sessions on the characterization of neuromorphic circuits, from elementary devices to systems.

S.-C. Liu et al.: Analog VLSI Circuits and Principles; various publications.

Particular: The course is highly recommended for those who intend to take the spring semester course ‘Neuromorphic Engineering II’, that

teaches the conception, simulation, and physical layout of such circuits with chip design tools.

Prerequisites: Background in basics of semiconductor physics helpful, but not required.

227-1037-00L Introduction to Neuroinformatics W 6 credits 2V+1U K. A. Martin, M. Cook, V. Mante, M. Pfeiffer

Abstract

Objective

The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties

(action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and

behavior will be explained. Some artificial systems (robot, chip) are presented.

Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can

contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the

monocultures of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the

enchantments and challenges that we all face in taking on this major 21st century problem and how each discipline can contribute to

discovering solutions.
This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simple models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied to understand both sensory transduction and the generation and transmission of nerve impulses along axons. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

529-0004-00L

**Computer Simulation in Chemistry, Biology and Physics**

**Abstract**

Molecular models, Force fields, Boundary conditions, Electrostatic interactions, Molecular dynamics, Analysis of trajectories, Quantum-mechanical simulation, Structure refinement, Application to real systems. Exercises: Analysis of papers on computer simulation, Molecular simulation in practice, Validation of molecular dynamics simulation.

**Objective**

Introduction to computer simulation of (bio)molecular systems, development of skills to carry out and interpret computer simulations of biomolecular systems.

**Content**

Molecular models, Force fields, Spatial boundary conditions, Calculation of Coulomb forces, Molecular dynamics, Analysis of trajectories, Quantum-mechanical simulation, Structure refinement, Application to real systems. Exercises: Analysis of papers on computer simulation, Molecular simulation in practice, Validation of molecular dynamics simulation.

**Lecture notes**

Available (copies of powerpoint slides distributed before each lecture)

**Literature**

See: www.csms.ethz.ch/education/CSCBP

**Prerequisites / notice**

Since the exercises on the computer do convey and test essentially different skills as those being conveyed during the lectures and tested at the oral exam, the results of the exercises are taken into account when evaluating the results of the exam.

For more information about the lecture: www.csms.ethz.ch/education/CSCBP

529-0733-00L

**Enzymes**

**Abstract**

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme-catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

**Objective**

Overview of enzymes, enzyme-catalyzed reactions and metabolic processes.

**Content**

Principles of enzymatic catalysis, enzyme kinetics, mechanisms of enzyme catalyzed reactions (group transfer reactions, carbon-carbon bond formation, eliminations, isomerisations and rearrangements), cofactor chemistry, enzymes in organic synthesis and the biosynthesis of natural products, catalytic antibodies.

**Lecture notes**

A script will not be handed out.

**Literature**

General:

In addition, citations from the original literature relevant to the individual lectures will be assigned weekly.

535-0810-00L

**Gene Technology**

**Abstract**

The course will provide a solid overview of the science and issues in gene technology and its pharmaceutical applications.

**Objective**

The aim of the lecture course is to provide a solid overview of gene technology, with a special focus on drug development. Topics: Antibody phage technology, DNA-encoded chemistry, protein modification technology, genome sequencing, transcriptomics, proteomics, functional genomics, principle of drug discovery. The course is suited for advanced undergraduate and early graduate students in pharmaceutical sciences or related fields.

**Content**

1. Antibody phage technology
   The antibody molecule
   V genes, CDRs, basics of antibody engineering
   Principles of phage display
   Phagemid and phage vectors
   Antibody libraries
   Phage display selection methodologies
   Other phage libraries (peptides, globular proteins, enzymes)
   Alternative screening/selection methodologies
   DNA-encoded chemical libraries

2. Proteins: chemical modification and detection of biomolecular interactions
   Homo- and hetero-dimerization of proteins
   Chemical modifications of proteins
   Antibody-drug conjugates
   Radioactive labeling of proteins
   Kinetic association and dissociation constants
   Affinity constant: definition and its experimental measurement

3. Genomics: Applications to Human Biology
   Protein cloning and expression
   DNA sequencing
   Some foundations of genetic analysis
   Knock-out technologies
   Transcriptomics
   Proteomics
   Recombinant vaccines

4. Pharmaceuticals: Focus on Discovery
   Ligand Discovery
   Half-life extension
   Cancer therapy
   Gene therapy

**Lecture notes**

Skript "Gene Technology" by Prof. Dario Neri and slides of the lecture
Learning the basic concepts of computer science along their historical development

Concepts in Modern Genetics

Scripts on the individual topics can be found under http://www.mol.biol.ethz.ch/teaching.

Y. Barral

Theoretical Computer Science

ECTS
2V

Y. Barral, D. Bopp, A. Hajnal, M. Stoffel, O. Voinnet

The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference. The course focuses on the concepts of classical and modern genetics and genomics.

This course is a co-production of the University of Zurich and ETH Zurich, and will be taught in English. The course takes place on Monday afternoon at ETH Hoenggerberg, and on Tuesday morning at UZH Irchel.

4V
Y. Barral, D. Bopp, A. Hajnal, M. Stoffel, O. Voinnet

Concepts of modern genetics and genomics, including principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

Objective

This course focuses on the concepts of classical and modern genetics and genomics.

Prerequisites / notice

This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture class covering the state of the research in bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

551-0313-00L

Microbiology (Part I)

W
3 credits
2V
W.-D. Hardt, L. Eberl, H.-M. Fischer, J. Piel, M. Pilhofer

Introduction into structural and functional aspects of the immune system.

Basic knowledge of the mechanisms and the regulation of an immune response.

Objective

This concept class will be based on common concepts and introduce to the enormous diversity among bacteria and archaea. It will cover introduction into structural and functional aspects of the immune system.

Prerequisites / notice

Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

551-0317-00L

Immunology I

W
3 credits

A. Oxenius, M. Kopf

Introduction into structural and functional aspects of the immune system.

Basic knowledge of the mechanisms and the regulation of an immune response.

Objective

This lecture class providing a broad overview on bacterial cell structure, genetics, metabolism, symbiosis and pathogenesis.

Prerequisites / notice

Electronic access to the documentation will be provided. The link can be found at "Lemmaterialien".

401-0647-00L

Introduction to Mathematical Optimization

W
5 credits
2V+1U
D. Adjiashvili

Introduction to basic techniques and problems in mathematical optimization, and their applications to problems in engineering.

The goal of the course is to obtain a good understanding of some of the most fundamental mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems. The students will also practice applying the learned models to problems in engineering.

Objective

Topics covered in this course include:
- Linear programming (simplex method, duality theory, shadow prices, ...).
- Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...).
- Modelling with mathematical optimization: applications of mathematical programming in engineering.

Prerequisites / notice

This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture class covering similar topics and more.

Concepts to cope with: a) what can be accomplished in a fully automated fashion (algorithmically solvable) b) How to measure the inherent difficulty of tasks (probems) c) What is randomness and how can it be useful? d) What is nondeterminism and what role does it play in CS? e) How to represent infinite objects by finite automata and grammars?

Learning the basic concepts of computer science along their historical development.
This lecture gives an introduction to theoretical computer science, presenting the basic concepts and methods of computer science in its historical context. We present computer science as an interdisciplinary science which, on the one hand, investigates the border between the possible and the impossible and the quantitative laws of information processing, and, on the other hand, designs, analyzes, verifies, and implements computer systems.

The main topics of the lecture are:
- alphabets, words, languages, measuring the information content of words, representation of algorithmic tasks
- finite automata, regular and context-free grammars
- Turing machines and computability
- complexity theory and NP-completeness
- design of algorithms for hard problems

Lecture notes
The lecture is covered in detail by the textbook "Theoretical Computer Science".

Literature

Further reading:

More exercises and examples in:
6. A. Asteroth, Ch. Baier: Theoretische Informatik

Prerequisites / notice
During the semester, two non-obligatory test exams will be offered.
Content
1. Direct Methods for linear systems of equations
2. Least Squares Techniques
3. Data Interpolation and Fitting
4. Filtering Algorithms
8. Approximation of Functions
9. Numerical Quadrature
10. Iterative Methods for non-linear systems of equations
11. Single Step Methods for ODEs
12. Stiff Integrators

Prerequisites / notice
The course will be accompanied by programming exercises in C++ relying on the template library EIGEN. Familiarity with C++, object oriented and generic programming is an advantage. Participants of the course are expected to learn C++ by themselves.

151-0104-00L Uncertainty Quantification for Engineering & Life Sciences

Abstract
Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective
The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Content
Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes
The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature

**Abstract**
The Master Thesis is the result of an independent scientific research and/or constructive development project in the chosen area of specialization.

**Objective**
The Master thesis concludes the Master programme. By writing up the Master thesis, students show their ability to independently produce a coherent and scientific piece of work.

**Content**
The program concludes with a Master thesis of 6 months duration that includes a written report and an oral presentation. The topic of the thesis can be chosen according to the student's interests in the field of computational biology & bioinformatics.

## Course Units for Additional Admission Requirements

The courses below are only available for MSc students with additional requirements.

<td>F. O. Friedrich Wicker</td>
</tr>
</tbody>
</table>

**Abstract**
The course covers the fundamental concepts of computer programming with a focus on systematic algorithmic problem solving. Teached language is C++. No programming experience is required.

**Objective**
Primary educational objective is to learn programming with C++. When successfully attended the course, students have a good command of the mechanisms to construct a program. They know the fundamental control and data structures and understand how an algorithmic problem is mapped to a computer program. They have an idea of what happens "behind the secenes" when a program is translated and executed.

**Content**
The course covers fundamental data types, expressions and statements, (Limits of) computer arithmetic, control statements, functions, arrays, structural types and pointers. The part on object orientation deals with classes, inheritance and polymorphy, simple dynamic data types are introduced as examples.

In general, the concepts provided in the course are motivated and illustrated with algorithms and applications.

**Abstract**
Introduction to basic methods and fundamental concepts of statistics and probability theory for non-mathematicians. The concepts are presented on the basis of some descriptive examples. Learning the statistical program R for applying the acquired concepts will be a central theme.
Objective
The objective of this course is to build a solid fundament in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

</table>

Abstract

The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training. The lecture will be thought on two afternoons. Some exercises will be built into the lecture.

Objective

Knowledge on structure and content of a scientific text. The course further is arranged to stimulate a discussion on how to properly write a legible scientific text versus writing an interesting novel. We will further discuss the practice of properly citing and critically reflect on recent plagiarism allegations.

Content

* Topic 1: Structure of a Scientific Text (The Title, the author list, the abstract, State-of-the Art, the “in this paper” paragraph, the scientific part, the summary, Equations, Figures).

* Topic 2: Power Point Presentations.

* Topic 3: Citation Rules and Citation Software.

* Topic 4: Guidelines for Research Integrity.

Literature

ETH "Citation Etiquette", see www.plagiate.ethz.ch.

Prerequisites / notice

Students should already have a Bachelor degree and plan to do either a semester project or a master thesis in the immediate future.

227-3001-00L Diploma Thesis

Only for DAS in Information Technology and Electrical Engineering.

Registration for the diploma thesis requires the successful completion of 18 credits ECTS from subjects of specialization.

Abstract

The Diploma of Advanced Studies finishes with a 3-months diploma thesis which is directed by a professor of the department ITET. Students prove their ability to conduct independent scientific research on a specific research problem, using skills and knowledge acquired during the program. The thesis includes a written report and an oral presentation.

Objective

see above

</tbody>
</table>

**Abstract**
The purpose of the lecture is to outline the development of the armed forces (assets regarding manpower, technology and armament), the concepts of warfare and the actual warfare in the 19th and 20th century.

**Objective**
- Distinguish between military history as a subject and historiography as a way of describing events;
- Analyse the modern developments regarding armed forces and warfare in the context of socio-economic changes;
- Based on the approach regarding revolution in military affairs, describe the evolution of the armed forces and of warfare;
- Emphasize the issues regarding the evolution of the comb (First and Second World War, Vietnam War and Algerian War).

**Content**
The lecture first examines the bases of the science of (military) history. It focuses on how military history developed from war history, on specific similarities and differences between military history and general historiography, the different ways of dealing with history in Switzerland, Germany, France and in the Anglo-Saxon cultural area (different approaches) as well as on institutions which deal with military history such as universities, military academies, national and international commissions and associations etc.

The lecture is structured along the lines of the concept of "Military Revolution" and starts with the formation of modern, European armed forces after the Oranian Army reform in the 17th century.

Based on the "Military Revolution" approach, the lecture examines the structural changes regarding the armed forces and the development of warfare from the 18th to the 20th century. Special emphasis will be put on how the battlefield was revolutionized due to the Napoleonic wars, the industrialization in the 19th century, the First World War, the mechanization and totalization during the Second World War and the period of the Cold War.

**Literature**

| 853-0047-00L | World Politics Since 1945: The History of International Relations | O | 4 credits | 2V+1U | A. Wenger |

**Abstract**
This lecture series provides students with an overview of the development of international relations since the end of World War II. The first part of the series deals with the development of and changes in Cold War security policy structures. The second part deals with the period after the transformation of 1989/91; the focus here is on current issues in international security policy.

**Objective**
By the end of the semester, participants should have a solid knowledge of the history and theoretical foundations of International Relations since the end of the Second World War.

**Content**
cf. "Diploma Supplement"

**Literature**

| 853-0082-00L | Strategic Studies I | O | 3 credits | 2V | M. Mantovani |

**Abstract**
The lecture series treats high-impact theories of strategic studies from antiquity to the present.

**Objective**
The participants know in what ways the understanding of strategy has evolved over time.

They understand the balance of strategy's basic components: ends, ways and means.

They know the most important classics of strategy and war theory, especially against their specific background.

Based on the analysis of historical and contemporary examples, they are aware the ambiguity of declaration and implementation of strategies.

They are capable of analyzing critically original texts and modern scholarly works in the field of strategic studies.

**Content**
The two-semester series treats classic texts of strategic studies from antiquity to the present. Term 1 covers the theories up until roughly 1900, term 2 the theories ever since.

Theories are deemed classic, if they were prominent in their respective times and if they had a strong reception after, be it in literature, in academic debates or as guidelines for action. Each out of some 50 theories is discussed in three steps: historical context, core messages and reception.

**Literature**
- Peter Paret, Makers of Modern Strategy: From Machiavelli to the Nuclear Age, Princeton 1986

| 853-0037-01L | Military Psychology and Pedagogy I (without Exercises) | O | 3 credits | 2V | H. Annen |

**Abstract**
Examine the fundamentals of the two sciences and establish links with military life. Discuss various schools of thought in psychology and focus on content and process theories of motivation. Explore characteristics of pedagogical thinking and discuss the values of military education with reference to the young adult serving in the armed forces.

**Objective**
- Becoming acquainted with basic psychological views of human behaviour and experience
- Knowing content- and process theories of motivation and being able to transfer them to the military context
- Knowing the possibilities and limitations of military education and deriving consequences
Content
Overall, the objective is to become acquainted with the basics of both scientific areas and to make references to military practice. Military psychology is a branch of applied psychology; consequently selected aspects of psychological principles will be covered. Military pedagogy hasn’t yet established itself firmly as an independent scientific discipline, it nevertheless can draw on a deep-seated tradition in Switzerland. Thus, the great importance that has been attached to the discussion of education in Swiss society and academia will be taken into account. Subjects:
- History of military psychology
- Psychological images of humanity (psychoanalysis, behaviourism, behavioural biology, humanistic psychology, cognitivism)
- Motivational theories
- Defence-, service-, operational- and combat motivation
- Swiss military pedagogy
- Education as defining feature of pedagogic thinking and acting

Literature
- Annen, H., Steiger, R. & Zwygart, U.: Gemeinsam zum Ziel, Huber, Frauenfeld 2004 (provided as pdf)
- Stadelmann, J.: Führung unter Belastung, Huber, Frauenfeld 1998 (provided as pdf)

The lecture is supported by a virtual learning environment containing relevant documents (presentations and texts) and information to further literature.

853-0064-00L Military Sociology I

Abstract
Beside of the most important terms of sociology, demographic changes and the related value and structure change will be analysed. The second part focuses on organizational sociology. Thirdly, the course examines to which extent armed forces can be considered as organizations like any other and to which extent they constitute a special case from an organizational and normative point of view.

Objective
Recognize and explain current changes (social change) in modern society (individualisation, pluralisation); describe demographic changes in Switzerland; explain the structures of societies; define issues and fields of research in modern military sociology and explain the foundations of organisational sociology; explain the military in terms of organisational sociology and identify specific traits of the military as an organisation.

Content
Societal change; organizations as societal phenomena; aims, structures, environments of organizations; specifics of the military as an organization; impacts of technological and societal changes on the armed forces in modern societies.

Literature
A reader with a set of texts will be handed out.

851-0000-00L Learning Environments for Training: Planning, Operation, Assessment

Abstract
In this lecture practical aspects of learning environments directed to training with respect to planning, operation and assessment are introduced comprising (a) presentations about their theoretical background, (b) discussions of practical aspects and (c) practical exercises. The participants have the knowledge and skills necessary for planning, preparing, and implementing good lessons. They apply their knowledge adaptively and based on findings from the research on learning and instruction literature.

Objective
The lecture consists of two parts: Basics of Learning skills and military didactics. The first part comprises insights in teaching and learning research, performance assessment, knowledge transfer and evaluation. Military didactics deal with specific aspects of military education:
- The planning of learning environments for schools and courses, the definition of learning objectives for military exercises, controlling and E-
- Learning within the army.

Content
The lecture comprises interactive parts where the participants elaborate and extend their knowledge and skills. There is no comprehensive written documentation of the lecture: the participants can download presentation slides, learning materials, and templates from "Moodle".

Literature
The necessary literature can be downloaded from "Moodle".

853-0033-00L Leadership I

Abstract
The lecture comprises an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organisation, context and situation. They should be informed about the evolution of the understanding of mankind in relation to working processes and its impact on organizations and the understanding of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate accurately in specific situations.

Objective
The 1-hour written exam will take place during the last lecture in the semester.

Prerequisites / notice
The 1-hour written exam will take place during the last lecture in the semester.

### Pharmacology and Toxicology I

**Number:** 535-0521-00L  
**Title:** Pharmacology and Toxicology I  
**Type:** W  
**ECTS:** 2 credits  
**Hours:** 2V  
**Lecturers:** U. Quitterer

**Abstract:**  
The two-semester lecture course will provide a detailed understanding of the fundamentals of drug action and the mechanisms of action and therapeutic use of the important classes of drugs. The lectures are intended for students of pharmaceutical sciences.

**Objective:**  
The lectures will provide a comprehensive survey of pharmacology and toxicology. Special emphasis is placed on the interrelationship between pharmacological, pathophysiological and clinical aspects.

**Content:**  
Topics include disease-relevant macroscopic, microscopic, pathobiochemical and functional disturbances of specific organs and organ systems. The lectures integrate disease pathology with mechanisms of drug action, usage, metabolism, pharmacokinetics, side effects, toxicology, contraindications and dosage of relevant drug classes. Basic principles of clinical pharmacology and pharmacotherapy will be covered.

**Lecture notes:**  
Für jede Vorlesung wird ein Skript abgegeben, das eine Zusammenfassung mit den wichtigsten Stichpunkten beinhaltet.

**Literature:**  
Recommended reading:  
or  
Comprehensive overview:  
The classic textbook in Pharmacology:  

**Prerequisites / notice:**  
Voraussetzungen: Abschluss Grundstudium

### Clinical Microbiology

**Number:** 535-0165-00L  
**Title:** Clinical Microbiology  
**Type:** W  
**ECTS:** 1 credit  
**Hours:** 1V  
**Lecturers:** K. Lucke

**Abstract:**  
Thorough knowledge of major pathogens involved in infectious diseases; principles of laboratory diagnosis of pathogenic bacteria and fungi.

**Objective:**  
Thorough knowledge of all major pathogens involved in infectious diseases; principles of laboratory diagnosis of pathogenic bacteria and fungi.

**Content:**  
Basics and principles of clinical microbiology:  
- host-pathogen interaction  
- symptoms and diagnosis of major bacterial pathogens  
- therapeutic regimens commonly used against bacterial disease  
- major aspects of medical mycology, virology and parasitology  
- epidemiology

**Literature:**  
- Brock, Mikrobiologie, Pearson, 13. aktualisierte Auflage  
- Kayser F. et al., Medizinische Mikrobiologie, Thieme, Stuttgart, New York  
- Brock, Mikrobiologie, Pearson, 13. aktualisierte Auflage

**Prerequisites / notice:**  
Voraussetzungen: Abschluss Grundstudium

### Gene Technology

**Number:** 535-0810-00L  
**Title:** Gene Technology  
**Type:** W  
**ECTS:** 2 credits  
**Hours:** 2G  
**Lecturers:** D. Neri

**Abstract:**  
The course will provide a solid overview of the science and issues in gene technology and its pharmaceutical applications.

**Objective:**  
The aim of the lecture course is to provide a solid overview of gene technology, with a special focus on drug development. Topics: Antibody phage technology, DNA-encoded chemistry, protein modification technology, genome sequencing, transcriptomics, proteomics, functional genomics, principle of drug discovery. The course is suited for advanced undergraduate and early graduate students in pharmaceutical sciences or related fields.
Content

1. Antibody phage technology
   The antibody molecule
   V genes, CDRs, basics of antibody engineering
   Principles of phage display
   Phagemid and phage vectors
   Antibody libraries
   Phage display selection methodologies
   Other phage libraries (peptides, globular proteins, enzymes)
   Alternative screening/selection methodologies
   DNA-encoded chemical libraries

2. Proteins: chemical modification and detection of biomolecular interactions
   Homo- and hetero-dimerization of proteins
   Chemical modifications of proteins
   Antibody-drug conjugates
   Radioactive labeling of proteins
   Kinetic association and dissociation constants
   Affinity constant: definition and its experimental measurement

3. Genomics: Applications to Human Biology
   Protein cloning and expression
   DNA sequencing
   Some foundations of genetic analysis
   Knock-out technologies
   Transcriptomics
   Proteomics
   Recombinant vaccines

4. Pharmaceuticals: Focus on Discovery
   Ligand Discovery
   Half-life extension
   Cancer therapy
   Gene therapy

Lecture notes
Skript "Gene Technology" by Prof. Dario Neri and slides of the lecture

Prerequisites / notice
Language: German and English
Pharmacology and Toxicology III

The course is divided into two parts. The first part provides a detailed understanding of drugs and pharmacotherapy of infectious diseases and cancer. In the field of pharmacogenomics, the course is focused on genetics, genome-wide association studies, genetic disease predisposition, examples of genetic variability of drug metabolism and drug responses, identification of new drug targets, relevance of pharmacogenomics for clinical drug development, and toxicogenomics. The second part focuses on topics related to the development and application of therapeutic proteins, such as protein expression, protein engineering, reducing immunogenicity, and GMP production of therapeutic proteins. Furthermore, selected examples of approved therapeutic proteins will be discussed.

**Objective**

3G

**Content**

- Historical landmarks of drug safety
- Pharmacovigilance and causality assessment
- Drug safety in premarketing clinical trials
- Descriptive, cohort and case-control drug safety study designs; Data analysis and control of confounding
- Pharmacopoeia and regulatory decision making in drug safety; Risk management plans (RMPs)
- Medication errors, clinical pharmacology / clinical pharmacy
- Clinical Decision Support Systems, Interventional Pharmacopoeidology
- Pharmacopoeidological databases, Big Data
- Interactive discussion of many real-life examples for each topic

**Literature**

- Rothman: Introduction to Epidemiology
- Strom, Kimmel, Hennessy: Textbook of Pharmacoepidemiology

**Recommended literature**

- Chapters 13-16 of the Immunobiology VIII book (Janeway et al.)
- Lecture Handouts
- Paper References provided in the Scripts
- EMEA Dossier for Humira

- Clinical Decision Support Systems, Interventional Pharmacoepidemiology
- Medication errors, clinical pharmacology / clinical pharmacy
- Pharmacoepidemiology and regulatory decision making in drug safety; Risk management plans (RMPs)
- Descriptive, cohort and case-control drug safety study designs; Data analysis and control of confounding
- Pharmacopoeia and regulatory decision making in drug safety; Risk management plans (RMPs)
- Medication errors, clinical pharmacology / clinical pharmacy
- Clinical Decision Support Systems, Interventional Pharmacoepidemiology
- Pharmacopoeidological databases, Big Data
- Interactive discussion of many real-life examples for each topic

**Lecture notes**

This course will be a combination of formal lectures, group discussions and self-directed studies. Course material will be taught through seminars, case studies in small groups. Reading material and scripts will be provided for each week.

---

Second Series of Courses

Compulsory Block Courses
Number | Title | Type | ECTS | Hours | Lecturers
---|---|---|---|---|---
535-5501-00L | Applied Pharmacology | O | 6 credits | 7G | P. Wiedemeier, S. Erni, B. Falch, K. Fünfschilling, A. Gutzeit, I. S. Vogel Kahmann

Abstract
Overview of the most important clinical pictures: symptoms, recognition, differentiation, pharmacotherapy for the most important general and special medical indications. Groups of pharmaceutical compounds, active pharmaceutical ingredients, proprietary medicinal products: mechanisms of action, contraindication, therapeutic patterns, side effects, interactions.

Objective
Students have a thorough knowledge of all clinical pictures and their symptoms regarding outpatient treatment. They know the main groups of indications including active pharmaceutical self-medication and ingredients, mechanisms of action, pharmacokinetics, pharmacodynamics and dosage. They are also able to identify the relevant side effects and interactions.

Content
Pathophysiology of selected clinical pictures and their main symptoms and clinical parameters. Recognition of alarm symptoms and distinction between pharmaceutical self-medication and the need for medical treatment. Detailed coverage of the pharmacotherapy of all fields of indication encountered in outpatient treatment. Outlining of therapeutic strategies and patterns with regard to suitable pharmaceutical compounds, active pharmaceutical ingredients and representative range of proprietary medicinal products. Discussion of the most important mechanisms of action, contraindications, side effects and interactions.

535-5502-00L | Pharmaceutical Manufacturing in Small Quantities | O | 3 credits | 3G | J. Fröhlich, H. Hartenberg, C. Meier

Abstract
Hands-on course in pharmaceutical manufacturing in the pharmacy according to "GMP regulations for small quantities" defined in the pharmacepeia: Design and practical approach in compounding of formulas using the most important dosage forms including their risks and quality assurance.

Objective
Students are able to manufacture, to package, to quality-control and document pharmaceutical compounding on their own, "best practice" and according to GMP regulations, using the appropriate techniques. They know the most important properties of active ingredients and excipients frequently used. They achieve the necessary knowledge including the relevant literature and other sources of information, as well as the legal requirements regarding pharmaceutical manufacturing in small quantities.

Content
To impart knowledge about the principal techniques and processes in the manufacturing of pharmaceuticals in small quantities (formulas), focusing on the design, manufacturing, quality assurance and risk based self-appraisal including the patient specific dispensing. During the practical training periods: by means of pharmaceutical relevant examples the design, the planning, the manufacturing including the correct use of the equipment, the packaging and the quality control they are practiced for various dosage forms and recipes. Quality assurance and control are mainly risk adapted considering as well hygiene regulations according to current pharmaceutical practice. The participants will thus improve their general GMP knowledge and skills.

535-5503-00L | Institutional Pharmacy | O | 3 credits | 3G | P. Wiedemeier, J. Beney, M. Lutters, I. S. Vogel Kahmann

Abstract
Organisation of institutional environments (emergency hospitals), with special focus on the medication process and institutional pharmaceutical care (continuum of care).

Objective
Students understand the concept of continuum of care and its practical implementation. They know the medication process within an institutional environment. They are able to find the necessary information and deal with problems in connection with pharmaceuticals, to evaluate them and to communicate and documentate their findings adequately. They know how a hospital is organised (procedures, possible problems), responsibilities of the different members of the staff and, most importantly, what the function of a hospital pharmacy is.

Content
Principals of the organisation of institutional environments (emergency hospitals), with special focus on medication processes and institutional pharmaceutical care (circulation of medication, continuum of care). Hygiene regulations, medical products, applications, drug formularies, patient files, SOAP notes, kardex study. Participation at interdisciplinary visits, internal trainings and doctors' reports as well as visitation of the emergency room. Drug interaction, generic substitution, quality management and pharmacovigilance.

535-5504-00L | Basics of Practical Pharmacy | O | 6 credits | 7G | P. Wiedemeier, S. Erni, B. Falch, K. Fünfschilling, I. S. Vogel Kahmann

Abstract
Introduction to managed care systems (Pharmaceutical Care und Public Health): problems with regard to therapy and approaches to solutions, service, first aid and medicinal products. Methods of illness prevention and health promotion. Important additional assortments including complementary medicine. Law and economy in everyday pharmacy, structures of the national health care system.

Objective
Students know the most important concepts and methods of pharmaceutical care of patients with regard to OTC and Rx-only drugs as well as the essential concepts and methods of public health, prevention and health care. They master the basic rules concerning the pharmaceutical triage and their implications. For the clinical pictures covered during the course, they are able to make therapeutic plans or accompany and optimize doctor's orders. Students show an adequate understanding of the rights and duties of pharmacists as medical personnel regarding medical care and service within the framework of the Swiss health care system. They are capable of handling important medical products and treating patients about their use. Students have the necessary basic skills and are capable of first aid and emergency medicine. They know the essence, chances and limits with reference to additional assortments, therapeutic options like phytotherapy, complementary medicine, veterinary pharmacy and non-medical methods of healing. Students have the essential knowledge of legal aspects and regulations concerning pharmacists and know the basics of business administration.

Content
Pharmaceutical Care: possibilities of pharmaceutical care of patients regarding OTC and Rx-only drugs in the officinal pharmacy. Good pharmaceutical triage in practice, introduction to the pharmaceutical validation of prescriptions, recognition of medicinal, patient related, therapeutic problems and the finding of solutions: Choice of therapy (OTC), accompanying and optimizing therapies (Rx), compliance, correct administration of drugs, cooperation with other medical professions in the field of outpatient treatment. Traditional and proactive pharmaceutical service: development of adequate means of documentations of intervention and consultation as well as pharmaceutical follow-up care. Public health: role and possibilities of official pharmacies as partners within the Swiss health care system: primary health care, prevention, campaigns, early detection, instruction and mediation, referral to doctors. Needs of customers, patients and employees, and social interaction. Significance of the medical profession (illness, suffering, promotion of health and well-being). Basic training in first aid, emergency medicine and wound care. Medical products: handling of important applications and instruction of patients. Important and additional forms of therapy and assortments: phytotherapy, complementary medicine, veterinary pharmacy, non-medical methods of healing. Economy and law in everyday pharmacy: overview of the Swiss legal system. Relevant legal framework, jurisdiction and regulations and their meaning with regard to quality assurance for practicing pharmacists. Basics of finance and accounting as well as personnel management and insurance matters.

Organisation and competencies of the various partners within the Swiss health care system, focusing on the intermediate position and the role of pharmacists as part of the medical community.

| Abstract        | gta-re-veh: Workshop on the occasion of the 50th jubilee of the Institute for the History and Theory of Architecture |
| Objective       | The development of the material is conceived as a joint form-finding process. The basic idea is to create a revue-like series of various “numbers”: a dynamic mixture of book and lecture texts, historical documents and spontaneously evolving conversations. The final product will be performed by workshop contributors during the anniversary celebrations. |
| Content         | The motivation behind the workshop is to focus on the beginnings of the gta on the occasion of its 50th anniversary. Among the founding fathers there were fascinating protagonists such as Adolf Max Vogt, Bernhard Hoesli, and Paul Hofer. Based on an understanding of their concepts, methods and ideas, a text collage will culminate in a script for a one-hour-long performance reading. In addition to the graphically significant gta publications produced at this time (*Rainbow*-books), contemporary image and film materials can be integrated as well as interviews with contemporary witnesses and the present gta chair. The result intends both contextualization as well as critical revision. |
| Prerequisites / notice | The seminar addresses the fellows of the Doctoral Program in History and Theory of Architecture. All other doctoral students of the Faculty of Architecture are welcome. |

| 064-0009-16L    | Research Colloquium in Architecture and Urbanism (M.Angéli) | W    | 3    | 1K    | M. Angélil |
| Abstract        | This colloquium is open to doctoral candidates in fields related to Architecture and Urbanism. Its focus will be on contemporary topics in urbanism and will involve two or three one-day sessions over the course of the semester, each of which will be attended by an invited scholar. |
| Objective       | The sessions will involve brief presentations of dissertation work by the participants followed by discussions with the guests. |
| Content         | This colloquium is open to doctoral candidates in fields related to Architecture and Urbanism. Its focus will be on contemporary topics in urbanism and will involve two or three one-day sessions over the course of the semester, each of which will be attended by an invited scholar. |
| Prerequisites / notice | Space is limited and participation is subject to approval from the organizers. |

| 064-0013-16L    | Methods in the History and Theory of Architecture | W    | 2    | 2S    | I. Heinze-Greenberg |
| Abstract        | Introduction to methodological approaches in the history and theory of architecture; presentation and discussion of individual doctoral projects. |
| Objective       | The doctoral students analyze critically relevant approaches in the history and theory of architecture and discuss fundamental questions with regard to their individual research projects, to produce and hand in their proposals. |
| Content         | The two-semester course in the first year of the doctoral program in the history and theory of architecture has a twofold objective: First, reading sessions on central approaches in the history and theory of architecture provide a methodological basis for the PhD scholars. Secondly, both, reading sessions and presentation and discussion sessions on the individual research projects, the doctoral students get support in the production of the proposal which they work on and which they have to present after the first year. |

| 064-0015-16L    | PhD Colloquium Theory of Information Technology for Architects | W    | 2    | 2K    | L. Hovestadt |
| Abstract        | Information technology plays an increasingly important role in research. To meet this challenging development, it is not only important to acquire respective skills, but also to consider and understand information technology in what sets it apart from other gestalts of technics (like mechanics, dynamics, or thermodynamics). |
| Objective       | The aim of this colloquium is to counter an observable tendency, that proportional to the degree in which students master practical skills in computing, they increasingly submit uncritically, in their understanding and framing of problems, to the dictation of schemata and templates implemented by technical systems. |
| Content         | The starting point for this colloquium is to comprehend computing not in terms of skills, but as a literacy which we can experience emerging today. Like in the case of writing as well, computing cannot exhaustively be reduced to either logics, grammar, arithmetics, or analytics. Rather, computation, if comprehended as a literacy, relates to any of the established categories of learning and raises questions of an architectonic kind. This colloquium draws from the principal richness of cultural forms of knowing and learning and thematizes approaches to formulate a theoretical stance on information technology for architects which is driven by and resting on the actual reality of computability today. In this, it is complementary to those theory courses on technology offered by the historical disciplines at ETH. |
| Prerequisites / notice | To benefit from this course, you should have a practical affinity to technics, as well as an abstract interest in information technology in its comprehensive cultural context. |

| Abstract        | Advanced PhD candidates of urban studies, urban and landscape design and urban sociology report about their experiences and insights in the concrete application of methods utilized for their research and scientific publications. Discussion of ongoing individual work, methodological questions, critical perspectives on urban and landscape design and city's relation to society. |
| Objective       | The seminar seeks to provide participants with a differentiated knowledge of methods in the field of the urbanism. Furthermore, it provides a platform to exchange contemporary urban research experiences across disciplinary boundaries, drawing from different geographies of knowledge production. Possible meta-themes include modes of data assessment in urban studies, ways of progressing from hypothesis to synthesis, and research by design as method. |
The format of HS15 will provide an overarching methodological meta-theme, to be defined prior to the event. One external guest critic will be invited. In this case, each presentation will conclude with a discussion round, providing sufficiently detailed feedback for every doctoral candidate.

Participants in both cases will be expected to submit single-page abstracts of their papers in advance and to make a presentation of app. 20 minutes at the colloquium. The discussion rounds will be moderated by the organizing professor and the invited guests.

Enrolment on agreement with the lecturer only.

151-0906-00L Frontiers in Energy Research

This course is only for doctoral students.

Abstract

PhD students at ETH Zurich working in the broad area of energy present their research to their colleagues, to their advisors and to the scientific community.

Objective

Knowledge of advanced research in the area of energy.

Content

PhD students at ETH Zurich working in the broad area of energy present their research to their colleagues, to their advisors and to the scientific community. Every week there are two presentations, each structured as follows: 15 min introduction to the research topic, 15 min presentation of the results, 15 min discussion with the audience.

Lecture notes

Slides will be distributed.

Course Catalogue of ETH Zurich

862-0002-16L Research Colloquium History of Knowledge (HS 2016)

Only for MAGPW students, D-GESS PhD and D-ARCH PhD students.

This colloquium is highly recommended for first and second semester MAGPW students.

Abstract

The colloquium of the ZGW focuses on present developments, debates and perspectives in the field of history of knowledge. On the second and fourth date there will be public events in the Cabaret Voltaire.

Objective

The colloquium deals with the general problems, questions and methods of the interdisciplinary research field "The History of Knowledge". Knowledge has become one of the existential conditions of modern societies and it increasingly determines their dynamics. Therefore, it is getting more and more relevant to develop a differentiated analysis of the epistemic, social and cultural constraints of the production, circulation and use of knowledge. In addition, the colloquium asks after the cultural and ethical resonances of knowledge not only within science but also in relation to art, literature, technology, everyday life, and so on.

Prerequisites / notice

Short notice about program changes are possible and will be communicated through the ZGW newsletter. Please register with www.zgw.ethz.ch/de/newsletter.html

Credit points can be gained by regular attending and by writing an essay. In addition to the five colloquia there will be a deepening seminar on offer (lecturer K. Esphahangizi).

Free childcare available.

051-0827-16L Sand: an (in)finite Resource? - Engineering for Development (E4D) Summer School

Number of participants limited.

Abstract

The programme revolves around the depleting resource sand and the question of how to develop alternative building materials for future cities. The course is for 30 master and doctoral students from ETH Zurich and other academic institutions (from different disciplines related to the topic), joined by faculty members and external experts from fields of expertise related to the winter school topic.

Objective

The E4D summer school 2016 aims to develop an integrated vision to a global challenge of today's construction industry. The programme revolves around the depleting resource sand and the question of how to develop alternative building materials for future cities. Led by different experts from around the world, students will not only learn the thematic resource but experiment with current and future technologies to transform sand and building waste. In the workshops the acquired knowledge will be tested and applied. The summer school presents three areas that could mobilise sand alternatives for construction and other applications: (i) I. Microbiologically Induced Calcite Precipitation (MICP), (ii) Chemical Crystalization Processes and (iii) 3D printing.

Content

Sand is the most commonly used raw material for the production of goods on our planet. It is found in concrete, glass, computers, detergents and toothpaste. Sand is the megastar of the industrial and digital era - our culture is literally built upon this resource. But sand is not equal to sand: the construction industry requires grain sizes and rough shapes that are only found in river beds, lakes and the oceans. Mining of aquatic sand comes at high environmental and social costs; its growing demand cannot be met sustainably. Sand is mostly composed of quartz, a mineral form of silicon dioxide. Silicon is one of the most abundant materials on earth and also one of the strongest. These properties make it valuable to various industries. Since a few years demand for sand has risen exponentially. Alternatives for sand for construction have yet to be developed.

Sustainability is often referred to as an interaction of social, cultural, economic, and ecological aspects. In the construction industry sustainability has been perceived as the optimisation of existing material and energy uses, yet the fundamental energetic and material character of these base resources has not been questioned. The speed of consumption of these resources increases continuously due to demographic pressure and resulting construction, as seen around the world and in particular in developing and emerging countries. A fundamental understanding of metabolic processes is required to frame the question of material and energetic sustainability. At the same time the definition of resources expands to include previously undervalued materials and waste. Finally, advances in digital technology and science have opened new avenues for alternative materials and processes.

The summer school presents three areas that could mobilise sand alternatives for construction and other applications:

I. Microbiologically Induced Calcite Precipitation (MICP): Also known as bio-cementation it is a process utilised in self-healing concrete and soil stabilisation. The application to sand will produce naturally grown structural sand bricks. This workshop will compare MICP for various sand types, building wastes and bacterial cultures.

II. Chemical Crystalization Processes: Based on material computation experiments pioneered by architect and engineer Frei Otto, this workshop combines form finding properties of sand with structural and thinking and chemical crystalization processes.

III. 3D Printing: 3D Printing with sand and building waste, finally, explores the potential of sand as a substrate within a binding agent. In combination with a robotic arm, 3D printing of sand is an in situ digitally controlled construction process. It overcomes the need for traditional form-work and transportation of material, thereby reducing the grey energy.
The objective of the summer school is to support PhD researchers in their individual research and specific research stages by sharing their work with keynotes and colleagues. Accordingly, participants are expected to develop their skills of articulating and communicating their ideas, examine various STS methods and techniques of approaching cities, and to discuss their research and obstacles in an academic setting. The three sessions; problematizing, describing and assembling, allow participants in various stages of their research to learn about the relevance of STS methodologies and concepts of urban research in general, and for their particular interest and research stage. They are also aimed at researchers not yet familiar with the approach and interested in learning a subset of its concepts (eg. networks/artefacts) and methodologies (e.g. ethnography/digital methods). Throughout the sessions participants will learn to: question the city from a STS perspective (problematizing), they will be introduced to the methodologies that tackle these questions (describing), and they will encounter ways of thinking through questions and answers (assembling). Specifically, participants are to write a full paper, design a poster and make a presentation. All deliverables will be evaluated by the keynote speakers, four external reviewers, and the organizers. The poster presentation will take place in front of a full audience, while paper presentations in the workshop only. The organizers are inquiring for publishing opportunities of outstanding papers (eg. Planning, the International Journal of Urban and Regional Research, ZAW). The website will be updated with the posters and a review of following the event.

The Assembling Cities summer school aims to bring together an interdisciplinary group of doctoral students who treat the city as their empirical site. Academic backgrounds include, but are not limited to: anthropology, architecture, geography, history, philosophy, political science, sociology, visual arts, and urban planning. In particular, the summer school addresses research exploring the borderlands of the diverse fields of STS and urban studies. It will be of particular interest to PhD candidates who have already begun their research and are in the stages before or after conducting field studies. As participants are required to enrol in one of three thematic groups, their stages of research may differ per group. In other words, the three themes can be interpreted to speak to various stages of research (problematizing, describing, and assembling respectively). The summer school is positioned at the intersection of science and technology studies (STS), urban studies and planning studies. The program emphasizes the development of conceptual and methodological insights as part of innovative approaches to contemporary urban phenomena. To the fields of urban studies it provides a more varied and dynamic conceptualisation of the city; it does not reduce urban phenomena to the logic of a capitalist mode of production. This endeavour relating urban studies with STS presents new, cross-cutting ways of examining arising planning issues.

Planning studies can benefit from new tools of interpreting problems of interconnection and expertise. A website will be created to advertise the summer school and will be distributed to various mailing lists (BESTS, EASST, s-architecture etc.) in our own networks and on posters at Swiss universities. It will be maintained until after the summer school in order to keep those interested and the participants informed about follow up activities.

### Content
The relevance of STS in urban research is explored with three themes: problematizing, describing and assembling (cities). Participants will be distributed in thematic groups, and lectures will be held by keynote speakers according to theme. Following the call, participants are required to indicate which theme fits their paper best as they will be shared within the thematic groups. The first day will include a keynote presentation followed by an informal poster session for each thematic group. The poster sessions are a chance for the other two groups to learn about participants’ research and ask questions. The following day two sessions will be held with the support of the respective keynote.

During the first session the participants will present their papers (max 15 min) within their thematic groups followed by a general 20 min discussion. During this time, key points will be noted and later discussed in the second (afternoon) session in which each group will prepare a plenary discussion and presentation for the final day. The final day consists of a plenary discussion of each theme opened by the respective keynote and moderated by members of the thematic group. Each thematic group will summarize their discussions and findings in a final presentation. The framework for the discussion and presentations will be defined together with the keynotes and could be, for example, a specific question and/or obstacle, a clear toolbox, or excerpts from selected presentations related to each respective theme. The summer school will open with an excursion to the housing project Hunzikerareal by the housing cooperative Mehr als wohnen in Zurich. This large mixed-use area development is used as an illustration of how institutions, individuals and artefacts mediate the planning process towards an inclusionary and diverse project.

### Key for Hours
- **V**: lecture
- **G**: lecture with exercise
- **U**: exercise
- **S**: seminar
- **K**: colloquium
- **P**: practical/laboratory course
- **A**: independent project
- **D**: diploma thesis
- **R**: revision course / private study

### Prerequisites / notice
Taking place from 4 to 22 July 2016 at the TU Delft in The Netherlands.

Costs: CHF 500, including board and accommodation. All participants are responsible for organising and financing their own domestic or international travel to Delft, The Netherlands.

The Engineering for Development (E4D) Winter School 2016 will invite 30 master and doctoral students from different disciplines related to the topic of the summer school. Applicants will be selected based on their academic record and previous work experiences. Applicants must send a one-page CV and one-page letter of motivation in PDF format stating their interest, to Ms. María Ubierna Aparicio (ubierna@ifu.baug.ethz.ch) Deadline: 31 March 2016 Notification: 15 April 2016

### 051-0829-16L Summer School: Assembling Cities. Studying Urban Matters in Practice

**W** 2 credits 4U D. Eberle Suitable for doctorate

Abstract
In particular, the summer school addresses research exploring the borderlands of the diverse fields of STS and urban studies. It will be of particular interest to PhD candidates who have already begun their research and are in the stages before or after conducting field studies. As participants are required to enrol in one of three thematic groups, their stages of research may differ per group.

Objective
The relevance of STS in urban research is explored with three themes: problematizing, describing and assembling (cities). Participants will be distributed in thematic groups, and lectures will be held by keynote speakers according to theme. Following the call, participants are required to indicate which theme fits their paper best as they will be shared within the thematic groups. The first day will include a keynote presentation followed by an informal poster session for each thematic group. The poster sessions are a chance for the other two groups to learn about participants’ research and ask questions. The following day two sessions will be held with the support of the respective keynote.

During the first session the participants will present their papers (max 15 min) within their thematic groups followed by a general 20 min discussion. During this time, key points will be noted and later discussed in the second (afternoon) session in which each group will prepare a plenary discussion and presentation for the final day. The final day consists of a plenary discussion of each theme opened by the respective keynote and moderated by members of the thematic group. Each thematic group will summarize their discussions and findings in a final presentation. The framework for the discussion and presentations will be defined together with the keynotes and could be, for example, a specific question and/or obstacle, a clear toolbox, or excerpts from selected presentations related to each respective theme.

During the second (afternoon) session the participants will present their papers (max 15 min) within their thematic groups followed by a general 20 min discussion. During this time, key points will be noted and later discussed in the second (afternoon) session in which each group will prepare a plenary discussion and presentation for the final day. The final day consists of a plenary discussion of each theme opened by the respective keynote and moderated by members of the thematic group. Each thematic group will summarize their discussions and findings in a final presentation. The framework for the discussion and presentations will be defined together with the keynotes and could be, for example, a specific question and/or obstacle, a clear toolbox, or excerpts from selected presentations related to each respective theme.

Abstract

The summer school examines in depth the systemic choices and assumptions used in life cycle assessment models of the world economy and biosphere, and then have the students apply this knowledge by making their own choices and building their own version of a life cycle inventory database. Software to apply these system modelling choices would be built specifically for the summer school.

Objective

To improve ones understanding of life cycle assessment, and the broader issues in modeling, improving, and understanding sustainability assessments.

Prerequisites / notice

Students should be familiar with either life cycle assessment, environmental science, or economic modeling. This seminar is intended to be primarily for Ph.D. students.

Objective
Theory and application of energy conversion at the cellular level. Understanding of the basic features governing solutes transport in the principal systems of the human cell. Connection of characteristics and patterns from other fields of engineering to bioluidics. Heat and mass transport processes in the cell, generation of forces, work and relation to biomedical technologies.

Content
Mass transfer models for the transport of chemical species in the human cell. Organization and function of the cell membrane and of the cell cytoskeleton. The role of molecular motors in cellular force generation and their function in cell migration. Description of the functionality of these systems and of analytical experimental and computational techniques for understanding of their operation. Introduction to cell metabolism, cellular energy transport and cellular thermodynamics.

Lecture notes/Literature
Material in the form of hand-outs will be distributed.

151-0927-00L
Rate-Controlled Separations in Fine Chemistry
W 4 credits 3G M. Mazzotti

Abstract
The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life science processes in particular, fine chemistry and biotechnology.

Objective
The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life science processes in particular, fine chemistry and biotechnology.

Content
The class covers separation techniques that are central in the purification and downstream processing of chemicals and biopharmaceuticals. Examples from both areas illustrate the utility of the methods: 1) Liquid-liquid extraction; 2) Adsorption and chromatography; 3) Membrane processes; 4) Crystallization and precipitation.

Lecture notes/Literature
Handouts during the class
Recommendations for text books will be covered in the class

Prerequisites / notice
Requirements: Thermal separation Processes I (151-0926-00) and Modelling and mathematical methods in process and chemical engineering (151-0940-00)

401-0649-00L
Applied Statistical Regression
W 5 credits 2V+1U M. Dettling

Abstract
This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical background are included, with the emphasis lying in learning “good practice” that can be applied in every student’s own projects and daily work life. A special focus will be laid in the use of the statistical software package R for regression analysis.

Objective
The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear modeling.

Content
The course starts with the basics of linear modeling, and then proceeds to parameter estimation, tests, confidence intervals, residual analysis, model choice, and prediction. More rarely touched but practically relevant topics that will be covered include variable transformations, multicollinearity problems and model interpretation, as well as general modeling strategies.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model, logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

Lecture notes/Literature
A script will be available.
Faraway (2005): Linear Models with R
Faraway (2006): Extending the Linear Model with R
Draper & Smith (1998): Applied Regression Analysis
Fox (2008): Applied Regression Analysis and GLMs
Montgomery et al. (2006): Introduction to Linear Regression Analysis

Prerequisites / notice
The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-3622-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have not registered for the examination of the other course unit.

551-1615-00L
NMR Methods for Studies of Biological Macromolecules
W 1 credit 1S G. Wider
Prerequisites: Basic knowledge in biological NMR spectroscopy.

Abstract
Seminar series on technical aspects of high resolution nuclear magnetic resonance (NMR) spectroscopy with biological macromolecules.

Objective
Introduction and discussion of advanced methods for recording and analysis of NMR data with biological macromolecules.

Content
Seminar series on technical aspects of high-resolution nuclear magnetic resonance (NMR) spectroscopy with biological macromolecules.

551-1619-00L
Structural Biology
W 1 credit 1K R. Glockshuber, F. Allain, N. Ban, K. Locher, E. Weber-Ban, G. Wider, K. Wüthrich

Abstract
The course consists of a series of research seminars on Structural Biology, Biochemistry and Biophysics, given by both scientists of the National Center of Competence in Research (NCCR) in Structural Biology and external speakers. Information on the individual seminars is provided on the following websites:
http://www.structuralbiology.uzh.ch/educ002.asp
http://www.biol.ethz.ch/dbiol-cal/index

Objective
The goal of this course is to provide doctoral and postdoctoral students with a broad overview on the most recent developments in biochemistry, structural biology and biophysics.

851-0180-00L
Research Ethics
W 2 credits 2G G. Achermann
Particularly suitable for students of D-BIOL, D-CHAB, D-HEST

Abstract
This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective
The main goal of this course is to enhance the student’s ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
- Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
- Recommended literature:
  - "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

Abstract
About 5 talks on applied statistics.

Objective
See how statistical methods are applied in practice.
The aim of this monthly meeting is to provide further education for master and doctoral students as well as Postdocs in diverse topics of

**551-1109-00L**  
**Seminars in Microbiology**  
**Objective**  
Seminars by invited speakers covering selected microbiology themes.

**Abstract**  
Discussion of selected microbiology themes presented by invited speakers.

**Prerequisites / notice**

**M. Aebi**  
0 credits  
Scientific talks and discussions on changing subjects.  
Students and researchers can get advice for analyzing scientific data, often for a thesis.  
We highly recommend to contact the consulting service when planning a project, not only towards the end of analyzing the resulting data!  
Contact: beratung@stat.math.ethz.ch . Tel. 044 632 2223. See also http://stat.ethz.ch/consulting  
Requirements: Knowledge of the basic concepts of statistics is desirable.

**551-0030-01L**  
**Doctoral Thesis**  
**Objective**  
Doctoral Thesis

**Abstract**  
Doctoral Thesis

**Prerequisites / notice**

**W. Spörri**  
0 credits  
Eligible for credits  
There will be about 5 talks on how statistical methods are applied in practice.  
This is no lecture. There is no exam and no credit points will be awarded. The current program can be found on the web:  
http://stat.ethz.ch/events/zukost  
Course language is English or German and may depend on the speaker.

**401-0620-00L**  
**Statistical Consulting**  
**Objective**  
The Statistical Consulting service is open for all members of ETH, including students, and partly also to other persons.

**Abstract**  
Advice for analyzing data by statistical methods.

**Content**  
Students and researchers can get advice for analyzing scientific data, often for a thesis.  
This is not a course, but a consulting service. There are no exams nor credits.

**Prerequisites / notice**

**M. Kalisch, L. Meier**  
0.1K  
1S  
Professors  
Statistical Consulting

**551-0512-00L**  
**Current Topics in Molecular and Cellular Neurobiology**

**Number of participants limited to 8.**

**Objective**  
The course is a literature seminar or "journal club". Each Friday a student, or a member of the Suter Lab in the Institute of Molecular Health Sciences, will present a paper from the recent literature.

**Abstract**  
The course introduces you to recent developments in the fields of cellular and molecular neurobiology. It also supports you to develop your skills in critically reading the scientific literature. You should be able to grasp what the authors wanted to learn i.e. their goals, why the authors chose the experimental approach they used, the strengths and weaknesses of the experiments and the data presented, and how the work fits into the wider literature in the field. You will present one paper yourself, which provides you with practice in public speaking.  
You are expected to take part in the discussion and to ask questions. To prepare for this you should read all the papers beforehand (they will be announced a week in advance of the presentation).

**Lecture notes**

Presentations will be made available after the seminars.

**Content**  
You will present one paper yourself. Give an introduction to the field of the paper, then show and comment on the main results (all the papers we present are available online, so you can show original figures with a beamer). Finish with a summary of the main points and a discussion of their significance.

**Prerequisites / notice**

You must attend at least 80% of the journal clubs, and give a presentation of your own. At the end of the semester there will be a 30 minute oral exam on the material presented during the semester. The grade will be based on the exam (45%), your presentation (45%), and a contribution based on your active participation in discussion of other presentations (10%).

**551-0737-00L**  
**Experimental Ecology: Evolution and Ecology**

**Objective**  
Interaction seminar. Student-mediated presentations, guests and discussions on current themes in ecology, evolutionary and population biology.

**Abstract**  
Getting familiar with scientific arguments and discussions. Overview of current research topics. Making contacts with fellow students in other groups.

**Content**  
Scientific talks and discussions on changing subjects.

**Prerequisites / notice**

For information and details: http://www.eco.ethz.ch/news/zis  
or contact: Lehrereve@env.ethz.ch

**551-0509-00L**  
**Current Immunological Research in Zürich**

**Objective**

This monthly meeting is a platform for Zurich-based immunology research groups to present and discuss their ongoing research projects. At each meeting three PhD students or Postdocs from the participating research groups present an ongoing research project in a 30 min seminar followed by a plenary discussion.

**Abstract**

The aim of this monthly meeting is to provide further education for master and doctoral students as well as Postdocs in diverse topics of immunology and to give an insight in the related research. Furthermore, this platform fosters the establishment of science- and technology-based interactions between the participating research groups.

**Content**

Presentation and discussion of current research projects carried out by various immunology-oriented research groups in Zurich.

<tr>
<td>Abstract</td>
<td>The lecture provides a journey into the molecular world of scents from the chemical secrets behind Chanel N°5 to structure-odor relationships, industrial processes, and total synthesis of terpenoids. Each subunit is centered on one odorant family and highlights a certain class of chemical reactions, illustrated by prominent perfume examples.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>After completion of this lecture module the students know all the major perfume materials of the important odor families with their academic and industrial syntheses, their olfactory properties, their usage, their historic perspective, and today's economic importance. The students can explain the significance of important building blocks and industrial transformations, and can estimate how attractive chemical processes are on large scale. They can retrosynthetically plan academic and industrial syntheses of fragrant compounds and terpenoids, and the acquired knowledge on structure-odor relationships enables them to predict and design new odorants. The students can approximate the conformational space of odorants and especially macrocycles on the basis of simple rules, and know how olfactophore models are used. The students understand and can explain the molecular mechanism of smell, the biosynthesis of terpenes, and the basics of perfume composition. The latter enables them to further their education in perfume at specialized Universities such as the ISIPCA in Versailles; yet, the student also knows about the links of Fragrance Chemistry with Pharmaceutical Chemistry and the Specialty Chemicals business in general.</td>

Group meeting

Abstract
Group seminar on electronic spectroscopy, photoelectron spectroscopy, vacuum ultraviolet spectroscopy.

Objective

Lecture notes
Unterlagen in der ersten Stunde verteilt. Zugang mit Bewilligung des Dozenten

Research seminar on current problems in nuclear magnetic resonance spectroscopy

Abstract
Basic concepts of the construction of instrumentation in physical chemistry. Practical exercises in mechanical construction and electronic circuits.

Lecture notes
Zugang mit Bewilligung des Dozenten

Institute-Seminar covering current research Topics in Physical Chemistry

Abstract
The course teaches advanced topics in molecular spectroscopy: techniques for analysing rotationally and rovibrationally resolved spectra will be discussed, the basics of FTIR spectroscopy will be reviewed, and the sources which may be used in high resolution infrared spectroscopy will be described. The fields in which high resolution infrared /THz spectroscopy is applied will also be reviewed. The students will learn how to record rotationally and rovibrationally resolved spectra in the THz and IR frequency range. For that purpose state-of-the-art sources like synchrotrons, FELs and other THz sources will be discussed. In this context, the basics of Fourier transform infrared spectroscopy will also be reviewed. The analysis of such spectra with interactive programs will then be explained. Finally, applications of high resolution molecular spectroscopy in the field of atmospheric and interstellar chemistry will be discussed. The identification and the quantitative determination of atmospheric pollutants will be discussed in detail. In addition, the identification of interstellar molecules in the context of the origin of life will be reviewed. The question of the identification of the interstellar unidentified infrared bands and of the interstellar diffuse bands will also be addressed. Finally, high resolution molecular spectroscopy of chiral molecules in the context of molecular parity violation will be discussed

Content
The students will understand how to use the tools needed to analyze simple highly resolved spectra. They will become familiar with experimental techniques in high resolution molecular spectroscopy and will understand how molecular spectroscopy can be applied to solve problems with respect to atmospheric pollutants and the detection of molecules in interstellar space.

Literature
Will be given in the lecture

Advanced High Resolution Molecular Spectroscopy

Objective
The students will understand how to use the tools needed to analyze simple highly resolved spectra. They will become familiar with experimental techniques in high resolution molecular spectroscopy and will understand how molecular spectroscopy can be applied to solve problems with respect to atmospheric pollutants and the detection of molecules in interstellar space.

Subject
The students will learn how to record rotationally and rovibrationally resolved spectra in the THz and IR frequency range. For that purpose state-of-the-art sources like synchrotrons, FELs and other THz sources will be discussed. In this context, the basics of Fourier transform infrared spectroscopy will also be reviewed. The analysis of such spectra with interactive programs will then be explained. Finally, applications of high resolution molecular spectroscopy in the field of atmospheric and interstellar chemistry will be discussed. The identification and the quantitative determination of atmospheric pollutants will be discussed in detail. In addition, the identification of interstellar molecules in the context of the origin of life will be reviewed. The question of the identification of the interstellar unidentified infrared bands and of the interstellar diffuse bands will also be addressed. Finally, high resolution molecular spectroscopy of chiral molecules in the context of molecular parity violation will be discussed

Literature
Will be given in the lecture

Seminar in Theoretical Chemistry

Objective
In depth study of selected recent papers on theoretical chemistry

Content
Variert nach aktuellem Stand der Forschung

will be announced on www.reiher.ethz.ch/courses-and-seminars.html

Molecular Quantum Dynamics

Objective
This lecture covers advanced topics in ultra-fast time resolved molecular spectroscopy and kinetics. Although primarily theoretical, and focused on quantum phenomena, contents include the discussion of certain modern experimental techniques.

Content
The lecture is intended to be a brief introduction to essential aspects regarding quantum dynamics, in particular regarding molecular physics and the primary steps of chemical reactions. It proposes also an introduction to the methods and computational algorithms used in the theoretical treatment of molecular quantum dynamics, in particular of short time propagation of wave packets. A practical course in handling computer programs specifically devised for quantum dynamics is offered.

Lecture notes
A program and handouts can be downloaded from the indicated web site or will be delivered in the first session. Handouts are in English.
A solid knowledge in quantum mechanics is helpful, but not a condition to assist the lecture.

529-0485-00L Calculating Free Energy Differences from Molecular Simulation: Theory and Practical Applications  

W 1 credit 1V N. Hansen

Abstract  Theoretical analysis as well as issues of practical implementation of state of the art free energy methods.

Objective  Recognition of the concepts that underlie the different approaches devised for the determination of free energies

Content  A wide variety of fundamental chemical quantities such as binding or equilibrium constants, solubilities, partition coefficients, and adsorption coefficients are related to the difference in free energy between particular (non)physical states of a system. A maze of computational techniques to calculate free energies is nowadays available that differ in efficiency and accuracy. However, most of them are rooted in a few basic ideas. In the lecture state of the art methods are discussed in light of these basic ideas.

Lecture notes  Handouts will be provided

Abstract
Students will learn how to effectively retrieve, critically judge, and manage published scientific information - important skill sets in chemistry and life sciences where scientists need to deal with vast amounts of information. The course, being based on practical examples, also covers scientific writing & communication and state-of-the-art technologies for analysis such as text mining.

Objective
Ability to select appropriate, subject-specific databases or tools for a given specific scientific question based on a sound understanding on how a tool or database has been developed and maintained, thus building the personal capacity of doing research effectively and efficiently by integrating scientific information into the research process when needed. Ability to communicate own scientific results using additional distribution channels. Ability to easily write-up the Ph.D. thesis or first paper.

Content
The course has been primarily designed for Ph.D. students, also for the Life Science Zurich Graduate School, but is also open to Master students. In a series of 13 lectures, which always include practical examples (for some lectures an own notebook is required), the use of scientific information is taught not in a database-centric view but corresponding to the steps through which scientific research is conducted - including the dissemination of scientific results. This is particularly interesting for students who are about to write-up their first paper or thesis. Students will learn about the different types of information resources and tools, get an insight into the numerous databases and tools that exists and how those are built and maintained, enabling them to critically judge the value and trustworthy of a information resource. Additionally, they will learn how to communicate their own scientific results properly, using also additional measures that are reflected by alternative metrics.

The following topics are covered:
1. The World of Scientific Publishing
2. Searching and Retrieving Scientific Information Using Search Engines and Using Literature Databases
3. Searching and Retrieving Scientific Information Using Subject-specific Databases in Chemistry
4. Searching and Retrieving Scientific Information Using Subject-Specific Databases in Life Sciences
5. Tools for Managing the Retrieved Scientific Information
7. Patents
8. Text(Literature) and Data Mining
9. Communicating & Analyzing the Impact of (Your) Science
10. Scientific Writing & Good Scientific Practice

Lecture notes
The slide deck and supplementary materials will be made available in the teaching document repository (ILIAS) after each lecture.

Literature
Additional literature and reference are provided in the course material.

Course Catalogue of ETH Zurich

151-0906-00L Frontiers in Energy Research
This course is only for doctoral students.

Abstract
PhD students at ETH Zurich working in the broad area of energy present their research to their colleagues, to their advisors and to the scientific community.

Objective
Knowledge of advanced research in the area of energy.

Content
PhD students at ETH Zurich working in the broad area of energy present their research to their colleagues, to their advisors and to the scientific community. Every week there are two presentations, each structured as follows: 15 min introduction to the research topic, 15 min presentation of the results, 15 min discussion with the audience.

Lecture notes
Slides will be distributed.

ECTS
European Credit Transfer and Accumulation System

Key
Special students and auditors need special permission from the lecturers.
Seminar Geochemistry and Petrology
diploma thesis
Eligible for credits
The class will focus mostly on reading recent literature on topics of interests, and will contain some computer exercises to allow students to gain insights into current research topics in these fields.

Heat and Mass Transfers in Magmatology
O. Bachmann
Compulsory
Seminar series with external and occasional internal speakers addressing current research topics in Petrology.

Geophysical Fluid Dynamics and Numerical Modelling
P. Tackley
Recommended, not eligible for credits
Biweekly paper discussion series on current challenges and state-of-the-art practices in earthquake physics and seismic cycle and geodynamic modeling.

Earthquake Physics and Numerical Modelling Paper Discussions
Does not take place this semester.

</table>
 Particularly suitable for students of D-ITET, D-MAVT

Abstract
The students shall obtain a basic knowledge about business law. They shall be able to recognize and evaluate issues in the area of business law and suggest possible solutions.

Objective
The students shall obtain the following competence:
- They shall obtain a working knowledge on the legal aspects involved in setting up and managing an enterprise.
- They shall be acquainted with corporate functions as contracting, negotiation, claim handling and dispute resolution.
- They shall be familiar with the issues of corporate compliance, i.e. the system to ascertain that all legal and ethical rules are observed.
- They shall be able to contribute to the legal management of the company and to discuss legal issues.
- They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

Lecture notes
A comprehensive script will be made available online on the moodle platform.

851-0735-09L Workshop & Lecture Series on the Law & Economics
W 2 credits 2S 3 credits
S. Bechtold, H. Gersbach,
of Innovation

Abstract
This series is a joint project by ETH Zurich and the University of Zurich. It provides an overview of interdisciplinary research on intellectual property, innovation, antitrust and technology policy. Scholars from law, economics, management and related fields give a lecture and/or present their current research. All speakers are internationally well-known experts from Europe, the U.S. and beyond.

Objective
After the workshop and lecture series, participants should be acquainted with interdisciplinary approaches towards intellectual property, innovation, antitrust and technology policy research. They should also have an overview of current topics of international research in these areas.

Content
The workshop and lecture series will present a mix of speakers who represent the wide range of current social science research methods applied to intellectual property, innovation, antitrust policy and technology policy issues. In particular, theoretical models, empirical and experimental research as well as legal research methods will be represented.

Lecture notes
Papers discussed in the workshop and lecture series are posted in advance on the course web page.

Literature
Suzanne Scotchmer, Innovation and Incentives, 2004

851-0125-18L Self-Ownership - Philosophical and Juridical Perspectives
W 3 credits 2G

Objective
Rights in Objects are founded by an inalienable Self-Ownership. These ideas ist central for personal rights. We speak of my body, my genes, my name, my portraits, my ideas or ways of expression.

Content
Participants will have the opportunity to gain access to unfamiliar texts from the philosophical tradition and to see their relevance today. They experience the consequences of a certain use of concepts and orient themselves in current bioethical, juridical and political discussions.

Literature
Suzanne Scotchmer, Innovation and Incentives, 2004

851-0585-15L Complexity and Global Systems Science
W 3 credits 2V

Objective
Participants should learn to get an overview of the state of the art in the field, to present it in a well understandable way to interdisciplinary scientific audience, to develop models for open problems, to analyze them, and to defend their results in response to critical questions. In essence, participants should improve their scientific skills and learn to think scientifically about complex dynamical systems.

