pathways; lectins; glycans and infectious disease

Content

The aim of this course is to introduce certain topics in Probability Theory and Stochastic Processes that have been specifically selected for their relevance to biological research. In many biological processes, ranging from gene-expression to evolution, randomness plays an important role that can only be understood using stochastic models. This course will provide the students with a theoretical foundation for developing such stochastic models and analyzing reading based on their research interests.

Content

The first half of the course will cover the basics of Probability Theory while the second half will delve into the theory of Stochastic Processes. Below is the list of topics that will be covered in the course.

1. The mathematical representation of random phenomena: The probability space, properties of the probability measure, Independence of events, Conditional probability and Bayes formula, applications to parameter inference.
3. Convergence of Random Variables: Modes of convergence, Laws of large numbers, the central limit theorem, the law of the iterated logarithm, Applications to the analysis of cell population data.

Literature

While no specific textbook will be followed, much of the material and homework problems will be taken from the following books:

Prerequisites / notice

The course will involve a healthy balance between mathematical rigor (theorem proving) and biological applications. Students are expected to have a good grasp of Linear Algebra and Multivariable Calculus. Basic knowledge of set theory will also be needed. Students should be prepared for abstract reasoning.

- Computational Biology: Attendees will learn which information is contained in genetic sequencing data and how to extract information from them using computational tools. The main concepts introduced are:
  * stochastic models in molecular evolution
  * phylogenetic & phylodynamic inference
  * maximum likelihood and Bayesian statistics

- The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments from the output of the sequencers. We then present methods to directly analyze the output data, such as BLAST algorithm, GWAS approaches). Second, we introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Third, we employ evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylotypes. Finally, we introduce the field of phylodynamics. The aim of this field is to understand and quantify the population dynamics of infectious diseases, such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the course, the models and methods are illustrated on different datasets providing insights into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades. Students will be trained in the algorithms and their application both on paper and in silico as part of the exercises.
**Lecture notes**
Slides of the lecture will be available online.
https://www.bsse.ethz.ch/cevo/education/cb-materials.html

**Literature**
The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:

- Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST

**Prerequisites / notice**
Basic knowledge in linear algebra, analysis, and statistics will be helpful. Some programming experience will be useful for the exercises, but is not required. Programming skills will not be tested in the examination.

**636-0501-00L Advanced Immunology**

- S. Panke, Y. Benenson, J. Stelling

**Abstract**
7 months biological design project, during which the students are required to give presentations on advanced topics in synthetic biology (specifically genetic circuit design) and then select their own biological system to design. The system is subsequently modeled, analyzed, and experimentally implemented. Results are presented at an international student competition at the MIT (Cambridge).

**Objective**
The students are supposed to acquire a deep understanding of the process of biological design including model representation of a biological system, design and thorough analysis, and the subsequent experimental implementation of the system and the related problems.

**Content**
Presentations on advanced synthetic biology topics (eg genetic circuit design, adaptation of systems dynamics, analytical concepts, large scale de novo DNA synthesis), project selection, modeling of selected biological system, design space exploration, sensitivity analysis, conversion into DNA sequence, (DNA synthesis external,) implementation and analysis of design, summary of results in form of scientific presentation and poster, presentation of results at the iGEM international student competition (www.igem.org).

**Lecture notes**
Handouts during course

**Prerequisites / notice**
The final presentation of the project is typically at the MIT (Cambridge, US). Other competing schools include regularly Imperial College, Cambridge University, Harvard University, UC Berkeley, Princeton University, CalTech, etc.

This project takes place between end of Spring Semester and beginning of Autumn Semester. Registration in April.

Please note that the number of ECTS credits and the actual work load are disconnected.

**636-0508-00L Genomics in Drug Discovery Research**

**636-0706-00L Spatio-Temporal Modelling in Biology**
- **W**
- 5 credits
- 3G
- D. Iber

**Abstract**
This course focuses on modeling spatio-temporal problems in biology, in particular on the cell and tissue level. A wide range of mathematical techniques will be presented as part of the course, including concepts from non-linear dynamics (ODE and PDE models), stochastic techniques (SDE, Master equations, Monte Carlo simulations), and thermodynamic descriptions.

**Objective**
The aim of the course is to introduce students to state-of-the-art mathematical modelling of spatio-temporal problems in biology. Students will learn how to chose from a wide range of modelling techniques and how to apply these to further our understanding of biological mechanisms. The course aims at equipping students with the tools and concepts to conduct successful research in this area; both classical as well as recent research work will be discussed.

**Content**
1. Introduction to Modelling in Biology
   2. Morphogen Gradients
   3. Turing Pattern
   4. Travelling Waves & Wave Pinning
   5. Application Example 1: Dorso-ventral axis formation
   6. Chemotaxis, Cell Adhesion & Migration
   7. Introduction to Numerical Methods
   8. Simulations on Growing Domains
   9. Image-Based Modelling
   10. Branching Processes
   11. Cell-based Simulation Frameworks
   12. Application Example 2: Limb Development
   13. Summary

**Lecture notes**
All lecture material will be made available online
https://www.bsse.ethz.ch/cobi/education/636-0706-00L_Spatial_Modelling_in_Biology.html

**Literature**

- Szallasi et al, System Modeling in Cellular Biology, MIT Press
- Wolkenhauer, Systems Biology
- Kreyszig, Engineering Mathematics, Wiley

**Prerequisites / notice**
The course builds on introductory courses in Computational Biology. The course assumes no background in biology but a good foundation regarding mathematical and computational techniques.

**752-4005-00L Food Microbiology I**
- **W**
- 3 credits
- 2V
- M. Loessner

**Abstract**
For students of the study programme Biology BSc the course can only be selected as 4th concept course.

**Objective**
This lecture is the first part of a one-year course. It offers insights into the fundamentals and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts and molds present in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

**Notice**
The lecture offers insights into the basics, practical consequences and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts, molds and protozoa in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

The focus of this first part of the lecture will be on the organisms, but also on the factors which determine spoilage and foodborne disease.
Content
1. History of Food Microbiology
   1.1. Short synopsis of foodborne microorganisms
   1.2. Spoilage of Foods
   1.3. Foodborne Disease
   1.4. Food Preservation
   1.5. VIP's of Food Microbiology
2. Overview of Microorganisms in Foods
   2.1. Origin of foodborne Microorganisms
   2.2. Bacteria
   2.3. Yeasts
   2.4. Molds
   3. Microbial Spoilage of Foods
      3.1. Intrinsic and Extrinsic Parameters
      3.2. Meats, Seafoods, Eggs
      3.3. Milk and Milk Products
      3.4. Vegetable and Fruit Products
      3.5. Miscellaneous (baked goods, nuts, spices, ready-to-eat products)
      3.6. Drinks and Canned Foods
4. Foodborne Disease
   4.1. Significance and Transmission of Foodborne pathogens
   4.2. Staphylococcus aureus
   4.3. Gram-positive Sporeformers (Bacillus & Clostridium)
   4.4. Listeria monocytogenes
   4.5. Salmonella, Shigella, Escherichia coli
   4.6. Vibrio, Yersinia, Campylobacter
   4.7. Brucella, Mycobacterium
   4.8. Parasites
   4.9. Viruses and Bacteriophages
   4.10. Mycotoxins
   4.11. Bioactive Amines
   4.12. Miscellaneous (Antibiotic-resistant Bacteria, Biofilms)

Lecture notes
Electronic copies of the presentation slides (PDF) and additional material will be made available for download.

Literature
Recommendations will be given in the first lecture

636-0021-00L Mathematical Modelling in Systems Biology  W+ 5 credits 3G D. Iber
Abstract
Basic concepts and mathematical tools to explore biochemical reaction kinetics and biological network dynamics.

Objective
The aim of the course is to provide an introductory overview of mathematical and computational methods to analyse biological network dynamics.

Content
1. Introduction to Mathematical Modeling
2. Introduction to Biochemical Reaction Modeling
3. Model Analysis: Phase Plane
4. Model Analysis: Linear Stability Analysis
5. Model Analysis: Bifurcation Analysis
6. Regulatory Feedback: Switches
7. Regulatory Feedback: Adaptation
8. Regulatory Feedback: Oscillations and Delay Equations
9. Receptor Signaling and Signaling Cascades
10. Network Properties: Sensitivity and Robustness
11. Introduction to Parameter Estimation

Lecture notes

Literature
- Keener and Sneyd, Mathematical Physiology, Springer
- Klipp et al, Systems Biology in Practice, Wiley

Prerequisites / notice
Introductory courses in Mathematics (Linear Algebra, Differential Equations, Numerics) and basic concepts of programming.

Research Project
Number Title Type ECTS Hours Lecturers
636-0801-00L Research Project O 20 credits 46A Lecturers
Abstract
In a research project students extend their knowledge in a particular field, get acquainted with the scientific way of working, and learn to work on an actual research topic. Research projects are carried out in a core or optional subject area as chosen by the student.

Objective
Students get acquainted with scientific working methods and deepen their knowledge in a particular research area.

Master's Thesis
Number Title Type ECTS Hours Lecturers
636-0900-00L Master's Thesis O 40 credits 91D Professors
Abstract
Only students who fulfill the following criteria are allowed to begin with their master thesis:
a. successful completion of the bachelor programme;
b. successful completion of any additional requirements necessary to gain admission to the master programme.

Objective
In the Master Thesis students prove their ability to independent, structured and scientific working. The Master thesis is carried out under the supervision of a professor in a research group of the D-BSSE, usually at the D-BSSE. Students are free to choose the area.

GESS Science in Perspective
Recommended GESS Science in Perspective (Type B) for D-BSSE.

</tr>
</tbody>
</table>

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

**Abstract**
The course introduces concepts of bioinformatics starting from first principles: DNA sequence alignment, phylogenetic tree inference, genome annotation, protein structure and function prediction. Key methods and algorithms are covered, including dynamic programming, Markov and Hidden Markov models, and molecular dynamics simulations. Practical applications and limitations are discussed.

**Objective**
The course aims at introducing the fundamental concepts and methods of bioinformatics. Emphasis is given to a deep understanding of the methods' foundations and limitations to enable critical evaluations and applications of bioinformatics tools in areas such as biotechnology and systems biology.

**Content**

- From "Understanding Bioinformatics":
  - Chapter 4: Producing and Analyzing Sequence Alignments
  - Chapter 5: Pairwise Sequence Alignment and Database Searching
  - Chapter 6: Patterns, Profiles, and Multiple Alignments
  - Chapter 7: Recovering Evolutionary History
  - Chapter 8: Building Phylogenetic Trees
  - Chapter 9: Revealing Genome Features
  - Chapter 10: Gene Detection and Genome Annotation
  - Chapter 11: Obtaining Secondary Structure from Sequence
  - Chapter 12: Predicting Secondary Structures
  - Chapter 13: Modeling Protein Structure
  - Chapter 14: Analyzing Structure-Function Relationships

- From "Biological Sequence Analysis":
  - Sections 3.1, 3.2, 3.3, 4.1, 4.2, 4.4, 5.2, 5.3, 5.4, 6.5 (Markov Chains and Hidden Markov Models)

- From "A First Course in Systems Biology":
  - Chapter 1: Biological Systems

**Lecture notes**
Course material will be made available at: http://www.csb.ethz.ch

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

**Abstract**
This lecture course gives an in-depth view into molecular mechanisms controlling basic biological processes, ranging from genetic regulatory networks, the internal functional organization of a cell to the signaling events controlling cells in their social context. An additional focus is on methods and techniques used in molecular biology to solve problems in biotechnology and medicine.

**Objective**
The goal is to achieve a high level knowledge of basic biological processes, to learn the methodology to tackle questions in molecular biology and to interpret experimental molecular data. Emphasis is given to cellular processes amenable to studies in systems and synthetic biology.

Chapter 4 DNA, Chromosomes, and Genomes
p. 173-216

Chapter 5 DNA Replication, Repair, and Recombination
p. 237-286

Chapter 6 How Cells Read the Genome: From DNA to Protein
p. 299-362

Chapter 7 Control of Gene Expression
p. 369-438

Chapter 8 Analyzing Cells, Molecules, and Systems
p. 439-508

Chapter 9 Visualizing Cells
p. 529-562

Chapter 10 Membrane Structure
p. 565-594

Chapter 11 Membrane Transport of Small Molecules and the Electrical Properties of Membranes
p. 597-638

Chapter 12 Intracellular Compartments and Protein Sorting
p. 641-691

Chapter 13 Intracellular Membrane Traffic
p. 695-750

Chapter 15 Cell Signaling
p. 813-880

Chapter 17 The Cell Cycle
p. 963-1018

Chapter 18 Cell Death
p. 1021-1034

Chapter 20 Cancer
p. 1091-1141

Chapter 22 Stem Cells and Tissue Renewal
p. 1217-1260

Lecture notes
Use the respective end-of-chapter problems section (“Which statements are true?”) to test your knowledge and prepare for exam.

Book Summary
As the amount of information in biology expands dramatically, it becomes increasingly important for textbooks to distill the vast amount of scientific knowledge into concise principles and enduring concepts. As with previous editions, Molecular Biology of the Cell, Sixth Edition accomplishes this goal with clear writing and beautiful illustrations. The Sixth Edition has been extensively revised and updated with the latest research in the field of cell biology, and it provides an exceptional framework for teaching and learning.

The entire illustration program has been greatly enhanced. Protein structures better illustrate structure-function relationships, icons are simpler and more consistent within and between chapters, and micrographs have been refreshed and updated with newer, clearer, or better images. As a new feature, each chapter now contains intriguing open-ended questions highlighting “What We Don’t Know” introducing students to challenging areas of future research. Updated end-of-chapter problems reflect new research discussed in the text, and these problems have been expanded to all chapters by adding questions on developmental biology, tissues and stem cells, pathogens, and the immune system.

Prerequisites / notice
During the semester two half days will be offered to discuss the content and allow questions to the lecturer.

**Abstract**

Course that focuses on an in-depth understanding of object-oriented programming and compares designs of object-oriented programming languages. Topics include different flavors of type systems, inheritance models, encapsulation in the presence of aliasing, object and class initialization, program correctness, reflection

**Objective**

After this course, students will:
- Have a deep understanding of advanced concepts of object-oriented programming and their support through various language features.
- Be able to understand language concepts on a semantic level and be able to compare and evaluate language designs.
- Be able to learn new languages more rapidly.
- Be aware of many subtle problems of object-oriented programming and know how to avoid them.

**Content**

The main goal of this course is to convey a deep understanding of the key concepts of sequential object-oriented programming and their support in different programming languages. This is achieved by studying how important challenges are addressed through language features and programming idioms. In particular, the course discusses alternative language designs by contrasting solutions in languages such as C++, C#, Eiffel, Java, Python, and Scala. The course also introduces novel ideas from research languages that may influence the design of future mainstream languages.

The topics discussed in the course include among others:
- The pros and cons of different flavors of type systems (for instance, static vs. dynamic typing, nominal vs. structural, syntactic vs. behavioral typing)
- The key problems of single and multiple inheritance and how different languages address them
- Generic type systems, in particular, Java generics, C# generics, and C++ templates
- The situations in which object-oriented programming does not provide encapsulation, and how to avoid them
- The pitfalls of object initialization, exemplified by a research type system that prevents null pointer dereferencing
- How to maintain the consistency of data structures

**Literature**

Will be announced in the lecture.

**Prerequisites / notice**

Prerequisites: Mastering at least one object-oriented programming language (this course will NOT provide an introduction to object-oriented programming); programming experience

**Abstract**

Main goal is teaching knowledge and skills needed for building custom operating systems and runtime environments. Relevant topics are studied at the example of sufficiently simple systems that have been built at our Institute in the past, ranging from purpose-oriented single processor real-time systems up to generic system kernels on multi-core hardware.

**Objective**

The lecture's main goal is teaching of knowledge and skills needed for building custom operating systems and runtime environments.

The lecture intends to supplement more abstract views of software construction, and to contribute to a better understanding of "how it really works" behind the scenes.

**Content**

Case Study 1: Embedded System
- Safety-critical and fault-tolerant monitoring system
- Based on an auto-pilot system for helicopters

Case Study 2: Multi-Processor Operating System
- Universal operating system for symmetric multiprocessors
- Shared memory approach
- Based on Language-/System Codeign (Active Oberon / A2)

Case Study 3: Custom designed Single-Processor System
- RISC Single-processor system designed from scratch
- Hardware on FPGA
- Graphical workstation OS and compiler (Project Oberon)

Case Study 4: Custom-designed Multi-Processor System
- Special purpose heterogeneous system on a chip
- Massively parallel hard- and software architecture based on message passing
- Focus: dataflow based applications

**Lecture notes**

Printed lecture notes will be delivered during the lecture. Slides will also be available from the lecture homepage.

**Abstract**

This course gives a detailed overview about the 802 standards and summarizes the state of the art for WLANs, WPANs, and WMANs, including new developments such as mesh networks, cognitive radio, and visible light communications. The course combines lectures with a set of assignments in which students are asked to work with a simple JAVA simulation software.

**Objective**

The objective of the course is to learn about the general principles of wireless communications, including physics, frequency spectrum regulation, and standards. Further, the most up-to-date standards and protocols used for wireless LAN IEEE 802.11, Bluetooth and Wi-Fi, mesh networks, sensor networks, cellular networks, visible light communication, and cognitive radios, are analyzed and evaluated.

Students develop their own add-on mobile computing algorithms to improve the behavior of the systems, using a Java-based event-driven simulator. We also hand out embedded systems that can be used for experiments for optical communication.

**Content**

**Lecture notes**

The script will be made available from the course webpage.

**Literature**

(1) The course webpage at http://www.lst.inf.ethz.ch/education/wireless.html
(2) The Java 802 protocol emulator "JEmula802"

**Prerequisites / notice**

Students should have interest in wireless communication, and should be familiar with Java programming.
Introduction to information retrieval with a focus on text documents and images. Main topics comprise extraction of characteristic features from documents, index structures, retrieval models, search algorithms, benchmarking, and feedback mechanisms. Searching the web, images and XML collections demonstrate recent applications of information retrieval and their implementation.

Objective
In depth understanding of managing, indexing, and retrieving documents with text, image and XML content. Knowledge about basic search algorithms on the web, benchmarking of search algorithms, and relevance feedback methods.

252-0373-00L Mobile and Personal Information Systems

Abstract
The course examines how traditional information system architectures and technologies have been adapted to support various forms of mobile and personal information systems. Topics to be covered include: databases of mobile objects; context-aware services; opportunistic information sharing; ambient information; pervasive display systems.

Objective
Students will be introduced to a variety of novel information services and architectures developed for mobile environments in order to gain insight into the requirements and processes involved in designing and developing such systems and learning to think beyond traditional information systems.

Content
Advances in mobile devices and communication technologies have led to a rapid increase in demands for various forms of mobile information systems where the users, the applications and the databases themselves may be mobile. Based on both lectures and breakout sessions, this course examines the impact of the different forms of mobility and collaboration that systems require nowadays and how these influence the design of systems at the database, the application and the user interface level. For example, traditional data management techniques have to be adapted to meet the requirements of such systems and cope with new connection, access and synchronisation issues. As mobile devices have increasingly become integrated into the users' lives and are expected to support a range of activities in different environments, applications should be context-aware, adapting functionality, information delivery and the user interfaces to the current environment and task. Various forms of software and hardware sensors may be used to determine the current context, raising interesting issues for discussion. Finally, user mobility, and the varying and intermittent connectivity that it implies, gives rise to new forms of dynamic collaboration that require lightweight, but flexible, mechanisms for information synchronisation and consistency maintenance. Here, the interplay of mobile, personal and social context will receive special attention.

252-0417-00L Randomized Algorithms and Probabilistic Methods

Abstract
Las Vegas & Monte Carlo algorithms; inequalities of Markov, Chebyshev, Chernoff; negative correlation; Markov chains: convergence, rapidly mixing; generating functions; Examples include: min cut, median, balls and bins, routing in hypercubes, 3SAT, card shuffling, random walks.

Objective
After this course students will know fundamental techniques from probabilistic combinatorics for designing randomized algorithms and will be able to apply them to solve typical problems in these areas.

Content
Randomized Algorithms are algorithms that "flip coins" to take certain decisions. This concept extends the classical model of deterministic algorithms and has become very popular and useful within the last twenty years. In many cases, randomized algorithms are faster, simpler or just more elegant than deterministic ones. In the course, we will discuss basic principles and techniques and derive from them a number of randomized methods for problems in different areas.

Lecture notes
Yes.

Literature

252-0437-00L Distributed Algorithms

Abstract
Models of distributed computations, time space diagrams, virtual time, logical clocks and causality, wave algorithms, parallel and distributed graph traversal, consistent snapshots, mutual exclusion, election and symmetry breaking, distributed termination detection, garbage collection in distributed systems, monitoring distributed systems, global predicates.

Objective
Become acquainted with models and algorithms for distributed systems.

Content
Verteilte Algorithmen sind Verfahren, die dadurch charakterisiert sind, dass mehrere autonome Prozesse gleichzeitig Teile eines gemeinsamen Problems in kooperativer Weise bearbeiten und der dabei erforderliche Informationsaustausch ausschliesslich über Nachrichten erfolgt. Derartige Algorithmen kommen im Rahmen verteilter Systeme zum Einsatz, bei denen kein gemeinsamer Speicher existiert und die Übertragungszeit von Nachrichten i.a. nicht vernachlässigt werden kann. Da dabei kein Prozess eine aktuelle konsistente Sicht des globalen Zustands besitzt, führt dies zu interessanten Problemen. Im einzelnen werden u.a. folgende Themen behandelt: Verteilte Berechnungen; Raum-Zeit-Diagramme; Virtuelle Zeit; Logische Uhren und Kausalität; Wellenalgorithmen; Verteilte und parallele Graphtraversierung; Berechnung konsistenter Schnappschüsse; Wechselseitiger Ausschluss; Election und Symmetriebrechung; Verteilte Terminierung; Garbage-Collection in verteilten Systemen; Beobachten verteilter Systeme; Berechnung globaler Prädikate.

252-0463-00L Security Engineering

Abstract
Subject of the class are engineering techniques for developing secure systems. We examine concepts, methods and tools, applied within the different activities of the SW development process to improve security of the system. Topics: security requirements & risk analysis, system modeling & model-based development methods, implementation-level security, and evaluation criteria for secure systems.

Objective
Security engineering is an evolving discipline that unifies two important areas: software engineering and security. Software Engineering addresses the development and application of methods for systematically developing, operating, and maintaining, complex, high-quality software. Security, on the other hand, is concerned with assuring and verifying properties of a system that relate to confidentiality, integrity, and availability of data.

The goal of this class is to survey engineering techniques for developing secure systems. We will examine concepts, methods, and tools that can be applied within the different activities of the software development process, in order to improve the security of the resulting systems.