Content
This course starts with a discussion of the typical and often counter-intuitive features of complex dynamical systems such as self-organization, emergence, (sudden) phase transitions at "tipping points", multi-stability, systemic instability, deterministic chaos, and turbulence. It then discusses phenomena in networked systems such as feedback, side and cascade effects, and the problem of radical uncertainty. The course progresses by demonstrating the relevance of these properties for understanding societal and, at times, global-scale problems such as traffic jams, crowd disasters, breakdowns of cooperation, crime, conflict, social unrests, political revolutions, bubbles and crashes in financial markets, epidemic spreading, and/or "tragedies of the commons" such as environmental exploitation, overfishing, or climate change. Based on this understanding, the course points to possible ways of mitigating techno-socio-economic-environmental problems, and what data science may contribute to their solution.

Prerequisites / notice
Mathematical skills can be helpful

851-0240-16L Colloquium on the Science of Learning and Instruction
W 1 credit 1K
E. Stern, P. Greutmann, further lecturers

Objective
In the colloquium we discuss scientific projects concerning the teaching in mathematics, computer science, natural sciences and technology (STEM). The colloquium is conducted by the professors participating in the Competence Center EduETH (ETH) and in the Institute for Educational Sciences (UZH). Participants are exemplarily introduced to different research methods used in research on learning and instruction and learn to weigh advantages and disadvantages of these approaches.
The aim of this course is to enable students at ETH Zurich to recognize which rights may protect their creations, and which rights may be infringed as a result of their activities. Students should learn to assess the risks and opportunities of intellectual property rights in the development and marketing of new products. To put them in this position, they need to know the prerequisites and scope of protection afforded by the various intellectual property rights as well as the practical difficulties involved in the enforcement of intellectual property rights. This knowledge is imparted based on current rulings and cases.

Another goal is to enable the students to participate in the current debate over the goals and desirability of protecting intellectual creations, particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls, patent thickets).

**Abstract**
The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights). Aspects of competition law are treated insofar as they are relevant for the protection of intellectual creations and source designations. The legal principles are developed based on current cases.

**Objective**
The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different positions in the scientific and philosophical treatment of questions relating the mind to the brain. It should also become clear that some of the most relevant problems in current neurosciences have a long history.

**Prerequisites / notice**

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' (851-0738-03) will be offered in the autumn semester.

**Abstract**
The lecture gives an overview of the fundamental aspects of intellectual property, which plays an important role in the daily routine of engineers. The lecture aims to make participants aware of the various methods of protection and to put them in a position to use this knowledge in the workplace.

**Objective**
In recent years, knowledge about intellectual property has become increasingly important for engineers. Both in production and distribution and in research and development, engineers are increasingly being confronted with questions concerning the patenting of technical inventions and the use of patent information.

The lecture will acquaint students with practical aspects of intellectual property and enable them to use the acquired knowledge in their future professional life.

Topics covered during the lecture will include:
- The importance of innovation in industrialised countries
- An overview of the different forms of intellectual property
- The protection of technical inventions and how to safeguard their commercialisation
- Patents as a source of technical and business information
- Practical aspects of intellectual property in day-to-day research, at the workplace and for the formation of start-ups.

Case studies will illustrate and deepen the topics addressed during the lecture.

The seminar will comprise practical exercises on how to use and search patent information. Basic knowledge of how to read and evaluate patent documents as well as how to use publicly available patent databases to obtain the required patent information will also be provided.

**Prerequisites / notice**

The lecture is in particular tailored to the needs of the following degree programs: Agricultural science, architecture, civil engineering, computational science and engineering, computer science, electrical engineering and information technology, environmental engineering, geomatic engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics.

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' (851-0738-03) will be offered in the autumn semester.

**Abstract**
In the last 2500 years, the mind-brain relationship has been articulated in various ways. In these lectures, I will explore the scientific and philosophical aspects of this relationship in the context of relevant cultural, historical and technological processes, with a focus on the modern neurosciences, but I will also discuss works of art and literature.

**Objective**
By the end of this lecture, students should be familiar with essential positions in the scientific and philosophical treatment of questions relating the mind to the brain. It should also become clear that some of the most relevant problems in current neurosciences have a long history.

**Content**
According to a myth, the ancient Greek philosopher Democrit dissected animals, because he was in search of the seat of the soul. Current neuroscientists use neuroimaging techniques like functional magnetic-resonance-tomography in order to localize cognitive and emotional qualities in the brain. Between these two dates lies a history of 2500 years, in which the relationship between the mind and the brain has been defined in various ways. Starting with ancient and medieval theories, the lecture will have its focus on modern theories from the nineteenth century onward. I will discuss essential issues in the history of the neurosciences such as localization theories, the neuron doctrine, reflex theory, theories of emotions, neurocybernetics and the importance of visualizing the brain and its parts, but I will also include works of art and literature.

**Abstract**
Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to a autonomous philosophy of technology, which had become important also for other philosophical disciplines (e.g. in Heidegger's philosophy).

**Objective**
The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protokoll is to be written.

**Abstract**
This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their research ideas in relation to behavioral science. The colloquium also features invited research talks.

**Objective**
Students know and can apply autonomously up-to-date investigation methods and techniques in the behavioral sciences. They achieve the ability to develop their own ideas in the field and to communicate their ideas in oral presentations and in written papers. The credits will be obtained by a written report of approximately 10 pages.

**Content**

This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their ideas in so far as they have some relation to behavioral science. The possible research areas are wide and may include theoretical as well as empirical approaches in Social Psychology and Research on Higher Education, Sociology, Modeling and Simulation in Sociology, Decision Theory and Behavioral Game Theory, Economics, Research on Learning and Instruction, Cognitive Psychology and Cognitive Science. Ideally the students (from Bachelor, Master, Ph.D. and Post-Doc programs) have started to start work on their thesis or on any other term paper.

Course credit can be obtained either based on a talk in the colloquium plus a written essay, or by writing an essay about a topic related to one of the other talks in the course. Students interested in giving a talk should contact course organizers (Rütsche, Stern) before the first session of the semester. Priority will be given to advanced / doctoral students for oral presentations. The course credits will be obtained by a written report of approximately 10 pages. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.
Social Networks research is a highly interdisciplinary field. For example, scholars in Sociology, Psychology, Political Sciences, Computer Science, Physics, Mathematics and Statistics contribute to the development of theories and methods. This course aims at understanding, comparing and structuring recent debates in the field of Social Networks.

The seminar is customised to the needs of chemists and students of related degree programs. Participants will become familiar with practice-oriented aspects of intellectual property and will be enabled to use the acquired knowledge in their future professional life.

Topics covered during the lecture will include:
- The importance of innovation in industrialised countries
- An overview of the different forms of intellectual property
- The protection of technical inventions and how to safeguard their commercialisation
- Patents as a source of technical and business information
- Practical aspects of intellectual property in day-to-day research, at the workplace and for the formation of start-ups
- Special aspects of protecting inventions in chemistry-related sectors, e.g. polymorphs and inventions in the field of nanotechnology.

Case studies will illustrate and deepen the topics addressed during the lecture.

The seminar will comprise practical exercises on how to use and search patent information. Basic knowledge of how to read and evaluate patent documents as well as how to use publicly available patent databases to obtain the required patent information will also be provided.

The lecture is coordinated in particular to the needs of the following degree programs: Agricultural science, biotechnology, chemical engineering, chemistry, food science, pharmaceutical sciences.

For engineering and physics students, the lecture 'The Role of Intellectual Property in daily routine: A Practical Introduction' (851-0738-01) will be offered in the autumn semester.

Computational Social Science and Global Systems Science serve to better understand the emerging digital society with its close co-evolution of information and communication technology (ICT) and society. They make current theories of crises and disasters applicable to the solution of global-scale problems, taking a data-based approach that builds on a serious collaboration between the natural, engineering, and social sciences, i.e. an interdisciplinary integration of knowledge.

Recent Debates in Social Networks research is highly interdisciplinary fields. For example, scholars in Sociology, Psychology, Political Sciences, Computer Science, Physics, Mathematics and Statistics contribute to the development of theories and methods. This course aims at understanding, comparing and structuring recent debates in the field of Social Networks.

Social Networks research is a highly interdisciplinary field. At the end of this seminar, students will understand and be able to compare different subject-specific approaches to social networks research (e.g., from Sociology, Psychology, Political Sciences, Computer Science, Physics, Mathematics and Statistics). They will be familiar with recent publications in the field of Social Networks and be able to critically participate in a number of recent debates. Amongst others, these debates touch upon the co-evolution of selection and influence mechanisms, appropriateness of statistical models, generic mechanisms and features of social networks, models for the analysis of dynamic networks.
1. Introduction: What are economic experiments and why to use them?

This course introduces PhD students into the principles of experimental methods and outlines how to prepare, conduct and evaluate an experiment.

This course aims to prepare PhD students for conducting their own experiment.

4. Conducting experiments: Instructions, testing, recruiting, sessions.

5. Measuring techniques: Eliciting beliefs, risk attitudes, social preferences.

Books:

Basic Articles:

A reading list with articles for each lecture has been published in Moodle.

851-0125-60L Introduction to Epistemology

Abstract
In this course we will examine fundamental questions of epistemology, e.g. What is knowledge? How are we to conceive of perception? Which beliefs are rational and justified? How do we acquire knowledge? By discussing a selection of seminal philosophical texts we will study fundamental epistemological theories.

851-0609-60L Governing the Energy Transition

Abstract
This course addresses the role of policy and its underlying politics in the transformation of the energy sector. It covers historical, socio-economic, and political perspectives and applies various theoretical concepts to specific aspects of governing the energy transition.

851-0253-03L The Sense of Time and its Effects on Motivation, Cognition, and Emotion

Abstract
While time is studied prominently in physics, it is also an integral part of our mind. Some of the main parameters of our sense of time are time immersion, time specificity, time speed, time texture, time horizon, time motion, time embodiment, and lifetime localization. Our sense of time can (often unconsciously) have profound effects on our motivation, cognition, and emotion.

851-0148-04L Cyclical time

Abstract
The idea of cyclical time is found in ancient pieces of wisdom (Pythagoreans, Plato, Buddhism) as reincarnation or memory, but also in Nietzsche as eternal return, in Freud as repetition compulsion. We investigate the concept of repetition in combination with difference as a positive mode of thinking change.

851-0301-04L Photography and Literature. Exchanging Practices

Abstract
The course discusses writers from Henry James to Margaret Atwood whose interest for photography led them to elaborate new intriguing modes of representation. The aim is to identify how literature, photography and art meet to promote a photographic aesthetics while approaching the theories of Susan Sontag, Roland Barthes and Bourdieu as well as postmodern or posthuman criticism.

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 428 of 1571
All interested students are most welcome. The course is not intended as a language course but a good knowledge of English is a necessary requirement in order to participate to class discussions and to do the reading.

851-0144-20L  Philosophical Aspects of Quantum Physics

Abstract
This course provides an introduction to philosophical issues surrounding quantum physics. In particular, we will examine different interpretations of quantum mechanics (such as the many-world interpretation) and the transition between the quantum and the classical physical realm (where phenomena such as decoherence will be highlighted).

Objective
By the end of the course students are able to describe and compare different theories and concepts of time (physical time, perceptual time, historical time ...). They are able to identify and examine issues concerning time as they occur in various philosophical sub-disciplines - especially in philosophy of science, philosophy of mind, metaphysics, and ethics. Students are in a position to critically discuss and evaluate the repercussions of these issues in broader scientific and social contexts.

851-0144-19L  Philosophy of Time

Abstract
This course provides an introduction to philosophical issues surrounding the concept of time. We will treat topics such as: the existence of past, present, and future; the possibility of time travel; the constitution of time consciousness and its possible neurophysiological counterparts; temporal biases in the conduct of our lives; responsibility to future and past generations.

Objective
By the end of the course students are able to describe and compare different theories and concepts of time (physical time, perceptual time, historical time ...). They are able to identify and examine issues concerning time as they occur in various philosophical sub-disciplines - especially in philosophy of science, philosophy of mind, metaphysics, and ethics. Students are in a position to critically discuss and evaluate the repercussions of these issues in broader scientific and social contexts.

Part of the course reflects on methods and contents from physics, neuroscience/cognitive science, and logic.

851-0301-05L  Beginnings

Abstract
"All beginnings are difficult," goes the saying, "but without them there wouldn't be an end." However, what makes beginnings so difficult? What kind of action is that? Which knowledge does it presuppose? And what would a beginning say about the end? We will pursue these questions by reading sacred, philosophical, literary, and scientific texts that, each in its own way, make a beginning.

Objective
- thorough reading and critical analysis of the texts
- reflection upon the conditions and practice of beginnings in terms of their epistemology and rhetorical strategy (i.e. as an intellectual and literary operation)
- consider the cultural and historical function of fictions that tell of origins, such as cosmological myths, foundationalist philosophy, or poetic incantations

Literature
Myths of Creation and First Origins (Genesis und Gospel St. John, Theogony, Upanishads), philosophy (Fichte, Hegel), literature and poetry (Wieland, Hölderlin, Novalis, Wordsworth, Melville, Richard Wagner, Beckett). For an introduction, see Wolfgang Iser, Emergenz: Nachgelassene und verstreut publizierte Essays (Konstanz 2013).

Prerequisites / notice
Readings partly in English

851-0306-05L  Literature and Technology - Simulations, Prototypes, Machines

Abstract
Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature offers problem oriented insights into this sociotechnical process of translation.

Objective
Students are familiar with different relations between literature and technology. They can verbalise and analyse central contents.

Content

851-0551-03L  Postal Knowledge and the History of Digital Societies

Abstract
In the second half of the 20th century, postal services have dramatically changed. Communication today is computer-based. The lecture converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of configurations of knowledge.

Objective
Students become familiar with the mutual interdependence of social and technological change that characterises the history of computing and communication.

Content

851-0157-66L  Who was Sigmund Freud?

Abstract
This seminar is devoted to the introduction into the ideas and concepts of one of the most influential thinkers of the 20th century. We will read selected texts by Freud for getting an overview over his medical, psychological and cultural thinking.

Objective
30 years ago it would have been bizarre to ask the question: Who was Sigmund Freud? The influence of psychoanalysis on twentieth century thinking was taken for granted even by those ones who rejected Freud's ideas. In contrast, the question today would be: What are Freud's central theories? We will tackle this question in the seminar and reconstruct Freud's thinking from his early medical writings to those writings, in which he developed a critical view of his time. The aim of the seminar is not only to understand Freud's thinking in historical context, but also to reflect, what it could mean to us in early twentyfirst century.

851-0125-57L  Values in Science

Abstract
Should science be free from moral, political or ideological influences? According to the so-called value-free ideal it should. Many scientists think of themselves as committed to truth and objectivity and nothing else. In this seminar, we will track the history of the value-free ideal and engage in a debate about the potential role of so-called non-epistemic values in science.

Objective
In the past decades, philosophers of science have begun to challenge the value-free ideal in science. With the help of recent literature from the philosophy of science, students will be introduced to the debate on values in science and the reasons for why the value-free ideal has come under attack. They will be familiarized with the distinction between epistemic (truth-conducive) values and so-called non-epistemic values. The course aims at enabling students to critically reflect the potential role of non-epistemic values in science.

851-0101-18L "Bollywood and Beyond" - A Cultural History of Indian W 3 credits 2V H. Fischer-Tiné
Cinema in the 20th Century

Abstract
The Indian film industry has been around for 100 years and is one of the richest and most variegated of the world. The lecture reconstructs the historical development of Indian cinema and uses it as a lens through which cultural, social, and political change in the subcontinent can be explored.

Objective
The objective of this course are three-fold. For one, the participants shall learn to question aesthetic certainties and received modes of perception of cinematographic art. Secondly they will be acquainted with the huge potential of films as a historical source to grasp processes of social and cultural change. Besides, the reconstruction of the international career of a specific variety of art and entertainment will also raise important questions of cultural globalisation and consumerism. As a side-effect, a sit were, the students will also be provided with important insights into the chequered history of the Indian subcontinent in during the course of the 20th century.

A detailed course description and session plan will be available from 15 Sept 2013 onwards at http://www.gmw.ethz.ch/education

851-0101-53L Collections in Context: What Do Historians and Scientists Learn from Butterflies, Stones, and Bones? W 3 credits 2S B. Schär, M. Greeff
Particularly suitable for students of D-BIOL, D-BSSE, D-USYS

Abstract
Zurich holds huge scientific collections. They contain objects from around the world, some of them dating back to the 18th century. This interdisciplinary seminar combines perspectives from the history of science and from current scientific disciplines. What do these objects tell us about Zurich's place in the global history of science? What potentials do old collections hold for scientists today?

Objective
The aim of this seminar is threefold: Firstly, students will become familiarised with historiographical approaches to scientific collections. Among them are constructivist approaches that seek to understand scientific knowhow that exist not primarily as a system of objective truths, but rather as an outcome of human 'constructions'. Other approaches deal with the problem of how scientific objects are related to systems of power and oppression, namely in the case of objects collected during the time of european colonialism overseas. Secondly, students will become familiarized with how old collections can yield new insights for current scientists working, e.g., on questions of ecology. Thirdly, the seminar shall serve as a platform to discuss ways of dialogue and possible collaboration between these different approaches.

Prerequisites / notice

Students will be expected to read theoretical texts and case studies during semester, participate in discussions with external experts (historians, curators, and scientists), and to write a summarizing essay at the end of the term.

Abstract
Bruno Latour (* 1947) is one of the most important contemporary sociologist of science. He enriched our understanding of what a scientific fact is and how we get to it, i.e. how it is made up, not only discovered. Latour defends a constructivist approach with realist elements.

Objective
- Understanding main topics of sociology and philosophy of science.

151-0906-00L Frontiers in Energy Research
This course is only for doctoral students.

Abstract
PhD students at ETH Zurich working in the broad area of energy present their research to their colleagues, to their advisors and to the scientific community.

Objective
- Introduction into the sociology of science of Bruno Latour, esp. the Agent/Network/Theory.

Prerequisites / notice
Number of participants limited to 40.

851-0157-67L Creativity W 3 credits 2S M. Wulz, V. Wolff

Abstract
Conceptual creativity may appear to be the most important requirement of the present age: creative thinking, start-ups, project development all seem to promise an ongoing innovation of work and life. Instead of repeating that promise once again, this course asks for the historical conditions of &quot;creativity&quot;.

Objective
We will deal with historical and contemporary theories of inventive imagination, fantasy, and creativity. Looking at artistic, psychological, pedagogical, economic, and entrepreneurial discourses of creativity from the 18th to the 21st century we will discuss their specific contexts in order to uncover historical differences and changes. Is it indeed possible to identify conjunctures between the economization, scientification and normalization of creativity? Are there any alternatives to the reigning paradigm of creativity? And if so, what are those?

Abstract
This seminar deals with the past, present, and imaginary futures of scientific publishing. We shall discuss the origin and trajectories of specific formats, conventions, and genres as well as examine exemplary historical developments as regards scientific publishing and associated cultures of science.

Objective
The technological upheavals wrought by the &quot;digital age&quot; have put the subject of scientific publishing on the map (again). Open access, copyright, or print-on-demand are just a few of the buzzwords that have defined controversies in recent years. The aim of this seminar is assist students in developing critical perspectives on these contemporary debates - by learning about the history of scientific publishing, including the role of specific publishers and journals, the footnote, or the malleable nature of authorship.

851-0157-70L The Mathematics of Scientific Racism W 2 credits 1S A. Teicher

Abstract
How did racial scientists determine racial affiliation? In the seminar we will examine the practical challenges and eventual works of physical anthropologists from 1850 to the present. By scrutinizing the scientific toolbox of racial scientists, we will reveal how national affiliation, anti-Semitic perceptions and Gender identity shaped scholars' choices of graphical and computational methods.

Objective
The aim of the course is to analyze the mutual relations between scientific theories and social perceptions, and to follow the formation of the &quot;scientific mind&quot;. The course focuses on racial scientists and on the way their practices of computation and statistical analysis influenced their world-views - and vice versa. The students will be instructed on the way historians of science analyze scientific sources. They will gain a better understanding of the complexities of disciplinary dynamics, social biases and institutional pressures shaping scientific ideas, and learn on the influences such scientific ideas may have on the society as a whole.

Prerequisites / notice
Please note that the seminar will be held in English and most texts will be in English. However, a small portion of the reading material will be in German.
The course is designed to provide an overview of the astronomical developments from the ancient Greek world to the 16th century. We are going to use primary sources tackling historical, technical and philosophical questions. Special attention will be paid to the dramatic change in the way people understood the structure of the heavens and the nature of the physical world.

Objective
The course aims at providing a working knowledge of astronomy and cosmology from the ancient world to the 16th century. Upon its completion the students will be able to describe how our knowledge of the heavens changed from Aristotle's system to the Copernican Revolution. In addition, they will also have acquired an appreciation of the debates about man's place in the cosmos and the philosophical principles underpinning cosmology.

Philosophical Issues and Problems in Theoretical Computer Science
Particularly suitable for students of D-INFK

Abstract
This course studies philosophical issues concerning computers and computing. Topics include: information (and information content), computational complexity, the Turing Test for computer thought; the "Chinese Room" argument against the possibility of strong AI; connectionist AI; consciousness; the Church-Turing thesis; computational and hypercomputational models of mind; and free will.

Objective
- Exhibit a general understanding of the philosophy and history of computing.
- Explain central problems in the field and their potential solutions, independently and at a level requiring in-depth knowledge and critical understanding.
- Communicate clearly in writing about topics in this field.

The Art of Conversation
W 3 credits 2V C. Thomas

Abstract
This course will offer the occasion to reflect upon the art of conversation: its codes, its pleasures of improvisation, its worldly aspects and its importance in everyday life.

Objective
This will permit us to consider different figures of the writer and salon hostess, such as Mme de Lafayette, Mme du Deffand, Julie de Lespinasse, and Mme de Staël.

The Secretaries of the Baroque Age and the "Honest Dissimulation"
851-0331-06L

Abstract
Torquato Accetto, secretary and poet, published the treatise "Della simulazione onesta" in 1641. It was a thin manual to survive political turmoils and moral instability of the time; it was also a guide to "secret" writing in a time of censorship. The course follows the reception of the treatise up to the 20th century and focuses on how it got shaped to meet various historical and political ideas.

Objective
The students know the author and his coeval context; the students can relate the writing modalities of the treatise to the socio-cultural context of various historical times; the students know how to identify and interpret the metaphorical potential of the texts, as well as its literary power.

Research Colloquium History of Knowledge (HS 2016)
862-0002-16L

Abstract
The colloquium of the ZGW focuses on present developments, debates and perspectives in the field of history of knowledge. On the second and fourth date there will be public events in the Cabaret Voltaire.

Objective
The colloquium deals with the general problems, questions and methods of the interdisciplinary research field "The History of Knowledge". Knowledge has become one of the existential conditions of modern societies and it increasingly determines their dynamics. Therefore, it is getting more and more relevant to develop a differentiated analysis of the epistemic, social and cultural constraints of the production, circulation and the decay of knowledge. In addition, the colloquium asks after the cultural and ethical resonances of knowledge not only within science but also in relation to art, literature, technology, everyday life, and so on.

Prerequisites / notice
Short notice about program changes are possible and will be communicated through the ZGW newsletter. Please register with www.zgw.ethz.ch/de/newsletter.html

Credit points can be gained by regular attending and by writing an essay. In addition to the five colloquia there will be a deepening seminar on offer (lecturer K. Espahangizi).

Free childcare available.

Images of Mathematics
851-0125-63L

Abstract
The lecture series "Images of Mathematics" deals with the formalization of the objects and the logical language of mathematics from Hilbert to Gödel and considers its consequences in view of our conception of mathematical practice and knowledge, the limits of calculability and computability in mathematics, and the relation between the logical proof procedures and the involved intuitive aspects.

Objective
The lecture series will present philosophical problems of theoretical mathematics in the 20th century and will discuss the consequences of formalization and axiomatization. It aims at a critical reflection on the modern images of mathematics.
The seminar deals with the meaning and history of "Witz" (wit, joke) as a form of knowledge. It places "Witz" as a switch or transitional

The lecture series "Images of Mathematics" deals with a few moments in the history of the scientific discipline since the middle of the 19th
century when the image of mathematics changed. In particular, it focuses on the consequences of the fact that in the 19th century
mathematics started to not only reflect on their own conceptual and methodological foundations in a general manner (which had been done
since the dawn of mathematics and was especially a philosophical task), but to formalize them in a strict, mathematical way: the objects of
mathematics, its logical language and its proof procedures. Through Cantor's set theory, the mathematical treatment of logic since Boole
and especially through Frege and the formalization of its axioms in a wide ranging discussion involving Zermelo, Fraenkel and others, this
self-reflexive stance came to the fore.

Yet, the deeper mathematics dug into its foundations, the more radical the problems became. Finally, the optimistic Hilbert program of
laying the foundation of mathematics within mathematics and of proving its own consistency as well as its completeness contributed to
clarifying of the foundation of mathematics primarily as if it was doomed to failure. Gödel proved his famous incompleteness theorems and
thereby dismissed at the same time the formalist attempt to reduce mathematical truth to logical provability. His work resulted in
detailed insights in the precariousness of the foundation of mathematics and further numerous of productive consequences within
mathematics.

Moreover, Gödel's theorems open many far-reaching and intriguing questions in view of our image of mathematics, questions concerning
the conception of mathematical practice and knowledge, the limits of calculability of mathematics and the possible role of computability and
machines in mathematics, the relation between the logical proof procedures and the involved intuitive aspects. In short, the image of
mathematics is not as static as we sometimes expect it to be, it was radically redrawn by the mathematicians of the 20th century and has
since then again been open to diverging interpretations.

For further reading (optional): Mark van Atten and Juliette Kennedy, Gödel's Logic, in: Handbook of the History of Logic, Vol 5: Logic from
Russell to Church, ed. by Dev M. Gabbay and John Woods, Amsterdam 2009, 449 ff. With Copeland et al. (eds.), Computability, Turing,
Gödel, Church, and beyond, Cambridge 2013; Ian Hacking, Why is there philosophy of mathematics at all? Cambridge 2014; Pirmin

851-0125-51L Man and Machine

Abstract The lecture gives an overview about the different Man-Machine-Relations since the 16th century. Different models of machines will be
important here: the clockwork, the steam engine and the computer.

Objective On the one hand models of machines had a heuristical value in research on man, e.g. in Harvey's discovery of blood circulation in the 17th
century or in brain research in the 20th century. On the other hand these models were always criticised, sometimes polemically, because
they are supposedly not adequate for man.

Students should learn about the connections between the history of anthropology and technology and be able at the end of the course to
evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

851-0300-85L The Knowledge of Literature. An Introduction

Abstract This lecture provides a general introduction to literary theory and presents the important theories dealing with knowledge and its role in and
as literature.

Objective Students are introduced to the various approaches and methods of literature studies and gain an overview of literary theory.

Content This lecture has two aims: Firstly, it serves as a general introduction into the field of literary theory (thereby looking into "knowledge about
literature"). Secondly, there will be a special emphasis on recent theoretical approaches that take seriously literature and knowledge as one of
its components (thus investigating the "knowledge of literature"). Even though traditional criticism disagrees, a number of recent
approaches, based on literature and culture studies, hold that literature is not to be conceived of as standing in opposition to the world and
the discursive system of the academic disciplines, particularly the sciences (e.g. Foucauldian discourse analysis and New Historicism).
Instead, these approaches understand literature in terms of its epistemological forms and functions. Thus, the main thesis is that literature
actively participates in the constitution and formation of knowledge. Literature itself generates models of knowledge, sometimes with critical or
even utopian intentions. Moreover, it draws attention to the fundamental role of order and representation (systematization, narrative
rendering, linguistic and pictorial representation) in both humanities and sciences.

851-0300-79L Theories of Joke

Abstract From Plato, Aristotle and Cicero, philosophers have tried to find the core principle of wit (or the joke, as both meanings are contained in the
German term "Witz"). Even during the 20th century, the philosophy of life and psychoanalysis struggle with it. The seminar provides an
overview of this history.

Objective This seminar deals with the meaning and history of "Witz" (wit, joke) as a form of knowledge. It places "Witz" as a switch or transitional
figure within the development of modern theories of knowledge in particular.

Content Contrary to intuitive expectations, the German term "Witz" is not only an instance of the comical, but also a form of knowledge that plays on
similarity and difference by juxtaposing the disparate. In this vein, especially during the 18th and 19th centuries, "Witz" becomes a central
attribute of poetic and rhetorical types of expression (wit). Only during the 19th century "Witz" comes to denote a characteristic genre of the
comical (joke). From now on "Witz" is theoretically associated with the comical and laughter. Around 1900 there are approaches based on
the philosophy of life, sociology and psychology, elaborated by Bergson, Bakhtin and Freud, among others.

862-0078-02L Research Colloquium. Extra-European History and Global History (HS 2016)

Abstract The fortnightly colloquium provides a forum for PhD students and postdoctoral researchers to present and discuss their current work. Half
of the slots are reserved for presentations by invited external scholars.

Objective PhD students will have an opportunity to improve their presentation skills and obtain an important chance to receive feedback both from
peers and more advanced scholars.

364-1078-00L z-Tree: Programming Experiments in Economics and the Social Sciences

Abstract This course is complemented by a course on experimental methods (364-1062-00L Experimental Methods). It is not

851-0300-79L Theories of Joke

862-0078-02L Research Colloquium. Extra-European History and Global History (HS 2016)

Abstract The fortnightly colloquium provides a forum for PhD students and postdoctoral researchers to present and discuss their current work. Half
of the slots are reserved for presentations by invited external scholars.

Objective PhD students will have an opportunity to improve their presentation skills and obtain an important chance to receive feedback both from
peers and more advanced scholars.

364-1078-00L z-Tree: Programming Experiments in Economics and the Social Sciences

Abstract This course is complemented by a course on experimental methods (364-1062-00L Experimental Methods). It is not
mandatory but recommended to take both courses.

Abstract
Learn the basic features of the software z-Tree. Learn how to program an experiment that can be implemented.

Objective
z-Tree is the standard software tool for programming economic experiments. This class gives a basic introduction into z-Tree. The class is split in two parts: In the first part, students get acquainted with the software and learn how to program simple experiments. Students should then be able to start working on a project which they have to present in the second part of the class. Students will be evaluated based on their programmed experiment.

Prerequisites / notice
The class is open to all Ph.D. (and Master students) who are interested in conducting (behavioral) economic experiments.

851-0252-08L Cognition in Studio Design - Analytic Tools for Evidence-Based Design W 3 credits 2S B. Emo Nax, M. Brösmile, C. Hölscher
Number of participants limited to 25.

Abstract
How can Behavioral and Cognitive Science inform architecture? In this project-oriented course, students are introduced to cognitive and analytical methods to evaluate their design projects. Existing theories are introduced and complemented with hands-on sessions, in which students learn how to implement a range of methods. The course is tailored for students from relevant design studios.

Objective
Taking the perspectives of the end user (occupants and visitors) is vital for a human-centered design approach. Students will learn about relevant theory and methods in cognitive science and environmental psychology that can be used to address human cognitive and behavioral needs in built environments. The foundations of environmental psychology and human spatial cognition will be introduced. A focus of the course will be on how people perceive their surroundings and orient in space. Students will learn about a range of methods including real-world observation, and methods of architectural analysis such as space syntax. Students will also be exposed to behavior simulation in design, virtual reality experiments, and eye-tracking. Students will reflect the roles of designers and other stakeholders with respect to human-centered design as well as an evidence-based design perspective. The course is tailored for students from a relevant design studio. Upon registering, students should send an email about their design studio to b emo@gess.ethz.ch. As an alternative to obtaining D-GESS credit, architecture students can obtain course credit in "Vertiefungsfach" or "Wahlfach".

851-0252-09L Special Topics in Cognitive Neuroscience W 3 credits 2V C. Ghisleni, V. Schinazi
Number of participants limited to 60.

Abstract
Cognitive neuroscience bridges two seemingly distinct but closely related disciplines. On one side, there is cognitive psychology and on the other side biology, or more specifically, neuroscience. In terms of research, this relatively young field aims to explain such diverse mental processes as thinking, perceiving, feeling, and reasoning by exploring their underlying biological or neural mechanisms. This course explores selected topics of cognitive neuroscience. The course begins with a basic introduction to the field covering neural anatomy and brain physiology. Contemporary methods used in neuroscientific research (e.g., IMRI, EEG) will also be introduced and their benefits and limits critically reviewed. Using this knowledge, we will discuss some of the classic works in neuroscience in visual perception, memory and emotion. This will be accompanied by some famous cases of patients demonstrating problems in these domains (e.g., people with agnosia or amnesia). Further topics will include the cognitive and neural processes involved in pain processing, the placebo effect, as well as spatial representation and navigation.

Objective
This course targets students at the Bachelor level with no previous experience. The main requirement for this course is an open and critical mind. By the end of the course, the student will be able to identify the major brain structures and to explain the basic functioning of neurons as well as some of the fundamental principles of how our brain works. Students should have an understanding of the methods used to obtain the various findings reported in the literature and the media. The course aims to enable and encourage the students to critically evaluate these findings, and what can and cannot be answered with neuroscience techniques. For each of the topics, students should be able to identify the phenomenon, give examples, and discuss one or two of the main theories explaining it.

851-0597-01L Evolutionary Foundations of Social Behavior W 2 credits 1V E. Voland
Number of participants limited to 20.

Abstract
This lecture will deal with the manifestations of the "selfish gene" principle in human social behavior. Cooperation and competition, selfishness and altruism, gender relations and parent-child conflicts are issues, the evolutionary backgrounds of which will be discussed. Special attention will be paid to the costly signaling theory.

Objective
You will receive an in-depth overview of the application of Darwinian theory on behavioral phenomena. This will enable you to approach the heuristic perspective of the so-called adaptationist program of social phenomena. Finally, you will be able to discern the benefits and the problems of the evolutionary perspective within various scientific disciplines, especially anthropology, psychology, empirical social research and comparative cultural sciences.

Course: Doctoral Seminar in Visual Computing (HS16)

**Objective:**
- Learn about current research results in the area of Visual Computing, practice of scientific presentations.

**Content:**
Current research at the IVC will be presented and discussed.

---

Course: Programming Languages Seminar

**Objective:**
- Learn about current research results in the area of programming languages, static program analysis, program verification, and related areas; practice of scientific presentations.

**Content:**
The seminar will explore different topics from a research perspective.

---

Course: 151-0906-00L Frontiers in Energy Research

**Objective:**
- PhD students at ETH Zurich working in the broad area of energy present their research to their colleagues, to their advisors and to the scientific community.

**Content:**
PhD students at ETH Zurich working in the broad area of energy present their research to their colleagues, to their advisors and to the scientific community. Every week there are two presentations, each structured as follows: 15 min introduction to the research topic, 15 min presentation of the results, 15 min discussion with the audience.

---

Course: 263-2900-00L How To Give Strong Technical Presentations

**Objective:**
- Wherever possible I illustrate by example and present the material in a way to make it immediately applicable. The goal is to provide the knowledge that enables the participants, whether beginner or experienced presenter, to further improve their presentation skills and hence their impact whenever they step in front of an audience.

**Content:**
This course covers all aspects of delivering strong presentations. I explain common mistakes, what works and what does not, and why. Then I discuss structure and content as well as a set of fundamental principles from graphic design that make slides communicate effectively. These principles also apply to the presentation and visualization of data which is covered in some detail. Finally, I give some useful tips on the use of Powerpoint that simplify the creation of strong presentations.

---

Course: 264-5812-00L Writing for Publication in Computer Science (WPCS)

**Objective:**
- This short course is designed to help junior researchers in Computer Science develop the skills needed to write their first research articles. Writing for Publication in Computer Science is a short course (5 x 4-lesson workshops) designed to help doctoral students develop the skills needed to write their first research articles. The course deals with topics such as:
  - understanding the needs of different target readerships,
  - managing the writing process efficiently,
  - structuring texts effectively,
  - producing logical flow in sentences and paragraphs,
  - editing texts before submission, and
  - revising texts in response to colleagues' feedback and reviewers' comments.

**Content:**
Participants will be expected to produce a number of short texts (e.g., draft of a conference abstract) as homework assignments; they will receive individual feedback on these texts during the course. Wherever feasible, elements of participants' future conference/journal articles can be developed as assignments within the course, so it is likely to be particularly useful for those who have i) their data and are about to begin the writing process, or ii) an MSc thesis they would like to convert for publication.

<td>Abstract</td>
<td>This course will provide a solid foundation for understanding physical principles of THz applications. We will discuss various building blocks of THz technology - components dealing with generation, manipulation, and detection of THz electromagnetic radiation. We will introduce THz applications in the domain of imaging, communications, and energy harvesting.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>This is an introductory course on Terahertz (THz) technology and applications. Devices operating in THz frequency range (0.1 to 10 THz) have been increasingly studied in the recent years. Progress in nonlinear optical materials, ultrafast optical and electronic techniques has strengthened research in THz application developments. Due to unique interaction of THz waves with materials, applications with new capabilities can be developed. In theory, they can penetrate somewhat like X-rays, but are not considered harmful radiation, because THz energy level is low. They should be able to provide resolution as good or better than magnetic resonance imaging (MRI), possibly with simpler equipment. Imaging, very-high bandwidth communication, and energy harvesting are the most widely explored THz application areas. We will study the basics of THz generation, manipulation, and detection. Our emphasis will be on the physical principles and applications of THz in the domain of imaging, communication and energy harvesting.</td>
<td></td>

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 437 of 1571
Randomized Algorithms and Probabilistic Methods

Topics covered in the lecture include:
- Bayesian theory of optimal decisions
- Maximum likelihood and Bayesian parameter inference
- Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
- Ensemble methods: Bagging and Boosting
- Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
- Non-parametric density estimation: Parzen windows, nearest neighbor
- Dimension reduction: principal component analysis (PCA) and beyond

Machine Learning

Lecture notes

No lecture notes, but slides will be made available on the course webpage.

Literature

Prerequisites / notice

The course requires solid basic knowledge in analysis, statistics and numerical methods for CSE as well as practical programming experience for solving assignments.

Students should at least have followed one previous course offered by the Machine Learning Institute (e.g., CIL or LIS) or an equivalent course offered by another institution.

Abstract

In this seminar participating students present and discuss recent research papers in the area of distributed computing. The seminar consists of algorithmic as well as systems papers in distributed computing theory, peer-to-peer computing, ad hoc and sensor networking, or multi-core computing.

Objective

In the last two decades, we have experienced an unprecedented growth in the area of distributed systems and networks; distributed computing now encompasses many of the activities occurring in today's computer and communications world. This course introduces the basics of distributed computing, highlighting common themes and techniques. We study the fundamental issues underlying the design of distributed systems: communication, coordination, synchronization, uncertainty. We explore essential algorithmic ideas and lower bound techniques.

In this seminar, students present the latest work in this domain.

Content

Different each year. For details see: www.disco.ethz.ch/courses.html

Lecture notes

Slides of presentations will be made available.

Literature

Papers.

The actual paper selection can be found on www.disco.ethz.ch/courses.html.

**Abstract**
The course focuses on important factors that drive the innovation performance of firms, like innovation capabilities, science-industry relationships, environmental policy and it shows how innovation activities relate to firm performance and to the technological dynamic of industries. Hence, the course provides an understanding of the relationship between technical change and industrial dynamics.

**Objective**
The course provides students with the basic skills to understand and assess empirically the technological activities of firms and the technological dynamics of industries.

**Content**
The course consists of two parts. Part I provides an introduction into important topics in the field of the economics of innovation. Part II consists of empirical exercises based on the KOF Innovation Data. In part I we will learn about: (a) market conditions that encourage firms to invest in R&D (Research and Development) and develop new products. ...b) the role of universities for the technological activities of a firm (technology transfer). ...c) how technologies diffuse among firms. ...d) how the R&D activities of firms are affected by economic crises and how firms finance their R&D activities. ...e) how we can measure the returns to R&D activities. ...f) how (environmental) policies affect the technological activities of a firm. In part II we will use the KOF Innovation Survey Data in order to assess empirically the technological activities of firms referring to the topics introduced in part I.

**Lecture notes**
Will be provided in the course

**Literature**
Literature will be presented in the course. For an introduction into the economics of innovation see G.M. Peter Swann, The Economics of Innovation - an Introduction, Edward Elgar, 2009.

**Prerequisites / notice**
Course is directed to advanced Master-Students and PhD Students with an interest in empirical work.

<td>G. von Krogh</td>
</tr>
</tbody>
</table>

**Abstract**
The purpose of this course is to review and discuss issues in current theory and research relevant to innovation in the digital space.

**Objective**
Through in-depth analysis of published work, doctoral candidates will identify and appraise theoretical and empirical studies, formulate research questions, and improve the positioning of their own research within the academic debate.

**Content**
The Internet has a twofold impact on the way individuals and firms innovate. First, firms increasingly draw on digital technology to access and capture innovation-relevant knowledge in their environment. Second, individuals, firms, and other organizations extensively utilize the Internet to create, diffuse, and commercialize new digital products and services. During the past decade, theory and research on innovation in the digital space has flourished and generated extensive insights of relevance to both academia and management practice. This has brought us better understanding of working models, and some fundamental reasons for innovation success or failure. A host of new models and research designs have been created to explore the innovation in the digital space, but these have also brought out many open research questions. We will review some of the existing streams of work, and in the process explore a new research agenda.

**Format**
The course is organized in one block of 2 days. The course is a combination of pre-readings, presentations by faculty and students, and discussions. The students prepare presentations of papers in order to facilitate analysis and discussion.
Innovation, openness and search:

Open source and innovation models:

Motivation to Innovate:

Leadership and Governance:

**364-0559-00L**

**Dynamic Macroeconomics (Doctoral Course)**

| W | 3 credits | 2V | H. Gersbach |

**Objective**

Dynamic models and workhorses in macroeconomics

In this doctoral course, we learn dynamic general equilibrium theory and the basic workhorses in macroeconomics. After the course the participants will be able to speak the Arrow-Debreu and recursive language and apply the frameworks to macroeconomic decision problems. Public Finance, Monetary Theory and Banking.

**Content**

1. Introduction
2. The Arrow-Debreu Approach and Sequential Markets
3. The Neoclassical Growth Model and the Representative Agent Model
4. Mathematical Background
5. Frictions and Banking
   5.1 Overview
   5.2 Banks in Macroeconomic Models
   5.3 Ramsey cum Banks: General Equilibrium with Banks and Outside Equity
6. Overlapping Generations Models and Models with Heterogenous Agents
7. Debates
   7.1 Theory of Piketty
   7.2 High Bank Equity Requirements

---

**364-0556-00L**

**Doctoral Workshop: Astute Modelling**

**Prerequisite:** Students are expected to attend the course 364-0559-00L "Dynamic Macroeconomics (Doctoral Course)", before registering for this workshop.

| W | 3 credits | 1G | H. Gersbach |

**Abstract**

In this workshop, ongoing research is presented and the criteria and guidelines for astute modelling of economic, political, and social situations are discussed.

**Objective**

We will learn how to craft models, how to present our own research and improve our analytical skills.

**Prerequisites / notice**

Students are expected to attend the doctoral course "Macroeconomic Dynamics" before registering for this workshop.

---

**364-0585-01L**

**PhD Course: Applied Econometrics**

| W | 2 credits | 2S | P. Egger |

**Abstract**

In this course, we will address three blocks of selected problems: (i) estimation of fixed and random effects panel data models for single equations and systems of equations; (ii) estimation of models with endogenous treatment effects or sample selection; (iii) estimation of models with interdependent data (so-called spatial models).

**Objective**

The main agenda of this course is to familiarize students with the estimation of econometric problems with three alternative types of problems: (i) estimation of fixed and random effects panel data models for single equations and systems of equations; (ii) estimation of models with endogenous treatment effects or sample selection; (iii) estimation of models with interdependent data (so-called spatial models). Students will be able to program estimation routines for such problems in STATA and apply them to data-sets. They will be given a data-set and will have to work out empirical problems in the context of a term paper.
Lecture notes

For panel data analysis, I will rely on the book:

For sample selection and endogenous treatment effect analysis, I will rely on the book:

For spatial econometrics:
I will mostly use papers.

I will prepare a script (based on slides), covering all topics.

### 364-0517-00L Urban and Spatial Economics

**W** 3 credits 2V R. H. van Nieuwkoop

**Abstract**
This course explores the economic factors which influence location decisions of households and firms, and it explores theories of how these decisions induce the formation of cities. The course will cover the neoclassical models of land use, concepts from the new economic geography, zoning, and transportation and traffic congestion.

**Objective**
The objective of the course is to provide graduate students with an understanding of the economic factors which give rise to urban spatial structure and the models which have been employed to study these processes. The course aims to help students develop an appreciation for the use of economic models in both positive and normative frameworks. We will assess both the history of thought regarding the role of markets in creating urban development, and we will read about modern theories of externalities and economic factors which induce agglomeration. The final section of the course will focus on transportation problems in urban areas and the use of economic models to assess public policy measures to deal with congestion and associated externalities.

**Content**
- Outline of Lectures
  - Topic 1: Why do cities exist?
  - Topic 2: The Basic Muth-Mills model
  - Topic 3: The New Economic Geography
  - Topic 4: Business demand for land and Von Thünen's model
  - Topic 5: Urban spatial structure
  - Topic 6: Land use control
  - Topic 7: City size and city growth
  - Topic 8: Traffic externalities and congestion
  - Topic 9: Public transport

**Lecture notes**
- Cities, agglomeration and spatial equilibrium by E. L. Glaeser, 2008, Oxford University Press.
- The new introduction to geographical economics, Steven Brakman, Harry Garretsen and Charles van Marrewijk, Cambridge.

### 364-0581-00L Microeconomics Seminar (ETH/UZH)

**E-** 0 credits 2S H. Gersbach

**Abstract**
Research Seminar research papers of leading researchers in Microeconomics are presented and discussed

**Objective**
Research Seminar research papers of leading researchers in Microeconomics are presented and discussed

**Content**
Invited Speakers present current research in Microeconomics

### 364-1013-00L Managerial Cognition

**W** 1 credit 1G S. Brusoni

**Abstract**
Does not take place this semester.

**Objective**
The primary objective of this module is to introduce some of the major theoretical threads and controversies in the field of managerial cognition. A secondary objective is to help understand the process of empirical research that has the potential to make an impact on research and management practice.

1. Exposure to key theoretical streams in the area.
2. Familiarity with the issues, methods, findings and gaps in the area.
4. Skills in critiquing the literature, defining research problems and proposing empirical research in this area.

**Content**
- Session 1 - Introduction to the field of managerial cognition
- Session 2 - Methods to study managerial cognition
- Session 3 - Sensemaking, Mindfulness and Attention
Session 1: Introduction

Session 2: Some methods to study managerial cognition

Session 3: Sensemaking, Mindfulness and Attention

Prerequisites / notice

Assignments: At the beginning of each session, students must distribute copies of their critique of the assigned reading (please see your names at the end of each reference). The critique should be brief, extending to a maximum of one printed page. The critique is meant to serve as a starting point for the student to lead the class in a discussion of the strengths and weaknesses of the paper. For each session, students should emphasize the following topics in their critique:

- summarize the research problem or question
- summarize the central framework/ theory that is proposed
- list the strengths of the paper (you can use bulletpoints)
- list the weaknesses of the paper (you can use bulletpoints)

Session 2: Some methods to study managerial cognition

Session 3: Sensemaking, Mindfulness and Attention

BONUS: http://www.wired.com/wired/archive/4.04/weick_pr.html

Assignments: At the beginning of each session, students must distribute copies of their critique of the assigned reading (please see your names at the end of each reference). The critique should be brief, extending to a maximum of one printed page. The critique is meant to serve as a starting point for the student to lead the class in a discussion of the strengths and weaknesses of the paper. For each session, students should emphasize the following topics in their critique:

Session 1:
- summarize the research problem or question
- summarize the central framework/ theory that is proposed
- list the strengths of the paper (you can use bulletpoints)
- list the weaknesses of the paper (you can use bulletpoints)

Session 2:
- Same as for session 1 with particular emphasis on the pros and cons of the method used
- Propose at least one alternative methodology and explain why you think the alternative method(s)would have been better suited

Session 3:
- three bullet points summarizing the paper strengths
- three bullet points summarizing the paper weaknesses
- prepare a one-page research idea: what would be a new research question? how would you extend the paper? what could be counterintuitive results?

Please contact Dr Daniella Laureiro Martinez for more information on this course.
This module aims to introduce major theoretical perspectives on organizational knowledge and to improve the competence of doctoral students to publish in relevant research areas. How knowledge is conceptualized and what aspects of knowledge are being studied depends on the epistemological and ontological assumptions accepted by researchers.

Objective
This module aims:
- to provide a basic understanding of key theoretical perspectives on organizational knowledge.
- to provide insights on the research questions, methods, findings and implications of the selected papers.
- to build skills in critically analyzing the literature.
- to identify future directions in the area.

Content
Given its prominence in the history of organization science, an impressive variety of theories have evolved that deals with organizational epistemology, the way of knowing in the organization (e.g., Brown & Duguid, 1991; Grant, 1996; Kogut & Zander, 1992; Lave & Wenger, 1991; Nonaka, 1994; Spender, 1996; Tsoukas, 1996; von Krogh et al., 1994). In this module, students will learn about various seminal contributions in the area of organizational knowledge and make connections between theory and empirical research, and identify the ongoing trends and future research directions.

Session 1: Knowledge based view of the firm.
Session 2: Knowledge sharing and transfer
Session 3: Social practice view on knowledge and knowing

Literature
Remark: The list might change. Students will be informed about the changes before the first session.

Prerequisites / notice
In each session, students will have three assignments:
1) prepare for in-depth discussion of all papers. The students are supposed to read in advance all the papers that will be presented in the sessions.
2) critically review and discuss the assigned papers. Assignments will be done after participants confirm their presence.
3) submit in advance a short critique of the assigned papers - max 2 pages.

364-1013-01L Organizations and Technical Change
W 1 credit 1G S. Brusoni
This 1-credit module is designed to introduce students to selected topics focused on the relationship between technical change and organizational dynamics.

Abstract
This 1-credit module is designed to introduce students to selected topics focused on the relationship between technical change and organizational dynamics.

Objective
The objectives of this module are:
1) to provide students with a relatively detailed understanding of some of the major theoretical perspectives and their developments in the field of innovation and technical change
2) to illustrate how these perspectives have evolved
3) to discuss how they can be operationalized
4) and, on these bases, develop the ability of constructively criticising them in order to learn how 'to build upon and extend' extant research in the field

Content
Session 1: Technology rules. Once upon a time, people believed that technology determines organization. What techniques we use explain how we organize around them. If there is no fit to the technique, then there is failure. Powerful, simple, predictable, engineer-friendly. Occasionally correct, too.

Session 2: Never Mind the Bollocks ... Once upon a time, people believed that technologies were fully malleable to social dynamics. Marxists, social constructivists and management gurus (still) share great optimism in the human ability of solving technical problems, once the right organizational processes are in place. Revolutionary, ambitious, path-breaking. Occasionally bluffing, though.

Session 3: It takes two to tango: Technological and organizational dynamics. And last, the big compromise, or the balance finally found? It is not white. It is not black. But it is not grey either. Pragmatic, practical, progressive. Relevant? Actionable?
The objectives of this course are:

This course is a mixture between a seminar primarily for PhD and postdoc students and a colloquium involving invited speakers. It consists of presentations and subsequent discussions in the area of modeling complex socio-economic systems and crises. Students and other guests are welcome.

Session 2. Never Mind the Bollocks: organizations rule.

Further info on assignments will be circulated by email before the start of the course.

364-1013-05L Organizational Behavior W 1 credit 1S E. L. Paddock, G. Grote

Objective

- to introduce students to the study of individual and group-level processes in organizations
- to explain the roles and responsibilities of different organizational levels

Content

- Group decision making and leadership styles
- Organizational culture and its impact on behavior
-冲突 management strategies

364-1013-06L Marketing Theory ■ W 1 credit 1G F. von Wangenheim

Objective

The objectives of this course are:

- to provide an overview of major research streams in Marketing
- to introduce students to the fundamental concepts and methods used in OB

Content

- Consumer behavior
- Marketing strategy and implementation
- Market analysis and segmentation

364-1025-00L Advanced Microeconomics E- 3 credits 2G A. Bomnier

Objective

The objectives of this course are:

- to provide students with advanced knowledge in microeconomic theory
- to prepare students for graduate-level coursework

Content

- Decision-making under uncertainty
- Combinatorial optimization
- Game theory

Abstract

This course is a mixture between a seminar primarily for PhD and postdoc students and a colloquium involving invited speakers. It consists of presentations and subsequent discussions in the area of modeling complex socio-economic systems and crises. Students and other guests are welcome.

Objective

- to provide a platform for interdisciplinary research
- to foster collaboration between different fields

Content

- This course is a mixture between a seminar primarily for PhD and postdoc students and a colloquium involving invited speakers. It consists of presentations and subsequent discussions in the area of modeling complex socio-economic systems and crises. For details of the program see the webpage of the colloquium. Students and other guests are welcome.
The purpose of this course is to

This course is geared towards first and second-year Ph.D. students of MTEC. It is held as in a workshop style. Students attending this seminar will benefit from interdisciplinary discussions and insights into current and future work in business and economics research.

The purpose of this course is to

- introduce students to the world of economics, management and systems research at MTEC
- make students aware of silo-thinking in the specific subdisciplines and encourage them to go beyond those silos
- discuss current issues with regard to substantive, methodological and theoretical domains of research in the respective fields

This course introduces PhD students into the principles of experimental methods and outlines how to prepare, conduct and evaluate an experiment.

This course aims to prepare PhD students for conducting their own experiment.

1. Introduction: What are economic experiments and why to use them?
4. Conducting experiments: Instructions, testing, recruiting, sessions.
5. Measuring techniques: Eliciting beliefs, risk attitudes, social preferences.

Books:

Basic Articles:

A reading list with articles for each lecture has been published in Moodle.

This course is complemented by a course on programming experiments with z-tree. It is not mandatory but recommended to take both courses.

This course is geared towards first and second-year Ph.D. students of MTEC. It is held as in a workshop style. Students attending this seminar will benefit from interdisciplinary discussions and insights into current and future work in business and economics research.

**ECTS**
European Credit Transfer and Accumulation System

- Special students and auditors need special permission from the lecturers.
Topics that will be covered include: Uncertainty quantification under current research projects at the Institute of Fluid Dynamics are presented and discussed. This course gives an introduction into algorithms and numerical methods for parallel computing for multi and many-core architectures and exchange on current internal research projects. Training of presentation skills.

This seminar covers actual subjects from the specific research areas of the laboratory of transport processes and reactions. The contents are announced through the group’s webpage.

Current advanced research activities in the areas of thermo- and fluid dynamics are presented and discussed, mostly by external speakers. Topics can cover all scientific interests and domains represented in the PhD program and in particular their interfaces. Team work on industrial problems. Interfacing academia and industry. Permission of the PhD advisor and/or instructor.

No enrollment to this course at ETH Zurich. Book the corresponding module directly at UZH. UZH Module Code: ESC802

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

PhD students at ETH Zurich working in the broad area of energy present their research to their colleagues, to their advisors and to the scientific community. Training of presentation skills. Knowledge of advanced research in the areas of thermo- and fluid dynamics

This class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

The class will be based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

The class will be based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

The class will be based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.
1. Students know and understand basic numerical methods used in CFD in terms of accuracy and stability.

2. Overview of basic concepts: Overview of discretization process and its consequences

Students participate in 8-10 laboratory experiments (study groups of 3-5 students, dependent on the number of course participants and available experiments)

- fluid mechanics, thermodynamics, heat and mass transfer
- electrical engineering / electronics
- numerical data analysis and processing (e.g. using MATLAB)

1. Governing and model equations. Brief review of equations and properties

2. Overview of basic concepts: Overview of discretization process and its consequences

3. Students understand how to assess the numerical and physical accuracy of CFD results.

As part of the course, students will write their own codes and verify and validate them systematically.

- numerical data analysis and processing (e.g. using MATLAB)

4. Fields: PDEs

5. Particles: N-body solvers

1. Hardware and architectures

2. OpenMP (4 weeks)

3. MPI (5 weeks)

Computers and methods:

1. Students have a basic understanding of a typical simple CFD code.

2. Overview of basic concepts: Overview of discretization process and its consequences

3. Students understand how to assess the numerical and physical accuracy of CFD results.

As part of the course, students will write their own codes and verify and validate them systematically.

- numerical data analysis and processing (e.g. using MATLAB)

4. Fields: PDEs

5. Particles: N-body solvers

Computers and methods:
Familiarize students with main architectural principles and concepts of embedded control systems.

J. S. Freudenberg, R. P. Haas, R. D’Andrea

Leading and Coaching Focus Project Teams (Basic Course)

This course provides a comprehensive overview of embedded control systems. The concepts introduced are implemented and verified on a microprocessor-controlled haptic device. Content

An embedded system is a microprocessor used as a component in another piece of technology, such as cell phones or automobiles. In this intensive two-week block course the students are presented the principles of embedded digital control systems using a haptic device as an example for a mechatronic system. A haptic interface allows for a human to interact with a computer through the sense of touch.

Subjects covered in lectures and practical lab exercises include:

- The application of C-programming on a microprocessor
- Digital I/O and serial communication
- Quadrature decoding for wheel position sensing
- Queued analog-to-digital conversion to interface with the analog world
- Pulse width modulation
- Timer interrupts to create sampling time intervals
- System dynamics and virtual worlds with haptic feedback
- Introduction to rapid prototyping

Prerequisite courses are Control Systems I and Informatics I.

This course is restricted to 33 students due to limited lab infrastructure. Interested students please contact Marianne Schmid (E-Mail: marischm@ethz.ch)

After your reservation has been confirmed please register online at www.mystudies.ethz.ch.

Detailed information can be found on the course website

http://www.idsc.ethz.ch/education/lectures/embedded-control-systems.html

**151-0563-01L** Dynamic Programming and Optimal Control W 4 credits 2V+1U R. D’Andrea

Abstract

Introduction to Dynamic Programming and Optimal Control.

Objective

Covers the fundamental concepts of Dynamic Programming & Optimal Control.

Content

Dynamic Programming Algorithm; Deterministic Systems and Shortest Path Problems; Infinite Horizon Problems, Bellman Equation; Deterministic Continuous-Time Optimal Control.

Literature

Prerequisites / notice

Requirements: Knowledge of advanced calculus, introductory probability theory, and matrix-vector algebra.

Abstract

This course provides a comprehensive overview of embedded control systems. The concepts introduced are implemented and verified on a microprocessor-controlled haptic device.

Objective

Familiarize students with main architectural principles and concepts of embedded control systems.

Content

An embedded system is a microprocessor used as a component in another piece of technology, such as cell phones or automobiles. In this intensive two-week block course the students are presented the principles of embedded digital control systems using a haptic device as an example for a mechatronic system. A haptic interface allows for a human to interact with a computer through the sense of touch.

Subjects covered in lectures and practical lab exercises include:

**151-0623-00L** ETH Zurich Distinguished Seminar in Robotics, Systems and Controls W 1 credit 1S B. Nelson, J. Buchli, M. Chli, R. Gassert, M. Hutter, W. Karlen, R. Riener, R. Siegwart

Abstract

This course consists of a series of seven lectures given by researchers who have distinguished themselves in the area of Robotics, Systems, and Controls.

Objective

Obtain an overview of various topics in Robotics, Systems, and Controls from leaders in the field. Please see http://www.msr.ethz.ch/education/distinguished-seminar-in-robotics-systems-controls--151-0623-0.html for a list of upcoming lectures.

Content

This course consists of a series of seven lectures given by researchers who have distinguished themselves in the area of Robotics, Systems, and Controls. MSc students in Robotics, Systems, and Controls are required to attend every lecture. Attendance will be monitored. If for some reason a student cannot attend one of the lectures, the student must select another ETH or University of Zurich seminar related to the field and submit a one page description of the seminar topic. Please see http://www.msr.ethz.ch/education/distinguished-seminar-in-robotics-systems-controls--151-0623-0.html for a suggestion of other lectures.

Prerequisites / notice

Students are required to attend all seven lectures to obtain credit. If a student must miss a lecture then attendance at a related special lecture will be accepted that is reported in a one page summary of the attended lecture. No exceptions to this rule are allowed.

**151-0765-00L** Leading and Coaching Focus Project Teams (Basic Course) W 0 credits 2G+0.5A R. P. Haas, I. Goller

This course is the first part of a two-semester course.

The course "Leading and Coaching Focus Project Teams (Basic Course)" for Autumn Semester is examined together with the course "Leading and Coaching Focus Project Teams (Advanced Course)" for Spring Semester with 4 ECTS.
Basic knowledge about role and mindset of a coach; Knowledge and reflection about the classical problems in coaching of a focus project; Development of personal coaching skills; Knowledge and know-how about coaching methods; Reflection and exchange of experiences about personal coaching situations; Inspiration and learning from good cases regarding organizational and team management aspects.

Content

Content of both basic and advanced course (2 semester):
- Basic knowledge about role and mindset of a coach
- Introduction into coaching: definition & models
- Introduction into the coaching process
- Role of coaches between examiner and "friend"
- Knowledge and reflection about the problems in coaching a focus project
- Knowledge about team development
- Reflection about critical phases in the innovation process for an innovation team
- Know-how about reference model for analysis critical situations
- Development of personal coaching competencies, e.g. active listening, asking questions, giving feedback
- Competencies in theoretical models
- Coaching competencies: exercises and reflection
- Knowledge and know-how about coaching methods
- Knowledge about basic coaching methods for technical projects/innovations projects
- Know-how about usage of methods in the coaching process
- Facilitating decisions
- Using and applying coaches opinions and knowledge
- Reflection and exchange of experiences about personal coaching situations
- Self-reflection
- Exchange of experiences in the lecture group
- Good practice on organizational and management aspects
- How to do system and concurrent engineering
- Project planning and replanning
- Facilitating conflict situations
- Discussing sample cases from former teams and actual cases of participants.

Prerequisites / notice

Participants (Students, PhD Students, Postdocs) should be part of the coaching team of focus project teams.

The course "Leading and Coaching Focus Project Teams (Basic Course)" (HS) is examined together with "Leading and Coaching Focus Project Teams (Advanced Course)" (FS) in FS with 4 ECTS.
This course focuses on the analysis of innovation as a pervasive process that cut across organizational and functional boundaries. It looks into the interdependence of various topics in the development and management of a firm. The lectures introduce students not only to topics relevant for managing large corporations, but also touch upon the different aspects of starting up your own venture. The lectures will be presented by the respective area specialists at D-MTEC. The approach is to develop a 'systemic' view of organizations. We look at organizations as part of an industry context, which is affected by different elements like strategy, structure, culture, tasks, people and outputs. We consider how managerial decisions are made in any one of these domains affect decisions in each of the others.

Introduction to Management

This course is an introduction to the critical management skills involved in planning, structuring, controlling and leading an organization. It is a systematic approach to the understanding of roles and activities and their relationship to the overall strategy and organization of an enterprise. The course broadens the view and understanding of technology by linking it with its commercial applications and with society. The lectures are designed to introduce students to topics related to strategy, corporate innovation, leadership, corporate and entrepreneurial finance, value chain analysis, corporate social responsibility, and business model innovation. Practical examples from industry experts will stimulate the students to critically assess these issues. Creative skills will be trained by the business game exercise, a participant-centered learning activity, which provides students with the opportunity to place themselves in the role of Chief Innovation Officer of a large multinational company. As they learn more about the specific case and identify the challenge they are faced with, the students will have to develop an innovative business case for this multinational corporation. Doing so, this exercise will provide an insight into the context of managerial problem-solving and corporate innovation, and enhance the students' appreciation for the complex tasks companies and managers deal with. The business game presents a realistic model of a company and provides a valuable learning platform to integrate the increasingly important development of the skills and competences required to identify entrepreneurial opportunities, analyse the future business environment and successfully respond to it by taking systematic decisions, e.g. critical assessment of technological possibilities.

Prerequisites / notice

Discovering Management is designed to suit the needs and expectations of Bachelor students at all levels as well as Master and PhD students not belonging to D-MTEC. By providing an overview of Business Management, this course is an ideal enrichment of the standard curriculum at ETH Zurich. No prior knowledge of business or economics is required to successfully complete this course.

363-0341-00L

Introduction to Management

W 3 credits 2G S. Brusoni, P. Baschera

Objective

We develop a 'systemic' view of organizations.

Content

Further information is available on the Tim Group Chair's website:
http://www.timgroup.ethz.ch/en/courses

and on the Moodle of the course:
https://moodle-app2.etzh.ch/course/view.php?id=2209
(The Enrollment Key to Moodle will be provided during the course)

Lecture notes

The content of the course will rely on the book:

Selected readings from the book and additional learning materials will be available on the course Moodle:
https://moodle-app2.etzh.ch/course/view.php?id=2209

Prerequisites / notice

The final exam of the present course is in written form.

All the materials uploaded on Moodle must be considered as required readings.

The final exam is requested for all types of students (BSc, MSc, MA, PhD, and Exchange students).

It is not possible to retake the exam within the same term or academic year.

We strongly recommend Exchange students to take it into consideration when selecting the courses to attend.

363-0389-00L

Technology and Innovation Management

W 3 credits 2G S. Brusoni

Objective

This course intends to enable all students to:
- understand the core concepts necessary to analyze how innovation happens
- master the most common methods and tools organizations deploy to innovate
- develop the ability to critically evaluate the innovation process, and act upon the main obstacles to innovation

Content

This course looks at technology and innovation management as a process. Continuously, organizations are faced with a fundamental decision: they have to allocate resources between well-known tasks that reliably generate positive results; or explore new ways of doing things, new technologies, products and services. The latter is a high risk choice. Its rewards can be high, but the chances of success are small.

How do firms organize to take these decisions? What kind of management skills are necessary to take them? What kind of tools and methods are deployed to sustain managerial decision-making in highly volatile environments? These are the central questions on which this course focuses, relying on a combination of lectures, case-based discussion, guest speakers, simulations and group work.

Lecture notes

Slides will be available on the TIMGROUP website.

Prerequisites / notice

No specific background in economics or management is required.

363-0403-00L

Introduction to Marketing

W 3 credits 2G F. von Wangenheim

The course is designed to convey a profound understanding of marketing's role in modern firms, its interactions and interfaces with other disciplines, its main instruments and recent trends. Particular attention is given to emerging marketing concepts and instruments, and the role of marketing in technology firms.
This course examines the behaviour of macroeconomic variables, such as gross domestic product, unemployment and inflation rates. It tries to answer questions like: How can we explain fluctuations of national economic activity? What can economic policy do against unemployment and inflation? What significance do international economic relations have for Switzerland?

Furthermore, this course will give you a better understanding of the potential and limits of economic policy. As a voter, you help choose the policies that guide the allocation of society's resources. When deciding which policies to support, you may find yourself asking various questions about economics. What are the burdens associated with alternative forms of taxation? What are the effects of free trade with other countries? What is the best way to protect the environment? How does the government budget deficit affect the economy? These and similar questions are always on the minds of policy makers.

We advise you to also buy access to Aplia. This internet platform will support you in learning for this course. To save money, you should buy the book together with Aplia. This is sold as a bundle (ISBN: 9781473715998).

Besides this textbook, the slides and lecture notes will cover the content of the lecture and the exam questions.