Topics covered include
- security requirements & risk analysis,
- system modeling and model-based development methods,
- implementation-level security, and
- evaluation criteria for the development of secure systems.
Security engineering is an evolving discipline that unifies two important areas: software engineering and security. Software Engineering addresses the development and application of methods for systematically developing, operating, and maintaining, complex, high-quality software. Security, on the other hand, is concerned with assuring and verifying properties of a system that relate to confidentiality, integrity, and availability of data.

The goal of this class is to survey engineering techniques for developing secure systems. We will examine concepts, methods, and tools that can be applied within the different activities of the software development process, in order to improve the security of the resulting systems.

Topics covered include

* security requirements & risk analysis,
* system modeling and model-based development methods,
* implementation-level security, and
* evaluation criteria for the development of secure systems

Modules taught:

1. Introduction
   - Introduction of Infsec group and speakers
   - Security meets SW engineering: an introduction
   - The activities of SW engineering, and where security fits in
   - Overview of this class
2. Requirements Engineering: Security Requirements and some Analysis
   - overview: functional and non-functional requirements
   - use cases, misuse cases, sequence diagrams
   - safety and security
   - FMEA, FTA, attack trees
3. Modeling in the design activities
   - structure, behavior, and data flow
   - class diagrams, statecharts
4. Model-driven security for access control (design)
   - SecureUML as a language for access control
   - Combining Design Modeling Languages with SecureUML
   - Semantics, i.e., what does it all mean,
   - Generation
   - Examples and experience
5. Model-driven security (Part II)
   - Continuation of above topics
6. Security patterns (design and implementation)
7. Implementation-level security
   - Buffer overflows
   - Input checking
   - Injection attacks
8. Testing
   - overview
   - model-based testing
   - testing security properties
9. Risk analysis and management 1 (project management)
   - "risk": assets, threats, vulnerabilities, risk
   - risk assessment: quantitative and qualitative
   - safeguards
   - generic risk analysis procedure
   - The OCTAVE approach
10. Risk analysis: IT baseline protection
    - Overview
    - Example
11. Evaluation criteria
    - CMM
    - systems security engineering CMM
    - common criteria
12. Guest lecture
    - TBA

Literature
- Further relevant books and journal/conference articles will be announced in the lecture.

Algorithmic Game Theory

J. Novak

No lecture notes, but slides will be made available on the course webpage.

The course requires solid basic knowledge in analysis, statistics and numerical methods for CSE as well as practical programming experience for solving assignments.

Students should at least have followed one previous course offered by the Machine Learning Institute (e.g., CIL or LIS) or an equivalent course offered by another institution.

**Prerequisites:**

Fundamentals of calculus and linear algebra, basic concepts of algorithms and data structures, programming skills in C++, Visual Computing course recommended.

No lecture notes.

**Lecture notes / notice:**

The programming assignments will be in C++. This will not be taught in the class.

**Prerequisites:**

No prerequisites.

**Lecture notes / notice:**

Fundamentals of calculus and linear algebra, basic concepts of algorithms and data structures, basic programming skills in C++. Knowledge on numerical mathematics as well as ordinary and partial differential equations is an asset, but not required.

**Prerequisites / notice:**

Fundamentals of calculus and physics, basic concepts of algorithms and data structures, basic programming skills in C++. Knowledge on numerical mathematics as well as ordinary and partial differential equations is an asset, but not required.

**Prerequisites / notice:**

Fundamentals of calculus and physics, basic concepts of algorithms and data structures, basic programming skills in C++. Knowledge on numerical mathematics as well as ordinary and partial differential equations is an asset, but not required.

**Prerequisites:**

Fundamentals of calculus and algorithms, data structures, and algorithms. The practical exercises include three assignments which are to be solved in small groups. In an additional course project, topics from the lecture will be implemented into a 3D game or a comparable application.

**Abstract:**

This course covers some of the fundamental concepts of computer graphics, namely 3D object representations and generation of photorealistic images from digital representations of 3D scenes.

**Objective:**

At the end of the course the students will be able to build a rendering system. The students will study the basic principles of rendering and image synthesis. In addition, the course is intended to stimulate the students' curiosity to explore the field of computer graphics in subsequent courses or on their own.

**Content:**

This course covers fundamental concepts of modern computer graphics. Students will learn about 3D object representations and the details of how to generate photorealistic images from digital representations of 3D scenes. Starting with an introduction to 3D shape modeling and representation, texture mapping and ray-tracing, we will move on to acceleration structures, the physics of light transport, appearance modeling and global illumination principles and algorithms. We will end with an overview of modern image-based image synthesis techniques, covering topics such as lightfields and depth-image based rendering.

**Abstract:**

This lecture provides an introduction to physically-based animation in computer graphics and gives an overview of fundamental methods and algorithms. The practical exercises include three assignments which are to be solved in small groups. In an additional course project, topics from the lecture will be implemented into a 3D game or a comparable application.

**Objective:**

This lecture provides an introduction to physically-based animation in computer graphics and gives an overview of fundamental methods and algorithms. The practical exercises include three assignments which are to be solved in small groups. In an additional course project, topics from the lecture will be implemented into a 3D game or a comparable application.

**Content:**

The lecture covers topics in physically-based modeling, such as particle systems, mass-spring models, finite difference and finite element methods. These approaches are used to represent and simulate deformable objects or fluids with applications in animated movies, 3D games and medical systems. Furthermore, the lecture covers topics such as rigid body dynamics, collision detection, and character animation.

**Abstract:**

Game theory provides a formal model to study the behavior and interaction of self-interested users and programs in large-scale distributed computer systems without central control. The course discusses algorithmic aspects of game theory.

**Objective:**

Learning the basic concepts of game theory and mechanism design, acquiring the computational paradigm of self-interested agents, and using these concepts in the computational and algorithmic setting.

**Content:**

The Internet is a typical example of a large-scale distributed computer system without central control, with users that are typically only interested in their own good. For instance, they are interested in getting high bandwidth for themselves, but don't care about others, and the same is true for computational load or download rates. Game theory provides a particularly well-suited model for the behavior and interaction of such selfish users and programs. Classic game theory dates back to the 1930s and typically does not consider algorithmic aspects at all. Only a few years back, algorithms and game theory have been considered together, in an attempt to reconcile selfish behavior of independent agents with the common good.

This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.

**Outline:**

- Introduction to classic game-theoretic concepts.
- Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity.
- Speed of convergence of natural game playing dynamics such as best-response dynamics or regret minimization.
- Techniques for bounding the quality-loss due to selfish behavior versus optimal outcomes under central control (a.k.a. the 'Price of Anarchy');
- Design and analysis of mechanisms that induce truthful behavior or near-optimal outcomes at equilibrium.
- Selected current research topics, such as Google's Sponsored Search Auction, the U.S. FCC Spectrum Auction, Kidney Exchange.

No lecture notes.
Geometric structures are useful in many areas, and there is a need to understand their structural properties, and to work with them. 

**Literature**

"Game Theory and Strategy", Philip D. Straffin, The Mathematical Association of America, 5th printing, 2004

**Prerequisites / notice**

Several copies of both books are available in the Computer Science library.

**Audience**

Although this is a Computer Science course, we encourage the participation from all students who are interested in this topic.

**Requirements**

You should enjoy precise mathematical reasoning. You need to have passed a course on algorithms and complexity. No knowledge of game theory is required.

Objective

This combination of requirements, together with the technologies that have emerged in order to address them, is typically referred to as "Big Data." This revolution has led to a completely new way to do business, e.g., develop new products and business models, but also to do science -- which is sometimes referred to as data-driven science or the "fourth paradigm".

Unfortunately, the quantity of data produced and available -- now in the Zettabyte range (that’s 21 zeros) per year -- keeps growing faster than our ability to process it. Hence, new architectures and approaches for processing it were and are still needed. Harnessing them must involve a deep understanding of data not only in the large, but also in the small.

The field of databases evolves at a fast pace. In order to be prepared to the extent possible, to the (r)evolutions that will take place in the next few decades, the emphasis of the lecture will be on the paradigms and core design ideas, while today’s technologies will serve as supporting illustrations thereof.

After visiting this lecture, you should have gained an overview and understanding of the Big Data landscape, which is the basis on which one can make informed decisions, i.e., pick and orchestrate the relevant technologies together for addressing each business use case efficiently and consistently.

Content

This course gives an overview of database technologies and of the most important database design principles that lay the foundations of the Big Data universe. The material is organized along three axes: data in the large, data in the small, data in the very small. A broad range of aspects is covered with a focus on how they fit together in the big picture of the Big Data ecosystem.

- physical storage (HDFS, S3)
- logical storage (key-value stores, document stores, column stores, key-value stores, data warehouses)
- data formats and syntaxes (XML, JSON, CSV, XBRL)
- data shapes and models (tables, trees, graphs, cubes)
- an overview of programming languages with a focus on their type systems (SQL, XQuery, MDX)
- the most important query paradigms (selection, projection, joining, grouping, ordering, windowing)
- paradigms for parallel processing (MapReduce) and technologies (Hadoop, Spark)
- optimization techniques (functional and declarative paradigms, query plans, rewrite, indexing)
- applications.

We will also host two guest lectures to get insights from the industry: UBS and Google.

Literature

Papers from scientific conferences and journals. References will be given as part of the course material during the semester.

263-3210-00L  Deep Learning  W  4 credits  2V+1U  T. Hofmann

Number of participants limited to 120.

Abstract

Deep learning is an area within machine learning that deals with algorithms and models that automatically induce multi-level data representations.

Objective

In recent years, deep learning and deep networks have significantly improved the state-of-the-art in many application domains such as computer vision, speech recognition, and natural language processing. This class will cover the fundamentals of deep learning and provide a rich set of hands-on tasks and practical projects to familiarize students with this emerging technology.

Prerequisites / notice

The participation in the course is subject to the following conditions:

1) The number of participants is limited to 120 students (MSc and PhDs).
2) Students must have taken the exam in Machine Learning (252-0535-00) or have acquired equivalent knowledge.

252-3610-00L  Smart Energy  W  3 credits  2G  F. Mattern, V. Tiefenbeck

Abstract

The lecture covers the role of ICT for sustainable energy usage. Concepts of the emerging smart grid are outlined and approaches to motivate sustainable consumer choices are explained. The lecture combines technologies from ubiquitous computing and traditional ICT with insights from socio-psychological concepts and illustrates them with examples from actual applications.

Objective

Participants become familiar with the challenges related to sustainable energy usage, understand the principles of a smart grid infrastructure and its applications, know the role of ubiquitous computing technologies, can explain the challenges regarding security and privacy, can reflect the basics cues to induce changes in consumer behavior, develop a general understanding of the effects of a smart grid infrastructure on energy efficiency, and know how to apply the learning to related design projects.

Content

- Background on energy generation and consumption; characteristics, potential, and limitations of renewable energy sources
- Introduction to energy economics
- Smart grid and smart metering infrastructures, virtual power plants, security challenges
- Demand management and home automation using ubiquitous computing technologies
- Changing consumer behavior with smart ICT
- Benefits challenges of a smart energy system

Literature

Will be provided during the course, though a good starting point is "ICT for green: how computers can help us to conserve energy" from Friedemann Mattern, Thosten Staake, and Markus Weiss (available at http://www.vs.inf.ethz.ch/publ/papers/ICT-for-Green.pdf).

Prerequisites / notice

The lecture includes interactive exercises, case studies and practical examples.

263-3800-00L  Advanced Operating Systems  W  6 credits  2V+2U+1A  T. Roscoe

Abstract

This course is intended to give students a thorough understanding of design and implementation issues for modern operating systems, with a particular emphasis on the challenges of modern hardware features. We will cover key design issues in implementing an operating system, such as memory management, scheduling, protection, inter-process communication, device drivers, and file systems.

Objective

The goals of the course are, firstly, to give students a broader perspective on OS design than that provided by knowledge of Unix or Windows, building on the material in a standard undergraduate operating systems class, and secondly, to provide them with practical experience in dealing directly with the concurrency, resource management, and abstraction problems confronting OS designers and implementers.

Content

This course is intended to give students a thorough understanding of design and implementation issues for modern operating systems, with a particular emphasis on the challenges of modern hardware features. We will cover key design issues in implementing an operating system, such as memory management, scheduling, protection, inter-process communication, device drivers, and file systems.

Prerequisites / notice

The course is based around a milestone-oriented project, where students work in small groups to implement major components of a microkernel-based operating system. The final assessment will be a combination of grades awarded for milestones during the course of the project, a final written report on the work, and a set of test cases on the final code.

263-4640-00L  Network Security  W  6 credits  2V+1U+2A  A. Perrig, T. P. Dübendorfer, S. Frei

Abstract

This lecture discusses fundamental concepts and technologies in the area of network security. Several case studies illustrate the dark side of the Internet and explain how to protect against such threats. A hands-on computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection.
Objective

Students are aware of current threats that Internet services and networked devices face and can explain appropriate countermeasures. Students can identify and assess known vulnerabilities in a software system that is connected to the Internet. Students know fundamental network security concepts. Students have an in-depth understanding of important security technologies. Students know how to configure a real firewall and know some penetration testing tools from their own experience.

Content

Risk management and the vulnerability lifecycle of software and networked services are discussed. Threats like denial of service, spam, worms, and viruses are studied in-depth. Fundamental security related concepts like identity, availability, authentication and secure channels are introduced. State of the art technologies like secure shell, network and transport layer security, intrusion detection and prevention systems, cross-site scripting, secure implementation techniques and more for securing the Internet and web applications are presented. Several case studies illustrate the dark side of the Internet and explain how to protect against current threats. A hands-on computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection. This lecture is intended for students with an interest in securing Internet services and networked devices. Students are assumed to have knowledge in networking as taught in the Communication Networks lecture.

Prerequisites / notice

Due to recent changes in the Swiss law, ETH requires each student of this course to sign a written declaration that he/she will not use the information given in this for illegal purposes. This declaration will have to be signed and submitted no later than at the beginning of the second lesson.

263-4650-00L Specification and Proof of Probabilistic Programs with W 4 credits 2V+1U A. McIver, C. C. Morgan

Applications to Security

Objective

The course will introduce participants to semantic models for probabilistic programs. The semantics will provide the fundamental model for deriving generic properties of probabilistic systems, and as a context for proving soundness and completeness of proof techniques.

Content

Students in this course will learn new ways to specify and reason about quantitative properties of probabilistic programs. Both probabilistic programs' functional behaviour and their information-flow properties are important aspects of modern systems building, complementing existing methods of abstraction, nondeterminism and refinement. This course's objective is to give the students the necessary intellectual skills for rigorous reasoning about building such systems.

Literature

The course will follow the book “Abstraction, Refinement and Proof for Probabilistic Systems”.

Other material will consist of research papers which will be available in the secured area.

Prerequisites / notice

The course is intended for MSc and PhD students.

263-4655-00L Lattice Cryptography W 4 credits 2V+1U V. Lyubashevsky

Objective

The course will introduce lattice-based cryptography, which is one of the main candidates for quantum-resistant cryptography.

Content

In this course, we will study lattice-based cryptography. We will cover the basic algorithms associated with integer lattices such as Gram-Schmidt orthogonalization, algorithms for finding short and near lattice vectors, as well as the critical algorithm for sampling lattice points according to a discrete Gaussian distribution. We will then proceed to build up a toolbox of lattice-based cryptographic primitives beginning from collision-resistant hash functions, then moving on to digital signatures, encryption, identity-based encryption, and fully-homomorphic encryption. Particular emphasis will be placed on concrete parameters and practical instantiations. For this purpose, we will also study cryptographic constructions based on the hardness of ideal lattices, which are ideals of polynomial rings.

Prerequisites / notice

There are no formal mathematical pre-requisites, but students should have "mathematical maturity", which entails dealing with abstract concepts and being comfortable with doing mathematical proofs. Some previous exposure to linear algebra, abstract algebra, and cryptography would be useful.

263-5001-00L Introduction to Finite Elements and Sparse Linear System Solving W 4 credits 2V+1U P. Arbenz

Objective

Students will know the most important direct and iterative solvers for sparse linear systems. They will be able to determine which solver to choose in particular situations.

Abstract

The finite element (FE) method is the method of choice for (approximately) solving partial differential equations on complicated domains. In the first third of the lecture, we give an introduction to the method. The rest of the lecture will be devoted to methods for solving the large sparse linear systems of equation that a typical for the FE method. We will consider direct and iterative methods.

Autumn Semester 2016
I. THE FINITE ELEMENT METHOD

(1) Introduction, model problems.
(2) 1D problems. Piecewise polynomials in 1D.
(3) 2D problems. Triangulations. Piecewise polynomials in 2D.
(4) Variational formulations. Galerkin finite element method.
(5) Implementation aspects.

II. DIRECT SOLUTION METHODS

(6) LU and Cholesky decomposition.
(7) Sparse matrices.
(8) Fill-reducing orderings.

III. ITERATIVE SOLUTION METHODS

(9) Stationary iterative methods, preconditioning.
(10) Preconditioned conjugate gradient method (PCG).
(11) Incomplete factorization preconditioning.
(12) Multigrid preconditioning.
(13) Nonsymmetric problems (GMRES, BiCGstab).
(14) Indefinite problems (SYMMLQ, MINRES).

Literature

Prerequisites / notice

Prerequisites: Linear Algebra, Analysis, Computational Science.

263-5200-00L Data Mining: Learning from Large Data Sets W 4 credits 2V+1U A. Krause

Abstract

Many scientific and commercial applications require insights from massive, high-dimensional data sets. This course introduces principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course covers theoretical foundations and practical applications.

Objective

Many scientific and commercial applications require us to obtain insights from massive, high-dimensional data sets. In this graduate-level course, we will study principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course will both cover theoretical foundations and practical applications.

Content

Topics covered:
- Dealing with large data (Data centers; Map-Reduce/Hadoop; Amazon Mechanical Turk)
- Fast nearest neighbor methods (Shingling, locality sensitive hashing)
- Online learning (Online optimization and regret minimization, online convex programming, applications to large-scale Support Vector Machines)
- Multi-armed bandits (exploration-exploitation tradeoffs, applications to online advertising and relevance feedback)
- Active learning (uncertainty sampling, pool-based methods, label complexity)
- Dimension reduction (random projections, nonlinear methods)
- Data streams (Sketches, coresets, applications to online clustering)
- Recommender systems

Prerequisites / notice

Prerequisites: Solid basic knowledge in statistics, algorithms and programming. Background in machine learning is helpful but not required.

263-5210-00L Probabilistic Artificial Intelligence W 4 credits 2V+1U S. Tschiatschek

Abstract

This course introduces core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet.

Objective

How can we build systems that perform well in uncertain environments and unforeseen situations? How can we develop systems that exhibit "intelligent" behavior, without prescribing explicit rules? How can we build systems that learn from experience in order to improve their performance? We will study core modeling techniques and algorithms from statistics, optimization, planning, and control and study applications in areas such as sensor networks, robotics, and the Internet. The course is designed for upper-level undergraduate and graduate students.

Content

Topics covered:
- Search (BFS, DFS, A*), constraint satisfaction and optimization
- Tutorial in logic (propositional, first-order)
- Probability
- Bayesian Networks (models, exact and approximative inference, learning) - Temporal models (Hidden Markov Models, Dynamic Bayesian Networks)
- Probabilistic planning (MDPs, POMDPs)
- Reinforcement learning
- Combining logic and probability

Prerequisites / notice

Solid basic knowledge in statistics, algorithms and programming

263-5902-00L Computer Vision W 6 credits 3V+1U+1A L. Van Gool, V. Ferrari, A. Geiger

<td>6</td>
<td>Study of fundamental concepts, models and computational methods for the analysis of complex biological networks. Topics: Systems approaches in biology, biology and reaction network fundamentals, modelling and simulation approaches (topological, probabilistic, stoichiometric, qualitative, linear / nonlinear ODEs, stochastic), and systems analysis (complexity reduction, stability, identification).</td>
</tr>
<tr>
<td>636-0017-00L</td>
<td>Computational Biology</td>
<td>4</td>
<td>The aim of the course is to provide up-to-date knowledge on how we can study biological processes using genetic sequencing data. Computational algorithms extracting biological information from genetic sequence data are discussed, and statistical tools to understand this information in detail are introduced.</td>
</tr>
</tbody>
</table>
The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments from the output of the sequencers. We then present methods to directly analyze this alignment (such as BLAST algorithm, GWAS approaches). Second, we introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Third, we employ evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. Finally, we introduce the field of phylematics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades. Students will be trained in the algorithms and their application both on paper and in silico as part of the exercises.

Lecture notes Slides of the lecture will be available online. https://www.bsse.ethz.ch/cevo/education/cb-materials.html

Literature The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:
- Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST

Prerequisites / notice Basic knowledge in linear algebra, analysis, and statistics will be helpful. Some programming experience will be useful for the exercises, but is not required. Programming skills will not be tested in the examination.

Data: 06.01.2019 12:56  Autumn Semester 2016  Page 338 of 1571
This seminar covers advanced topics in computer graphics, including both seminal research papers as well as the latest research results. Each time the course is offered, a collection of research papers are selected covering topics such as modeling, rendering, animation, real-time graphics, physical simulation, and computational photography. Each student presents one paper to the class and leads a discussion about the paper and related topics. All students read the papers and participate in the discussion.

Lecture notes

Abstract
Develop an understanding of selected topics in the area of molecular algorithms, and the practice of scient

Objective
Study and understanding of selected topics of interest in molecular algorithms such as: Computational Power of Molecular Algorithms, Molecular Algorithms for Solving Fundamental Tasks (Majority, Leader Election, Counting), Complexity Lower Bounds, Implementations of Algorithms in DNA.

Content
This seminar will familiarize the students with current research on molecular algorithms, with a focus on algorithms executable in DNA. We will have an introductory lecture covering the basics of molecular computational models, and the underlying bio-chemical phenomena. Subsequently, we will read and present selected research papers, focusing on their algorithmic content.

No prior knowledge of biology or chemistry will be required.

Literature
Selected research articles.

Prerequisites / notice
The course will require a good understanding of Randomized Algorithms. Hence, you must have passed our "Randomized Algorithms" class (or have acquired equivalent knowledge, in exceptional cases). No prior knowledge of biology or chemistry will be assumed. The basics will be presented in an introductory lecture.

227-0559-00L Seminar in Distributed Computing  W 2 credits  2S  R. Wattenhofer

Abstract
In this seminar participating students present and discuss recent research papers in the area of distributed computing. The seminar consists of algorithmic as well as systems papers in distributed computing theory, peer-to-peer computing, ad hoc and sensor networking, or multi-core computing.

Objective
In the last two decades, we have experienced an unprecedented growth in the area of distributed systems and networks; distributed computing now encompasses many of the activities occurring in today's computer and communications world. This course introduces the basics of distributed computing, highlighting common themes and techniques. We study the fundamental issues underlying the design of distributed systems: communication, coordination, synchronization, uncertainty. We explore essential algorithmic ideas and lower bound techniques.

In this seminar, students present the latest work in this domain.

Seminar language: English

Content
Different each year. For details see: www.disco.ethz.ch/courses.html

Lecture notes
Slides of presentations will be made available.