The set-up of the course will closely follow the book of N. Gregory Mankiw and Mark P. Taylor (2014), “Economics”, 3rd edition, South-Western Cengage Learning. The case data will be provided so that students practice and apply the concepts of the lecture on their own. The tutorial is held jointly by two Teaching Assistants (Zhiying Cui and Jana Gross) and the professor (Prof. F. v. Wangenheim).

The learning objectives of the course are:

1) Students must be able to discuss basic principles, problems and approaches in microeconomics. (2) Students can analyse and explain simple economic principles in a market using supply and demand graphs. (3) Students can contrast different market structures and describe firm and consumer behaviour. (4) Students can identify market failures such as externalities related to market activities and illustrate how these affect the economy as a whole. (5) Students can apply simple mathematical treatment of some basic concepts and can solve utility maximization and cost minimization problems.

The course introduces basic principles, problems and approaches of microeconomics.

The course acquaints students who have previous not studied economics to economic concepts and quantitative methods which can be employed in business decisions. The course covers the economic theory of choice, models of oligopoly and industrial organization, applications of game theory to contract design and agency theory, and the theory of decision making under uncertainty focusing specifically on long-term investment decisions. The course will include three lectures by Professor Volker Hoffmann focusing on related case-studies in management.

For students taking only the course 'Principles of Microeconomics' there is a shorter version of the same book:

Complementary:

The course introduces basic principles, problems and approaches of microeconomics.
Participants will be able to plan and analyze efficient experiments in the fields of natural sciences. They will gain practical experience by working with advanced design tools.

### Synthetic Biology II

**Overview of financial and managerial accounting**

Accounting for current and fixed assets
Liabilities and owners equity
Recording change in balance sheet
Measuring financial performance
Managing financial reporting
Full and variable costing system
Using accounting information for decision making purposes

**Objective**

Understand the different procedures involved in the accounting system
Record change in financial position
Measure business income
Prepare final accounts
Understand the principles of cost accounting
Calculate the different product costs
Make decisions about the acceptance or rejection of a particular product

**Content**

Financial Accounting: Balance sheet, income statement, double-entry accounting, journal and ledger, accounting for merchandising activities, value-added tax, adjustments before final accounts, provisions, depreciation, valuation,

Managerial Accounting: Full costing, variable costing, cost-volume profit, break-even analysis, activity-based costing

**Exercises**

This is a prerequisite for the course Financial Management.

<tr>
<td>Technology Entrepreneurship</td>
<td>2</td>
<td>V</td>
<td>Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding. This course offers the fundamentals in theory and practice of entrepreneurship in new technology ventures. Main topics covered are success factors in the creation of new firms, including founding, financing and growing a venture.</td>
</tr>
<tr>
<td>Monetary Policy</td>
<td>3</td>
<td>V</td>
<td>The main aim of this course is to analyse the goals of monetary policy and to review the instruments available to central banks in order to pursue these goals. It will focus on the transmission mechanisms of monetary policy and the differences between monetary policy rules and discretionary policy. It will also make connections between theoretical economic concepts and current real world issues.</td>
</tr>
<tr>
<td>Patents</td>
<td>1</td>
<td>V</td>
<td>Knowledge in the field of intellectual property, especially of patents and trademarks, with particular emphasis on pharmaceutics. Introduction into intellectual property; prosecution of patent applications; patent information; exploitation and enforcement of patents; peculiarities in pharmaceutics and medicine; social, political and ethical aspects; Trademarks.</td>
</tr>
<tr>
<td>Synthetic Biology II</td>
<td>4</td>
<td>A</td>
<td>7 months biological design project, during which the students are required to give presentations on advanced topics in synthetic biology (specifically genetic circuit design) and then select their own biological system to design. The system is subsequently modeled, analyzed, and experimentally implemented. Results are presented at an international student competition at the MIT (Cambridge).</td>
</tr>
</tbody>
</table>
Objective
The students are supposed to acquire a deep understanding of the process of biological design including model representation of a biological system, its thorough analysis, and the subsequent experimental implementation of the system and the related problems.

Content
Presentations on advanced synthetic biology topics (e.g., genetic circuit design, adaptation of systems dynamics, analytical concepts, large scale de novo DNA synthesis), project selection, modeling of selected biological system, design space exploration, sensitivity analysis, conversion into DNA sequence, (DNA synthesis external) implementation and analysis of design, summary of results in form of scientific presentation and poster, presentation of results at the iGEM international student competition (www.igem.org).

Lecture notes
Handouts during course

Prerequisites / notice
The final presentation of the project is typically at the MIT (Cambridge, US). Other competing schools include regularly Imperial College, Cambridge University, Harvard University, UC Berkeley, Princeton University, CalTech, etc.

This project takes place between end of Spring Semester and beginning of Autumn Semester. Registration in April.

Please note that the number of ECTS credits and the actual work load are disconnected.

851-0180-00L Research Ethics 2 credits 2G G. Achermann
Particularly suitable for students of D-BIOL, D-CHAB, D-HEST

Abstract
This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective
The main goal of this course is to enhance the student's ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks;
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

<tr>
<td>Content</td>
<td>In 1964, V. Arnold constructed an example of a nearly integrable deterministic system exhibiting instabilities. In the 1970s, physicist B. Chirikov coined the term for this phenomenon &quot;Arnold diffusion&quot;, where diffusion refers to stochastic nature of instability. One of the most famous examples of stochastic instabilities for nearly integrable systems is dynamics of ocean waves in the Korteweg-de Vries equation. They were discovered numerically by astronomer J. Wisdom. During the course we shall discuss various aspects of this phenomenon, in particular, a class of nearly integrable deterministic systems, where stochastic diffusive behaviour was proven, namely, that distributions given by deterministic evolution of certain probability measures weakly converge to a stochastic diffusion process.</td>

<tr>
<td>Content</td>
<td>There have been some very important efforts in the recent years to understand certain canonical models of two-dimensional random geometries, whose inspiration came from theoretical physics in the years 80-90. These are defined either as continuum limits of discrete models (random maps) or purely continuum objects defined in terms of conformally invariant processes (Gaussian free field, SLE). In these lectures, we will review the perspective on scaling limits of random maps, discuss the various ways to encode them based on their combinatorics, and describe some of the (many) natural continuum random structures that can be induced from these models.</td>

</tr>
<tr>
<td>Content</td>
<td>During the first lectures we will review the theory of tempered distributions and their Fourier transforms. We will go in particular through the notion of Fréchet spaces, Banach-Steinhaus for Fréchet spaces etc. We will then apply this theory to the Fourier characterization of Hilbert-Sobolev spaces. In the second part of the course we will study fundamental properties of the Hardy-Littlewood Maximal Function in relation with L^{p} spaces. We will then make a digression through the notion of Marcinkiewicz weak L^{p} spaces and Lorentz spaces. At this occasion we shall give in particular a proof of Aoki-Roelwicz theorem on the metrisability of quasi-normed spaces. We will introduce the preduals to the weak L^{p} spaces, the Lorentz L^{p,q}(r,1) spaces as well as the general L^{p,q}(r,q) spaces and show some applications of these dualities such as the improved Sobolev embeddings.</td>

Perfectoid Spaces
P. D. Nelson

Books:
- "Geometric Aspects of Hamiltonian Dynamics"
- "The aim of this course is to give detailed proofs of Margulis' normal subgroup theorem and his superrigidity theorem for lattices in higher"
- "Introduction to Lie Groups"
- "The goal is to have a broad though foundational knowledge of the theory of Lie groups and their associated Lie algebras with an emphasis on the algebraic and topological aspects of it."

In this course we try to understand Peter Scholze's seminal paper on Perfectoid Spaces. We will cover in details (as much as time permits) the preliminary background from Huber's work on adic spaces, which provides the context for the basic constructions. Time permitting, we will also see how this theory leads to applications in p-adic etale cohomology.

The theory of perfectoid spaces provides functors, called tilting, between geometric objects in characteristic 0 and in characteristic p. In the zero dimensional case (fields) this essentially recovers a construction of Fontaine and Wintenberger that underlies p-adic Hodge theory; the absolute Galois group of an infinitely ramified p-adic field and that of the perfection of the corresponding Laurent series field (the tilted field) are canonically isomorphic. Subsequent works by Scholze have shown that perfectoid spaces are a powerful new tool across many aspects of arithmetic geometry.

401-3225-00L
Introduction to Lie Groups
W. 8 credits 4G P. D. Nelson

Abstract
Topological groups and Haar measure. Definition of Lie groups, examples of local fields and examples of discrete subgroups; basic properties; Lie subgroups. Lie algebras and relation with Lie groups: exponential map, adjoint representation. Semisimplicity, nilpotency, solvability, compactness: Killing form, Lie's and Engel's theorems. Definition of algebraic groups and relation with Lie groups.

Objective
The goal is to have a broad though foundational knowledge of the theory of Lie groups and their associated Lie algebras with an emphasis on the algebraic and topological aspects of it.

Content

Prerequisites
Topology and basic notions of measure theory. A basic understanding of the concepts of manifold, tangent space and vector field is useful, but could also be achieved throughout the semester.

Course webpage: http://www.math.ethz.ch/education/bachelor/lectures/hs2014/math/introlg

401-4531-66L
Topics in Rigidity Theory
W. 6 credits 3G M. Burger

Abstract
The aim of this course is to give detailed proofs of Margulis' normal subgroup theorem and his superrigidity theorem for lattices in higher rank Lie groups.

Objective
Understand the basic techniques of rigidity theory.

Content
This course gives an introduction to rigidity theory, which is a set of techniques initially invented to understand the structure of a certain class of discrete subgroups of Lie groups, called lattices, and currently used in more general contexts of groups arising as isometries of non-positively curved geometries. A prominent example of a lattice in the Lie group $SL(n, R)$ is the lattice $SL(n, Z)$ of integer $n \times n$ matrices with determinant 1. Prominent questions concerning this group are:
- Describe all its proper quotients.
- Classify all its finite dimensional linear representations.
- More generally, can this group act by diffeomorphisms on "small" manifolds like the circle?
- Does its Cayley graph considered as a metric space at large scale contain enough information to recover the group structure?
- In this course we will give detailed treatment for the answers to the first two questions; they are respectively Margulis' normal subgroup theorem and Margulis' superrigidity theorem. These results, valid for all lattices in simple Lie groups of rank at least 2 –like $SL(n, R)$, with $n$ at least 3– lead to the arithmeticity theorem, which says that all lattices are obtained by an arithmetic construction.

Literature
- D. Witte-Morris: "Introduction to Arithmetic groups", available on Arxiv
- Y. Benoist: "Five lectures on lattices in simple Lie groups", available on his homepage.
- M. Burger: "Rigidity and Arithmeticity", European School of Group Theory, 1996, handwritten notes, will be put online.

Prerequisites
For this course some knowledge of elementary Lie theory would be good. We will however treat Lie groups by examples and avoid structure theory since this is not the point of the course nor of the techniques.

401-3001-61L
Algebraic Topology I
W. 8 credits 4G P. S. Jossen

Abstract
This is an introductory course in algebraic topology. The course will cover the following main topics: introduction to homotopy theory, homology and cohomology of spaces.

Literature

Book can be downloaded for free at: http://www.math.cornell.edu/~hatcher/AT/ATpage.html

See also:
http://www.math.cornell.edu/~hatcher/Anchors/1772800

Prerequisites
Some knowledge of elementary differential geometry and algebra is useful but not absolutely necessary.

401-3536-11L
Geometric Aspects of Hamiltonian Dynamics
W. 6 credits 3V P. Biran

Abstract
The course will concentrate on the geometry of the group of Hamiltonian diffeomorphisms introduced by Hofer in the early 1990's and its relations to various topics in symplectic geometry such as capacities, Lagrangian submanifolds, holomorphic curves, as well as recent algebraic structures on the group of Hamiltonian diffeomorphisms such as quasi-morphisms.

Literature
Books:
- L. Polterovich: "The geometry of the group of symplectic diffeomorphisms"
- H. Hofer & E. Zehnder: "Symplectic invariants and Hamiltonian dynamics"

Prerequisites
Good knowledge of undergraduate mathematics (analysis, complex functions, topology, and differential geometry). Some knowledge of elementary algebraic topology would be useful.
### 401-4475-66L Partial Differential Equations and Semigroups of Bounded Linear Operators

<table>
<thead>
<tr>
<th>W</th>
<th>4 credits</th>
<th>2G</th>
<th>A. Jentzen</th>
</tr>
</thead>
</table>

**Abstract**
In this course we study the concept of a semigroup of bounded linear operators and we use this concept to investigate existence, uniqueness, and regularity properties of solutions of partial differential equations (PDEs) of the evolutionary type.

**Objective**
The aim of this course is to teach the students a decent knowledge (i) on semigroups of bounded linear operators, (ii) on solutions of partial differential equations (PDEs) of the evolutionary type, and (iii) on the analytic concepts used to formulate and study such semigroups and such PDEs.

**Content**
The course includes content (i) on semigroups of bounded linear operators, (ii) on solutions of partial differential equations (PDEs) of the evolutionary type, and (iii) on the analytic concepts used to formulate and study such semigroups and such PDEs. Key example PDEs that are treated in this course are heat and wave equations.

**Lecture notes**
Lecture Notes are available in the lecture homepage (please follow the link in the Learning materials section).

**Literature**

**Prerequisites / notice**
Mandatory prerequisites: Functional analysis

**Start of lectures:** Friday, September 23, 2016
For more details, please follow the link in the Learning materials section.

### 401-4497-66L Free Boundary Problems

<table>

### 401-4831-66L Mathematical Themes in General Relativity I

<table>
<thead>
<tr>
<th>W</th>
<th>4 credits</th>
<th>2V</th>
<th>A. Carlotto</th>
</tr>
</thead>
</table>

**Abstract**
First part of a one-year course offering a rigorous introduction to general relativity, with special emphasis on aspects of current interest in mathematical research. Topics covered include: initial value formulation of the Einstein equations, causality theory and singularities, constructions of data sets by gluing or conformal methods, asymptotically flat spaces and positive mass theorems.

**Objective**
Acquisition of a solid and broad background in general relativity and mastery of the basic mathematical methods and ideas developed in such context and successfully exploited in the field of geometric analysis.

**Content**
Lorentzian geometry; geometric review of special relativity; the Einstein equations and their basic classes of special solutions; the Einstein equations as an initial-value problem; causality theory and hyperbolicity; singularities and trapped domains; Penrose diagrams; asymptotically flat spaces: ADM invariants, positive mass theorems, Penrose inequalities, geometric properties.

**Lecture notes**
Lecture notes written by the instructor will be provided to all enrolled students.

**Prerequisites / notice**
The content of the basic courses of the first three years at ETH will be assumed. In particular, enrolled students are expected to be fluent both in Differential Geometry (at least at the level of Differentialgeometrie I, II) and Functional Analysis (at least at the level of Funktionalanalysis I, II). Some background on partial differential equations, mainly of elliptic and hyperbolic type, (say at the level of the monograph by L. C. Evans) would also be desirable.

### 401-4657-00L Numerical Analysis of Stochastic Ordinary Differential Equations

<table>
<thead>
<tr>
<th>W</th>
<th>6 credits</th>
<th>3V+1U</th>
<th>A. Jentzen</th>
</tr>
</thead>
</table>

**Objectives**
- Understanding the key principles and methods of numerical analysis for stochastic ordinary differential equations (SODEs).
- Appreciation of the importance of stochastic analysis in financial modeling.
- Ability to apply numerical methods to solve SODEs and analyze their convergence properties.

**Prerequisites**
- Probability Theory I.
- Elementary Probability, basic numerical analysis and basics of MATLAB programming.
- mandatory courses:
  - Elementary Probability, Probability Theory I.
- recommended courses:
  - Stochastic Processes.

**Contents**
- Stochastic processes and Brownian motion
- Stochastic ordinary differential equations (SODEs)
- Numerical approximations of SODEs
- Multilevel Monte Carlo methods for SODEs
- Applications to computational finance: Option valuation

**Literature**

**Prerequisites / notice**
Mandatory: Probability and measure theory, basic numerical analysis and basics of MATLAB programming.

**Start of lectures:** Wednesday, September 21, 2016
For more details, please follow the link in the Learning materials section.

### 401-3651-00L Numerical Methods for Elliptic and Parabolic Partial Differential Equations

<table>
<thead>
<tr>
<th>W</th>
<th>10 credits</th>
<th>4V+1U</th>
<th>C. Schwab</th>
</tr>
</thead>
</table>

**Course audience at ETH:** 3rd year ETH BSc Mathematics and MSc Mathematics and MSc Applied Mathematics students.

Other ETH-students are advised to attend the course "Numerical Methods for Partial Differential Equations" (401-0674-00L) in the CSE curriculum during the spring.
This lecture covers selected advanced topics in computational statistics, including various classification methods, the EM algorithm, clustering, handling missing data, and graphical models.

A selection of the following topics will be covered:

- Elliptical boundary value problems
- Galerkin discretization of linear variational problems
- The primal finite element method
- Mixed finite element methods
- Discontinuous Galerkin Methods
- Boundary element methods
- Spectral methods
- Adaptive finite element schemes
- Singularly perturbed problems
- Sparse grids
- Galerkin discretization of elliptic eigenproblems
- Non-linear elliptic boundary value problems
- Discretization of parabolic initial boundary value problems

Course slides will be made available to the audience.

Prerequisites / notice

Practical exercises based on MATLAB

Mathematical and Computational Methods in Photonics

The aim of this course is to review new and fundamental mathematical tools, computational approaches, and inversion and optimal design methods used to address challenging problems in nanophotonics. The emphasis will be on analyzing plasmon resonant nanoparticles, super-focusing & super-resolution of electromagnetic waves, photonic crystals, electromagnetic cloaking, metamaterials, and metasurfaces.

The field of photonics encompasses the fundamental science of light propagation and interactions in complex structures, and its technological applications.

The recent advances in nanoscience present great challenges for the applied and computational mathematics community. In nanophotonics, the aim is to control, manipulate, reshape, guide, and focus electromagnetic waves at nanometer length scales, beyond the resolution limit. In particular, one wants to break the resolution limit by reducing the focal spot and confine light to length scales that are significantly smaller than half the wavelength.

Interactions between the field of photonics and mathematics has led to the emergence of a multitude of new and unique solutions in which today's conventional technologies are approaching their limits in terms of speed, capacity and accuracy. Light can be used for detection and measurement in a fast, sensitive and accurate manner, and thus photonics possesses a unique potential to revolutionize healthcare. Light-based technologies can be used effectively for the very early detection of diseases, with non-invasive imaging techniques or point-of-care applications. They are also instrumental in the analysis of processes at the molecular level, giving a greater understanding of the origin of diseases, and hence allowing prevention along with new treatments. Photonics technologies also play a major role in addressing the needs of our ageing society: from pace-makers to synthetic bones, and from endoscopes to the micro-cameras used in in-vivo processes. Furthermore, photonics are also used in advanced lighting technology, and in improving energy efficiency and quality. By using photonic media to control waves across a wide band of wavelengths, we have an unprecedented ability to fabricate new materials with specific microstructures.

The main objective in this course is to report on the use of sophisticated mathematics in diffractive optics, plasmonics, super-resolution, photonic crystals, and metamaterials for electromagnetic invisibility and cloaking. The course merges highly nontrivial multi-mathematics in order to make a breakthrough in the field of mathematical modelling, imaging, and optimal design of optical nanodevices and nanomaterials capable of light enhancement, and of the focusing and guiding of light at a subwavelength scale. We demonstrate the power of layer potential techniques in solving challenging problems in photonics, when they are combined with asymptotic analysis and the elegant theory of Gohberg and Sigal on meromorphic operator-valued functions.

In this course we shall consider both analytical and computational matters in photonics. The issues we consider lead to the investigation of fundamental problems in various branches of mathematics. These include asymptotic analysis, spectral analysis, mathematical imaging, optimal design, stochastic modelling, and analysis of wave propagation phenomena. On the other hand, deriving mathematical foundations, and new and efficient computational frameworks and tools in photonics, requires a deep understanding of the different scales in the wave propagation problem, an accurate mathematical modelling of the nanodevices, and fine analysis of complex wave propagation phenomena. An emphasis is put on mathematically analyzing plasmon resonant nanoparticles, diffractive optics, photonic crystals, super-resolution, and metamaterials.
Abstract
Statistical analysis and modeling of observations in temporal order, which exhibit dependence. Stationarity, trend estimation, seasonal decomposition, autocorrelations, spectral and wavelet analysis, ARIMA-, GARCH- and state space models. Implementations in the software R.

Objective
Understanding of the basic models and techniques used in time series analysis and their implementation in the statistical software R.

Content
This course deals with modeling and analysis of variables which change randomly in time. Their essential feature is the dependence between successive observations. Applications occur in geophysics, engineering, economics and finance. Topics covered: Stationarity, trend estimation, seasonal decomposition, autocorrelations, spectral and wavelet analysis, ARIMA-, GARCH- and state space models. The models and techniques are illustrated using the statistical software R.

Lecture notes
Not available

Literature
A list of references will be distributed during the course.

Prerequisites / notice
Basic knowledge in probability and statistics

Completed courses
Numerical Analysis of Elliptic/Parabolic PDEs,
or Numerical Analysis of Hyperbolic PDEs,
or Numerical Analysis of Stochastic ODEs,
and FAI, Probability Theory I.

401-4600-66L Student Seminar in Probability W 4 credits 2S A.-S. Sznitman, J. Bertoin, P. Nolin, W. Werner

Content

The seminar is centered around a topic in probability theory which changes each semester.
The student seminar in probability is held at times at the undergraduate level (typically during the spring term) and at times at the graduate level (typically during the autumn term). The themes vary each semester.
The number of participants to the seminar is limited. Registration to the seminar will only be effective once confirmed by email from the organizers.

Objective
Expose graduate students to ongoing research activities (including applications) in the domain of optimization.
Content
This seminar is a forum for researchers interested in optimization theory and its applications. Speakers are expected to stimulate discussions on theoretical and applied aspects of optimization and related subjects. The focus is on efficient algorithms for continuous and discrete optimization problems, complexity analysis of algorithms and associated decision problems, approximation algorithms, mathematical modeling and solution procedures for real-world optimization problems in science, engineering, industries, public sectors etc.

Semiconductor Materials: Fundamentals and Fabrication

This course gives an introduction into the fundamentals of semiconductor materials. The main focus is on state-of-the-art fabrication and characterization methods. The course will be continued in the spring term with a focus on applications.

Modern Aspects in Surface Science Research:

The Course will treat the subjects of the crystal structure of bulk and surfaces, imaging surfaces with electrons and ions, general scanning probe microscopy methods, Scanning Tunnelling Microscopy, Atomic force microscopy, Electronic structure of the bulk and surfaces, Photoelectric emission, STM and AFM spectroscopy. The various techniques will be illustrated with examples from modern research.

SEM and LEED, LEEM

SEM, LEED, LEEM

LEIS, He ion microscopy

General problems, field ion microscope, topografiner

LEIS, He ion microscopy

Scanning Tunnelling Microscopy (weeks 6, 7 and 8):

Tunnelling problem (reminder), work function derivation and measurement with STM, imaging surfaces in real space, surface reconstructions, examples form metals and semiconductors and hybrid surface systems

Atomic force microscopy (week 9):

Technique, basics, examples.

Electronic structure of the bulk (week 10):

Reminders; density of states, band structure, low dimensional systems

Electronic structure of surfaces (week 11):

Bulk derived states, image states, examples from STM research

Photoelectric emission (week 12):

Basics of spectroscopy with x-rays and electrons.

STM and AFM derived spectroscopy techniques (weeks 13 and 14):

Comparative studies of Scanning Tunnelling spectroscopy (STS) to other integral spectroscopic methods.

6) Charles Kittel, Introduction to Solid State Physics (8th Ed.)
7) Neil W. Ashcroft and N. David Mermin, Solid State Physics
8) Harald Ibach and Hans Lüth, Solid-State Physics: An Introduction to Principles of Materials Science
9) Further reading material will be supplied.

At least, 4 homework will be assigned.

Reference:

https://moodle-app2.let.ethz.ch/course/view.php?id=2395

Course contents

1) Introduction and reminder of bulk crystals (week 1):
   Reminder of the crystal structure, x-ray diffraction and determination of the crystal structure.

2) Crystal surfaces (weeks 2 and 3):
   Definitions, description of surfaces, and reconstructions; Moiré patterns; quasi-crystals.

3) Imaging surfaces with electrons (week 4):
   SEM, LEED, LEEM

4) Imaging surfaces with ions (week 5):
   LEIS, He ion microscopy

5) Introduction to probe microscopy (week 6):
   General problems, field ion microscope, topografiner

6) Scanning Tunnelling Microscopy (weeks 6, 7 and 8):
   Tunnelling problem (reminder), work function derivation and measurement with STM, imaging surfaces in real space, surface reconstructions, examples form metals and semiconductors and hybrid surface systems

7) Atomic force microscopy (week 9):
   Technique, basics, examples.

8) Electronic structure of the bulk (week 10):
   Reminders; density of states, band structure, low dimensional systems

9) Electronic structure of surfaces (week 11):
   Bulk derived states, image states, examples from STM research

10) Photoelectric emission (week 12):
    Basics of spectroscopy with x-rays and electrons.
Ultrafast Processes in Solids

Abstract

Ultrafast processes in solids are of fundamental interest as well as relevant for modern technological applications. The dynamics of the lattice, the electron gas as well as the spin system of a solid are discussed. The focus is on time resolved experiments which provide insight into pico- and femtosecond dynamics.

Objective

After attending this course you understand the dynamics of essential excitation processes which occur in solids and you have an overview over state of the art experimental techniques used to study fast processes.

Content

1. Experimental techniques, an overview
2. Dynamics of the electron gas
   2.1 First experiments on electron dynamics and lattice heating
   2.2 The finite lifetime of excited states
   2.3 Detection of lifetime effects
   2.4 Dynamical properties of reactions and adsorbents
3. Dynamics of the lattice
   3.1 Phonons
   3.2 Non-thermal melting
4. Dynamics of the spin system
   4.1 Laser induced ultrafast demagnetization
   4.2 Ultrafast spin currents generated by lasers
   4.3 Landau-Lifschitz-Dynamics
   4.4 Laser induced switching
5. Correlated materials

Lecture notes will be distributed

Literature

relevant publications will be cited

Prerequisites / notice

The lecture is complementary to the lecture on "ultrafast methods for solid state physics" of the spring semester. Both lectures can be attended independently. The focus of this lecture is on the physical processes whereas the focus of the "ultrafast methods for solid state physics" lecture is on the experimental techniques.

Optical Properties of Semiconductors

Abstract

This course presents a comprehensive discussion of optical processes in semiconductors.

Objective

The rich physics of the optical properties of semiconductors, as well as the advanced processing available on these material, enabled numerous applications (lasers, LEDs and solar cells) as well as the realization of new physical concepts. Systems that will be covered include quantum dots, exciton-polaritons, quantum Hall fluids and graphene-like materials.

Content

Electronic states in III-V materials and quantum structures, optical transitions, excitons and polaritons, novel two dimensional semiconductors, spin-orbit interaction and magneto-optics.

Prerequisites / notice

Prerequisites: Quantum Mechanics I, Introduction to Solid State Physics

Introduction to Magnetism

Abstract

The former title of this course unit was "Fundamental Aspects of Magnetism". This lecture insists on the fundamental aspects -- quantum and statistical physics of magnetism -- which are often not comprehensively spelled out in conventional lectures on solid state physics.

Objective

Preliminary contents for the HS16:
- Magnetism in atoms (quantum-mechanical origin of atomic magnetic moments, intra-atomic exchange interaction)
- Magnetism in solids (mechanisms producing inter-atomic exchange interaction in solids, crystal field).
- Magnetic order at finite temperatures (Ising and Heisenberg models, mean-field approximation, low-dimensional magnetism)
- Dipolar interaction in ferromagnets (shape anisotropy, frustration and modulated phases of magnetic domains)
- Spin physics in the time domain (Larmor precession, resonance phenomena, Bloch equation, Landau-Lifshitz-Gilbert equation, superparamagnetism)

Content

The lecture "Introduction to Magnetism" is the regular course on Magnetism for the Master curriculum of the Department of Physics of ETH Zurich. With respect to specialized courses related to Magnetism (such as the one held by R. Allenspach in FS16) this lecture addresses more fundamental aspects -- quantum and statistical physics of magnetism -- which are often not comprehensively spelled out in conventional lectures on solid state physics.

Lecture notes

Lecture notes and slides are made available during the course, through the Moodle portal.

Prerequisites / notice

The former title of this course unit was "Fundamental Aspects of Magnetism". This lecture insists on the fundamental aspects -- quantum physics and statistical physics of magnetism. Applications to nanoscale magnetism will be considered from the perspective of basic underlying principles.

Semiconductor Nanostructures

Abstract

The course covers the foundations of semiconductor nanostructures, e.g., materials, band structures, bandgap engineering and doping, field-effect transistors. The physics of the quantum Hall effect and of common nanostructures based on two-dimensional electron gases will be discussed, i.e., quantum point contacts, Aharonov-Bohm rings and quantum dots.

Objective

At the end of the lecture the student should understand four key phenomena of electron transport in semiconductor nanostructures:
1. The integer quantum Hall effect
2. Conductance quantization in quantum point contacts
3. the Aharonov-Bohm effect
4. Coulomb blockade in quantum dots

Content

1. Introduction and overview
2. Semiconductor crystals: Fabrication and band structures
3. k.p-theory, effective mass
4. Envelope functions and effective mass approximation, heterostructures and band engineering
5. Fabrication of semiconductor nanostructures
6. Electrostatics and quantum mechanics of semiconductor nanostructures
7. Heterostructures and two-dimensional electron gases
8. Drude Transport
9. Electron transport in quantum point contacts; Landauer-Büttiker description
10. Ballistic transport experiments
11. Interference effects in Aharonov-Bohm rings
12. Electron in a magnetic field, Shubnikov-de Haas effect
13. Integer quantum Hall effect
14. Coulomb blockade and quantum dots
In addition to the lecture notes, the following supplementary books can be recommended:

The course will focus predominantly on understanding research conducted over the last 4-5 years at the forefront of this developing field, with a strong emphasis on nonlinear THz science which has only recently become possible. This in particular has generated excitement as it offers potential new ways to control chemical reactions and/or phase transitions in materials.

The course is taught in English.

The former course title of this course is “Terahertz Technology and Applications”.

Knowledge of advanced research in the area of energy.

Statistical methods play a vital role in modern cosmology and astrophysics studies. This course will give an overview of the statistical methods that are used in these fields. Topics covered will include basic probability theory, Bayesian inference, hypothesis testing, sampling and estimators. 

**Literature**

- Higgs Hunter's Guide (by S. Dawson, J. Gunion, H. Haber and G. Kane)

**Prerequisites / notice**

Astrophysics I is required and Astrophysics II is recommended. Some programming skills in Python or similar languages are necessary.

**Objective**

Develop an understanding of basic probability and statistical theory. Gain practical knowledge of statistical methods commonly used in cosmology and astrophysics.

**Prerequisites / notice**

Credit or current enrollment in Astrophysics I is recommended but not required.
This lecture covers advanced topics in ultra-fast time resolved molecular spectroscopy and kinetics. Although primarily theoretical, and focused on quantum phenomena, contents include the discussion of certain modern experimental techniques.

Goals are: acquisition of the basic knowledge in modern, ultra-fast Spectroscopy and chemical kinetics and of some knowledge of theoretical methods currently used to interpret experimental data; exercise the interpretation of computational results related to molecular quantum dynamics on selected examples and discussion of the problems involved.

The lecture is intended to be a brief introduction to essential aspects regarding quantum dynamics, in particular regarding molecular physics and the primary steps of chemical reactions. It proposes also an introduction to the methods and computational algorithms used in the theoretical treatment of molecular quantum dynamics, in particular of short time propagation of wave packets. A practical course in handling computer programs specifically devised for quantum dynamics is offered.

A program of the lecture as well as lecture notes in English containing a detailed literature list will be distributed before the 1st session.

A solid knowledge in quantum mechanics is helpful, but not a condition to assist the lecture.

**Abstract**
Research results in agro- and forest ecosystem sciences will be presented by experienced researchers as well as Ph.D. and graduate students. Citation classics as well as recent research results will be discussed. Topics will range from plant ecophysiology, biodiversity and biogeochemistry to management aspects in agro- and forest ecosystems.

**Objective**
Students will be able to understand and evaluate experimental design and data interpretation of on-going studies, be able to critically analyze published research results, practice to present and discuss results in the public, and gain a broad knowledge of recent research and current topics in agro- and forest ecosystem sciences.

**Content**
Research results in agro- and forest ecosystem sciences will be presented by experienced researchers as well as Ph.D. and graduate students. | 751-5123-00L | Rhizosphere Ecology | W    | 4    | 4G    | H. A. Gamper, T. I. McLaren

**Abstract**
This course is about the physical, chemical, and biological processes in the rhizosphere and their effect on plant growth. Effects of fertilisers, companion plants, and microbial symbionts, and other microbes on nutrient cycling and plant uptake are discussed. An "intercropping" experiment in the glasshouse is used as a model to check for rhizosphere effects on plant growth and mineral nutrition.

**Objective**
To gain a holistic understanding of resource-driven and regulatory processes in agricultural and natural ecosystems. Develop skills on the critical analysis of scientific papers. Define explanatory hypotheses, identify knowledge gaps for further investigations. Carry out a multi-disciplinary experiment that involves aspects of soil, (micro-)biology, plant physiology, pathology, and ecology. Develop manual skills in the set up of a glasshouse experiment, in soil and plant analyses, and in isolation and DNA-based characterisation of rhizobia. Gain insights on basic methods to analyse (bio-)chemical, molecular genetic, and graphical data. Discuss and interpret data in the context of the literature. Prepare a research report in the format of a scientific paper and a poster in the format of a conference paper, partially alone and partially in small groups, using data obtained from the glasshouse experiment.

**Content**
This course is designed to stimulate thinking and promote critical analysis of important processes that occur in the rhizosphere. As part of this course, the knowledge acquired will be used for analysing and interpreting experimental data, as well as, preparing a scientific report and conference-type poster.

The course will cover the relative importance of spatial scales and various physicochemical and microbiological dynamics as influenced by roots. We will discuss root traits and activities that influence the immediately root-surrounding soil and thereby contribute to mineral nutrient mobilization and immobilization. An overview of the most relevant root-microbe symbioses for agroecosystems will be provided and root and microbial traits discussed, which could be of use in efforts towards utilization of intercropping and bioinoculants as a possible means of reducing energetically expensive inputs to farming systems. A special emphasis will be given to the importance of physicochemical features of soils and the chemical forms (= species) of elements important for plant uptake.

Practical experience will be gained with setting up a glasshouse experiment, soil and root sampling, basic soil and plant analyses, isolation of rhizobia, determination of the number of colony forming units (CFU), assays to screen for phosphorus and zinc solubilizing bacteria, DNA extraction, PCR amplification, and restriction fragment length polymorphism analysis (RFLP) of host range determining symbiosis-specific genes.

In short, the processes dealt with in this course occur on a small-scale and are generally (bio)chemical and microbiological in nature. Furthermore, they are generally not taken into account using current methods of agronomic management for plant production. However, they are increasingly being recognized as a potentially useful means of obtaining a resource-efficient and hence, economically and environmentally sustainable agricultural system, including for ecosystem restoration. Therefore, the course will invite for critical reflections and exemplify challenges in translating knowledge from scientific studies and ecology into application for plant production.

**Lecture notes**
For documentation, lecture slides and laboratory protocols will continuously be uploaded to the directory '751-5123-00L Rhizosphere Ecology' on the electronic document exchange platform ILIAS, LDA-ELBA: https://ilias-app2.let.ethz.ch/ilias.php?ref_id=109651&cmd=view&cmdClass=ilobjcoursegui&cmdNode=ef&v=baseClass=ilRepositoryGUI
Major objectives of the colloquium are:

- increased interaction among students and professors
- promotion of presentation and discussion skills
- introduction of graduate students and Master students to the broad field of plant sciences
- providing an interdisciplinary approach to plant sciences as a challenge in the field of plant sciences.

The colloquium offers a unique chance to approach interdisciplinary topics as a challenge in the field of plant sciences.

Students of D-USYS will be reimbursed via bank transfer for train and bus tickets of the zones 121 and 122 (Please send all tickets with the bank details to Christiane Gujan (http://www.plantnutrition.ethz.ch/the-group/people-a-z/person-detail.html?persid=85593).

Maximum number of participants: 18 (Attention: Admission will be on a first come first served basis - inscribe early!)

Students of D-USYS will be reimbursed via bank transfer for train and bus tickets of the zones 121 and 122 (Please send all tickets with the bank details to Christiane Gujan (http://www.plantnutrition.ethz.ch/the-group/people-a-z/person-detail.html?persid=85593).

Can microbes feed the world? (Society for general microbiology) http://www.sgm.ac.uk/en/publications/microbiology-today/past-issues.cfm/publication/can-microbes-feed-the-world

Ecological understanding (Second Edition)

Prerequisites / notice

We ask all course attendees of the agricultural sciences to have passed the exams at the end of the lectures Plant Nutrition I and II (Nutrient cycling in agroecosystems) by Prof. E. Frossard. All others, have to have successfully worked through the e-learning module Plant Nutrition I by Prof. E. Frossard: https://moodle-app2.let.ethz.ch/course/view.php?id=279

Remark: The course is designed to be complimentary to those on Radioisotopes in Plant Nutrition (751-3405-00L), and Nutrient Fluxes in Soil-Plant Systems (751-3404-00L), although some thematic overlaps cannot be avoided. Special emphasis is given to plant-microbe-soil interactions and an appreciation of whole plant functioning in the ecological context. You will familiarize yourself with bacterial isolation, cultivation, enumeration, as well as, molecular detection, discrimination and identification techniques for rhizosphere and root-associated microbes.

Marking will consider the efforts and outcome of work by the individual participant as well as results of work in small groups. Activities for the course will result in posters and reports in the format of a conference and scientific paper. Reports will be due on Friday January 6, 2017.

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 475 of 1571
Challenges in Plant Sciences will cover the following topics:
- Chemical communication among plants, insect and pathogens.
- Specificity in hormone signaling.
- Genetic networks.
- Plant-plant interactions.
- Resilience of tropical ecosystems.
- Regulatory factors controlling cell wall formation.
- Chlorophyll breakdown.
- Innate immunity.
- Disease resistance genes.
- Sustainable agroecosystems.

### Prerequisites / notice
Physics I, II, Environmental Fluid Dynamics

### 701-1251-00L  Land-Climate Dynamics  W  3 credits  2G  S. I. Seneviratne, E. L. Davin

**Abstract**
The purpose of this course is to provide fundamental background on the role of land surface processes (vegetation, soil moisture dynamics, land energy and water balances) for the climate system. The course consists of 2 contact hours per week, including 2 computer exercises.

**Objective**
The students can understand the role of land processes and associated feedbacks for the climate system.

**Lecture notes**
Powerpoint slides will be made available

**Prerequisites / notice**

**Prerequisites**: Introductory lectures in atmospheric and climate science

### 701-1237-00L  Solar Ultraviolet Radiation  W  1 credit  1V  J. Gröbner

**Abstract**
The lecture will introduce the student to the thematics of solar ultraviolet radiation and its effects on the atmosphere and the biosphere. The lecture will cover the modeling and the measurement of solar ultraviolet radiation. The instruments used for solar radiation measurements will also be introduced.

**Objective**
The lecture should enable the student to understand the specific problematics related to solar ultraviolet radiation and its interaction with the atmosphere and the biosphere.
1) Einführung in die Problematik  Motivation
Begriffe (UV-C, UV-B, UV-A,...)
Einfluss der UV Strahlung auf Biosphäre (Mensch, Tier, Pflanzen)
Positive und schädliche Effekte
Wirkungsspektrum, Konzept, Beispiele
UVIndex

2) Geschichtlicher Rückblick
Rayleigh - Himmlsblau
1907: Dorno, PMOD
1970: Bener, PMOD
1980: Berger, Erythemal sunburn meter
1990- : State of the Art

3) Extraterrestrische UV Strahlung
Spektrum
Energieverteilung
Variabilität (Spektral, zeitlich, relativ zu Totalstrahlung)
Satellitenmessungen, Übersicht

4) Einfluss der Atmosphäre auf die solare UV Strahlung
Atmosphärenauflauf
Beinflussende Parameter (Ozon, Wolken, ...)
Ozon, Stratosphärisches versus troposphärisches
Geschichte: Ozondepletion, Polare Ozonlöcher und Einfluss auf die UV Strahlung
Wolken
Aerosole
Rayleighstreuung
Trends (Ozon, Wolken, Aerosole)
Radiation Amplification Factor (RAF)

5-6) Strahlungstransfer
Strahlungstransfergleichung
Modellierung, DISORT
LibRadtran, TUV, FASTRT
Parameter
Sensitivitätsstudien
Vergleiche mit Messungen
3-D Modellierung (MYSTIC)
Beer-Lambert Gesetz

7) Strahlungsmessungen
Instrumente zur Strahlungsmessung
Messgrößen: Irradiance (global, direct, diffus), radiance, aktinischer Fluss
Horizontale und geneigte Flächen
Generelle Problematic: Freiluftmessungen...
Qualitätssicherung

8) Solare UV Strahlungsmessungen
Problematic: Dynamik, Spektrale Variabilität, Alterung
Stabilität
Spezifische Instrumente: Filterradiometer, Spektroradiometer, Dosimetrie
Übersicht Aufbau und Verwendung

9-10) Solare UV Strahlungsmessgeräte
Spektroradiometer, Filterradiometer (Breit und schmalbandig)
Charakterisierung
Kalibriermethoden (Im Labor, im Feld)
Qualitätssicherung, Messkampagnen

11-12) Auswerteverfahren
Atmosphärische Parameter aus Strahlungsmessungen
Ozon, SO2
Albedo (Effektiv versus Lokal)
Aerosol Parameter (AOD, SSA, g, Teilchenverteilungen)
Zusammenspiel Messungen - Modellierung
Aktinische UV-Strahlungsflüsse und Bestimmung von atmosphärischen Photolysefrequenzen

13) UV Klimatologie
Trends
UV Klimatologie durch Messnetze
UV Klimatologie durch Satellitenmessungen am Beispiel von TOMS
Modellierung am Beispiel Meteosat-JRC
UV Rekonstruktionen

Internationale Projekte, Stand der Forschung

### 701-1233-00L Stratospheric Chemistry

**W 4 credits 2V+1U**

T. Peter, A. Stenke

---

**Abstract**

Thermodynamical and kinetic basics: bi- and termolecular reactions, photo-dissociation. Chemical family concept. Chapman chemistry. Radical reactions of oxygen species with nitric oxide, active halogens and odd hydrogen. Ozone depletion cycles. Methane depletion and ozone production in the lower stratosphere. Heterogeneous chemistry on background aerosol. Chemistry and dynamics of the ozone hole. The lecture gives an overview on the manifold reactions which occur in the gas phase, in stratospheric aerosol droplets and in polar cloud particles. The focus is on the chemistry of stratospheric ozone and its influence through natural and anthropogenic effects. Especially the intercontinental air traffic and the ozone depletion caused by FCKW CFC in the mid-latitude and the polar regions as well as coupling with the greenhouse effect.

---

**Objective**

Thermodynamical and kinetic basics: bi- and termolecular reactions, photo-dissociation. Chemical family concept. Chapman chemistry. Radical reactions of oxygen species with nitric oxide, active halogens and odd hydrogen. Ozone depletion cycles. Methane depletion and ozone production in the lower stratosphere. Heterogeneous chemistry on background aerosol. Chemistry and dynamics of the ozone hole. The lecture gives an overview on the manifold reactions which occur in the gas phase, in stratospheric aerosol droplets and in polar cloud particles. The focus is on the chemistry of stratospheric ozone and its influence through natural and anthropogenic effects. Especially the intercontinental air traffic and the ozone depletion caused by FCKW CFC in the mid-latitude and the polar regions as well as coupling with the greenhouse effect.
Content
Short presentation of thermodynamical and kinetic basics of chemical reactions: bi- and thermo molecular reactions, photo-dissociation. Introduction to the chemical family concept: active species, their source gases and reservoir gases. Detailed treatment of the pure oxygen family (odd oxygen) according to the Chapman chemistry. Radical reactions of the oxygen species with nitric oxide, active halogens (chlorine and bromine) and odd hydrogen. Ozone depletion cycles. Methane depletion and ozone production in the lower stratosphere (photo-smog reactions). Heterogeneous chemistry on the background aerosol and its significance for heavy air traffic. Chemistry and dynamics of the ozone hole: Formation of polar stratospheric clouds and chlorine activation.

Lecture notes
Documents are provided in the contact hours.

Literature

Prerequisites / notice
Prerequisites: Basics in physical chemistry are required and an overview equivalent to the bachelor course in atmospheric chemistry (lecture 701-0471-01) is expected.

701-1211-01L Master's Seminar: Atmosphere and Climate 1 W 3 credits 2S H. Joos, O. Stebeler, F. Tummon, M. A. Wiest

Abstract
In this seminar, the process of writing a scientific proposal will be introduced. The essential elements of a proposal, including the peer review process, will be outlined and class exercises will train scientific writing skills. Knowledge exchange between class participants is promoted through the preparation of a master thesis proposal and evaluation of each other's work.

Objective
Training scientific writing skills.

Content

Attendance is mandatory.

651-4095-01L Colloquium Atmosphere and Climate 1 W 1 credit 1K H. Joos, C. Schär, D. N. Bresch, N. Gruber, R. Knutti, U. Lohmann, T. Peter, S. I. Seneviratne, H. Wernli, M. Wild

Abstract
The colloquium is a series of scientific talks by prominent invited speakers assembling interested students and researchers from around Zürich. Students take part of the scientific discussions.

Objective
The students are exposed to different atmospheric science topics and learn how to take part in scientific discussions.

Abstracts
- The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. Natural processes, anthropogenic pollution, legislation of groundwater and surface water and of drinking water as well as water treatment will be discussed for industrialized and developing countries.
- The course covers qualitative (chemistry and microbiology) and quantitative aspects of drinking water from the resource to the tap. The various water resources, particularly groundwater and surface water, are discussed as part of the natural water cycle influenced by anthropogenic activities such as agriculture, industry, urban water systems. Furthermore legislation related to water resources and drinking water will be discussed. The lecture is focused on industrialized countries, but also addresses global water issues and problems in the developing world. Finally unit processes for drinking water treatment (filtration, adsorption, oxidation, disinfection etc.) will be presented and discussed.
- The course introduces the scientific concepts and typical applications of tracers in biogeochemistry. The course covers stable and radioactive isotopes, geochemical tracers and biomarkers and their application in biogeochemical processes as well as regional and global cycles. The course provides essential theoretical background for the lab course "Isotopic and Organic Tracers Laboratory".
- The course aims at understanding the fractionation of stable isotopes in biogeochemical processes. Students learn to know the origin and decay modes of relevant radiogenic isotopes. They discover the spectrum of possible geochemical tracers and biomarkers, their potential and limitations and get familiar with important applications.
- Geogenic and cosmogenic radionuclides (sources, decay chains); stable isotopes in biogeochemistry (natural abundance, fractionation); geochemical tracers for processes such as erosion, productivity, redox fronts; biomarkers for specific microbial processes.
- Students should have a basic knowledge of biogeochemical processes (BSc course on Biogeochemical processes in aquatic systems or equivalent).
- The course addresses the biogeochemical classification and behavior of trace elements, including key processes driving the cycling of important trace elements in aquatic and terrestrial environments and the coupling of abiotic and biotic transformation processes of trace elements. Examples of the role of trace elements in natural or engineered systems will be presented and discussed in the course.
- The students are familiar with the chemical characteristics, the environmental behavior and fate, and the biogeochemical reactivity of different groups of trace elements. They are able to apply their knowledge on the interaction of trace elements with geosphere components and on abiotic and biotic transformation processes of trace elements to discuss and evaluate the behavior and impact of trace elements in aquatic and terrestrial systems.

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 479 of 1571
Content:
(i) Definition, importance and biogeochemical classification of trace elements. (ii) Key biogeochemical processes controlling the cycling of different trace elements (base metals, redox-sensitive and chalcophile elements, volatile trace elements) in natural and engineered environments. (iii) Abiotic and biotic processes that determine the environmental fate and impact of selected trace elements.

Lecture notes
Selected handouts (lecture notes, literature, exercises) will be distributed during the course.

Prerequisites / notice
Students are expected to be familiar with the basic concepts of aquatic and soil chemistry covered in the respective classes at the bachelor level (soil mineralogy, soil organic matter, acid-base and redox reactions, complexation and sorption reactions, precipitation/dissolution reactions, thermodynamics, kinetics, carbonate buffer system).

This lecture is a prerequisite for attending the laboratory course "Trace elements laboratory".

701-1346-00L Carbon Mitigation

Abstract
Future change is not only kept within a reasonable bound when CO2 emissions are drastically reduced. In this course, we will discuss a portfolio of options involving the alteration of natural carbon sinks and carbon sequestration. The course includes introductory lectures, presentations from guest speakers from industry and the public sector, and final presentations by the students.

Objective
The goal of this course is to investigate, as a group, a particular set of carbon mitigation/sequestration options and to evaluate their potential, cost, and their consequences.

Content
From the large number of carbon sequestration/mitigation options, a few options will be selected and then investigated in detail by the students. The results of the research will then be presented to the other students, involved faculty, and discussed in detail by the whole group.

Lecture notes
None

Literature
Will be identified based on the chosen topic.

Prerequisites / notice
Exam: No final exam. Pass/No-Pass is assigned based on the quality of the presentation and ensuing discussion.

Abstract
Students of this course will discuss current topics from the field of infectious disease biology. From a list of publications, each student chooses some themes that he/she is going to explain and discuss with all other participants and under supervision. The actual topics will change from year to year corresponding to the progress and new results occurring in the field.

Objective
This is an advanced course that will require significant student participation. Students will learn how to evaluate and present scientific literature and trace the development of ideas related to understanding the ecology and evolutionary biology of infectious diseases.

Content
A core set of ~10 classic publications encompassing unifying themes in infectious disease ecology and evolution, such as virulence, resistance, metapopulations, networks, and competition will be presented and discussed. Pathogens will include bacteria, viruses, and fungi. Hosts will include animals, plants, and humans.

Prerequisites / notice
None

Literature
Publications and class notes can be downloaded from a web page announced during the lecture.

Abstract
The course provides methods and tools for ecological evaluations dealing with nature conservation or landscape planning. It covers census methods, ecological criteria, indicators, indices and critically appraises objectivity and accuracy of the available methods, tools and procedures. Birds and plants are used as main example guiding through different case studies.

Objective
Students will be able to:
1) critically consider biological data books and local, regional, and national inventories;
2) evaluate the validity of ecological criteria used in decision making processes;
3) critically appraise the handling of ecological data and criteria used in the process of evaluation
4) perform an ecological evaluation project from the field survey up to the descison making and planning.

Prerequisites / notice
None

Abstract
This course provides training for advanced students (master, doctoral or post-doctoral level) in how to measure and collect genetic diversity data from populations, experiments, field and laboratory. Different DNA/RNA extraction, genotyping and gene expression techniques will be addressed. Choice of topic by demand and/or availability of data.

Objective
To learn and improve on standard and modern methods of genetic data collection. Examples are: use of pyrosequencing, expression analysis, SNP-typing, next-generation sequencing, etc.

Prerequisites / notice

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 480 of 1571
This six-day winter school aims at teaching advanced Master students, PhD students and postdocs on landscape genetics. It provides both theoretical background as well as hands-on exercises on major topics of contemporary landscape genetics and landscape genomics such as landscape effects on gene flow and adaptive genetic variation in a landscape context. Researchers as well as conservation managers make increasing use of landscape genetic thinking and methods. Landscape genetics builds on concepts and methods from landscape ecology and population genetics. This winter school introduces advanced students to major concepts and methods of landscape genetics and genomics, i.e. (i) the study of landscape effects on dispersal and gene flow and (ii) the study of the interactions between the environment and adaptive genetic variation. The winter school focuses on currently used methods and hands-on exercises. It is specifically aimed at the needs of advanced students (Master, PhD and postdocs).

Prerequisites: good knowledge in population genetics and experience in using GIS is required.

Abstract
This six-day winter school aims at teaching advanced Master students, PhD students and postdocs on landscape genetics. It provides both theoretical background as well as hands-on exercises on major topics of contemporary landscape genetics and landscape genomics such as landscape effects on gene flow and adaptive genetic variation in a landscape context.

Objective
Landscape genetics is an evolving scientific field of both basic and applied interest. Researchers as well as conservation managers make increasing use of landscape genetic thinking and methods. Landscape genetics builds on concepts and methods from landscape ecology and population genetics. This winter school introduces advanced students to major concepts and methods of landscape genetics and genomics, i.e. (i) the study of landscape effects on dispersal and gene flow and (ii) the study of the interactions between the environment and adaptive genetic variation. The winter school focuses on currently used methods and hands-on exercises. It is specifically aimed at the needs of advanced students (Master, PhD and postdocs).

Content
Themes:
(1) Genetic data: estimates of gene flow; genetic distances; assignment tests and parentage analysis.
(2) Landscape data: landscape resistance and least cost paths; transects.
(3) Landscape genetic analysis of gene flow: partial Mantel tests and causal modeling; multiple regression on distance matrices and mixed effects models.
(4) Networks and graph theory.
(5) Landscape genomics: adaptive genetic variation; outlier detection; environmental association.
(6) Overlays: Bayesian clustering; barrier detection; kriging.

Lecture notes
Hand-outs will be distributed.

Literature
The course requires 4 hours of preparatory reading of selected papers on landscape genetics. These papers will be distributed by e-mail.

Prerequisites
Grading will be according to a short written report (4 pages) on one of the themes of the course (workload: about 8 hours) and according to student contributions during the course.

Prerequisites: students should have basic knowledge in population genetics, GIS and R.

551-0737-00L Experimental Ecology: Evolution and Ecology W 2 credits 2S S. Bonhoeffer

Abstract
Interaction seminar. Student-mediated presentations, guests and discussions on current themes in ecology, evolutionary and population biology.

Objective
Getting familiar with scientific arguments and discussions. Overview of current research topics. Making contacts with fellow students in other groups.

Content
Scientific talks and discussions on changing subjects.

Lecture notes
None

Literature
None

Human-Environment Systems

Number Title Type ECTS Hours Lecturers
701-1651-00L Environmental Governance W 3 credits 2G E. Lieberherr, G. de Bure, R. Schweizer

Abstract
The course addresses environmental policies, focusing on new steering approaches, which are generally summarized as environmental governance. The course also provides students with tools to analyze environmental policy processes and assesses the key features of environmental governance by examining various practical environmental policy examples.

Objective
To understand how an environmental problem may (not) become a policy and explain political processes, using basic concepts and techniques from political science.

To analyze the evolution as well as the key elements of environmental governance.

To be able to identify the main challenges and opportunities for environmental governance and to critically discuss them with reference to various practical policy examples.

Content
Improvements in environmental quality and sustainable management of natural resources cannot be achieved through technical solutions alone. The quality of the environment and the achievement of sustainable development strongly depend on human behavior and specifically the human uses of nature. To influence human behavior, we rely on public policies and other societal rules, which aim to steer the way humans use natural resources and their effects on the environment. Such steering can take place through government intervention alone. However, this often also involves governance, which includes the interplay between governmental and non-governmental actors, the use of diverse tools such as emission standards or financial incentives to steer actors' behavior and can occur at the local, regional, national or international level.

In this course, we will address both the practical aspects of as well as the scientific debate on environmental governance. The course gives future environmental experts a strong basis to position themselves in the governance debate, which does not preclude government but rather involves a spectrum from government to governance.

Key questions that this course seeks to answer: What are the core characteristics of environmental challenges from a policy perspective? What are the key elements of 'environmental governance' and how legitimate and effective are these approaches in addressing persistent environmental challenges?

Lecture notes
Lecture slides and additional course material will be provided throughout the semester.

Literature
We will mostly work with readings from the following books:
Prerequisites / notice

A detailed course schedule will be made available at the beginning of the semester.

We recommend that students have (a) three-years BSc education of a (technical) university; (b) successfully completed Bachelor introductory course to environmental policy (Entwicklungen nationaler Umweltpolitik (or equivalent)) and (c) familiarity with key issues in environmental policy and some fundamental knowledge of one social science or humanities discipline (political science, economics, sociology, history, psychology, philosophy)

Abstract

Technological change plays a crucial role in efforts to create a more sustainable future. In this context, policy decision makers must design rules that minimize its risks and maximize its benefits for society at large. The course discusses this challenge from an interdisciplinary perspective taking into account legal, economic, historical, development and environmental aspects.

Objective

- to recognize the challenges and opportunities of technological change in terms of sustainable development
- to become familiar with policy instruments to promote innovation
- to improve understanding of political decision-making processes in the regulation of science & technology
- improved understanding of the role of science and technology in the context of human and societal development

Content

Science and Technology Policy is normally associated with the improvement of national competitiveness; yet, it is also an integral part of effective environmental and development policies. The course will discuss the challenges and opportunities of technological change in terms of sustainable development and show how public policy on the national and the international level is responding to this change.

In this context, students are to become familiar with the basic principles of political economy and New Growth Theory and how such theories help explain political decisions as well as political outcomes in the area of Science, Technology and Innovation. State interventions are either designed to regulate (e.g. environmental regulations, anti-trust law) or facilitate (e.g. intellectual property rights protection, public investment in R&D and technical education, technology transfer) technological change. This will be illustrated by looking at different industries and different national systems of innovation. Subsequently the positive and negative consequences for society and the natural environment will be discussed from a short-term and a long-term perspective.

Lecture notes

Reader with issue-specific articles. E-version is partly available under https://www.ethz.ch/content/specialinterest/gess/cis/international-relations/en/teaching/materials/tech.html

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 482 of 1571

The 2-hour course (5-7 p.m.) will be held as a series of lectures. The course materials will be available in form of an electronic Reader at the beginning of the semester.

Students will be asked to give a (a) presentation (15 Minutes) or write a review paper based on a article selected from the electronic script, and (b) they will have to pass a written test at the end of the course in order to obtain 3 credit points in the ECTS System. In the final mark (a) will have a weight of 40% and (b) 60%.

The course deals with transdisciplinary (td) methods, concepts and their applications in the context of case studies and other problem oriented research projects. Td methods are used in research at the science-society interface and when collaborating across scientific disciplines. Students learn to apply methods within a functional framework. The format of the course is seminar-like, interactive.
Objective
At the end of the course students should:

Know:
- Function, purpose and algorithm of a selected number of transdisciplinary methods

Understand:
- Functional application in case studies and other problem oriented projects

Be able to reflect on:
- Potential, limits, and necessity of transdisciplinary methods

Be prepared for:
- Transdisciplinary Case Study 2017

Content
The lecture is structured as follows:

- Overview of concepts and methods of inter-transdisciplinary integration of knowledge, values and interests (approx. 20%)  
- Analysis of a selected number of transdisciplinary methods focusing problem framing, problem analysis, and impact (approx. 50%)  
- Practical application of the methods in a broader project setting (approx. 30%)

Lecture notes
Handouts are provided by the lecturers

Literature
Selected scientific articles and book-chapters

Prerequisites / notice
This course is recommended and helpful for students participating in the Transdisciplinary Case Study 2017.

701-1551-00L Sustainability Assessment  W  3 credits  2G  P. Krütli, C. E. Pohl

Abstract
The course deals with the concepts and methodologies for the analysis and assessment of sustainable development. A special focus is given to the social dimension and to social justice as a guiding principle of sustainability as well as to trade-offs between the three dimensions of sustainability.

Objective
At the end of the course students should:

Know:
- core concepts of sustainable development, and;
- the concept of social justice - normatively and empirically - as a core element of social sustainability;
- important empirical methods for the analysis and assessment of local / regional sustainability issues.

Understand and reflect on:
- the challenges of trade-offs between the different goals of sustainable development;
- and the respective impacts on individual and societal decision-making.

Content
The course is structured as follows:

- Overview of rationale, objectives, concepts and origins of sustainable development;
- Importance and application of sustainability in science, politics, society, and economy;
- Sustainable (local / regional) development in different national / international contexts;
- Analysis and evaluation methods of sustainable development with a focus on social justice;
- Trade-offs in selected examples.

Lecture notes
Handouts.

701-1631-00L Foundations of Ecosystem Management  W  5 credits  3G  J. Ghazoul, C. Garcia

Abstract
This course introduces the broad variety of conflicts that arise in projects focusing on sustainable management of natural resources. It explores case studies of ecosystem management approaches and considers their practicability, their achievements and possible barriers to their uptake.

Objective
Students should be able to

a) propose appropriate and realistic solutions to ecosystem management problems that integrate ecological, economic and social dimensions across relevant temporal and spatial scales.

b) identify important stakeholders, their needs and interests, and the main conflicts that exist among them in the context of land and resource management.
Content

Traditional management systems focus on extraction of natural resources, and their manipulation and governance. However, traditional management has frequently resulted in catastrophic failures such as, for example, the collapse of fish stocks and biodiversity loss. These failures have stimulated the development of alternative ecosystem management approaches that emphasise the functionality of human-dominated systems. Inherent to such approaches are system-wide perspectives and a focus on ecological processes and services, multiple spatial and temporal scales, as well as the need to incorporate diverse stakeholder interests in decision making. Thus, ecosystem management is the science and practice of managing natural resources, biodiversity and ecological processes, to meet multiple demands of society. It can be local, regional or global in scope, and addresses critical issues in developed and developing countries relating to economic and environmental security and sustainability.

This course provides an introduction to ecosystem management, and in particular the importance of integrating ecology into management systems to meet multiple societal demands. The course explores the extent to which human-managed terrestrial systems depend on underlying ecological processes, and the consequences of degradation of these processes for human welfare and environmental well-being. Building upon a theoretical foundation, the course will tackle issues in resource ecology and management, notably forests, agriculture and wild resources within the broader context of sustainability, biodiversity conservation and poverty alleviation or economic development. Case studies from tropical and temperate regions will be used to explore these issues. Dealing with ecological and economic uncertainty, and how this affects decision making, will be discussed. Strategies for conservation and management of terrestrial ecosystems will give consideration to landscape ecology, protected area systems, and community management, paying particular attention to alternative livelihood options and marketing strategies of common pool resources.

701-1671-00L

Sampling Techniques for Forest Inventories

Abstract
Introduction to design and model assisted sampling theory for finite populations as well as to the infinite population model for forest inventory. Two-phase two-stage forest inventories with simple or cluster sampling. Small area estimation. Presentation of the Swiss National Inventory.

Short introduction to Kriging techniques.

Objective
Students should have a good understanding of the concepts of general sampling theory in a modern framework. They should also be able to, if necessary, to read more specialized books or research papers.

Content

Lecture notes
Sampling techniques for forest inventories. Daniel Mandalayaz, Chapman and Hall. A free electronic copy of the book is also available. A PDF file containing parts of the book will be mailed to the participants.

Literature
Sampling methods, remote sensing and GIS multisource forest inventory M. Köhö, S. Magnusson, M. Marchetti, 2006, Springer.

Prerequisites / notice
A simulation software will be used throughout the lectures to illustrate the theoretical developments. Upon request a half day field demonstration can be organized at the WSL outside the lecture time. A repertorium for the exam is also offered.
Stable Isotope Ecology of Terrestrial Ecosystems ■ W 2 credits 2G R. A. Werner, N. Buchmann, A. Gessler

Abstract
This course provides an overview about the applicability of stable isotopes (carbon 13C, nitrogen 15N, oxygen 18O and water 2H) to process-oriented ecological research. Topics focus on stable isotopes as indicators for the origin of pools and fluxes, partitioning of composite fluxes as well as to trace and integrate processes. In addition, students carry out a small project during lab sessions.

Objective
Students will be familiar with basic and advanced applications of stable isotopes in analyses on plants, soils, water and trace gases, know the relevant approaches, concepts and recent results in stable isotope ecology, know how to combine classical and modern techniques to solve ecophysiological or ecological problems, learn to design, carry out and interpret a small IsoProject, practice to search and analyze literature as well as to give an oral presentation.

Content
The analyses of stable isotopes often provide insights into ecophysiological and ecological processes that otherwise would not be available with classical methods only. Stable isotopes proved useful to determine origin of pools and fluxes in ecosystems, to partition composite fluxes and to integrate processes spatially and temporally.

Lecture notes
Handouts will be available on the webpage of the course.

Prerequisites / notice
This course is based on fundamental knowledge about plant ecophysiology, soil science, and ecology in general. Course will be taught in English.

Literature
Folien zu jeden Vorlesungsblock werden zur Verfügung gestellt.

Earth Observation
102-0675-00L

W 4 credits 3G I. Hajnsek, E. Baltsavias

Abstract
The aim of the course is to provide the fundamental knowledge about earth observation sensors, techniques and methods for bio/geophysical environmental parameter estimation. Students should know at the end of the course:
1. Basics of measurement principle
2. Fundamentals of image acquisition
3. Basics of the sensor-specific geometries
4. Sensor-specific determination of environmental parameters

Objective
Die Lehrveranstaltung gibt einen Einblick in die heutige Erdbewachung mit dem folgenden skizzierten Inhalt:
1. Einführung in die Fernerkundung von Luft- und Weltraum gestützten Systemen
2. Einführung in das Elektromagnetische Spektrum
3. Einführung in optische Systeme (optisch und hyperspektral)
4. Einführung in Mikrowellen-Technik (aktiv und passiv)
5. Einführung in atmosphärische Systeme (meteo und chemisch)
6. Einführung in die Techniken und Methoden zur Bestimmung von Umweltparametern
7. Einführung in die Anwendungen zur Bestimmung von Umweltparametern in der Hydrologie, Glaziologie, Forst und Landwirtschaft, Geologie und Topographie

Lecture notes
Folien zu jeden Vorlesungsblock werden zur Verfügung gestellt.

Prerequisites / notice
This course is based on fundamental knowledge about earth observation sensors, techniques and methods for bio/geophysical environmental parameter estimation. Students should know at the end of the course:
1. Basics of measurement principle
2. Fundamentals of image acquisition
3. Basics of the sensor-specific geometries
4. Sensor-specific determination of environmental parameters

Element Balancing and Soil Functions in Managed Ecosystems
701-1681-00L

W 3 credits 2G A. Keller

Abstract
Applying element balances of agricultural soils and the assessment of soil functions for real applications in computer exercises to design preventive strategies against soil pollution and to support sustainable management of regional agroecosystems also in the context of spatial planning procedures.

Objective
The students learn to critically assess changes in land use management on element cycles in agro-ecosystems and to assess soil services (soil functions). You design solutions for chemical problems in soil protection at the regional scale and learn to assess soil functions using different methods.

Content
The students apply a regional balance model for Swiss regions in computer exercises and assess major soil functions of agricultural soils. You assess the sustainability of current land use and analyse management options improving nutrient and metal cycling in agro-ecosystems. The students will have the opportunity to calculate specific scenarios regarding land use management and environmental changes. Special focus we be paid on the soil services such as regulation-, production function and soil as habitat, and the assessment of these functions based on soil mapping data.

Lecture notes
Literature
Lecture notes, Literature for a case study
Literature will be provided.

Geographic Data Processing with Python and ArcGIS
701-1776-00L

W 1 credit 2U A. Balteinsweiler

Abstract
The course communicates the basics of the programming language Python and gives a general introduction into the geoprocessing framework of ArcGIS. In addition various Python libraries (numpy, Scipy, GDAL, statsmodels, pandas) will be introduced which increase the functional range of the geoprocessing framework substantially.

Objective
The students learn the basics of geographic data processing based on the programming language Python and ArcGIS (arcpy). They get the ability to implement their own processing sequences and models for geoprocessing. The students are able to integrate open source libraries in their python scripts and know how the libraries are applied to spatial datasets.

Content
The course communicates a deepened understanding of the geoprocessing frameworks arcpy and covers basic language concepts of Python such as datatypes, control structures and functions. In addition the application of popular Python libraries in combination with spatial datasets will be shown.

Lecture notes
Lecture notes, exercises and worked out solutions to them will be provided.

Dendroecology
701-1682-00L

W 3 credits 3G C. Bigler, A. Rigling, K. Treydte

Abstract
The course dendroecology offers theoretical and practical aspects of dendrochronology. The impact of different environmental influences on tree-ring characteristics will be shown. The students learn various methods to date tree rings and they understand how ecological and environmental processes and patterns can be reconstructed using tree rings.
The seminar is designed for students and researchers (MA, PhD, PostDoc) who use inter- and transdisciplinary elements in their projects.

The participants understand the specific challenges of inter- and transdisciplinary research in general and in the context of sustainable development in particular. They know methods and concepts to address these challenges and apply them to their research projects.

The class language is German and English, on request English only.

Requirements:
- Basics of biology, ecology and forest ecology
- Work on an independent research question related to a dendroecological topic and write a short literature review based on scientific papers.
- Work out an independent research question related to a dendroecological topic and write a short literature review based on scientific papers.
- Understand the general challenges of inter- and transdisciplinary research in particular. They know methods and concepts to address these challenges and apply them to their research projects.
- Increasingly, scientists need to interact more with people and institutions outside the scientific community. This requires the capability to understand and critically reflect about scientific activities and consequences for society and environment and to communicate with confidence. The CCES Winter School builds capacity to create and manage interactions between science and society.

</tr>
</tbody>
</table>

### Objective
- Understand how wood is configured and how tree-ring structures are formed.
- Are able to identify and describe different tree-ring structures.
- Understand the theoretical and practical aspects of the dating of tree rings.
- Know the effects of different abiotic and biotic environmental influences (climate, site, competition, insects, fire, physical-mechanical influences) on trees and tree rings.
- Discover a tool for understanding and reconstructing global change processes.
- Learn software to date, standardize and analyze tree rings.
- Get hands-on experience based on the demonstration of wood (increment cores, stem discs, wedges), sampling in the field, and measuring and dating of tree rings in the tree-ring lab.
- Solve R-based exercises (R tutorial will be provided) and answer questions in Moodle.
- Work out an independent research question related to a dendroecological topic and write a short literature review based on scientific papers.

### Content
- Overview and history of dendrochronology
- Principles of dendrochronology
- Evolution of tree rings
- Formation and structure of wood and tree rings
- Intra-seasonal tree-ring growth
- Continuous and discontinuous tree-ring characteristics
- Sampling and measuring
- Crossdating methods (visual, skeleton plots, quantitative)
- Standardization of tree-ring series
- Development of tree-ring chronologies
- Dendrogeomorphology, dendrohydrolgy, dendroglaciology
- Stable isotopes
- Climate, climate-growth relationships, climate reconstructions
- Age and size structures, forest dynamics (regeneration, growth, competition, mortality)
- Disturbance ecology (fire, insects, blowdown)
- Application of tree-ring research in practice and in interdisciplinary research projects
- Field and lab day (date for one entire day or two half days will be searched together with the students in the beginning of the semester): discussion of different dendroecological questions in the forest; sampling of trees; insight into different tree-ring projects in the lab (Swiss Federal Institute for Forest, Snow and Landscape Research WSL)

### Literature
- Lecture notes (in English) will be handed out in the class.
- Literature will be made available through various channels and also be made available through the teaching materials.

### Prerequisites / notice
- Time schedule (total of 90 hours): There will be 12 lectures with each two hours (total of 24 hours presence) as well as a field and lab day (8 hours presence). In addition, the students are expected to put 18 hours into the preparation of the lectures as well as 18 hours for the exercises. 4 hours are reserved for the lab work and 18 hours for the project.

The seminar is specifically suitable for PhD or PostDoc researchers. It is open to master students (minor "global change and sustainability") and further interested people, who preferably are preparing, or working on, a project/thesis.

The program will be announced through various channels and also be made available through the teaching materials.

The CCES Winter School builds capacity to create and manage interactions between science and society.
The CCES Winter School provides insights into theoretical and methodological foundations on the challenges of knowledge exchange and dialogue between science and practice. It offers media and knowledge management training for enhancing stakeholder involvement. Selected case examples support group work discussions and analysis. Real stakeholder meetings are organized for testing techniques in view of identifying diverse expectations and needs and working towards solutions. Together the Winter School participants and stakeholders experience and develop ways for better linking environmental science and practice.

The course is structured by an intimate interconnection between theoretical inputs, reflection and translation into own topics and projects. The course offers insights into a wide spectrum of crossing boundaries between science and practice (e.g. information, consultation, co-production of knowledge) and provides test fields for and room for reflection of own experiences.

The first block with inputs, individual and group work, and reflection is a preparation for the second block, which focuses on implementation of stakeholder interactions. Between the two blocks coached project work is offered.

The CCES Winter School takes place at Propstei Wislikofen in January and February 2017. Accommodation is provided.

Course materials (e.g. slides, articles, toolboxes) are provided for preparatory reading and during the course (in Moodle).

Collection of key literature in online reader in Moodle.

The CCES Winter School addresses PhD students and postdocs from environmental and natural sciences, engineering, and social sciences related to sustainable development. Participants are required to apply online providing key information about their interest and PhD project - details and application form can be found here: http://www.ccges.ethz.ch/winterschool/

The Winter School runs with a maximum of 25 participants.

The Winter School 2017 will be delivered by a diverse group of coaches and experienced intermediaries:
- Christoph Clases (AOC Unternehmensberatung)
- Pius Krüti (USYS TdLab, ETH Zurich)
- Christian Pohl (USYS TdLab, ETH Zürich)
- A. Ghazoul, G. Hirsch Hadorn, J. Patt
- Patricia Fry (Wissensmanagement Umwelt GmbH)

The total time requirement is in the range of 120 hours, equivalent to 4 ECTS. The learning control focuses on i) active participation, engagement in case examples, and reflection against the background of own projects and experiences, 2) active team involvement in implementing tasks on information, consultation, and co-production of knowledge, including the design and organization of stakeholder meetings. The course is successfully completed by pass (pass/no pass, thus no marks). The language of the Winter School is English. Stakeholder meetings will be in the local language (Swiss German) and translation into English is provided.

There is a participation fee of 400 CHF for the course, which is a contribution to the costs for the two blocks at the seminar venue Propstei Wislikofen, organizational support as well as material for the stakeholder meetings. Travel expenses to the venue are to be borne by the participants.

**Abstract**

This course introduces students to foundational texts that led to the emergence of the environment as a subject of scientific importance, and shaped its relevance to society. Above all, the course seeks to give confidence and raise enthusiasm among students to read more widely around the broad spectrum of environmental sciences and management both during the course and beyond.

**Objective**

The course will provide students with opportunities to read, discuss, evaluate and interpret key texts that have shaped the environmental movement and, more specifically, the environmental sciences. Students will gain familiarity with the foundational texts, but also understand the historical context within which their academic and future professional work is based. More directly, the course will encourage debate and discussion of each text that is studied, from both the original context as well as the modern context. In so doing students will be forced to consider and justify the current societal relevance of their work.

**Content**

The course will be run as a book reading club. The first session will provide a short introduction as to how to explore a particular text (that is not a scientific paper) to identify the key points for discussion.

Thereafter, in each week a text (typically a chapter from a book or a paper) considered to be seminal or foundational will be assigned by a course lecturer. The lecturer will introduce the selected text with a brief background of the historical and cultural context in which it was written, with some additional biographical information about the author. He/she will also briefly explain the justification for selecting the particular text.

The students will read the text, with two to four students (depending on class size) being assigned to present it at the next session. Presentation of the text requires the students to prepare by, for example:
- identifying the key points made within the text
- identifying issues of particular personal interest and resonance
- considering the impact of the text at the time of publication, and its importance now
- evaluating the text from the perspective of our current societal and environmental position

Such preparation would be supported by a mid-week tutorial discussion (about 1 hour) with the assigning lecturer.

These students will then present the text (for about 15 minutes) to the rest of the class during the scheduled class session, with the lecturer facilitating the subsequent class discussion (about 45 minutes). Towards the end of the session the presenting students will summarise the emerging points (6 minutes) and the lecturer will finish with a brief discussion of how valuable and interesting the text was (10 minutes). In the remaining 15 minutes the next text will be presented by the assigning lecturer for the following week.

**Literature**

The specific texts selected for discussion will vary, but examples include:
- Leopold (1949) A Sand County Almanach
- Carson (1962) Silent Spring
- Jared Diamond (2005) Collapse

Discussions might also encompass films or other forms of media and communication about nature.
### EAWAG PhD Skills Seminar

**701-0017-00L**

**Abstract**

Purpose is to discuss and teach the professional skills that are needed in science (or future career in science). Course consists of lectures and practical sessions. Course is organized by Eawag scientists.

**Objective**

Purpose is to discuss and teach the professional skills that are needed in science (or future career in science). Course consists of lectures and practical sessions.

**Content**

Lectures and exercises in:
- Project management
- Application of research grants
- Scientific publishing
- Reviewing
- Writing papers
- Applying jobs
- Job interviews

---

### Basic Concepts of Management

**701-0763-00L**

**Abstract**

This course deals with fundamental and proven management concepts. The lecturers emphasize the practical applicability of concepts. The course was designed in close cooperation with practitioners; e.g. will Mr. S. Baldenweg, mechanical engineer ETH, MBA Insead, share his experience in several guest lectures.

**Objective**

Students will be familiar with basic general management concepts.

- learn about the fundamental concepts of strategy development with practical examples.
- get a rough overview on the concepts of financial management.
- learn about the strategic positioning of small departments within larger organisations.
- learn about the fundamental mechanisms for handling change, and will be able to recognise these situations.
- learn the basic principles of project management and of successful self-management.
- will reflect on customer-oriented information representation.

**Content**

Die finanzielle Abbildung von Organisationen und Projekten wird übersichtsweise dargestellt und die stufengerechte Darstellung von Informationen anhand von realen Beispielen besprochen.

Die Inhalte werden durchgängig mit Praxisbeispielen illustriert.

**Lecture notes**

Skripten werden elektronisch zur Verfügung gestellt.

**Literature**

---

### Research Ethics

**851-0180-00L**

**Abstract**

This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

**Objective**

The main goal of this course is to enhance the student's ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry
---------------------------------------
Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)
----------------------------------------------------------
Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

ECTS: 30
Abstract
The course covers the fundamental concepts of computer programming with a focus on systematic algorithmic problem solving. Taught language is C++. No programming experience is required.

Objective
Primary educational objective is to learn programming with C++. When successfully attended the course, students have a good command of the mechanisms to construct a program. They know the fundamental control and data structures and understand how an algorithmic problem is mapped to a computer program. They have an idea of what happens "behind the scenes" when a program is translated and executed.

Secondary goals are an algorithmic computational thinking, understanding the possibilities and limits of programming and to impart the way of thinking of a computer scientist.

Content
The course covers fundamental data types, expressions and statements, (Limits of) computer arithmetic, control statements, functions, arrays, structural types and pointers. The part on object orientiation deals with classes, inheritance and polymorphy, simple dynamic data types are introduced as examples.

In general, the concepts provided in the course are motivated and illustrated with algorithms and applications.

Lecture notes
A script written in English will be provided during the semester. The script and slides will be made available for download on the course web page.

Literature
Bjarne Stroustrup: Einführung in die Programmierung mit C++, Pearson Studium, 2010

Prerequisites / notice
From AS 2013, an admission to the exam does not any more formally require an attending of the recitation sessions. Handing in solutions to the weekly exercise sheets is thus not mandatory, but we strongly recommend it.

Examination is a one hour-long written test.

Abstract
Digital and analogue signals and their representation. Combinational and sequential circuits and systems, boolean algebra, K-maps. Finite state machines. Memory and computing building blocks in CMOS technology, programmable logic circuits.

Objective
Deepen and extend the knowledge from lecture and exercises, usage of design software Quartus II as well as an oscilloscope

Content
The contents of the digital circuits laboratory will deepen and extend the knowledge of the correspondent lecture and exercises. With the help of the logic device design software Quartus II different circuits will be designed and then tested on an evaluation board. You will build up the control for a 7-digit display as well as an adder and you will create different types of latches and flip-flops. At the end of the laboratory a small synthesizer will be programmed that is able to play self-created melodies. At the same time the usage of a modern oscilloscope will be taught in order to analyse the programmed circuits through the digital and analogue inputs.

Abstract
In this lecture we treat problems in applied analysis. The focus lies on the simplest cases of three fundamental types of partial differential equations of second order: the Laplace equation, the heat equation and the wave equation.

Content
1.) Klassifizierung von PDE's
   - linear, quasilinear, nicht-linear
   - elliptisch, parabolisch, hyperbolisch

2.) Quasilineare PDE
   - Methode der Charakteristiken (Beispiele)

3.) Elliptische PDE
   - Bsp: Laplace-Gleichung
   - Harmonische Funktionen, Maximumsprinzip, Mittelwerts-Formel.
   - Methode der Variablenseparation.

4.) Parabolische PDE
   - Bsp: Wärmeleitungsgleichung
   - Bsp: Inverse Wärmeleitungsgleichung
   - Methode der Variablenseparation

5.) Hyperbolische PDE
   - Bsp: Wellengleichung
   - Formel von d'Alembert in (1+1)-Dimensionen
   - Methode der Variablenseparation

6.) Green'sche Funktionen
   - Rechnen mit der Dirac-Deltafunktion
   - Idee der Green'schen Funktionen (Beispiele)

7.) Ausblick auf numerische Methoden
   - 5-Punkt-Diskretisierung des Laplace-Operators (Beispiele)

Prerequisites: Analysis I and II, Fourier series (Komplexe Analyse)
402-0053-00L  
**Physics II**  
The goal of the Physics II class is an introduction to quantum mechanics (lecture given in German)  

**Abstract**  
The goal of the Physics II class is an introduction to quantum mechanics (lecture given in German)  

**Objective**  
The goal of the Physics II class is an introduction to quantum mechanics (lecture given in German)  

**Content**  
Kap. 1-Teil 1 Die Grundlagen der elektromagnetischen Wellen und der Quantenphysik  
Wärmeinstrahlung, Elektronennetzespektrum, Ausgangspunkt Maxwellschen, Verteilungsgesetze, Materialgleichungen für die Herleitung der Wellengleichung (Skript wird verteilt), Lüttig der Wellengleichung: ebene Welle, Wellenfronten, Dispersion, Photoelektrische Emission, Photonen, Dualismus Teilchen-Welle bei Photonen, Interferenz, Wellenpack (Skript wird verteilt)  

Kap. 1-Teil 2 Die Grundlagen der Quantenphysik  
Streuung von Strahlungen durch freie Elektronen, Compton-Effekt, Impuls von Photonen, Bohrsche Atommodel und stationäre Zustände, Impulserhaltung bei Absorption und Emission von Photonen, Dualismus Teilchen-Welle bei Elektronen, Materiewelle, Beugung (Skript wird verteilt), Heisenbergsche Unschärferelationen  

**Kapitel 2: Quantenmechanik**  
Wellenfunktion und Wahrscheinlichkeitsdichte, Schrödingergleichung, freies Teilchen, Dispersion der Materiewelle, Potentialstufe, Tunneneffekt, Teilchen im Potentiaalkasten, harmonische Oszillator, zeitabhängige Schrödingergleichung, formale Theorie der Quantenmechanik (Operator, Observable, Eigenwert, Erwartungswert, Kommutator)  

**Kapitel 3: Atome mit einem Elektron**  
Wasserstoffatom, Quantisierung des Drehimpulses, Einelektronen-Wellenfunktion in Zentralfeldern (Atomorbital), Zeeman-Effekt, Elektronenspin, Spin-Bahn-Wechselwirkung  

**Kapitel 4: Atome mit vielen Elektronen**  
Born-Oppenheimer Näherung, Heliumatom, Ausschliessungsprinzip von Pauli, Periodensystem, Elektronenstruktur der Atome, Röntgenspektren, Auswahlregeln  

**Kapitel 5: Moleküle**  
Wasserstoffmolekül-Ion, Moleküllwellenfunktion zweiatomiger Moleküle, Kovalente Bindung, Hybrid-Oberfeld, Molekule Rotation und Schwingung  

**Kapitel 6 und 13: Festkörper und Quantenstatistik**  
Typen der Festkörper, Bändermodell der Festkörper, "Tight Binding Model" explizit hergeleitet, Modell der freien Elektronen, Elektronenbewegung in einer periodischen Struktur, "effective mass approximation", Leiter, Isolator und Halbleiter, Quantentheorie der elektrischen Leitfähigkeit, Fermienergie, Löcher, Strahlungsübergänge in Festkörpern, Fermi-Dirac Statistik, Zustandsdichte, Bose-Einstein Statistik, Herleitung Planckscbe Strahlungsgesetz, Elektronen in Metallen und Halbleiter (Anwendung der Fermi-Dirac Verteilung), Dotierungen in Halbleitern

**Lecture notes**  
Es wird nur für spezielle Themen Skripte verteilt (online)  

**Literature**

**Abstract**  

**Objective**  
Introduction to mathematical signal processing and system theory.  

**Content**  

**Lecture notes**  
Lecture notes, problem set with solutions.

227-0013-00L  
**Computer Engineering I**  
The course provides knowledge about structures and models of digital systems (abstract data types finite state automata, dependence and process graphs), assembler and compiler, control path and data path, pipelining, speculation techniques, superscalar computer architectures, memory hierarchy and virtual memory, operating system, processes and threads.  

**Abstract**  
The course provides knowledge about structures and models of digital systems (abstract data types finite state automata, dependence and process graphs), assembler and compiler, control path and data path, pipelining, speculation techniques, superscalar computer architectures, memory hierarchy and virtual memory, operating system, processes and threads.  

**Objective**  
Logical and physical structure of computer systems. Introduction to principles in hardware design, datapath and control path, assembler programming, modern architectures (pipelining, speculation techniques, superscalar architectures), memory hierarchy and virtual memory, software concepts.  

**Content**  
Structures and models of digital systems (abstract data types finite state automata, dependence and process graphs), abstraction and hierarchy in computer systems, assembler and compiler, control path and data path, pipelining, speculation techniques, superscalar computer architectures, memory hierarchy and virtual memory, operating system, processes and threads.  

**Prerequisites / notice**  
Prerequisites: Programming skills in high level language, knowledge of digital design.

Modern, transistor-based electronics has transformed our lives and plays a crucial role in our economy since the 2nd half of last century. The main objective of this course in electronic circuits is to introduce the concept of active device, including operational amplifiers, and their use in amplification, signal conditioning, switching and filtering to students. In addition to gaining experience with typical electronic circuits that are found in common applications, including their own Gruppenarbeiten and Fachpraktikum projects, students sharpen their understanding of linear circuits based on nonlinear devices, imperfections of electronic circuits and the concept of design (as opposed to analysis). The course is a prerequisite for higher semester subjects such as analog integrated circuits, RF circuits for wireless communications, A/D and D/A converters and optoelectronics.

Abstract: Lab with principal electronic circuit experiments on the transistor and operational amplifier basis.

Objective: Modern, transistor-based electronics has transformed our lives and plays a crucial role in our economy since the 2nd half of last century. The main objective of this course in electronic circuits is to introduce the concept of active device, including operational amplifiers, and their use in amplification, signal conditioning, switching and filtering to students. In addition to gaining experience with typical electronic circuits that are found in common applications, including their own Gruppenarbeiten and Fachpraktikum projects, students sharpen their understanding of linear circuits based on nonlinear devices, imperfections of electronic circuits and the concept of design (as opposed to analysis). The course is a prerequisite for higher semester subjects such as analog integrated circuits, RF circuits for wireless communications, A/D and D/A converters and optoelectronics.

Content: Get to know and understand basic transistor and op amp based electronic circuits. Build and operate simple electronic circuits including supply decoupling. Carry out and understand different, principal measurement methods such as DC- and AC-analysis, time and frequency domain measurements, impedance and transfer function measurements. In the lab we will have a closer look at the following topics and circuits: characterization of a real capacitor including non-idealties; common-emitter transistor amplifier with emitter degeneration; characterization of a real operational amplifier with non-idealties; band pass filter with op amp, resistors and capacitors; data converters; oscillator and function generator based on an op amp.

Abstract
Participants learn how to design a predefined electronic circuit and how to lay out the pertaining circuit board. CAE and CAD activities for design and simulation are carried out with the aid of Altium Designer.

Objective
The goal is to become acquainted with all those practical aspects of electronic circuit and PCB design by working through a modest but complete application example. This involves analysis of specifications, the evaluation of electronic parts, efficient testing and failure search, electromagnetic compatibility (EMC), the usage of industrial CAE/CAD tools for circuit simulation and PCB layout, generating production data for the board manufacturer, board mounting, testing and start up.

Content
- Understanding circuit, system, and product specifications
- Guidelines, standards, and regulations
- Design and development flow
- Introduction to the Altium Designer environment
- Selection of components and circuit sizing
- Preparing schematic symbols and footprints for CAE/CAD
- Working with database component libraries
- Logically structured schematic circuit diagrams
- Capturing a predefined circuit
- Definition of net classes and layout rules in schematics
- Design for EMC
- Checking schematic data
- Simulation of mixed signal circuits using Spice
- Hints for improved testing and debugging
- Component placement on the PCB
- Turning circuit diagrams into a workable layout
- Manual and automatic interconnect routing
- Definition of layout rules
- RF- and EMC-guidelines for circuit wire routing
- Differential pairs and impedance-controlled routing
- Introduction to PCB manufacturing
- Preparation of production and assembly data
- PCB and device assembly (component mounting)
- Final circuit testing and start up

Literature
All necessary documents will be available as electronic documents (PDF).

Prerequisites / notice
- The course is recommended to all students who plan to design an electronic circuit or a PCB in an upcoming term project or as part of their master thesis. Attending this course during the term before will ensure they are optimally prepared and will allow them to fully focus on their project.
- The number of participants is limited.
- For their own students and staff, the Department of Information Technology and Electrical Engineering provides electronic components and consumables free of charge. All other participants have to bear a 200 CHF fee for those items.

Third Year Core Courses
Can be freely combined, a list of recommendations is available under www.ee.ethz.ch/bachelor-kernfaecher

Abstract
The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications: discrete-time linear filters, equalization, DFT, discrete-time stochastic processes, elements of detection theory and estimation theory, LMMSE estimation and LMMSE filtering, LMS algorithm, Viterbi algorithm.

Objective
The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications. The two main themes are linearity and probability. In the first part of the course, we deepen our understanding of discrete-time linear filters. In the second part of the course, we review the basics of probability theory and discrete-time stochastic processes. We then discuss some basic concepts of detection theory and estimation theory, as well as some practical methods including LMMSE estimation and LMMSE filtering, the LMS algorithm, and the Viterbi algorithm. A recurrent theme throughout the course is the stable and robust "inversion" of a linear filter.
1. Discrete-time linear systems and filters:
   state-space realizations, z-transform and spectrum,
   decimation and interpolation, digital filter design,
   stable realizations and robust inversion.

2. The discrete Fourier transform and its use for digital filtering.

3. The statistical perspective:
   probability, random variables, discrete-time stochastic processes;
   detection and estimation: MAP, ML, Bayesian MMSE, LMMSE;
   Wiener filter, LMS adaptive filter, Viterbi algorithm.

Lecture notes

227-0102-00L Discrete Event Systems W 6 credits 4G L. Thiele, L. Vanbever, R. Wattenhofer

Abstract
Introduction to discrete event systems. We start out by studying popular models of discrete event systems. In the second part of the course
we analyze discrete event systems from an average-case and from a worst-case perspective. Topics include: Automata and Languages,

Objective
Over the past few decades the rapid evolution of computing, communication, and information technologies has brought about the
proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans.
The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a
keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss).

The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study
processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new
modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event
systems, such as automata and Petri nets. In the second part of the course we analyze discrete event systems. We first examine discrete
event systems from an average-case perspective: we model discrete events as stochastic processes, and then apply Markov chains and
queueing theory for an understanding of the typical behavior of a system. In the last part of the course we analyze discrete event systems
from a worst-case perspective using the theory of online algorithms and adversarial queuing.

Content
1. Introduction
2. Automata and Languages
3. Smarter Automata
4. Specification Models
5. Stochastic Discrete Event Systems
6. Worst-Case Event Systems
7. Network Calculus

227-0103-00L Control Systems W 6 credits 2V+2U F. Dörfler

Abstract
Study of concepts and methods for the mathematical description and analysis of dynamical systems. The concept of feedback. Design of
control systems for single input - single output and multivariable systems.

Objective
Study of concepts and methods for the mathematical description and analysis of dynamical systems. The concept of feedback. Design of
control systems for single input - single output and multivariable systems.

Content
Process automation, concept of control. Modelling of dynamical systems - examples, state space description, linearisation,
analytical/numerical solution. Laplace transform, system response for first and second order systems - effect of additional poles and zeros.
Closed-loop control - idea of feedback. PID control, Ziegler - Nichols tuning. Stability, Routh-Hurwitz criterion, root locus, frequency
response, Bode diagram, Bode gain/phase relationship, controller design via "loop shaping", Nyquist criterion. Feedforward compensation,
cascade control. Multivariable systems (transfer matrix, state space representation), multi-loop control, problem of coupling, Relative Gain
Array, decoupling, sensitivity to model uncertainty. State space representation (modal description, controllability, control canonical form,
observer canonical form), state feedback, pole placement - choice of poles. Observer, observability, duality, separation principle. LQ
Regulator, optimal state estimation.
This course provides advanced knowledge of electromagnetic waves in linear materials including negative index and other non classical materials.

Objective
The behavior of electromagnetic waves both in free space and in selected environments including stratified media, material interfaces and waveguides is understood. Material models in the time harmonic regime including negative index and plasmonic materials are clarified.

Content
Description of generic time harmonic electromagnetic fields; the role of the material in Maxwell's equations; energy transport and power loss mechanism; EM-waves in homogeneous space; ordinary and evanescent plane waves, cylindrical and spherical waves, "complex origin"-waves and beams; EM-waves in stratified media; generic guiding mechanism for EM waves; classical wave guides, dielectric wave guides.

Lecture notes
A script including animated wave representations is provided in electronic form.

Literature
See literature list in the script.

Prerequisites / notice
The lecture is taught in German while both the script and the viewgraphs are in English.

6 credits
2V+2U
P. Leuchtmann

Abstract
This course has been moved from the spring to the fall semester for the academic year of 2016/17. It will therefore not take place in spring 2017.

Objective
This course provides advanced knowledge of electromagnetic waves in linear materials including negative index and other non classical materials.

Content
The behavior of electromagnetic waves both in free space and in selected environments including stratified media, material interfaces and waveguides is understood. Material models in the time harmonic regime including negative index and plasmonic materials are clarified.

Lecture notes
A script including animated wave representations is provided in electronic form.

Literature
See literature list in the script.

Prerequisites / notice
The lecture is taught in German while both the script and the viewgraphs are in English.

High-Speed Signal Propagation
W
6 credits
2V+2U
C. Bolognesi

Abstract
Understanding of high-speed signal propagation in microwave cables and integrated circuits and printed circuit boards.

Objective
Understanding of high-speed signal propagation in interconnects, microwave cables and integrated transmission lines such as microwave integrated circuits and/or printed circuit boards.

Content

Lecture notes
Butterworth-, Chebychev- and Bessel filter approximations: filter synthesis from low-pass filter prototypes.

Prerequisites / notice
Exercises will be held in German, but assistants also speak English.

227-0113-00L
Power Electronics
W
6 credits
4G
J. W. Kolar

Abstract
Fields of application of power electronic systems. Principle of operation of basic pulse-width modulated and line-commutated power electronic converters, analysis of the operating behavior and of the control oriented behavior, converter design. Reduction of effects of line-commutated rectifiers on the mains, electromagnetic compatibility.

Objective
Fields of application of power electronic systems. Principle of operation of basic pulse-width modulated and line-commutated power electronic converters, analysis of the operating behavior and of the control oriented behavior, converter design. Reduction of effects of line-commutated rectifiers on the mains, electromagnetic compatibility.

Content

Lecture notes
Lecture notes and associated exercises including correct answers, simulation program for interactive self-learning including visualization/animation features.

Prerequisites / notice
Prerequisites: Signal and Systems Theory II.

227-0121-00L
Communication Systems
W
6 credits
4G
A. Wittneben

Abstract
Information Theory, Signal Space Analysis, Baseband Transmission, Passband Transmission, Example und Channel, Data Link Layer, MAC, Example Layer 2, Layer 3, Internet

Objective
Introduction into the fundamentals of digital communication systems. Selected examples on the application of the fundamental principles in existing and upcoming communication systems

Content
Covered are the lower three layer of the OSI reference model: the physical, the data link, and the network layer. The basic terms of information theory are introduced. After this, we focus on the methods for point to point communication, which may be addressed elegantly and coherently in the signal space. Methods for error detection and correction as well as protocols for the retransmission of perturbed data will be covered. Also the medium access for systems with shared medium will be discussed. Finally, algorithms for routing and flow control will be treated.

The application of the basic methods will be extensively explained using existing and future wireless and wired systems.

Data: 06.09.2021 13:00
Autumn Semester 2016
Page 499 of 1571
To understand the physical and technical principles underlying X-ray imaging, computed tomography, single photon and positron emission.

Bioelectronics and Biosensors

Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information

Structure of electric power systems, transformer and power line models, analysis of and power flow calculation in basic systems, symmetrical and unsymmetrical three-phase systems, transient current and voltage processes, technology and principle of electric power systems.

Undergraduate physics, mathematics, semiconductor devices

Handouts of presented slides. No script but an accompanying textbook is recommended.

New course. Not to be confounded with 227-0393-00L last offered in the Spring Semester 2015.

The course introduces the concepts of bioelectricity and biosensing. The sources and use of electrical fields and currents in the context of biological systems and problems are discussed. The fundamental challenges of measuring biological signals are introduced. The most important biosensing techniques and their physical concepts are introduced in a quantitative fashion.

During this course the students will:
- learn the basic concepts in biosensing and bioelectronics
- be able to solve typical problems in biosensing and bioelectronics
- learn about the remaining challenges in this field
L1. Bioelectronics history, its applications and overview of the field
- Volta and Galvani dispute
- BMI, pacemaker, cochlear implant, retinal implant, limb replacement devices
- Fundamentals of biosensing
- Glucometer and ELISA

L2. Fundamentals of quantum and classical noise in measuring biological signals

L3. Biomeasurement techniques with photons

L4. Acoustics sensors
- Differential equation for quartz crystal resonance
- Acoustic sensors and their applications

L5. Engineering principles of optical probes for measuring and manipulating molecular and cellular processes

L6. Optical biosensors
- Differential equation for optical waveguides
- Optical sensors and their applications
- Plasmonic sensing

L7. Basic notions of molecular adsorption and electron transfer
- Quantum mechanics: Schrödinger equation energy levels from H atom to crystals, energy bands
- Electron transfer: Marcus theory, Gerischer theory

L8. Potentiometric sensors
- Fundamentals of the electrochemical cell at equilibrium (Nernst equation)
- Principles of operation of ion-selective electrodes

L9. Amperometric sensors and bioelectric potentials
- Fundamentals of the electrochemical cell with an applied overpotential to generate a faraday current
- Principles of operation of amperometric sensors
- Ion flow through a membrane (Fick equation, Nernst equation, Donnan equilibrium, Goldman equation)

L10. Channels, amplification, signal gating, and patch clamp Y4

L11. Action potentials and impulse propagation

L12. Functional electric stimulation and recording
- MEA and CMOS based recording
- Applying potential in liquid - simulation of fields and relevance to electric stimulation

L13. Neural networks memory and learning

Literature
Plonsey and Barr, Bioelectricity: A Quantitative Approach (Third edition)

Prerequisites / notice
Supervised exercises solving real-world problems. Some Matlab based exercises in groups.

Electives
This is but a short selection. Other courses from the ETH course catalogue may be chosen. Please consult the “Richtlinien zu Projekten, Praktika, Seminaren” (German only), published on our website (http://www.ee.ethz.ch/pps-richtlinien).

Economics, Law and Management Electives
These subjects are particularly suitable for students planning to apply to the Master's Degree Program in Energy Science and Technology (MSc EST) or Management, Technology and Economics (MSc MTEC).

<table>

Abstract
Discovering Management offers an introduction to the field of business management and entrepreneurship for engineers and natural scientists. The module provides an overview of the principles of management, teaches knowledge about management that is highly complementary to the students' technical knowledge, and provides a basis for advancing the knowledge of the various subjects offered at D-MTEC.

Objective
Discovering Management combines in an innovate format a set of lectures and an advanced business game. The learning model for Discovering Management involves 'learning by doing'. The objective is to introduce the students to the relevant topics of the management literature and give them a good introduction in entrepreneurship topics too. The course is a series of lectures on the topics of strategy, innovation, corporate finance, leadership, design thinking and corporate social responsibility. While the 14 different lectures provide the theoretical and conceptual foundations, the experiential learning outcomes result from the interactive business game. The purpose of the business game is to analyse the innovative needs of a large multinational company and develop a business case for the company to grow. This business case is as relevant to someone exploring innovation within an organisation as it is if you are planning to start your own business. By discovering the key aspects of entrepreneurial management, the purpose of the course is to advance students' understanding of factors driving innovation, entrepreneurship, and company success.
Content
Discovering Management aims to broaden the students' understanding of the principles of business management, emphasizing the interdependence of various topics in the development and management of a firm. The lectures introduce students not only to topics relevant for managing large corporations, but also touch upon the different aspects of starting up your own venture. The lectures will be presented by the respective area specialists at D-MTEC. The course broadens the view and understanding of technology by linking it with its commercial applications and with society. The lectures are designed to introduce students to topics related to strategy, corporate innovation, leadership, corporate and entrepreneurial finance, value chain analysis, corporate social responsibility, and business model innovation. Practical examples from industry experts will stimulate the students to critically assess these issues. Creative skills will be trained by the business game exercise, a participant-centered learning activity, which provides students with the opportunity to place themselves in the role of Chief Innovation Officer of a large multinational company. As they learn more about the specific case and identify the challenge they are facing with, the students will have to develop an innovative business case for this multinational corporation. Doing so, this exercise will provide an insight into the context of managerial problem-solving and corporate innovation, and enhance the students' appreciation for the complex tasks companies and managers deal with. The business game presents a realistic model of a company and provides a valuable learning platform to integrate the increasingly important development of the skills and competences required to identify entrepreneurial opportunities, analyse the future business environment and successfully respond to it by taking systematic decisions, e.g. critical assessment of technological possibilities.

Prerequisites / notice
Discovering Management is designed to suit the needs and expectations of Bachelor students at all levels as well as Master and PhD students not belonging to D-MTEC. By providing an overview of Business Management, this course is an ideal enrichment of the standard curriculum at ETH Zurich. No prior knowledge of business or economics is required to successfully complete this course.

363-0305-00L
Empirical Methods in Management
W 3 credits
A. Scherer
Objective
- Ability to formulate research questions and designing an appropriate study
- Ability to collect and analyze data using a variety of methods
- Ability to critically assess the quality of empirical research in management
- Applied knowledge of empirical methods through out-of-class assignments

Content
1) Introduction to empirical management research
2) Research designs: exploratory, descriptive, experimental
3) Measurement and scaling
4) Data collection and sampling
5) Data analysis methods
6) Reporting and presenting empirical research

Prerequisites / notice
Assignments and projects: This course includes out-of-class assignments and projects to give students some hands-on experience in conducting empirical research in management. Projects will focus on one particular aspect of empirical research, like the formulation of a research question or the design of a study. Students will have at least one week to work on each assignment. Students are expected to work on these assignments individually. Duplicate answers will receive no credit and will be subject to a disciplinary review. Assignments will be graded and need to be turned-in on time.

Class participation: Class participation is encouraged and can greatly improve students' learning in this class. In this spirit, students are expected to attend class regularly and come to class prepared.

363-0503-00L
Principles of Microeconomics
W 3 credits
M. Filippini
Objective
The learning objectives of the course are:

(1) Students must be able to discuss basic principles, problems and approaches in microeconomics. (2) Students can analyse and explain simple economic principles in a market using supply and demand graphs. (3) Students can contrast different market structures and describe firm and consumer behaviour. (4) Students can identify market failures such as externalities related to market activities and illustrate how these affect the economy as a whole. (5) Students can apply simple mathematical treatment of some basic concepts and can solve utility maximization and cost minimization problems.

Lecture notes
Lecture notes, exercises and reference material can be downloaded from Moodle.

Literature
N. Gregory Mankiw and Mark P. Taylor (2014), "Economics", 3rd edition, South-Western Cengage Learning. The book can also be used for the course 'Principles of Macroeconomics' (Sturm)

For students taking only the course 'Principles of Microeconomics' there is a shorter version of the same book:

Complementary:

363-0511-00L
Managerial Economics
W 4 credits
S. Rausch, V. Hoffmann
Objective
Managerial Economics applies economic theory and methods to business and economic decision-making. Economic ideas related to optimization, the theory of consumer demand, the theory of the firm, industrial organization and decision making under uncertainty are studied using methods of numerical analysis, statistical estimation, game theory and constrained optimization.

Objective
The objective of the course is to provide undergraduate and graduate students in MAVT with an understanding of the use of economic concepts for firm-level management decisions. The course covers a number of models and methods of analysis which are commonly employed in business decisions. The course covers the economic theory of choice, models of oligopoly and industrial organization, applications of game theory to contract design and agency theory, and the theory of decision making under uncertainty focusing specifically on long-term investment decisions. The course will include three lectures by Professor Volker Hoffmann focusing on related case-studies in management.

Lecture notes
Mikroökonomie (Pearson Studium - Economic VWL) Gebundene Ausgabe, August 2013, Robert S. Pindyck, Dr. Daniel L. Rubinfeld.

Prerequisites / notice
The course acquaints students who have previous not studied economics to economic concepts and quantitative methods which can be used to solve management decision problems.

851-0703-00L
Introduction to Law
W 2 credits
O. Streiff Gnoßff
Abstract
This course introduces students into basic features of the legal system. Fundamental issues of constitutional law, administrative law, private law and the law of the EU are covered.
The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights).

Students are introduced to the basics of micromachining and silicon process technology and will understand the fabrication of microsystems.

Further documents will be available online (https://moodle-app2.let.ethz.ch/course/view.php?id=2170).

### Objective

Students are able to identify basic structures of the legal system. They understand selected topics of public and private law and are able to apply the fundamentals in more advanced law classes.

### Content

- Basic concepts of law, sources of law.
- Private law: Contract law (particularly contract for work and services), tort law, property law.
- Public law: Human rights, administrative law, procurement law, procedural law.
- Insights into the law of the EU and into criminal law.

### Lecture notes

Jaap Hage, Bram Akkermans (Eds.), Introduction to Law, Cham 2014 (Online Resource ETH Library)

### Literature

- Further documents will be available online (https://moodle-app2.let.ethz.ch/course/view.php?id=2170).

### Engineering Electives

- **Abstract**: Students are introduced to the basics of micromachining and silicon process technology and will learn about the fabrication of microsystems and devices by a sequence of defined processing steps (process flow).

- **Objective**: Students are introduced to the basics of micromachining and silicon process technology and will understand the fabrication of microsystem devices by the combination of unit process steps (process flow).

- **Content**:
  - Introduction to microsystems technology (MST) and micro electro mechanical systems (MEMS)
  - Basic silicon technologies: Thermal oxidation, photolithography and etching, diffusion and ion implantation, thin film deposition.
  - Specific microsystems technologies: Bulk and surface micromachining, dry and wet etching, isotropic and anisotropic etching, beam and membrane formation, wafer bonding, thin film mechanical and thermal properties, piezoelectric and piezoresistive materials.

- **Lecture notes**: Handouts (available online)

### Another Goal

Another goal is to enable the students to participate in the current debate over the goals and desirability of protecting intellectual creations, particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls, patent thickets).

### Objective

- The students shall obtain a basic knowledge about business law. They shall be able to recognize and evaluate issues in the area of business law and suggest possible solutions.

### Literature

- A comprehensive script will be made available online on the moodle platform.

### Further information

The lecture notes for the course 'Microsystems Technology' (151-0621-00L) cover the following topics:

- **Objective**:
  - They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.
  - They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

- **Prerequisites / notice**:
  - They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

- **Case study**:
  - The students shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

- **Insights into the law of the EU and into criminal law.**

- **Public law**: Human rights, administrative law, procurement law, procedural law.

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' (851-0738-03) will be offered in the autumn semester.

Abstract
The course explains main principles of air transport in general and elaborates on simple interdisciplinary topics. Since working on broad topics like aerodynamics, manufacturers, airport operation, business aviation, business models etc. the students get a good overview in air Transportation.

Objective
Understand and explain basics, principles and contexts in the broader air transport industry. Lay the foundation of working in or with the air transport industry. Ideal foundation for Aviation II - Management of Air Transport

Content
Weekly: 1h independent preparation; 2h lectures and 1 h training with an expert in the respective field
Concept: This course will be taught as Aviation I. A subsequent course is under evaluation.

Content: Transport as part of the overall transportation scheme; Aerodynamics; Aircraft (A/C) Designs & Structures; A/C Operations; Law Enforcement; Maintenance & Manufacturers; Airport Operations & Planning; Customs & Security; ATC & Airspace; Air Freight; General Aviation; Business Jet Operations; Business models within Airline Industry; Military Operations.

Technical visit: This course includes a guided tour at Zurich Airport (baggage sorting system, apron, ATC Tower).

Examination: written, 60 min, open books (Examination in German; Answers may be given in English)

Lecture notes
Slides are provided prior to each class

Literature
We will also use English papers

| 227-0853-00L | Mentored Work Subject Didactics Electrical Engineering and Information Technology I ■ | W    | 2    | 4A    | M. Thaler                        |
|             | Only for students who enrolled before HS 2011 into TC.               |      |      |       |                                  |
In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

To this end they:
- (Mini-)Leitprogramm
- Gelenktes Entdeckendes Lernen
- Puzzle
- Werkstatt
- Projektarbeit

Zu diesen Themen sind die vorhandenen Manuals aus den IfV zu verwenden, bzw. wo nötig zu adaptieren.

Objective

### Further Subject Didactics

**Number** | **Title** | **Type** | **ECTS** | **Hours** | **Lecturers**
--- | --- | --- | --- | --- | ---
227-0854-00L | Mentored Work Subject Didactics Electrical Engineering and Information Technology II | O | 2 credits | 4A | M. Thaler

**Abstract**
In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

**Objective**
The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle, and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

**Content**
- Gemäss aktualisierter Ablaufplanung mit Mentor und Betreuer.
- Das Fachgebiet richtet sich nach dem aktuellen Unterrichtsprogramm des betreuenden FH/BMS-Dozenten, und seinem Auftrag zum geleiteten Selbststudium.
- Auszugehen ist vom verwendeten Skript / Lehrbuch Zu erarbeiten ist die dazugehörende eLearning-Umgebung (Tests, Repetitionsfragen, Übungsaufgaben, Arbeitsprogramme, etc.).
- Die anzuwendende eLearning-Plattform richtet sich nach den lokalen Usanzen der FH / BMS.
- Andernfalls ist eine einfach handhabbare, lizenzfreie Plattform in Absprache mit dem Betreuer festzulegen.

Die abzuleifernde Bericht hat sich an die Richtlinien der vorhandenen Manuals aus den IfV zu halten. Er ist in zwei Teilen zu erstellen, für Studenten/innen, und für den Dozenten/Entwickler getrennt.

Typisch soll die Arbeit 3 - 4 Unterrichtseinheiten aus 45 Minuten abdecken (bei Einzelarbeit), bei Arbeit zu zweit mindestens 6 solche Einheiten.

Die Einsatzeile ist wenn möglich durch Erprobung, zu überprüfen. Die aus der Erprobung resultierenden Korrekturen sind eingearbeitet.

**Literature**
- Die Literatur ist themenspezifisch. Die Studierenden beschaffen sie sich in der Regel selber (siehe Lernziele). In besonderen Fällen wird sie vom Betreuer zur Verfügung gestellt.

Die Arbeit sollte vor Beginn des Praktikums abgeschlossen werden.

#### Electrical Engineering and Information Technology TC - Key for Type

| O | Compulsory | E- | Recommended, not eligible for credits |
| W+ | Eligible for credits and recommended | Z | Courses outside the curriculum |
| W | Eligible for credits | Dr | Suitable for doctorate |

#### Key for Hours

| V | lecture |
| G | lecture with exercise |
| U | exercise |

Wireless access systems support locally constrained wireless connectivity and mobile access to a backbone network (typically the Internet). In this course, the student develops a comprehensive understanding of existing and upcoming wireless access technologies (including WiFi, Bluetooth, RFID, NFC, VANET) and related Physical Layer and Medium Access Control Layer problems and opportunities.

The course consists of two tracks. The track “Technology&Systems” is structured as regular lecture. In the introduction we will discuss the challenges and potential of pervasive wireless access and study some fundamentals of short/medium range wireless communications. The main body of this track is devoted to existing and upcoming systems. A comprehensive survey of Ultrawide band (UWB) as the promising transmission technology for pervasive wireless access completes this track. In the track “Simulate&Practice” we form student teams that implement and analyze functional blocks of the physical layer of various advanced wireless access systems based on MATLAB simulations. The track includes combination tasks where different teams combine their functional blocks (e.g. transmitter, receiver) in order to simulate the complete physical layer.

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems. We analyze discrete event systems from an average-case and from a worst-case perspective. Topics include: Automata and Languages, Specification Models, Stochastic Discrete Event Systems, Worst-Case Event Systems, Verification, Network Calculus.

The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

Abstract

Wireless access systems support locally constrained wireless connectivity and mobile access to a backbone network (typically the Internet). In this course, the student develops a comprehensive understanding of existing and upcoming wireless access technologies (including WiFi, Bluetooth, RFID, NFC, VANET) and related Physical Layer and Medium Access Control Layer problems and opportunities.

Objective

The course consists of two tracks. The track “Technology&Systems” is structured as regular lecture. In the introduction we will discuss the challenges and potential of pervasive wireless access and study some fundamentals of short/medium range wireless communications. The main body of this track is devoted to existing and upcoming systems. A comprehensive survey of Ultrawide band (UWB) as the promising transmission technology for pervasive wireless access completes this track. In the track “Simulate&Practice” we form student teams that implement and analyze functional blocks of the physical layer of various advanced wireless access systems based on MATLAB simulations. The track includes combination tasks where different teams combine their functional blocks (e.g. transmitter, receiver) in order to simulate the complete physical layer.

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems. We analyze discrete event systems from an average-case and from a worst-case perspective. Topics include: Automata and Languages, Specification Models, Stochastic Discrete Event Systems, Worst-Case Event Systems, Verification, Network Calculus.

The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

Abstract

Introduction to discrete event systems. We start out by studying popular models of discrete event systems. In the second part of the course we analyze discrete event systems from an average-case and from a worst-case perspective. Topics include: Automata and Languages, Specification Models, Stochastic Discrete Event Systems, Worst-Case Event Systems, Verification, Network Calculus.

Objective

Over the past few decades the rapid evolution of computing, communication, and information technologies has brought about the proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans. The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss).

The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems, such as automata and Petri nets. In the second part of the course we analyze discrete event systems. We first examine discrete event systems from an average-case perspective. We model discrete events as stochastic processes, and then apply Markov chains and queuing theory for an understanding of the typical behavior of a system. In the last part of the course we analyze discrete event systems from a worst-case perspective using the theory of online algorithms and adversarial queuing.

Abstract
High-Speed Signal Propagation
Understanding of high-speed signal propagation in microwave cables and integrated circuits and printed circuit boards.

Objective
The course is of high value to all interested in high-speed analog (RF, microwave) or digital systems.

As clock frequencies rise in the GHz domain, there is a need grasp signal propagation to maintain good signal integrity in the face of symbol interference and cross-talk.

Content
As system clock frequencies continuously rise in the GHz domain, a need urgently develops to understand high-speed signal propagation in order to maintain good signal integrity in the presence of such inter-symbol interference (ISI). As clock frequencies rise, all structures effectively become "transmission lines." Unless care is taken, it is highly probable that one ends-up with a bad transmission line that causes the designed system to malfunction.

Lecture notes
Exercises will be held in German, but assistants also speak English.

Prerequisites / notice
MATLAB is used for system analysis and simulation.

Abstract
Analog Integrated Circuits
This course provides a foundation in analog integrated circuit design based on bipolar and CMOS technologies.

Objective
Integrated circuits are responsible for much of the progress in electronics in the last 50 years, particularly the revolutions in the Information and Communications Technologies we witnessed in recent years. Analog integrated circuits play a crucial part in the highly integrated systems that power the popular electronic devices we use daily. Understanding their design is beneficial to both future designers and users of such systems.

Content
The basic elements, design issues and techniques for analog integrated circuits will be taught in this course.

Physics of Failure and Failure Analysis of Electronic Devices and Equipment

W 3 credits

2V

U. Sennhauser

Abstract

Failures have to be avoided by proper design, material selection and manufacturing. Properties, degradation mechanisms, and expected lifetime of materials are introduced and the basics of failure analysis and analysis equipment are presented. Failures will be demonstrated experimentally and the opportunity is offered to perform a failure analysis with advanced equipment in the laboratory.

Objective

Introduction to the degradation and failure mechanisms and causes of electronic components, devices and systems as well as to methods and tools of reliability testing, characterization and failure analysis.

Content

Summary of reliability and failure analysis terminology; physics of failures: material properties, physical processes and failure mechanisms; failure analysis of ICs, PCBs, opto-electronics, discrete and other components and devices; basics and properties of instruments; application in circuit design and reliability analysis.

Image Analysis and Computer Vision

W 6 credits

3V+1U

L. Van Gool, O. Gökse, E. Konukoglu

Abstract

Objective

Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.

Content

The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

Lecture notes

Course material Script, computer demonstrations, exercises and problem solutions

Prerequisites / notice

Prerequisites:
Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.

The course language is English.

227-0455-00L

Terahertz: Technology & Applications

W 3 credits

2V

K. Sankaran

Abstract

This course will provide a solid foundation for understanding physical principles of THz applications. We will discuss various building blocks of THz technology - components dealing with generation, manipulation, and detection of THz electromagnetic radiation. We will introduce THz applications in the domain of imaging, communications, and energy harvesting.

Objective

This is an introductory course on Terahertz (THz) technology and applications. Devices operating in THz frequency range (0.1 to 10 THz) have been increasingly studied in the recent years. Progress in nonlinear optical materials, ultrafast optical and electronic techniques has strengthened research in THz application developments. Due to unique interaction of THz waves with materials, applications with new capabilities can be developed. In theory, they can penetrate somewhat like X-rays, but are not considered harmful radiation, because THz energy level is low. They should be able to provide resolution as good or better than magnetic resonance imaging (MRI), possibly with simpler equipment. Imaging, very-high bandwidth communication, and energy harvesting are the most widely explored THz application areas. We will study the basics of THz generation, manipulation, and detection. Our emphasis will be on the physical principles and applications of THz in the domain of imaging, communication and energy harvesting.

Content

INTRODUCTION
Chapter 1: Introduction to THz Physics
Chapter 2: Components of THz Technology

THz TECHNOLOGY MODULES
Chapter 3: THz Generation
Chapter 4: THz Detection
Chapter 5: THz Manipulation

APPLICATIONS
Chapter 6: THz Imaging
Chapter 7: THz Communication
Chapter 8: THz Energy Harvesting

Literature

- Yun-Shik Lee, Principles of Terahertz Science and Technology, Springer 2009

Prerequisites / notice

Whenever we deviate from the main material discussed in these books, softcopy of lectures notes will be provided.

Good foundation in electromagnetics & knowledge of microwave or optical communication is helpful.

227-0468-00L

Analog Signal Processing and Filtering

W 6 credits

2V+2U

H. Schmid

Suitable for Master Students as well as Doctoral Students.

Abstract

This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers.

Objective

This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers. The way the exam is done allows for the different interests of the two groups.

The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

<tbody>
<tr>
<td>At the beginning, signal-flow graphs in general and driving-point signal-flow graphs in particular are introduced. We will use them during the whole term to analyze circuits and understand how signals propagate through them. The theory and CMOS implementation of active filters is then discussed in detail using the example of Gm-C filters and active-RC filters. The ideal and nonideal behaviour of opamps, current conveyors, and inductor simulators follows. The link to the practical design of circuits and systems is done with an overview over different quality measures and figures of merit used in scientific literature and datasheets. Finally, an introduction to discrete-time and mixed-domain filters and circuits is given, including sensor read-out amplifiers, correlated double sampling, and chopping, and an introduction to sigma-delta A/D and D/A conversion on a system level.</td>

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 514 of 1571
Abstract
This lecture discusses fundamental concepts and technologies in the area of network security. Several case studies illustrate the dark side of the Internet and explain how to protect against such threats. A hands-on computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection.

Objective
Students are aware of current threats that Internet services and networked devices face and can explain appropriate countermeasures. Students can identify and assess known vulnerabilities in a software system that is connected to the Internet. Students know fundamental network security concepts. Students have an in-depth understanding of important security technologies. Students know how to configure a real firewall and know some penetration testing tools from their own experience.

Content
Risk management and the vulnerability lifecycle of software and networked services are discussed. Threats like denial of service, spam, worms, and viruses are studied in-depth. Fundamental security related concepts like identity, availability, authentication and secure channels are introduced. State of the art technologies like secure shell, network and transport layer security, intrusion detection and prevention systems, cross-site scripting, secure implementation techniques and more for securing the Internet and web applications are presented. Several case studies illustrate the dark side of the Internet and explain how to protect against current threats. A hands-on computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection.

This lecture is intended for students with an interest in securing Internet services and networked devices. Students are assumed to have knowledge in networking as taught in the Communication Networks lecture.

Prerequisites / notice
Knowledge in computer networking and Internet protocols (e.g. course Communication Networks (D-ITET) or Operating Systems and Networks (D-INFK)).

Due to recent changes in the Swiss law, ETH requires each student of this course to sign a written declaration that he/she will not use the information given in this for illegal purposes. This declaration will have to be signed and submitted no later than at the beginning of the second lesson.

Computers and Networks

<td>Designing systems with a low energy footprint is an increasingly important. There are many applications for low-power systems ranging from mobile devices powered from batteries such as today’s smart phones to energy efficient household appliances and datacenters. Key drivers are to be found mainly in the tremendous increase of mobile devices and the growing integration density requiring to carefully reason about power, both from a provision and consumption viewpoint. Traditional circuit design classes introduce low-power solely from a hardware perspective with a focus on the power performance of a single or at most a hand full of circuit elements. Similarly, low-power aspects are touched in a multitude of other classes, mostly as a side topic. However in successfully designing systems with a low energy flow it is not sufficient to only look at low-power as an aspect of second class. In modern low-power system design advanced CMOS circuits are of course a key ingredient but successful low-power integration involves many more disciplines such as system architecture, different sources of energy as well as storage and most importantly software and algorithms. In this lecture we discuss aspects of low-power design as a first class citizen introducing key concepts as well as modeling and measurement techniques focusing mainly on the design of networked embedded systems but of course equally applicable to many other classes of systems. The lecture is further accompanied by a reading seminar as well as exercises and lab sessions.</td>

Notice
Content
The first part of the lecture covers individual system's aspects starting with tamperproof or tamperresistant hardware in general over operating system related security mechanisms to application software systems such as host based intrusion detection systems. The main topics covered are: tamper resistant hardware, CPU support for security, protection mechanisms in the kernel, file system security (permissions / ACLs / network filesystem issues), IPC Security, mechanisms in more modern OS, such as Capabilities and Zones, Libraries and Software tools for security assurance, etc.

In the second part, the focus is on system design and methodologies for building secure systems. Topics include: patch management, common software faults (buffer overflows, etc.), writing secure software (design, architecture, QA, testing), compiler-supported security, language-supported security, logging and auditing (BSM audit, dtrace, ...), cryptographic support, and trustworthy computing (TGG, SGX).

Along the lectures, model cases will be elaborated and evaluated in the exercises.

263-4640-00L Network Security W 6 credits 2V+1U+2A A. Perrig, T. P. Dubendorfer, S. Frei

Abstract
This lecture discusses fundamental concepts and technologies in the area of network security. Several case studies illustrate the dark side of the Internet and explain how to protect against such threats. A hands-on computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection.

Objective
Students are aware of current threats that Internet services and networked devices face and can explain appropriate countermeasures. Students can identify and assess known vulnerabilities in a software system that is connected to the Internet. Students know fundamental network security concepts. Students have an in-depth understanding of important security technologies. Students know how to configure a real firewall and know some penetration testing tools from their own experience.

Content
Risk management and the vulnerability lifecycle of software and networked services are discussed. Threats like denial of service, spam, worms, and viruses are studied in-depth. Fundamental security related concepts like identity, availability, authentication and secure channels are introduced. State of the art technologies like secure shell, network and transport layer security, intrusion detection and prevention systems, cross-site scripting, secure implementation techniques and more for securing the Internet and web applications are presented. Several case studies illustrate the dark side of the Internet and explain how to protect against current threats. A hands-on computer lab that accompanies the lecture gives a deep dive on firewalls, penetration testing and intrusion detection.

This lecture is intended for students with an interest in securing Internet services and networked devices. Students are assumed to have knowledge in networking as taught in the Communication Networks lecture.

Prerequisites / notice
Knowledge in computer networking and Internet protocols (e.g. course Communication Networks (D-ITET) or Operating Systems and Networks (D-INFK)).

Due to recent changes in the Swiss law, ETH requires each student of this course to sign a written declaration that he/she will not use the information given in this for illegal purposes. This declaration will have to be signed and submitted no later than at the beginning of the second lesson.

Recommended Subjects
These courses are recommended, but you are free to choose courses from any other special field. Please consult your tutor.

Number Title Type ECTS Hours Lecturers
227-0101-00L Discrete-Time and Statistical Signal Processing W 6 credits 4G H.-A. Loeliger

Abstract
The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications: discrete-time linear filters, equalization, DFT, discrete-time stochastic processes, elements of detection theory and estimation theory, LMMSE estimation and LMMSE filtering, LMS algorithm, Viterbi algorithm.

Objective
The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications. The two main themes are linearity and probability. In the first part of the course, we deepen our understanding of discrete-time linear filters. In the second part of the course, we review the basics of probability theory and discrete-time stochastic processes. We then discuss some basic concepts of detection theory and estimation theory, as well as some practical methods including LMMSE estimation and LMMSE filtering, the LMS algorithm, and the Viterbi algorithm. A recurrent theme throughout the course is the stable and robust "inversion" of a linear filter.

Content
1. Discrete-time linear systems and filters: state-space realizations, z-transform and spectrum, decimation and interpolation, digital filter design, stable realizations and robust inversion.
2. The discrete Fourier transform and its use for digital filtering.
3. The statistical perspective: probability, random variables, discrete-time stochastic processes; detection and estimation: MAP, ML, Bayesian MMSE, LMMSE; Wiener filter, LMS adaptive filter, Viterbi algorithm.

Lecture notes Lecture Notes.

227-0103-00L Control Systems W 6 credits 2V+2U F. Dörfler

Abstract
Study of concepts and methods for the mathematical description and analysis of dynamical systems. The concept of feedback. Design of control systems for single input - single output and multivariable systems.

Objective
Study of concepts and methods for the mathematical description and analysis of dynamical systems. The concept of feedback. Design of control systems for single input - single output and multivariable systems.

Content

Literature

Prerequisites / notice
Prerequisites: Signal and Systems Theory II.

MATLAB is used for system analysis and simulation.

227-0197-00L Wearable Systems I W 6 credits 4G G. Tröster, U. Blanke
## 227-0377-00L  Physics of Failure and Failure Analysis of Electronic Devices and Equipment  W  3 credits  2V  U. Sennhauser

**Abstract**
Failures have to be avoided by proper design, material selection and manufacturing. Properties, degradation mechanisms, and expected lifetime of materials are introduced and the basics of failure analysis and analysis equipment are presented. Failures will be demonstrated experimentally and the opportunity is offered to perform a failure analysis with advanced equipment in the laboratory.

**Objective**
Introduction to the degradation and failure mechanisms and causes of electronic components, devices and systems as well as to methods and tools of reliability testing, characterization and failure analysis.

**Content**
Summary of reliability and failure analysis terminology; physics of failure: materials properties, physical processes and failure mechanisms; failure analysis of ICs, PCBs, opto-electronics, discrete and other components and devices; basics and properties of instruments; application in circuit design and reliability analysis

**Lecture notes**
Comprehensive copy of transparencies

## 252-0437-00L  Distributed Algorithms  W  4 credits  3V  F. Mattern

**Abstract**
Models of distributed computations, time space diagrams, virtual time, logical clocks and causality, wave algorithms, parallel and distributed graph traversal, consistent snapshots, mutual exclusion, election and symmetry breaking, distributed termination detection, garbage collection in distributed systems, monitoring distributed systems, global predicates.

**Objective**
Become acquainted with models and algorithms for distributed systems.

**Content**
Verteilte Algorithmen sind Verfahren, die dadurch charakterisiert sind, dass mehrere autonome Prozesse gleichzeitig Teile eines gemeinsamen Problems in kooperativer Weise bearbeiten und der dabei erforderliche Informationsaustausch ausschliesslich über Nachrichten erfolgt. Derartige Algorithmen kommen im Rahmen verteilter Systeme zum Einsatz, bei denen kein gemeinsamer Speicher existiert und die Übertragungszeit von Nachrichten i.a. nicht vernachlässigt werden kann. Da dabei kein Prozess eine aktuelle konsistente Sicht des globalen Zustands besitzt, führt dies zu interessanten Problemen.

Im einzelnen werden u.a. folgende Themen behandelt:
- Modelle verteilter Berechnungen; Raum-Zeit-Diagramme; Virtuelle Zeit; Logische Uhren und Kausalität; Wellenalgorithmen; Verteilte und parallele Graphtraversierung; Berechnung konsitenter Schnappschüsse; Wechselseitiger Ausschluss; Elektion und Symmetriebrechung; Verteilte Terminierung; Garbage-Collection in verteilten Systemen; Beobachten verteilter Systeme; Berechnung globaler Prädikate.

**Literature**

- G. Tesi: Topics in Distributed Algorithms, Cambridge University Press
- N. Lynch: Distributed Algorithms, Morgan Kaufmann Publ

## 227-0447-00L  Image Analysis and Computer Vision  W  6 credits  3V+1U  L. Van Gool, O. Göksel, E. Konukoglu

**Abstract**

**Objective**
Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.
Content
The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

Lecture notes
Course material Script, computer demonstrations, exercises and problem solutions

Prerequisites / notice
Prerequisites:
Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.
The course language is English.

227-0555-00L Fault Tolerance in Distributed Systems
Abstract Fault-tolerance (failure models, consensus, agreement), replication (primary copy, 2PC, 3PC, Paxos, quorum systems), shared memory (spin locks, concurrency)
Objective Become acquainted with pertinent technologies and architectures of fault-tolerant distributed systems.
Content We discuss fault-tolerance issues (models, consensus, agreement) as well as replication issues (primary copy, 2PC, 3PC, Paxos, quorum systems, distributed storage) and problems with asynchronous multiprocessing (shared memory, spin locks, concurrency).
Prerequisites / notice This lecture takes place in the second half of the semester; the lecture is the second part of the lecture "Verteilte Systeme" (Distributed Systems, 252-0213-00L). Students may attend at most one of the two lectures.

Lecture notes
Script and exercises sheets.

227-0627-00L Applied Computer Architecture
Abstract This lecture gives an overview of the requirements and the architecture of parallel computer systems, performance, reliability and costs.
Objective Understand the function, the design and the performance modeling of parallel computer systems.
Content The lecture "Applied Computer Architecture" gives technical and corporate insights in the innovative Computer Systems/Architectures (CPU, GPU, FPGA, special processors) and their real implementations and applications. Often the designs have to deal with technical limits.
Which computer architecture allows the control of the over 1000 magnets at the Swiss Light Source (SLS)?
Which architecture is behind the alarm center of the Swiss Railway (SBB)?
Which computer architectures are applied for driver assistance systems?
Which computer architecture is hidden behind a professional digital audio mixing desk?
How can data streams of about 30 TB/s, produced by a protone accelerator, be processed in real time?
Can the weather forecast also be processed with GPUs?
How can a good computer architecture be found?
Which are the driving factors in successful computer architecture design?

Prerequisites / notice
Prerequisites: Basics of computer architecture.

151-0593-00L Embedded Control Systems
Abstract This course provides a comprehensive overview of embedded control systems. The concepts introduced are implemented and verified on a microprocessor-controlled haptic device.
Objective Familiarize students with main architectural principles and concepts of embedded control systems.
Content An embedded system is a microprocessor used as a component in another piece of technology, such as cell phones or automobiles. In this intensive two-week block course the students are presented the principles of embedded digital control systems using a haptic device as an example for a mechatronic system. A haptic interface allows for a human to interact with a computer through the sense of touch.
Subjects covered in lectures and practical lab exercises include:
- The application of C-programming on a microprocessor
- Digital I/O and serial communication
- Quadrature decoding for wheel position sensing
- Queued analog-to-digital conversion to interface with the analog world
- Pulse width modulation
- Timer interrupts to create sampling time intervals
- System dynamics and virtual worlds with haptic feedback
- Introduction to rapid prototyping

Prerequisite courses are Control Systems I and Informatics I.

Lecture notes
Lecture notes, lab instructions, supplemental material

252-1411-00L Security of Wireless Networks
Abstract Core Elements: Wireless communication channel, Wireless network architectures and protocols, Attacks on wireless networks, Protection techniques.
Objective After this course, the students should be able to describe and classify security goals and attacks in wireless networks; describe security architectures of the following wireless systems and networks: 802.11, GSM/UMTS, RFID, ad hoc/sensor networks; reason about security protocols for wireless network; implement mechanisms to secure 802.11 networks.

227-0559-00L Seminar in Distributed Computing
Abstract In this seminar participating students present and discuss recent research papers in the area of distributed computing. The seminar consists of algorithmic as well as systems papers in distributed computing theory, peer-to-peer computing, ad hoc and sensor networking, or multi-core computing.

Lecture notes
Lecture notes, lab instructions, supplemental material

Prerequisite courses are Control Systems I and Informatics I.
In the last two decades, we have experienced an unprecedented growth in the area of distributed systems and networks; distributed computing now encompasses many of the activities occurring in today's computer and communications world. This course introduces the basics of distributed computing, highlighting common themes and techniques. We study the fundamental issues underlying the design of distributed systems: communication, coordination, synchronization, uncertainty. We explore essential algorithmic ideas and lower bound techniques.

In this seminar, students present the latest work in this domain.

Seminar language: English

Slides of presentations will be made available.

Abstract
This second course in our VLSI series is concerned with how to turn digital circuit netlists into safe, testable and manufacturable mask layout, taking into account various parasitic effects. Low-power circuit design is another important topic. Economic aspects and management issues of VLSI projects round off the course.

Objective
Know how to design digital VLSI circuits that are safe, testable, durable, and make economic sense.