Literature
Papers.
The actual paper selection can be found on www.disco.ethz.ch/courses.html.

Dietary Etiologies of Chronic Disease

Abstract
To have the student gain understanding of the links between the diet and the etiology and progression of chronic diseases, including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Objective
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.

Content
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

Lecture notes
There is no script. Powerpoint presentations will be made available on-line to students.

Literature
To be provided by the individual lecturers, at their discretion.

Prerequisites / notice
No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

Nutrition and Performance

Abstract
The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

Objective
To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Content
The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

Lecture notes
Lecture slides and required handouts will be available on the ETH website.

Literature
Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

Prerequisites / notice
General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English

It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

Selected Topics in Physiology Related to Nutrition

Abstract
Gives the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand.

Objective
Some basic knowledge in physiology is recommended for this course, which revisits important physiological topics, emphasizing their relation to nutrition. The aim is to give the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand. For students with a background in medicine, pharmacy or biology, the course is useful as a review of previously acquired knowledge. Major topics are basic neuroanatomy and neurophysiology; general endocrinology; the physiology of taste and smell; nutrient digestion and absorption; intermediary metabolism and energy homeostasis; and some aspects of cardiovascular physiology and water balance.

Lecture notes
Handouts for each lecture will be made available every week: http://www.fpb.ethz.ch/teaching/handouts.html

529-0075-00L Radiochemistry (Practical Training) E- 4 credits 4P M. Badertscher

Abstract

Objective
Knowledge of the most important phenomena in relation with radioactivity. Knowledge of the principles of radiation protection. Ability to handle radioactive material.

Content
Handling open and closed radioactive sources. Getting accustomed to a variety of instruments and detectors for various kinds of ionizing radiation. Acquisition of working techniques under consideration of radiation protection.

Lecture notes
Comprehensive material is available online.

Abstract
Institute-Seminar covering current research Topics in Physical Chemistry

529-1100-00L Fragrance Chemistry E- 1 credit 1V P. Kraft

Abstract
The lecture provides a journey into the molecular world of scents from the chemical secrets behind Chanel N°5 to structure-odor relationships, industrial processes, and total synthesis of terpenoids. Each subunit is centered on one odorant family and highlights a certain class of chemical reactions, illustrated by prominent perfumery examples.

Objective
After completion of this lecture module the students know all the major perfumery materials of the important odor families with their academic and industrial syntheses, their olfactory properties, their usage, their historic perspective, and today's economic importance. The students can explain the significance of important building blocks and industrial transformations, and can estimate how attractive chemical processes are on large scale. They can retrosynthetically plan academic and industrial syntheses of fragrant compounds and terpenoids, and the acquired knowledge on structure-odor relationships enables them to predict and design new odorants. The students can approximate the conformational space of odorants and especially macrocycles on the basis of simple rules, and know how olfactophore models are used. The students understand and can explain the molecular mechanism of smell, the biosynthesis of terpenes, and the basics of perfumery composition. The latter enables them to further their education in perfumery at specialized Universities such as the ISIPCA in Versailles; yet, the student also knows about the links of Fragrance Chemistry with Pharmaceutical Chemistry and the Specialty Chemicals business in general.

Introduction to Computer Science

Introduction to UNIX, data representation, introduction to C++ programming, errors, algorithms, computer architecture, sorting and searching, databases, numerical algorithms, types of algorithms, simulation, data communication & networks, chemical structures, operating systems, programming languages, software engineering.

For more information: www.csms.ethz.ch/education/infol

Abstract

Objectives

Discuss fundamentals of computer architecture, languages, algorithms and programming with an eye to their application in the area of chemistry, biology and material science.

Content

Minimal introduction to UNIX, Data representation and processing, algorithms and programming in C++, Errors, programming guidelines, efficiency, computer architecture, algorithms for sorting and searching, databases, numerical algorithms, types of algorithms, simulation, data communication & networks, chemical structures, operating systems, programming languages, style, software engineering.

Lecture notes

Available (in English), distributed at first lecture

Literature

See: www.csms.ethz.ch/education/infol

Prerequisites / notice

Since the exercises on the computer do convey and test essentially different skills as those being conveyed during the lectures and tested at the written exam, the results of the exercises are taken into account when evaluating the results of the exam.

For more information about the lecture: www.csms.ethz.ch/education/infol

Laboratory Courses

Number Title Type ECTS Hours Lecturers
529-0011-04L Practical Course General Chemistry O 8 12P

H. V. Schönberg, E. C. Meister

Information about the practical course will be given on the first day.

Abstract

Qualitative analysis (determination of cations and anions), acid-base-equilibria (pH-values, titrations, buffer), precipitation equilibria (gravimetry, potentiometry, conductivity, complexometric titration)
Analysis of measured values, states of aggregation (vapour pressure, conductivity, calorimetry)

Objective

Qualitative analysis (simple cation and anion separation process, determination of cations and anions), acid-base-equilibria (strengths of acids and bases, pH- and pKa-values, titrations, buffer systems, Kjeldahl determination), precipitation equilibria (gravimetry, potentiometry, conductivity, oxidation state and redox behaviour (syntheses), redox-titrations, galvanic elements), metal complexes (syntheses of complexes, ligand exchange reactions, complexometric titration)
Analysis of measured values (measuring error, average value, error analysis), states of aggregation (vapour pressure), characteristics of electrolytes (conductivity measurements), thermodynamics (calorimetry)

Content

The general aim for the students of the practical course in general chemistry is an introduction in the scientific work and to get familiar with simple experimental procedures in a chemical laboratory. In general, first experiences with the principal reaction behaviour of a variety of different substances will be made. The chemical characteristics of these will be elucidated by a series of quantitative experiments alongside with the corresponding qualitative analyses. In order to get an overview of classes of substances as well as some general phenomena in chemistry suitable experiments have been chosen. In the second part of the practical course, i.e. physical chemistry, the behaviour of substances in their states of aggregation as well as changes of selected physical values will be recorded and discussed.

Lecture notes

Prerequisites / notice

Compulsory: online enrolment latest one week prior start of the semester

3. Semester

Compulsory Subjects Examination Block I

Number Title Type ECTS Hours Lecturers
529-0121-00L Inorganic Chemistry I O 3 2+1U A. Mezzetti

Complexes of the transition metals: structure, bonding, spectroscopic properties, and synthesis.

Introduction to the binding theory in complexes of the transition metals. Interpretation of structure, bonding, and spectroscopic properties. General synthetic strategies.

The chemical bond (overview). Symmetry and group theory. The chemical bond of coordination compounds (Valence Bond Theory, Crystal Field Theory, Molecular Orbital Theory (sigma- and pi-bonding), pi-Accepting ligands (CO, NO, olefins, dioxygen, dihydrogen, phosphines and phosphites). Electronic spectra of coordination compounds (Tanabe-Sugano diagrams). Coordination numbers and isomers in complexes. Dynamic phenomena (stereochemical nonrigidity). Complexes and kinetics.

Can be bought at the HCI-shop

529-0221-00L Organic Chemistry I O 3 2+1U F. Diederich, C. Schaack

Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

Acquisition of a basic repertoire of synthetic methods including important reactions of aldehydes, ketones, carboxylic acids and carboxylic acid derivatives, as well as eliminations and fragmentations. Particular emphasis is placed on the understanding of reaction mechanisms and the correlation between structure and reactivity. A deeper understanding of the concepts presented during the lecture is reached by solving the problems handed out each time and discussed one week later in the exercise class.

Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

A pdf file of the printed lecture notes is provided online. Supplementary material may be provided online.

No set textbooks. Optional literature will be proposed at the beginning of the class and in the lecture notes.

Abstract
Physics I
Introduction to the concepts and tools in physics with the help of demonstration experiments: mechanics of point-like and ridged bodies, periodic motion and mechanical waves.

Objective
The concepts and tools in physics, as well as the methods of an experimental science are taught. The student should learn to identify, communicate and solve physical problems in his/her own field of science.

Content
Mechanics (motion, Newton's laws, work and energy, conservation of momentum, rotation, gravitation, fluids)
Periodic Motion and Waves (periodic motion, mechanical waves, acoustics).

Lecture notes
The lecture follows the book "Physics" by Paul A. Tipler.

Literature
Paul A. Tipler and Gene P. Mosca, Physics (for Scientists and Engineers), W. H. Freeman and Company

Prerequisites / notice
Prerequisites: Mathematics I & II

Analytical Chemistry I
Introduction into the most important spectroscopical methods and their applications to gain structural information.

Objective
Knowledge about the necessary theoretical background of spectroscopical methods and their practical applications

Content
Application oriented basics of organic and inorganic instrumental analysis and of the empirical employment of structure elucidation methods:
- Mass spectrometry: Ionization methods, mass separation, isotope signals, rules of fragmentation, rearrangements.
- NMR spectroscopy: Experimental basics, chemical shift, spin-spin coupling.
- IR spectroscopy: Revisiting topics like harmonic oscillator, normal vibrations, coupled oscillating systems (in accordance to the basics of the related lecture in physical chemistry); sample preparation, acquisition techniques, law of Lambert and Beer, interpretation of IR spectra; Raman spectroscopy.

Lecture notes
Script will be for the production price

Literature
- M. Hesse, H. Meier, B. Zeeh, Spektroskopische Methoden in der organischen Chemie, 5. überarbeitete Auflage, Thieme, Stuttgart, 1995

Prerequisites / notice
Excercises are integrated in the lectures. In addition, attendance in the lecture 529-0289-00 "Instrumental analysis of organic compounds" (4th semester) is recommended.
## Examples of partial differential equations
- Classification of PDEs
- Superposition principle

## One-dimensional wave equation
- D'Alembert's formula
- Duhamel's principle

## Fourier series
- Representation of piecewise continuous functions via Fourier series
- Examples and applications

## Separation of variables
- Resolution of wave and heat equation
- Homogeneous and inhomogeneous boundary conditions, Dirichlet and Neumann boundary conditions

## Laplace equation
- Resolution of the Laplace equation on rectangle, disk and annulus
- Poisson formula
- Mean value theorem and maximum principle

## Fourier transform
- Derivation and Definition
- Inverse Fourier transformation and inversion formula
- Interpretation and properties of the Fourier transform
- Resolution of the heat equation

## Laplace transform
- Definition, motivation and properties
- Inverse Laplace transform of rational functions
- Application to ordinary differential equations

Lecture notes
There are available some Lecture Notes in English and also in German of the Professor. These can be found following the links provided under the tab 'Lernmaterialien'.

Literature
2) Y. Pinchover and J. Rubinstein, An Introduction to Partial Differential Equations, Cambridge University Press
3) E. Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons (only Chapters 1,2,6,11)

Prerequisites / notice
It is required a minimal background of: 1) multivariables functions (Riemann integrals in two or three variables, change of variables in the integrals through the Jacobian, partial derivatives, differentiability, Jacobian) 2) numerical and functional sequences and series, basic knowledge of ordinary differential equations.

**Abstract**
Introduction to the experimental methods of Inorganic Chemistry

**Objective**
The teaching laboratory offers an insight into different aspects of Inorganic Chemistry, including solid state chemistry, organometallic chemistry, kinetics, etc.. The synthesis, characterization and analysis of inorganic compound are a main topic. Emphasis is given to scientific writing (experiment reports).

**Content**
Inorganic chemistry part: Synthesis and analysis of elemento-organic compounds, metal complexes, and organometallic compounds. Introduction to Schlenk techniques, solid state synthesis, and kinetics. Introduction in the chemistry library: literature data banks and collections of spectra.

**Lecture notes**
A manual is distributed in the teaching laboratory.

**Prerequisites / notice**
- Practical Course General Chemistry (1. Semester, 529-0011-04)
- Practical Course Inorg. and Org. Chemistry I (2. Sem., 529-0230)
- Attendance of Course Inorg. Chemistry 1 (3. Sem., 529-0121)

**Abstract**
Fundamental aspects of the organometallic chemistry of the transition elements. Mechanistic homogeneous catalysis including oxidative additions, reductive eliminations and insertion reactions. Catalytic hydrogenation, carbonylation, C=C bond-forming and related reactions.

**Objective**
Towards an understanding of the fundamental coordination-chemical and mechanistic aspects of transition-metal chemistry relevant to homogeneous catalysis.

**Content**

### Literature

- Evans’ Problems in Organic Chemistry App
- Physical Methods for Inorganic Chemistry: Cram- and Felkin-Anh models, carbonyl Lewis acid interactions, chelate controlled reactions; chemistry of enolates, selective formation; asymmetric enolate alkylation; aldol reactions, allyl- and crotyl-metal chemistry; cyclisations, Baldwin rules; Diastereoselective olefin functionalization: hydroboration, dihydroxylation, epoxidation.
Mainly based on recent original literature, a detailed list will be distributed during the first lecture.

Electrochemistry

**Title**: Chemical Biology - Peptides  
**Type**: W  
**ECTS**: 6 credits  
**Hours**: 3G  
**Lecturers**: H. Wennemers

**Abstract**: An advanced course on the synthesis, properties and function of peptides in chemistry and biology.

**Objective**: Knowledge of the synthesis, properties and function of peptides in chemistry and biology.

**Content**: Advanced peptide synthesis, conformational properties, combinatorial chemistry, therapeutic peptides, peptide based materials, peptides in nanotechnology, peptides in asymmetric catalysis.

**Literature**: Citations from the original literature relevant to the individual lectures will be assigned weekly.

**Lecture notes**: No script

**Number**: 529-0240-00L  
**Title**: Chemical Aspects of Energy  
**Type**: W  
**ECTS**: 6 credits  
**Hours**: 3G  
**Lecturers**: P. Novák

**Abstract**: Historic development and applications of electrochemistry. Applications: electrolysis, galvanotechnics, batteries; electrosynthesis, sensors, corrosion.

**Objective**: Towards the end of the course the students will understand the basics of electrochemistry and will be able to describe and calculate electrochemistry-related matters in industrial processes and products.

**Number**: 529-0599-00L  
**Title**: Chemical Crystallography  
**Type**: W  
**ECTS**: 6 credits  
**Hours**: 3G  
**Lecturers**: M. D. Wörle

**Abstract**: An introduction to the principles of X-ray diffraction. An introduction to crystallography and crystal structure determination as it relates to Chemistry.

**Objective**: To gain an understanding of the principles of crystal structure determination by X-ray diffraction.

**Content**: Basic crystallographic concepts: Unit cells, Bravais lattices, Laue symmetry, crystal classes (point groups), space groups, crystal growth, instrumentation, diffraction of X-rays by crystals: physical and geometric basics, powder and single crystal methods, structure solution and modelling, interpretation of crystal structure data; internal coordinates for structure description: atom spacing, co-ordination polyhedra, bond angles, torsion angles; intermolecular interactions, absolute configuration determination. Overview of inorganic, organic and macromolecular databases.

**Literature**: The script and exercises will be distributed weekly in loose form.

**Prerequisites / notice**

Exercises are an integral part of the lecture.

**Prerequisites**:  
529-0051-00 "Analytische Chemie I (3. Semester)"  
529-0058-00 "Analytische Chemie II (4. Semester)"  
(or equivalent)

**Number**: 529-0039-00L  
**Title**: Principles of Crystal Structure Determination  
**Type**: W  
**ECTS**: 6 credits  
**Hours**: 3G  
**Lecturers**: M. D. Wörle, N. Trapp

**Abstract**: A brief introduction to the principles of X-ray diffraction and crystal structure determination as it relates to Chemistry.

**Objective**: To gain an understanding of the principles of crystal structure determination by X-ray diffraction.

**Content**: Basic crystallographic concepts: Unit cells, Bravais lattices, Laue symmetry, crystal classes (point groups), space groups, crystal growth, instrumentation, diffraction of X-rays by crystals: physical and geometric basics, powder and single crystal methods, structure solution and modelling, interpretation of crystal structure data; internal coordinates for structure description: atom spacing, co-ordination polyhedra, bond angles, torsion angles; intermolecular interactions, absolute configuration determination. **Number**: 529-0731-00L  
**Title**: Nucleic Acids and Carbohydrates  
**Type**: W  
**ECTS**: 6 credits  
**Hours**: 3G  
**Lecturers**: D. Hilvert, P. A. Kast, S. J. Sturla, H. Wennemers

**Abstract**: Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

**Objective**: Structure, function and chemistry of nucleic acids and carbohydrates. DNA/RNA structure and synthesis; recombinant DNA technology and PCR; DNA arrays and genomics; antisense approach and RNAi; polymerases and transcription factors; catalytic RNA; DNA damage and repair; carbohydrate structure and synthesis; carbohydrate arrays; cell surface engineering; carbohydrate vaccines

Algorithms and Programming in C++

**Number**: 529-0002-00L  
**Title**: Algorithms and Programming in C++  
**Type**: W  
**ECTS**: 6 credits  
**Hours**: 3G  
**Lecturers**: S. Riniker

**Abstract**  
Introduction to algorithms (special focus on chemistry): Design of algorithms, data structures, search and sort algorithms, graphs, numerical algorithms, algorithms in cheminformatics, machine learning and cheminformatics  
Computer language: C++

**Objective**  
Development of programming skills and craftsmanship in order to be able to deal with the complexity of computer applications in chemistry.

**Content**  
Introduction to algorithms (special focus on chemistry): Design of algorithms, data structures, search and sort algorithms, graphs, numerical algorithms, algorithms in cheminformatics, machine learning and cheminformatics  
Computer language: C++

**Lecture notes**  
Script (in English) will be available

**Literature**  

Please note that this course will be offered for the last time in the autumn semester of 2017.

Basic Polymer Synthesis

**Number**: 529-0947-00L  
**Title**: Basic Polymer Synthesis  
**Type**: W  
**ECTS**: 6 credits  
**Hours**: 3G  
**Lecturers**: A. D. Schlüter

**Abstract**  
Chain-growth polymerizations (anionic, cationic, Ziegler/Natta, ROMP, radical, NMP, ATRP), mechanistic details including how to render a polymerization "living", recent developments, and important examples.

**Objective**  
The students should gain an overview of important polymerization procedures, learn how to deal with chemical structures and reactivities, and be able to suggest reasonable synthetic pathways to a given polymer structure. Aspects like achievable molar masses in dependence of the method used and structure perfection play a role throughout.

**Content**  
I. Anionic polymerization  
1. General  
2. Living polymerization  
3. Group transfer polymerization (GTP)  
4. Some recent developments

II. Cationic polymerization  
1. General  
2. Some applications (macromonomer and telechelics)

III. Ziegler/Natta- and metallocene polymerization  
1. General  
2. Mechanism  
3. Some applications

IV. Ring-opening metathesis polymerization  
1. Comments on history  
2. Monomers, catalysts, polymer structures  
3. Mechanism, direct NMR monitoring  
4. Termination  
5. Examples

V. Controlled radical polymerization  
1. Nitroxide mediated polymerization (NMP)  
2. Atom transfer radical polymerization (ATRP)

**Prerequisites / notice**  
Since the exercises on the computer do convey and test essentially different skills as those being conveyed during the lectures and tested at the oral exam, the results of the exercises are taken into account when evaluating the results of the exam.

Introduction to Environmental Chemistry and Ecotoxicology

**Number**: 529-0037-01L  
**Title**: Introduction to Environmental Chemistry and Ecotoxicology  
**Type**: W  
**ECTS**: 4 credits  
**Hours**: 3G  
**Lecturers**: K. Fenner, C. Bogdal, J. Hollender

**Abstract**  
Production and use of chemicals also introduces them into the environment. This course introduces chemistry students to environmental chemistry, ecotoxicology and trace analysis. Partitioning behavior and reactions of organic pollutants in the environment. Biodegradation, bioavailability and bioaccumulation. Ecotoxicological effects at the molecular level. Aspects of chemical trace analysis.

**Objective**  
Goals:  
* The students develop an understanding of the processes that govern the fate and effects of chemicals in the environment.  
* The students know a number of methods for estimating the fate and effect of environmental pollutants. They recognize the relevant processes affecting a given compound and know how to use appropriate estimation methods for their quantification.

PhD students who need recognized credit points are required to pass the written exam.
Part I: Fate of Chemicals in the Environment:
Relevant environmental compartments and how chemicals reach the environment.
Partitioning in the environment:
- Meaning of vapor pressure, water solubility and air-water partition coefficient for environmental behavior
- Octanol-water partition coefficient as surrogate for partitioning into biological systems
- Influence of temperature and pH on partitioning
- Global distribution of semi-volatile chemicals
- Molecular interactions that govern partitioning
- Sorption to natural surfaces, partitioning into natural organic matter
Chemical and photochemical transformation reactions
- Microbial transformation processes in the environment

Part II: Effects of chemicals in the environment
- Biological test systems for assessing ecotoxicological effects
- Endpoints of toxicity assessment:
  - Acute and chronic toxicity, effects on reproduction
  - Dose-response modeling
- Bioavailability and bioaccumulation:
  - Bioconcentration, biomagnification, food chain accumulation
  - Active and passive uptake mechanisms
- Molecular mechanisms of toxicity in cells:
  - Baseline toxicity
  - Specific toxicity (Examples: Inhibition of photosynthesis, neurotoxicity, including AchEsterase, ion channels etc.)
  - Oxidative stress
  - Genotoxicity

Part III: Specific aspects of trace analysis in the environment (soil, water, air)
Planning of analytical strategy and sampling
Enrichment procedures
Separation and detection
Quantification, screening for unknowns

Lecture notes
Copies of the slides and some articles are distributed

Literature
- Prerequisites: Basics in physical chemistry are required and an overview equivalent to the bachelor course in atmospheric chemistry (lecture 701-0471-01) is expected.

Cognitively Activating Instructions in MINT Subjects

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Abstract
This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

Objective
- Get to know cognitively activating instructions in MINT subjects
- Get recent information about relevant literature on learning and instruction

Prerequisites / notice
Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

Human Intelligence
Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

Number of participants limited to 30.

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Abstract
The focus will be on the book "Intelligenz: Grosse Unterschiede und ihre Folgen" by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

Objective
- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

Research Methods in Educational Science

Number of participants limited to 30.

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Abstract
Literature from the learning sciences is critically discussed with a focus on research methods.

At the first meeting, working groups will be assembled and meetings with those will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

Objective
- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

Student Research Projects: Practical Research on Learning and Instruction

Number of participants limited to 20.

The successful completion of both course no. 851-0240-00L "Menschliches Lernen (EW 1)" and course no. 851-0238-01L "Unterstützung und Diagnose von Wissenserwerbsprozessen (EW 3)" is a necessary prerequisite for this course.

Abstract
In teams of two, participants in this seminar conduct their own research project. Each team is advised by one of the researchers serving as lecturers in this course. Basic conceptual and methodological issues are the topic of a series of plenary meetings; however, the major part of the work is done in small-group meetings with the advising researcher, and in self-directed research projects.

Objective
The course is targeted at advanced students who have taken an interest in gathering practical research experience in the field of Learning & Instruction. In teams of two, students conduct their own research projects (planning, conducting, analyzing, interpreting, and presenting research); thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students’ independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction).