Content
The second course begins with a thorough discussion of various technical aspects at the circuit and layout level before moving on to economic issues of VLSI. Topics include:
- The difficulties of finding fabrication defects in large VLSI chips.
- How to make integrated circuit testable (design for test).
- Synchronous clocking disciplines compared, clock skew, clock distribution, input/output timing.
- Synchronization and metastability.
- CMOS transistor-level circuits of gates, flip-flops and random access memories.
- Sinks of energy in CMOS circuits.
- Power estimation and low-power design.
- Current research in low-energy computing.
- Circuit design, interconned delay, static timing analysis.
- Switching currents, ground bounce, IR-drop, power distribution.
- Floorplanning, chip assembly, packaging.
- Layout design at the mask level, physical design verification.
- Electromigration, electrostatic discharge, and latch-up.
- Models of industrial cooperation in microelectronics.
- The caveats of virtual components.
- The cost structures of ASIC development and manufacturing.
- Market requirements, decision criteria, and case studies.
- Yield models.
- Avenues to low-volume fabrication.
- Marketing considerations and case studies.
- Management of VLSI projects.

Exercises are concerned with back-end design (floorplanning, placement, routing, clock and power distribution, layout verification). Industrial CAD tools are being used.

Lecture notes

Literature
All written documents in English.

Prerequisites / notice
Students are offered the opportunity to design a circuit of their own which then gets actually fabricated as a microchip! Students who elect to participate in this program register for a term project at the Integrated Systems Laboratory in parallel to attending the VLSI II course.

Highlight:
"VLSI I: from Architectures to Very Large Scale Integration Circuits and FPGAs" or equivalent knowledge.

Further details:
http://www.iis.ee.ethz.ch/stud_area/vorlesungen/vlsi2.en.html
Using internal sensors and sensors in our environment including data from the wristwatch, bracelet or internet (crowd sourcing), our ‘smart phone’ detects our context continuously, e.g. where we are, what we are doing, with whom we are together, what is our constitution, what are our needs. Based on this information our ‘smart phone’ offers us the appropriate services like a personal assistant. Context recognition - what is the situation of the user, his activity, his environment, how is he doing, what are his needs - as the central functionality of mobile systems constitutes the focus of the course.

The main topics of the course include

Sensor nets, sensor signal processing, data fusion, time series (segmentation, similarity measures), supervised learning (Bayes Decision Theory, Decision Trees, Random Forest, KNN-Methods, Support Vector Machine, Adaboost, Deep Learning), clustering (k-means, dbscan, topic models), Recommender Systems, Collaborative Filtering, Crowdsourcing.

The exercises show concrete design problems like motion and gesture recognition using distributed sensors, detection of activity patterns and identification of the local environment.

Presentations of the PhD students and the visit at the Wearable Computing Lab introduce in current research topics and international research projects.

| 227-1033-00L | Neuromorphic Engineering I | W 6 credits 2V+3U | T. Delbrück, G. Indiveri, S.-C. Liu | * This course covers analog circuits with emphasis on neuromorphic engineering: MOS transistors in CMOS technology, static circuits, dynamic circuits, systems (silicon neuron, silicon retina, silicon cochlea) with an introduction to multi-chip systems. The lectures are accompanied by weekly laboratory sessions. * Understanding of the characteristics of neuromorphic circuit elements. * Neuromorphic circuits are inspired by the organizing principles of biological neural circuits. Their computational primitives are based on physics of semiconductor devices. Neuromorphic architectures often rely on collective computation in parallel networks. Adaptation, learning and memory are implemented locally within the individual computational elements. Transistors are often operated in weak inversion (below threshold), where they exhibit exponential I-V characteristics and low currents. These properties lead to the feasibility of high-density, low-power implementations of functions that are computationally intensive in other paradigms. Application domains of neuromorphic circuits include silicon retinas and cochleas for machine vision and audition, real-time emulations of networks of biological neurons, and the development of autonomous robotic systems. This course covers devices in CMOS technology (MOS transistor below and above threshold, floating-gate MOS transistor, phototransducers), static circuits (differential pair, current mirror, transconductance amplifiers, etc.), dynamic circuits (linear and nonlinear filters, adaptive circuits), systems (silicon neuron, silicon retina and cochlea) and an introduction to multi-chip systems that communicates events analogous to spikes. The lectures are accompanied by weekly laboratory sessions on the characterization of neuromorphic circuits, from elementary devices to systems. | - Physics II

S.-C. Liu et al.: Analog VLSI Circuits and Principles; various publications.
Partial: The course is highly recommended for those who intend to take the spring semester course 'Neuromorphic Engineering II', that teaches the conception, simulation, and physical layout of such circuits with chip design tools.

Prerequisites: Background in basics of semiconductor physics helpful, but not required.

<td>The course aims at the understanding of the principle physics of modern semiconductor devices, of the foundations of the physical modeling of transport and its numerical simulation. During the course also basic knowledge on quantum-mechanics, semiconductor physics and device physics is provided.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Content</td>
<td>The main topics are: transport models for semiconductor devices (quantum transport, Boltzmann equation, drift-diffusion model, hydrodynamic model), physical characterization of silicon (intrinsinc properties, scattering processes), mobility of cold and hot carriers, recombination (Shockley-Read-Hall statistics, Auger recombination), impact ionization, metal-semiconductor contact, metal-insulator-semiconductor structure, and heterojunctions. The exercises are focussed on the theory and the basic understanding of the operation of special devices, as single-electron transistor, resonant tunneling diode, pn-diode, bipolar transistor, MOSFET, and laser. Numerical simulations of such devices are performed with an advanced simulation package (Sentaurus-Synopsys). This enables to understand the physical effects by means of computer experiments.</td>

</tr>
</tbody>
</table>
This is an introductory course on Terahertz (THz) technology and applications. Devices operating in THz frequency range (0.1 to 10 THz) have been increasingly studied in the recent years. Progress in nonlinear optical materials, ultrafast optical and electronic techniques has strengthened research in THz application developments. Due to unique interaction of THz waves with materials, applications with new capabilities can be developed. In theory, they can penetrate somewhat like X-rays, but are not considered harmful radiation, because THz energy level is low. They should be able to provide resolution as good or better than magnetic resonance imaging (MRI), possibly with simpler equipment. Imaging, very-high bandwidth communication, and energy harvesting are the most widely explored THz application areas. We will study the basics of THz generation, manipulation, and detection. Our emphasis will be on the physical principles and applications of THz in the domain of imaging, communication and energy harvesting.

Content

INTRODUCTION
Chapter 1: Introduction to THz Physics
Chapter 2: Components of THz Technology

THz TECHNOLOGY MODULES
Chapter 3: THz Generation
Chapter 4: THz Detection
Chapter 5: THz Manipulation

APPLICATIONS
Chapter 6: THz Imaging
Chapter 7: THz Communication
Chapter 8: THZ Energy Harvesting

Literature
- Yun-Shik Lee, Principles of Terahertz Science and Technology, Springer 2009

Prerequisites / notice
Good foundation in electromagnetics & knowledge of microwave or optical communication is helpful.

When we deviate from the main material discussed in these books, softcopy of lectures notes will be provided.

Objective

This lecture provides theoretical and experimental knowledge on the techniques for the characterization and numerical modeling of power semiconductors, as well on the related built-in reliability strategies.

Abstract

Solar radiation characteristics, physical mechanisms for the light to electrical power conversion, properties of semiconductors for solar cells, processing and properties of conventional Si and GaAs based solar cells, technology and physics of thin film solar cells based on compound semiconductors, other solar cells including organic and dye sensitized cells, problems and new developments for power generation in space, interconnection of cells and solar module design, measurement techniques, system design of photovoltaic plants, system components such as inverters and controllers, engineering procedures with software demonstration, integration in buildings and other specific examples.

Lecture notes

Lecture reprints (in english).

Prerequisites: Basic knowledge of semiconductor properties.

Objective

This lecture provides the basics of THz generation, manipulation, and detection. Our emphasis will be on the physical principles and applications of THz in the domain of imaging, communication and energy harvesting.

Abstract

This lecture provides a wide overview over analog filters (continuous-time and discrete-time), signal-processing systems, and sigma-delta conversion, and gives examples with sensor interfaces and class-D audio drivers. All systems and circuits are treated using a signal-flow view. The lecture is suitable for both analog and digital designers.

Lecture notes

The base for these lectures are lecture notes and two or three published scientific papers. From these papers we will together develop the technical content.

Prerequisites / notice

Knowledge of the Laplace transform and z transform and their interpretation (transfer functions, poles and zeros, bode diagrams, stability criteria ... ) and of the main properties of linear systems is necessary.

Lecture notes

The learning goal is that the students can apply signal-flow graphs and can understand the signal flow in such circuits and systems (including non-ideal effects) well enough to gain an understanding of further circuits and systems by themselves.

Content

At the beginning, signal-flow graphs in general and driving-point signal-flow graphs in particular are introduced. We will use them during the whole term to analyze circuits and understand how signals propagate through them. The theory and CMOS implementation of active Filters is then discussed in detail using the example of Gm-C filters and active-RC filters. The ideal and nonideal behaviour of opamps, current conveyors, and inductor simulators follows. The link to the practical design of circuits and systems is done with an overview over different quality measures and figures of merit used in scientific literature and datasheets. Finally, an introduction to discrete-time and mixed-domain filters and circuits is given, including sensor read-out amplifiers, correlated double sampling, and chopping, and an introduction to sigma-delta A/D and D/A conversion on a system level.

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 522 of 1571
Content

This lecture consists of a theoretical part (50%) and of laboratory exercises and demonstrations (50%). The theoretical part covers the basic techniques and procedures for characterization, modeling and built-in reliability of modern power semiconductor devices with special attention to MOS and IGBT. The starting part on technology provides an overview on the main device families and includes a review of the most relevant application-oriented aspects of the device physics, thermal management, and packaging. The second section deals with the basic experimental characterization techniques for the definition of the semiconductor material properties, electrical characteristics, safe operating area, and junction temperature of the devices. The following section introduces the basic principles for electrical, thermal, and electro-thermal simulation of power semiconductors by Technology Computed Aided Design (TCAD) and compact modeling. Finally, procedures are methods are presented to implement efficient built-in reliability programs targeted on power semiconductors. They include failure physics, dedicated failure analysis techniques, accelerated testing, defect screening, and lifetime modeling.

During the laboratory activities, selections of the experimental techniques presented in the lecture are demonstrated on the base of realistic examples. Furthermore, schematic power devices will be simulated by the students with advanced TCAD tools and circuit simulators.

227-0620-00L Characterization of the Electronic Properties of Materials for Semiconductor Devices

W 4 credits 3G

Abstract

This lecture provides theoretical and experimental knowledge on the techniques for the characterization of the main electronic properties of semiconductors and thin film materials used in microelectronics, with special focus on silicon.

Objective

The characterization of the electronic properties of semiconductor and related materials is fundamental to manufacture integrated devices, which fulfill the required specifications. By this lecture, the students shall get acquainted with the main electrical characterization techniques of the electronic properties of semiconductors and thin film materials used in microelectronics, as well as with their physical principles. This knowledge is intended to provide the future engineer with the theoretical background and experimental tools for process control in semiconductor manufacturing, parameter extraction in device simulation, and design of dependable devices.

Content

This lecture consists of a theoretical part (80%) and of laboratory exercises and demonstrations (20%). In the first section of the lecture, methods and procedures are presented for the experimental characterization of relevant electronic parameters in the bare semiconductor (mainly silicon), like resistivity, carrier and doping density, contact resistance, and defect density, carrier lifetime, mobility. The second section deals with techniques involving basic structures and devices (contact chains, MIS capacitors, diodes, gated diodes, BJT, MOSFET) for the characterization of atomic transport, mechanical stress, dielectric thickness, impact ionization, channel mobility, instabilities, defect formation at interfaces and in thin film dielectrics, carrier transport and trapping in thin film dielectrics, quasi-static and dynamic device characteristics. The list of the covered methods includes among others probing, Kelvin measurements, VanderPauw technique, Hall spectroscopy, SIMS, Raman spectroscopy, spreading resistance, scanning probe techniques, static/high-speed I-V, static/high-frequency C-V, open circuit voltage decay, carrier recombination techniques, Zerbst techniques, deep level transient spectroscopy, split C-V, charge pumping, and inverse modeling techniques using TCAD. All methods are presented in conjunction with the proper test structures. During the laboratory activities, a selection of the experimental techniques discussed in the lecture are demonstrated on the basis of realistic examples.

W 6 credits 4G

A. Gunzinger

Abstract

This lecture gives an overview of the requirements and the architecture of parallel computer systems, performance, reliability and costs.

Objective

Understand the function, the design and the performance modeling of parallel computer systems.

Content

The lecture "Applied Computer Architecture" gives technical and corporate insights in the innovative Computer Systems/Architectures

Prerequisites / notice

Script and exercices sheets.

227-0659-00L Integrated Systems Seminar

W 1 credit 1S

A. Schenk

Abstract

In the "Fachseminar IIS" the students learn to communicate topics, ideas or problems of scientific research by listening to more experienced authors and by presenting scientific work in a conference-like situation for a specific audience.

Objective

The seminar aims at instructing graduate and PhD students in the basics of presentation techniques, i.e. "how to give a professional talk". Attendees have the possibility to become acquainted with a current topic by a literature study, and to present the results thereof in a 20 minutes talk in English. The participation at the seminar gives also an overview on current problems in modern nano- and opto-electronics.

Content

The seminar topics' are simulation of nanoelectronic processes and devices, and the optical as well as electronical simulation of optoelectronic devices as lasers, photodiodes, etc.

Lecture notes

Presentation material

227-2037-00L Physical Modelling and Simulation

W 5 credits 4G

C. Hafner, J. Leuthold, J. Smajic

Abstract

This module consists of (a) an introduction to fundamental equations of electromagnetics, mechanics and heat transfer, (b) a detailed overview of numerical methods for field simulations, and (c) practical examples solved in form of small projects.

Objective

Basic knowledge of the fundamental equations and effects of electromagnetics, mechanics, and heat transfer. Knowledge of the main concepts of numerical methods for physical modelling and simulation. Ability (a) to develop own simple field simulation programs, (b) to select an appropriate field solver for a given problem, (c) to perform field simulations, (d) to evaluate the obtained results, and (e) to interactively improve the models until sufficiently accurate results are obtained.
Robotic Systems are often viewed from three perspectives: perception (sensing), manipulation (affecting changes in the world), and cognition (intelligence). Robotic systems integrate aspects of all three of these areas. This course provides an introduction to the theory of robotics, and covers the fundamentals of the field, including rigid motions, homogeneous transformations, forward and inverse kinematics of multiple degree of freedom manipulators, velocity kinematics, motion planning, trajectory generation, sensing, vision, and control. It’s a requirement for the Robotics Vertiefung and for the Masters in Mechatronics and Microsystems.

The theoretical part of the course finishes with a presentation of multiphysics simulations through several practical examples of HF-engineering such as coupled electromagnetic-mechanical and electromagnetic-thermal analysis of MEMS.

In the second part of the course the students will work in small groups on practical simulation problems. For solving practical problems the students can develop and use own simulation programs or chose an appropriate commercial field solver for their specific problem. This practical simulation work of the students is supervised by the lecturers.

Course format:

- Written documentation and evaluation of the entire production, processing and characterization of the MEMS is documented and evaluated in a final report.
- Testing and characterization of the MEMS device
- Photolithography, dry etching, wet etching, sacrificial layer etching, critical point drying, various cleaning procedures
- Packaging and electrical connection of a MEMS device
- Testing and characterization of the MEMS device
- Written documentation and evaluation of the entire production, processing and characterization

The module begins with an introduction to the fundamental equations and effects of electromagnetics, mechanics, and heat transfer. After the introduction follows a detailed overview of the available numerical methods for solving electromagnetic, thermal and mechanical boundary value problems. This part of the course contains a general introduction into numerical methods, differential and integral forms, linear equation systems, Finite Difference Method (FDM), Boundary Element Method (BEM), Method of Moments (MoM), Multiple Multipole Program (MMP) and Finite Element Method (FEM). The theoretical part of the course finishes with a presentation of multiphysics simulations through several practical examples of HF-engineering such as coupled electromagnetic-mechanical and electromagnetic-thermal analysis of MEMS.

The course will be taught in English.

Topics are treated in 2 blocks:

(I) From Quantum to Continuum
From atoms to molecules to condensed matter: characteristic properties of simple nanosystems and how they evolve when moving towards complex ensembles. Intermolecular forces, their macroscopic manifestations, and ways to control such interactions. Self-assembly and directed assembly of 2D and 3D structures. Special emphasis on the emerging field of molecular electronic devices.

(II) Interaction Forces on the Micro and Nano Scale
Intermolecular forces, their macroscopic manifestations, and ways to control such interactions. Self-assembly and directed assembly of 2D and 3D structures.

Prerequisites / notice
Lectures and Mini-Review presentations: Thursday 10-13, ML F 36

Homework: Mini-Reviews
Students select a paper (list distributed in class) and expand the topic into a Mini-Review that illuminates the particular field beyond the immediate results reported in the paper.

Abstract
Practical course: Students are introduced to the process steps required for the fabrication of MEMS (Micro Electro Mechanical System) and carry out the fabrication and testing steps in the clean rooms by themselves. Additionally, they learn the requirements for working in clean rooms. Processing and characterization will be documented and analyzed in a final report. Limited access

Objective
Students learn the individual process steps that are required to make a MEMS (Micro Electro Mechanical System). Students carry out the process steps themselves in laboratories and clean rooms. Furthermore, participants become familiar with the special requirements (cleanliness, safety, operation of equipment and handling hazardous chemicals) of working in the clean rooms and laboratories. The entire production, processing, and characterization of the MEMS is documented and evaluated in a final report.

Content
With guidance from a tutor, the individual silicon microsystem process steps that are required for the fabrication of an accelerometer are carried out:
- Photolithography, dry etching, wet etching, sacrificial layer etching, critical point drying, various cleaning procedures
- Packaging and electrical connection of a MEMS device
- Testing and characterization of the MEMS device
- Written documentation and evaluation of the entire production, processing and characterization

Lecture notes
A document containing theory, background and practical course content is distributed at the first meeting of the course.

Literature
The document provides sufficient information for the participants to successfully participate in the course.

Electromagnetic oscillations known as surface plasmon polaritons have many unique properties that are useful across a broad set of

Technology and Innovation Management

This course intends to enable all students to:

- understand the core concepts necessary to analyze how innovation happens
- master the most common methods and tools organizations deploy to innovate
- develop the ability to critically evaluate the innovation process, and act upon the main obstacles to innovation

This course looks at technology and innovation management as a process. Continuously, organizations are faced with a fundamental decision: they have to allocate resources between well-known tasks that reliably generate positive results; or explore new ways of doing things, new technologies, products and services. The latter is a high risk choice. Its rewards can be high, but the chances of success are small.

How do firms organize to take these decisions? What kind of management skills are necessary to take them? What kind of tools and methods are deployed to sustain managerial decision-making in highly volatile environments? These are the central questions on which this course focuses, relying on a combination of lectures, case-based discussion, guest speakers, simulations and group work.

The course is offered in autumn and spring semester.

**151-0911-00L**  
**Introduction to Plasmonics**  
W 4 credits 2V+1U  
D. J. Norris

This course provides fundamental knowledge of surface plasmon polaritons and discusses their applications in plasmonics. Electromagnetic oscillations known as surface plasmon polaritons have many unique properties that are useful across a broad set of applications in biology, chemistry, physics, and optics. The field of plasmonics has arisen to understand the behavior of surface plasmon polaritons and to develop applications in areas such as catalysis, imaging, photovoltaics, and sensing. In particular, metallic nanoparticles and patterned metallic interfaces have been developed to utilize plasmonic resonances. The aim of this course is to provide the basic knowledge to understand and apply the principles of plasmonics. The course will strive to be approachable to students from a diverse set of science and engineering backgrounds.

**Content**

- Fundamentals of Plasmonics
  - Basic electromagnetic theory
  - Optical properties of metals
  - Surface plasmon polaritons on surfaces
  - Surface plasmon polariton propagation
  - Localized surface plasmons
- Applications of Plasmonics
  - Waveguides
  - Extraordinary optical transmission
  - Enhanced spectroscopy
  - Sensing
  - Metamaterials

**Literature**

**Prerequisites**

Physics I, Physics II

**363-0389-00L**  
**Technology and Innovation Management**  
W 3 credits 2G  
S. Brusoni

This course focuses on the analysis of innovation as a pervasive process that cut across organizational and functional boundaries. It looks at the sources of innovation, at the tools and techniques that organizations deploy to routinely innovate, and the strategic implications of technical change.

**Objective**

This course intends to enable all students to:

- understand the core concepts necessary to analyze how innovation happens
- master the most common methods and tools organizations deploy to innovate
- develop the ability to critically evaluate the innovation process, and act upon the main obstacles to innovation

Basics of the switching behavior, gate drive and snubber circuits of power semiconductors are discussed. Soft-switching and resonant DC/DC converters are analyzed in detail and high frequency loss mechanisms of magnetic components are explained. Space vector modulation of three-phase inverters is introduced and the main power components are designed for typical industry applications.
Objective
Detailed understanding of the principle of operation and modulation of advanced power electronics converter systems, especially of zero voltage switching and zero current switching non-isolated and isolated DC/DC converter systems and three-phase voltage DC link inverter systems. Furthermore, the course should convey knowledge on the switching frequency related losses of power semiconductors and inductive power components and introduce the concept of space vector calculus which provides a basis for the comprehensive discussion of three-phase PWM converters systems in the lecture Power Electronic Systems II.

Content
Basics of the switching behavior and gate drive circuits of power semiconductor devices and auxiliary circuits for minimizing the switching losses are explained. Furthermore, zero voltage switching, zero current switching, and resonant DC/DC converters are discussed in detail; the operating behavior of isolated full-bridge DC/DC converters is detailed for different secondary side rectifier topologies; high frequency loss mechanisms of magnetic components of converter circuits are explained and approximate calculation methods are presented; the concept of space vector calculus for analyzing three-phase systems is introduced; finally, phase-oriented and space vector modulation of three-phase inverter systems are discussed related to voltage DC link inverter systems and the design of the main power components based on analytical calculations is explained.

Lecture notes
Lecture notes and associated exercises including correct answers, simulation program for interactive self-learning including visualization/animation features.

Prerequisites / notice
Prerequisites: Introductory course on power electronics.

227-0517-00L  Electrical Drive Systems II  W  6 credits  4G  P. Steimer, G. Scheuer, C. A. Stulz
Abstract
In the course "Drive System II" the power semiconductors are repeated. The creation of converters based on the combination of switches/cells and based topologies is explained. Another main focus is on the 3-level inverter with its switching and transfer functions. Further topics are the control of the synchronous machine, of line-side converters and issues with converter-fed machines.

Objective
The students establish a deeper understanding in regards of the design of the main components of an electrical drive system. They establish knowledge on the most important interaction with the grid and the machine and their related high dynamic control.

Content
Converter topologies (switch or cell based), multi-pulse diode rectifiers, system aspects of transformer and electrical machines, 3-level inverter with its switching and transfer functions, grid side harmonics, modeling and control of synchronous machines (including permanent magnet machines), control of line-side converters, reflection effects with power cables, winding isolation and bearing stress. Field trip to ABB Semiconductors.

Lecture notes
Lecture notes are sold at the beginning of the lectures or can be downloaded from Ilias

Literature
Skript is sold at the beginning of the lectures or can be downloaded from Ilias

Prerequisites / notice
Prerequisites: Electrical Drive Systems I (recommended), Basics in electrical engineering, power electronics, automation and mechatronics

227-0526-00L  Power System Analysis  W  6 credits  4G  G. Hug
Abstract
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Objective
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

Content
The electrical power transmission system, the energy management system, requirements of the electrical power transmission (demand oriented, operationally, economically), network planning and network operation, models of N-port network components (line, cables, shunts, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.

Lecture notes
Lecture notes. Course is supported by WWW-teaching system.

227-0567-00L  Design of Power Electronic Systems  W  6 credits  4G  F. Krismer
Abstract
Complete design process: from given specifications to a complete power electronic system; selection / design of suitable passive power components; static and dynamic properties of power semiconductors; optimized EMI filter design; heat sink optimization; additional circuitry, e.g. gate driver; system optimization.

Objective
Basic knowledge of design and optimization of a power electronic system; furthermore, lecture and exercises thoroughly discuss key subjects of power electronics that are important with respect to a practical realization, e.g. how to select suitable power components, how to determine switching losses, calculation of high frequency losses, EMI filter design and realization, thermal considerations.

Content
Complete design process: from given specifications to a complete power electronic system.
Selection and / or design of suitable passive power components: specific properties, parasitic components, tolerances, high frequency losses, thermal considerations, reliability.
Static and dynamic characteristics of power semiconductors.
Optimized design of the EMI filter.
Thermal characterization of the converter, optimized heat sink design.
Additional circuitry: gate driver, measurement, control.
Converter start up: typical sequence of events, circuitry required.
Overall system optimization: identifying couplings between different components of the considered power electronic system, optimization targets and issues.

Lecture notes
Lecture notes and complementary exercises including correct answers.

Prerequisites / notice
Prerequisites: Introductory course on power electronics.

227-0731-00L  Power Market I - Portfolio and Risk Management  W  6 credits  4G  D. Reichelt, G. A. Koeppe
Abstract
Portfolio and risk management in the electrical power business, Pan-European power market and trading, futures and forward contracts, hedging, options and derivatives, performance indicators for the risk management, modelling of physical assets, cross-border trading, ancillary services, balancing power market, Swiss market model

Objective
Content

1. Pan-European power market and trading
2. Market model
3. Portfolio and Risk management
4. Energy & Finance I
5. Communication Systems
6. Linear System Theory

Objective

1. Pan-European power market and trading
2. Market model
3. Portfolio and Risk management
4. Energy & Finance I
5. Communication Systems
6. Linear System Theory

Abstract

The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications: discrete-time linear filters, equalization, DFT, discrete-time stochastic processes, elements of detection theory and estimation theory, LMMSE estimation and LMMSE filtering, LMS algorithm, Viterbi algorithm.

Objective

The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications. The two main themes are linearity and probability. In the first part of the course, we deepen our understanding of discrete-time linear filters. In the second part of the course, we review the basics of probability theory and discrete-time stochastic processes. We then discuss some basic concepts of detection theory and estimation theory, as well as some practical methods including LMMSE estimation and LMMSE filtering, the LMS algorithm, and the Viterbi algorithm. A recurrent theme throughout the course is the stable and robust "inversion" of a linear filter.

Content

1. Discrete-time linear systems and filters: state-space realizations, z-transform and spectrum, decimation and interpolation, digital filter design, stable realizations and robust inversion.
2. The discrete Fourier transform and its use for digital filtering.
3. The statistical perspective: probability, random variables, discrete-time stochastic processes; detection and estimation: MAP, ML, Bayesian MMSE, LMMSE; Wiener filter, LMS adaptive filter, Viterbi algorithm.

A recurrent theme throughout the course is the stable and robust "inversion" of a linear filter.

Content

1. Discrete-time linear systems and filters: state-space realizations, z-transform and spectrum, decimation and interpolation, digital filter design, stable realizations and robust inversion.
2. The discrete Fourier transform and its use for digital filtering.
3. The statistical perspective: probability, random variables, discrete-time stochastic processes; detection and estimation: MAP, ML, Bayesian MMSE, LMMSE; Wiener filter, LMS adaptive filter, Viterbi algorithm.

Abstract

Information Theory, Signal Space Analysis, Baseband Transmission, Passband Transmission, Example und Channel, Data Link Layer, MAC, Example Layer 2, Layer 3, Internet

Objective

Introduction into the fundamentals of digital communication systems. Selected examples on the application of the fundamental principles in existing and upcoming communication systems

Content

Covered are the lower three layer of the OSI reference model: the physical, the data link, and the network layer. The basic terms of information theory are introduced. After this, we focus on the methods for the point to point communication, which may be addressed elegantly and coherently in the signal space. Methods for error detection and correction as well as protocols for the retransmission of perturbed data will be covered. Also the medium access for systems with shared medium will be discussed. Finally, algorithms for routing and flow control will be treated.

The application of the basic methods will be extensively explained using existing and future wireless and wired systems.

Abstract

The class is intended to provide a comprehensive overview of the theory of linear dynamical systems, their use in control, filtering, and estimation and their applications to areas ranging from avionics to systems biology.

Objective

By the end of the class students should be comfortable with the fundamental results in linear system theory and the mathematical tools used to derive them.
This lecture provides theoretical and experimental knowledge on the techniques for the characterization and numerical modeling of power semiconductors. The students shall get acquainted with the most important concepts and techniques for characterization, numerical modeling and built-in reliability of modern power semiconductor devices. This knowledge is intended to provide the future engineer with the theoretical background and tools for the design of dependable power devices and systems.

**Prerequisites:** Control Systems I (227-0103-00) or equivalent and sufficient mathematical maturity.

**Course Information:**
- **Course Code:** 227-0523-00L
- **Title:** Railway Systems I
- **Description:** Basic characteristics of railway vehicles and their interfaces with the railway infrastructure:
  - Transportation tasks and vehicle types
  - Running dynamics
  - Mechanical part of rail vehicles
  - Brakes
  - Traction chain and auxiliary supply
  - Railway power supply
  - Signalling systems
  - Traffic control and maintenance
- **Objective:**
  - Overview of the technical characteristics of railway systems
  - Interrelationship between different fields of engineering sciences (mechanics, electro and information technology, transport systems)
  - Understanding tasks and opportunities of engineers working in an environment which has strong economical and political boundaries
  - Insight into the activities of the railway vehicle industry and railway operators in Switzerland
  - Motivation of young engineers to start a career in the railway industry or with railway operators
- **Content:**
  1. Einführung:
     1.1 Geschichte und Struktur des Bahnsystems
     1.2 Fahrdynamik
  2. Vollbahnhäuzer:
     2.1 Mechanik: Kasten, Drehgestelle, Lauftechnik, Adhäsion
     2.2 Bremsen
     2.3 Traktionsantriebssysteme
     2.4 Hilfsbetriebe und Komfortanlagen
     2.5 Steuerung und Regelung
  3. Infrastruktur:
     3.1 Fahrbahn
     3.2 Bahnstromversorgung
     3.3 Sicherungsanlagen
  4. Betrieb:
     4.1 Interoperabilität, Normen und Zulassung
     4.2 RAMS, LCC
     4.3 Anwendungsbeispiele

**Prerequisites / notice**
- **Dozent:** Dr. Markus Meyer, Emkamatik GmbH

**Lecture notes**
- Abgabe der Unterlagen (gegen eine Schutzgebühr) zu Beginn des Semesters. Rechtzeitig eingeschriebene Teilnehmer können die Unterlagen auf Wunsch und gegen eine Zusatzgebühr auch in Farbe beziehen.

**Course Information:**
- **Course Code:** 227-0618-00L
- **Title:** Modeling, Characterization and Reliability of Power Semiconductors
- **Description:**
  This lecture provides a theoretical and experimental knowledge on the techniques for the characterization and numerical modeling of power semiconductors, as well as on the related built-in reliability and packaging strategies. The students shall get acquainted with the most important concepts and techniques for characterization, numerical modeling and built-in reliability of modern power semiconductor devices. This knowledge is intended to provide the future engineer with the theoretical background and tools for the design of dependable power devices and systems.

**Objective:**
- **Abstract:**
  This lecture provides a theoretical and experimental knowledge on the techniques for the characterization and numerical modeling of power semiconductors, as well as on the related built-in reliability and packaging strategies. The students shall get acquainted with the most important concepts and techniques for characterization, numerical modeling and built-in reliability of modern power semiconductor devices. This knowledge is intended to provide the future engineer with the theoretical background and tools for the design of dependable power devices and systems.
- **Content:**
  This lecture consists of a theoretical part (50%) and of laboratory exercises and demonstrations (50%). The theoretical part covers the basic techniques and procedures for characterization, modeling and built-in reliability of modern power semiconductor devices with special attention to MOS and IGBT. The starting point on technology provides an overview on the main device families and includes a review of the most relevant application-oriented aspects of the device physics, thermal management, and packaging. The second section deals with the basic experimental characterization techniques for the definition of the semiconductor material properties, electrical characteristics, safe operating area, and junction temperature of the devices. The following section introduces the basic principles for electrical, thermal, and electro-thermal simulation of power semiconductors by Technology Computed Aided Design (TCAD) and compact modeling. Finally, procedures are presented to implement efficient built-in reliability programs targeted on power semiconductors. They include failure physics, dedicated failure analysis techniques, accelerated testing, defect screening, and lifetime modeling.
  During the laboratory activities, selections of the experimental techniques presented in the lecture are demonstrated on the base of realistic examples. Furthermore, schematic power devices will be simulated by the students with advanced TCAD tools and circuit simulators.

**Lecture notes**
- Handouts to the lecture (approx. 250 pp.)
By the end of the class students should be comfortable with the fundamental results in linear system theory and the mathematical tools.

Knowledge of process automation and its application in industry and power generation

The goal of the lecture is to get a basic understanding of international market mechanisms and their consequences for a successful enterprise.

Introduction to process automation: system architecture, data handling, communication (fieldbusses), process visualization, engineering, etc.

Dynamic Programming and Optimal Control

Introduction to Dynamic Programming and Optimal Control.

Dynamic Programming Algorithm; Deterministic Systems and Shortest Path Problems; Infinite Horizon Problems, Bellman Equation; Deterministic Continuous-Time Optimal Control.

Globalization of markets increases global competition and requires enterprises to continuously improve their performance to sustainably survive. Engineers substantially contribute to the success of an enterprise provided they understand and follow fundamental international market forces, economic basics and operational business management.

The first part of the course provides an overview about the development of international markets, the expected challenges and the players in the market. The second part is focusing on the economic aspects of an enterprise, their importance for the long term success and how they convert into a successful portfolio an enterprise offers to the global market. They will understand the basics of international business management, why efficient organizations and effective business processes are crucial for the successful survival of an enterprise and how all this can be implemented.

A script is provided for this lecture.

The lecture will be held in three blocks each of them on a Saturday. Each block will focus on one of the three main topics of the course. Between the blocks the students will work on specific case studies to deepen the subject matter. About two weeks after the third block a written examination will be conducted.

Practical exercises will illustrate some topics, e.g. some control software coding using industry standard programming tools based on IEC61131-3.

Practical exercises will illustrate some topics, e.g. some control software coding using industry standard programming tools based on IEC61131-3.

These core subjects are particularly recommended for the field of "Systems and Control".

<td>Discrete Event Systems</td>
<td>W</td>
<td>6 credits</td>
<td>4G</td>
<td>L. Thiele, L. Vanbever, R. Wattenhofer</td>
</tr>
</tbody>
</table>

**Abstract**
Introduction to discrete event systems. We start out by studying popular models of discrete event systems. In the second part of the course we analyze discrete event systems from an average-case and from a worst-case perspective. Topics include: Automata and Languages, Specification Models, Stochastic Discrete Event Systems, Worst-Case Event Systems, Verification, Network Calculus.

**Objective**
Over the past few decades the rapid evolution of computing, communication, and information technologies has brought about the proliferation of new dynamic systems. A significant part of activity in these systems is governed by operational rules designed by humans. The dynamics of these systems are characterized by asynchronous occurrences of discrete events, some controlled (e.g. hitting a keyboard key, sending a message), some not (e.g. spontaneous failure, packet loss). The mathematical arsenal centered around differential equations that has been employed in systems engineering to model and study processes governed by the laws of nature is often inadequate or inappropriate for discrete event systems. The challenge is to develop new modeling frameworks, analysis techniques, design tools, testing methods, and optimization processes for this new generation of systems.

In this lecture we give an introduction to discrete event systems. We start out the course by studying popular models of discrete event systems, such as automata and Petri nets. In the second part of the course we analyze discrete event systems. We first examine discrete event systems from an average-case perspective: we model discrete events as stochastic processes, and then apply Markov chains and queuing theory for an understanding of the typical behavior of a system. In the last part of the course we analyze discrete event systems from a worst-case perspective using the theory of online algorithms and adversarial queuing.

**Content**
1. Introduction
2. Automata and Languages
3. Smarter Automata
4. Specification Models
5. Stochastic Discrete Event Systems
6. Worst-Case Event Systems
7. Network Calculus

**227-0447-00L Image Analysis and Computer Vision**  W  6 credits  3V+1U  L. Van Gool, O. Gökşel, E. Konukoglu

**Abstract**

**Objective**
Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.
The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

**Prerequisites / notice**

Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.

The course language is English.

**Lecture notes**

Course material, Script, computer demonstrations, exercises and problem solutions.

**Content**

- Power System Analysis
  - Objective: The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.
  - Content: The electrical power transmission system, energy management system, requirements of the electrical power transmission (demand oriented, operationally, economically), network planning and network operation, models of N-port network components (line, cables, shunts, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.
  - Lecture notes: Lecture notes. Course is supported by WWW-teaching system.

- System Identification
  - Objective: To provide a series of practical techniques for the development of dynamical models from experimental data, with the emphasis being on the development of models suitable for feedback control design purposes. To provide sufficient theory to enable the practitioner to understand the trade-offs between model accuracy, data quality and data quantity.
  - Prerequisites / notice: Control systems (227-0216-00L) or equivalent.

- Cell and Molecular Biology for Engineers I
  - Objective: The course gives an introduction into cellular and molecular biology, specifically for students with a background in engineering. The focus will be on the basic organization of eukaryotic cells, molecular mechanisms and cellular functions. Textbook knowledge will be combined with results from recent research and technological innovations in biology.
  - Content: After completing this course, engineering students will be able to apply their previous training in the quantitative and physical sciences to modern biology. Students will also learn the principles how biological models are established, and how these models can be tested.

- Uncertainty Quantification for Engineering & Life Sciences
  - Objective: Course does not take place this semester. Number of participants limited to 60.
  - Content: Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.
  - Literature: Scripts of all lectures will be available.

Prerequisites / notice

401-0647-00L Introduction to Mathematical Optimization W 5 credits 2V+1U D. Adjiashvili

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 533 of 1571
The goal of the course is to obtain a good understanding of some of the most fundamental mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems. The students will also practice applying the learned models to problems in engineering.

Topics covered in this course include:

- Linear programming (simplex method, duality theory, shadow prices, ...)
- Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...).
- Modelling with mathematical optimization: applications of mathematical programming in engineering.

Information about relevant literature will be given in the lecture.

This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture covering similar topics and more.

**401-3901-00L**

**Mathematical Optimization**

**W** 11 credits 4V+2U  R. Weismantel

**Abstract**

Mathematical treatment of diverse optimization techniques.

**Objective**

Advanced optimization theory and algorithms.

**Content**

1. Linear optimization: The geometry of linear programming, the simplex method for solving linear programming problems, Farkas’ Lemma and infeasibility certificates, duality theory of linear programming.

3. Integer optimization: Ties between linear and integer optimization, total unimodularity, complexity theory, cutting plane theory.

4. Combinatorial optimization: Network flow problems, structural results and algorithms for matroids, matchings and, more generally, independence systems.

**363-0007-00L**

**Computational Systems Biology**

**W** 6 credits 3V+2U  J. Stelling

**Abstract**

Study of fundamental concepts, models and computational methods for the analysis of complex biological networks. Topics: Systems approaches in biology, biology and reaction network fundamentals, modeling and simulation approaches (topological, probabilistic, stoichiometric, qualitative, linear / nonlinear ODEs, stochastic), and systems analysis (complexity reduction, stability, identification).

**Objective**

The aim of this course is to provide an introductory overview of mathematical and computational methods for the modeling, simulation and analysis of biological networks.

**Content**

Biology has witnessed an unprecedented increase in experimental data and, correspondingly, an increased need for computational methods to analyze this data. The explosion of sequenced genomes, and subsequently, of bioinformatics methods for the storage, analysis and comparison of genetic sequences provides a prominent example. Recently, however, an additional area of research, captured by the label "Systems Biology", focuses on how networks, which are more than the mere sum of their parts’ properties, establish biological functions. This is essentially a task of reverse engineering. The aim of this course is to provide an introductory overview of corresponding computational methods for the modeling, simulation and analysis of biological networks.

We will start with an introduction into the basic units, functions and design principles that are relevant for biology at the level of individual cells. Making extensive use of example systems, the course will then focus on methods and algorithms that allow for the investigation of biological networks with increasing detail. These include (i) graph theoretical approaches for revealing large-scale network organization, (ii) probabilistic (Bayesian) network representations, (iii) structural network analysis based on reaction stoichiometries, (iv) qualitative methods for dynamic modeling and simulation (Boolean and piece-wise linear approaches), (v) mechanistic modeling using ordinary differential equations (ODEs) and finally (vi) stochastic simulation methods.

Abstract
The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training. The lecture will be thought on two afternoons. Some exercises will be built into the lecture.

Objective
Knowledge on structure and content of a scientific text. The course further is arranged to stimulate a discussion on how to properly write a legible scientific text versus writing an interesting novel. We will further discuss the practice of properly citing and critically reflect on recent plagiarism allegations.

Content
* Topic 1: Structure of a Scientific Text (The Title, the author list, the abstract, State-of-the-Art, the "in this paper" paragraph, the scientific part, the summary, Equations, Figures).
  * Topic 2: Power Point Presentations.
  * Topic 3: Citation Rules and Citation Software.
  * Topic 4: Guidelines for Research Integrity.

Literature
ETH "Citation Etiquette", see www.plagiate.ethz.ch.

Prerequisites / notice
Students should already have a Bachelor degree and plan to do either a semester project or a master thesis in the immediate future.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.
The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications: discrete-time linear filters, equalization, DFT, discrete-time stochastic processes, elements of detection theory and estimation theory, LMMSE estimation and LMMSE filtering, LMS algorithm, Viterbi algorithm.

The course introduces some fundamental topics of digital signal processing with a bias towards applications in communications. The two main themes are linearity and probability. In the first part of the course, we deepen our understanding of discrete-time linear filters. In the second part of the course, we review the basics of probability theory and discrete-time stochastic processes. We then discuss some basic concepts of detection theory and estimation theory, as well as some practical methods including LMMSE estimation and LMMSE filtering, the LMS algorithm, and the Viterbi algorithm. A recurrent theme throughout the course is the stable and robust "inversion" of a linear filter.

1. Discrete-time linear systems and filters: state-space realizations, z-transform and spectrum, decimation and interpolation, digital filter design, stable realizations and robust inversion.

2. The discrete Fourier transform and its use for digital filtering.

3. The statistical perspective: probability, random variables, discrete-time stochastic processes; detection and estimation: MAP, ML, Bayesian MMSE, LMMSE; Wiener filter, LMS adaptive filter, Viterbi algorithm.

Lecture notes
Lecture Notes.
Content
- discussion of the field equations relevant for high voltage engineering.
- analytical and numerical solutions/solving of this equations, as well as the derivation of the important equivalent circuits for the description of the fields and losses in insulations
- introduction to kinetic theory of gases
- mechanisms of the breakdown in gaseous, liquid and solid insulations, as well as insulation systems
- methods for the mathematical determination of the electric withstand of gaseous, liquid and solid insulations
- application of the expertise on high voltage components
- excursions to manufacturers of high voltage components
- exercise to learn on computer-modeling in high voltage engineering

| 227-1631-00L | Energy System Analysis                                    | W    | 4    | 3G    | G. Hug, S. Hellweg, F. Noembrini, A. Schlüter |
|             | The course provides an introduction to the methods and tools for analysis of energy consumption, energy production and energy flows. Environmental aspects are included as well as economical considerations. Different sectors of the society are discussed, such as electric power, buildings, and transportation. Models for energy system analysis planning are introduced. |
| Objective   | The purpose of the course is to give the participants an overview of the methods and tools used for energy systems analysis and how to use these in simple practical examples. |
| Content     | The course gives an introduction to methods and tools for analysis of energy consumption, energy production and energy flows. Both larger systems, e.g. countries, and smaller systems, e.g. industries, homes, vehicles, are studied. The tools and methods are applied to various problems during the exercises. Different conventions of energy statistics used are introduced. |

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 539 of 1571
Objective

At the end of the semester, the students have an understanding of the term of sustainable development, its history, the current political and scientific discourses and its relevance for our built environment.

In order to address current challenges of climate change mitigation and resource depletion, students will learn a holistic approach of sustainable development. Ecological, economical and social constraints will be presented and students will learn about methods for argumentation and tools for assessment (i.e. life cycle assessment).

For this purpose an overview of sustainable development is presented with an introduction to the history of sustainability and its today definition as well as the role of cities, urbanisation and material resources (i.e. energy, construction material) in social economic and environment aspects.

The course aims to promote an integral view and understanding of sustainability and describing different spheres (social/cultural, ecological, economical, and institutional) that influence our built environment.

Students will acquire critical knowledge and understand the role of involved stakeholders, their motivations and constraints, learn how to evaluate challenges, identify deficits and define strategies to promote a more sustainable construction.

After the course students should be able to define the relevance of specific local, regional or territorial aspects to achieve coherent and applicable solutions toward sustainable development.

The course offers an environmental, socio-economic and socio-technical perspective focussing on buildings, cities and their transition to resilience with sustainable development. Students will learn on theory and application of current scientific pathways towards sustainable development.

Content

The following topics give an overview of the themes that are to be worked on during the lecture.

- Overview on the history and emergence of sustainable development
- Overview on the current understanding and definition of sustainable development
- Case Study 1: Sustainable construction, the role of construction industry (national/international)
- Case Study 2: Cities, forms of settlements
- Case Study 3: Material resources, scenarios, energy, construction materials, urban metabolism
- Case Study 4: Buildings, heating/cooling, consumers, prosumers and other stakeholder, cooperations
- Method 1: Life cycle assessment (planning, construction, operation/use, deconstruction)
- Method 2: Economics for sustainable construction
- Method 3: Construction, flexibility, modularity
- Synthesis 1: Climate Change mitigation and adaptation in cities
- Synthesis 2: Transition to sustainable development

Lecture notes

All relevant information will be online available before the lectures. For each lecture slides of the lecture will be provided.

Literature

A list of the basic literature will be offered on a specific online platform, that could be used by all students attending the lectures.

151-0123-00L Experimental Methods for Engineers W 4 credits 2V+2U T. Rösgen, R. S. Abhari, K. Boulouchos, D. J. Norris, H.-M. Prasser, A. Steinfeld

Abstract

The course presents an overview of measurement tasks in engineering environments. Different concepts for the acquisition and processing of typical measurement quantities are introduced. Following an initial in-class introduction, laboratory exercises from different application areas (especially in thermofluidics and process engineering) are attended by students in small groups.

Objective

Introduction to various aspects of measurement techniques, with particular emphasis on thermo-fluidic applications.

Understanding of various sensing technologies and analysis procedures.

Exposure to typical experiments, diagnostics hardware, data acquisition and processing.

Study of applications in the laboratory.

Fundamentals of scientific documentation & reporting.

Content

In-class introduction to representative measurement techniques in the research areas of the participating institutes (fluid dynamics, energy technology, process engineering).

Student participation in 8-10 laboratory experiments (study groups of 3-5 students, dependent on the number of course participants and available experiments)

Lab reports for all attended experiments have to be submitted by the study groups.

A final exam evaluates the acquired knowledge individually.

Lecture notes

Presentations, handouts and instructions are provided for each experiment.

Literature

Prerequisites / notice

- fluid mechanics, thermodynamics, heat and mass transfer
- electrical engineering / electronics
- numerical data analysis and processing (e.g. using MATLAB)

151-0163-00L Nuclear Energy Conversion W 4 credits 2V+1U H.-M. Prasser

Abstract

Physical fundamentals of the fission reaction and the sustainable chain reaction, thermal design, construction, function and operation of nuclear reactors and power plants, light water reactors and other reactor types, conversion and breeding

Objective

Students get an overview on energy conversion in nuclear power plants, on construction and function of the most important types of nuclear reactors with special emphasis to light water reactors. They obtain the mathematical/physical basis for quantitative assessments concerning most relevant aspects of design, dynamic behaviour as well as material and energy flows.

Content

Nuclear physics of fission and chain reaction. Thermodynamics of nuclear reactors. Design of the reactor core. Introduction into the dynamic behaviour of nuclear reactors. Overview on types of nuclear reactors, difference between thermal reactors and fast breeders. Construction and operation of nuclear power plants with pressurized and boiling water reactors, role and function of the most important safety systems, special features of the energy conversion. Development tendencies of reactor technology.

Lecture notes

Hand-outs will be distributed. Additional literature and information on the website of the lab:

Turbomachinery Design

The analysis of realistic reactive flow systems necessitates the use of detailed computer models that can be constructed starting from first principles. These models incorporate the fundamental processes involved in the operation of turbomachinery devices. The course introduces the students to the fundamentals, technologies, modern day application, and economics of wind energy. These subjects are introduced through a discussion of the basic principles of wind energy generation and conversion, and a detailed description of the broad range of relevant technical, economic, and environmental topics. This course is part of the focus "Energy, Flows & Materials Technology" on the Bachelor level and is recommended as a basis for a future Master in the area of energy. It is also a facultative lecture on the Master level in Energy Science and Technology and Process Engineering.

Introduction to the understanding of a broad range of turbomachinery devices. The students learn the steps of turbomachinery design. The objective of this course is to introduce the students to the fundamentals, technologies, modern day application, and economics of wind energy. These subjects are introduced through a discussion of the basic principles of wind energy generation and conversion, and a detailed description of the broad range of relevant technical, economic, and environmental topics. The analysis of realistic reactive flow systems necessitates the use of detailed computer models that can be constructed starting from first principles. These models incorporate the fundamental processes involved in the operation of turbomachinery devices. The course introduces the students to the fundamentals, technologies, modern day application, and economics of wind energy. These subjects are introduced through a discussion of the basic principles of wind energy generation and conversion, and a detailed description of the broad range of relevant technical, economic, and environmental topics. This course is part of the focus "Energy, Flows & Materials Technology" on the Bachelor level and is recommended as a basis for a future Master in the area of energy. It is also a facultative lecture on the Master level in Energy Science and Technology and Process Engineering.

The students should become familiar with the fundamentals and with application examples of chemically reactive processes in energy conversion (combustion engines in particular) as well as the synthesis of new materials. The lecture is applied in several calculation exercises and two lab exercises at the engine test bench. The students get an insight in alternative power train systems.

Wind Energy

The objective of this course is to introduce the students to the fundamentals, technologies, modern day application, and economics of wind energy. These subjects are introduced through a discussion of the basic principles of wind energy generation and conversion, and a detailed description of the broad range of relevant technical, economic, and environmental topics. The analysis of realistic reactive flow systems necessitates the use of detailed computer models that can be constructed starting from first principles. These models incorporate the fundamental processes involved in the operation of turbomachinery devices. The course introduces the students to the fundamentals, technologies, modern day application, and economics of wind energy. Number of participants limited to 20.

151-0207-00L Theory and Modeling of Reactive Flows

The course first reviews the governing equations and combustion chemistry, setting the ground for the analysis of homogeneous gas-phase mixtures, laminar diffusion and premixed flames. Catalytic combustion and its coupling with homogeneous combustion are dealt in detail, and turbulent combustion modeling approaches are presented. Available numerical codes will be used for modeling.

151-0216-00L Wind Energy

The objective of this course is to introduce the students to the fundamentals, technologies, modern day application, and economics of wind energy. These subjects are introduced through a discussion of the basic principles of wind energy generation and conversion, and a detailed description of the broad range of relevant technical, economic, and environmental topics. The analysis of realistic reactive flow systems necessitates the use of detailed computer models that can be constructed starting from first principles i.e. thermodynamics, fluid mechanics, chemical kinetics, and heat and mass transport. In this course, the focus will be on combustion theory and modeling. The reacting flow governing equations and the combustion chemistry are firstly reviewed, setting the ground for the analysis of homogeneous gas-phase mixtures, laminar diffusion and premixed flames. Heterogeneous (catalytic) combustion, an area of increased importance in the last years, will be dealt in detail along with its coupling with homogeneous combustion. Finally, approaches for the modeling of turbulent combustion will be presented. Available numerical codes will be used to compute the above described phenomena. Familiarity with numerical methods for the solution of partial differential equations is expected.

Abstract

- Introduction to current and future engine systems and their control systems
- Introduction to methods of control and optimization of dynamic systems. Application to real engines. Understand the structure and behavior of drive train systems and their quantitative descriptions.
- Physical description and mathematical models of components and subsystems (mixture formation, load control, supercharging, emissions, drive train components, etc.).
- Case studies of model-based optimal design and control of engine systems with the goal of minimizing fuel consumption and emissions.
- Introduction to Modeling and Control of Internal Combustion Engine Systems

Objective

- Combined homework and testbench exercise (air-to-fuel-ratio control or idle-speed control) in groups
- Lecture notes and associated exercises including correct answers, simulation program for interactive self-learning including visualization/animation features.
- Basic characteristics of railway vehicles and their interfaces with the railway infrastructure:
  - Transportation tasks and vehicle types
  - Running dynamics
  - Mechanical part of rail vehicles
  - Brakes
  - Traction chain and auxiliary supply
  - Railway power supply
  - Signalling systems
  - Traffic control and maintenance
- Overview of the technical characteristics of railway systems
- Know-how about the design and construction principles of rail vehicles
- Interrelationship between different fields of engineering sciences (mechanics, electro and information technology, transport systems)
- Understanding tasks and opportunities of engineers working in an environment which has strong economical and political boundaries
- Insight into the activities of the railway vehicle industry and railway operators in Switzerland
- Motivation of young engineers to start a career in the railway industry or with railway operators
Content

1 Einführung:
1.1 Geschichte und Struktur des Bahnsystems
1.2 Fahrdynamik

2 Vollbahnfahrzeuge:
2.1 Mechanik: Kasten, Drehgestelle, Lauftechnik, Adhäsion
2.2 Bremsen
2.3 Traktionsantriebssysteme
2.4 Hilfsbetriebe und Komfortanlagen
2.5 Steuerung und Regelung

3 Infrastruktur:
3.1 Fahrweg
3.2 Bahnstromversorgung
3.3 Sicherungsanlagen

4 Betrieb:
4.1 Interoperabilität, Normen und Zulassung
4.2 RAMS, LCC
4.3 Anwendungsbeispiele

Voraussichtlich ein oder zwei Gastreferate

Geplante Exkursionen:
Betriebszentrale SBB, Zürich Flughafen
Reparatur und Unterhalt, SBB Zürich Altstetten
 Fahrzeugeigertigung, Stadler Bussnang

Lecture notes
Abgabe der Unterlagen (gegen eine Schutzgebühr) zu Beginn des Semesters. Rechtzeitig eingeschriebene Teilnehmer können die Unterlagen auf Wunsch und gegen eine Zusatzgebühr auch in Farbe beziehen.

Prerequisites / notice
Dozent: Dr. Markus Meyer, Emkamatik GmbH

Voraussichtlich ein oder zwei Gastvorträge von anderen Referenten.

EST I (Herbstsemester) kann als in sich geschlossene einsemestrige Vorlesung besucht werden. EST II (Frühjahrssemester) dient der weiteren Vertiefung der Fahrzeugtechnik und der Integration in die Bahninfrastruktur.

---

**227-0526-00L**  
**Power System Analysis**  
*W* 6 credits  
4G  
G. Hug

**Abstract**  
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

**Objective**  
The goal of this course is understanding the stationary and dynamic problems in electrical power systems. The course includes the development of stationary models of the electrical network, their mathematical representation and special characteristics and solution methods of large linear and non-linear systems of equations related to electrical power networks.

**Content**  
The electrical power transmission system, the energy management system, requirements of the electrical power transmission (demand oriented, operationally, economically), network planning and network operation, models of N-port network components (line, cables, shunts, transformers), the p.u. computation, computer oriented network models, linear networks (solution methods - direct, iterative), algorithms for the solution of non-linear sets of equations, derived from the electrical power system (Newton-Raphson), power flow computation (problem definition, solution methods), three phase short-circuit computation, application of power flow algorithms. Introduction to power system stability.

**Lecture notes**  
Lecture notes. Course is supported by WWW-teaching system.

**227-0731-00L**  
**Power Market I - Portfolio and Risk Management**  
*W* 6 credits  
4G  
D. Reichelt, G. A. Koeppe

**Abstract**  
Portfolio and risk management in the electrical power business, Pan-European power market and trading, futures and forward contracts, hedging, options and derivatives, performance indicators for the risk management, modelling of physical assets, cross-border trading, ancillary services, balancing power market, Swiss market model

**Objective**  
Content

1. Pan-European power market and trading
1.1. Power trading
1.2. Development of the European power markets
1.3. Energy economics
1.4. Spot and OTC trading
1.5. European energy exchange EEX

2. Market model
2.1. Market place and organisation
2.2. Balance groups / balancing energy
2.3. Ancillary services
2.4. Market for ancillary services
2.5. Cross-border trading
2.6. Capacity auctions

3. Portfolio and Risk management
3.1. Portfolio management 1 (introduction)
3.2. Forward and futures contracts
3.3. Risk management 1 (m2m, VaR, hpf, volatility, cVaR)
3.4. Risk management 2 (PaR)
3.5. Contract valuation (HPFC)
3.6. Portfolio management 2
2.8. Risk Management 3 (enterprise wide)

4. Energy & Finance I
4.1. Options 1 basics
4.2. Options 2 hedging with options
4.3. Introduction to derivatives (swaps, cap, floor, collar)
4.4. Financial modelling of physical assets
4.5. Trading and hydro power
4.6. Incentive regulation

Lecture notes
Handouts of the lecture
Prerequisites / notice
1 excursion per semester, 2 case studies, guest speakers for specific topics.

227-0759-00L International Business Management for Engineers W 3 credits 2V W. Hofbauer
Abstract
Globalization of markets increases global competition and requires enterprises to continuously improve their performance to sustainably survive. Engineers substantially contribute to the success of an enterprise provided they understand and follow fundamental international market forces, economic basics and operational business management.
Objective
The goal of the lecture is to get a basic understanding of international market mechanisms and their consequences for a successful enterprise. Students will learn by practical examples how to analyze international markets, competition as well as customer needs and how they convert into a successful portfolio an enterprise offers to the global market. They will understand the basics of international business management, why efficient organizations and effective business processes are crucial for the successful survival of an enterprise and how all this can be implemented.

Content
The first part of the course provides an overview about the development of international markets, the expected challenges and the players in the market. The second part is focusing on the economic aspects of an enterprise, their importance for the long term success and how to effectively manage an international business. Based on these fundamentals the third part of the course explains how an innovative product portfolio of a company can be derived from considering the most important external factors and which consequences in respect of product innovation, competitive product pricing, organization and business processes emerge. Each part of the course includes practical examples to demonstrate the procedure.

Lecture notes
A script is provided for this lecture.

529-0193-00L Renewable Energy Technologies I W 4 credits 3G A. Wokaun, A. Steinfeld
The lectures Renewable Energy Technologies I (529-0193-00L) and Renewable Energy Technologies II (529-0191-01L) can be taken independently from one another.
Abstract
Scenarios for world energy demand and CO2 emissions, implications for climate. Methods for the assessment of energy chains. Potential and technology of renewable energies: Biomass (heat, electricity, biofuels), solar energy (low temp, heat, solar thermal and photovoltaic electricity, solar chemistry), Wind and ocean energy, heat pumps, geothermal energy, energy from waste. CO2 sequestration.
Objective
Scenarios for the development of world primary energy consumption are introduced. Students know the potential and limitations of renewable energies for reducing CO2 emissions, and their contribution towards a future sustainable energy system that respects climate protection goals.

Content

Lecture notes
Lecture notes will be distributed electronically during the course.

Prerequisites / notice
Fundamentals of chemistry, physics and thermodynamics are a prerequisite for this course.
Topics are available to carry out a Project Work (Semesterarbeit) on the contents of this course.
Advanced Environmental Assessments

Master students in Environmental Engineering choosing module Ecological Systems Design are not allowed to enrol 102-0317-03 Advanced Environmental Assessments (5KP) as already included in 102-0307-01 Advanced Environmental, Social and Economic Assessments (5KP).

Abstract
This course deepens students' knowledge of the environmental assessment methodologies and their various applications. In particular, students completing the course should have the
- Ability to judge the scientific quality and reliability of environmental assessment studies, the appropriateness of inventory data and modelling, and the adequacy of life cycle impact assessment models and factors
- Knowledge about the current state of the scientific discussion and new research developments
- Ability to properly plan, conduct and interpret environmental assessment studies
- Knowledge of how to use LCA as a decision support tool for companies, public authorities, and consumers

Content
- Inventory developments, transparency, data quality, data completeness, and data exchange formats
- Allocation (multioutput processes and recycling)
- Hybrid LCA methods.
- Consequential and marginal analysis
- Recent development in impact assessment
- Spatial differentiation in Life Cycle Assessment
- Workplace and indoor exposure in Risk and Life Cycle Assessment
- Uncertainty analysis
- Subjectivity in environmental assessments
- Multicriteria analysis
- Case Studies

Lecture notes
No script. Lecture slides and literature will be made available on the lecture homepage.

Literature
Literature will be made available on the lecture homepage.

Prerequisites / notice
Basic knowledge of environmental assessment tools is a prerequisite for this class. Students that have not done classwork in this topic before are required to read an appropriate textbook before or at the beginning of this course (e.g. Jolliet, O et al. 2016: Environmental Life Cycle Assessment. CRC Press, Boca Raton - London - New York. ISBN 978-1-4398-8766-0 (Chapters 2-5.2)).
The lecture deals with constitutive models that are relevant for design and calculation of structures. These include anisotropic linear elasticity, linear viscoelasticity, plasticity, viscoplasticity. Homogenization theories and laminate theory are presented. Theoretical models are complemented by examples of engineering applications and experiments.

3. Strength of material theories and material properties: ductile behaviour, plasticity, von Mises, Tresca, principal stress criterion; brittle behaviour; viscoplastic behaviour, creep resistance.
4. Structural design: fatigue and dynamic structural analysis.

If you have specific interests or questions, let me know at arthurb@ethz.ch. Maybe I can include your issues - or I can't :-)

151-0360-00L Procedures for the Analysis of Structures W 4 credits 2V+1U G. Kress

Abstract
Basic theories for structure integrity calculations are presented with focus on strength, stability, fatigue and elasto-plastic structural analysis. Theories and models for one dimensional and planar structures are presented based on energy theorems.

Objective
Basic principles applied in structural mechanics. Introduction to the theories of planar structures. Development of an understanding of the relationship between material properties, structural theories and design criteria.

Content
1. Basic problem of continuum mechanics and energy principles: structural theories, homogenization theories; finite elements; fracture mechanics.
3. Strength of material theories and material properties: ductile behaviour, plasticity, von Mises, Tresca, principal stress criterion; brittle behaviour; viscoplastic behaviour, creep resistance.
4. Structural design: fatigue and dynamic structural analysis.

Lecture notes
yes

151-0524-00L Continuum Mechanics I W 4 credits 2V+1U E. Mazza

Abstract
The lecture deals with constitutive models that are relevant for design and calculation of structures. These include anisotropic linear elasticity, linear viscoelasticity, plasticity, viscoplasticity. Homogenization theories and laminate theory are presented. Theoretical models are complemented by examples of engineering applications and experiments.

Objective
Basic theories for solving continuum mechanics problems of engineering applications, with particular attention to material models.

Content

Lecture notes
yes

151-0573-00L System Modeling W 4 credits 2V+2U G. Ducard, C. Onder

Abstract

Objective
Introduction to generic system modeling approaches for control-oriented models based on first principles and on experimental data.

Content
Examples: mechatronic, thermodynamic, chemistry, fluid dynamic, energy, and process engineering systems. Model scaling, linearization, order reduction, and balancing. Estimation techniques (least-squares methods).

Class case studies: Loud-speaker, Water-propelled rocket, geostationary satellites, etc. The exercises address practical examples. One larger case study is to be solved.

Lecture notes
yes

Abstract
This course provides a comprehensive overview of embedded control systems. The concepts introduced are implemented and verified on a microprocessor-controlled haptic device.

Objective
Familiarize students with main architectural principles and concepts of embedded control systems.

Content
An embedded system is a microprocessor used as a component in another piece of technology, such as cell phones or automobiles. In this intensive two-week block course the students are presented the principles of embedded digital control systems using a haptic device as an example for a mechatronic system. A haptic interface allows for a human to interact with a computer through the sense of touch.

Subjects covered in lectures and practical lab exercises include:
- The application of C-programming on a microprocessor
- Digital I/O and serial communication
- Quadrature decoding for wheel position sensing
- Queued analog-to-digital conversion to interface with the analog world
- Pulse width modulation
- Timer interrupts to create sampling time intervals
- System dynamics and virtual worlds with haptic feedback
- Introduction to rapid prototyping

Lecture notes
Lecture notes, lab instructions, supplemental material

Prerequisites / notice
Prerequisite courses are Control Systems I and Informatics I.

This course is restricted to 33 students due to limited lab infrastructure. Interested students please contact Marianne Schmid (E-Mail: marisch@ethz.ch).
After your reservation has been confirmed please register online at www.mystudies.ethz.ch.

Detailed information can be found on the course website
http://www.idsc.ethz.ch/education/lectures/embedded-control-systems.html

151-0927-00L Rate-Controlled Separations in Fine Chemistry W 4 credits 3G M. Mazzotti

Abstract
The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life science processes in particular, fine chemistry and biotechnology.
The students are supposed to obtain detailed insight into the fundamentals of separation processes that are frequently applied in modern life science processes in particular, fine chemistry and biotechnology.

The class covers separation techniques that are central in the purification and downstream processing of chemicals and biopharmaceuticals. Examples from both areas illustrate the utility of the methods: 1) Liquid-liquid extraction; 2) Adsorption and chromatography; 3) Membrane processes; 4) Crystallization and precipitation.

Handouts during the class

Recommendations for text books will be covered in the class

The goal of the lecture is to expound design characteristics of systems for process engineering applications.

The lectures address the assessment of corporate sustainability and its links to strategy, technology, and finance. Students learn why sustainability matters for managers and how businesses can act towards it. E-modules allow students to train critical thinking skills. In the 2nd half of the semester, sustainability challenges on water, energy, mobility, and food are explored in group projects.

Develop critical thinking skills (argumentation, communication, evaluative judgment) that are useful in the context of corporate sustainability using an innovative writing and peer review method.

Overview of the key concepts of corporate sustainability and topics related to Water, Energy, Mobility, and Food

Business implications of sustainable development, in particular for the assessment of sustainability performance, strategic change towards sustainability, technological innovations and sustainability, and finance and corporate sustainability.

Understand the limits and the potential of corporate sustainability for sustainable development

Develop critical thinking skills (argumentation, communication, evaluative judgment) that are useful in the context of corporate sustainability using an innovative writing and peer review method.

Overview of the key concepts of corporate sustainability and topics related to Water, Energy, Mobility, and Food

Business implications of sustainable development, in particular for the assessment of sustainability performance, strategic change towards sustainability, technological innovations and sustainability, and finance and corporate sustainability.

Critical thinking skills for corporate sustainability.

In-depth case studies of corporate sustainability challenges in the track phase: How to deal with environmental pressure groups? How to use the strengths of business to solve pressing sustainability problems? How to catalyze technological innovations for sustainability? How to invest money in a sustainable way?

Presentation slides will be made available on moodle prior to lectures.

Literature recommendations will be distributed during the lecture

Relationship between economy and environment, market failure, external effects and public goods, contingent valuation, internalisation of externalities; economics of non-renewable resources, economics of renewable resources, cost-benefit analysis, sustainability, and international aspects of resource and environmental economics.

Using the appropriate tools, which are concise verbal explanations, diagrams or mathematical expressions.