Learning goals include:
- Participants can illustrate and explain basic methods and concepts for research in the fields of Learning and Instruction, e.g. with the help of practical examples.
- Participants can generate testable research questions for a topic relevant in the fields of Learning and Instruction.
- Participants can design and conduct a study that is relevant for answering their research question.
- Participants can summarize and evaluate the main results from a study in the field of learning and Instruction, with regard to the research question being asked.

see Educational Science Teaching Diploma

Importantly: You can only enrol in the courses of this category if you have not more than 12 CP left for possible additional requirements.

Mentored Work Subject Didactics Chemistry A

Number of participants limited to 30.

Important: You can only enrol in the courses of this category if you have not more than 12 CP left for possible additional requirements.
In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

**Abstract**

The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Prerequisites / notice

Spezielle Experimental-Veranstaltung zum Lehramt in Chemie, die als Paket zusammen mit der Veranstaltung "Fachdidaktik Chemie 1" im Herbstsemester besucht werden muss. Die ECTS-Punkte dieser Vorlesung mit praktischen Übungen sind - zusammen mit den ECTS-Punkten für die Veranstaltung "Fachdidaktik Chemie 1" im Herbstsemester - die Voraussetzung für die Zulassung zur Veranstaltung "Fachdidaktik Chemie 2" im Frühlingssemester.

Blockveranstaltung an einem Gymnasium in der Deutschschweiz.

529-0968-01L Examination Lesson I Chemistry ■ O 1 credit 2P A. Baertsch

Simultaneous enrolment in "Examination Lesson II Chemistry" (529-0968-02L) is compulsory.

Will mark the conclusion of the teacher training program in Chemistry.

Abstract

In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter-based and didactic skills they have acquired in the course of their training.

Objective

On the basis of a specified topic, the candidate shows that they are in a position - to develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle - to analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

Content

Lecture notes

Students enrolled at UZH must register for this course and the corresponding exam at ETH.

Abstract

Selected topics in general chemistry:
1) The language of chemistry
2) Chirality and stereochemistry
3) Oxidation of water
4) Chemistry of the atmosphere

Objective

In this course, participants acquire extended and more in-depth knowledge of selected chemistry topics. The selection is based on a large extent on the partial aspects of chemistry that are typically taught at high school. By gaining a broader understanding, teachers are put in a position where they can comprehend the topics that are to be taught in a wider and, to some extent, unconventional context and critically process these in respect of their teachability and learnability. At the same time, interrelationships between the classical sub-disciplines of chemistry are highlighted, along with the unique features of chemistry as one of the central natural sciences.

Content

Content of the four modules:
1) The language of chemistry: Concepts, formulas, aesthetics, and philosophical aspects
2) Chirality and stereochemistry: Selected aspects, origin of biomolecular chirality, inorganic chemistry
3) Cosmochemistry
4) Chemistry of the atmosphere

Lecture notes

Foliens und ausgewählte Literatur werden zur Verfügung gestellt.

Literature

Ausgewählte Artikel aus der Primärliteratur werden vorgestellt, kommentiert und zur Lektüre empfohlen.

Prerequisites / notice

FV A (gelesen im Frühjahrsemester) and FV B (gelesen im Herbstsemester) bauen nicht aufeinander. Die Reihenfolge der Belegung ist belanglos.

529-0962-01L Mentored Work Specialised Courses in the Respective O 2 credits 4A R. Ciocliaro
Subject with an Educational Focus Chemistry B

Abstract
In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. They compile texts under supervision that are directly comprehensible to the targeted readers - generally specialist-subject teachers at high-school level.

Objective
The aim is for the students
- to familiarise themselves with a new topic by obtaining material and studying the sources, so that they can selectively extend their specialist competence in this way.
- to independently develop a text on the topic, with special focus on its mathematical comprehensibility in respect of the level of knowledge of the targeted readership.
- To try out different options for specialist further training in their profession.

**ECTS**

European Credit Transfer and Accumulation System

- Special students and auditors need special permission from the lecturers.
The aim of the course is to familiarize the students with the basic concepts of magnetic resonance relaxation theory in liquids and solids. Starting from the mathematical description of spin dynamics, the effect of stochastic motional processes on the density operator will be analyzed. In the end students should understand the Redfield formulation of relaxation and be able to understand the effect of dynamics on magnetic resonance experiments.

The complex relation between structural analysis, methods leading to desired transformations, and insight into reaction mechanisms is exemplified. Relations between retrosynthetic analysis of target structures, synthetic methods and their combination in a synthetic strategy are outlined. Concepts of the planning of organic synthesis (strategy and tactics), retrosynthetic analysis. Structure-reactivity relation in the context of synthesis with chiral auxiliaries and reagents; new concepts in asymmetric catalysis including ligand design and optimization; cross coupling reactions from preactivated precursors; C-H activation and oxidation chemistry; building block synthesis with chiral auxiliaries and reagents; new concepts in asymmetric catalysis. Analysis of key primarily literature including identification of trends, key precendents, and emerging topics will be emphasized.

The course is for advanced students and covers selected topics from magnetic resonance spectroscopy. This year, the lecture will introduce and discuss relaxation theory and its applications in magnetic resonance.

Inorganic and Organometallic Polymers

Advanced Methods and Strategies in Synthesis

Organic Synthesis: Methods and Strategies

Advanced Physical Chemistry: Statistical Thermodynamics
This course provides an introduction to the interaction of light with nano- and microparticles followed by an overview of applications of current interest. Examples range from nanoparticles for medical applications and sensing to the role of the interaction of solar radiation with aerosol particles and cloud droplets for the climate.

The students will be introduced to the basic concepts of the interaction of light with nano- and microparticles. The combination of basic concepts with different applications will enable students to apply their knowledge to new problems in various fields where nanoscale objects play a role.

Light interacts surprisingly differently with small particles than with bulk or with gas phase materials. The first part of the course provides a basic but rigorous introduction into the interaction of light with nano- and microparticles. The emphasis is on the classical treatment of absorption and scattering of light by small particles. The strengths and limits of this conventional approach will be discussed. The second part of the course is devoted to a broad range of applications. Heroparcs include: Plasmon resonances in metallic systems, metallic dielectric nanoparticles for medical applications, the use of lasers for optical trapping and characterization of single particles, vibrational excitons in dielectric nanoparticles, interaction of light with aerosol particles and cloud droplets for remote sensing applications and climate predictions, characterization of ultrafine aerosol particles by photoemission using velocity map imaging.

Lecture notes will be distributed during the course.

Literature
Basics: Absorption and Scattering of Light by Small Particles, C. F. Bohren and D. R. Huffman, John Wiley & Sons, Inc.

Applications: References will be provided during the course.
Advanced Magnetic Resonance

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme-catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

ECTS: 7 credits

B. H. Meier, M. Ernst

Analytical Strategy

Problem-oriented development of analytical strategies and solutions.

Ability to create solutions for particular analytical problems.

Individual development of strategies for the optimal application of chemical, biochemical, and physico-chemical methods in analytical chemistry solving predefined problems. Experts from industry and administration present particular problems in their field of activity.

Design and application of microanalytical systems.

Copies of problem sets and solutions will be distributed free of charge.

Prerequisites:
- 529-0051-00 "Analytical Chemistry I (3. Semester)"
- 529-0058-00 "Analytical Chemistry II (4. Semester)"

Lecturers:
R. Zenobi, M. Badertscher, P. S. Dittrich, D. Günther

Advanced Optics and Spectroscopy

This course provides an introduction to the interaction of light with nano- and microparticles followed by an overview of applications of current interest. Examples range from nanoparticles for medical applications and sensing to the role of the interaction of solar radiation with aerosol particles and cloud droplets for the climate.

The students will be introduced to the basic concepts of the interaction of light with nano- and microparticles. The combination of basic concepts with different applications will enable students to apply their knowledge to new problems in various fields where nanoscale objects play a role.

Light interacts surprisingly differently with small particles than with bulk or with gas phase materials. The first part of the course provides a basic but rigorous introduction into the interaction of light with nano- and microparticles. The emphasis is on the classical treatment of absorption and scattering of light by small particles. The strengths and limits of this conventional approach will be discussed. The second part of the course is devoted to an broad range of applications. Here topics include: Plasmon resonances in metallic systems, metallo-dielectric nanoparticles for medical applications, the use of lasers for optical trapping and characterization of single particles, vibrational excitons in dielectric nanoparticles, interaction of light with aerosol particles and cloud droplets for remote sensing applications and climate predictions, characterization of airborne aerosol particles by photoemission using velocity mapping imaging.

Lecture notes will be distributed during the course.

Applications: References will be provided during the course.

Analytical Methods for Characterization of Nanoparticles and Nanomaterials

Introduction to modern analytical methods used to fully characterize and identify nano-engineered materials and systems.

Understanding of analytical concepts used in nanotechnology, In-depth knowledge of most important methods used in industry and research, Introduction to selected industrial applications, Basic knowledge of production mechanisms of nano-engineered materials.

Understanding of potential health and environmental effects and risks of such small nano-sized particles. Therefore, a lot of different industry customers are forced nowadays to monitor and regulate the size and concentration of nanoparticles in their nano-enabled products.

Above and beyond these regulatory requirements, most industries employing nanoparticles need to be able to online measure nanoparticles to meet their requirements towards quality control and production efficiency. All these requirements demand new precise, accurate, fast and innovative analysis methods to fully characterize nanoparticles in real-time and during the manufacturing process.

Lecture notes will be provided.

Prerequisites:
- 529-0051-00 "Analytical Chemistry I (3. Semester)"
- 529-0058-00 "Analytical Chemistry II (4. Semester)"

(continued)

Enzymes

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme-catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

Overview of enzymes, enzyme-catalyzed reactions and metabolic processes.

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

A script will not be handed out.
529-0735-00L  Chemical Aspects of Bioimaging  W  7 credits  2V+1U  P. Rivera Fuentes

Abstract
This course will introduce basic concepts of fluorescence spectroscopy and microscopy applied to the observation and manipulation of biological systems. The course will focus on the design, preparation and implementation of small-molecule and protein-based probes for biological investigations.

Objective
To understand the basic chemical aspects of bioimaging and photoactivation in biology.

Content
Principles of fluorescence spectroscopy and microscopy, fluorescent dyes and proteins, chemiluminescence, super-resolution microscopy, fluorescent sensors, photoremovable groups, photoswitchable molecules, and optogenetics.

Lecture notes
Handouts, selected original literature, problem sets, and other materials will be provided electronically.

Literature

529-0139-00L  Chemical Aspects of Energy  W  4 credits  3G  A. Wokaun, A. Steinfeld

Number
529-0193-00L  Renewable Energy Technologies I  W  4 credits  3G  A. Wokaun, A. Steinfeld

Abstract
Scenarios for world energy demand and CO2 emissions, implications for climate. Methods for the assessment of energy chains. Potential and technology of renewable energies: Biomass (heat, electricity, biofuels), solar energy (low temp. heat, solar thermal and photovoltaic electricity, solar chemistry). Wind and ocean energy, heat pumps, geothermal energy, energy from waste. CO2 sequestration.

Objective
Scenarios for the development of world primary energy consumption are introduced. Students know the potential and limitations of renewable energies for reducing CO2 emissions, and their contribution towards a future sustainable energy system that respects climate protection goals.

Content

Lecture notes
Lecture notes will be distributed electronically during the course.

Literature

Prerequisites / notice
Fundamentals of chemistry, physics and thermodynamics are a prerequisite for this course.

Topics are available to carry out a Project Work (Semesterarbeit) on the contents of this course.

529-0029-00L  Chemical Crystallography  W  7 credits  3G  M. D. Wörle, N. Trapp

Number
529-0579-00L  Advanced X-ray crystal structure analysis  W  7 credits  3G  M. D. Wörle, N. Trapp

Abstract
To gain a deeper understanding of crystal structure determination principles and practice by X-ray diffraction and the evaluation of results. Review of principles of diffraction and instrumentation, unit cells, lattices, and symmetry. Inorganic structural chemistry: sphere packings, ionic crystals, covalent networks, intermetallic compounds. Overview of powder diffraction and application of crystal chemistry for structure analysis of polycrystalline phases. Working safely with X-rays, crystal growth, selection and mounting, data collection strategies, data reduction, corrections for absorption, extinction and Lp, advanced structure solution theory and techniques: Patterson function, heavy atom technique, Fourier methods, direct methods. Structure modeling and refinement, disorder, twinning, false symmetry, interpretation of anisotropic shift parameters. Determination of absolute configuration, interpretation of results and scope of chemically useful information, validation and publication of results, critical evaluation of published crystal structures.

Lecture notes
Information and exercise sheets will be distributed in loose form.

Abstract

Advanced, but fundamental topics central to the understanding of theory in chemistry and for solving actual chemical problems with a computer.

Examples are:

1. Operators derived from principles of relativistic quantum mechanics
2. Relativistic effects + methods of relativistic quantum chemistry
3. Open-shell molecules + spin-density functional theory

Content

1) Introductory lecture: basics of quantum mechanics and quantum chemistry
2) Einstein’s special theory of relativity and the (classical) electromagnetic interaction of two charged particles
3) Klein-Gordon and Dirac equation; the Dirac hydrogen atom
4) Numerical methods based on the Dirac-Fock-Coulomb Hamiltonian, two-component and scalar relativistic Hamiltonians
5) Response theory and molecular properties, derivation of property operators, Breit-Pauli-Hamiltonian
6) Relativistic effects in chemistry and the emergence of spin
7) Spin in density functional theory
8) New electron-correlation theories: Tensor network and matrix product states, the density matrix renormalization group
9) Quantum chemistry without the Born-Oppenheimer approximation

Students will conduct the computational exercises and examples of structure solution and refinement on personal computers.

Abstract

A comprehensive understanding of the interaction of electrons with condensed matter and details on the instrumentation and methods designed to use these probes in the structural and chemical analysis of various materials.

Objective

A comprehensive understanding of the interaction of electrons with condensed matter and details on the instrumentation and methods designed to use these probes in the structural and chemical analysis of various materials.

Content

This course provides a general introduction into electron microscopy of organic and inorganic materials. In the first part, the basics of transmission- and scanning electron microscopy are presented. The second part includes the most important aspects of specimen preparation, imaging and image processing. In the third part, recent applications in materials science, solid state physics, structural biology, structural geology and structural chemistry will be reported.

Abstract

Toxicokinetic and toxicodynamic aspects of xenobiotic interactions with cellular structures and mechanisms. Toxic responses at the level of organs (immune-, neuro-, reproductive and genotoxicity) and organisms. Introduction into developmental toxicology and ecotoxicology.

Objective

Explanation of important interactions between xenobiotic chemicals and cellular structures such as membranes, enzymes, and nucleic acids. Relevance of intake, distribution, excretion, and biochemical transformation processes. Relevance of mixtures. Explanation of important modes of toxic action such as immunotoxicity, neurotoxicity, reproduction toxicity, genotoxicity based on examples of certain xenobiotics and their effects on important organs.

Abstract

Projects on chemical assessment with the focus on the analysis and assessment of basic substance data for selected chemical classes; analysis and modelling of technical processes; characterisation of environmental and health risks. Risk assessment on the basis of quality and protection goals. Estimation of model and parameter uncertainty. Precaution and safety measures.
Objective

Project thesis (report) on chemicals assessment; time frame totals ca. 80 hours.

Projects on chemical assessment with the focus on the following aspects:

* Analysis and assessment of basic substance data for selected chemical classes: physical chemical properties, environmental behaviour (distribution, persistence), human and eco-toxicity (biochemical metabolism, effect mechanisms), safety.
* Analysis and modelling of technical processes determining chemical release into the environment, e.g., chemicals applications.
* Characterisation of environmental and health risks on the basis of exposure and effect models, QSARs from environmental chemistry, toxicology and methods of risk analysis.
* Risk assessment on the basis of quality and safety goals. Estimation of the model and data uncertainty.
* Demonstration of possibilities and limits of precaution and safety measures (technical, organisational, concerning personnel) including effectiveness and efficiency.

Lecture notes

Project teaching; time frame totals ca. 80 hours.

**Abstract**

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

**Objective**

Knowledge about the necessary theoretical background of spectroscopical methods and their practical applications.

**Content**

Application oriented basics of organic and inorganic instrumental analysis and of the empirical employment of structure elucidation methods:

- Mass spectrometry: Ionization methods, mass separation, isotope signals, rules of fragmentation, rearrangements.
- NMR spectroscopy: Experimental basics, chemical shift, spin-spin coupling.
- IR spectroscopy: Revisiting topics like harmonic oscillator, normal vibrations, coupled oscillating systems (in accordance to the basics of the related lecture in physical chemistry); sample preparation, acquisition techniques, law of Lambert and Beer, interpretation of IR spectra; Raman spectroscopy.

**Lecture notes**

Script will be for the production price.

**Abstract**

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

**Objective**

The lecture is based on Inorganic Chemistry I and addresses an enhanced understanding of the symmetry aspects of chemical bonding of molecules and translation polymers, i.e. crystal structures.

**Content**

Symmetry aspects of chemical bonding, point groups and representations for the deduction of molecular orbitals, energy assessment for molecules and solids, Sanderson formalism, derivation and understanding of band structures, densities of states, overlap populations, crystal symmetry, basic crystal structures and corresponding properties, visual representations of crystal structures.

Special students and auditors need special permission from the lecturers.
The aim of the course is to provide the tools needed for the understanding of the fundamental processes and the design of the industrial production of polymers with molecular characteristics suitably tuned for specific applications. This includes the post-treatment of polymer latexes and the analysis of their colloidal behavior.

Specific topics in the course include, but not limited to:

1. Theoretical Concepts
   Features of mass and thermal transport on the microscale
   Key scaling laws
2. Microfluidic Device Manufacture
   Conventional lithographic processing of rigid materials
   Soft lithographic processing of plastics and polymers
   Mass fabrication of polymeric devices
3. Unit operations and functional components
   Analytical separations (electrophoresis and chromatography)
   Chemical and biological synthesis
   Sample pre-treatment (filtration, SPE, pre-concentration)
   Molecular detection
4. Design Workshop
   Design of microfluidic architectures for PCR, distillation & mixing
5. Contemporary Applications in Biological Analysis
   Microarrays
   Cellular analyses (single cells, enzymatic assays, cell sorting)
6. System integration
   Applications in radiochemistry, diagnostics and high-throughput experimentation

Lecture notes
Lecture handouts, background literature, problem sheets and notes will be provided electronically.

Abstract

Objective
Introduce the students to the design of polymerization reactors for the production of polymers with molecular characteristics suitably tuned for specific applications. This includes the post-treatment of polymer latexes and the analysis of their colloidal behavior.

Content
The aim of the course is to provide the tools needed for the understanding of the fundamental processes and the design of the industrial production of polymeric materials and in the post-treatment of polymer colloids. In particular, the following topics are discussed: Physico-chemical characterization of polymers and description of the polymerization processes. Kinetics of free-radical polymerization and use of population balance models. Production of homo- and co-polymers with controlled characteristics in terms of molecular weight distribution and chain composition distribution. Living polymerizations. Design of polymerization reactors and the thermal runaway problem. Kinetics and control of emulsion polymerization. The radical segregation problem. Surfactants and colloidal stability. Aggregation kinetics and aggregate structure in conditions of diffusion and reaction limited aggregation. The role of shear conditions on aggregation and breakage kinetics and on the aggregate structure. Modeling and design of colloidal aggregation processes.

Abstract
The 'Chemical Product Design' course teaches students quantitative concepts to analyze, select and transform theoretical concepts from chemistry and engineering into valuable real-world products. Basic chemistry and chemical engineering knowledge is required (Diffusion, Thermodynamics, Kinetics,...).

Objective
This course starts with analyzing existing chemical needs and unmet technical challenges. We then develop the skills to critically analyze a specific chemical idea for a product, to rapidly test feasibility or chance for success and to eventually realize its manufacturing. The chemical engineering basics are then used to assess performance of products or devices with non-traditional functions based on dynamic properties (e.g. responsive building materials; personal medical diagnostics on paper strips). The course teaches the interface between laboratory and market with a specific focus on evaluating the chemical value of a given process or compound, and the necessary steps to pursue the resulting project within an entrepreneurial environment. We therefore extend the questions of process design ('how do we make something?') to the question of 'what should we make?'
This course encompasses the theoretical principles of chemical process simulation, as well as its practical application in process analysis and optimization. The techniques for simulating stationary and dynamic processes are presented, and illustrated with case studies. Commercial software packages are presented as a key engineering tool for solving process flowsheeting and simulation problems. Students are expected to actively develop chemical products along the course. Contributions will be made individually, or in small groups, where a larger topic is studied.

### Abstract

This course aims to develop the competency of chemical engineers in process flowsheeting and simulation. Specifically, students will develop the following skills:

- Deep understanding of chemical engineering fundamentals: the acquisition of new concepts and the application of previous knowledge in the area of chemical process systems and their mechanisms are crucial to intelligently simulate and evaluate processes.
- Modeling of general chemical processes and systems: students have to be able to identify the boundaries of the system to be studied and develop the set of relevant mathematical relations, which describe the process behavior.
- Mathematical reasoning and computational skills: the familiarization with mathematical algorithms and computational tools is essential to be capable of achieving rapid and reliable solutions to simulation and optimization problems. Hence, students will learn the mathematical principles necessary for process simulation and optimization, as well as the structure and application of process simulation software. Thus, they will be able develop criteria to correctly use commercial software packages and critically evaluate their results.

Overview of process simulation and flowsheeting
- Definition and fundamentals
- Classification: stationary (steady-state) versus dynamic (transient state) systems
- Fields of application
- Case studies

Process optimization and analysis
- Classification of optimization problems
- Linear programming
- Non-linear programming
- Dynamic programming
- Optimization methods in process flowsheeting
- Sequential methods
- Simultaneous methods

Process simulation
- Process specification
- Introduction to process specification
- Classification of mathematical models: AMS, DOE, DAE, PDE
- Model validation
- Software tools
- Solution methods for process flowsheeting
- Simultaneous methods
- Sequential methods
- Dynamic simulation
- Numerical solution: explicit and implicit methods
- Continuous-discrete simulation: handling of discontinuities

Commercial software for simulation: Aspen Plus
- Thermodynamic property methods
- Reaction and reactors
- Separation / columns
- Convergence & debugging

A basic understanding of material and energy balances, thermodynamic property methods and typical unit operations (e.g., reactors, flash separations, distillation/absorption columns etc.) is required.

Chemical Product Design

Prerequisites: Basic chemistry and chemical engineering knowledge (Diffusion, Thermodynamics, Kinetics,...).

Abstract
The 'Chemical Product Design' course teaches students quantitative concepts to analyze, select and transform theoretical concepts from chemistry and engineering into valuable real-world products. Basic chemistry and chemical engineering knowledge is required (Diffusion, Thermodynamics, Kinetics,...).

Objective
This course starts with analyzing existing chemical needs and unmet technical challenges. We then develop the skills to critically analyze a specific chemical idea for a product, to rapidly test feasibility or chance for success and to eventually realize its manufacturing. The chemical engineering basics are then used to assess performance of products or devices with non-traditional functions based on dynamic properties (e.g. responsive building materials; personal medical diagnostics on paper strips). The course teaches the interface between laboratory and market with a specific focus on evaluating the chemical value of a given process or compound, and the necessary steps to pursue the resulting project within an entrepreneurial environment. We therefore extend the questions of process design ('how do we make something?') to the question of 'what should we make?'

Content
Part A: The 'Chemical Product Design' course starts with discussing questions along, 'What is a chemical product, and why do people pay for it? How does a given compound in a specific setting provide a service?' We then learn how to translate new, often ill-defined wishes or ideas into quantifiable specifications.

Part B: Thermodynamic and kinetic data allow sharp selection criteria for successful products. We learn how to deal with insufficient data and development of robust case models to evaluate their technical and financial constraints. How can parameters of a running process in one industry be scaled into another industry? Can dimensionless engineering numbers be applied beyond traditional chemical processes?

Part C: Manufacturing of commodity products, devices and molecular products: Chemical reactors, separation and detection or isolation units as part of a toolbox. Planning of manufacturing and decisions based on hard data. Providing quantitative answers on potential value generation.

Students are expected to actively develop chemical products along the course. Contributions will be made individually, or in small groups, where a larger topic is studied.

Literature

Process Design and Development

Abstract
The course is focused on the design of Chemical Processes, with emphasis on the preliminary stage of the design approach, where process creation and quick selection among many alternatives are important. The main concepts behind more detailed process design and process simulation are also examined in the last part of the course.

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 371 of 1571
The course is focused on the design of Chemical Processes, with emphasis on the preliminary stage of the design approach, where process creation and quick selection among many alternatives are important. The main concepts behind more detailed process design and process simulation are also examined in the last part of the course.

**Objective**

**Content**

Preliminary process evaluation: simplified material and energy balances (linear balances), degrees of freedom, short-cut models, flowsheet solution algorithm.

Process economic evaluation: equipment sizing and costing, time value of money, cash flow calculations.

Batch Processes: scheduling, sizing and inventories.

Detailed Process Design: unit operation models, flash solution algorithms (different iterative methods, inside-out method), sequencing of nonideal distillation columns, networks of chemical reactors.

### 529-0617-00L Catalysis Engineering

**W 7 credits 3G**  
J. Pérez-Ramírez

**Abstract**

The purpose of the “Catalysis Engineering” course is to provide students with tools that enable the optimal design of catalytic materials and reactor engineering concepts favoring more sustainable manufacturing processes within the chemical industry.

**Objective**

The course aims at illustrating, from conception to implementation, the design of sustainable catalytic processes by integration of the microlevel (catalyst), mesolevel (reactor), and macrolevel (process). The word “sustainable” implies intensified processes with an improved exploitation of raw materials, wider use of renewable feedstocks, reduction of energy consumption, and minimized environmental impact. By the use of modern case studies of industrial relevance, aspects of catalyst preparation and characterization, kinetics, mass and heat transport, and deactivation are discussed. Emphasis is put on understanding the interaction among these basic elements in order to select the optimal catalytic process. Since no textbooks covering this area are available at this time and the intention of this course is unique, the lectures will be based on own texts and journal articles. During the course, there will be specific topics addressed by industrial contributors.

**Content**

The following general aspects:

- Catalyst preparation and characterization
- Kinetics
- Mass and heat transport
- Selectivity
- Deactivation

will be demonstrated for modern catalytic materials and processes of industrial relevance such as:

- Chlorine recycling
- N2O abatement
- Chemoselective hydrogenations
- Hierarchical zeolite catalysts
- Syngas conversion
- Biomass to chemicals and fuels

**License notes**

The course material is based on an own script, journal articles, and slides.

**Prerequisites / notice**

It is assumed that students selecting this course are familiar with general concepts of catalysis, reactor design, and transport phenomena.

---

### 529-0837-00L Biomicrofluidic Engineering

**W 7 credits 3G**  
A. de Mello

**Abstract**

Biomicrofluidics describes the behaviour, control and manipulation of fluids that are geometrically constrained within sub-microliter environments. The use of microfluidic devices offers an opportunity to control physical and chemical processes with unrivalled precision, and in turn provides a route to performing chemistry and biology in an ultra-fast and high-efficiency manner.

**Objective**

In the course students will investigate the theoretical concepts behind microfluidic device operation, the methods of microfluidic device manufacture and the application of microfluidic architectures to important problems faced in modern day chemical and biological analysis. A design workshop will allow students to develop new microscale flow processes by appreciating the dominant physics at the microscale. The application of these basic ideas will primarily focus on biological problems and will include a treatment of diagnostic devices for use at the point-of-care, advanced functional material synthesis, DNA analysis, proteomics and cell-based assays. Lectures, assignments and the design workshop will acquaint students with the state-of-the-art in applied microfluidics.

**Content**

Specific topics in the course include, but not limited to:

1. Theoretical Concepts
2. Features of mass and thermal transport on the microscale
   - Key scaling laws
3. Microfluidic Device Manufacture
   - Conventional lithographic processing of rigid materials
   - Soft lithographic processing of plastics and polymers
   - Mass fabrication of polymeric devices
4. Unit operations and functional components
   - Analytical separations (electrophoresis and chromatography)
   - Chemical and biological synthesis
   - Sample pre-treatment (filtration, SPE, pre-concentration)
   - Molecular detection
5. Design Workshop
   - Design of microfluidic architectures for PCR, distillation & mixing
6. Microarrays
   - Cellular analyses (single cells, enzymatic assays, cell sorting)
   - Proteomics
7. System integration
   - Applications in radiochemistry, diagnostics and high-throughput experimentation

**License notes**

Lecture handouts, background literature, problem sheets and notes will be provided electronically.

### 529-0047-00L Risk Assessment of Chemicals

**W 7 credits 6A**  
C. Bogdal, K. Hungerbühler, N. von Götz, Z. Wang

**Objective**

The course will illustrate, from conception to implementation, the design of sustainable catalytic processes by integration of the microlevel (catalyst), mesolevel (reactor), and macrolevel (process). The word “sustainable” implies intensified processes with an improved exploitation of raw materials, wider use of renewable feedstocks, reduction of energy consumption, and minimized environmental impact. By the use of modern case studies of industrial relevance, aspects of catalyst preparation and characterization, kinetics, mass and heat transport, and deactivation are discussed. Emphasis is put on understanding the interaction among these basic elements in order to select the optimal catalytic process. Since no textbooks covering this area are available at this time and the intention of this course is unique, the lectures will be based on own texts and journal articles. During the course, there will be specific topics addressed by industrial contributors.

**Content**

The following general aspects:

- Catalyst preparation and characterization
- Kinetics
- Mass and heat transport
- Selectivity
- Deactivation

will be demonstrated for modern catalytic materials and processes of industrial relevance such as:

- Chlorine recycling
- N2O abatement
- Chemoselective hydrogenations
- Hierarchical zeolite catalysts
- Syngas conversion
- Biomass to chemicals and fuels

**License notes**

The course material is based on an own script, journal articles, and slides.

**Prerequisites / notice**

It is assumed that students selecting this course are familiar with general concepts of catalysis, reactor design, and transport phenomena.
Abstract
Projects on chemical assessment with the focus on the analysis and assessment of basic substance data for selected chemical classes; analysis and modelling of technical processes; characterisation of environmental and health risks. Risk assessment on the basis of quality and protection goals. Estimation of model and parameter uncertainty. Precision and safety measures.

Objective
Project thesis (report) on chemicals assessment; time frame totals ca. 80 hours.

Content
Projects on chemical assessment with the focus on the following aspects:

* Analysis and assessment of basic substance data for selected chemical classes: physical chemical properties, environmental behaviour (distribution, persistence), human and eco-toxicity (biochemical metabolism, effect mechanisms), safety.
* Analysis and modelling of technical processes determining chemical release into the environment, e.g., chemicals applications.
* Characterisation of environmental and health risks on the basis of exposure and effect models, QSARs from environmental chemistry, toxicology and methods of risk analysis.
* Risk assessment on the basis of quality and safety goals. Estimation of the model and data uncertainty.
* Demonstration of possibilities and limits of precaution and safety measures (technical, organisational, concerning personnel) including effectiveness and efficiency.

Project teaching; time frame totals ca. 80 hours.

Electrolytes: conductivity, transfer number, diffusion, migration, convection. Electrode/electrolyte interface, Nernst equation, potential vs. electricity, solar chemistry). Wind and ocean energy, heat pumps, geothermal energy, energy from waste. CO2 sequestration.

Objective
Understanding of the impact of chemicals on biological systems; evaluation of the effects from different biomedical perspectives.

Content
Explanation of important interactions between xenobiotic chemicals and cellular structures such as membranes, enzymes, and nucleic acids. Relevance of intake, distribution, excretion, and biochemical transformation processes. Relevance of mixtures. Explanation of important modes of toxic action such as immune toxicity, neurotoxicity, reproduction toxicity, genotoxicity based on examples of certain xenobiotics and their effects on important organs.

Lecture notes
See recommended literature.

Literature

Prerequisites / notice
Voraussetzung:
Beschränkt auf 6 Projektarbeiten pro Semester

529-0745-00L General and Environmental Toxicology W 7 credits 3V M. Arand, K. Hungerbühler, H. Nägeli, B. B. Stieger, I. Werner

Abstract
Toxicokinetic and toxicodynamic aspects of xenobiotic interactions with cellular structures and mechanisms. Toxic responses at the level of organs (immune-, neuro-, reproductive and genotoxicity) and organisms. Introduction into developmental toxicology and ecotoxicology.

Objective
Understanding of the impact of chemicals on biological systems; evaluation of the effects from different biomedical perspectives.

Content
Explanation of important interactions between xenobiotic chemicals and cellular structures such as membranes, enzymes, and nucleic acids. Relevance of intake, distribution, excretion, and biochemical transformation processes. Relevance of mixtures. Explanation of important modes of toxic action such as immune toxicity, neurotoxicity, reproduction toxicity, genotoxicity based on examples of certain xenobiotics and their effects on important organs.

Lecture notes
Course material will be handed out as the lectures progress

Literature
Textbooks of pharmacology and toxicology (cf. list in course material)

Prerequisites / notice
Eduational basis: basic chemistry, biology and biochemistry

529-0659-00L Electrochemistry W 6 credits 3G P. Nováč

Abstract

Objective
Toward the end of the course the students will understand the basics of electrochemistry and will be able to describe and calculate electrochemistry-related matters in industrial processes and products.

Content

529-0193-00L Renewable Energy Technologies I W 4 credits 3G A. Wokaun, A. Steinfeld

Abstract
The lectures Renewable Energy Technologies I (529-0193-00L) and Renewable Energy Technologies II (529-0191-00L) can be taken independently from one another.

Objective
Scenarios for world energy demand and CO2 emissions, implications for climate. Methods for the assessment of energy chains. Potential and technology of renewable energies: Biomass (heat, electricity, biofuels), solar energy (low temp. heat, solar thermal and photovoltaic electricity, solar chemistry). Wind and ocean energy, heat pumps, geothermal energy, energy from waste, CO2 sequestration.

Content
Scenarios for the development of world primary energy consumption are introduced. Students know the potential and limitations of renewable energies for reducing CO2 emissions, and their contribution towards a future sustainable energy system that respects climate protection goals.

Lecture notes
Lecture notes will be distributed electronically during the course.

Literature
Introduction to molecules used for biomaterials, molecular interactions between different materials and biological systems (molecules, cells, tissues). The concept of biocompatibility is discussed and important techniques from biomaterials research and development are introduced.

Objective
The class consists of three parts:
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Content
Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implanting material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.

In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

Lecture notes
Handouts can be accessed online.

Literature

Handouts provided during the classes and references therein.

636-0007-00L
Computational Systems Biology

Objective
The aim of this course is to provide an introductory overview of mathematical and computational methods for the modeling, simulation and analysis of biological networks.

Content
Biology has witnessed an unprecedented increase in experimental data and, correspondingly, an increased need for computational methods to analyze this data. The explosion of sequenced genomes, and subsequently, of bioinformatics methods for the storage, analysis and comparison of genetic sequences provides a prominent example. Recently, however, an additional area of research, captured by the label “Systems Biology”, focuses on how networks, which are more than the mere sum of their parts’ properties, establish biological functions. This is essentially a task of reverse engineering. The aim of this course is to provide an introductory overview of corresponding computational methods for the modeling, simulation and analysis of biological networks.

We will start with an introduction into the basic units, functions and design principles that are relevant for biology at the level of individual cells. Making extensive use of example systems, the course will then focus on methods and algorithms that allow for the investigation of biological networks with increasing detail. These include (i) graph theoretical approaches for revealing large-scale network organization, (ii) probabilistic (Bayesian) network representations, (iii) structural network analysis based on reaction stoichiometries, (iv) qualitative methods for dynamic modeling and simulation (Boolean and piece-wise linear approaches), (v) mechanistic modeling using ordinary differential equations (ODEs) and finally (vi) stochastic simulation methods.

Lecture notes

Biological Engineering and Biotechnology

Objective
Biological Engineering and Biotechnology will cover the latest biotechnological advances as well as their industrial implementation to engineer mammalian cells for use in human therapy. This lecture will provide forefront insights into key scientific aspects and the main points in industrial decision-making to bring a therapeutic from target to market.

Content
- Insight Into The Mammalian Cell Cycle. Cycling, The Balance Between Proliferation and Cancer - Implications For Biopharmaceutical Manufacturing.
- 2. The Licence To Kill. Apoptosis Regulatory Networks - Engineering of Survival Pathways To Increase Robustness of Production Cell Lines.
- 5. From Target To Market. An Antibody's Journey From Cell Culture to the Clinics.
- 6. Biology and Malign Applications. Do Life Sciences Enable the Treatment of Cancer?
- 7. Functional Food. Enjoy your Meal!

Lecture notes
- Handouts during the course.

151-0104-00L
Uncertainty Quantification for Engineering & Life Sciences

Objective
The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Content
Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes
- The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.
Simulate and optimise a chemical production process using a commercial process simulation software.

The learning objectives (LO) of this course are:

LO 1: Create a model describing the production process
- Students will apply a commercial process simulator systematically for process creation and analysis.
- Students will create a simulation flow sheet for steady-state simulation.
- Students will discriminate the models for the different process units.
- Students will evaluate the sequencing in which process units associated with recycle loops are solved to obtain converged material and energy balances.

LO 2: Evaluate the performance of the production process
- Students will analyse and understand the degrees of freedom in modelling process units and flowsheets.
- Students will make design specifications and follow the iterations implemented to satisfy them.
- Students will judge the role of process simulators in equipment sizing and costing and profitability analysis.
- Students will assess the economic performance of the process, including investment and operation costs.
- Students will assess the environmental impact of the production process.

LO 3: Optimise the design and operating conditions of the production process
- Students will solve sensitivity analyses and optimisations are conducted considering technical and economic criteria.
- Students will generate process integration alternatives to improve the initial production process.
- Students will optimise the production process considering economic and environmental criteria.
Before the case study week, students do exercises in the course of Process Simulation and Flowsheeting in order to get familiar with Aspen Plus simulation software (compulsory). They also receive guidelines for environmental impact assessment and skills on oral presentations.

The problem statement and detailed instructions are provided at the beginning of the case study week.

During the case study week:
- Students work in teams of 3-5 people.
- Students have to pose and solve the different questions presented in the problem statement.
- Students have to coordinate the activities, the preparation of the written report and the oral presentation.
- Students will be assessed in specific questions they may find along the case study development.
- An industry expert, namely a chemical engineer from ETHZ, exchanges with the groups.

One week after the case study week, the groups deliver the written report.

One week later, the students receive the comments on the work done, and implement required corrections.

All the groups prepare a single presentation comparing the results and showing their achievements.

Finally, the students visit the real industrial process at the site. They also present their work to the industrial experts on the day of the industry visit.

Only students who fulfill the following criteria are allowed to begin with their master thesis:

a. successful completion of the bachelor programme;

b. fulfilling of any additional requirements necessary to gain admission to the master programme.

Duration of the Master's Thesis: 16 weeks.

Duration of the Master's Thesis: 16 weeks.

In the Master thesis students prove their ability to independent, structured and scientific working. The Master thesis is carried out in a research group of the Department of Chemistry and Applied Biosciences, usually in the Institute of Chemical and Bioengineering, as chosen by the student.

In the Master Thesis students prove their ability to independent, structured and scientific working.

**Course Units for Additional Admission Requirements**

The courses below are only available for MSc students with additional admission requirements.

<table>

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

The goal of this course is to provide students with a wide general understanding cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

The focus is animal cells and the development of multicellular organisms with a clear emphasis on the molecular basis of cellular structures and phenomena. The topics include biological membranes, the cytoskeleton, protein sorting, energy metabolism, cell cycle and division, viruses, extracellular matrix, cell signaling, embryonic development and cancer research.

Analyzing cells & molecules / Gebhard Schertler/ 439-463; Membrane structure / Gebhard Schertler/ 10 / 565-595; Compartmental Sorting/ Ulrike Kutay/12+14+6/641-694/755-758/782-783/315-320/325 -333/Table 6-2/Figure6-20, 6-21, 6-32, 6-34; Intracellular Membrane Traffic/ Ulrike Kutay/13/695-752; The Cytoskeleton/ Ulrike Kutay/ 16/889 - 948 (only the essentials); Membrane Transport of Small Molecules and the Electrical Properties of Membranes /Sabine Werner/11/597 - 633; Mechanisms of Cell Communication / Sabine Werner/15/813-876; Cancer/ Sabine Werner/20/1091-1141; Cell Junctions and Extracellular Matrix/Ueli Suter / 1035-1081; Stem Cells and Tissue Renewal/Ueli Suter /1217-1262; Development of Multicellular organisms/ Ernst Hafen/ 21/ 1145-1179 /1184-1198/1198-1213; Cell Migration/Joao Matos/951-960; Cell Death/Joao Matos/1021-1032; Cell Cycle/chromosome segregation/Cell division/Melosis/Joao Matos/ 963-1018.
Biology II

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
The lecture course Biology II is a basic introductory course into biology for students who need to pass this course for admission to their MSc curriculum.

Objective
The objective of the lecture course Biology II is the understanding of form, function, and development of animals and of the basic underlying mechanisms.

Content

1. Genomes, DNA Technology, Genetic Basis of Development
   - Chapter 19: Eukaryotic Genomes: Organization, Regulation, and Evolution
   - Chapter 20: DNA Technology and Genomics
   - Chapter 21: The Genetic Basis of Development

2. Form, Function, and Development of Animals I
   - Chapter 40: Basic Principles of Animal Form and Function
   - Chapter 41: Animal Nutrition
   - Chapter 44: Osmoregulation and Excretion
   - Chapter 47: Animal Development

3. Form, Function, and Development of Animals II
   - Chapter 42: Circulation and Gas Exchange
   - Chapter 43: The Immune System
   - Chapter 45: Hormones and the Endocrine System
   - Chapter 48: Nervous Systems
   - Chapter 49: Sensory and Motor Mechanisms

Literature
The following text-book is the basis for the courses Biology I and II:

Exercises are integrated in the lectures. In addition, attendance in the lecture 529-0289-00 "Instrumental analysis of organic compounds" (4th semester) is recommended.

Analytical Chemistry I

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Introduction into the most important spectroscopical methods and their applications to gain structural information.

Objective
Knowledge about the necessary theoretical background of spectroscopical methods and their practical applications.

Content
Application oriented basics of organic and inorganic instrumental analysis and of the empirical employment of structure elucidation methods:
- Mass spectrometry: Ionization methods, mass separation, isotope signals, rules of fragmentation, rearrangements.
- NMR spectroscopy: Experimental basics, chemical shift, spin-spin coupling.
- IR spectroscopy: Revisiting topics like harmonic oscillator, normal vibrations, coupled oscillating systems (in accordance to the basics of the related lecture in physical chemistry); sample preparation, acquisition techniques, law of Lambert and Beer, interpretation of IR spectra; Raman spectroscopy.

Lecture notes
Script will be for the production price

Biochemistry

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
The lecture is a basic introductory course on the molecular principles of biology for students who need to pass this course for admission to their MSc curriculum.

Objective
The goal of this course is to give the students a basic understanding of the molecules that build a cell and make it function, and the basic principles of metabolism and molecular genetics.
The course content is based on the following chapters of the textbook Biochemistry (Berg, Tymoczko, Stryer, 7th edition, 2012, Freeman & Co, New York)

Chapter 1: The molecular design of life
Chapter 2: Protein composition and structure
Chapter 3: Exploring proteins and proteomes
Chapter 4: DNA, RNA and the flow of information
Chapter 5: Exploring Genes and Genomes
Chapter 7: Hemoglobin
Chapter 8: Enzymes and the basic concepts of catalysis
Chapter 11: Carbohydrates
Chapter 12: Lipids and cell membranes
Chapter 15: Metabolism: Basic concepts and design

Qualitative analysis (determination of cations and anions), acid-base-equilibria (pH-values, titrations, buffer), precipitation equilibria

Can be bought at the HCI-shop

Introduction to UNIX, data representation, introduction to C++ programming, errors, algorithms, computer architecture, sorting and searching, databases, numerical algorithms, types of algorithms, simulation, data communication & networks, chemical structures, operating systems, programming languages, software engineering.

For more information: www.csms.ethz.ch/education/linfoL

Objective
Discuss fundamentals of computer architecture, languages, algorithms and programming with an eye to their application in the area of chemistry, biology and material science.

Content
Minimal introduction to UNIX, Data representation and processing, algorithms and programming in C++, Errors, programming guidelines, efficiency, computer architecture, algorithms for sorting and searching, databases, numerical algorithms, types of algorithms, simulation, data communication & networks, chemical structures, operating systems, programming languages, style, software engineering.

Lecture notes
Available (in English), distributed at first lecture

Lecture notes
See: www.csms.ethz.ch/education/linfoL

Prerequisites / notice
Since the exercises on the computer do convey and test essentially different skills as those being conveyed during the lectures and tested at the written exam, the results of the exercises are taken into account when evaluating the results of the exam.

For more information about the lecture: www.csms.ethz.ch/education/linfoL

</table>

Information about the practical course will be given on the first day.