Introduction to resource and environmental economics

Importance of resource and environmental economics

Main issues of resource and environmental economics

Utilitarianism

Fairness according to Rawls

Economic growth and environment

Externalities in the environmental sphere

Governmental internalisation of externalities

Private internalisation of externalities: the Coase theorem

Free rider problem and public goods

Types of public policy

Efficient level of pollution

Tax vs. permits

Command and Control Instruments

Empirical data on non-renewable natural resources

Optimal price development: the Hotelling-rule

Effects of exploration and Backstop-technology

Effects of different types of markets.

Biological growth function

Optimal depletion of renewable resources

Social inefficiency as result of over-use of open-access resources

Cost-benefit analysis and the environment

Measuring environmental benefit

Measuring costs

Concept of sustainability

Technological feasibility

Conflicts sustainability / optimality

Indicators of sustainability

Problem of climate change

Cost and benefit of climate change

Climate change as international ecological externality

International climate policy: Kyoto protocol

Implementation of the Kyoto protocol in Switzerland
This course aims to develop the competency of chemical engineers in process flowsheeting and simulation. Specifically, students will develop the following skills:

- Deep understanding of chemical engineering fundamentals: the acquisition of new concepts and the application of previous knowledge in the area of chemical process systems and their mechanisms are crucial to intelligently simulate and evaluate processes.
- Modelling of general chemical processes and systems: students have to be able to identify the boundaries of the system to be studied and develop the set of relevant mathematical relations, which describe the process behavior.
- Mathematical reasoning and computational skills: the familiarization with mathematical algorithms and computational tools is essential to be capable of achieving rapid and reliable solutions to simulation and optimization problems. Hence, students will learn the mathematical principles necessary for process simulation and optimization, as well as the structure and application of process simulation software. Thus, they will be able develop criteria to correctly use commercial software packages and critically evaluate their results.

Prerequisites /
notice
A basic understanding of material and energy balances, thermodynamic property methods and typical unit operations (e.g., reactors, flash separations, distillation/absorption columns etc.) is required.

Literature
An exemplary literature list is provided below:

Objective
The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training.

### Content
- Vorstellung der Dozierenden mit Fallstudie aus der persönlichen Berufspraxis (CH, RK, WL, FS)
- Resourcen der Welt und Bedeutung für die Schweiz (RK)
- Metallische Erzlagerstätten - Einführung (CH)
- Metallische Erzlagerstätten - Magnatische Prozesse Test 1 (CH)
- Ozeanische Hydrothermalsysteme, Oberflächenverzweigung und Atmosphärenentwicklung (CH)
- Metallische Erzlagerstätten - Magnatisch-hydrothermale Systeme Test 2 (CH)
- Energieerhöhung - Einführung, Bildungsmöglichkeiten, Erdgas und Erdgas (WL)
- Energieerhöhung - Kohle und CO2-Entsorgung Test 3 (WL/RK)
- Nichtmetallische Rohstoffe - Baustoffe (RK)
- Nichtmetallische Rohstoffe - Erden (RK/FS)
- Nichtmetallische Rohstoffe - Industriematerialien Test 4 (FS)
- Industriematerialien, nachhaltige Nutzung von Rohstoffen der Erde (FS)

### Semester Project

**Number**
227-1101-00L  

**Title**
How to Write Scientific Texts in Engineering Sciences - Strongly recommended prerequisite for Semester Projects and Master Theses at D-ITET (MSC BME, MSc EEIT, MSc EST).

**Type**
E-

**ECTS**
0 credits

**Hours**

**Lecturers**
J. Leuthold

**Abstract**
The 4 hour lecture covers the basics of writing & presenting a scientific text. The focus will be on the structure and elements of a scientific text and not on the language. Citation rules, good practice of scientific writing and an overview on software tools will be part of the training.

**Objective**
Knowledge on structure and content of a scientific text. The course further is aimed at stimulating a discussion on how to properly write a legible scientific text versus writing an interesting novel. We will further discuss the practice of properly citing and critically reflect on recent plagiarism allegations.

**Content**
- Topic 1: Structure of a Scientific Text (The Title, the author list, the abstract, State-of-the Art, the "in this paper" paragraph, the scientific part, the summary, Equations, Figures).
- Topic 2: Power Point Presentations.
- Topic 3: Citation Rules and Citation Software.
- Topic 4: Guidelines for Research Integrity.

**Literature**
ETH “Citation Etiquette”, see www.plagiate.ethz.ch.

**Prerequisites / notice**
Students should already have a Bachelor degree and plan to do either a semester project or a master thesis in the immediate future.

### Semester Project

**Number**
227-1671-00L  

**Title**
Registration in mysteries required!

Only students who fulfill the following criteria are allowed to enroll for and start with their master thesis:

a. successful completion of the bachelor program;
b. any additional requirements necessary to gain admission to the master program EST have been successfully completed;
c. both the semester project and the internship have been successfully completed.

Registration in mystudies required!

Abstract
The master program in Energy Science and Technology culminates in a six months research project which addresses a scientific research question on one's chosen area of specialization. The masters thesis is supervised by a program-affiliated faculty member and the topic must be approved in advance by the tutor.

Objective
see above

Abstract
This practical course provides an introduction to elementary laboratory techniques. The experiments cover a wide range of techniques, including analytical and synthetic techniques (e.g. investigation of soil and water samples or the preparation of simple compounds). Furthermore, the handling of gaseous substances is practised.

Objective
This course is intended to provide an overview of experimental chemical methods. The handling of chemicals and proper laboratory techniques represent the main learning targets. Furthermore, the description and recording of laboratory processes is an essential part of this course.

Content
The classification and analysis of natural and artificial compounds is a key subject of this course. It provides an introduction to elementary laboratory techniques, and the experiments cover a wide range of analytic and synthetic tasks:
Selected samples (e.g. soil and water) will be analysed with various methods, such as titrations, spectroscopy or ion chromatography. The chemistry of aqueous solutions (acid-base equilibria and solvation or precipitation processes) is studied.

The synthesis of simple inorganic complexes or organic molecules is practised. Furthermore, the preparation and handling of environmentally relevant gaseous species like carbon dioxide or nitrogen oxides is a central subject of the Praktikum.

Lecture notes
The script will be published on the web. Details will be provided on the first day of the semester.

Literature
A thorough study of all script materials is requested before the course starts.

Abstract
To understand, qualitatively and semi-quantitatively, crystal and mineral formation, the interdependence between crystals structure, chemical composition and physical properties. This dependence is especially the case for the structural dependence of optical anisotropy and the elastic properties of the minerals as well as for the growth of crystals and their defect structures.

Objective
Qualitatives und teilweise quantitatives Verständnis für den Aufbau von Kristallen und Mineralien, für die Zusammenhänge zwischen chemischer Zusammensetzung, Kristallstruktur und physikalischen Eigenschaften, für das Wachstum von Kristallen sowie wichtiger identifizierter makroskopischer Eigenschaften: selbständige Identifikation der rund 70 wichtigsten Mineralarten.

Content
- Symmetrien und Ordnung, Punktgruppen, Translationsgruppen, Raumgruppen.
- einfache Strukturtypen, dichte Kugelpackungen, Strukturbestimmende Faktoren
- Chemische Bindungen, Beziehungen zwischen Struktur und Eigenschaften einer Kristall.
- Grundlagen von Thermodynamik und Computersimulationen in der Kristallographie.
- Einführung in die Mineralogie und Mineralysystematik
- Praktikum in Mineralbestimmen aufgrund makroskopischer Eigenschaften.

Abstract
We will study traces in the lithosphere that have been left behind by organisms in the course of Earth history and mineral components, which were built through biological processes or used as sources of energy and nutrients. Traces of life from the past will be compared with the development of the diversity of and the disparities in today's organisms.

Objective
The course will allow students to ask questions about the origin and the evolution of life on Earth, to understand contemporary hypotheses and create new methods of developing them further. Theory is supplemented with observations in the field, exercises and the application of simple mathematical models. The course will enable students to integrate geobiological knowledge into topics that will be taught in subsequent Earth science courses and into the current understanding of Earth history. They will learn to better understand modern geological settings and, if necessary, to recommend biogeochemically well-founded and responsible interventions or protective measures.

Content
- how biological cells and its components are built from essential elements and molecules,
- where the elements and molecules needed to form biomass originate,
- how cells function and which life styles organisms developed,
- how organisms can exist and which factors select for their presence,
- how biogeochemical cycles function and how they can get out of steady state,
- which metabolic strategies lead to the selection of molecular isoforms,
- how biological metabolism can change environmental conditions and composition,
- which metabolic products can lead to mineralogical signals in the rock record,
- how biological cells and its components are built from essential elements and molecules,
- which biological skeletal components can become indicators in Earth history,
- how organic and inorganic components and redox-labile trace elements are cycled in the biosphere,
- how biogeochemical cycles function and how they can get out of steady state,
- which information of relevance for Earth history is stored in genomes of organisms,
- how biological "innovations" evolved, how they were maintained over time and how they changed in response to environmental changes,
- which characteristics were essential for an ancestral cell to be able to metabolise, to reproduce and to respond to changes in environmental conditions,
- which abiotic, catalytic processes, reactivities on mineral surfaces and conditions were necessary for life to emerge?

Applied Case Studies, which supplement and illustrate the contents:
- Scientific applications of geobiological knowledge are found in fields like Microbial Ecology, Geochemistry, Palaeontology, Sedimentology, Petrology, Ocean Research, Environmental Sciences, Astrobiology and Archaeology.
- Practical applications of geobiological knowledge are needed in fields like stabilisation of existing and design of save waste repositories, surveilling ground water resources, sewage treatment, exploitation of and prospecting for fossil carbon sources, soil remediation, mineral exploration and leaching, forensic and geomedicine.

Lecture notes
Lecture slides, a list with recommended text books, scientific articles and recorded lectures to specific topics will be available in electronic form on the learning management site OLAT. Access requires that participants who are enrolled in MyStudies, will login to the course "Geobiology ETHZ" in OLAT via the switch aai authorisation system.

The course builds on the contents of the natural science topics that are parts of the basics, the focus areas and the supplementary courses as required for the Swiss federal Matura (Guidelines for the Swiss Matura Exam, 2012). In order to be able to repeat some of these contents and to better prepare for the course before it starts, one can find links to preparatory material (videoclips) on the Course website on OLAT.

### 651-4271-00L Data Analysis and Visualisation with Matlab in Earth Sciences

**Title**

Data Analysis and Visualisation with Matlab in Earth Sciences

**ECTS**

O 3 credits 2G

**S. Wiemer, G. De Souza, T. Tormann**

**Abstract**

This lecture and the corresponding exercises provide the students with an introduction to the concepts and tools of scientific data analysis. Based on current questions in the Earth Sciences, the students solve problems of increasing complexity both in small groups and singly using the software package MATLAB. Students also learn how to effectively visualise different kinds of datasets.

**Objective**

The following concepts are introduced in the course:
- Effective data analysis and visualisation in 2D and 3D
- Working with matrices and arrays
- Programming and development of algorithms
- Learning to effectively use animations
- Statistical description of a dataset
- Interactive data mining
- Uncertainty, error propagation and bootstrapping
- Regression analysis
- Testing hypotheses

**Abstract**

The central aim is to provide an individual experience of the physical phenomena and the basic principles of the experiment. By conducting simple physical experiments the student will learn how to properly use physical instruments and how to evaluate the results correctly.

**Objective**

This laboratory course aims to provide basic knowledge of
- the setup of a physics experiment,
- the use of measurement instruments,
- various measuring techniques,
- the analysis or measurement errors,
- and the interpretation of the measured quantities.

Abstract
Introduction to reading and construction of simple geologic maps.
Construction of geological cross-sections.
Introduction to Lambert projection and Schmidt net (i.e., stereoplots).

This course is mainly a hands-on-training, where students solve exercises under supervision.

Objective
To improve the ability to understand geological structures in three dimensions and visualize them.

Learn how to read and interpret geological maps, as well as drawing geological cross-sections.

Content
strike lines, symbols
true and apparent thickness of geological units
true and apparent dip
V-rule
3-Point-Problems
unconformities
faults
introduction to the Lambert projection
folds
magmatic structures

Lecture notes
Exercises and instructions are handed out and are available online in Moodle.

Literature
Semester literature can be found in the ERDW-library.

Prerequisites / notice
This course is not a prerequisite, but nevertheless extremely helpful for the Terrainkurs II.

651-3323-00L Earth and Climate History W+ 3 credits 2G G. Haug
Course will no longer take place after HS16.

Abstract
The goal of the course is to give the students a perception of the major aspects of planetary history and to add to their curiosity about methods which can be applied in the investigations of more specific problems and to planetary features.

Objective

Content
Frühe Geschichte der Erde, der Litho-, Atmo- und Biosphäre; Phanerozoische Platten und Terranes; Entwicklung des Lebens im Phanerozoikum, Mesozoische Anoxia, Kreide-Tertiär-Grenze, Tertiäre Abkühlung, Messian-Salinitätskrise, Hominidenentwicklung, Quartäre Klimaschwankungen.

Lecture notes
Unterlagen werden abgegeben.

Literature

>>> Examination Blocks

>>> Examination Block 1

Number Title Type ECTS Hours Lecturers
402-0063-00L Physics II O 5 credits 3V+1U A. Vaterlaus

Abstract
Introduction to the "way of thinking" and the methodology in Physics, with the help of demonstration experiments. The Chapters treated are Electromagnetism, Refraction and Diffraction of Waves, Elements of Quantum Mechanics with applications to Spectroscopy, Thermodynamics, Phase Transitions, Transport Phenomena. Whenever possible, examples relevant to the students' main field of study are given.

Objective
Introduction to the scientific methodology. The student should develop his/her capability to turn physical observations into mathematical models, and to solve the latter.

Content
Elektromagnetismus, Elektromagnetische Wellen, Wellenoptik, Quantenoptik, Quantenmechanik, Thermische Eigenschaften, Transportphänomene, Wärmestrahlung

Lecture notes
Skript wird verteilt.

701-0023-00L
Atmosphere
O 3 credits 2V  H. Wernli, E. M. Fischer, T. Peter

Abstract
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

Objective
Understanding of basic physical parameters and chemical processes in the atmosphere. Understanding of mechanisms of and interactions between: weather - climate, atmosphere - ocean - continents, troposphere - stratosphere. Understanding of environmentally relevant structures and processes on vastly differing scales. Basis for the modelling of complex interactions in the atmosphere.

Content
Basic principles of the atmosphere, physical structure and chemical composition, trace gases, atmospheric cycles, circulation, stability, radiation, condensation, clouds, oxidation capacity and ozone layer.

Lecture notes
Written information will be supplied.

Literature

5. Semester Majors

Major in Geology

Advisor of the major in Geology is Prof. Stefano Bernasconi

Major in Geology: Core Courses

From the offered core courses in autumn and spring semester, 27 credits have to be acquired.

Number Title Type ECTS Hours Lecturers
701-0071-00L Mathematics III: Systems Analysis O 4 credits 2V+1U N. Gruber, D. Byrne

Abstract
The objective of the systems analysis course is to deepen and illustrate the mathematical concepts on the basis of a series of very concrete examples. Topics covered include: linear box models with one or several variables, non-linear box models with one or several variables, time-discrete models, and continuous models in time and space.

Objective
Learning and applying of concepts (models) and quantitative methods to address concrete problems of environmental relevance. Understanding and applying the systems-analytic approach, i.e., Recognizing the core of the problem - simplification - quantitative approach - prediction.

Content
http://www.up.ethz.ch/education/systems-analysis.html

Lecture notes
Overhead slides will be made available through Ilias.

Literature

701-0401-00L Hydrosphere O 3 credits 2V R. Kipfer, C. Roques

Abstract
Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

Objective
Qualitative and quantitative understanding of the physical processes that control the terrestrial water cycle. Energy and mass exchange, mixing and transport processes are described and the coupling of the hydrosphere with the atmosphere and the solid Earth are discussed.

Content
Topics of the course.
- Physical properties of water (i.e. density and equation of state)
- Groundwater and its dynamics
- Processes at boundaries
- Groundwater as part of the terrestrial water cycle
- Groundwater hydraulics, Darcy's law
- Aquifers and their properties
- Hydrochemistry and tracer
- Ground water use
- Case studies

Lecture notes
In addition to the suggested literature handouts are distributed.

Literature
Suggested literature.

Prerequisites / notice
The case studies and the analysis of the questions and problems are integral part of the course.

5. Semester Majors

Major in Geology

Advisor of the major in Geology is Prof. Stefano Bernasconi

Major in Geology: Core Courses

From the offered core courses in autumn and spring semester, 27 credits have to be acquired.

Number Title Type ECTS Hours Lecturers
651-3501-00L Isotope Geochemistry and Isotope Geology W+ 3 credits 2G S. Bernasconi, D. Vance

Abstract
The course focuses on the most important systems of radioactive and stable isotopes used in geochemistry and geology. Applications of isotope geochemistry for solving fundamental geological problems are discussed on the basis of case studies.

Objective
Development of a basic knowledge and understanding of the applications of the most important systems of stable and radiogenic isotopes.
Content
The following methods will be discussed in detail: the radioactive-radiogenic systems Rb-Sr, Sm-Nd, U-Th-Pb and K-Ar, as well as the stable isotope systems of oxygen, carbon, nitrogen, sulfur and hydrogen.

We will discuss how these methods are used in the following research fields: geochemistry of the earth, age dating, paleotemperature reconstructions, evolution of the crust and mantle reservoirs, sediment diagenesis, fluid rock interactions, hydrothermal activity, paleoceanography, biogeochemical cycles.

Lecture notes
Available

Literature
- Dickin A. P., Radiogenic Isotope Geology, (2005), Cambridge University Press

Prerequisites / notice
Geochemie I: (Bachelor course)

651-3503-00L Metamorphism W+ 3 credits 3G M. W. Schmidt
Abstract
Understanding of the principles governing (chemical) reactions in metamorphic processes and resulting (physical) properties of metamorphic rocks s.l.: Recognition of metamorphic minerals and rocks (e.g. Gesteinsbestimmung)

651-3505-00L Mineral Resources W+ 3 credits 2V C. A. Heinrich, R. Kündig, W. Leu, F. Schenker
Abstract
Overview of the geological formation processes and the global distribution of mineral resources (metals, energy resources, bulk materials and industrial minerals), their economic importance, as well as the political and environmental aspects of responsible resource extraction and site rehabilitation.

Objective

Content
- Vorstellung der Dozierenden mit Fallstudie aus der persönlichen Berufspraxis (CH, RK, WL, FS)

Prerequisites / notice

651-3521-00L Tectonics W+ 3 credits 2V J.-P. Burg, E. Kissling
Abstract
Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wringing tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales. Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alps-Himalaya orogenic system.

Objective
Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wringing tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales. Assessment of mechanisms responsible for plate movements (the Earth as a heat transfer machine, dynamics of earth mantle, plate driving forces) and subsequent large-scale structures (oceanic basins and cycle of the oceanic lithosphere, convergence and mountain systems and continual growth, etc) through theoretical and experimental information. Evaluation of plate tectonic and other orogenic processes through the study of reference examples taken in Alps-Himalaya orogenic system.

Content
- Geochemical frame work: earth cooling and mantle-plate interaction, three kinds of plate boundaries and their roles and characteristics, cycle of oceanic lithosphere, longevity and growth of continents, supercontinents.
- Rheology of layered lithosphere and upper mantle.
- Plate tectonics:
  - Basaltic systems
  - Extensional systems
  - Passive and active continental margin evolution

Lecture notes
Detailed scriptum in digital form and additional learning module (www.lead.ethz.ch) available on the intranet.

**Major in Geology: Compulsory Laboratory Courses**

These practical courses are mandatory for the BSc-specializations "geology" and "geophysics".

From the offered elective courses in autumn and spring semester 8 credits must be acquired. Primarily courses from the core courses of BSc Earth Sciences have to be selected. Other elective courses from the ETH and Universitäten of Zurich are possible, however they must be granted by the advisor of geology (Professor Stefano Bernasconi). Courses of the paleontology of the University of Zurich (further offer under www.palinst.uzh.ch).

Primarily core courses of the BSc Earth Sciences majors should be chosen.

651-3561-00L  
**Cryosphere**  
*W* 3 credits  
**M. Funk, M. Huss, K. Steffen**  
**Abstract**  
This course introduces the different parts of the cryosphere: snow, glaciers, sea ice, permafrost - and their role in the climate system. A significant physical aspect is the focus in each part. Those completing the course are able to describe the dynamics of cryosphere components both formally and using examples.  
**Objective**  
Students are able  
- to qualitatively describe the main components of the cryosphere and their role in the climate system  
- to formally describe the relevant physical processes which determine the state of cryosphere components  
**Content**  
Introduction into the different components of the Cryosphere: Snow, glaciers, sea ice and permafrost, and their roles in the climate system.  
Each part is use to emphasized on one specific physical aspect: material qualities of ice, mass balance and dynamics of glaciers and energy balance of sea ice.  
**Lecture notes**  
Handouts will be distributed during the teaching semester.

651-3527-00L  
**Earth Science Mapping Exercises II**  
*W* 2 credits  
**J.-P. Burg**  
**Abstract**  
Reading and interpretation of geological and climatological maps.  
**Objective**  
Reading and interpretation of geological and climatological maps.  
**Content**  
Advanced analysis of geological maps and construction of geological sections. Special points: normal faults of the Rheintal graben, Bull Lake West (USA), Val de Ruz, Helvetic nappes of the Säntis area. Reconstruction of the geological history of the map areas. References to the Geology of Switzerland.  
Introduction to generation of climatological maps. Analysis of synoptic scale patterns of air pressure and temperature advection on the surface and one upper air level. (Hydrostatic) Conclusions about vertical stratification of the atmosphere. Elementary prognostic interpretation. Inclusion of special actually weather phenomenon.  
**Lecture notes / notice**  
Exercises and instructions are handed out.  
**Prerequisites / notice**  
Requirement: Earth science mapping exercises I.

**Introduction to Engineering Geology**

This introductory course starts from a description of the behavior and phenomena of soils and rocks under near surface loading conditions and their key geotechnical properties. Lab and field methods for the characterization of soils, rocks and rock masses are introduced. Finally practical aspects of ground engineering, including tunneling and landslide hazards are presented.

**Abstract**

Understanding the basic geotechnical and geomembrane properties and processes of rocks and soils. Understanding the interaction of rock and soil masses with technical systems. Understanding the fundamentals of geological hazards.

**Objectives**

- Become familiar with the concepts for characterization of fractured and karst aquifers
- Learn about the risk exposure of aquifers and ways to protect
- Get insight into the role of the quaternary aquifers and apply fundamental hydrogeological techniques.
- Familiarize with the concepts for characterization of fractured and karst aquifers

**Content**

Erforschungsgeschichte und Gliederung des Quartärs, Klimaentwicklung.

**Objective**

- Familiarize with the processes that formed the landscapes during the last 2 Mio. years.
- Understand the types of landscape and the forming quaternary sediments.
- Get insight into the role of the quaternary aquifers and apply fundamental hydrogeological techniques.
- Learn about the risk exposure of aquifers and ways to protect

**Literature**

651-3523-00L

**Hydrogeology and Quaternary Geology**

This course provides the basics of quaternary geology and an overview of the aspects of the hydrogeology of quaternary sediments and karst within Switzerland.

**Abstract**

- Grundwasservorkommen der Schweiz (mit Übungen).
- Hydrogeologie quartärer Ablagerungen (namentlich fluvioglaziale Schotter).
- Nutzung und Bewirtschaftung der Grundwasservorkommen in quartären Ablagerungen (mit Übungen).

**Objective**

- Familiarize with the processes that formed the landscapes during the last 2 Mio. years.
- Understand the types of landscape and the forming quaternary sediments.
- Get insight into the role of the quaternary aquifers and apply fundamental hydrogeological techniques.
- Learn about the risk exposure of aquifers and ways to protect

**Tectonics**

Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wrenching tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales. Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alps-Himalaya orogenic system.

**Abstract**

Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wrenching tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales. Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alps-Himalaya orogenic system.

**W+** 3 credits 2V  J.-P. Burg, E. Kissling
Objective
Comprehensive understanding of evolution, mechanics, and rheology of divergent, convergent and wrenching tectonic systems from the lithospheric scale to local shallow crustal and outcrop-scales.
Assessment of mechanisms responsible for plate movements (the Earth as a heat transfer machine, dynamics of earth mantle, plate driving forces) and subsequent large-scale structures (oceanic basins and cycle of the oceanic lithosphere, convergence and mountain systems, and continental growth, etc) through theoretical and experimental information.
Evaluation of plate tectonic and other orogenic processes through the study of reference examples of taken in Alps-Himalaya orogenic system.

Content
Plate tectonic frame work: earth cooling and mantle-plate interaction, three kinds of plate boundaries and their roles and characteristics, cycle of oceanic lithosphere, longlifity and growth of continents, supercontinents.
Rheology of layered lithosphere and upper mantle.
Oduction systems
Collision systems
Extensional systems
Basin evolution
Passive and active continental margin evolution

Mineral Resources
W+ 3 credits 2V C. A. Heinrich, R. Kündig, W. Leu, F. Shenker

Abstract
Overview of the geological formation processes and the global distribution of mineral resources (metals, energy resources, bulk materials and industrial minerals), their economic importance, as well as the political and environmental aspects of responsible resource extraction and site rehabilitation.

Objective

Content
- Vorstellung der Dozierenden mit Fallstudie aus der persönlichen Berufspraxis (CH, RK, WL, FS)
- Resourcen der Welt und die Bedeutung für die Schweiz (RK)
- Metallische Erzlagerstätten - Einführung (CH)
- Metallische Erzlagerstätten - Magmatische Prozesse Test 1 (CH)
- Ozeanische Hydrothermalsysteme, Oberflächenergie und Atmosphärenentwicklung (CH)
- Metallische Erzlagerstätten - Magmatisch-hydrothermale Systeme Test 2 (CH)
- Energierohstoffe - Einführung: Bildungsprozesse Petroleum und Erdgas (WL)
- Energierohstoffe - Oel und Gas (WL)
- Energierohstoffe - Kohle und CO2-Entsorgung Test 3 (WL/RK)
- Nichtmetallische Rohstoffe - Baustoffe (RK)
- Nichtmetallische Rohstoffe - Erden (RK/FS)
- Nichtmetallische Rohstoffe - Industrieminenalieren Test 4 (FS)
- Industrieminenalieren und nachhaltige Nutzung von Rohstoffen der Erde (FS)

Prerequisites / notice

651-3503-00L
Isotope Geochemistry and Isotope Geology
W+ 3 credits 2G M. W. Schmidt

Abstract
Understanding of the principles governing (chemical) reactions in metamorphic processes and resulting (physical) properties of metamorphic rocks s.l.. Recognition of metamorphic minerals and rocks (e.g. Gesteinsbestimmung)

Objective
The course focuses on the most important systems of radioactive and stable isotopes used in geochemistry and geology. Applications of isotope geochemistry for solving fundamental geological problems are discussed on the basis of case studies.

Content
Development of a basic knowledge and understanding of the applications of the most important systems of stable and radiogenic isotopes.
We will discuss how these methods are used in the following research fields: geochemistry of the earth, age dating, paleotemperature reconstructions, evolution of the crust and mantle reservoirs, sediment diagenesis, fluid rock interactions, hydrothermal activity, paleoceanography, biogeochemical cycles.

Numerical Methods in Environmental Sciences

Abstract
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Objective
This lecture imparts the mathematical basis necessary for the development and application of numerical models in the field of Environmental Science. The lecture material includes an introduction into numerical techniques for solving ordinary and partial differential equations, as well as exercises aimed at the realization of simple models.

Content
Classification of numerical problems, introduction to finite-difference methods, time integration schemes, non-linearity, conservative numerical techniques, an overview of spectral and finite-element methods. Examples and exercises from a diverse cross-section of Environmental Science.

Lecture notes
Is provided (CHF 10.- per copy).

Literature
List of literature is provided.

Weather Systems

Abstract
This lecture introduces the theoretical principles and the observational and analytical methods of atmospheric dynamics. Based on these principles, the following aspects are discussed: the energetics of the global circulation, the basic synoptic- and meso-scale flow phenomena, in particular the dynamics of extratropical cyclones, and the influence of mountains on the atmospheric flow.

Objective
The students are able to:
- explain up-to-date meteorological observation techniques and the basic methods of theoretical atmospheric dynamics
- to discuss the mathematical basis of atmospheric dynamics, based on selected atmospheric flow phenomena
- to explain the basic dynamics of the global circulation and of synoptic- and meso-scale flow features
- to explain how mountains influence the atmospheric flow on different scales

Content
Satellite observations; analysis of vertical soundings; geostrophic and thermal wind; cyclones at mid-latitude; global circulation; north-atlantic oscillation; atmospheric blocking situations; Eulerian and Lagrangian perspective; potential vorticity; Alpine dynamics (storms, orographic wind); planetary boundary layer

Air Pollution Control

Abstract
The lecture provides in the first part an introduction to the formation of air pollutants by technical processes, the emission of these chemicals into the atmosphere and their impact on air quality. The second part covers different strategies and techniques for emission reduction. The basic knowledge is deepened by the discussion of specific air pollution problems of today's society.

Objective
The students gain general knowledge of the factors resulting in air pollution and the techniques used for air pollution control. The students can identify major air pollution sources and understand the methods for measurement, data collection and analysis. The students can evaluate possible control methods and equipment, design a control system and estimate the efficiency and cost. The students know the different techniques of air pollution control and their scientific basements. They are able to incorporate goals concerning the air quality into their engineering work.
This course offers a practically oriented introduction into regression modeling methods. The basic concepts and some mathematical
Faraway (2005): Linear Models with R
The course provides the first part of an introduction to the statistical software R for scientists. R is free software that contains a huge

Part 2 Air Pollution Control Technologies
-The reduction of the formation of pollutants is done by modifying the processes (pro-cess-integrated measures) and by different
engineering operations for the cleaning of waste gas (downstream pollution control). It will be demonstrated, that the variety of these
procedures can be traced back on the application of a few basic principles of physical chemistry.
- Procedures for the removal of particles (inertial separator, filtration, electrostatic pre-cipitators, scrubbers) with their different
mechanisms (field forces, impaction and diffu-sion processes) and the modelling of these mechanisms.
- Procedures for the removal of gaseous pollutants and the description of the driving forces involved, as well as the equilibrium and
the kinetics of the relevant processes (absorption, adsorption as well as thermal, catalytic and biological conversions).
- Discussion of the technical possibilities to solve the actual air pollution problems.

The students acquire advanced practical skills in linear regression analysis and are also familiar with its extensions to generalized linear
modeling.

The last third of the course is dedicated to an introduction to generalized linear models: this includes the generalized additive model,
logistic regression for binary response variables, binomial regression for grouped data and poisson regression for count data.

A script will be available.
Faraway (2005): Linear Models with R
Faraway (2006): Extending the Linear Model with R
Draper & Smith (1998): Applied Regression Analysis
Fox (2008): Applied Regression Analysis and GLMs
Montgomery & Peck (2006): Introduction to Linear Regression Analysis

The exercises, but also the classes will be based on procedures from the freely available, open-source statistical software package R, for
which an introduction will be held.

In the Mathematics Bachelor and Master programmes, the two course units 401-0649-00L "Applied Statistical Regression" and 401-
3622-00L "Regression" are mutually exclusive. Registration for the examination of one of these two course units is only allowed if you have
not registered for the examination of the other course unit.

401-6215-00L Using R for Data Analysis and Graphics (Part I) W 1 credit 1G A. Drewek, A. J. Papritz

The course provides the first part an introduction to the statistical software R for scientists. Topics covered are data generation and
selection, graphical and basic statistical functions, creating simple functions, basic types of objects.

The students will be able to use the software R for simple data analysis.

The course provides the first part of an introduction to the statistical software R for scientists. R is free software that contains a huge
collection of functions with focus on statistics and graphics. If one wants to use R one has to learn the programming language R - on very
rudimentary level. The course aims to facilitate this by providing a basic introduction to R.

Part I of the course covers the following topics:
- What is R?
- R Basics: reading and writing data from/to files, creating vectors & matrices, selecting elements of dataframes, vectors and matrices,
arithmetics;
- Types of data: numeric, character, logical and categorical data, missing values;
- Simple (statistical) functions: summary, mean, var, etc., simple statistical tests;
- Writing simple functions;
- Introduction to graphics: scatter-, boxplots and other high-level plotting functions, embellishing plots by title, axis labels, etc., adding
elements (lines, points) to existing plots.

The course focuses on practical work at the computer. We will make use of the graphical user interface RStudio: www rstudio.org

Note: Part I of UsingR is complemented and extended by Part II, which is offered during the second part of the semester and which can be
taken independently from Part I.

An Introduction to R. http://stat.ethz.ch/CRAN/doc/contrib/Lam-IntroductionToR_LHL.pdf
The course resources will be provided via the Moodle web learning platform
Please login (with your ETH (or other University) username+password) at

Choose the course "Using R for Data Analysis and Graphics" and follow the instructions for registration.
Abstract
The course provides theoretical and practical foundations for understanding and characterizing physical and transport properties of soils/near-surface earth materials, and quantifying hydrological processes and fluxes of mass and energy at multiple scales. Emphasis is given to land-atmosphere interactions, the role of plants on hydrological cycles, and biophysical processes in soils.

Objective
Students are able to:
- characterize quantitative knowledge needed to measure and parameterize structural, flow and transport properties of partially-saturated porous media;
- quantify driving forces and resulting fluxes of water, solute, and heat in soils;
- apply modern measurement methods and analytical tools for hydrological data collection;
- conduct and interpret a limited number of experimental studies;
- explain links between physical processes in the vadose-zone and major societal and environmental challenges.

Content
Weeks 1 to 3: Physical Properties of Soils and Other Porous Media
Units and dimensions, definitions and basic mass-volume relationships between the solid, liquid and gaseous phases; soil texture; particle size distributions; surface area; soil structure. Soil colloids and clay behavior.

Soil Water Content and its Measurement - Definitions; measurement methods - gravimetric, neutron scattering, gamma attenuation; and time domain reflectometry; soil water storage and water balance.

Weeks 4 to 5: Soil Water Retention and Potential (Hydrostatics) - The energy state of soil water; total water potential and its components; properties of water (molecular, surface tension, and capillary rise); modern aspects of capillarity in porous media; units and calculations and measurement of equilibrium soil water potential components; soil water characteristic curves definitions and measurements; parametric models; hysteresis. Modern aspects of capillarity.

Demo-Lab: Laboratory methods for determination of soil water characteristic curve (SWC), sensor pairing.

Weeks 6 to 9: Water Flow in Soil - Hydrodynamics:
- Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.
- Unsaturated steady state flow; unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximate solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties.

Midterm exam.

Weeks 10 to 11: Energy Balance and Land Atmosphere Interactions - Radiation and energy balance; evapotranspiration definitions and estimation; transpiration, plant development and transpiration coefficients small and large scale influences on hydrological cycle; surface evaporation.

Week 12 to 13: Solute Transport in Soils - Transport mechanisms of solutes in porous media; breakthrough curves; convection-dispersion eq.; solutions for pulse and step solute application; parameter estimation; salt balance.

Lab #3: Miscible displacement and breakthrough curves for a conservative tracer through a column; data analysis and transport parameter estimation.

Additional topics:
Temperature and Heat Flow in Porous Media - Soil thermal properties; steady state heat flow; nonsteady heat flow; estimation of thermal properties; engineering applications.

Biological Processes in the Vadose Zone - An overview of below-ground biological activity (plant roots, microbial, etc.); interplay between physical and biological processes. Focus on soil-atmosphere gaseous exchange; and challenges for bio- and phytoremediation.

Classnotes on website: Vadose Zone Hydrology, by Or D., J.M. Wraith, and M. Tuller (available at the beginning of the semester) http://www.step.ethz.ch/education/active-courses/vadose-zone-hydrology

Lab #1: Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.

Part 1 - Laminar flow in tubes (Poiseuille's Law); Darcy's Law, conditions and states of flow; saturated flow; hydraulic conductivity and its measurement.

Part 2 - Unsaturated steady state flow; unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximate solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties.

Midterm exam.

Lab #2: Measurement of vertical infiltration into dry soil column - Green-Ampt, and Philip's approximations; infiltration rates and wetting front propagation.

Part 3 - Use of Hydrus model for simulation of unsaturated flow.

Week 10 to 11: Energy Balance and Land Atmosphere Interactions - Radiation and energy balance; evapotranspiration definitions and estimation; transpiration, plant development and transpiration coefficients small and large scale influences on hydrological cycle; surface evaporation.

Week 12 to 13: Solute Transport in Soils - Transport mechanisms of solutes in porous media; breakthrough curves; convection-dispersion eq.; solutions for pulse and step solute application; parameter estimation; salt balance.

Lab #3: Miscible displacement and breakthrough curves for a conservative tracer through a column; data analysis and transport parameter estimation.

Additional topics:
Temperature and Heat Flow in Porous Media - Soil thermal properties; steady state heat flow; nonsteady heat flow; estimation of thermal properties; engineering applications.

Biological Processes in the Vadose Zone - An overview of below-ground biological activity (plant roots, microbial, etc.); interplay between physical and biological processes. Focus on soil-atmosphere gaseous exchange; and challenges for bio- and phytoremediation.

Classnotes on website: Vadose Zone Hydrology, by Or D., J.M. Wraith, and M. Tuller (available at the beginning of the semester) http://www.step.ethz.ch/education/active-courses/vadose-zone-hydrology

Lab #1: Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.

Part 1 - Laminar flow in tubes (Poiseuille's Law); Darcy's Law, conditions and states of flow; saturated flow; hydraulic conductivity and its measurement.

Part 2 - Unsaturated steady state flow; unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximate solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties.

Midterm exam.

Lab #2: Measurement of vertical infiltration into dry soil column - Green-Ampt, and Philip's approximations; infiltration rates and wetting front propagation.

Part 3 - Use of Hydrus model for simulation of unsaturated flow.

Week 10 to 11: Energy Balance and Land Atmosphere Interactions - Radiation and energy balance; evapotranspiration definitions and estimation; transpiration, plant development and transpiration coefficients small and large scale influences on hydrological cycle; surface evaporation.

Week 12 to 13: Solute Transport in Soils - Transport mechanisms of solutes in porous media; breakthrough curves; convection-dispersion eq.; solutions for pulse and step solute application; parameter estimation; salt balance.

Lab #3: Miscible displacement and breakthrough curves for a conservative tracer through a column; data analysis and transport parameter estimation.

Additional topics:
Temperature and Heat Flow in Porous Media - Soil thermal properties; steady state heat flow; nonsteady heat flow; estimation of thermal properties; engineering applications.

Biological Processes in the Vadose Zone - An overview of below-ground biological activity (plant roots, microbial, etc.); interplay between physical and biological processes. Focus on soil-atmosphere gaseous exchange; and challenges for bio- and phytoremediation.

Classnotes on website: Vadose Zone Hydrology, by Or D., J.M. Wraith, and M. Tuller (available at the beginning of the semester) http://www.step.ethz.ch/education/active-courses/vadose-zone-hydrology

Lab #1: Measurement of saturated hydraulic conductivity in uniform and layered soil columns using the constant head method.

Part 1 - Laminar flow in tubes (Poiseuille's Law); Darcy's Law, conditions and states of flow; saturated flow; hydraulic conductivity and its measurement.

Part 2 - Unsaturated steady state flow; unsaturated hydraulic conductivity models and applications; non-steady flow and Richards Eq.; approximate solutions to infiltration (Green-Ampt, Philip); field methods for estimating soil hydraulic properties.

Midterm exam.

Lab #2: Measurement of vertical infiltration into dry soil column - Green-Ampt, and Philip's approximations; infiltration rates and wetting front propagation.

Part 3 - Use of Hydrus model for simulation of unsaturated flow.
Objective

a) Students understand the basic concepts of flow and contaminant transport processes and boundary conditions in groundwater.

b) Students are able to formulate simple practical flow and transport problems.

c) Students are able to understand and apply simple analytical solutions to simple flow and transport problems.

d) Students are able to use simple numerical codes to adequately solve simple flow (and transport) problems.

Content

Properties of porous media.

Exercises: Groundwater use, porosity, grain size analysis.

Flow properties, Darcy's law, filter.

Flow equations, stream function.

Exercises: Darcy's law.

Analytical solutions, confined aquifers, steady-state flow.

Exercises: Head isolines.

Use of superposition principles, transient flow, free surface flow.

Exercises: Analytical solutions to flow problems.

Finite difference solutions to flow problems I.

Exercises: Analytical solutions to flow problems.

Finite difference solutions to flow problems II.

Exercises: Finite difference formulations to flow problems.

Transport processes.

Exercises: Computer workshop using PMWIN.

Analytical solutions to transport problems I.

Exercises: Computer workshop using PMWIN.

Analytical solutions to transport problems II.

Exercises: Analytical solutions to transport problems.

Path lines, groundwater protection.

Exercises: Analytical solutions to transport problems.

Groundwater remediation, groundwater management.

Exercises: Groundwater remediation.

G. de Marsily, Quantitative Hydrogeology, Academic Press, 1986

Abstract

This course introduces the different parts of the cryosphere - snow, glaciers, sea ice, permafrost - and their role in the climate system. A significant physical aspect is the focus in each part. Those completing the course are able to describe the dynamics of cryosphere components both formally and using examples.

Objective

Students are able to:
- to qualitatively describe the main components of the cryosphere and their role in the climate system
- to formally describe the relevant physical processes which determine the state of cryosphere components

Content

Introduction into the different components of the Cryosphere: Snow, glaciers, sea ice and permafrost, and their roles in the climate system.

Each part is use to emphasized on one specific physical aspect: material qualities of ice, mass balance and dynamics of glaciers and energy balance of sea ice.

Lecture notes

handouts will be distributed during the teaching semester

Field Trips, Laboratory and Block Courses

The Practical Training in Atmosphere and Climate takes place in Spring Semester.

Electives

Courses can be chosen from the complete offerings of the ETH Zurich and University of Zurich.

Number  Title  Type  ECTS  Hours  Lecturers
701-0565-00L Fundamentals of Natural Hazards Management  W  3 credits  3G  H. R. Heinimann, B. Knrummenacher, S. Löw

Abstract

Risks to life and human assets result when settlement areas and infrastructure overlap regions where natural hazard processes occur. This course utilizes case studies to teach how a future natural hazards-specialist should analyze, assess and manage risks.
Objective

Concepts will be explained step-by-step through a set of case studies, and applied in lab by the students. The following principal steps are used when coping with natural hazard-risks. At each step, students will learn and apply the following skills:

Risk analysis - What can happen?
- Characterize the processes and environmental measures that lead to a natural hazard and integrate modeling results of these processes.
- Identify threats to human life and assets exposed to natural hazards and estimate possible drawbacks or damages.

Risk assessment - What are the acceptable levels of risk?
- Apply principles to determine acceptable risks to human life and assets in order to identify locations which should receive added protection.
- Explain causes for conflicts between risk perception and risk analysis.

Risk management - What steps should be taken to manage risks?
- Explain how various hazard mitigation approaches reduce risk.
- Describe hazard scenarios as a base for adequate dimensioning of control measures.
- Identify the best alternative from a set of thinkable measures based on an evaluation scheme.
- Explain the principles of risk-governance.

Content

Die Vorlesung besteht aus folgenden Blöcken:
1) Einführung ins Vorgehenskonzept (1W)
2) Risikoanalyse (6W + Exkursion) mit:
   - Systemabgrenzung
   - Gefahrenbeurteilung
   - Expositions- und Folgenanalyse
3) Risikobewertung (2W)
4) Risikomanagement (2W + Exkursion)
5) Abschlussbesprechung (1W)

Choice of courses from the complete offerings of ETH and UZH.

ECTS European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
This course provides basic knowledge in microscopy of igneous rocks. Apart from the identification of common igneous minerals in thin sections, mineral assemblages, textures and structures will be investigated and the results of microscopy will be combined with igneous phase equilibria to understand generation, differentiation and emplacement of igneous rocks.

Objective
- Advanced knowledge in optical mineralogy
- Application of methods to determine minerals in thin sections
- Identification and characterisation of metamorphic minerals
- Description of rocks. Derive correct petrographic rock name, based on modal abundance and microstructure/texture
- Interpretation of rock fabric/microstructure, parageneses and mineral reactions

Content
- Repetition of principal optical properties and of microscopic methods to identify minerals. Emphasis on interpretation of interference figures.
- Study typical metamorphic rocks in thin sections
- Description and interpretation of parageneses and texture/microstructures. Study the age relationship of crystallisation and deformation.
- Estimation of metamorphic grade
- Quantitative petrography: To determine volume percentage of rock components
- Scientific documentation: Descriptions, drawings, photomicrography using different kinds of illumination and using plane- or circular-polarised light.

Lecture notes
- handouts with additional information on theory and for exercises, in English.
- To brush up knowledge in optical mineralogy read the relevant chapters in the book of W.D. Nesse (2004).
- Nesse, W.D.: Introduction to optical mineralogy. 3. Ed. (2004). Figures from this book will be used in lectures. Besides the theory, this book describes all optical properties of important minerals. Petrographers working on varying types of silicate rocks should have a look at this book.
- Also available in the D-ERDW library, NO building, on D-floor.

Prerequisites / notice
- Participants should have basic knowledge in crystallography, mineralogy and petrology, and have taken practical courses in microscopy of thin sections, as well as lectures in metamorphic petrology and structural geology!

Other microscope courses at department D-ERDW are on:
- magmatic rocks, following this course in second half of semester (P. Ulmer, IGP; Inst. for Geochemistry and Petrology)
- sedimentary rocks (Geol. Institute)
- ore minerals (reflected light microscopy, Th. Driesner, IGP)
- microstructures, deformed rocks (Geol. Institute)

This course does not include an introduction in optical mineralogy and the use of a polarizing microscope and, therefore, bases on the course ¨Microscopy of metamorphic rocks¨ taught by P. Nievergelt immediately before this course where these basic principles are provided. Alternatively, e.g. for external students, an equivalent course is required to follow this practical course.

This course provides basic knowledge in microscopy of igneous rocks. Apart from the identification of common igneous minerals in thin sections, mineral assemblages, textures and structures will be investigated and the results of microscopy will be combined with igneous phase equilibria to understand generation, differentiation and emplacement of igneous rocks.

Objective
The principal goal of this course is to acquire expertise in:
(1) optical determination of minerals in igneous rocks using the polarizing microscope
(2) Identification of igneous rocks basing on modal mineralogy, structure and texture;
(3) Interpretation of textures and structures and associated igneous processes;
(4) Application of igneous phase diagrams to natural rocks.

Content
This practical course bases on the course "Microscopy of metamorphic rocks" (P. Nievergelt), that is taught immediately before this course, where basic knowledge in optical mineralogy and the use of the polarizing microscope is acquired.
In this course, the most important (common) igneous minerals and rocks are studied in thin sections under the polarizing microscope. Mineral assemblages, structures, textures and crystalization sequences are determined and utilized to understand the generation, differentiation and emplacement of igneous rocks. In addition, we will apply igneous phase equilibria that have been introduced in other lectures (such as magmatism and volcanism at ETH/Uni Zurich or an equivalent igneous petrology course) to natural rock samples in order to constrain qualitatively parental magma compositions and crystallization conditions.
The range of investigated rocks encompasses mantle rocks, tholeiitic, calc-alkaline and alkaline plutonic and volcanic rocks that contain the most common igneous minerals.

Lecture notes
Basis of the optical determinations of (igneous) minerals using the polarizing microscope are the tables of Tröger (‘Optische Bestimmung der gesteinsbildenden Minerale’, Optical determination of rock-forming minerals, 1982) that are available in sufficient volumes in the class room.
Some loose sheets will be distributed during the lecture providing additional information and templates for thin section descriptions.
Additionally, I recommend the lecture notes of H.-G. Stosch (University of Karlsruhe, in German) that can be provided in printed form upon request.

Literature
- Estimation of metamorphic grade
- Description and interpretation of parageneses and texture/microstructures. Study the age relationship of crystallisation and deformation.
- Identification of metamorphic grade
- Quantitative petrography: To determine volume percentage of rock components
- Scientific documentation: Descriptions, drawings, photomicrography using different kinds of illumination and using plane- or circular-polarised light.

Prerequisites / notice
There are several good textbooks on the subject of ‘mineralogy in thin sections’ that I can suggest upon request.

Other microscope courses taught at ETH Zurich at the D-ERDW are:
- Microscopy of metamorphic rocks (P. Nievergelt, required for this course)
- Microscopy of sedimentary rocks (W. Winkler & Blaesi)
- Reflected light microscopy and ore deposits practical (T. Driesner)
- Microstructures (deformation structures, B. Cordonnier)
**Introduction to Analytical Chemistry and Atom Physics.**

**Lecturers:**

- M. Plötze

Abstract

The course "Climate history and palaeoclimatology gives an overview on climate through geological time and it provides insight into methods and tools used in palaeoclimatic research.

Objective

The student will have an understanding of evolution of climate and its major forcing factors -orbital, atmosphere chemistry, tectonics-through geological time. He or she will understand interaction between life and climate and he or she will be familiar with the use of most common geochemical climate "proxies", he or she will be able to evaluate quality of marine and terrestrial sedimentary paleoclimate archives. The student will be able to estimate rates of changes in climate history and to recognize feedbacks between the biosphere and climate.

Content

Geological time, stratigraphy, geological archives, climate archives, palaeoclimate proxies

Climate through geological time: "lessons from the past"

Cretaceous greenhouse climate

The Late Paleocene Thermal Maximum (PETM)

Cenozoic Cooling

Onset and Intensification of Southern Hemisphere Glaciation

Onset and Intensification of Northern Hemisphere Glaciation

Pliocene warmth

Glacial and Interglacials

Millennial-scale climate variability during glaciations

The last deglaciation(s)

The Younger Dryas

Holocene climate - climate and societies

Abstract

The course will focus on biological and chemical aspects of sedimentation in marine environments. Marine sedimentation will be traced from coast to deep-sea. The use of stable isotopes palaeoceanography will be discussed. Neritic, hemipelagic and pelagic sediments will be used as proxies for environmental change during times of major perturbations of climate and oceanography.

Objective

-You will understand chemistry and biology of the marine carbonate system
-You will be able to relate carbonate mineralogy with facies and environmental conditions
-You will be familiar with cool-water and warm-water carbonates
-You will see carbonate and organic-carbon rich sediments as part of the global carbon cycle
-You will be able to recognize links between climate and marine carbonate systems (e.g. acidification of oceans and reef growth)
-You will be able to use geological archives as source of information on global change
-You will have an overview of marine sedimentation through time

Content

-carbonates:, chemistry, mineralogy, biology
-carbonate sedimentation from the shelf to the deep sea
-carbonate facies
-cool-water and warm-water carbonates
-organic-carbon and black shales
-C-cycle, carbonates, Corg : CO2 sources and sink
-carbonates: their geochemical proxies for environmental change; stable isotopes, Mg/Ca, Sr
-marine sediments through geological time
-carbonates and evaporites
-lacustrine carbonates
-economic aspects of limestone

Lecture notes

No script. Scientific articles will be distributed during the course

Literature

We will read and critically discuss scientific articles relevant for "biological and chemical processes in marine and lacustrine systems"
The course will focus on biological and chemical aspects of sedimentation in marine environments. Marine sedimentation will be traced using X-ray Powder Diffraction for the study of mineral composition and crystallographic parameters. Students will be familiar with the application of dating methods in scientific publications.

**Abstract**
Introduction to the programming software Matlab.

**Objective**
- Use Matlab for their future needs (e.g., for their MSc Thesis)
- Understand the fundamental concept of the finite-element method
- Apply the finite-element method to successfully work on a small project tailored to the student's interests.

**Content**
- Rheological equations: elasticity + viscous materials
- Introduction to the finite-element method (in 1D)
- Numerical integration + isoparametric elements
- Going to 2D finite elements
- Finite-element method for 2D elasticity
- Stress calculation + visualization
- Finite-element method for 2D viscous materials
- Heterogeneous media
- Final project-based work tailored to the student's interest.

**Lecture notes**
The script is very diverse and ranges from PowerPoint-based pdf-files, to self-study tutorials. Also, the more theoretical and mathematical aspects will be explained on the black board without a proper script.

**Literature**
There is no mandatory literature. The following literature is recommended:

**Prerequisites / notice**
The used software is Matlab. So, knowledge of Matlab is advantageous. Students may bring their own laptop with a pre-installed copy of Matlab.
The course will focus on biological and chemical aspects of sedimentation in marine environments. Marine sedimentation will be traced through time using stable isotopes and palaeoceanography, which will be discussed in detail. The course will cover the evolution, mechanics, and rheology of divergent, convergent, and wrenching tectonic systems, including the role of plate movements and the formation of continental margins.

The objective of this course is to introduce Rock Physics as a laboratory and interpretive tool. Students will learn how to interpret the physical properties of rocks and use this information to understand geological processes. The course will cover the properties of rock materials, including density, porosity, permeability, and elastic wave velocities, and will introduce the concept of seismic anisotropy.

After completing this course, students will be able to explain how plants are preserved in the fossil record, describe the importance of plant microfossils in paleoclimate reconstruction, and understand the relevance of plant associations through geological time. They will also learn about the evolution and morphology of the major plant groups, major adaptations and innovations leading to the present plant diversity, and the conquest of the continents by plants.

The course "Basics in Palaeobotany" gives an overview on the evolution and palaeobiology of plants and their relevance for the reconstruction of past environments. The course will cover measurements of physical properties of rock such as density, porosity, permeability and elastic wave velocity, and will introduce the concept of seismic seismic anisotropy etc. Later we will cover rock deformation in the brittle field, earthquake physics and triggering. Finally we will discuss scale effects as we move from small scale laboratory environment to the scale of the geophysical investigation.

The course "Rock Physics" as a laboratory and interpretive tool. The course will cover the properties of rock materials, including density, porosity, permeability, and elastic wave velocities, and will introduce the concept of seismic anisotropy.

The course "Sedimentology II: Biological and Chemical Processes in Lacustrine and Marine Systems" will focus on biological and chemical aspects of sedimentation in marine environments. The course will cover the evolution, mechanics, and rheology of divergent, convergent, and wrenching tectonic systems, including the role of plate movements and the formation of continental margins.

After completing this course, students will be able to explain how plants are preserved in the fossil record, describe the importance of plant microfossils in paleoclimate reconstruction, and understand the relevance of plant associations through geological time. They will also learn about the evolution and morphology of the major plant groups, major adaptations and innovations leading to the present plant diversity, and the conquest of the continents by plants.

The course "Rock Physics" as a laboratory and interpretive tool. The course will cover the properties of rock materials, including density, porosity, permeability, and elastic wave velocities, and will introduce the concept of seismic seismic anisotropy etc. Later we will cover rock deformation in the brittle field, earthquake physics and triggering. Finally we will discuss scale effects as we move from small scale laboratory environment to the scale of the geophysical investigation.
Objective
- You will understand chemistry and biology of the marine carbonate system
- You will be able to relate carbonate mineralogy with facies and environmental conditions
- You will be familiar with cool-water and warm-water carbonates
- You will see carbonate and organic-carbon rich sediments as part of the global carbon cycle
- You will be able to recognize links between climate and marine carbonate systems (e.g. acidification of oceans and reef growth)
- You will be able to use geological archives as source of information on global change
- You will have an overview of marine sedimentation through time

Content
- carbonates: chemistry, mineralogy, biology
- carbonate sedimentation from the shelf to the deep sea
- carbonate facies
- cool-water and warm-water carbonates
- organic-carbon and black shales
- C-cycle, carbonates, Corg : CO2 sources and sink
- Carbonates: their geochemical proxies for environmental change: stable isotopes, Mg/Ca, Sr
- marine sediments through geological time
- carbonates and evaporites
- lacustrine carbonates
- economic aspects of limestone

Lecture notes
no script. scientific articles will be distributed during the course

Literature
We will read and critically discuss scientific articles relevant for "biological and chemical processes in marine and lacustrine systems"

Prerequisites / notice
The grading of students is based on in-class exercises and end-semester examination.

651-4057-00L Climate History and Palaeoclimatology W 3 credits 2G S. Bernasconi, B. Ausin Gonzalez, A. Fernandez Bremer, A. Gilli

Abstract
The course "Climate history and paleoclimatology gives an overview on climate through geological time and it provides insight into methods and tools used in paleoclimatic research.

Objective
The student will have an understanding of evolution of climate and its major forcing factors -orbital, atmosphere chemistry, tectonics- through geological time. He or she will understand interaction between life and climate and he or she will be familiar with the use of most common geochemical climate "proxies", he or she will be able to evaluate quality of marine and terrestrial sedimentary paleoclimatic archives. The student will be able to estimate rates of changes in climate history and to recognize feedbacks between the biosphere and climate.

Content
Geological system and earth history - climate forcing factors and feedback mechanisms of the geosphere, biosphere, and hydrosphere.

Climate through geological time: "lessons from the past"
- Cretaceous greenhouse climate
- The Late Paleocene Thermal Maximum (PETM)
- Cenozoic Cooling
- Onset and Intensification of Southern Hemisphere Glaciation
- Onset and Intensification of Northern Hemisphere Glaciation
- Pliocene warmth
- Glacial and Interglacials
- Millennial-scale climate variability during glaciations
- The last deglaciation(s)
- The Younger Dryas
- Holocene climate - climate and societies

Open Choice Modules Geology

Basin Analysis

Basin Analysis: Compulsory Courses

Number Title Type ECTS Hours Lecturers
651-4231-00L Basin Analysis W+ 3 credits 2G S. Willett, T. I. Eglinton, M. Lupker

Abstract
The course discusses the formation and development of different basin types as part of lithosphere geodynamics. It introduces conceptual models and governing physics, with practical application to the study of basin evolution. Techniques for the analysis of subsidence and thermal history are demonstrated. Organic matter, petroleum play, and their biogeochemical investigation are examined.

Objective
Based on the introductory education and practical training during this course, each participant should be able to choose and apply approaches and techniques to own problems of basin analysis, and should be versed to expand their knowledge independently.

In particular, each participant should:
- Develop an intuitive understanding for origin, dynamics, and temporal evolution of basins in a geological / geodynamic context;
- Acquire the necessary theoretical foundation to describe basin evolution quantitatively;
- Be familiar with geological and geophysical methods that are applied to obtain information about rock properties, structural geometry, and thermal and subsidence history of basins;
- Understand the burial and maturation of organic matter in basins, the development of petroleum play, and be acquainted with geochemical methods to study the evolution of biogenic carbon.
The following topics are covered:

- Introduction; classification schemes and types of basins; heat conduction; geotherms;
- The lithosphere; isostasy; rifts and basins due to lithospheric stretching; uniform extension model; modifications to the uniform stretching model; dynamics of rifting.
- Elasticity of the lithosphere; flexural compensation; geometry and analytical description of loads and the resulting deflection; foreland basins; their anatomy;
- Reconstruction of basin evolution; borehole data; porosity loss and decompaction; backstripping; subsidence curves; thermal history and its reconstruction;
- Petroleum play concept; organic production; source rock prediction and depositional environment; petroleum generation, expulsion, migration, alteration; reservoir and traps;
- Carbon cycle; maturation of organic matter; geochemistry of biogenic carbon; biomarkers; analytical techniques
- Overview of other basin types: effects of mantle dynamics, strike-slip basins.

Each week of the course is split in lectures and corresponding practicals, in which the concepts are applied to simplified problems.

Grading of the semester performance is based on submitted practicals (50%) and a final exam (50%). The exam will take place in the time slot of the last practical (18.12.).

Lecture notes
Lecture notes are provided online during the course. They summarize the current subjects week by week, and provide the essential theoretical background.

Literature
Main reference:

Recommended, but not required (available in library).

Supplementary:

Prerequisites / notice
Familiarity with MATLAB is advantageous, but not required.

Abstract
Introduction into seismic interpretation for solving geological and environmental problems. A special focus is given to the seismic facies analysis and seismic sequence stratigraphy. In addition, the seismic attributes are explained, which are important for the analysis of paleo-geomorphology and structural deformation.

Objective
1. Acquire techniques for a comprehensive interpretation of seismic sections for solving geologic, tectonic, stratigraphic and environmental problems
2. Correlation of seismic facies to lithologic facies in different sedimentary systems
3. Recognition of structural elements and faults on seismic sections.
4. Learning the techniques of 3D seismic data interpretation
5. Reconstruction of sedimentary history using seismic stratigraphy and facies analysis and core information.
The four day course consists of lectures that are accompanied by a variety of exercises.

**Day 1:**
- Introduction seismic facies analysis with exercise
- Seismic resolution
- Factors controlling sedimentation
- Exercise: Seismic section in Straits of Florida

**Day 2:**
- Seismic attributes and seismic geomorphology
- Siliciclastic deltas, shelves and turbidite systems, 2D-3D
- Exercise: Seismic section Tarragon Basin
- Seismic facies carbonates
- Exercise: Seismic section Platform margin Great Bahama Bank
- Deepwater environments, including cold-water coral habitats

**Day 3:**
- Seismic facies of mixed systems with exercises
- Faults and structures on seismic sections
- Exercise: Seismic section Golf von Mexiko

**Day 4:**
- Telling ages on seismic section
- Seismic stratigraphy and sequence stratigraphy
- Exercise: Sequence analysis Straits of Andros
- Final discussion

### Lecture notes
An original script (110 pages) designed for the class will be distributed at the beginning of the course.

The course is an introduction to the concepts of geodesy applied to the seismic cycle and to the monitoring of ground deformation. The aim of the course is to gain a thorough understanding of the physical processes leading to and governing earthquake source ruptures.

a) Students are introduced to various geodetic techniques and to their most famous applications in Earth Sciences;

b) Students are able to independently conceptualize 1) the inter seismic strain accumulation for an earthquake and 2) inflation of a spherical reservoir (i.e. magma chamber of a volcano) or 3) water level change within aquifer. c) Students are then introduced to news techniques linking seismology and geodesy.

3. The seismic cycle monitoring (Moment release, seismology, Stress transfer)

4. Presentation of GPS and Applications 1 (positioning, rigid plate motions)

5. GPS networks in the world. Development of tectonic geodesy and Applications 2 (Practical on inter-seismic deformation)

6. Presentation of InSAR, pSAR, etc. Applications to earthquake. Post-seismic deformation.

7. GPS and deformation related to volcanoes (Practical on Mogi source)

8. GPS, Strain, Stress and Plate motion.

9. InSAR applied to subsidence and small deformation.

10. Tsposphere sounding. Accuracies of GPS and InSAR.

11. GPS and geodynamics

12. Future of GPS. Future of InSAR.

13. GPS and normal modes?

Pre-Requisite:

Higher Geodesy Basics; Physical Geodesy and Geodynamics I; Seismotectonics

The grading is based on participation, homework sets, and a final oral presentation. There is no final exam.

651-4103-00L Earthquakes Source Physics W+ 3 credits 2G S. Wiemer

Does not take place this semester.
The course unit will be offered again in the autumn semester 2017.

Abstract

This course teaches the fundamental principles to understand physical processes leading to and governing earthquake source ruptures. To obtain that understanding we cover topics ranging from friction and fault mechanics up to earthquake source descriptions. The acquired understanding will be applied to a topic of choice to practice research skills.

Objective

The aim of the course is to gain a thorough understanding of the physical processes leading to and governing earthquake source ruptures. Finally, this understanding will be applied to analyze a state-of-the-art earthquake physics topic of choice.

Content

We will cover a range of topics, including:

- Earthquake basics: definitions, faults, elastic rebound theory, and source parameters.
- Introduction to elastodynamics: strain, stress, equation of motion.
- Mathematical description of the source:
  - Representation theorem, point and extended sources, source spectra.
  - Energy partitioning
  - Source dynamics: Linear Elastic Fracture Mechanics
  - Fault mechanics and friction
  - Seismic cycle: inter-, co-, and post-seismic processes
  - Aseismic creep and slow slip transients
  - Earthquake source inversion and data assimilation
  - Recurrence models
  - Modeling of dynamic ruptures and seismic cycles

After a theoretical understanding has been acquired, we invite students to apply this knowledge to their topic of preference by presenting a group of state-of-the-art and/or classical papers as a final project. This will require them to understand and evaluate current challenges and state-of-the-art practices in earthquake physics. Additionally, this stimulates participants to improve their skills to:

- critically analyze (to be) published papers
- disseminate knowledge within their own and neighboring research fields
- formulate their opinion, new ideas and broader implications
- present their findings to an audience
- ask questions and actively participate in discussions on new scientific ideas

Lecture notes

Course notes will be made available on a designated course web site. An overview of the discussed principles are available in the three books mentioned below.

Literature

This concerns a bi-yearly course that will be taught again in Fall 2017.

The course will be evaluated in 2 parts:
- a two hours final exam at the end of the course,
- a presentation discussing a topic of choice based on a group of suggested papers

The course is worth 3 credit points, and a satisfactory total grade (4 or better) is needed to obtain 3 ECTS. The final writing exam has a weight of 70% and the presentation weighs for 30%.

The course will be given in English.

Abstract
Does not take place this semester.

Objective
There are two objectives in this course: (1) to acquire an understanding of the physical theory behind the origin of magnetism in a mineral or rock; and (2) to learn how material magnetic properties can be used to study environmental and geologic systems and processes

Content
1. Fundamentals of magnetism
2. Magnetic mineralogy
3. Measurement techniques
4. Time
5. Special Topics: Magnetoclimatology, mass transport, pollution monitoring, biophysics, magnetic properties of nanoscale materials

Lecture notes

Abstract
This course introduces the different parts of the cryosphere - snow, glaciers, sea ice, permafrost - and their role in the climate system. A significant physical aspect is the focus in each part. Those completing the course are able to describe the dynamics of cryosphere components both formally and using examples.

Objective
Students are able
- to qualitatively describe the main components of the cryosphere and their role in the climate system
- to formally describe the relevant physical processes which determine the state of cryosphere components

Content
Introduction into the different components of the Cryosphere: Snow, glaciers, sea ice and permafrost, and their roles in the climate system.
Each part is use to emphasized on one specific physical aspect: material qualities of ice, mass balance and dynamics of glaciers and energy balance of sea ice.

Lecture notes
handouts will be distributed during the teaching semester

651-4077-00L Quantification and Modeling of the Cryosphere: Dynamic Processes (University of Zurich) | W | 3 credits | 1V | University lecturers

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
Overview of the most important earth surface processes and landforms in cold regions (with emphasis on high-mountain aspects). Discussion of present research challenges.

Knowledge of the most prominent climate-related geomorphological processes and phenomena in high-mountain regions, understanding of primary research challenges.

Erosion and sedimentation by glaciers as a function of topography, englacial temperature, sediment balance, sliding and melt water runoff. Processes and landforms in regions of seasonal and perennial frost (frost weathering, rock falls, debris cones/talus, solifluction, permafrost creep/rock glaciers, debris flows).

Glacial and periglacial geomorphodynamics in high-mountain regions. Ca. 100 pages.

Basic knowledge about geomorphology and permafrost from corresponding courses at ETH/UZH or from the related lecture notes.

Overview of the most important earth surface processes and landforms in cold regions (regions with glaciers and intense frost) with emphasis on high-mountain aspects. Discussion of present research challenges.

Knowledge of the most prominent climate-related geomorphological processes and phenomena in high-mountain regions, understanding of primary research challenges.

Erosion and sedimentation by glaciers as a function of topography, englacial temperature, sediment balance, sliding and melt water runoff. <tr>
<td></td>
<td>This course focusses on the principles (fundamentals) and basic concepts of rock mechanics and rock engineering (e.g. tunnelling, rock slope stability). The course aims to introduce the fundamentals and basic concepts of rock mechanics and generic rock engineering. The student shall understand how rocks behave at different scales, under various artificial loads and in the shallow subsurface (a few km below ground). The link between rock mechanics, geology, hydrogeology and tectonics (i.e. the conditions under which the rock formed) will be clearly established. The student shall understand basic principles of rock mechanics and rock engineering. In addition, the student shall learn how to carry out laboratory tests to interpret these tests and to apply the results from lab and field investigations to simple engineering problems. This knowledge is required for subsequent integration courses (Landslide Analysis and Hazard Mitigation; Engineering Geology of Underground Excavations).</td>

</tbody>
</table>

Objective

- Students understand the basic concepts of groundwater flow and solute/heat transport processes and boundary conditions.
- Students are able to formulate simple, practical groundwater flow and solute/heat transport problems.
- Students are able to understand and apply simple analytical and/ or numerical solutions to fluid flow and solute/heat transport problems.
1. Introduction to groundwater problems. Concepts to quantify properties of aquifers.
2. Flow equation. The generalised Darcy law.
3. The water balance equation.
5. Analytical solutions to flow problems I
6. Analytical solutions to flow problems II
7. Finite difference solution to flow problems.
12. Analytical solutions to transport problems I.
13. Analytical solutions to transport problems II

</table>

Abstract
This course introduces students to the methods used in characterising, developing or monitoring geotechnical engineering project sites. Measurements, tools and analyses are described that are relevant to determining the geologic conditions at a site as well as deformations that occur under natural or construction conditions.

Objective
This course aims to introduce the general procedures taken during a engineering geological site investigation. Students who complete the course should be able to design a site investigation program of measurements based on information from initial desk studies, and to analyse, integrate and interpret data from the measurement program.

Content
The methods that are routinely employed in site investigations will be described focusing on their applicability in different geologic environments. The limitations of the data in constraining the parameters of interest will be addressed together with problems of interpretation and cost-versus-information value. Specific topics addressed include drilling, coring, sampling, borehole testing, geophysical methods used in engineering geology, satellite, air- and ground-based surface and displacement monitoring (photogrammetry, LIDAR and Radar), and in-situ deformation measurement methods.

Lecture notes
Lecture notes will be available for download 1-2 days before each class.

Literature

Supplemental literature will be suggested and made available during the course.

---

Engineering Geology: Integration

The goals of the industry practical are to become familiar with technical, economic, legal and communication issues of real-life work in private industry or technical administration. The practical is supervised both from the industry partner and ETH and consists of technically and/or scientifically challenging work in the engineering geology domain. The regular duration of the practical is 2.5 month. The practical is is pre-defined in a work plan and concluded with a report written by the student.

The goal of this course is to provide an understanding of the principles of digital signal processing and filter theory. Form: two hours lecture with two hours of computer based exercises per week over 7 weeks.

The goals of the course is for students to learn how to program numerical applications from scratch. By the end of the course, students should be able to write state-of-the-art MATLAB codes that solve systems of partial-differential equations relevant to Earth and Planetary Science applications using finite-difference method and marker-in-cell technique. Applications include Poisson equation, buoyancy driven variable viscosity flow, heat diffusion and advection, and state-of-the-art thermomechanical code programming. The emphasis will be on commonality, i.e., using a similar approach to solve different applications, and modularity, i.e., re-use of code in different programs. The course will emphasise a hands-on learning approach rather than extensive theory, and will begin with an introduction to programming in MATLAB.

GRADING will be based on weekly programming homeworks (50%) and a term project (50%) to develop an application of their choice to a more advanced level.

**Geophysical Fluid Dynamics**

Building blocks of modern geophysics. This course aims to provide the students with the basics tools used in fluid dynamics studies of geophysical-astrophysical problems. The course is a combination of lectures, exercises and demo experiments to present the same concepts in various forms.

</tbody>
</table>

Lecture notes will be made available for download from the website of the course. The class follows no single book. A list of relevant texts will be given in class. Students must bring their own laptop in class for Matlab exercises.
The goal of this course is to learn and understand a few principal partial differential equations (conservation laws) that are applicable for analysing and modelling of any continuum including the Earth's mantle, core, atmosphere and ocean. By the end of the course, students should be able to write, explain and analyse the equations and apply them for simple analytical cases. Numerical solving of these equations will be discussed in the Numerical Modelling I and II course running in parallel.

Content
A provisional week-by-week schedule (subject to change) is as follows:

Week 1: The continuity equation
Exercise: Computing the divergence of velocity field.

Week 2: Density and gravity
Exercise: Computing density, thermal expansion and compressibility from an equation of state.

Week 3: Stress and strain
Exercise: Analysing strain rate tensor for solid body rotation.

Week 4: The momentum equation
Exercise: Computing velocity for magma flow in a channel.

Week 5: Viscous rheology of rocks
Theory: Solid-state creep of minerals and rocks as the major mechanism of deformation of the Earth's interior. Dislocation and diffusion creep mechanisms. Rheological equations for minerals and rocks. Effective viscosity and its dependence on temperature, pressure and strain rate. Formulation of the effective viscosity from empirical flow laws.
Exercise: Deriving viscous rheological equations for computing effective viscosities from empirical flow laws.

Week 6: The heat conservation equation
Exercise: steady temperature profile in case of channel flow.

Week 7: Elasticity and plasticity

GRADING will be based on homeworks (30%) and oral exams (70%).

Restricted Choice Modules Geophysics

Seismology

The course is a general introduction to the theory of seismic wave propagation. It explains the principles and assumptions used in seismology. It provides the tools to solve basic seismsological problems.

The course is a general introduction to the theory of seismic wave propagation.

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 585 of 1571
The course explains the principles and assumptions used in seismology. It provides the tools to solve basic seismological problems. The course includes the theorems in dynamic elasticity, the formulation with potentials, Greens function, elastic waves from point dislocations sources, moment tensors, 1D, 2D, and 3D wave propagation problems, reflection and transmission at plane boundaries, and surface waves in a vertically heterogeneous medium.

651-4015-00L Seismotectonics W+ 3 credits 2G A. P. Rinaldi, I. Molinari

Abstract

If you're interested in knowing more about the relationship between seismicity and plate tectonics, this is the course for you. (If you're not that interested, but yr program of study requires that you complete this course, this is also the course for you.)

Objective

By the conclusion of this course, we hope that you:

- have a solid understanding of stress and strain and tensor representations;
- have a feeling for what rheology is and why it is important;
- have a more sophisticated understanding of the relationship b/w plate tectonics and eqks;
- understand eqk source representations of varying complexity;
- understand eqks in the context of different tectonic settings;
- understand why we can't predict eqks; and
- understand that "modern science is... a set of research directions rather than a collection of nuggets of established truth."

Content

To begin our series of 14 meetings, we will review fundamentals of continuum mechanics and tensor analysis; our goal is to help you understand deformation from the scale of cornstarch in the classroom to the scale of plate tectonics. We will tell you about several ways to appropriately represent an earthquake source; we'll present these in order of increasing sophistication. We'll discuss a currently-popular theory to explain earthquake triggering. We'll talk about the conceptual connections between earthquakes and tectonic deformation. You will enjoy (at least) two computer exercises.

Discussed: stress and deformation in the Earth; stress and strain tensors; rheology and failure criteria; fault stresses, friction and effects of fluids; stable and unstable sliding; earthquake focal mechanisms; relationship between stress fields and focal mechanisms; seismic moment and moment tensors; relationship between moment- and deformation tensors; crustal deformation from seismic, geologic, and geodetic observations; earthquake stress drop, scaling, and source parameters; earthquake induced stress changes; global earthquake distribution; current global earthquake activity; different seismotectonic regions; examples of earthquake activity in different tectonic settings, such as in subduction zones, California, the Mediterranean, and in Switzerland.

Lecture notes

TBA

Literature

Prerequisites / notice

You should have at least a foggy recollection of calculus.

651-4021-00L Engineering Seismology W+ 3 credits 2G D. Fäh, M. Pilz

Abstract

This course is a general introduction to the methods of seismic hazard analysis. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties.

Objective

This course is a general introduction to the methods of seismic hazard analysis.

Content

In the course it is explained how the disciplines of seismology, geodesy, strong-motion geophysics, and earthquake engineering contribute to the evaluation of seismic hazard. It provides an overview of the input data and the tools in deterministic and probabilistic seismic hazard assessment, and discusses the related uncertainties. The course includes the discussion related to Intensity and macroseismic scales, historical seismicity and earthquake catalogues, ground motion parameters used in earthquake engineering, definitions of the seismic source, ground motion attenuation, site effects and microzonation, and the use of numerical tools to estimate ground motion parameters, both in a deterministic and probabilistic sense.

During the course recent earthquakes and their impacts are discussed and related to existing hazard assessments for the areas of interest.

Physics of the Earth's Interior

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 587 of 1571
This course will give an introduction to phase petrology and its application to magmatic and metamorphic systems. Further, the course will give an introduction to thermobarometry of mineral assemblages. The origin and interpretation of microstructures and chemical zonation in rocks will be discussed. We will also touch kinetics of rock forming processes and the role of fluids during the lectures.

The specific topics will involve:
- Mineral reactions and chemical equilibria in metamorphic and magmatic rocks, recalculations of rock and mineral analyses, mineral modes, P-T-X relations.

Course "Applied mineralogy and non-metallic resources I" (autumn/winter semester):
- Non-metallic resources, Occurrences, geology, extraction, properties, fabrication and use. Industrial aspects, (new) technologies, market, stock, situation, reserves & resources, trends and development, environmental aspects, law.
- Chapters: e.g. coal/carbon (coal, graphite, diamond, fullerene); oil/gas (oil- and tarsands, oil-shists); phosphates/nitrates; aluminum (bauxite, corundum); salt; carbonates; titanium; clay and clay minerals; sulphur; gypsum/anhydrite; fluoride; asbestos; talc; micas; rare earth elements.

Course "Applied mineralogy and non-metallic resources II" (fall/spring semester):
- Chapters: e.g. Stone industry - technical aspects of building stones, properties, weathering, treatment, quarries, products. Crushed stones - quarries, products, planning, environment. Gravel an sand - resources/reserves, environment (protection/law), alternative products (substitution). Cement and concrete (geological resources, prospection, fabrication, environment).

Lecture notes
Will be given according to the lessons. Partially integration of e-learning tools.

Prerequisites

Number of participants limited to 12.

In the course the students learn to measure X-ray diffraction patterns of minerals and to evaluate these using different software for qualitative and quantitative mineral composition as well as crystallographic parameters.

Upon successful completion of this course students are able to:
- describe the principle of X-ray diffraction analysis
- carry out a qualitative and quantitative mineralogical analysis independently,
- critically assess the data,
- communicate the results in a scientific report.

Fundamental principles of X-ray diffraction
Setup and operation of X-ray diffractometers
Interpretation of powder diffraction data
Qualitative and quantitative phase analysis of crystalline powders (e.g. with Rietveld analysis)

Selected handouts will be made available in the lecture

The course includes a high portion of practical exercises in sample preparation as well as measurement and evaluation of X-ray powder diffraction data.

The lecture course is limited to 12 participants.

This course addresses master students interested in an integral view of processes operating in various tectonic environments, most specifically divergent and convergent plate margins.
Introduction to computer tools for the simulation of hydrothermal processes. This includes fluid flow modelling and thermodynamic parameters calculation.

Numerical Modelling of Ore Forming Hydrothermal Processes

Students will learn to understand the use of non-metallic mineral resources from a geological and mineralogical point of view as well as from an economic, strategic and environmental point of view. Environmental aspects on the worldwide use of non-metallic mineral resources are discussed. A special focus will be given on the situation in Switzerland.

Course "Applied mineralogy and non-metallic resources I" (autumn/winter semester):

Non-metallic resources. Occurrences, geology, extraction, properties, fabrication and use. Industrial aspects, (new) technologies, market, stock, situation, reserves & resources, trends and development, environmental aspects, law.

Chapters: e.g. coal/carbon (coal, graphite, diamond, fullerene); oil/gas (oil- and tarsands, oil-shists); phosphates/nitrates; aluminum (bauxite, corundum); salt; carbonates; titanium; clay and clay minerals; sulphur; gypsum/anhydrite; fluorite; asbestos; talc; micas; rare earth elements.

Course "Applied mineralogy and non-metallic resources II" (fall/summer semester):

Chapters: e.g. Stone industry - technical aspects of building stones, properties, weathering, treatment, quarries, products. Crushed stones - quarries, products, planning, environment. Gravel an sand - resources/reserves, environment (protection/law), alternative products (substitution). Cement and concrete (geological resources, prospection, fabrication, environment).

Notes handed out during lectures

Lecture notes will be given according to the lessons. Partially integration of e-learning tools.

Lecture notes

Will be given according to the lessons. Partially integration of e-learning tools.

Lecture notes

Literature

Content

Introduction to computer tools for the simulation of hydrothermal processes: HYDROTHERM for fluid flow simulations, HCH for thermodynamical modeling. While learning the respective computer programs is an essential part of the course, the emphasis will be on using these tools to learn how the physics and chemistry of hydrothermal system actually work.

Lecture notes

Computer programs and course material will be distributed during the course.

Literature

651-4034-00L Resource Economics and Mineral Exploration

Does not take place this semester.

The course unit will be offered again in the autumn semester 2017.

Abstract

Global mineral economics and the strategies of mineral exploration -- including geological, geochemical and geophysical methods, but also non-geological factors such as organisational, political and environmental aspects. Changing external lecturers.

Objective

Practical understanding of the procedure of exploring a mineral prospect, based on geological analysis, exploration by drilling, resource calculation of tonnage and grade as a basis for economic evaluation for reporting to investors.

Content

This block course in will comprise 4 half-day lectures and a series of practical exercises from selection of a mineral property to discovery of mineral resources and their valuation. Teams are formed as Limited Partnership companies that have to select and bid for a mineral property offered during an auction. Each company has the same nominal budget. The highest bidder purchases the selected property, others need to purchase the remaining properties during an auction. Justification for selecting the property is justified in a report. The companies must interpret the geology of their mineral property to prepare a diamond drill program to discover and, eventually, delineate the mineral resources. This drill program is presented in a report prior to drilling. Drilling in the tri-dimensional matrix of the property is simulated using the software FOREUR, until budget lapse. The companies must select drill intervals for chemical analysis to document the extent and composition of the discovered mineralization. Portions of the mineral rights can be traded for capital between the companies. An estimate of the tonnage and grade of the discovered resource is prepared using geometric methods and GIS software (ex. Arc GIS). The ground value of the resource is estimated by a computation of the Net Smelter Return at current metal prices. The results of the exploration program are presented in a comprehensive report.

Lecture notes

Handouts for background information and a computer simulation program for the case-study exercise will be provided. Participants must bring a Windows-based laptop computer.

Prerequisites / notice

Prerequisites: Knowledge of mineral deposit-type characteristics is useful (orogenic gold, Cu-Zn VMS, Ni-Cu-PGE); at least "Ressourcen der Erde", or adequate knowledge of mineral deposits acquired by preparatory reading. Basic knowledge of ArcGIS software is important to produce maps and sections required in reports. Training exercises and tutorials will be provided in advance to prepare for the course. Taught biennially in collaboration with University of Geneva.

This course is co-organised by ETH Zurich (Prof. C. Heinrich) and University of Geneva (Prof. L. Fontbote)

Abstract

This course will introduce some of the main quantitative methods available for the quantitative treatment of geochemical data, as well as the main modelling tools. Emphasis will both be on conceptual understanding of these methods as well as on their practical application, using key software packages to analyse real geochemical datasets.

Objective

Development of a basic knowledge and understanding of the main tools available for the quantitative analysis of geochemical data.

Content

The following approaches will be discussed in detail: major and trace element modelling of magmas, with application to igneous systems; methods and statistics for calculation of isochrons and model ages; reservoir dynamics and one-dimensional modelling of ocean chemistry; modelling speciation in aqueous (hydrothermal, fresh water sea water) fluids.

We will discuss how these methods are applied in a range of Earth Science fields, from cosmochemistry, through mantle and crustal geochemistry, volcanology and igneous petrology, to chemical oceanography.

A special emphasis will be put on dealing with geochemical problems through modeling. Where relevant, software packages will be introduced and applied to real geochemical data.

Lecture notes

Slides of lectures will be available.

Prerequisites / notice

Pre-requisite: Geochemistry (651-3400-00L), Isotope Geochemistry and Geochronology (651-3501-00L).

651-4227-00L Planetary Geochemistry

W+   3    2G  M. Schönächler, H. Busemann, A. Hunt

Abstract

Formation and evolution of the solar system with a geochemical perspective

Objective

To understand the formation and evolution of the solar system from a geochemical perspective

Content

The sun and solid objects in the solar system (planets, comets, asteroids, meteorites, interplanetary dust) are discussed with a geochemical perspective. What does their present-day composition tell us about the origin and evolution of the solar system? The lecture first introduces the basic facts of the terrestrial and giant planets, as well as comets and asteroids, as mainly gained from modern planetary missions. The chemical and isotopic composition of meteorites, being the most primitive material available for study, is a further major topic.

Lecture notes

available electronically.

651-4057-00L Climate History and Palaeoclimatology

W   3    2G  S. Bernasconi, B. Ausin Gonzalez, A. Fernandez Bremer, A. Gilli

Abstract

The course "Climate history and palaeoclimatology gives an overview on climate through geological time and it provides insight into methods and tools used in palaeoclimatic research."
Objective
The student will have an understanding of evolution of climate and its major forcing factors -orbital, atmosphere chemistry, tectonics-through geological time. He or she will understand interaction between life and climate and he or she will be familiar with the use of most common geochemical climate "proxies", he or she will be able to evaluate quality of marine and terrestrial sedimentary paleoclimate archives. The student will be able to estimate rates of changes in climate history and to recognize feedbacks between the biosphere and climate.

Content
Climate system and earth history - climate forcing factors and feedback mechanisms of the geosphere, biosphere, and hydrosphere.

Geological time, stratigraphy, geological archives, climate archives, paleoclimate proxies

Climate through geological time: "lessons from the past"

Cretaceous greenhouse climate

The Late Paleocene Thermal Maximum (PETM)

Cenozoic Cooling

Onset and Intensification of Southern Hemisphere Glaciation

Onset and Intensification of Northern Hemisphere Glaciation

Pliocene warmth

Glacial and Interglacials

Millennial-scale climate variability during glaciations

The last deglaciation(s)

The Younger Dryas

Holocene climate - climate and societies

---

651-4225-00L  Topics in Geochemistry  W  3 credits  2G  S. Bernasconi, G. Bernasconi-Green, D. L. Cook

Abstract
This course aims to present and discuss advanced topics in geochemistry based on the critical reading of research papers. Themes will vary from year to year and suggestions from students are welcome. The format of the course will be: one or more lectures introducing a theme, followed by a presentation of one or more papers by a student or group of students.

Objective
The goal of the course is discuss topics in advanced geochemistry which were not covered in other general and specialized geochemistry courses. In addition, we aim at training the student's ability to critically evaluate research papers and to summarize the findings concisely in an oral presentation.

Content
Themes will vary from year to year and suggestions from students are welcome. Some possible topics are:

- Organic geochemistry.
- Isotope geochemistry of organic matter: carbon, hydrogen and nitrogen.
- Multiply-substituted isotopologues.
- Mass-independent fractionations.
- Mass transfer and isotopes in modern and ancient ocean-floor hydrothermal systems and subduction zone environments.
- Noble gas geochemistry: terrestrial and extraterrestrial applications

Lecture notes
None

Literature
Will be identified based on the chosen topic.

---

651-4010-00L  Planetary Physics and Chemistry  W  3 credits  2G  P. Tackley

Abstract
This course aims to give a physical understanding of the formation, structure, dynamics and evolution of planetary bodies in our solar system and also apply it to ongoing discoveries regarding planets around other stars.

Objective
The goal of this course is to enable students to understand current knowledge and uncertainties regarding the formation, structure, dynamics and evolution of planets and moons in our solar system, as well as ongoing discoveries regarding planets around other stars. Students will practice making quantitative calculations relevant to various aspects of these topics through weekly homeworks.

The following gives an overview of the course content and approximate schedule (subject to change).

---

651-4235-00L  Marine Geology and Geochemistry  W  3 credits  2G  G. Bernasconi-Green

Does not take place this semester.
Abstract
Introduction to oceanographic methods and international research programs in marine geology and an overview of physical, chemical and biological processes in modern marine environments.

Objective
This course aims at giving an overview of oceanographic methods and an understanding of physical, chemical and biological processes in modern marine environments. This course will combine lectures and student participation. Student presentations are based on critical reading of research papers and integration of data and results from international oceanographic programs and ocean drilling.

Content
Specific topics will be chosen to examine processes of crustal formation, alteration, mass transfer and biological activity in mid-ocean ridge, continental margin and subduction zone settings, with consideration of data and new results obtained from international oceanographic programs and from DSDP, ODP and IODP drilling.

Student participation and discussions are based on critical reading of research papers, use of internet-based data, and web-based cruise results. Requirements to obtain credit points are oral or poster presentations and a short written summary of selected themes.

Lecture notes
No formal script will be distributed. Handouts will be given, where necessary. These will consist of the most important diagrams presented in the lectures. The students are expected to take their own notes and consult the literature for more details.

Literature
Lists of literature relevant to the selected topics will be handed out in the course.

Prerequisites / notice
This course is offered every 2 years.

651-4229-00L Advanced Geochronology W 3 credits 2G A. Quad Wykradt-Hüchtenbruck, H. Busemann, B. Ellis, M. Guillong, A. Liati

Objective
The purpose of this lecture is to provide a comprehensive overview of: a) the different radiometric methods in Geology, the different dating tasks and the constraints put by the complexity of natural systems, including dating by cosmogenic nuclides, b) the various analytical tools available today for radiometric dating, their advantages and disadvantages, c) the Geochemistry and d) detailed description of case studies, as examples of approach of a number of geological problems and interpretation of the data.

Content
The content of this lecture is summarised as follows:

Anthi Liati:
- Ion microprobes - U-Pb SHRIMP dating (zircon, sphene, rutile, monazite)
- Dating metamorphic rocks
- Combined geochronology and petrology subduction and exhumation rates
- Tracing the timing of mantle and crustal events via zircon-dating in mantle xenoliths: Two case studies: South Namibia, Kilbourne Hole (New Mexico)

Henner Busemann:
- Noble gas geo- and cosmochemistry
- Surface exposure dating with cosmogenic nuclides
- carbon-14 dating and U-Th-Threrochronology
- Visit of the radiogenic and noble gas isotope laboratories of IGMR

Albrecht von Quadt:
- Analytical tools and applications to radiogenic isotopes (basics about TIMS, LA-ICP-MS-MC)
- Dating magmatic rocks and ore deposits (porphyry, epithermal Cu-Au-(Mo) deposits)
- U-Pb, Re-Os, Pb-Pb methods - HI tracing of zircons
- Geochronology and geochemistry of magmatic systems

Marcel Guillong:
- LA-ICP-MS as the method of choice for dating, in comparison to other methods (Ion-probe, TIMS, ...)
- Data reduction in LA-ICP-MS: from measured counts per seconds to the final age of a sample, with hands on example.
- The challenge to date very young Zircons, with an example from Kos.

Ben Ellis:
- Ar-Ar dating techniques
- Ar-Ar dating of volcanic rocks

Lecture notes
Script (for part of the lecture), partly power point presentations (in the web) and partly copies of power point transparencies.

651-1615-00L | Colloquium Geophysics | W | 1 credit | 1K | A. Obermann
Abstract
This colloquium comprises geophysical research presentations by invited leading scientists from Europe and overseas, advanced ETH Ph.D. students, new and established ETH scientists with specific new work to be shared with the institute. Topics cover the field of geophysics and related disciplines, to be delivered at the level of a well-informed M.Sc. graduate/early Ph.D. student.

Objective
Attendants of this colloquium obtain a broad overview over active and frontier research areas in geophysics as well as opened questions. Invited speakers typically present recent work; Attendants following this colloquium for multiple terms will thus be able to trace new research directions, trends, potentially diminishing research areas, controversies and resolutions thereof, and thus build a solid overview of state and direction of geophysical research. Moreover, the diverse content and delivery style shall help attendees in gaining experience in how to successfully present research results.

651-1851-00L Introduction to Scanning Electron Microscopy

Objective
Introduction in scanning electron microscopy and microanalysis. Obtain practical experience in operating a SEM.

Content

Lecture notes
Scripts and operation manuals are provided during the course.

Literature

Prerequisites / notice
Full day block course after the end of HS

651-0048-00L Electron Microprobe Course

Abstract

Objective

Content
Physical principles of electron optics, interaction of electrons with matter, preparation of X-rays, interaction of X-rays with matter. Detection of X-rays. Laboratory work in the field of Earth sciences.

Lecture notes
Kursunterlagen

Literature

Prerequisites / notice
7 full days.

Max. 8 participants (incl. PhD students and external participants).

- Restricted attendance. Register with E. Reusser.

327-0703-00L Electron Microscopy in Material Science

Abstract
A comprehensive understanding of the interaction of electrons with condensed matter and details on the instrumentation and methods designed to use these probes in the structural and chemical analysis of various materials.

Objective
A comprehensive understanding of the interaction of electrons with condensed matter and details on the instrumentation and methods designed to use these probes in the structural and chemical analysis of various materials.

Content
This course provides a general introduction into electron microscopy of organic and inorganic materials. In the first part, the basics of transmission- and scanning electron microscopy are presented. The second part includes the most important aspects of specimen preparation, imaging and image processing. In the third part, recent applications in materials science, solid state physics, structural biology, structural geology and structural chemistry will be reported.

Lecture notes
Englisch

Literature
Transmission Electron Microscopy, L. Reimer; Einführung in die Elektronenmikroskopie, M. v. Heimendahl. Williams, Hawkes, Valdrè:

651-3541-00L Exploration and Environmental Geophysics

Abstract
Overview and understanding of the most important geophysical methods: Potential field methods (Gravimetrics and Magnetics), Electrical and electromagnetic methods, Refraction and reflection seismics, Georadar. Discussion of survey design, sources and receivers and data processing.

Objective
Overview and understanding of the most important geophysical methods. Proposed solutions to assess and observe problems relevant to exploration and environmental geophysics in soil, ice and lithosphere at different scales. Getting familiar with measuring- and interpretation procedures. Pointing out the possibilities and limitations of geophysical methods.

Content

Lecture notes
Available through eDoz/ILIAS.

Literature
This course shall provide the basics of experimental petrology. The principal goals are the acquisition of basic knowledge about experimental equipment employed in petrology and the design and setup of an experimental study targeted to obtain quantitative data on phase relations, thermodynamic, kinetic and rheologic properties of earth materials as well as the examination, analysis and evaluation of experiments. At the end of the course, the participants should be able to evaluate experimental data independently and design appropriate experiments on their own.

**Objective**

The course ‘Experimental methods in petrology’ covers the following subjects:

1. Introduction and historical summary of experimental petrology
2. Experimental methods at ambient pressure (1 bar) with practical exercise to determine the free energy of formation of wustite (FeO)
3. Experimental buffering techniques (phase rule, buffering of partial pressures of gases and supercritical fluids, buffering of mixed volatile phases at elevated pressures, buffering of activities and solid-solution in solid phases
4. Experimental methods at moderate pressures: externally (cold seal) and internally (HPV) heated gas-pressure apparatus with practical demonstration/exercise
5. High-pressure solid-media experimental techniques (piston cylinders)
6. Ultrahigh-pressure experimental techniques (multi-anvil apparatus, diamond-anvil-cells (DAC)
7. Evaluation of petrologic experiments (preparation of run products, analytical and spectroscopic methods of examination and quantification)

The practical work in the laboratories are conducted (with the exception of exercise #1) on a small research project where the various techniques and equipment are demonstrated and the practical use is trained.

**Literature**

Currently, there is no comprehensive book available that summarizes the most important aspects of experimental petrology; publications relating to individual subjects are referred during the lectures.

**Prerequisites**

This course addresses to a public (master and PhD students) that is interested in an introduction to experimental research in petrology, but does not require basic knowledge in experimental methods. However, basic knowledge in petrology and physical chemistry (thermodynamics) is required to follow the course.
Basic aspects of design and analysis of underground structures. Conventional tunnel construction methods. Auxiliary measures (ground improvement and drainage, forepoling, face reinforcement). Numerical analysis methods.

Abstract
Understanding glaciers and ice sheets with simple physical concepts. Topics include the reaction of glaciers to the climate, ice rheology, temperature in glaciers and ice sheets, glacier hydrology, glacier seismology, basal motion and calving glaciers. A special focus is the current development of Greenland and Antarctica.

Objective
After the course the students are able understand and interpret measurements of ice flow, subglacial water pressure and ice temperature. They will have an understanding of glaciology-related physical concepts sufficient to understand most of the contemporary literature on the topic. The students will be well equipped to work on glacier-related problems by numerical modeling, remote sensing, and field work.

Content
The dynamics of glaciers and polar ice sheets is the key requisite to understand their history and their future evolution. We will take a closer look at ice deformation, basal motion, heat flow and glacier hydraulics. The specific dynamics of tide water and calving glaciers is investigated, as is the reaction of glaciers to changes in mass balance (and therefore climate).

Prerequisites / notice
A list of relevant literature is available on the class web site. Good high school mathematics and physics knowledge required.

**(University of Zurich)**

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.  
UZH Module Code: GEO231

Mind the enrolment deadlines at UZH:  
http://www.uzh.ch/studies/application/mobilitaet_en.html

**Abstract**
Das Modul bietet eine kurze Einführung in einige Komponenten und Prozesse des hydrologischen Kreislaufs. Dabei werden einzelne Wasserspeicher (Schnee, - Boden und Grundwasser) und Flüsse zwischen den Speichern (Verdunstung, Niederschlag und Abfluss) betrachtet. Übungen ergänzen die Vorlesung.

**Prerequisites / notice**
Besuch von GEO122.

**Heat and Mass Transfers in Magmatology**  

W Dr

P. Tackley, M. D. Ballmer, T. Gerya, D. A. May

O. Bachmann, J. Leuthold
Heat and mass transfers in the crust control many aspects of the differentiation of our planet, including (1) type of volcanic eruptions we should expect at the surface of our planet, (2) the volcanic/plutonic ratio in the crust, and (3) how volcanic degassing occurs, with important consequences on the climate response following volcanic eruptions.

The goal of this class is to learn about the modern methods and ideas on heat and mass transfers in magmatology through recently published papers and computer softwares. The class will allow students to explore some of the most challenging concepts in this field, and become familiar with state-of-the-art techniques to model these processes.

The class will focus mostly on reading recent literature on topics of interests, and will contain some computer exercises to allow students to work by themselves on some well-defined problems.

**Course Details**

**Title:** Heat and mass transfers in the crust

**ECTS:** 30

**Type:** MSc Project Proposal

**Number:** 651-4060-00L

**Lecturers:**

- S. Löw
- Lecturers

**Objective:**

- To get prepared for a MSc project.
- To obtain experience in writing scientific reports/papers.
- To familiarize with research procedures in a selected scientific area.
- To gain experience in writing scientific reports/papers.

**Abstract:**

The MSc Project Proposal is only offered in autumn semester. A registration in spring semester is subject to special approval by the study director.

The introductory lecture for all majors on "Conduct as a Scientist" will be taught at the beginning of spring semester 2017 on Tuesday February 21, 2017 at 16:15 during the Engineering Geology Seminar.

The main purpose of the Master Project Proposal is to help students organize ideas, material and objectives for their Master Thesis, and to begin development of communication skills.

The main objectives of the Master Project Proposal are to demonstrate the following abilities:

- to formulate a scientific question
- to present scientific approach to solve the problem
- to interpret, discuss and communicate scientific results in written form
- to gain experience in writing a scientific proposal

**Prerequisites / notice:**

- To have successfully completed the MSc Project Proposal
- To gain admission to the master programme; fulfilling of any additional requirements necessary to begin with their master thesis:

Only students who fulfill the following criteria are allowed to participate:

- to gain experience in writing scientific reports/papers
- to present scientific approach to solve the problem
- to interpret, discuss and communicate scientific results in written form
- to gain experience in writing a scientific proposal

**Type of course:**

- GESS Science in Perspective
- Recommended Science in Perspective (Type B) for D-ERDW.

**Reflection Capability:**

- see Science in Perspective: Type A: Enhancement of Reflection Capability
- see Science in Perspective: Language Courses ETH/UZH

**Master’s Thesis**

**Number:** 651-4062-00L

**Title:** Master’s Thesis

Only students who fulfill the following criteria are allowed to begin with their master thesis:

- a. successful completion of the bachelor programme;
- b. fulfilling of any additional requirements necessary to gain admission to the master programme;
- c. have successful completed the MSc Project Proposal

**ECTS:** 30

**Type:** Master’s Thesis

**Lecturers:**

- Lecturers

Abstract

Provides a basic introduction into Earth Sciences, emphasizing different rock-types and the geological rock-cycle, as well as introduction into geophysics and plate tectonic theory.

Objective

Understanding basic geological and geophysical processes

Content

Overview of the Earth as a system, with emphasis on plate tectonic theory and the geological rock-cycle. Provides a basic introduction to crystals and minerals and different rock-types. Lectures include processes in the Earth's interior, physics of the earth, planetology, introduction to magmatic, metamorphic and sedimentary rocks. Exercises are conducted in small groups to provide more in depth understanding of concepts and content of the lectures.

Prerequisites / notice

Exercises and short excursions in small groups (10-15 students) will be lead by student assistants. Specific topics in earth sciences will be discussed using examples and case studies. Hand samples of the major rock types will be described and interpreted. Short excursions in the region of Zurich will permit direct experience with earth science processes (e.g. earth surface processes) and recognition of earth science problems and solutions relevant for modern society (e.g. building materials, water resources). Working in small groups will allow for discussion and examination of actual earth science themes.

Abstract

Mathematical tools for the engineer

Objective

Basic mathematical knowledge for engineers.

Content

Complex numbers. Calculus for functions of one variable with applications. Simple Mathematical models in engineering.

Literature

Textbooks in English:

Textbooks in German:
- M. Akveld, R. Sperb: Analysis I, vdf
- M. Akveld, R. Sperb: Analysis II, vdf
- L. Papula: Mathematik für Ingenieure und Naturwissenschaftler, Vieweg Verlag
- L. Papula: Mathematik für Ingenieure 2, Vieweg Verlag

Abstract

Introduction to the concepts and tools in physics: mechanics of point-like and rigid bodies, elasticity theory, elements of hydrostatics and hydrodynamics, periodic motion and mechanical waves.

Objective

Introduction to the scientific methodology. The student should develop his/her capability to turn physical observations into mathematical models, and to solve the latter.

The student should acquire an overview over the basic concepts in mechanics.

---

**651-3521-AAL**

**Tectonics**

E- 3 credits 6R T. Gerya, E. Kissling

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

**Abstract**

Comprehensive understanding of role and evolution of oceanic and continental lithosphere in global plate tectonics and evolution of earth.

Understanding principles of theoretical and experimental geothermics and fundamentals of mantle and lithosphere rheologies.

**Objective**

Comprehensive understanding of role and evolution of oceanic and continental lithosphere in global plate tectonics and evolution of earth.

Understanding principles of theoretical and experimental geothermics and fundamentals of mantle and lithosphere rheologies.

**Content**

**Lecture notes**

Detailed scriptum in digital form and additional learning modules (www.lead.ethz.ch) available on intranet.

**Literature**

see list in scriptum.

**Prerequisites / notice**

PPT-files of each lecture may be played back for rehearsal on www.lead.ethz.ch.

---

**529-2001-AAL**

**Chemistry I and II**

E- 9 credits 19R H. Grützmacher, W. Uhlig

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

**Abstract**

General Chemistry I and II: Chemical bond and molecular structure, chemical thermodynamics, chemical equilibrium, kinetics, acids and bases, electrochemistry

**Objective**

Introduction to general and inorganic chemistry. Basics of the composition and the change of the material world. Introduction to the thermodynamically controlled physico-chemical processes. Macroscopic phenomena and their explanation through atomic and molecular properties. Using the theories to solve qualitatively and quantitatively chemical and ecologically relevant problems.

**Content**

1. Stoichiometry

2. Atoms and Elements (Quantenmechanical Model of the Atom)

3. Chemical Bonding

4. Thermodynamics

5. Chemical Kinetics

6. Chemical Equilibrium (Acids and Bases, Solubility Equilibria)

7. Electrochemistry

**Lecture notes**

**406-0603-AAL**

**Stochastics (Probability and Statistics)**

E- 4 credits 9R M. Kalisch

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

**Abstract**

Introduction to basic methods and fundamental concepts of statistics and probability theory for non-mathematicians. The concepts are presented on the basis of some descriptive examples. Learning the statistical program R for applying the acquired concepts will be a central theme.

**Objective**

The objective of this course is to build a solid fundament in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

Introduction to Engineering Geology

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
This introductory course starts from a description of the behavior and phenomena of soils and rocks under near surface loading conditions and their key geotechnical properties. Lab and field methods for the characterization of soils, rocks and rock masses are introduced. Finally practical aspects of ground engineering, including tunneling and landslide hazards are presented.

Objective
Understanding the basic geotechnical and geomechanical properties and processes of rocks and soils. Understanding the interaction of rock and soil masses with technical systems. Understanding the fundamentals of geological hazards.

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 601 of 1571
Demanding biological topics are dealt with under consideration of the special needs of persons involved in teaching. The module comprises the parts:

1) Lecture (Tues. 08.00-09.45 hrs)
2) Colloquium (every second Tues. 10.15-12.00 hrs., begins on first lecture day)
3) Seminar with presentation (every second Tues. 10.15-12.00 hrs., begins in second lecture week)
4) Semester thesis in a research group (7 weeks)

The goal is to promote the ability to understand biological concepts, principles and their interrelationships and to communicate specialist knowledge to various groups of recipients in an understandable manner.

Hand out of course material.

- Students can discuss and put into practice in their teaching work the conditions and objectives set out in the regulations governing the special major, as one of the two obligatory research projects (each 15 CP). In such a case, additional 3 CP must be obtained in another course.

- Planning and preparation of lessons.
- Application of teaching methods and techniques from educational science in biology classes.

Performance Assessment:

Performance is assessed during the course of the entire modul, with a final test. Active participation in the colloquia and group seminars is required. The thesis report and an oral presentation have to be completed.

The Specialized Biology Course with an Educational Focus (12 CP) can be acknowledged, in agreement with the advisor of the respective elective major, as one of the two obligatory research projects (each 15 CP). In such a case, additional 3 CP must be obtained in another course.

In case of overbooking of the course, students enrolled in the Teaching Diploma in Biology will have priority for registration.

The course is organized jointly with the University of Zurich (Fachbereich Biologie) and is held at the Life Science Zurich Learning Center of the ETH Zurich and the University of Zurich.

551-0963-02L Specialized Biology Course with an Educational Focus II: Teaching Diploma

Abstract: Specialized aspects of biology are dealt with under the viewpoint of their presentation, their historical development, their significance for the field, the individual and society.

Objective: The goal is to promote the ability to understand biological concepts, principles and their interrelationships and to communicate specialist knowledge to various groups of recipients in an understandable manner.

Content: Demanding biological topics are dealt with under consideration of the special needs of persons involved in teaching. The module:

1) Lecture (Tues. 08.00-09.45 hrs)
2) Colloquium (every second Tues. 10.15-12.00 hrs., begins on first lecture day)
3) Seminar with presentation (every second Tues. 10.15-12.00 hrs., begins in second lecture week)
4) Semester thesis in a research group (3.5 weeks)

Literature: Specific references will be made available for the individual projects.

Prerequisites / notice: The program of this course represents one half (6 CP) of that of the Specialized Biology Course with an Educational Focus (551-0963-00, 12 CP).

**Abstract**
This course imparts fundamental didactic concepts that are relevant to teaching science in a Higher Education context.

**Objective**
Students are able to characterize and to discuss the model of outcomes based education.

Students are able to transfer the basic concepts of this model (ILO, TLA, assessment, constructive alignment) to science education.

**Lecture notes**
keines

**Number** | **Title** | **Type** | **ECTS** | **Hours** | **Lecturers**
---|---|---|---|---|---
529-0962-00L | **Fundamental Aspects of Chemistry with an Educational Focus B** | W | 4 credits | 2V | A. Togni, R. Alberto |

**Abstract**
Selected topics in general chemistry:
1) The language of chemistry
2) Chirality and stereochemistry
3) Oxidation of water
4) Chemistry of the atmosphere

**Objective**
In this course, participants acquire extended and more in-depth knowledge of selected chemistry topics. The selection is based to a large extent on the partial aspects of chemistry that are typically taught at high school. By gaining a broader understanding, teachers are put in a position where they can comprehend the topics that are to be taught in a wider and, to some extent, unconventional context and critically process these in respect of their teachability and learnability. At the same time, interrelationships between the classical sub-disciplines of chemistry are highlighted, along with the unique features of chemistry as one of the central natural sciences.

**Content**
Content of the four modules:
1) The language of chemistry: Concepts, formulas, aesthetics, and philosophical aspects
2) Chirality and stereochemistry: Selected aspects, origin of biomolecular chirality, inorganic chemistry
3) Cosmochemistry
4) Chemistry of the atmosphere

**Lecture notes**
Folien und ausgewählte Literatur werden zur Verfügung gestellt.

**Literature**
Ausgewählte Artikel aus der Primärliteratur werden vorgestellt, kommentiert und zur Lektüre empfohlen.

**Abstract**
Implementing findings from research into teaching and learning for chemistry lessons and coverage of subject-specific teaching and learning specialties.

**Objective**
- Among other things, students are put in a position where they can
  - divide up the subject matter into contents that can be learned by heart or accessed intellectually, and communicate these contents;
  - break down technically complex contents to the right level for a class and still present these in a stringent, error-free manner in their simplified form;
  - establish which subject matter can be presented with which teaching techniques and methods that have been recognised as efficient in teaching terms, and adapt these tools to the learning content in question;
  - plan school experiments, incorporate them in lessons, perform them in accordance with all the rules of the art, and also evaluate them in a beneficial manner;
  - assess pupils' prior knowledge, clarify it in greater detail and take it into account for planning lessons;
  - design a sequential curriculum suitable for the levels in question and put it into practice;
  - reliably identify stumbling blocks in the contents and get round these.

**Content**
Schwerpunkte im ersten Studiensemester bilden die folgenden Themen:
- Auswahl gymnasiumsrelevanter Lerninhalte
- Modellbegriff in den Naturwissenschaften, insbesondere der Chemie
- Sprache und Fachsprache im Chemieunterricht
- Wechselwirkungen zwischen Beobachtungen in der realen Welt und Deutungsversuchen auf der Modell-Ebene
- Interdisziplinarität mit Biologie, Mathematik und Physik
- Leistungserhebung und -beurteilung im Theorie- und Laborunterricht
- Atommodelle und chemische Bindung
- Mathematische Beschreibung chemischer Systeme (z.B. Stöchiometrie und Gleichgewichtssysteme)
- Auswahl, Konzeption, Einbettung, Vorbereitung, Durchführung, Nachbereitung und Auswertung von Demonstrations- und Schüler-Experimenten

**Lecture notes**
Prerequisites / notice

Der Chemieunterricht am Gymnasium soll einerseits dem zukünftigen Nichtnaturalwissenschaftler ein grundlegendes Rüstzeug an chemischen Kenntnissen und Fähigkeiten für den Alltag an die Hand geben, andererseits aber auch auf ein naturwissenschaftlich orientiertes Hochschulstudium vorbereiten können. Diese beiden Anforderungen sind im Unterricht gleichermaßen zu berücksichtigen.

Da viele Lerninhalte zudem zwingend sequentiell und einander benützend strukturiert sind, ist dem logischen und aus Schülerperspektive nachvollziehbaren Aufbau des Unterrichts besonderes Augenmerk zu schenken. Dies bedingt eine besonders feine Abstimmung von fachlichen Inhalten unterschiedlichen Niveaus und der für ihre Vermittlung eingesetzten didaktischen Methoden und Techniken auf die kognitive Leistungsfähigkeit der Lernenden.

Anhand der Diskussion ausgearbeiteter und bewährter Beispiele, aber auch durch selbständiges Probekonzipieren und mit Hilfe selbst zu erstellender kleiner Unterrichtsbausteine soll die zukünftige Lehrkraft befähigt werden, einen den spezifischen Rahmenbedingungen angepassten eigenen Unterricht zu konzipieren und durchzuführen, der diesem hohen Qualitätsanspruch genügen kann.

Abstract

The energy and related environmental problems, the physics principles of using energy and the various real and hypothetical options are discussed from a physicist point of view. The lecture is intended for students of all ages with an interest in a rational approach to the energy problem of the 21st century.

Objective

- Scientists and espially physicists are often confronted with questions related to the problems of energy and the environment.
- The lecture tries to address the physical principles of todays and tomorrow energy use and the resulting global consequences for the world climate.
- The lecture is for students which are interested participate in a rational and responsible debate about the energyproblem of the 21. century.
- Energy conservation and the first and second law of thermodynamics
- Fossil fuels (our stored energy resources) and their use.
- Burning fossil fuels and the physics of the greenhouse effect.
- Physics basics of nuclear fission and fusion energy
- Controlled nuclear fission energy today, the different types of nuclear power plants, uranium requirements and resources, natural and artificial radioactivity and the related waste problems from the nuclear fuel cycle.
- Nuclear reactor accidents and the consequences, a comparison with risks from other energy using methods.
- The problems with nuclear fusion and the ITER project.
- Nuclear fusion and fission: "exotic" ideas.
- Hydrogen as an energy carrier: ideas and limits of a hydrogen economy.
- New clean renewable energy sources and their physical limits (wind, solar, geothermal etc)
- Energy perspectives for the next 100 years and some final remarks

Lecture notes

- many more details (in english and german) here:
  - http://ihp-lx2.ethz.ch/energy21/
Science promised us truth, or at least a knowledge of such relations as our intelligence can seize: it never promised us peace or happiness.

Gustave Le Bon

Physicists learned to realize that whether they like a theory or they don't like a theory is not the essential question. Rather, it's whether or not the theory gives predictions that agree with experiment.

Richard Feynman, 1985

This course imparts fundamental didactic concepts that are relevant to teaching science in a Higher Education context.

Students are able to characterize and to discuss the model of outcomes based education.

Students are able to transfer the basic concepts of this model (ILO, TLA, assessment, constructive alignment) to science education.

<td>Overall, the objective is to become acquainted with the basics of both scientific areas and to make references to military practice. Military psychology is a branch of applied psychology; consequently selected aspects of psychological principles will be covered. Military pedagogy hasn't yet established itself firmly as an independent scientific discipline, it nevertheless can draw on a deep-seated tradition in Switzerland. Thus, the great importance that has been attached to the discussion of education in Swiss society and academia will be taken into account.</td>

<tr>
<td></td>
<td><strong>Literature</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>The lecture is structured along the lines of the concept of &quot;Military Revolution&quot; and starts with the formation of modern, European armed forces after the Oranian Army reform in the 17th century. Based on the &quot;Military Revolution&quot; approach, the lecture examines the structural changes regarding the armed forces and the development of warfare from the 18th to the 20th century. Special emphasis will be put on how the battlefield was revolutionized due to the Napoleonic wars, the industrialization in the 19th century, the First World War, the mechanization and totalization during the Second World War and the period of the Cold War.</td>

</tr>
</tbody>
</table>
The program of the course is organized into 14 units of 90 minutes each. The units combine the elements of lecture (where analytical concepts are taught) and application (where these concepts are applied). Additionally, guest lecturers will hold talks on selected issues.

- Global economic autarchy - madness or option?
- Global resource positions and world trade: Implications for the Swiss Armed Forces I
- Global resource positions and world trade: Implications for the Swiss Armed Forces II
- Economic causes of military instability
- Aggressive emerging economies: Economic growth and rearmament
- The process of an arms deal
- Costs and financing of a military conflict
- Economic analysis of terrorism
- Economic analysis of cyberwar
- Economic analysis of the present GSOA initiative: Compulsory military service vs. voluntary militia
- Global arms production and international arms trade
- The privatization of military security
- Standardisation and interoperability: Does NATO membership increase Swiss military efficiency
- Written exam

As this course has been completely redesigned and is being offered for the first time in the fall semester of 2013, a script is not yet available. However, the lecturer will distribute all necessary course material in time and directly to the students, either in the classroom or by uploading files to a public server.

The Lecturer will distribute all necessary literature directly to the students by disseminating pdf files or citing links to online references.

Exam "Military Business Administration I" passed successfully or profound basic knowledge of business administration and economics. The course is open to external participants.

**Abstract**
Beside of the most important terms of sociology, demographic changes and the related value and structure change will be analysed. The second part focuses on organizational sociology. Thirdly, the course examines to which extent armed forces can be considered as organizations like any other and to which extent they constitute a special case from an organizational and normative point of view.

**Objective**
Recognize and explain current changes (social change) in modern society (individualisation, pluralisation); describe demographic changes in Switzerland; explain the structures of societies; define issues and fields of research in modern military sociology and explain the foundations of organisational sociology; explain the military in terms of organisational sociology and identify specific traits of the military as an organisation.

**Content**
Societal change; organizations as societal phenomena; aims, structures, environments of organizations; specifics of the military as an organization; impacts of technological and societal changes on the armed forces in modern societies.

A reader with a set of texts will be handed out.

**Specialized Continuing Education**
Special internal ETH courses offered by LET and the Teaching Specialists.

History Part One: Europe (The Cradle of Modernity, Britain ca. 1789-1939)

Using the concrete example of Britain, the “cradle of modernity”, this lecture offers a survey and analysis of the crucial historical transformations that engendered “modernity” in Europe from the late 18th to the mid 20th centuries.

Objective

At the end of this lecture course, students can: (a) highlight the most important changes in the “long nineteenth century” in Europe (b) explain their long-term effects; and (c) relate these changes to global developments.

Content

The thematic foci include: the economic and social consequences of the industrial revolution, the genesis of political ideologies and social movements, shifts in gender roles, colonialism and imperialism, as well as the emergence of consumerism and a “leisure society.”

Lecture notes

Power Point Slides and sources will be made available at POLYBOX in the course of the semester.

Literature

Mandatory and further reading will be listed on course plan that is made available before the first session.

---

Postal Knowledge and the History of Digital Societies

Using the concrete example of postal services, this lecture offers a survey and analysis of the crucial historical transformations that engendered “modernity” in Europe from the late 18th to the mid 20th centuries.

Objective

Students become familiar with the mutual interdependence of social and technological change that characterises the history of computing and communication.

Content

The thematic foci include: the economic and social consequences of the industrial revolution, the genesis of political ideologies and social movements, shifts in gender roles, colonialism and imperialism, as well as the emergence of consumerism and a “leisure society.”

Lecture notes

Power Point Slides and sources will be made available at POLYBOX in the course of the semester.

Literature

Mandatory and further reading will be listed on course plan that is made available before the first session.

“Bollywood and Beyond” - A Cultural History of Indian Cinema in the 20th Century

The Indian film industry has been around for 100 years and is one of the richest and most variegated of the world. The lecture reconstructs the historical development of Indian cinema and uses it as a lens through which cultural, social and political change in the subcontinent can be explored.

Objective

The objectives of this course are three-fold. For one, the participants shall learn to question aesthetic cetainties and received modes of perception of cinematographic art. Secondly they will be acquainted with the huge potential of films as a historical source to grasp processes of social and cultural change. Besides, the reconstruction of the international career of a specific variety of art and entertainment will also raise important questions of cultural globalization and consumerism. As a side-effect, a sit were, the students will also be provided with important insights into the chequered history of the Indian subcontinent in during the course of the 20th century.

Collections in Context: What Do Historians and Scientists Learn from Butterflies, Stones, and Bones?
Particularly suitable for students of D-BIOL, D-BSSE, D-USYS
Zurich holds huge scientific collections. They contain objects from around the world, some of them dating back to the 18th century. This
The aim of this seminar is threefold: Firstly, students will become familiarised with historiographical approaches to scientific collections.
Among them are constructivist approaches that seek to understand scientific knowledge not primarily as a system of objective truths, but
Other approaches deal with the problem of how scientific objects are related to systems of power and oppression, namely in the case of objects collected during the time of european colonialism overseas. Secondly, students will become familiarized with how old collections can yeald new insights for current scientists working, e.g., on questions of ecology. Thirdly, the seminar shall serve as a plattform to discuss ways of dialogue and possible collaboration between these different approaches.
Students will be expected to read theoretical texts and case studies during semester, participate in discussions with external experts (historians, curators, and scientists), and to write a summarizing essay at the end of the term.

The course explores the complex nature of politics and history of the Arabian Peninsula. It examines the
Regional Politics of the Arabian Peninsula
The course explores the complex nature of politics and history of the Arabian Peninsula. It takes a closer look at the political systems of several countries of the Arabian Peninsula, especially Yemen, Saudi Arabia and Oman and Bahrain.

Introduce the Arabian Peninsula as a political unit, but not a homogeneous one.
An overview of the type of political systems prevalent in the region, religious Denominations, sectarian rivalry, and how this shape its regional relations.
The neighbouring states of the Arabian Peninsula - especially Saudi Arabia, Oman and Yemen - make for strange bedfellows. They are
governed by different systems with different results, calling into question how their internal policies affect regional relations and vice versa.
Saudi Arabia is a monarchy, a prosperous, religious and restrictive state increasingly facing problems of social/politica unrest. Oman is a
small, thriving, stable sultanate, modernised and moderate but tightly controlled; and the republic of Yemen, which has the region's poorest
economy, has still not shrugged off the legacy of its turbulent modern history. Each state adheres to a different Islamic sect, moreover, and
though their populations are overwhelmingly Arab, differing tribal structures result in widely variant effects on the political process in their respective systems. Each state has also had extensive historical relationships with the Ottoman and British empires, the US and Russia, and these too have coloured regional relations. Recent events like the terrorist attacks of 11 September 2001, the American-led invasion of Iraq, and the Arab uprisings of 2011 have also influenced these states' internal policy decisions, further affecting their dealings with one another and at with the world at large. This course examines each country in detail, from state formation to current affairs and from local to international government.

The two-semester course offers an introduction to the history and theory of architecture from the industrial revolution up to now. Based on
current questions a variety of case studies will be discussed.
The aim is to give an overview on crucial events, works of art, buildings and theories since the beginning of the 19th century up to today.
The course should enhance the comprehension of historical and theoretical issues, and allow the students to localize their own practice within
another and at with the world at large. This course examines each country in detail, from state formation to current affairs and from local to international government.

The course covers the time from the beginning of urban culture until the mid 19th century. With selected examples it emphasizes on the
historical plannings and methods of European cities. Each specific urban development will be presented within a broader context.
This course analyzes the history of urban architecture primarily in its existing three dimensional form as a complex human artefact. It also
explores the inspirations that prompted the creation of this artefact: philosophical and religious concepts, social conditions, property
relationships and the mechanisms that exploit the economics of real estate and the influence of building technology. Intellectual, literary or
artistic modes of thought will also be assessed with regard to their impact on urban development. Urbanism has its own distinctive approach as a discipline, but it is also clearly responsive to the influence of related disciplines. Study is made of actual cities and urban expansion plans which are in the process of implementation, as well as unrealized projects and visions of the future. These projects sometimes illustrate ways of thinking that are equal to, or clearer than, actual urban situations.

History of Art and Architecture III

The subject of this lecture course is the history and theory of architecture since the beginning of the 19th century up to now. It examines the
architectural answers to the changing technical inventions and social practices. Consequently, the focus will be less on individual architects
or buildings than on various themes that determined the architecture of the period.

The subject of this lecture course is the history and theory of architecture since the beginning of the 19th century up to now. It examines the
architectural answers to the changing technical inventions and social practices. Consequently, the focus will be less on individual architects
or buildings than on various themes that determined the architecture of the period.
In the first semester an introduction to the discipline and the methods are given along the thematic issues from the beginning of urban culture until the mid-19th century.

01. Introduction to the discipline and method: The history of urban design as a historical project

02. Athens and Rome in the ancient world: Myth, selfportrayal and speculation

03. From the spirit of equality to the colonial module: Greek and Roman City foundings

04. From the urban ideal to new cities in the Middle Ages and the Renaissance

05. Baroque strategies: The new organisation of Rome under Sixtus V, the production of Versailles under Louis XIV and the invention of St. Petersburg

06. The city between Absolutism and Enlightenment: baroque defence-designs, the European colonization of the American continent and the reconstruction of Lisbon

07. Ideology and speculation after the Glorious Revolution: landscapegardens and urban figurations in England from 1650-1850

08. Between modernization, Grandeur and repression: Embellishment in Paris from 1750-1830

09. The construction of the bourgeois city: Georges-Eugène Haussmann transforms Paris into the capital of the 19th century

10. Architectural insertion and plan for the expansion of the city: From the Berlin of Karl Friedrich Schinkel to James Hobrecht

11. Neobaroque: European Self-confidence and Marxian Idealism: The Viennese Ringstrasse and lidefonson Cerdas Ensanche for Barcelona

Environmental History - Introduction and Overview
W 2 credits 2V D. Speich Chassé
Number of participants limited to 100.

Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

Introduction into environmental history; survey of long-term development of human-nature-interrelations; discussion of selected problems. Improved ability to assess current problems from a historical perspective and to critically interrogate one's own standpoint.

Uekötter, Frank (Ed.) 2010. The turning points of environmental history, Pittsburgh: University of Pittsburgh Press.

Students are asked to write an exam during the second last session (11.12.2015).

Further recommended literature to consult is listed within the script.

History of Urban Design from antiquity to the 19th century

ARCHITECTURE

The lecture covers the time of the 20th century and describes with theories, projects and implemented plannings the history of the modern city. The lectures emphasize on the historical plannings and methods and presents each specific urban development within a broader context.

This course analyzes the history of urban architecture primarily in its existing three dimensional form as a complex human artefact. It also sometimes illustrate ways of thinking that are equal to, or clearer than, actual urban situations. This is also responsive to the influence of related disciplines. Study is made of actual cities and urban expansion plans which are in the process of implementation, as well as realized projects and visions of the future. These projects changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

The lecture which will be held only in one semester includes the developments of the 20th century

1. Le Corbusier: theories, visions and clearcuts in the name oft he autorité
2. The United States in the Jazz Age: Between Metropolis of Tomorrow and Broadacre City
3. Italy in the Fascist Era: Monumental ensembles and new town between assiduousness of modernization and obsession of representation
4. Urban design under totalitarian regimes: The architects of the "Tausendjährige Reich" and the "engineers of luck" of the Soviet Union of Stalin
5. Coming to terms with the past and the Cold War: Reconstruction in the two German states
6. The myth of the human scale: the 1950s in Spain, Great Britain, Scandinavia and Italy
7. Postwar Experiments: Rationalistic classicism in France
8. Two new towns in the 20th century: Chandigarh and Brasilia
9. Fictions and visions: The international utopia of the city
10. The second conquest of the North American territorium: The automobile and the city in the USA
11. Analysis, analogy and renewal: The adventure of the typological city

<tr>
<td>Abstract</td>
<td>This lecture provides a general introduction to literary theory and presents the important topics dealing with knowledge and its role in and as literature.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>Students are introduced to the various approaches and methods of literature studies and gain an overview of literary theory.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Content</td>
<td>This lecture has two aims: Firstly, it serves as a general introduction into the field of literary theory (thereby looking into &quot;knowledge about literature&quot;). Secondly, there will be a special emphasis on recent theoretical approaches that take seriously literary and knowledge as one of its components (thus investigating the &quot;knowledge of literature&quot;). Even though traditional criticism disagrees, a number of recent approaches, based on literature and culture studies, hold that literature is not to be conceived of as standing in opposition to the world and the classificatory system of the academic disciplines, particularly the sciences (e.g. Foucauldian discourse analysis and New Historicism). Instead, these approaches understand literature in terms of its epistemological forms and functions. Thus, the main thesis is that literature actively participates in the constitution and formation of knowledge. Literature itself generates models of knowledge, sometimes with critical or even utopian intentions. Moreover, it draws attention to the fundamental role of order and representation (systematization, narrative rendering, linguistic and pictorial representation) in both humanities and sciences.</td>

| Abstract        | The course discusses writers from Henry James to Margaret Atwood whose interest for photography led them to elaborate new intriguing modes of representation. The aim is to identify how literature, photography and art meet to promote a photographic aesthetics while approaching the theories of Susan Sontag, Roland Barthes and Bourdieu as well as postmodern and posthuman criticism. |
| Objective       | Students know a wide variety of literary text (and their authors) that are related in content or form to the practice of photography. Students know how to relate texts to key critical theories as well as to the historical and social context. |
| Prerequisites / notice | All interested students are most welcome. The course is not intended as a language course but a good knowledge of English is a necessary requirement in order to participate to class discussions and to do the reading. |

| 851-0301-05L    | Beginnings                                             | W    | 3    | 2S    | C. Jany          |
| Abstract        | "All beginnings are difficult," goes the saying, "but without them there wouldn't be an end." However, what makes beginnings so difficult? What kind of action is that? Which knowledge does it presuppose? And what would a beginning say about the end? We will pursue these questions by reading sacred, philosophical, literary, and scientific texts that, each in its own way, make a beginning. |
| Objective       | - thorough reading and critical analysis of the texts  |
| Content         | - reflection upon the conditions and practice of beginnings in terms of their epistemology and rhetorical strategy (i.e. as an intellectual and literary operation) |
| Literature      | Myths of Creation and First Origins (Genesis and Gospel of St. John, Theogony, Upanishads), philosophy (Fichte, Hegel), literature and poetry (Wieland, Hölderlin, Novalis, Wordsworth, Melville, Richard Wagner, Beckett). For an introduction, see Wolfgang Iser, Emergenz: Nachgelassene und verstreute publizistischen Essays (Konstanz 2013). |
| Prerequisites / notice | readings partly in English |

| 851-0306-05L    | Literature and Technology - Simulations, Prototypes, Machines | W    | 3    | 2S    | E. Edelmann-Ohler |
| Abstract        | Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of configurations of knowledge. |
| Objective       | Students are familiar with different relations between literature and technology. They can verbalise and analyse central contents. |
| Content         | Im Seminar lesen wir unter anderem Texte von E.T.A. Hofmann, Franz Kafka, Georg Kaiser und Max Frisch. |

| 851-0309-15L    | Thomas Mann’s Last Novel: “Bekenntnisse des Hochstaplers Felix Krull” | W    | 3    | not available |
| Abstract        | “Bekenntnisse des Hochstaplers Felix Krull” was published in 1954, one year before Thomas Mann's death. This humorous autobiography of a confidence man was and is often considered a somewhat lightweight work, intellectually inferior to Mann's more earnest and more celebrated output. By contrast, this seminar will seek to elucidate the novel's manifold discursive and knowledge-based contexts. |
| Objective       | - Students read and discuss the "Bekenntnisse" |
| Content         | - Students familiarize themselves with the critical technique of "close reading" |
|                 | - The seminar presents current and well-founded research perspectives on Mann's novel, preferably from the context of the history of knowledge, and the history of the idea. Approaches from the fields of gender studies, discourse analysis and other areas will also be considered |

| 851-0300-79L    | Theories of Joke | W    | 3    | 2S    | A. Kilcher |
| Abstract        | From Plato, Aristotle and Cicero, philosophers have tried to find the core principle of wit (or the joke, as both meanings are contained in the German term "Witz"). Even during the 20th century, the philosophy of life and psychoanalysis struggle with it. The seminar provides an overview of this history. |
| Objective       | This seminar deals with the meaning and history of "Witz" (wit, joke) as a form of knowledge. It places "Witz" as a switch or transitional figure within the development of modern theories of knowledge in particular. |
| Content         | Contrary to intuitive expectations, the German term "Witz" is not only an instance of the comical, but also a form of knowledge that plays on similarity and difference by juxtaposing the disparate. In this vein, especially during the 17th and 18th centuries, "Witz" becomes a central attribute of poetic and rhetorical types of expression (wit). Only during the 19th century "Witz" comes to denote a characteristic genre of the comical (joke). From now on "Witz" is theoretically associated with the comical and laughter. Around 1900 there are approaches based on the philosophy of life, sociology and psychology, elaborated by Bergson, Bakhtin and Freud, among others. |

| 851-0365-01L    | Introduction to English Literature: Science and Fiction | W    | 2    | 2S    | A. Brand-Kilcher |
| Abstract        | |
| Objective       | |
| Content         | |
"Plot is to the novelist what experiment is to the scientist." (Lionel Trilling) We will read Emile Zola's essay "The Experimental Novel" and other texts to look on the one hand at the scientific aspect to fiction and fiction writing and on the other hand at the narrative and fictional aspects to science.

**Objective**
Compare and find out about differences and similarities between natural sciences and fiction/ fiction writing. Maybe become aware that "to conclude that what happens in the laboratory is what happens in the universe requires a leap of the imagination." (Trilling)

**Content**
We will look at a number of essays and texts on that subject. We will also read Zadie Smith's highly entertaining novel "White Teeth" which has a very elaborate not to say artificial plot. One line of the story is about the geneticist Marcus Chalfen and the "Future Mouse" he designed.

**Literature**
Recommended Reading: Zadie Smith: White Teeth; Emile Zola: The Experimental Novel

851-0129-00L Writing for Others - Science and Public

**Abstract**
Learning to write texts, that can present topics from the sciences to an interested public (in newspapers, non-specialist journals but also in papers for non-specialists in an academic context); to gain insights into the cultural, historical and philosophical contexts of science and the public.

**Objective**
Learning to write texts, that can present topics from the sciences to an interested public (in newspapers, non-specialist journals but also in papers for non-specialists in an academic context); to gain insights into the cultural, historical and philosophical contexts of science and the public.

**Content**
Practical exercises in writing articles for the feature pages of newspapers will be combined with the theoretical work on topics relevant for the historical, sociological and philosophical aspects of writing for others.

**Prerequisites / notice**
Voraussetzungen: Die Bereitschaft, sich auf ein Projekt mit experimentellem Charakter einzulassen. GUTE BEHERRSCHUNG DER DEUTSCHEN SPRACHE.

Die Teilnehmerzahl ist begrenzt. SCHRIFTLICHE ANMELDUNG erforderlich (bis 31. August): uwe.justus.wenzel@nzz.ch

---

851-0315-01L Writing: Precision of Language as a Field of Research

**Abstract**
In this course we shall analyze and apply conditions and criteria for literary writing on the basis of our own texts.

**Objective**
In this course we shall analyze and apply conditions and criteria for literary writing on the basis of our own texts.

**Content**
In the natural sciences as well as in engineering we set up experiments, analyze equation systems, and formulate theories. In order to complement these practices, the course "Writing" shall pursue precision in literary writing, its choice of word and its self-evidence.

When we write a literary text we also enter into a set-up for experiments and explore the possibilities ensuing from the specific structure and overall consistency of such a text. This form of writing takes us from the question: what is it that I want to write about? to the question: what do I write? How do such literary approaches differ from the ways in which the natural sciences use language? In this course we shall analyze and apply conditions and criteria for literary writing on the basis of our own texts. The course is intended for persons who are interested in literary approaches to exactitude. Any attempt to write literature is confronted with an unforeseeable linguistic dynamism whose feasibility is determined by laws and rules quite different from those of science and technology. For the science-oriented writer, experiencing the self-evidence produced by literary approaches in his or her own writing project opens up a field of language with new content and new methods.