Abstract
Qualitative analysis (determination of cations and anions), acid-base-equilibria (pH-values, titrations, buffer), precipitation equilibria (gravimetry, potentiometry, conductivity, complexometric titration)

Objective
Qualitative analysis (simple cation and anion separation process, determination of cations and anions), acid-base-equilibria (strengths of acids and bases, pH- and pKa-values, titrations, buffer systems, Kjeldahl determination), precipitation equilibria (gravimetry, potentiometry, conductivity), oxidation state and redox behaviour (syntheses), redox-titrations, galvanic elements, metal complexes (syntheses of complexes, ligand exchange reactions, complexometric titration) analysis of measured values (measuring error, average value, error analysis), states of aggregation (vapour pressure), characteristics of electrolytes (conductivity measurements), thermodynamics (calorimetry)

Content
The general aim for the students of the practical course in general chemistry is an introduction in the scientific work and to get familiar with simple experimental procedures in a chemical laboratory. In general, first experiences with the principal reaction behaviour of a variety of different substances will be made. The chemical characteristics of these will be elucidated by a series of quantitative experiments alongside with the corresponding qualitative analyses. In order to get an overview of classes of substances as well as some general phenomena in chemistry suitable experiments have been chosen. In the second part of the practical course, i.e. physical chemistry, the behaviour of substances in their states of aggregation as well as changes of selected physical values will be recorded and discussed.

Abstract
Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

Objective
Acquisition of a basic repertoire of synthetic methods including important reactions of aldehydes, ketones, carboxylic acids and carboxylic acid derivatives, as well as eliminations and fragmentations. Particular emphasis is placed on the understanding of reaction mechanisms and the correlation between structure and reactivity. A deeper understanding of the concepts presented during the lecture is reached by solving the problems handed out each time and discussed one week later in the exercise class.

Content
Chemical reactivity and classes of compounds. Eliminations, fragmentations, chemistry of aldehydes and ketones (hydrates, acetals, imines, enamines, nucleophilic addition of organometallic compounds, reactions with phosphorus and sulfur ylides; reactions of enolates as nucleophiles) and of carboxylic acid derivatives. Aldol reactions.

Lecture notes
A pdf file of the printed lecture notes is provided online. Supplementary material may be provided online.

Literature
No set textbooks. Optional literature will be proposed at the beginning of the class and in the lecture notes.

Reaction Kinetics

Abstract

Objective
Introduction to Chemical Reaction Kinetics

Content
Fundamental concepts: rate laws, elementary reactions and composite reactions, molecularity, reaction order. Experimental methods in reaction kinetics up to new developments in femtosecond kinetics. Simple chemical reaction rate theories: temperature dependence of the rate constant and Arrhenius equation, collision theory, reaction cross-section, transition state theory. Reaction mechanisms and complex kinetic systems, approximation techniques, chain reactions, explosions and detonations. Homogeneous catalysis and enzyme kinetics.

Lecture notes

Literature

Prerequisites / notice
Voraussetzungen:
- Mathematik I und II
- Allgemeine Chemie I und II
- Physikalische Chemie I

402-0043-00L Physics I

Abstract
Introduction to the concepts and tools in physics with the help of demonstration experiments: mechanics of point-like and ridged bodies, periodic motion and mechanical waves.

Objective
The concepts and tools in physics, as well as the methods of an experimental science are taught. The student should learn to identify, communicate and solve physical problems in his/her own field of science.

Content
Mechanics (motion, Newton's laws, work and energy, conservation of momentum, rotation, gravitation, fluids)
Periodic Motion and Waves (periodic motion, mechanical waves, acoustics)

Lecture notes
The lecture follows the book “Physics” by Paul A. Tipler.

Literature
- Paul A. Tipler and Gene P. Mosca, Physics (for Scientists and Engineers), W. H. Freeman and Company

Prerequisites / notice
- Mathematics I & II

529-0051-00L Analytical Chemistry I

Abstract
Introduction into the most important spectroscopical methods and their applications to gain structural information.

Objective
Knowledge about the necessary theoretical background of spectroscopical methods and their practical applications

Content
Application oriented basics of organic and inorganic instrumental analysis and of the empirical employment of structure elucidation methods:
Mass spectrometry: Ionization methods, mass separation, isoipe signals, rules of fragmentation, rearrangements.
NMR spectroscopy: Experimental basics, chemical shift, spin-spin coupling.
IR spectroscopy: Revisiting topics like harmonic oscillator, normal vibrations, coupled oscillating systems (in accordance to the basics of the related lecture in physical chemistry); sample preparation, acquisition techniques, law of Lambert and Beer, interpretation of IR spectra; Raman spectroscopy.
UV/VIS spectroscopy: Basics, interpretation of electron spectra. Circular dichroism (CD) und optical rotation dispersion (ORD).

Lecture notes
Script will be for the production price

Literature
- M. Hesse, H. Meier, B. Zeeh, Spektroskopische Methoden in der organischen Chemie, 5. überarbeitete Auflage, Thieme, Stuttgart, 1995

Prerequisites / notice
Excercises are integrated in the lectures. In addition, attendance in the lecture 529-0289-00 “Instrumental analysis of organic compounts” (4th semester) is recommended.

401-0373-00L Mathematics III: Partial Differential Equations

Abstract

Objective
The main objective is that the students get a basic knowledge of the classical tools to solve explicitly linear partial differential equations.
## Examples of partial differential equations
- Classification of PDEs
- Superposition principle

## One-dimensional wave equation
- D'Alembert's formula
- Duhamel's principle

## Separation of variables
- Resolution of wave and heat equation
- Homogeneous and inhomogeneous boundary conditions, Dirichlet and Neumann boundary conditions

## Laplace equation
- Resolution of the Laplace equation on rectangle, disk and annulus
- Poisson formula
- Mean value theorem and maximum principle

## Fourier series
- Representation of piecewise continuous functions via Fourier series
- Examples and applications

## Separation of variables
- Resolution of wave and heat equation
- Homogeneous and inhomogeneous boundary conditions, Dirichlet and Neumann boundary conditions

## Fourier transform
- Derivation and Definition
- Inverse Fourier transformation and inversion formula
- Interpretation and properties of the Fourier transform
- Resolution of the heat equation

## Laplace transform
- Definition, motivation and properties
- Inverse Laplace transform of rational functions
- Application to ordinary differential equations

Lecture notes
There are available some Lecture Notes in English and also in German of the Professor. These can be found following the links provided under the tab 'Lernmaterialien'.

Literature
2) Y. Pinchover and J. Rubinstein, An Introduction to Partial Differential Equations, Cambridge University Press
3) E. Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons (only Chapters 1,2,6,11)

Prerequisites / notice
It is required a minimal background of:
1) multivariable functions (Riemann integrals in two or three variables, change of variables in the integrals through the Jacobian, partial derivatives, differentiability, Jacobian)
2) numerical and functional sequences and series, basic knowledge of ordinary differential equations.

Abstract
Introduction to the experimental methods of Inorganic Chemistry

Objective
The teaching laboratory offers an insight into different aspects of Inorganic Chemistry, including solid state chemistry, organometallic chemistry, kinetics, etc. The synthesis, characterization and analysis of inorganic compounds are a main topic. Emphasis is given to scientific writing (experiment reports).

Content
Inorganic chemistry part: Synthesis and analysis of elemento-organic compounds, metal complexes, and organometallic compounds. Introduction to Schlenk techniques, solid state synthesis, and kinetics. Introduction in the chemistry library: literature data banks and collections of spectra.

Organic synthesis with organometallic compounds and catalysts: Experiments in the framework of a selected specialised project. Possible projects: Rh catalysed asymmetric hydrogenation of enamides, Mn-catalysed epoxidation of olefins, Cu catalysed Diels-Alder reactions, synthesis of organo-boron compounds and Pd catalysed coupling with halides, Ru catalysed transfer hydrogenation.

A manual is distributed in the teaching laboratory.

Prerequisites / notice
- Practical Course General Chemistry (1. Semester, 529-0011-04)
- Practical Course Inorg. and Org. Chemistry I (2. Sem., 529-0230)
- Attendance of Course Inorg. Chemistry I (3. Sem., 529-0121)
If necessary, access priority will be settled according to the results of the first-year examinations.

Abstract
This course teaches the fundamentals of thermodynamics applied to the description of real mixtures in the presence of physicochemical equilibria, including methods to quantitatively estimate them. While giving insights into the meaning and properties of main thermodynamic quantities, the course keeps primary focus on application to real chemical engineering problems.

Objective
The objective of the course is twofold. First, to teach the methods to calculate the volumetric and thermodynamic properties of mixtures in the presence of physicochemical equilibria. In particular, students are supposed to acquire the knowledge on which thermodynamic properties have to be estimated to carry out such calculation, on which data which need to be gathered and estimated, on the methods, the relative assumption and approximations. Second, the course is intended to give the students a sufficient theoretical insight on the thermodynamic properties, which will be used for future applications and studies.
The first part of the course is focusing on pure fluids (ideal and real). First, some fundamentals of thermodynamics are reviewed, including thermodynamic quantities and balances (of mass, energy and entropy). Then, equations of state and their use to estimate the volumetric properties of pure fluids are introduced. Finally, it is discussed how to use previous results for the estimation of the main thermodynamic properties (internal energy, enthalpy, entropy, free Gibbs energy, fugacity, etc.).

The second part of the course is focusing on mixtures, starting from binary mixture to mixtures of N components. Again, real mixtures are discussed, with emphasis on when such mixtures can be approximated as ideal ones and on the corrections which are needed to switch from ideal to real mixtures. As for pure fluids, first the use of the equations of state is discussed to estimate volumetric properties, then the estimation of the thermodynamic properties of mixtures is introduced. In this part, a particular focus is given to phase equilibria in the absence of chemical reactions. The most common equilibria (liquid-vapor, solid-liquid, liquid-liquid, etc) are discussed.

In the last part of the course, the chemical equilibria are discussed, with particular focus on the calculation of mass and energy balances for multicomponent systems (mixtures), also in the presence of physical equilibria.

During the lectures, theoretical aspects will be discussed and will be linked to application by the discussion of a comprehensive study case, including the methods for its solution. Detailed exercises will be given (and discussed later) to the students, to let them familiarize with the main methods discussed during the lecture.

No script will be available. Support material consists of PowerPoint presentations, which will be available in PDF format online.

Books on this subject can be mostly found under the title: 'Chemical Engineering Thermodynamics', 'Thermodynamics for Chemical Engineers', or 'Chemical Process Principles'. A selection:

Acquisition of material properties and data:

11. "TRC Thermodynamic Tables", Thermodynamic Research Center, College Station USA
Objective: Provide to the students a complete methodology for the analysis and design of homogeneous reactors.

Lecture notes: Scripts are available online on the web pages of the Morbidelli group.

752-4001-00L Microbiology O 2 credits 2V M. Schuppler, S. Schlegel, J. Vorhoft-Zambelli

Abstract: Teaching of basic knowledge in microbiology with main focus on Microbial Cell Structure and Function, Molecular Genetics, Microbial Growth, Metabolic Diversity, Phylogeny and Taxonomy, Prokaryotic Diversity, Human-Microbe Interactions, Biotechnology.

Objective: Teaching of basic knowledge in microbiology.

Lecture notes: Scripts von den jeweiligen Dozenten ausgegeben.

Literature: Die Behandlung der Themen erfolgt auf der Basis des Lehrbuchs Brock, Biology of Microorganisms.

401-0675-00L Statistical and Numerical Methods for Chemical Engineers O 3 credits 2V+2U R. Käppeli, P. Müller, M. Sokolov

Abstract: This course covers common numerical algorithms and statistical methods used by chemical engineers to solve typical problems arising in industrial and research practice.

Objective: This course covers common numerical algorithms and statistical methods used by chemical engineers to solve typical problems arising in industrial and research practice. The focus is on application of these algorithms to real world problems, while the underlying mathematical principles are also explained. The MATLAB environment is adopted to integrate computation, visualization and programming.

Content: Topics covered:

Part I: Numerical Methods:
- Interpolation & Numerical Calculus
- Non-linear Equations
- Ordinary Differential Equations
- Partial Differential Equations
- Linear and Non-linear Least Squares

Part II: Statistical Methods:
- Data analysis and regression methods
- Statistical experimental design
- Multivariate analysis of spectra

Lecture notes: For the numerics part, see http://www.sam.math.ethz.ch/~karoger/numci/2016/

Literature: Recommended reading:
2) A. Constantinides, N. Mostoufi, Numerical Methods for Chemical Engineers with Matlab Applications, Prentice Hall, 1999
4) W. A. Stahel, Statistische Datenanalyse, Vieweg, 4th edition 2002

351-0778-00L Discovering Management Entry level course in management for BSc, MSc and PHD students at all levels not belonging to D-MTEC. This course can be complemented with Discovering Management (Exercise) 351-0778-01.

Abstract: Discovering Management offers an introduction to the field of business management and entrepreneurship for engineers and natural scientists. The module provides an overview of the principles of management, teaches knowledge about management that is highly complementary to the students’ technical knowledge, and provides a basis for advancing the knowledge of the various subjects offered at D-MTEC.

Objective: Discovering Management combines in an innovative format a set of lectures and an advanced business game. The learning model for Discovering Management involves ‘learning by doing’. The objective is to introduce the students to the relevant topics of the management literature and give them a good introduction in entrepreneurship topics too. The course is a series of lectures on the topics of strategy, innovation, corporate finance, leadership, design thinking and corporate social responsibility. While the 14 different lectures provide the theoretical and conceptual foundations, the experiential learning outcomes result from the interactive business game. The purpose of the business game is to analyse the innovative needs of a large multinational company and develop a business case for the company to grow. This business case is as relevant to someone exploring innovation within an organisation as it is if you are planning to start your own business. By discovering the key aspects of entrepreneurial management, the purpose of the course is to advance students’ understanding of factors driving innovation, entrepreneurship, and company success.

Content: Discovering Management aims to broaden the students’ understanding of the principles of business management, emphasizing the interdependence of various topics in the development and management of a firm. The lectures introduce students not only to topics relevant for managing large corporations, but also touch upon the different aspects of starting up your own venture. The lectures will be presented by the respective area specialists at D-MTEC. The course broadens the view and understanding of technology by linking it with its commercial applications and with society. The lectures are designed to introduce students to topics related to strategy, corporate innovation, leadership, corporate and entrepreneurial finance, value chain analysis, corporate social responsibility, and business model innovation. Practical examples from industry experts will stimulate the students to critically assess these issues. Creative skills will be trained by the business game exercise, a participant-centered learning activity, which provides students with the opportunity to place themselves in the role of Chief Innovation Officer of a large multinational company. As they learn more about the specific case and identify the challenge they are faced with, the students will have to develop an innovative business case for this multinational corporation. Doing so, this exercise will provide an insight into the context of managerial problem-solving and corporate innovation, and enhance the students’ appreciation for the complex tasks companies and managers deal with. The business game presents a realistic model of a company and provides a valuable learning platform to integrate the increasingly important development of the skills and competences required to identify entrepreneurial opportunities, analyse the future business environment and successfully respond to it by taking systematic decisions, e.g. critical assessment of technological possibilities.
Prerequisites / notice

Discovering Management is designed to suit the needs and expectations of Bachelor students at all levels as well as Master and PhD students not belonging to D-MTEC. By providing an overview of Business Management, this course is an ideal enrichment of the standard curriculum at ETH Zurich.
No prior knowledge of business or economics is required to successfully complete this course.

Abstract

The focus of part I of the case study course lies on the literature-based comparison of chemical process alternatives. Based on this compilation and selected quantitative as well as qualitative measures a process assessment and comparison is conducted and the most promising process alternative is chosen for further evaluation, and a basic flowsheet and mass and energy balances are generated.

Objective

- to obtain knowledge about different databases and sources of information
- application of the knowledge obtained in lectures
- problem-oriented problem solving (application of different methods to the same subject)
- team work
- report writing and presentation techniques

Content

The focus of part I of the case study course lies on the literature-based comparison of chemical process alternatives. For this purpose relevant substance data (i.e. physico-chemical, toxicological, safety, and environmental data) as well as information about synthesis routes and technical implementations (i.e. on reaction kinetics; possible separation operations; economic, safety, and environmental aspects) are collected from the literature. Based on this compilation and selected quantitative as well as qualitative measures a process assessment and comparison is conducted and the most promising process alternative is chosen for further evaluation. For this alternative a basic flowsheet and mass and energy balances are generated.

529-0639-01L Chemical Engineering Laboratory I O 6 credits 8P M. Morbidelli, N. Kobert

Abstract

Introduction to various tools of chemical engineering techniques with reference to the lectures. In groups of two, students will conduct experiments in the following areas: thermodynamics and phase equilibria including electrochemistry, transport phenomena, kinetics and selectivity of complex reactions, characterisation of ideal and real reactors.

Objective

Introduction to various tools of chemical engineering techniques with reference to the running lectures.

Content

In groups of two, students will conduct selected experiments in the following areas: thermodynamics and phase equilibria including electrochemistry, transport phenomena, kinetics and selectivity of complex reactions, characterisation of ideal and real reactors.

</tr>
<tr>
<td>Objective</td>
<td>This MACIS core seminar covers basic issues of research design, small-n research, and data collection. It familiarizes students with general research design problems such as defining research questions, analyzing causality, and designing single and comparative case studies. It then introduces them to basic issues in small-n research. Students acquire an understanding of the specific challenges and design problems in qualitative analysis. Finally, students are introduced to exemplary methods of data collection. By the end of the course, students would be able to use the principal methods of data collection used by political scientists, have a critical understanding of the advantages and disadvantages of the methods, and should be able to reflect on and discuss the methods in light of research questions of their interest.</td>

<tr>
<td>Abstract</td>
<td>This research seminar at the intersection between Security Studies and Science and Technology Studies focuses on how sociotechnical innovations (cyberspace, chemical and biological agents and robots) impact security politics and military strategy, and will look at the possibilities and limitations for international governance and arms control, with specific attention on the challenge of 'dual-use'. Students will learn about national technostategic projects such as strategic bombing, the creation of cyberspace, the weaponization of chemical and biological agents, and the move towards 'Lethal Autonomous Weapons Systems'. Furthermore, students will learn about problems and solutions for the international governance of technologies and arms control. By the conclusion of the course, students should be able to frame problems related to technology and security in an analytical framework that makes clear their complexity as well as the points at which policy might intervene successfully.</td>
<td></td>

MACIS students are given priority.

**Abstract**

This advanced research seminar deals with current issues and research in comparative politics and EU integration and politics.

**Objective**

This seminar is designed for advanced students with an interest in comparative European politics and EU integration and politics. It introduces students to state-of-the-art theorizing, data, methods, and empirical findings and provides them with opportunities to work with data on their own. After taking this seminar, students should have a good overview of current research and be prepared to write their Master's thesis in this area. Topics include: European integration, EU decision-making, parlaments in the EU and its member states, party groups and parliamentarians. Students may also propose research topics of their interest.

**Abstract**

This course focuses on how the concept of security and security studies as a subfield of international relations have evolved from the Cold War to today's 'globalized' security environment. It looks at the changing landscape of threats that states and societies face, the way states organize themselves to confront these threats, and how security studies' theories can explain these developments.

**Objective**

The aim of the course is to promote a critical engagement with a wide range of empirical and theoretical literature in Security Studies and by applying this theoretical material to contemporary developments in world politics. By the end of the course students should be able to understand competing contemporary definitions and theories of security and to formulate academically informed opinions about contemporary security issues and policy.

**Content**

This course draws upon a variety of theoretical perspectives in security studies to analyze the complex ways in which the world order has been threatened during and after the Cold War. To this end, the first part of the course concentrates on traditional approaches to security, while the second provides students with an overview of approaches that have broadened and deepened the concept of security: away from military concerns to include economic, societal, and environmental sectors, and away from the state towards notions of global and human security.

**Lecture notes**

Since the seminar is an opportunity to explore in depth particular issues and to engage in discussions in a small group, students are expected to contribute to such discussions and present short position papers. Most importantly, students will also be expected to engage in continuous independent study.

**Literature**

Class will only take place with a minimum of 5 students and is limited to approx. 15 participants. MACIS students are given priority.

**Abstract**

This course focuses on the conditions under which cooperation in international environmental politics emerges and the conditions under which such cooperation and the respective public policies are effective and/or efficient.

**Objective**

The objectives of this course are to (1) gain an overview of relevant questions in the area of international environmental politics from a social sciences viewpoint; (2) learn how to identify interesting/innovative questions concerning this policy area and how to answer them in a methodologically sophisticated way; (3) gain an overview of important global and regional environmental problems.

**Content**

This course deals with how and why international cooperation in environmental politics emerges, and under what circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

After passing an end-of-semester test (requirement: grade 4.0 or higher) students will receive 3 ECTS credit points. The workload is around 90 hours (meetings, reading assignments, preparation of test).

**Lecture notes**

Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory.

**Literature**

Assigned reading materials and slides will be available at http://www.ib.ethz.ch/teaching.html (select link 'Registered students, please click here for course materials' at top of that page). Log in with your nethz name and password. Questions concerning access to course materials can be addressed to Mike Hudecheck (Mike Hudecheck <michaehu@student.ethz.ch>). All assigned papers must be read ahead of the respective meeting. Following the course on the basis of on-line slides and papers alone is not sufficient. Physical presence in the classroom is essential. Many books and journals covering international environmental policy issues can be found at the D-GE2SS library at the IFW building, Haldeneggsteig 4, B-floor, or in the library of D-USYS.

**Prerequisites / notice**

Class will only take place with a minimum of 5 students and is limited to approx. 15 participants. MACIS students are given priority.

**Abstract**

Students acquire the contextual knowledge for analyzing public policies. They learn why and how public policies and laws are developed, designed, and implemented at national and international levels, and what challenges arise in this regard.
This course addresses the role of policy and its underlying politics in the transformation of the energy sector. It covers historical, socio-economic, and political perspectives and applies various theoretical concepts to specific aspects of governing the energy transition.

- To gain an overview of the history of the transition of large technical systems
- To recognize current challenges in the energy system to understand the theoretical frameworks and concepts for studying transitions
- To demonstrate knowledge on the role of policy and politics in energy transitions

Data: 06.01.2019 12:56 Autumn Semester 2016 Page 388 of 1571
Climate change, access to energy and other societal challenges are directly linked to the way we use and create energy. Both the recent United Nations Paris climate change agreement and the UN Sustainable Development Goals make a fast and extensive transition of the energy system necessary.

This course introduces the social and environmental challenges involved in the energy sector and discusses the implications of these challenges for the rate and direction of technical change in the energy sector. It compares the current situation with historical socio-technical transitions and derives the consequences for policy-making. It then introduces theoretical frameworks and concepts for studying innovation and transitions. It then focuses on the role of policy and policy change in governing the energy transition, considering the role of political actors, institutions and policy feedback.

The course has a highly interactive (seminar-like) character. Students are expected to actively engage in the weekly discussions and to give a presentation (15-20 minutes) on one of the weekly topics during that particular session. The presentation (30%) and participation in the discussions (20%) will form one part of the final grade, the remaining 50% of the final grade will be formed by a final exam.

This course is particularly suited for students of the following programmes: MA Comparative International Studies; MSc Energy Science & Technology; MSc Environmental Sciences; MSc Management, Technology & Economics; MSc Science, Technology & Policy; ETH & UZH PhD programmes.

Abstract
How have the EU's powers developed until now and what are the problems facing the Union today? In this course, we will discuss the development of European integration. Furthermore, the course will address key issues such as the EU's democratic deficit, the consequences from enlargement to Central and Eastern Europe, the prospects for future entrants, the Euro-crisis, and the refugee crisis.

Objective
Since its start in the fifties, the European Union has evolved into an ever more important multilevel system of integration in terms of decision-making competences and scope of policy. The course 'Contemporary European Politics' discusses the development of the EU's powers and the problems that the Union faces today. At the end of this course, the participants will be familiar with the major theories and debates in the EU studies. Based on this knowledge, the participants should be able to identify the strengths and weaknesses of existing studies as well as to formulate and to defend their own arguments.

The course is divided into two parts. The first part discusses the development of European integration in terms of the functioning of the EU institutions and the policy-making process (i.e. agenda-setting, decision-making and implementation). In the second part of the course, we analyze the problems confronting Europe during the process of European integration, as well as current issues associated with the EU's expansion of powers and membership. For example, key questions include: Is there a "democratic deficit" in the EU in terms of responsiveness to public opinion? To what extent does the existing EU institutional structure allow for representation? How can we explain patterns of "differentiated integration" across policy areas and countries? What are the consequences from the EU's enlargement on the "new" Central and Eastern European member states and the prospects for future entrants? We will conclude with a discussion about the Euro-crisis and the European refugee crisis.

Content
- Setting the stage: What is sustainable? What is development? Why Sustainable Development Goals (SDGs)?
- The Agenda 2030: What do the Agenda 2030 mean for Switzerland's national and international agendas? Which SDGs does Switzerland focus on at home and abroad?
- Actors: Who are the actors in the SDG debate? How do these actors influence decisions? What are the roles of civil society, of the private sector, and of governments in implementing the SDGs?
- Switzerland: What do the Agenda 2030 mean for Switzerland's national and international agendas? Which SDGs does Switzerland focus on at home and abroad?
- Focus on a selection of SDGs and their related targets (not dealt with in other courses).

Literature
Slides and reading material will be made available via moodle.ethz.ch (only for registered students).

Prerequisites
This course is particularly suited for students of the following programmes: MA Comparative International Studies; MSc Energy Science & Technology; MSc Environmental Sciences; MSc Management, Technology & Economics; MSc Science, Technology & Policy; ETH & UZH PhD programmes.

Data: 06.01.2019 12:56 Autumn Semester 2016
Objective

Students
- have a sound understanding of linear and logit regression
- know strategies to test causal hypotheses using regression analysis and/or experimental methods
- are able to formulate and implement a regression model for a particular policy question and a particular type of data
- are able to critically interpret results of applied statistics, in particular, regarding causal inference
- are able to critically read and assess published studies on policy evaluation
- are able to use the statistical software STATA for data Analysis

Content

The topics covered in the first part of the course are a revision of basic statistics and linear and logit regression analysis. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, and randomized controlled trials mostly used for policy evaluation. The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of 30%. Students are assisted in solving the assignments during the exercises session.

Master's Thesis

--- | --- | --- | --- | --- | ---
857-0019-00L | Master's Thesis Colloquium | O | 4 credits | 3K | D. Bischof

Permission to begin master thesis is required to take part in Colloquium.

Abstract
In this colloquium, students enrolled in the MACIS program first present and discuss research design and methods issues concerning their prospective MA theses. Towards the end of the semester they present preliminary findings from their MA thesis work.

Objective
It is the goal of the colloquium to help students with the initial steps of writing their master theses. During the colloquium, they will develop a relevant research question and hypotheses and select appropriate methods and data.

857-0021-00L | Master's Thesis | O | 26 credits | 56D | Professors

Only students who fulfill the following criteria are allowed to begin with their master thesis:
a. successful completion of the bachelor programme;
b. fulfilling of any additional requirements necessary to gain admission to the master programme.

Abstract
The Master Thesis is an independent piece of research on an issue in comparative and international politics. It combines theory, methods, and empirical work.

Objective
The Thesis should demonstrate the students’ ability to conduct independent research on the basis of the theoretical and methodological knowledge acquired during the MA program.

### Core Courses

#### Principles of Evolution: Theory (University of Zurich)
- **Number**: 262-5120-00L
- **Title**: Principles of Evolution: Theory (University of Zurich)
- **Type**: W
- **ECTS**: 6 credits
- **Hours**: 3V
- **Lecturers**: University lecturers

**Prerequisites**: No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

**Module Code**: BIO351

**Abstract**: Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

**Objective**: "Nothing in Biology Makes Sense Except in the Light of Evolution". Evolutionary theory and methods are essential in all branches of modern biology.

**Subject specific skills**: Subject specific skills:
- By the end of the course, students will be able to:
  - describe basic evolutionary theory and its applications
  - discuss ongoing debates in evolutionary biology
  - critically assess the presentation of evolutionary research in the popular media
- Key skills:
  - By the end of the course, students will be able to:
    - approach biological questions from an evolutionary perspective

**Content**: This course will provide a broad overview of current evolutionary thought, including the mechanisms of evolutionary change, adaptation and the history of life and will involve practical field and lab work as well as lecture material.

#### Statistical Analysis of High-Throughput Genomic and Transcriptional Data (University of Zurich)
- **Number**: 401-6282-00L
- **Title**: Statistical Analysis of High-Throughput Genomic and Transcriptional Data (University of Zurich)
- **Type**: W
- **ECTS**: 5 credits
- **Hours**: 3G
- **Lecturers**: H. Rehrauer, M. Robinson

**Prerequisites**:
- Basic knowledge of the programming language R
- Sufficient knowledge in statistics

**Module Code**: STA426

**Abstract**: A range of topics will be covered, including basic molecular biology, genomics technologies and in particular, a wide range of statistical and computational methods that have been used in the analysis of DNA microarray and high throughput sequencing experiments.

**Objective**: - Understand the fundamental "scientific process" in the field of Statistical Bioinformatics
- Be equipped with the skills/tools to preprocess genomic data (Unix, Bioconductor, mapping, etc.) and ensure reproducible research (Sweave)
- Have a general knowledge of the types of data and biological applications encountered with microarray and sequencing data
- Have the general knowledge of the range of statistical methods that get used with microarray and sequencing data
- Gain the ability to apply statistical methods/knowledge/software to a collaborative biological project
- Gain the ability to critically assess the statistical bioinformatics literature
- Write a coherent summary of a bioinformatics problem and its solution in statistical terms

**Content**: Lectures will include: microarray preprocessing; normalization; exploratory data analysis techniques such as clustering, PCA and multidimensional scaling; Controlling error rates of statistical tests (FPR versus FDR versus FWER); limma (linear models for microarray analysis); mapping algorithms (for RNA/ChIP-seq); RNA-seq quantification; statistical analyses for differential count data; isoform switching; epigenomics data including DNA methylation; gene set analyses; classification

**Lecture notes**
- Lecture notes, published manuscripts

**Prerequisites / notice**
- Prerequisites: Basic knowlegde of the programming language R, sufficient knowledge in statistics

**Former course title**: Statistical Methods for the Analysis of Microarray and Short-Read Sequencing Data

#### Molecular and Structural Biology I: Protein Structure and Function
- **Number**: 551-0307-00L
- **Title**: Molecular and Structural Biology I: Protein Structure and Function
- **Type**: W
- **ECTS**: 3 credits
- **Hours**: 2V
- **Lecturers**: R. Glockshuber, K. Locher, E. Weber-Ban

**Abstract**: Biophysics of protein folding, membrane proteins and biophysics of membranes, enzymatic catalysis, catalytic RNA and RNAs, current topics in protein biophysics and structural biology.

**Objective**: Understanding of structure-function relationships in proteins and in protein folding, detailed understanding of biophysics and physical methods as well as modern methods for protein purification and microanalytics.

**Lecture notes**
- Scripts on the individual topics can be found under http://www.mol.biol.ethz.ch/teaching.

**Literature**
- Basics:
  - Creighton, T.E., Proteins, Freeman, (1993)
  - Fersht, A., Enzyme, Structure and Mechanism in Protein Science (1999), Freeman.

**Current topics**: References will be given during the lectures.

#### Computational Systems Biology
- **Number**: 636-0007-00L
- **Title**: Computational Systems Biology
- **Type**: W
- **ECTS**: 6 credits
- **Hours**: 3V+2U
- **Lecturers**: J. Stelling

**Abstract**: Study of fundamental concepts, models and computational methods for the analysis of complex biological networks. Topics: Systems approaches in biology, biology and reaction network fundamentals, modeling and simulation approaches (topological, probabilistic, stoichiometric, qualitative, linear / nonlinear ODEs, stochastic), and systems analysis (complexity reduction, stability, identification).

**Objective**: The aim of this course is to provide an introductory overview of mathematical and computational methods for the modeling, simulation and analysis of biological networks.
Content

Biology has witnessed an unprecedented increase in experimental data and, correspondingly, an increased need for computational methods to analyze this data. The explosion of sequenced genomes, and subsequently, of bioinformatics methods for the storage, analysis and comparison of genetic sequences provides a prominent example. Recently, however, an additional area of research, captured by the label "Systems Biology", focuses on how networks, which are more than the mere sum of their parts' properties, establish biological functions. This is essentially a task of reverse engineering. The aim of this course is to provide an introductory overview of corresponding computational methods for the modeling, simulation and analysis of biological networks.

We will start with an introduction into the basic units, functions and design principles that are relevant for biology at the level of individual cells. Making extensive use of example systems, the course will then focus on methods and algorithms that allow for the investigation of biological networks with increasing detail. These include (i) graph theoretical approaches for revealing large-scale network organization, (ii) probabilistic (Bayesian) network representations, (iii) structural network analysis based on reaction stoichiometries, (iv) qualitative methods for dynamic modeling and simulation (Boolean and piece-wise linear approaches), (v) mechanistic modeling using ordinary differential equations (ODEs) and finally (vi) stochastic simulation methods.

Evolutionary Dynamics

W 5 credits 2V+1U N. Beerenwinkel

Abstract

Evolutionary dynamics is concerned with the mathematical principles according to which life has evolved. This course offers an introduction to mathematical modeling of evolution, including deterministic and stochastic models.

Objective

The goal of this course is to understand and to appreciate mathematical models and computational methods that provide insight into the evolutionary process.

Content

Evolution is the one theory that encompasses all of biology. It provides a single, unifying concept to understand the living systems that we observe today. We will introduce several types of mathematical models of evolution to describe gene frequency changes over time in the context of different biological systems, focusing on asexual populations. Viruses and cancer cells provide the most prominent examples of such systems and they are at the same time of great biomedical interest. The course will cover some classical mathematical population genetics and population dynamics, and also introduce several new approaches. This is reflected in a diverse set of mathematical concepts which make their appearance throughout the course, all of which are introduced from scratch. Topics covered include the quasispecies equation, evolution of HIV, evolutionary game theory, birth-death processes, evolutionary stability, evolutionary graph theory, somatic evolution of cancer, stochastic tunneling, cell differentiation, hematopoietic stem cell genetics, genetic progression of cancer and the speed of adaptation, drift theory, fitness landscapes, neutral networks, branching processes, evolutionary escape, and epistasis.

Literature

Prerequisites / notice

Prerequisites: Basic mathematics (linear algebra, calculus, probability)

636-0017-00L

Computational Biology

W 4 credits 3G T. Stadler, C. Magnus

Abstract

The aim of the course is to provide up-to-date knowledge on how we can study biological processes using genetic sequencing data. Computational algorithms extracting biological information from genetic sequence data are discussed, and statistical tools to understand this information in detail are introduced.

Objective

Attendees will learn which information is contained in genetic sequencing data and how to extract information from them using computational tools. The main concepts introduced are:
- stochastic models in molecular evolution
- phylogenetic & phylodynamic inference
- maximum likelihood and Bayesian statistics

Attendees will apply these concepts to a number of applications yielding biological insight into:
- epidemiology
- pathogen evolution
- macroevolution of species

Content

The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments from the output of the sequencers. We then present methods to directly analyze this alignment (such as BLAST algorithm. GWAS approaches). Second, we introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Third, we employ evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phylogenomics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades. Students will be trained in the algorithms and their application both on paper and in silico as part of the exercises.

Literature

The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:
- Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST

Prerequisites / notice

Basic knowledge in linear algebra, analysis, and statistics will be helpful. Some programming experience will be useful for the exercises, but is not required. Programming skills will not be tested in the examination.

636-0706-00L

Spatio-Temporal Modelling in Biology

W 5 credits 3G D. Iber

Abstract

This course focuses on modeling spatio-temporal problems in biology, in particular on the cell and tissue level. A wide range of mathematical techniques will be presented as part of the course, including concepts from non-linear dynamics (ODE and PDE models), stochastic techniques (SDE, Master equations, Monte Carlo simulations), and thermodynamic descriptions.

Objective

The aim of the course is to introduce students to state-of-the-art mathematical modelling of spatio-temporal problems in biology. Students will learn how to choose from a wide range of modelling techniques and how to apply these to further our understanding of biological mechanisms. The course aims at equipping students with the tools and concepts to conduct successful research in this area; both classical as well as recent research work will be discussed.
The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

Prerequisites: Background in basics of semiconductor physics helpful, but not required.

Abstract

This course covers analog circuits with emphasis on neuromorphic engineering: MOS transistors in CMOS technology, static circuits, dynamic circuits, systems (silicon neuron, silicon retina, silicon cochlea) with an introduction to multi-chip systems. The lectures are accompanied by weekly laboratory sessions.

Objective

Neuromorphic circuits are inspired by the organizing principles of biological neural circuits. Their computational primitives are based on physics of semiconductor devices. Neuromorphic architectures often rely on collective computation in parallel networks. Adaptation, learning and memory are implemented locally within the individual computational elements. Transistors are often operated in weak inversion (below threshold), where they exhibit exponential I-V characteristics and low currents. These properties lead to the feasibility of neuromorphic circuits include silicon retinas and cochleas for machine vision and audition, real-time emulations of networks of biological neurons, and the development of autonomous robotic systems. This course covers devices in CMOS technology (MOS transistor below and above threshold, floating-gate MOS transistor, phototransducers), static circuits (differential pair, current mirror, transconductance amplifiers, etc.), dynamic circuits (linear and nonlinear filters, adaptive circuits), systems (silicon neuron, silicon retina and cochlea) and an introduction to multi-chip systems that communicate events analogous to spikes. The lectures are accompanied by weekly laboratory sessions on the characterization of neuromorphic circuits, from elementary devices to systems.

Prerequisites:

S.-C. Liu et al.: Analog VLSI Circuits and Principles; various publications.

Particular: The course is highly recommended for those who intend to take the spring semester course 'Neuromorphic Engineering II', that teaches the conception, simulation, and physical layout of such circuits with chip design tools.

Prerequisites:

Background in basics of semiconductor physics helpful, but not required.
The course will provide a solid overview of the science and issues in gene technology and its pharmaceutical applications.

**Abstract**

Molecular models, Force fields, Boundary conditions, Electrostatic interactions, Molecular dynamics, Analysis of trajectories, Quantum-mechanical simulation, Structure refinement, Application to real systems. Exercises: Analysis of papers on computer simulation, Molecular simulation in practice, Validation of molecular dynamics simulation.

For more information: www.csms.ethz.ch/education/CSCBP

**Objective**

Introduction to computer simulation of (bio)molecular systems, development of skills to carry out and interpret computer simulations of biomolecular systems.

**Content**

Molecular models, Force fields, Spatial boundary conditions, Calculation of Coulomb forces, Molecular dynamics, Analysis of trajectories, Quantum-mechanical simulation, Structure refinement, Application to real systems. Exercises: Analysis of papers on computer simulation, Molecular simulation in practice, Validation of molecular dynamics simulation.

Lecture notes: Available (copies of powerpoint slides distributed before each lecture)

Literature: See: www.csms.ethz.ch/education/CSCBP

Prerequisites / notice: Since the exercises on the computer do convey and test essentially different skills as those being conveyed during the lectures and tested at the oral exam, the results of the exercises are taken into account when evaluating the results of the exam.

For more information about the lecture: www.csms.ethz.ch/education/CSCBP

---

**Enzymes**

**Abstract**

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme-catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

**Objective**

Overview of enzymes, enzyme-catalyzed reactions and metabolic processes.

**Content**

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

Lecture notes: A script will not be handed out.

Literature: General:

In addition, citations from the original literature relevant to the individual lectures will be assigned weekly.

---

**Gene Technology**

**Abstract**

The course will provide a solid overview of the science and issues in gene technology and its pharmaceutical applications.

**Objective**

The aim of the lecture course is to provide a solid overview of gene technology, with a special focus on drug development. Topics: Antibody phage technology, DNA-encoded chemistry, protein modification technology, genome sequencing, transcriptomics, proteomics, functional genomics, principle of drug discovery. The course is suited for advanced undergraduate and early graduate students in pharmaceutical sciences or related fields.

**Content**

1. Antibody phage technology
   - The antibody molecule
   - V genes, CDRs, basics of antibody engineering
   - Principles of phage display
   - Phagemid and phage vectors
   - Antibody libraries
   - Phage display selection methodologies
   - Other phage libraries (peptides, globular proteins, enzymes)
   - Alternative screening/selection methodologies
   - DNA-encoded chemical libraries

2. Proteins: chemical modification and detection of biomolecular interactions
   - Homo- and hetero-dimerization of proteins
   - Chemical modifications of proteins
   - Antibody-drug conjugates
   - Radioactive labeling of proteins
   - Kinetic association and dissociation constants
   - Affinity constant: definition and its experimental measurement

3. Genomics: Applications to Human Biology
   - Protein cloning and expression
   - DNA sequencing
   - Some foundations of genetic analysis
   - Knock-out technologies
   - Transcriptomics
   - Proteomics
   - Recombinant vaccines

4. Pharmaceuticals: Focus on Discovery
   - Ligand Discovery
   - Half-life extension
   - Cancer therapy
   - Gene therapy

**Lecture notes**

Skript "Gene Technology" by Prof. Dario Neri and slides of the lecture

---

**Molecular and Structural Biology I: Protein Structure**

**Abstract**

This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

Abstract

Concepts to cope with: a) what can be accomplished in a fully automated fashion (algorithmically solvable) b) How to measure the inherent difficulty of tasks (problems) c) What is randomness and how can it be useful? d) What is nondeterminism and what role does it play in CS? e) How to represent infinite objects by finite automata and grammar?

Objective

Learning the basic concepts of computer science along their historical development.
This lecture gives an introduction to theoretical computer science, presenting the basic concepts and methods of computer science in its historical context. We present computer science as an interdisciplinary science which, on the one hand, investigates the border between the possible and the impossible and the quantitative laws of information processing, and, on the other hand, designs, analyzes, verifies, and implements computer systems.

The main topics of the lecture are:
- alphabets, words, languages, measuring the information content of words, representation of algorithmic tasks
- finite automata, regular and context-free grammars
- Turing machines and computability
- complexity theory and NP-completeness
- design of algorithms for hard problems

The lecture is covered in detail by the textbook "Theoretical Computer Science".

More exercises and examples in:
6. A. Asteroth, Ch. Baier: Theoretische Informatik

Prerequisites / notice
During the semester, two non-obligatory test exams will be offered.

Abstract
Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

Objective
Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensible to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real world data.

Content
The theory of fundamental machine learning concepts is presented in the lecture, and illustrated with relevant applications. Students can deepen their understanding by solving both pen-and-paper and programming exercises, where they implement and apply famous algorithms to real-world data.

Topics covered in the lecture include:
- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non parametric density estimation: Parzen windows, nearest neighbour
- Dimension reduction: principal component analysis (PCA) and beyond

Lecture notes
No lecture notes, but slides will be made available on the course webpage.

Literature

Prerequisites / notice
Students should at least have followed one previous course offered by the Machine Learning Institute (e.g., CIL or LIS) or an equivalent course offered by another institution.

Abstract
The course gives an introduction into fundamental techniques and algorithms of numerical mathematics which play a central role in numerical simulations in science and technology. The course focuses on fundamental ideas and algorithmic aspects of numerical methods. The exercises involve actual implementation of numerical methods in C++.

Objective
* Knowledge of the fundamental algorithms in numerical mathematics
* Knowledge of the essential terms in numerical mathematics and the techniques used for the analysis of numerical algorithms
* Ability to choose the appropriate numerical method for concrete problems
* Ability to interpret numerical results
* Ability to implement numerical algorithms efficiently
Content
1. Direct Methods for linear systems of equations
2. Least Squares Techniques
3. Data Interpolation and Fitting
4. Filtering Algorithms
8. Approximation of Functions
9. Numerical Quadrature
10. Iterative Methods for non-linear systems of equations
11. Single Step Methods for ODEs
12. Stiff Integrators

Lecture notes

M. Hanke-Bourgeois "Grundlagen der Numerischen Mathematik und des wissenschaftlichen Rechnens", BG Teubner, 2002
P. Deuflhard and A. Hohmann, "Numerische Mathematik I", DeGruyter, 2002

Prerequisites / notice
The course will be accompanied by programming exercises in C++ relying on the template library EIGEN. Familiarity with C++, object oriented and generic programming is an advantage. Participants of the course are expected to learn C++ by themselves.

151-0104-00L  Uncertainty Quantification for Engineering & Life Sciences
Number of participants limited to 60.

Abstract
Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective
The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Content
Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes
The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature
1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
2. Probability Theory: The Logic of Science by E. T. Jaynes
3. Class Notes

Prerequisites / notice
Fundamentals of Probability, Fundamentals of Computational Modeling

--- | --- | --- | --- | --- | ---
262-0800-00L | Master’s Thesis 15R | O | 30 credits | 64D | Professors

**Abstract**
The Master Thesis is the result of an independent scientific research and/or constructive development project in the chosen area of specialization.

**Objective**
The Master thesis concludes the Master programme. By writing up the Master thesis, students show their ability to independently produce a coherent and scientific piece of work.

**Content**
The program concludes with a Master thesis of 6 months duration that includes a written report and an oral presentation. The topic of the thesis can be chosen according to the student’s interests in the field of computational biology & bioinformatics.

### Course Units for Additional Admission Requirements

The courses below are only available for MSc students with additional requirements.

**Number** | **Title** | **Type** | **ECTS** | **Hours** | **Lecturers**
--- | --- | --- | --- | --- | ---
252-0002-AAL | Data Structures and Algorithms | E- | 7 credits | 15R | P. Widmayer

**Abstract**
This course is about fundamental algorithm design paradigms (such as induction, divide-and-conquer, backtracking, dynamic programming), classic algorithmic problems (such as sorting and searching), and data structures (such as lists, hashing, search trees). The connection between algorithms and data structures is explained for geometric and graph problems.

**Objective**
An understanding of the design and analysis of fundamental algorithms and data structures.

252-0835-AAL | Computer Science I | E- | 4 credits | 9R | F. O. Friedrich

**Abstract**
The course covers the fundamental concepts of computer programming with a focus on systematic algorithmic problem solving. Teached language is C++. No programming experience is required.

**Objective**
Primary educational objective is to learn programming with C++. When successfully attended the course, students have a good command of the mechanisms to construct a program. They know the fundamental control and data structures and understand how an algorithmic problem is mapped to a computer program. They have an idea of what happens "behind the scenes" when a program is translated and executed.

**Content**
The course covers fundamental data types, expressions and statements, (Limits of) computer arithmetic, control statements, functions, arrays, structural types and pointers. The part on object orientation deals with classes, inheritance and polymorphy, simple dynamic data types are introduced as examples. In general, the concepts provided in the course are motivated and illustrated with algorithms and applications.

Abstract

The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training. The lecture will be thought on two afternoons. Some exercises will be built into the lecture.

Objective

Knowledge on structure and content of a scientific text. The course further is arranged to stimulate a discussion on how to properly write a legible scientific text versus writing an interesting novel. We will further discuss the practice of properly citing and critically reflect on recent plagiarism allegations.

Content

* Topic 1: Structure of a Scientific Text (The Title, the author list, the abstract, State-of-the Art, the “in this paper” paragraph, the scientific part, the summary, Equations, Figures).
* Topic 2: Power Point Presentations.
* Topic 3: Citation Rules and Citation Software.
* Topic 4: Guidelines for Research Integrity.

Literature

ETH "Citation Etiquette", see www.plagiate.ethz.ch.

Prerequisites / notice

Students should already have a Bachelor degree and plan to do either a semester project or a master thesis in the immediate future.

227-3001-00L Diploma Thesis

Only for DAS in Information Technology and Electrical Engineering.

Registration for the diploma thesis requires the successful completion of 18 credits ECTS from subjects of specialization.

Abstract

The Diploma of Advanced Studies finishes with a 3-months diploma thesis which is directed by a professor of the department ITET. Students prove their ability to conduct independent scientific research on a specific research problem, using skills and knowledge acquired during the program. The thesis includes a written report and an oral presentation.

Objective

see above

Data: 01.06.2019 12:56 Autumn Semester 2016 Page 401 of 1571
Overall, the objective is to become acquainted with the basics of both scientific areas and to make references to military practice. Military psychology is a branch of applied psychology; consequently selected aspects of psychological principles will be covered. Military pedagogy hasn't yet established itself firmly as an independent scientific discipline, it nevertheless can draw on a deep-seated tradition in Switzerland. Thus, the great importance that has been attached to the discussion of education in Swiss society and academia will be taken into account.

**Subjects:**
- History of military psychology
- Psychological images of humanity (psychoanalysis, behaviourism, behavioural biology, humanistic psychology, cognitivism)
- Motivational theories
- Defence-, service-, operational- and combat motivation
- Swiss military pedagogy
- Education as defining feature of pedagogic thinking and acting

**Literature**
- Annen, H., Steiger, R. & Zwygart, U.: Gemeinsam zum Ziel, Huber, Frauenfeld 2004 (provided as pdf)
- Stadelmann, J.: Führung unter Belastung, Huber, Frauenfeld 1998 (provided as pdf)

The lecture is supported by a virtual learning environment containing relevant documents (presentations and texts) and information to further literature.

---

**853-0064-00L Military Sociology I**

**Abstract**
Beside of the most important terms of sociology, demographic changes and the related value and structure change will be analysed. The second part focuses on organizational sociology. Thirdly, the course examines to which extent armed forces can be considered as organizations like any other and to which extent they constitute a special case from an organizational and normative point of view.

**Objective**
Recognize and explain current changes (social change) in modern society (individualisation, pluralisation); describe demographic changes in Switzerland; explain the structures of societies; define issues and fields of research in modern military sociology and explain the foundations of organisational sociology; explain the military in terms of organisational sociology and identify specific traits of the military as an organisation.

**Content**
Societal change; organizations as societal phenomena; aims, structures, environments of organizations; specifics of the military as an organization; impacts of technological and societal changes on the armed forces in modern societies.

**Literature**
A reader with a set of texts will be handed out.

---

**851-0000-00L Learning Environments for Training: Planning, Operation, Assessment**

**Abstract**
In this lecture practical aspects of learning environments directed to training with respect to planning, operation and assessment are introduced comprising (a) presentations about their theoretical background, (b) discussions of practical aspects and (c) practical exercises.

**Objective**
The participants have the knowledge and skills necessary for planning, preparing, and implementing good lessons. They apply their knowledge adaptively and based on findings from the research on learning and instruction literature.

**Content**
The lecture consists of two parts: Basics of Learning skills and military didactics. The first part comprises insights in teaching and learning research, performance assessment, knowledge tranfer and evaluation. Military didactics deal with specific aspects of military education: The planning of learning environments for schools and courses, the definition of learning objectives for military exercises, controlling and E-Learning within the army.

**Lecture notes**
The lecture comprises interactive parts where the participants elaborate and extend their knowledge and skills. There is no comprehensive written documentation of the lecture: the participants can download presentation slides, learning materials, and templates from "Moodle".

**Literature**
The necessary literature can be downloaded from "Moodle".

---

**853-0033-00L Leadership I**

**Abstract**
The lectures "Leadership I" (WS) and "Leadership II" (SS) have been designed as a two-semester lecture series, but may also be followed independently of one another or in reverse order. "Leadership I" covers the following fields: leadership basics, leadership theories and leadership styles, the concept of leadership responsibility and the role of communication in practical leadership.

**Objective**
The aim of this lecture is to give students an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organisation, context and situation. They should be informed about the evolution of the understanding of mankind in relation to working processes and its impact on organizations and the understanding of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate accurately in specific situations.

**Prerequisites / notice**
The 1-hour written exam will take place during the last lecture in the semester.
### Pharmacology and Toxicology I

**Number:** 535-0521-00L  
**Title:** Pharmacology and Toxicology I  
**Type:** W  
**ECTS:** 2 credits  
**Hours:** 2V  
**Lecturers:** U. Quitterer

**Abstract:** The two-semester lecture course will provide a detailed understanding of the fundamentals of drug action and the mechanisms of action and therapeutic use of the important classes of drugs. The lectures are intended for students of pharmaceutical sciences.

**Objective:** The lectures will provide a comprehensive survey of pharmacology and toxicology. Special emphasis is placed on the interrelationship between pharmacological, pathophysiological and clinical aspects.

**Content:** Topics include disease-relevant macroscopic, microscopic, pathobiochemical and functional disturbances of specific organs and organ systems. The lectures integrate disease pathology with mechanisms of drug action, usage, metabolism, pharmacokinetics, side effects, toxicology, contraindications and dosage of relevant drug classes. Basic principles of clinical pharmacology and pharmacotherapy will be covered.

**Lecture notes:** Für jede Vorlesung wird ein Skript abgegeben, das eine Zusammenfassung mit den wichtigsten Stichpunkten beinhaltet.

**Recommended reading:**  

.or

Comprehensive overview:  

The classic textbook in Pharmacology:  

**Prerequisites / notice:**  
Voraussetzungen: Abschluss Grundstudium

### Clinical Microbiology

**Number:** 535-0165-00L  
**Title:** Clinical Microbiology  
**Type:** W  
**ECTS:** 1 credit  
**Hours:** 1V  
**Lecturers:** K. Lucke

**Abstract:** Thorough knowledge of major pathogens involved in infectious diseases; principles of laboratory diagnosis of pathogenic bacteria and fungi.

**Objective:** Thorough knowledge of all major pathogens involved in infectious diseases; principles of laboratory diagnosis of pathogenic bacteria and fungi.

**Content:** Basics and principles of clinical microbiology:  
- host-pathogen interaction  
- symptoms and diagnosis of major bacterial pathogens  
- therapeutic regimens commonly used against bacterial disease  
- major aspects of medical mycology, virology and parasitology  
- epidemiology

**Literature:**  
- Brock, Mikrobiologie, Pearson, 13. aktualisierte Auflage  
- Kayser F. et al., Medizinische Mikrobiologie, Thieme, Stuttgart, New York  

**Prerequisites / notice:** Basic knowledge of biochemistry, general microbiology, immunology

### Gene Technology

**Number:** 535-0810-00L  
**Title:** Gene Technology  
**Type:** W  
**ECTS:** 2 credits  
**Hours:** 2G  
**Lecturers:** D. Neri

**Abstract:** The course will provide a solid overview of the science and issues in gene technology and its pharmaceutical applications.

**Objective:** The aim of the lecture course is to provide a solid overview of gene technology, with a special focus on drug development. Topics: Antibody phage technology, DNA-encoded chemistry, protein modification technology, genome sequencing, transcriptomics, proteomics, functional genomics, principle of drug discovery. The course is suited for advanced undergraduate and early graduate students in pharmaceutical sciences or related fields.
1. Antibody phage technology
   The antibody molecule
   V genes, CDRs, basics of antibody engineering
   Principles of phage display
   Phagemid and phage vectors
   Antibody libraries
   Phage display selection methodologies
   Other phage libraries (peptides, globular proteins, enzymes)
   Alternative screening/selection methodologies
   DNA-encoded chemical libraries

2. Proteins: chemical modification and detection of biomolecular interactions
   Homo- and hetero-dimerization of proteins
   Chemical modifications of proteins
   Antibody-drug conjugates
   Radioactive labeling of proteins
   Kinetic association and dissociation constants
   Affinity constant: definition and its experimental measurement

3. Genomics: Applications to Human Biology
   Protein cloning and expression
   DNA sequencing
   Some foundations of genetic analysis
   Knock-out technologies
   Transcriptomics
   Proteomics
   Recombinant vaccines

4: Pharmaceuticals: Focus on Discovery
   Ligand Discovery
   Half-life extension
   Cancer therapy
   Gene therapy

Abstract
Get Students familiar with basic Immunological concepts of pharmaceutical relevance.

Objective
Get Students familiar with basic Immunological concepts of pharmaceutical relevance.

Content
Chapters 1 - 11 of the Janeway's ImmunoBiology, by Kenneth Murphy (9th Edition; Garland).

Literature

535-0421-00L
Galenical Pharmacy I
W  2 credits 2G  J.C. Leroux, B. A. Gander

Abstract
Principles and technologies for the manufacturing of dosage forms and drug delivery systems. Knowledge of pharm. excipients, materials, containers, liquid and semi-solid dosage forms, their production, function, quality and application. Comprehension of molecular interactions in solution and colloidal systems. Comprehension of interfacial phenomena and stabilization measures in dosage forms.

Objective
Knowledge of the most important pharmaceutical excipients, materials, containers, liquid and semi-solid dosage forms, of their production, function, quality, stability and application. Comprehension of the molecular interactions in solution and colloidal systems. Comprehension of interfacial phenomena and stabilization measures in dispense dosage forms.

Content
Introduction and overview of important fundamentals, principles and technologies for the development and manufacturing of dosage forms and drug delivery systems. Overview of the most important pharmaceutical excipients and polymers, their structure, properties and processing; importance of materials properties for containers. Pharmaceutical solvents, fundamentals of solubility and solubilization of drugs. Water treatment processes, sterilization techniques and quality requirements of pharmaceutical water. Parenteral dosage forms and liquid ophthalmics. Surfactants, micel formation and colloidal systems. Liquid suspensions and emulsions. Stabilization measures in dosage forms.

Prerequisites / notice
Language: German and English

535-0250-00L
Biotransformation of Drugs and Xenobiotics
W  1 credit 1V  S.D. Krämer

Abstract
Knowledge of the major reactions of biotransformation in drug therapy, prediction of possible metabolites of drugs and xenobiotics, recognition of structure elements and reactions which can lead to toxic metabolites. Knowledge of inter- and intraindividual factors influencing metabolism.

Objective
Goals: knowledge of the major reactions of biotransformation in drug therapy, prediction of possible metabolites of drugs and xenobiotics, recognition of structure elements and reactions which can lead to toxic metabolites. Knowledge of inter- and intraindividual factors influencing metabolism.

Content
Major reactions of biotransformation. Major enzymes and reaction partners involved in the biotransformation of drugs and xenobiotics.

Lecture notes
Biotransformation of drugs and xenobiotics

### Pharmacoepidemiology and Drug Safety

**Objective:**

- To familiarize participants with the principle methods and applications of pharmacoepidemiology and drug safety that is relevant for industry, regulatory affairs, but also for clinical pharmacists in hospitals and office pharmacies.
- Perform independently a causality assessment of suspected adverse drug reactions in patients
- Study designs and biostatistics used for the quantitative evaluation of drug safety
- Setup of programs that can effectively reduce medication errors and improve drug safety in clinical practice, particularly in hospitals

**Content:**
- Historical landmarks of drug safety
- Pharmacovigilance and causality assessment
- Drug safety in premarketing clinical trials
- Descriptive, cohort and case-control drug safety study designs; Data analysis and control of confounding
- Pharmacoepidemiology and regulatory decision making in drug safety; Risk management plans (RMPs)
- Medication errors, clinical pharmacology / clinical pharmacy
- Clinical Decision Support Systems, Interventional Pharmacoepidemiology
- Pharmacoepidemiological databases, Big Data
- Interactive discussion of many real-life examples for each topic

**Lecture notes:**
This course will be a combination of formal lectures, group discussions and self-directed studies. Course material will be taught through seminars, case studies in small groups.

**Reading materials:**
Reading material and scripts will be provided for each week.

**Literature:**
- Rothman: Introduction to Epidemiology
- Strom, Kimmel, Hennessy: Textbook of Pharmacoepidemiology

---

### Therapeutic Proteins

**Objective:**

- Students know and understand:
  - basic mechanisms and regulation of the immune response
  - the pathogenic mechanisms of the most important immune-mediated disorders
  - the most frequently used expression systems for the production of therapeutic proteins
  - the use of protein engineering tools for modifying different features of therapeutic proteins
  - the mechanism of action of selected therapeutic proteins and their application
  - basic concepts in the GMP production of therapeutic proteins

**Content:**

- The course consists of two parts:
  - In a first part, students will complete their training of pharmaceutical immunology (Chapter 13 - 16 Immunobiology VIII textbook). This part particularly focuses on the pathogenic mechanisms of immune-mediated diseases. Deepened knowledge of immunology will be relevant for understanding the mechanism of action of many therapeutic proteins, as well as for understanding one major concern related to the use of protein-based drugs, namely, immunogenicity.
  - The second part focuses on topics related to the development and application of therapeutic proteins, such as protein expression, protein engineering, reducing immunogenicity, and GMP production of therapeutic proteins. Furthermore, selected examples of approved therapeutic proteins will be discussed.

**Lecture notes:**
Handouts to the lectures will be available for downloading under [http://www.pharma.ethz.ch/scripts/index](http://www.pharma.ethz.ch/scripts/index)

**Literature:**
- Chapters 13-16 of the Immunobiology VIII book (Janeway et al.)
- Lecture Handouts
- Paper References provided in the Scripts
- EMEA Dossier for Humira

---

### Pharmacology and Toxicology III

**Objective:**

The course advances basic knowledge in pharmacology and toxicology. Special emphasis is placed on the interrelationship between pharmacological, pathophysiological and clinical aspects of drug therapy in the fields of infectious diseases and cancer. The course also provides an overview of the field of pharmacogenomics, with a special focus on the role of genetic polymorphisms in disease susceptibility, drug response and adverse effects.

**Content:**

- Topics include the pharmacology and pharmacotherapy of infectious diseases and cancer. In the field of pharmacogenomics, the course is focused on genetics, genome-wide association studies, genetic disease predisposition, examples of genetic variability of drug metabolism and drug responses, identification of new drug targets, relevance of pharmacogenomics for clinical drug development, and toxicogenomics.

**Lecture notes:**
A script is provided for each lecture course. The scripts define important and exam-relevant contents of lectures. Scripts do not replace the lecture.

**Literature:**
Recommended reading:
- The classic textbook in Pharmacology:
  - Goodman and Gilman’s The Pharmacological Basis of Therapeutics
  - Laurence Brunton, Bruce Chaibner, Bjorn Knollman. 12th edition - 1808 pages
  - or
  - 2013: Urban & Fischer (Elsevier, München)

---

**Second Series of Courses**

**Compulsory Block Courses**
535-5501-00L  Applied Pharmacology  ■  O  6 credits  7G  P. Wiedemeier, S. Emi, B. Falch, K. Fünfschilling, A. Gutzeit, I. S. Vogel Kahmann

Abstract
Overview of the most important clinical pictures: symptoms, recognition, differentiation, pharmacotherapy for the most important general and special medical indications. Groups of pharmaceutical compounds, active pharmaceutical ingredients, proprietary medicinal products: mechanisms of action, contraindication, therapeutic patterns, side effects, interactions.

Objective
Students have a thorough knowledge of all clinical pictures and their symptoms regarding outpatient treatment. They know the main groups of indications including active pharmaceutical self-medication and ingredients, mechanisms of action, pharmacokinetics, pharmacodynamics and dosage. They are also able to identify the relevant side effects and interactions.

Content
Pathophysiology of selected clinical pictures and their main symptoms and clinical parameters. Recognition of alarm symptoms and distinction between pharmacological self-medication and the need for medical treatment. Detailed coverage of the pharmacotherapy of all fields of indication encountered in outpatient treatment. Outlining of therapeutic strategies and patterns with regard to suitable pharmaceutical compounds, active pharmaceutical ingredients and representative range of proprietary medicinal products. Discussion of the most important mechanisms of action, contraindications, side effects and interactions.

535-5502-00L  Pharmaceutical Manufacturing in Small Quantities  ■  O  3 credits  3G  J. Fröhlich, H. Hartenberg, C. Meier

Abstract
Hands-on course in pharmaceutical manufacturing in the pharmacy according to "GMP regulations for small quantities" defined in the pharmacopeia: Design and practical approach in compounding of formulas using the most important dosage forms including their risks and quality assurance.

Objective
Students are able to manufacture, to package, to quality-control and document pharmaceutical compounding on their own, "best practice" and according to GMP regulations, using the appropriate techniques. They know the most important properties of active ingredients and excipients frequently used. They achieve the necessary knowledge including the relevant literature and other sources of information, as well as the legal requirements regarding pharmaceutical manufacturing in small quantities.

Content
To impart knowledge about the principal techniques and processes in the manufacturing of pharmaceuticals in small quantities (formulas), focusing on the design, manufacturing, quality assurance and risk based self-appraisal including the patient specific dispensing. During the practical training periods: by means of pharmaceutical relevant examples and cases, the planning, the manufacturing including the correct use of the equipment, the in-process control, the packaging and the quality assurance are practiced for various dosage forms and recipes. Quality assurance and control are mainly risk adapted considering as well hygiene regulations according to current pharmaceutical practice. The participants will thus improve their general GMP knowledge and skills.

535-5503-00L  Institutional Pharmacy  ■  O  3 credits  3G  P. Wiedemeier, J. Beney, M. Lutters, I. S. Vogel Kahmann

Abstract
Organisation of institutional environments (emergency hospitals), with special focus on the medication process and institutional pharmaceutical care (continuum of care).

Objective
Students understand the concept of continuum of care and its practical implementation. They know the medication process within an institutional environment. They are able to find the necessary information and deal with problems in connection with pharmaceuticals, to evaluate them and to communicate and documentate their findings adequately. They know how a hospital is organised (procedures, possible problems), responsibilities of the different members of the staff and, most importantly, what the function of a hospital pharmacy is.

Content
Principals of the organisation of institutional environments (emergency hospitals), with special focus on medication processes and institutional pharmaceutical care (circulation of medication, continuum of care). Hygiene regulations, medical products, applications, drug formularies, patient files, SOAP notes, kardex study. Participation at interdisciplinary visits, internal trainings and doctors' reports as well as visitation of the emergency room. Drug interaction, generic substitution, quality management and pharmacovigilance.

535-5504-00L  Basics of Practical Pharmacy  ■  O  6 credits  7G  P. Wiedemeier, S. Emi, B. Falch, K. Fünfschilling, I. S. Vogel Kahmann

Abstract
Introduction to managed care systems (Pharmaceutical Care and Public Health): problems with regard to therapy and approaches to solutions, service, first aid and medicinal products. Methods of illness prevention and health promotion. Important additional assortments including complementary medicine. Law and economy in everyday pharmacy, structures of the national health care system.

Objective
Students know the most important concepts and methods of institutional pharmaceutical care of patients with regard to OTC and Rx-only drugs as well as the essential concepts and methods of public health, prevention and health care. They master the basic rules concerning the pharmaceutical triage and their implications. For the clinical pictures covered during the course, they are able to make therapeutic plans or accompany and optimize doctor's orders. Students show an adequate understanding of the rights and duties of pharmacists as medical personnel regarding medical care and the framework of the Swiss health care system. They are capable of handling important medical products and instructing patients about their use. Students have the necessary basic skills and applications of first aid and emergency medicine. They know the essence, chances and limits with reference to additional assortments, therapeutic options like phytotherapy, complementary medicine, veterinary pharmacy and non-medicinal methods of healing. Students have the essential knowledge of legal aspects and regulations concerning pharmacists and know the basics of business administration.

Content
Pharmaceutical Care: possibilities of pharmaceutical care of patients regarding OTC and Rx-only drugs in the officinal pharmacy. Good pharmaceutical triage in practice, introduction to the pharmaceutical validation of prescriptions, recognition of medicinal, patient related, therapeutic problems and the finding of solutions: Choice of therapy (OTC), accompanying and optimizing therapies (Rx), compliance, correct administration of drugs, cooperation with other medical professions in the field of outpatient treatment. Traditional and proactive pharmaceutical service.: development of adequate means of documentations of intervention and consultation as well as pharmaceutical follow-up care. Public health: role and possibilities of official pharmacies as partners within the Swiss health care system: primary health care, prevention, campaigns, early detection, instruction and mediation, referral to doctors. Needs of customers, patients and employees, and social interaction. Significance of the medical profession (illness, suffering, promotion of health and well-being). Basic training in first aid, emergency medicine and wound care. Medical products: handling of important applications and instruction of patients. Important and additional forms of therapy and assortments: phytotherapy, complementary medicine, veterinary pharmacy, non-medicinal methods of healing. Economy and law in everyday pharmacy: overview of the Swiss legal system. Relevant legal framework, jurisdiction and regulations and their meaning with regard to quality assurance for practicing pharmacists. Basics of finance and accounting as well as personnel management and insurance matters.

Organisation and competencies of the various partners within the Swiss health care system, focusing on the intermediate position and the role of pharmacists as part of the medical community.

Abstract:
The Postgraduate Colloquium mainly addresses doctoral students of the Chair. It is aimed at presenting and further discussing the current research, thus focusing on the argumentation and verification of contextual and methodical questions. The Colloquium provides a basis for exchange and further education and to establish and promote networking.

Objective:
The Colloquium focuses on the presentation and further discussion of the current research of doctoral students. It concentrates on the discussion and verification of contextual and methodical questions and provides a basis for exchange and networking among the participants.

Content:
Die Themenschwerpunkte der jeweiligen Veranstaltung richten sich nach den präsentierten Forschungsarbeiten. Inhaltlich korrespondieren sie mit den Forschungsschwerpunkten der Professur.