**Prerequisites / notice**
Those wishing to participate are required to send in between two and three pages text of their own writing that will be discussed in class. The next step will be writing a text on a preset topic as a basis for discussing the various realizations of a given task.

---

851-0331-05L The Art of Conversation

**Abstract**
This course will offer the occasion to reflect upon the art of conversation: its codes, its pleasures of improvisation, its worldly aspects and its importance in everyday life.

**Objective**
This course will offer the occasion to reflect upon the art of conversation: its codes, its pleasures of improvisation, its worldly aspects and its importance in everyday life.

---

851-0331-06L The Secretaries of the Baroque Age and the "Honest Disimulation"

**Abstract**
Torquato Accetto, secretary and poet, published the treatise "Della simulazione onesta" in 1641. It was a thin manual to survive political turmoils and moral instability of the time; it was also a guide to "secret" writing in a time of censorship. The course follows the reception of the treatise up to the 20th century and focuses on how it got shaped to meet various historical and political ideas.

**Objective**
The students know the author and his coeval context; the students can relate the writing modalities of the treatise to the socio-cultural context of various historical times; the students know how to identify and interpret the metaphorical potential of the texts, as well as its literary power.

**Abstract**
This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their research ideas in relation to behavioral science. The colloquium also features invited research talks.

**Objective**
Students know and can apply autonomously up-to-date investigation methods and techniques in the behavioral sciences. They achieve the ability to develop their own ideas in the field and to communicate their ideas in oral presentations and in written papers. The credits will be obtained by a written report of approximately 10 pages.
This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the macro- and micro-levels of cognitive, behavioral and social science. It also offers an opportunity for students from other disciplines to discuss their ideas in so far as they have some relation to behavioral science. The possible research areas are wide and may include theoretical as well as empirical approaches in Social Psychology and Research on Higher Education, Sociology, Modelling and Simulation in Sociology, Decision Theory and Behavioral Game Theory, Economics, Research on Learning and Instruction, Cognitive Psychology and Cognitive Science. Ideally the students (from Bachelor, Master, Ph.D. and Post-Doc programs) have started to start work on their thesis or on any other term paper. 

Course credit can be obtained either based on a talk in the colloquium plus a written essay, or by writing an essay about a topic related to one of the other talks in the course. Students interested in giving a talk should contact the course organizers (Rütsche, Stern) before the first session of the semester. Priority will be given to advanced / doctoral students for oral presentations. The course credits will be obtained by a written report of approximately 10 pages. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.

The topics covered in the first part of the course are a revision of basic statistics and linear and logit regression analysis. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, and randomized controlled trials mostly used for policy evaluation. The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of 30%. Students are assisted in solving the assignments during the exercises session.

**363-1027-00L Introduction to Health Economics and Policy**

**W 3 credits 2V W. Mimra**

**Abstract**

Health expenditures constitute about 10% of GDP in OECD countries. Extensive government intervention is a typical feature in health markets. Risk factors to health have been changing with growing importance of lifestyle factors such as smoking, obesity and lack of physical activity. This course gives an introduction to the economic concepts and empirical findings in health economics.

**Objective**

Introduce students without prior economics background to the main concepts of health economics and policy to enhance students understanding of how health care institutions and markets function.

**Content**

The course gives an introduction to the economic concepts and empirical findings in health economics to enhance students understanding of how health care institutions and markets function. First, the three important decisions made by individuals will be analyzed: What determines the health behaviors, like the intensity of preventive measures like sport, that an individual undertakes? What types and amount of personal health care services does an individual demand? How much health insurance coverage will be purchased?

In a second part, the major participants on the supply side of health care markets - physicians, hospitals, nurses and pharmaceutical manufacturers - will be discussed. E.g., how important are financial incentives in the choice of medicine as a career, specialty choice and practice location? What does it mean and imply that a physician is an agent for a patient? How do pharmaceutical firms decide on investments in new products and how can public policy encourage pharmaceutical innovation?

The choices made by societies about how health care services are financed and about the types of organizations that supply health care will be addressed in a third part. One important choice is whether a country will rely on public financing of personal health care services or encourage private health insurance markets. How could and should a public health insurance system be designed? What health care services should be included or excluded from a public system? Another important choice is whether a society relies on government provision of health care services, private provision by not-for-profit or for-profit organizations or some combination. The advantages and disadvantages of the alternatives will be discussed to provide a framework for analyzing specific types of health care systems.

**Literature**

Jay Bhattacharya, Timothy Hyde, Peter Tu, "Health Economics", Palgrave Macmillan.

**363-0387-00L Corporate Sustainability**

**W 3 credits 2G V. Hoffmann**

**Abstract**

The lectures address the assessment of corporate sustainability and its links to strategy, technology, and finance. Students learn why sustainability matters for managers and how businesses can act towards it. E-modules allow students to train critical thinking skills. In the 2nd half of the semester, sustainability challenges on water, energy, mobility, and food are explored in group projects.

**Objective**

Understand the limits and the potential of corporate sustainability for sustainable development

Develop critical thinking skills (argumentation, communication, evaluative judgment) that are useful in the context of corporate sustainability using an innovative writing and peer review method.

**Content**

Be able to recognize and realize opportunities for corporate sustainability in a business environment

Overview of the key concepts of corporate sustainability and topics related to Water, Energy, Mobility, and Food

Business implications of sustainable development, in particular for the assessment of sustainability performance, strategic change towards sustainability, technological innovations and sustainability, and finance and corporate sustainability.

Critical thinking skills for corporate sustainability.

In-depth study of corporate sustainability challenges in the phase track: How to deal with environmental pressure groups? How to use the strengths of business to solve pressing sustainability problems? How to catalyze technological innovations for sustainability? How to invest money in a sustainable way?

**Lecture notes**

Presentation slides will be made available on moodle prior to lectures.

**363-0565-00L Principles of Macroeconomics**

**W 3 credits 2V J.-E. Sturm**

**Abstract**

This course examines the behaviour of macroeconomic variables, such as gross domestic product, unemployment and inflation rates. It tries to answer questions like: How can we explain fluctuations of national economic activity? What can economic policy do against unemployment and inflation? What significance do international economic relations have for Switzerland?

**Objective**

This lecture will introduce the fundamentals of macroeconomic theory and explain their relevance to everyday economic problems.

This course helps you understand the world in which you live. There are many questions about the macroeconomy that might spark your curiosity. Why are living standards so meagre in many African countries? Why do some countries have high rates of inflation while others have stable prices? Why have some European countries adopted a common currency? These are just a few of the questions that this course will help you answer.

Furthermore, this course will give you a better understanding of the potential and limits of economic policy. As a voter, you help choose the policies that guide the allocation of society’s resources. When deciding which policies to support, you may find yourself asking various questions about economics. What are the burdens associated with alternative forms of taxation? What are the effects of free trade with other countries? What is the best way to protect the environment? How does the government budget deficit affect the economy? These and similar questions are always on the minds of policy makers.

**Lecture notes**

The course webpage (to be found at https://moodle-app2.let.ethz.ch/course/view.php?id=2467) contains announcements, course information and lecture slides.

**Literature**

We advise you to also buy access to Aplia. This internet platform will support you in learning for this course. To save money, you should buy the book together with Aplia. This is sold as a bundle (ISBN: 9781473715998).

Besides this textbook, the slides and lecture notes will cover the content of the lecture and the exam questions.

**363-0561-00L Financial Market Risks**

**W 3 credits 2G D. Sornette**

**Abstract**

I aim to introduce students to the concepts and tools of modern finance and to make them understand the limits of these tools, and the many problems met by the theory in practice. I will put this course in the context of the on-going financial crises in the US, Europe, Japan and China, which provide fantastic opportunities to make the students question the status quo and develop novel solutions.
Objective
The course explains the key concepts and mechanisms of financial economics, their depth and then stresses how and why the theories and models fail and how this is impacting investment strategies and even a global view of citizenship, given the present developing crises in the US since 2007 and in Europe since 2010.

- Development of the concepts and tools to understand these risks and master them.
- Working knowledge of the main concepts and tools in finance (Portfolio theory, asset pricing, options, real options, bonds, interest rates, inflation, exchange rates)
- Strong emphasis on challenging assumptions and developing a systemic understanding of financial markets and their many dimensional risks

Content

1- The Financial Crises: what is really happening? Historical perspective and what can be expected in the next decade(s). Bubbles and crashes. The illusion of the perpetual money machine.

2- Risks in financial markets
- What is risk?
- Measuring risks of financial assets
- Introduction to three different concepts of probability
- History of financial markets, diversification, market risks

3- Introduction to financial risks and its management.
- Relationship between risk and return
- Portfolio theory: the concept of diversification and optimal allocation
- How to price assets: the Capital Asset Pricing Model
- How to price assets: the Arbitrage Pricing Theory, the factor models and beyond

4- Financial markets: role and efficiency
- What is an efficient market?
- Financial markets as valuation engines: exogeneity versus endogeneity (reflexivity)
- Deviations from efficiency, puzzles and anomalies in the financial markets
- Financial bubbles, crashes, systemic instabilities

5- An introduction to Options and derivatives
- Calls, Puts and Shares and other derivatives
- Financial alchemy with options (options are building blocs of any possible cash flow)
- Determination of option value; concept of risk hedging

6- Valuation and using options
- A first simple option valuation model
- The Binomial method for valuing options
- The Black-scholes model and formula
- Practical examples and implementation
- Realized prices deviate from these theories; volatility smile and real option trading
- How to imperfectly hedge with real markets?

7- Real options
- The value of follow-on investment opportunities
- The timing option
- The abandonment option
- Flexible production
- Conceptual aspects and extensions

8- Government bonds and their valuation
- Relationship between bonds and interest rates
- Real and nominal rates of interest
- Term structure and Yields to maturity
- Explaining the term structure
- Different models of the term structure

9- Managing international risks
- The foreign exchange market
- Relations between exchanges rates and interest rates, inflation, and other economic variables
- Hedging currency risks
- Currency speculation
- Exchange risk and international investment decisions

Lecture notes
Lecture slides will be available on the site of the lecture

Conference of Disarmament: Simulation of Negotiations

Does not take place this semester.

Abstract
The Global Studies Institute (University of Geneva) is organizing a simulation seminar on nuclear disarmament in collaboration with the Chair of Negotiation and Conflict Management (ETH), experts from the United Nations Institute for Disarmament Research and the Geneva Center for Security Policy.

Objective
The simulation is conducted in collaboration with experts and students during a two days seminar at the University of Geneva.

Students will have the possibility to participate in simulated diplomatic negotiations and to analyse and assess the negotiation logic behind the situations. They should gain insight in the basic information on disarmament issues and on the functioning of the Conference on Disarmament as well as on negotiation techniques in general.
Open- and User Innovation

B. Clarysse

Discovering Management combines in an innovative format a set of lectures and an advanced business game. The learning model for the slides of the lectures is made available and updated continuously through the SMI website:

The course includes both lectures and exercises alternately. The goal is to understand the opportunity of user innovation for management and develop strategies to harness the value of user-developed ideas and contributions for firms and other organizations.

Relevant literature for the exam includes the slides and the reading assignments. The corresponding papers are either available from the Discovering Management website or distributed during class.

To get the 3 ECTS, students have to participate at the 2 days simulation in Geneva, attend the 3 mandatory lecture parts via conference call and write a report of 5 pages at the end of the course.

Note:
The participation in the simulation on 26 and 27 November in Geneva is necessary.

The two hours lectures on the 22. September, 6. and 13. October have to be attended in Zürich via conference call (ETH HG D 16.2). The other lectures during the semester can be attended via Skype.

The participation in the simulation on 26 and 27 November in Geneva is necessary.

The two hours lectures on the 22. September, 6. and 13. October have to be attended in Zürich via conference call (ETH HG D 16.2). The other lectures during the semester can be attended via Skype.

The 3 ECTS, students have to participate at the 2 days simulation in Geneva, attend the 3 mandatory lecture parts via conference call and write a report of 5 pages at the end of the course.

(technical note for registration: At this stage all registered students are on the waiting list)

351-0555-00L
Open- and User Innovation

W 3 credits 2G
S. Häfliger, S. Spaeth

Abstract
The course introduces the students to the long-standing tradition of actively involving users of technology and other knowledge-intensive products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies.

Objective
The course includes both lectures and exercises alternately. The goal is to understand the opportunity of user innovation for management and develop strategies to harness the value of user-developed ideas and contributions for firms and other organizations.

The students actively participate in discussions during the lectures and contribute presentations of case studies during the exercises. The combination should allow to compare theory with practical cases from various industries.

The course presents and builds upon recent research and challenges the students to devise innovation strategies that take into account the availability of user expertise, free and public knowledge, and the interaction with communities that span beyond one organization.

Grading is based on the final exam, the class presentations (including the slides) as well as class participation.

Content
This course on user innovation extends courses on knowledge management and innovation as well as marketing. The students are introduced to the long-standing tradition of actively involving users of technology and other knowledge-intensive products in the development and production process, and through own cases they develop an entrepreneurial understanding of product development under distributed, user-centered, or open innovation strategies. Theoretical underpinnings taught in the course include models of innovation, the structuration of technology, and an introduction to entrepreneurship.

Lecture notes
The slides of the lectures are made available and updated continuously through the SMI website:

Literature
Relevant literature for the exam includes the slides and the reading assignments. The corresponding papers are either available from the author online or distributed during class.

Reading assignments: please consult the SMI website:

Discovering Management

W 3 credits 3G
B. Clarysse, M. Ambühl, S. Brusoni, E. Fleisch, G. Grote, V. Hoffmann, P. Schönleben, G. von Krogh, F. von Wangenheim

Abstract
Discovering Management offers an introduction to the field of business management and entrepreneurship for engineers and natural scientists. The module provides an overview of the principles of management, teaches knowledge about management that is complementary to the students’ technical knowledge, and provides a basis for advancing the knowledge of the various subjects offered at D-MTEC.

Objective
Discovering Management combines in an innovative format a set of lectures and an advanced business game. The learning model for Discovering Management involves ‘learning by doing’. The objective is to introduce the students to the relevant topics of the management literature and give them a good introduction in entrepreneurship topics too. The course is a series of lectures on the topics of strategy, innovation, corporate finance, leadership, design thinking and corporate social responsibility. While the 14 different lectures provide the theoretical and conceptual foundations, the experiential learning outcomes result from the interactive business game. The purpose of the business game is to analyse the innovative needs of a large multinational company and develop a business case for the company to grow.

This business case is as relevant to someone exploring innovation within an organisation as it is if you are planning to start your own business. By discovering the key aspects of entrepreneurial management, the purpose of the course is to advance students’ understanding of factors driving innovation, entrepreneurship, and company success.

**Abstract**

- **701-0747-00L**: This course presents the basics of policy analysis and the specific characteristics of Swiss environmental policy. Policy instruments, actors and processes are addressed both theoretically as well as by means of current Swiss environmental policy examples.
- **701-0757-00L**: This course covers the bases for understanding micro- and macroeconomic issues and theories. Participants are given the tools to argue in economic and political terms and to evaluate the corresponding measures. Group and individual exercises deepen the knowledge gained.
- **701-0985-00L**: The lecture treats the social intercourses with risks of technical systems. The notion of risk and the perception of risk are discussed by case studies (e.g. nanotechnology) and socio-political instruments for decision-making are presented. Methods are presented that can be applied to deal with environmental risks and how they can be used for sustainable innovation.
- **701-0727-00L**: The course focuses on processes and drivers of decision-making on natural resources management issues in developing countries. It gives insights into the relevance of ecological aspects in developing countries. It covers concepts, instruments, processes and actors in environmental politics at the example of specific environmental challenges of global importance.

**Prerequisites / notice**

- **701-0747-00L**: Discovering Management is designed to suit the needs and expectations of Bachelor students at all levels as well as Master and PhD students not belonging to D-MTEC. By providing an overview of Business Management, this course is an ideal enrichment of the standard curriculum at ETH Zürich. No prior knowledge of business or economics is required to successfully complete this course.

- **701-0757-00L**: No prior knowledge of business or economics is required to successfully complete this course.

- **701-0985-00L**: No prior knowledge of business or economics is required to successfully complete this course.

- **701-0727-00L**: No prior knowledge of business or economics is required to successfully complete this course.
Introduction to Epistemology

After completion of the module, students will be able to:
- Identify and appraise ecological aspects in development cooperation, development policies and developing countries’ realities
- Analyze the forces, components and processes, which influence the design, the implementation and the outcome of ecological measures
- Characterize concepts, instruments and drivers of environmental politics and understand, how policies are shaped, both at national level and in multilateral negotiations
- Study changes (improvements) in environmental politics over time as the result of the interaction of processes and actors, including international development organizations
- Analyze politics and design approaches to influence them, looking among others at governance, social organization, legal issues and institutions

Content

Key issues and basic concepts related to environmental politics are introduced. Then the course predominantly builds on case studies, providing information on the context, specifying problems and potentials, describing processes, illustrating the change management, discussing experiences and outcomes, successes and failures. The analysis of the cases elucidates factors for success and pitfalls in terms of processes, key elements and intervention strategies.

Different cases not only deal with different environmental problems, but also focus on different levels and degrees of formality. This ranges from local interventions with resource user groups as key stakeholders, to country level policies, to multi- and international initiatives and conventions. Linkages and interaction of the different system levels are highlighted. Special emphasis is given to natural resources management.

The cases address the following issues:
- Land use and soil fertility enhancement: From degradation to sustainable use
- Common property resource management (forest and pasture): Collective action and property rights, community-based management
- Ecosystem health (integrated pest management, soil and water conservation)
- Payment for environmental services: Successes in natural resources management
- Climate change and agriculture: Adaptation and mitigation possibilities
- Biodiversity Convention: Implications for conservations and access to genetic resources
- Biodiversity as a means for more secure livelihoods: Agroforestry and intercropping
- The Millennium Development Goals: Interactions between poverty and the environment
- Poverty and natural resources management: Poverty reduction strategies, the view of the poor themselves
- Food security: Policies, causes for insecurity, the role of land grabbing
- Biofuels and food security: Did politics misfire?
- Strategy development at global level: IAASTD and World Development Report 2008

Lecture notes

Information concerning the case studies and specific issues illustrated therein will be provided during the course (uploaded on Moodle)

Literature

Prerequisites / notice

The performance assessment will consist of an individual essay to be written by each student based on at least five references in addition to the sources provided in the course. Students can choose from a list of topics. Criteria for assessment will be communicated at the beginning of the course.

<td>Environmental knowledge and management is quite common in different research fields and in everyday practice. We will be identifying those concepts, objects and methods that mainly construe what might be called the core of the environmental sciences. This will be done by using different philosophical tools and approaches.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>The environmental sciences cover a wide range of scientific practices and objects and accordingly afford different kinds of scientific knowledge. Additionally, there is an important interplay between the scientific and the societal sphere. In this seminar we will examine likewise central and widespread concepts such as sustainable development or resilience by using philosophical tools that will allow to prove the different uses of those concepts, their semantic range in terms of historical depth and semantic fields and finally their logical coherence. Another important topic is the philosophical investigation of methods and objects that can be identified in the environmental sciences. Those methods are for instance Life Cycle Assessment or Adaptive Ecosystem Management, technological objects may be a wind engine or a hydropower plant. The latter raise questions of how renewable energies can be assessed and valued, including the more general issue of how values and norms can be embedded in technological objects. This leads us to the third and last complex of topics that focus on current deliberations about possible new ways of existence in the age of the Anthropocene and as a consequence the formation of adequate life styles in our societies. This refers to issues in philosophical and social anthropology and the challenge of climate change.</td>

851-0125-18L Self-Ownership - Philosophical and Juridical Perspectives

Objective
- conceptions of fundamental epistemological concepts
- sensitivity to epistemological questions
- capacity to reflect epistemological theories
- capacity to discuss epistemological theories
- reading philosophical texts (including English texts)

Abstract
Rights in Objects are founded by an inalienable Self-Ownership. These ideas are central for personal rights. We speak of my body, my genes, my name, my portrait, my ideas or ways of expression.

Objective
Participants will make acquaintance with founding texts of the natural rights property concept (John Locke). They will see the connection between individual self-ownership, prohibition of slavery, derivative commercial rights and modern personal rights. They will learn about the problems of self-ownership today concerning property in one’s body and intellectual property. Critical alternatives to the property paradigm will be discussed.

Participants will have the opportunity to gain access to unfamiliar texts from the philosophical tradition and to see their relevance today. They experience the consequences of a certain use of concepts and orient themselves in current bioethical, juridical and political discussions.

Content
Texts by Locke, Nozick, Christman, Otsuka, Rasmussen, Schneider, Stirner, Fichte and Forschner. Founding of property right in self-ownership (Locke), revival of this concept in Nozick and his egalitarian critics. Critique of the concept of self-ownership related to property in one’s body. Looking back to the personal self-relatedness that comes up again in Intellectual Property and in modern personal rights.

Literature
Text, Seminarplan und Literaturliste in ILIAS Lehrodokumentenablage.

851-0125-51L Man and Machine

Objective
Particularly suitable for students of D-CHAB, D-HEST, D-MAVT, D-MATL

Abstract
The lecture gives an overview about the different Man-Machine-Relations since the 16th century. Different models of machines will be important here: the clockwork, the steam engine and the computer.

Objective
On the one hand, models of machines had a heuristic value in research on man, e.g. in Harvey’s discovery of blood circulation in the 17th century or in brain research in the 20th century. On the other hand, these models were always criticised, sometimes polemically, because they are not always adequate for man.

Students should learn about the connections between the history of anthropology and technology and be able to evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

851-0125-61L What is the Value of Truth?

Objective
- knowledge of different epistemological conceptions of truth
- capacity to discuss questions of truth
- capacity to reflect on the value of truth
- sensitivity to epistemological questions

Abstract
It is useful to know which fellows are available or to know the causes of frequent occurrence of extreme weather. These truths are of instrumental value. Is it also intrinsically good to know the truth, e.g. to know that there are gravitational waves? And which is the role of truth in our lives? The course will deal with such philosophical questions.

3. Ebenso soll ein besseres Urteil gebildet werden darüber, welche existenzielle Rolle die Suche nach Wahrheiten in unserem persönlichen Leben hat.

Objective
How should we human beings understand ourselves according to our best knowledge about the social world, human history and nature? What are the relationships between biological and socio-cultural determinants of our thinking and doing? Michael Tomasello, psychologist, and social philosopher, has answered these questions in a thought provoking way. His answers will be studied and examined.

Literature

851-0125-63L Images of Mathematics

Objective
Particularly suitable for students of D-MATH

Abstract
The lecture series "Images of Mathematics" deals with the formalization of the objects and the logical language of mathematics from Hilbert to Gödel and considers its consequences in view of our conception of mathematical practice and knowledge, the limits of calculability and computability in mathematics, and the relation between the logical proof procedures and the involved intuitive aspects.

Objective
The lecture series will present philosophical problems of theoretical mathematics in the 20th century and will discuss the consequences of formalization and axiomatization. It aims at a critical reflection on the modern images of mathematics.
Content

How we understand Mathematics is probably strongly influenced by the Mathematics lessons we participated in during our school days. The common image of mathematics is therefore often characterized by the impression of a very stable form of knowledge with clear-cut problems and suitable recipes for finding the solution. It is a very static image which is very much in conflict with the rapid series of innovations that the discipline has experienced especially since the 19th century: Mathematics as a field of research has been highly innovative and even revolutionary as few other scientific disciplines in the last 200 hundred years.

These mathematical innovations did not only contribute to a progress amassing more and more knowledge. They very often changed how mathematicians conceived of their discipline. Even a contribution to a specific research question that appears at first sight to be minor can sometimes establish new connections to other fields, found a whole research field of its own or introduce new methods thereby changing the whole image of mathematics in the same way that a small addition to a picture can alter radically what we take it to represent.

The lecture series “Images of Mathematics” deals with a few moments in the history of the scientific discipline since the middle of the 19th century when the image of mathematics changed. In particular, it focuses on the consequences of the fact that in the 19th century mathematics started to not only reflect on their own conceptual and methodological foundations in a general manner (which had been done since the dawn of mathematics and was especially a philosophical task), but to formalize them in a strict, mathematical way: the objects of mathematics, its logical language and its proof procedures. Through Cantor's set theory, the mathematical treatment of logic since Boole and especially through Frege and the formalization of its axioms in a wide ranging discussion involving Zermelo, Fraenkel and others, this self-reflexive stance came to the fore.

Yet, the deeper mathematics dug into its foundations, the more radical the problems became. Finally, the optimistic Hilbert program of laying the foundation of mathematics within mathematics and of proving its own consistency as well as its completeness contributed to clarifying of the foundation of mathematics primarily insofar as it was doomed to failure. Gödel proved his famous incompleteness theorems and thereby dismissed at the same time the formalist attempt to reduce mathematical truth to logical provability. His work resulted in detailed insights in the precariousness of the foundation of mathematics and further numerous of productive consequences within mathematics.

Moreover, Gödel’s theorems open many far-reaching and intriguing questions in view of our image of mathematics, questions concerning the conception of mathematical practice and knowledge, the limits of calculability of mathematics and the possible role of computability and machines in mathematics, the relation between the logical proof procedures and the involved intuitive aspects. In short, the image of mathematics is not as static as we sometimes expect it to be, it was radically redrawn by the mathematicians of the 20th century and has since then again been open to diverging interpretations.

Literature

851-0125-57L Values in Science W 3 credits 2S K. Baicher

Number of participants limited to 25

Abstract

Should science be free from moral, political or ideological influences? According to the so-called value-free ideal it should. Many scientists think of themselves as committed to truth and objectivity and nothing else. In this seminar, we will track the history of the value-free ideal and engage in a debate about the potential role of so-called non-epistemic values in science.

Objective

In the past decades, philosophers of science have begun to challenge the value-free ideal in science. With the help of recent literature from the philosophy of science, students will be introduced to the debate on values in science and the reasons for why the value-free ideal has come under attack. They will be familiarized with the distinction between epistemic (truth-conducive) values and so-called non-epistemic values. The course aims at enabling students to critically reflect the potential role of non-epistemic values in science.

Content

www.blogs.ethz.ch/valuesinscience/

851-0180-00L Research Ethics W 2 credits 2G G. Achermann

Particularly suitable for students of D-BIOL, D-CHAB, D-HEST

Abstract

This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective

The main goal of this course is to enhance the student’s ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry
---------------------------------------
Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)
----------------------------------------------------------
Integrity in Research & Research Misconduct
- What is “integrity” in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks;
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.
### Philosophy of Science

- **Objective**: Ziel der Veranstaltung ist es, eine eigenständige kritische Perspektive auf Erzählungen von Gesundheit und Krankheit zu ermöglichen. Im Seminar werden daher unterschiedliche Arten von aktuellen Texten und Materialien zur Rolle von medizinischen Narrativen kritisch miteinander diskutiert.

- **851-0148-04L**  
  **Cyclical time**  
  **W** 3 credits 2S T. Böhm  
  **Abstract**: The idea of cyclical time is found in ancient pieces of wisdom (Pythagoreans, Plato, Buddhism) as reincarnation or memory, but also in Nietzsche as eternal return, in Deleuze as repetition, in Freud as repetition compulsion. We investigate the concept of repetition in combination with different philosophical theories of thinking change.

- **851-0144-20L**  
  **Philosophical Aspects of Quantum Physics**  
  **W** 3 credits 2S N. Sieroka, R. Renner  
  **Abstract**: This course provides an introduction to philosophical issues surrounding quantum physics. In particular, we will examine different interpretations of quantum mechanics (such as the many-world interpretation) and the transition between the quantum and the classical physical realm (here phenomena such as decoherence will be highlighted).

- **851-0144-19L**  
  **Philosophy of Time**  
  **W** 3 credits 2V N. Sieroka  
  **Abstract**: This course provides an introduction to philosophical issues surrounding the concept of time. We will treat topics such as: the existence of past, present, and future; the possibility of time travel; the constitution of time consciousness and its possible neurophysiological counterparts; temporal biases in the conduct of our lives; responsibility to future and past generations.

- **851-0144-21L**  
  **Philosophical Issues and Problems in Theoretical Computer Science**  
  **W** 3 credits 2V G. Sommaruga, J. Copeland, D. Proudfoot  
  **Abstract**: This course studies philosophical issues concerning computers and computing. Topics include: information (and information content), computational complexity, the Turing Test for computer thought; the "Chinese Room" argument against the possibility of strong AI; connectionist AI; consciousness; the Church-Turing thesis; computational and hypercomputational models of mind; and free will.

- **851-0144-22L**  
  **Developments in Logic after Gödel: Applications to Theoretical Computer Science**  
  **W** 3 credits 2V G. Sommaruga, J. Copeland  
  **Abstract**: The course will start by presenting a modern logic, namely (propositional) modal logic, which has turned out to be extremely fruitful and to have numerous interesting applications in computer science, mathematics and philosophy. Subsequently, two of these applications to computer science, tense logic and dynamic logic, and one application to mathematics, provability logic, will be introduced.

- **851-0127-28L**  
  **Death: The Secret Problem of Life**  
  **W** 3 credits 2S H. Wiedebach  
  **Abstract**: No detective novel without a corpse, no religion without knowledge about death and life, no large transplantation of an organ without certificate for the donor’s death. Is a dead person always a corpse? - Death is part of life and yet stands simultaneously in opposition to it. We cling to life and nonetheless wish to have the option to commit suicide. Do we know what we really want in that case?

- **701-0701-00L**  
  **Philosophy of Science**  
  **W** 3 credits 2V G. Hirsch Hadorn, C. J. Baumberger
Philosophy of Science: Exercises

Abstract
The lecture explores various strands in philosophy of science in a critical way, focusing on the notion of rationality in science, especially with regards to environmental research. It addresses the significance and limits of empirical, mathematical and logical methods, as well as problems and ethical issues raised by the use of science in society.

Objective
Students learn to engage with problems in the philosophy of science and to relate them to natural and environmental sciences, thus developing their skills in critical thinking about science and its use. They know the most important positions in philosophy of science and the objections they face. They can identify, structure and discuss issues raised by the use of science in society.

Content
1. Core differences between classical Greek and modern conceptions of science.
2. Classic positions in the philosophy of science in the 20th century: logical empiricism and critical rationalism (Popper); the analysis of scientific concepts and explanations.
3. Objections to logical empiricism and critical rationalism, and further developments: What is the difference between the natural sciences, the social sciences and the arts and humanities? What is progress in science (Kuhn, Fleck, Feyerabend)? Is scientific knowledge relativistic? What is the role of experiments and computer simulations?
4. Issues raised by the use of science in society: The relation between basic and applied research; inter- and transdisciplinarity; ethics and accountability of science.

Lecture notes
A reader will be available for students.

Literature
A list of introductory literature and handbooks will be distributed to the students.

Prerequisites / notice
Oral examination during the session examination.
Further optional exercises accompany the lecture and offer the opportunity for an in-depth discussion of selected texts from the reader. Students receive an additional credit point. They have to sign up separately for the exercises for the course 701-0701-01 U.

701-0701-01L Philosophy of Science: Exercises W 1 credit 1U G. Hirsch Hadorn, C. J. Baumberger

Abstract
The exercises in philosophy of science serve to develop skills in critical thinking by discussing seminal texts about the rationality of science. Topics discussed include the significance and limits of empirical, mathematical and logical methods, as well as problems and ethical issues raised by the use of science in society.

Objective
Students can engage with problems in the philosophy of science and to relate them to natural and environmental sciences. They learn to analyze and summarize philosophical texts. In this way, they develop their skills in critical thinking with a focus on the rationality of science.

Content
The optional exercises accompany the lecture and serve to develop skills in critical thinking with a focus on the rationality of science, based on discussing seminal texts. The texts cover important positions in the philosophy of science and their critics. Topics discussed include the significance and limits of empirical, mathematical and logical methods, as well as problems and ethical issues raised by the use of science in society.

Lecture notes
A reader will be available for students.

Literature
A list of literature will be distributed to the students together with the reader.

Prerequisites / notice
Students that want to subscribe for this course also have to subscribe for the lecture 701-0701-00 V "Wissenschaftsphilosophie". Credit points are given for preparing a structure and a summary of one of the texts.

701-0703-00L Environmental Ethics W 2 credits 2V M. Huppenbauer

Abstract
The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

Objective
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and arguments to be found within the field of environmental ethics and will have practised these in small case studies.

Content
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

Lecture notes
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

Literature

Generel introductions:
- Marcus Düwell et. al (Hrg.), Handbuch Ethik, 2. Auflage, Stuttgart (Metzler Verlag), 2006
- Johann S. Ach et. al (Hrg.), Grundkurs Ethik 1. Grundlagen, Paderborn (mentis) 2008

Prerequisites / notice
The procedure for accumulating CP will be explained at the start of term.

I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

851-0121-32L Introduction to Ethics of Science W 3 credits 2S N. Mazouz

Abstract
This course covers both, issues of research ethics and of the social responsibility of scientists. Thereby the relevant theories for the determination of science and its tasks are introduced, as well as the main ethical theories.

Objective
Students learn to identify, analyse and evaluate problems concerning research ethics as well as the political and social role of science. They form their abilities to reason as well as to interpret and write texts.

Political Science

Number Title Type ECTS Hours Lecturers
851-0594-00L International Environmental Politics W 3 credits 2V T. Bernauer

Abstract
Particularly suitable for students of D-ITET, D-USYS

Objective
This course focuses on the conditions under which cooperation in international environmental politics emerges and the conditions under which such cooperation and the respective public policies are effective and/or efficient.

The objectives of this course are to (1) gain an overview of relevant questions in the area of international environmental politics from a social sciences viewpoint; (2) learn how to identify interesting/innovative questions concerning this policy area and how to answer them in a methodologically sophisticated way; (3) gain an overview of important global and regional environmental problems.
This course deals with how and why international cooperation in environmental politics emerges, and under what circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

After passing an end-of-semester test (requirement: grade 4.0 or higher) students will receive 3 ECTS credit points. The workload is around 90 hours (meetings, reading assignments, preparation of test).

Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory.

Assigned reading materials and slides will be available at http://www.ib.ethz.ch/teaching.html (select link ‘Registered students, please click here for course materials’ at top of that page). Log in with your nethz name and password. Questions concerning access to course materials can be addressed to Mike Hudecheck (Mike Hudecheck <michaelh@student.ethz.ch>). All assigned papers must be read ahead of the respective meeting. Following the course on the basis of on-line slides and papers alone is not sufficient. Physical presence in the classroom is essential. Many books and journals covering international environmental policy issues can be found at the D-GESS library at the IFW building, Haldeneggsteig 4, B-floor, or in the library of D-USYS.

851-0589-00L Technology and Innovation for Development

W Dr
3 credits
2V
P. Aerni

Abstract

Technological change plays a crucial role in efforts to create a more sustainable future. In this context, policy decision makers must design rules that minimize its risks and maximize its benefits for society at large. The course discusses this challenge from an interdisciplinary perspective taking into account legal, economic, historical, development and environmental aspects.

Objective

- to recognize the challenges and opportunities of technological change in terms of sustainable development
- to become familiar with policy instruments to promote innovation
- to improve understanding of political decision-making processes in the regulation of science & technology
- improved understanding of the role of science and technology in the context of human and societal development

Content

Science and Technology Policy is normally associated with the improvement of national competitiveness; yet, it is also an integral part of effective environmental and development policies.

The course will discuss the challenges and opportunities of technological change in terms of sustainable development and how public policy on the national and the international level is responding to this change.

In this context, students are to become familiar with the basic principles of political economy and New Growth Theory and how such theories help explain political decisions as well as political outcomes in the area of Science, Technology and Innovation. State interventions are either designed to regulate (e.g. environmental regulations, anti-trust law) or facilitate (e.g. intellectual property rights protection, public investment in R&D and technical education, technology transfer) technological change. This will be illustrated by looking at different industries and different national systems of innovation. Subsequently the positive and negative consequences for society and the natural environment will be discussed from a short-term and a long-term perspective.

Lecture notes

Reader with issue-specific articles. E-version is partly available under https://www.ethz.ch/content/specialinterest/gess/cis/international-relations/en/teaching/materials/tech.html

Prerequisites / notice

The 2-hour course (5-7 p.m.) will be held as a series of lectures. The course materials will be available in form of an electronic Reader at the beginning of the semester.

Students will be asked to give a (a) presentation (15 Minutes) or write a review paper based on a article selected from the electronic script, and (b) they will have to pass a written test at the end of the course in order to obtain 3 credit points in the ECTS System. In the final mark (a) will have a weight of 40% and (b) 60%.

853-0038-00L Swiss Foreign Policy W 3 credits 2V D. Möckli

Abstract

This course analyzes the foundations and challenges of Swiss foreign policy. After reviewing the history of foreign policy conceptions since the early 20th century, we will discuss the determining factors of Swiss foreign policy and examine, together with guest speakers from the foreign ministry, current issues such as the Syria crisis, the migration challenge, terrorism, and Swiss-EU relations.

Objective

Students should acquire a sound understanding of Swiss foreign policy and the relevant academic and political debates associated with it.
The lectures “Leadership I” (WS) and “Leadership II” (SS) have been designed as a two-semester lecture series, but may also be followed separately. The lecture course covers the theory, development, and core policy fields of European integration as well as structures and processes of leadership and international relations.

By the end of the semester, participants should have a solid knowledge of the history and theoretical foundations of International Relations and Conflict Research. Participants should gain a solid understanding of security challenges stemming from the use and control of dual-use technologies. In addition, the students should become aware of how researchers can deal with sensitive knowledge regarding research transparency and control.

The lecure is being supported by a website on Moodle. If you have any questions, please contact Lukas Meyer, lukas.meyer@sipo.gess.ethz.ch.

A reading list will be handed out at the beginning of the semester. The course will be supported by an e-learning environment.

### Content

**853-0047-01L** World Politics Since 1945: The History of International Relations (Without Exercises)

- **Objective:** By the end of the semester, participants should have a solid knowledge of the history and theoretical foundations of International Relations since the end of World War II. The first part of the series deals with the development of and changes in Cold War security policy structures. The second part deals with the period after the transformation of 1989/91; the focus here is on current issues in international security policy.

- **Content:** cf. “Diploma Supplement”

- **Literature:** Reading:

- **Prerequisites / notice**
  - The lecture is being supported by a website on Moodle. If you have any questions, please contact Lukas Meyer, lukas.meyer@sipo.gess.ethz.ch.

### Content

**853-0060-00L** Current Issues in Security Policy

- **Objective:** The aim of the course is to provide participants with an overview of international security politics with a special focus on dual-use technologies. Students will analyze the character of dual-use security risks and of risk-based security strategies and instruments. Thematic areas include the nuclear non-proliferation regime, biological and chemical weapons conventions, missile proliferation, the nuclear program of Iran and North Korea, cyber and space technologies, as well as robotics and nanotechnology.

- **Content:** The aim of the course is to provide participants with an overview of international security politics with a special focus on dual-use technologies. Students will analyze the character of dual-use security risks and of risk-based security strategies and instruments. Thematic areas include the nuclear non-proliferation regime, biological and chemical weapons conventions, missile proliferation, the nuclear program of Iran and North Korea, cyber and space technologies, as well as robotics and nanotechnology.

- **Literature:** Reading:
  - A reading list will be distributed at the beginning of the semester.

### Content

**853-0033-00L** Leadership I

- **Objective:** The aim of this lecture is to give students an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organisation, context and situation. They should be informed about the evolution of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate adequately in specific situations.

- **Prerequisites / notice**
  - The 1-hour written exam will take place during the last lecture in the semester.

### Content

**853-0015-01L** Conflict Research I: Causes of War in Historical Context (without exercises)

- **Objective:** Developing an understanding for causes of war and their development over the last 500 years. Knowledge of fundamental concepts in research on causes of war.

### Content

**853-0302-01L** European Integration (Seminar without Tutorial)

- **Objective:** The seminar is designed to help students understand the European Union as a particular kind of political system that differs both from the nation-state and from other international organizations. It imparts basic knowledge on the development, institutions, procedures, and policies of the EU and provides an introduction to major approaches to integration theory and political science research on the EU.
Content

1. Introduction
2. Theories of European integration
3. The development of European integration
4. Internal market and monetary union
5. Internal and external security policies
6. Constitutionalization
7. Widening and differentiation
8. Switzerland, the EEA, and EU neighbourhood policies
9. Identity, trust, and solidarity
10. Public spheres, parties, and elections
11. Decision-making and policy development in the EU
12. Statehood and democracy in the EU
13. European integration in crisis

Lecture notes
The seminar covers the theory, development, and core policy fields of European integration as well as structures and processes of the EU as a decision- and policy-making system.

Literature
Basislektüre

Prerequisites / notice
The grade is based on a written exam.

860-0001-00L Public Institutions and Policy-Making Processes W 3 credits 3G T. Bernauer, S. Bechtold, F. Schimmelfennig

Number of participants limited to 25.

Priority for Science, Technology, and Policy MSc students.

Abstract
Students acquire the contextual knowledge for analyzing public policies. They learn why and how public policies and laws are developed, designed, and implemented at national and international levels, and what challenges arise in this regard.

Objective
Public policies result from decision-making processes that take place within formal institutions of the state (parliament, government, public administration, courts). That is, policies are shaped by the characteristics of decision-making processes and the characteristics of public institutions and related actors (e.g. interest groups). In this course, students acquire the contextual knowledge for analyzing public policies. They learn why and how public policies and laws are developed, designed, and implemented at national and international levels, and what challenges arise in this regard. The course is organized in three modules. The first module (Stefan Bechtold) examines basic concepts and the role of law, law-making, and law enforcement in modern societies. The second module (Thomas Bernauer) deals with the functioning of legislatures, governments, and interest groups. The third module (Frank Schimmelfennig) focuses on the European Union and international organisations.

Content
Schedule (for up-to-date information, see the syllabus that will be distributed to participants electronically):

W1: Bechtold, Bernauer: Introduction
How are laws created and interpreted? How are they enforced?

W2: Bechtold: Why do we need laws and why do people and firms usually obey the law? What are possible goals of legal systems? What is the relationship between laws, social norms, and moral values?

W3: Bechtold: What role does scientific evidence play in the creation and enforcement of the law? How does the law deal with non-quantifiable factors or incommensurable values?

W4: no class

W5: Bernauer: How are parliaments (legislatures) elected, how do they work, and how do their characteristics and processes affect policy-making?

W6: Bernauer: Why do forms of government differ and how does this affect policy-making? Why and in what respect are public administrations efficient/ effective, and why sometimes not?

W7: Bernauer: How do interest groups and social movements affect policy-making.

W8: Study week

W9: Schimmelfennig: Governance beyond the state: why and how states create international institutions.

W10: Schimmelfennig: International organizations and regimes: case studies of global governance.

W11: Schimmelfennig: Institutions and policy-making in the European Union.

W12: Schimmelfennig: International organizations and policy diffusion.

W13: End-of-semester exam

An add-on module to this course (3 ECTS) involves an essay. This part of the course is accessible only to ISTP MSc students and requires enrollment in the main course (3 ECTS). ISTP MSc students must enrol in both parts. Other students can only enrol in the main course.

3rd week of January: deadline for review essay

Lecture notes
Reading materials will be distributed electronically to the students when the semester starts.
This course offers a comprehensive examination of the role of international organizations (IOs) in world politics. Besides teaching the basic theories and methods that are necessary for studying IOs, this course considers the application of those theories and methods to a range of special institutions.

The first part of the course offers an introduction and will seek to explain how, if at all, IOs obtain some measure of authority in international affairs, i.e., why states delegate certain tasks to IOs instead of dealing unilaterally or multilaterally outside of an institutional context. The second part of the course focuses on the impact and effectiveness of international institutions. We assess whether and how IOs influence state compliance with agreements, and whether IOs socialize states to behave in certain ways. The third and final part of the course examines a special set of IOs: international alliances and international regimes, i.e., explicit principles, norms, rules, and decision-making procedures that define expected behavior in a specific problem field.

The requirements for the course include participation in class discussions (10%), one class presentation (30%), and a final exam (60%).

Prerequisites / notice

This is a Master level course. The course is capped at 25 students, with ISTP Master students having priority.

851-0595-01L International Organizations W 3 credits 2S Z. Bakaki

Abstract

The course offers a comprehensive examination of the role of international organizations (IOs) in world politics. Besides teaching the basic theories and methods that are necessary for studying IOs, this course considers the application of those theories and methods to a range of special institutions.

Objective

The first part of this course offers an introduction and will seek to explain how, if at all, IOs obtain some measure of authority in international affairs, i.e., why states delegate certain tasks to IOs instead of dealing unilaterally or multilaterally outside of an institutional context. The second part of the course focuses on the impact and effectiveness of international institutions. We assess whether and how IOs influence state compliance with agreements, and whether IOs socialize states to behave in certain ways. The third and final part of the course examines a special set of IOs: international alliances and international regimes, i.e., explicit principles, norms, rules, and decision-making procedures that define expected behavior in a specific problem field.

Content

The requirements for the course include participation in class discussions (10%), one class presentation (30%), and a final exam (60%).

a) Participation: The quality of students’ experience in this course depends on the participation of students. Regular attendance and active class participation constitute a significant portion of the course grade. Students will be expected to read the required readings, think critically about them, and discuss them in class.

b) Class Presentation: First, you will submit one short (maximum 2 pages) paper summarizing the readings for a particular week. This short paper should be distributed to the class ahead of the meeting time (email, at least 24 hours in advance). Each student writing such a paper must also prepare a short class presentation. The goal of this exercise is not simply to summarize the assigned readings, as others in the class will already be familiar with the assignment. Rather, a good summary discusses the broader issues, themes, and questions underlying the readings or identifies problems with research design or potential flaws in the particular articles. The paper(s) and presentation(s) serve as a starting point for a more focused in-class discussion.

c) Final exam: The final examination will take place at the last week of the course. It lasts 1.5 hours, during which you will be required to answer 3 questions out of 9 questions.

Psychology, Pedagogics

This lecture is only apt for students who intend to enrol in the programs "Teaching Diploma" or "Teaching Certificate". It is about learning in childhood and adolescence.

Objective

Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way human processes information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

Content

Thematic Schwerpunkte:
Lernen als Verhaltensänderung und als Informationsverarbeitung: Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzzerwachsung unter besonderer Berücksichtigung des Wissenstransfers; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen.

Lernformen:

Prerequisites: successful participation in 851-0240-00L "Human Learning (EW1)".
Abstract
The course Private Law focuses on the Swiss Code of Obligations (contracts, torts) and on Property Law (ownership, mortgage and easements). In addition, the course will provide a short overview of Civil Procedure and Enforcement.

Objective

Content
Le cours de droit civil porte notamment sur le droit des obligations (droit des contrats et responsabilité civile) et sur les droits réels (propriété, gages et servitudes). De plus, il est donné un bref aperçu du droit de la procédure et de l'exécution forcée.

Literature
Editions officielles récentes des lois fédérales, en langue française (Code civil et Code des obligations) ou italienne (Codice civile e Codice delle obbligazioni), disponibles auprès de la plupart des bibliothèques.

Sont indispensables:
- le Code civil et le Code des obligations;
- S. Scherler

Prerequisites / notice
- Le cours de droit civil et le cours de droit public (2e sem.) sont l'équivalent des cours "Recht I" et "Recht II" en langue allemande et des exercices y relatifs.
- Les examens peuvent se faire en français ou en italien.
- Examen au 1er propédeutique; convient pour travail de semestre.

851-0727-02L E-Business-Law
Particularly suitable for students of D-INFK, D-ITET

W 2 credits 2V 2
D. Rosenthal

Abstract
The course deals with the basic legal framework for doing e-business as well as using information technology. It discusses a variety of legal concepts and rules to be taken into account in practice, be it when designing and planning new media business models, be it when implementing online projects and undertaking information technology activities.

Objective
The objective is knowing and understanding key legal concepts relevant for doing e-business, in particularly understanding how e-business is regulated by law nationally and internationally, how contracts are concluded and performed electronically, which rules have to be obeyed in particular in the Internet with regard to third party and own content and client data, the concept of liability applied in e-business and the role of the law in the practical implementation and operation of e-business applications.

Content
Vorgesehene Strukturierung der Vorlesung:

1) Welches Recht gilt im E-Business?
   Internationalität des Internets
   Regulierte Branchen

2) Gestaltung und Vermarktung von E-Business-Angeboten
   Verwendung fremder und Schutz der eigenen Inhalte
   Haftung im E-Business (und wie sie beschränkt werden kann)
   Domain-Namen

3) Beziehung zu E-Business-Kunden
   Verträge im E-Business, Konsumentenschutz
   Elektronische Signaturen
   Datenschutz
   Spam

4) Verträge mit E-Business-Providern

Lecture notes
Es wird mit Folien gearbeitet, die als PDF über die elektronische Dokumentenablage (ILIAS) auf dem System der ETHZ vorgängig abrufbar sind. Teilweise ergänzt werden diese mit einspringenden Links zu weiterführenden Literaturhinweisen. Im Vorhinein ist auch eine Übersicht der im Vorlesungsverlauf zu behandelnden Themen und Zielsetzungen auf der Studierendenplattform verfügbar. Die Vorlesung wird auf Videoaufnahme gesetzt und online abrufbar sein.

Literature
- Sicherheit und Risiken der Netze: http://www.security-explained.de
- Schröder, K.: Recht im Internet, Beck
- Spiekermann, C.: Informationstechnologie und Recht, Beck
- Dörr, B.: Haftung im E-Commerce, LexisNexis
- Thiel, A.: Elektronische Kommunikation und Haftung, DVA

Prerequisites / notice
- Le cours de droit civil et le cours de droit public (2e sem.) sont l'équivalent des cours "Recht I" et "Recht II" en langue allemande et des exercices y relatifs.
- Les examens peuvent se faire en français ou en italien.
- Examen au 1er propédeutique; convient pour travail de semestre.

851-0733-00L Traffic Law / Traffic Commercial Law

W 2 credits 2G 2
S. Scherler

Abstract
Within the scope of the lecture "Traffic Law / Traffic Commercial Law", besides an introduction into the legal basis of the national and international traffic, the main interest will be laid on actual political and economical questions and problems with respect to traffic (e.g. financing of traffic, road pricing, rail reform, air traffic vs. environment law etc.).

Objective
Participants are acquiring a comprehensive summary about the system Traffic Law/Traffic Commercial Law in Switzerland. With practical exercises and subsequent detailed reviews themes and subjects of special interest to participants are being treated more thoroughly.

Objective

Content
Le cours de droit civil porte notamment sur le droit des obligations (droit des contrats et responsabilité civile) et sur les droits réels (propriété, gages et servitudes). De plus, il est donné un bref aperçu du droit de la procédure et de l'exécution forcée.

Literature
Editions officielles récentes des lois fédérales, en langue française (Code civil et Code des obligations) ou italienne (Codice civile e Codice delle obbligazioni), disponibles auprès de la plupart des bibliothèques.

Sont indispensables:
- le Code civil et le Code des obligations;
- S. Scherler

Prerequisites / notice
- Le cours de droit civil et le cours de droit public (2e sem.) sont l'équivalent des cours "Recht I" et "Recht II" en langue allemande et des exercices y relatifs.
- Les examens peuvent se faire en français ou en italien.
- Examen au 1er propédeutique; convient pour travail de semestre.

851-0727-02L E-Business-Law
Particularly suitable for students of D-INFK, D-ITET

W 2 credits 2V 2
D. Rosenthal

Abstract
The course deals with the basic legal framework for doing e-business as well as using information technology. It discusses a variety of legal concepts and rules to be taken into account in practice, be it when designing and planning new media business models, be it when implementing online projects and undertaking information technology activities.

Objective
The objective is knowing and understanding key legal concepts relevant for doing e-business, in particularly understanding how e-business is regulated by law nationally and internationally, how contracts are concluded and performed electronically, which rules have to be obeyed in particular in the Internet with regard to third party and own content and client data, the concept of liability applied in e-business and the role of the law in the practical implementation and operation of e-business applications.

Content
Vorgesehene Strukturierung der Vorlesung:

1) Welches Recht gilt im E-Business?
   Internationalität des Internets
   Regulierte Branchen

2) Gestaltung und Vermarktung von E-Business-Angeboten
   Verwendung fremder und Schutz der eigenen Inhalte
   Haftung im E-Business (und wie sie beschränkt werden kann)
   Domain-Namen

3) Beziehung zu E-Business-Kunden
   Verträge im E-Business, Konsumentenschutz
   Elektronische Signaturen
   Datenschutz
   Spam

4) Verträge mit E-Business-Providern

Lecture notes
Es wird mit Folien gearbeitet, die als PDF über die elektronische Dokumentenablage (ILIAS) auf dem System der ETHZ vorgängig abrufbar sind. Teilweise ergänzt werden diese mit einspringenden Links zu weiterführenden Literaturhinweisen. Im Vorhinein ist auch eine Übersicht der im Vorlesungsverlauf zu behandelnden Themen und Zielsetzungen auf der Studierendenplattform verfügbar. Die Vorlesung wird auf Videoaufnahme gesetzt und online abrufbar sein.

Literature
- Sicherheit und Risiken der Netze: http://www.security-explained.de
- Schröder, K.: Recht im Internet, Beck
- Spiekermann, C.: Informationstechnologie und Recht, Beck
- Dörr, B.: Haftung im E-Commerce, LexisNexis
- Thiel, A.: Elektronische Kommunikation und Haftung, DVA

Prerequisites / notice
- Le cours de droit civil et le cours de droit public (2e sem.) sont l'équivalent des cours "Recht I" et "Recht II" en langue allemande et des exercices y relatifs.
- Les examens peuvent se faire en français ou en italien.
- Examen au 1er propédeutique; convient pour travail de semestre.

851-0733-00L Traffic Law / Traffic Commercial Law

W 2 credits 2G 2
S. Scherler

Abstract
Within the scope of the lecture "Traffic Law / Traffic Commercial Law", besides an introduction into the legal basis of the national and international traffic, the main interest will be laid on actual political and economical questions and problems with respect to traffic (e.g. financing of traffic, road pricing, rail reform, air traffic vs. environment law etc.).

Objective
Participants are acquiring a comprehensive summary about the system Traffic Law/Traffic Commercial Law in Switzerland. With practical exercises and subsequent detailed reviews themes and subjects of special interest to participants are being treated more thoroughly.

Content
Within the scope of the lecture "Traffic Law / Traffic Commercial Law", besides an introduction into the legal basis of the national and international traffic, the main interest will be laid on actual political and economical questions and problems with respect to traffic (e.g. financing of traffic, road pricing, rail reform, air traffic vs. environment law etc.). With practical exercises and subsequent detailed reviews themes and subjects of special interest to participants are being treated more thoroughly.

Lecture notes
Script will be distributed during the lecture.
The students shall obtain a basic knowledge about business law. They shall be able to recognize and evaluate issues in the area of business law and suggest possible solutions.

The students shall obtain the following competence:
- They shall obtain a working knowledge on the legal aspects involved in setting up and managing an enterprise.
- They shall be acquainted with corporate functions as contracting, negotiation, claims management and dispute resolution.
- They shall be familiar with the issues of corporate compliance, i.e. the system of corporate fraud, the liabilities and rules of conduct and due diligence are observed.
- They shall be able to contribute to the legal management of the company and to discuss legal issues.
- They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

A comprehensive script will be made available online on the moodle platform.

**851-0735-04L Workshop and Lecture Series in Law and Finance**  
**W** 2 credits  
**2S** G. Hertig

**Abstract**
The Workshop and Lectures Series in Law & Finance is a joint seminar of ETH Zurich, the University of Zurich and the University of St. Gallen. Each semester, several guest scholars from law, finance and related fields give a lecture and/or discuss their ongoing research. All speakers are internationally well-known experts from Europe, the U.S. and beyond.

**Objective**
The Lecture and Workshop Series in Law & Finance aims at allowing participants to discuss current financial regulation and corporate governance issues with leading academics.

**Content**
Participants discuss current Law & Finance issues with guest scholars from Europe and the U.S. In addition, participants write a comment on one of the discussed papers.

**Lecture notes**
To be discussed papers are posted in advance on the course’s web page.

**Literature**
- Viral Acharya et al., Regulating Wall Street (Wiley 2011)

**851-0735-09L Workshop & Lecture Series on the Law & Economics of Innovation**  
**W** 2 credits  
**2S** S. Bechtold, H. Gersbach, A. Heinemann

**Abstract**
This series is a joint project by ETH Zurich and the University of Zurich. It provides an overview of interdisciplinary research on intellectual property, innovation, antitrust and technology policy. Scholars from law, economics, management and related fields give a lecture and/or present their current research. All speakers are internationally well-known experts from Europe, the U.S. and beyond.

**Objective**
After the workshop and lecture series, participants should be acquainted with interdisciplinary approaches towards intellectual property, innovation, antitrust and technology policy research. They should also have an overview of current topics of international research in these areas.

**Content**
The workshop and lecture series will present a mix of speakers who represent the wide range of current science research methods applied to intellectual property, innovation, antitrust policy and technology policy issues. In particular, theoretical models, empirical and experimental research as well as legal research methods will be represented.

**Lecture notes**
Papers discussed in the workshop and lecture series are posted in advance on the course web page.

**851-0735-11L Environmental Regulation: Law and Policy**  
**W** 3 credits  
**1S**

**Does not take place this semester.**

**The course will be offered again in the spring semester 2017.**

**Number of participants limited to 15.**

**Abstract**
The aim of this course is to make students with a technical scientific background aware of the legal and political context of environmental policy in order to place technical solutions in their regulatory context.

**Objective**
The aim of this course is to equip students with a legal and regulatory skill-set that allows them to translate their technical knowledge into a policy brief directed at legally trained regulators. More generally, it aims to inform students with a technical scientific background of the legal and political context of environmental policy. The focus of the course will be on international and European issues and regulatory frameworks - where relevant, the position of Switzerland within these international networks will also be discussed.
In recent years, knowledge about intellectual property has become increasingly important for engineers. Both in production and distribution, the protection of technical inventions is of crucial importance. The lecture gives an overview of the fundamental aspects of intellectual property, which plays an important role in the daily routine of engineers. It is particularly tailored to the needs of the following degree programs: Agricultural science, architecture, civil engineering, geomatic engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics. For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' (851-0738-03) will be offered in the autumn semester.

The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights). An electronic copy of relevant readings will be provided to the students at no cost before the start of the lectures. The seminar will comprise practical exercises on how to use and search patent information. Basic knowledge of how to read and evaluate patent documents as well as how to use publicly available patent databases to obtain the required patent information will also be provided. The seminar is in particular tailored to the needs of the following degree programs: Agricultural science, architecture, civil engineering, computational science and engineering, computer science, electrical engineering and information technology, environmental engineering, geomatic engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics.

Teaching will take place over two weeks in September and October. The exam date will be in December. During the second week of the teaching period, students will have individual 30-minute meetings with the lecturer to discuss their project.

The course is (inter)related to materials discussed in Politikwissenschat: Grundlagen (851-0577-00 V), Ressourcen- und Umweltökonomie (751-1551-00 V), Umweltrecht: Konzepte und Rechtsgebiete (851-0705-01 V), Rechtlicher Umgang mit natürlichen Ressourcen (701-0743-01 V), Environmental Governance (701-1651-00 G), Policy and Economics of Ecosystem Services (701-1653-00 G), International Environmental Politics: Part I (851-0594-00 V).

No specific pre-existing legal knowledge is required, however all students must have successfully completed Grundzüge des Rechts (851-0708-00 V) or an equivalent course.

The lecture gives students of chemistry-related degree programs an overview of the options to protect inventions and the underlying research efforts. The lecture aims to put the participants in a position to use this know-how in the workplace.

The seminar will comprise practical exercises on how to use and search patent information. Basic knowledge of how to read and evaluate patent documents as well as how to use publicly available patent databases to obtain the required patent information will also be provided. The seminar is in particular tailored to the needs of the following degree programs: Agricultural science, architecture, civil engineering, computational science and engineering, computer science, electrical engineering and information technology, environmental engineering, geomatic engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics.

For students of chemistry-related degree programs, the lecture 'Protecting inventions in chemistry' (851-0738-03) will be offered in the autumn semester.
Participants should learn to get an overview of the state of the art in the field, to present it in a well understandable way to an interdisciplinary scientific audience, to develop models for open problems, to analyze them, and to defend their results in response to critical questions. In essence, participants should learn to apply the insights gained from the course in their future professional life.

This course teaches the possibilities and limits of the law in order to protect natural resources and landscapes against harm and nuisance. The students know the opportunities and restrictions which are given by the law when using natural resources. They have insights into the complexity environmental legal system and their application in concrete cases. The students are able to formulate typical legal questions, to understand the argumentation of courts and to solve simple legal problems with respect to environmental problems.

Case studies will illustrate and deepen the topics addressed during the lecture. The seminar will comprise practical exercises on how to use and search patent information. Basic knowledge of how to read and evaluate patent documents as well as how to use publicly available patent databases to obtain the required patent information will also be provided.

For engineering and physics students, the lecture 'The Role of Intellectual Property in daily routine: A Practical Introduction' (851-0738-01) will be offered in the autumn semester.

### Literature
- Rausch/Marti/Griffel; Umweltrecht Ein Lehrbuch. Herausgeber: Walter Haller. Schulthess Verlag, Zürich 2004
- Rausch, H.; Panorama des Umweltrechts - Kompendium der Umweltschutzvorschriften des Bundes, BUWAL-Schriftenreihe Umwelt Nr. 2008/2
- Keel/Zimmermann; Bundesaergerichte Rechtsprechung zur Waldgesetzgebung. In URP 2009/3
- Zeitungsartikel etc. über neue Vorhaben mit Auswirkungen auf die Umwelt und entsprechenden Rechtsfragen abgegeben.
- Weitere Literaturangaben erfolgen in der ersten Veranstaltung.

### Prerequisites / notice
The lecture is coordinated in particular to the needs of the following degree programs: Agricultural science, biotechnology, chemical engineering, chemistry, food science, pharmaceutical sciences.

For engineering and physics students, the lecture 'The Role of Intellectual Property in daily routine: A Practical Introduction' (851-0738-01) will be offered in the autumn semester.

### Objective
Research and development play an important role in chemistry-related technology sectors such as inorganic and organic chemistry or engineering, chemistry, food science, pharmaceutical sciences.

Investments in the development of new substances and active components in these sectors are traditionally secured by patents because publicly known inventions, generally chemical substances, may easily be reproduced by others.

In the last years, the know-how about intellectual property has become increasingly important for chemists and engineers. Both in the production process and in the distribution sector, chemists and engineers are increasingly being confronted with questions concerning the patenting of technical inventions and the use of patent information. As more than three-quarters of all publicly available technical information are available only in patents, it is more and more important for researchers and engineers to be capable of extracting relevant information from the flood of patents.

Patents are not only a powerful measure to protect investments and inventions in chemistry-related sectors but also an important source of information about competitors and potential cooperation partners and about the development of markets. Accordingly, the know-how about patents and patent information has become a key qualification on the strategic level in companies and in the research sector.

The seminar is customised to the needs of chemists and students of related degree programs. Participants will become familiar with practice-oriented aspects of intellectual property and will be enabled to use the acquired knowledge in their future professional life.

Topics covered during the lecture will include:
- The importance of innovation in industrialised countries
- An overview of the different forms of intellectual property
- The protection of technical inventions and how to safeguard their commercialisation
- Patents as a source of technical and business information
- Practical property in day-to-day research, at the workplace and for the formation of start-ups
- Special aspects of protecting inventions in chemistry-related sectors, e.g. polymorphs and inventions in the field of nanotechnology.

Case studies will illustrate and deepen the topics addressed during the lecture.
### Behavioral Studies Colloquium

**Abstract**
This colloquium offers an opportunity for students to discuss their ongoing research and scientific ideas in the behavioral sciences, both at the micro- and macro-levels of cognitive, behavioral, and social science. It also offers an opportunity for students from other disciplines to discuss their ideas in so far as they have some relation to behavioral science. The possible research areas are wide and may include the theoretical as well as empirical approaches in Social Psychology and Research on Higher Education, Sociology, Modeling and Simulation in Sociology, Decision Theory and Behavioral Game Theory, Economics, Research on Learning and Instruction, Cognitive Psychology and Cognitive Science. Ideally the students (from Bachelor, Master, Ph.D. and Post-Doc programs) have started to work on their thesis or on any other term paper.

**Objective**
Students know and can apply autonomously up-to-date investigation methods and techniques in the behavioral sciences. They achieve the ability to develop their own ideas in the field and to communicate their ideas in oral presentations and in written papers. The colloquium also serves as a venue for invited talks by researchers from other universities and institutions related to behavioral and social sciences.

**Content**
- characterize the nature of digital goods vs. physical goods
- Starting from economic and legal basics, we compare proprietary and open/"free" models.
- Sustainable development as a concept is knowledge in a way, which directly contrasts with the traditional understanding of "intellectual property" and the industries based on it.

**Lecture with Computer Exercises: Modelling and Simulating Social Systems with MATLAB**

**Abstract**
This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

**Objective**
Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the participation in a number of recent debates. Amongst others, these debates touch upon the co-evolution of selection and influence mechanisms, appropriateness of statistical models, generic mechanisms and features of social networks, models for the analysis of dynamic networks.

**Content**
- Particularly suitable for students of D-MAVT, D-INFK, D-ITET, D-MTEC, D-PHYS.
- Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

**Literature**

**Prerequisites / notice**
The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

### Digital Sustainability in the Knowledge Society

**Abstract**
How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on strong intellectual property rights are contrasted with open models like, e.g. Open Source/Content/Access. The course discusses consequences from different models and introduces »digital sustainability« as an alternative vision for society.

**Objective**
At the heart of the discourse is the handling of digital goods and intellectual property in society. Digitalization and the Internet allow handling knowledge in a way, which directly contrasts with the traditional understanding of "intellectual property" and the industries based on it. Starting from economic and legal basics, we compare proprietary and open/"free" models. Sustainable development as a concept is transferred to digital goods, taking into account the particular nature of digital stuff.

After the lecture, you should (hopefully) be able to:
- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- use an example, explain the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the free/open source software model to other digital goods (e.g., open content, open access)
Content

Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. «Digitization plus Internet» allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?»

The issue that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetics», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency provides to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge. Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)...

As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2020.ethz.ch.

More on teach.digisus.info starting from September. Stay tuned.

Lecture notes

Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

Literature

Content of the following books is covered (PDFs freely available online):

Other recommended books are:
1 (general) Chris DiBona et al., Open Sources. Voices from the Open Source Revolution, O'Reilly, 1999.

Prerequisites / notice

For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.

Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.

851-0588-00L Introduction to Game Theory. Models and Experimental Studies W 2 credits 2V A. Diekmann

Particularly suitable for students of D-MAVT, D-MATL

Abstract

This course introduces the foundations of game theory. It focuses on models of social interaction, conflict and cooperation, the emergence of cooperation and concepts of strategic decision-making behaviour. Examples, applications and the contrast between theory and empirical results are particularly emphasized.

Objective

Learn the fundamentals, models, and logic of thinking about game theory.

Apply game theory models to strategic interaction situations and critically assess game theory's capabilities through a wide array of experimental results.

Content

In der Vorlesung wird Wert darauf gelegt, Modelle an Beispielen zu demonstrieren und empirische Untersuchungen ("experimentelle Spieltheorie") vorzustellen.

Lecture notes

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 638 of 1571
Die folgenden Einführungen unterscheiden sich nach Anwendungen und Grad der Formalisierung. Zur Einführung kann man sich eines der folgenden Bücher ansehen, die ab Januar im Handapparat der D-GESS-Bibliothek stehen werden:

Weitere Literatur und Übungsaufgaben zum Download unter:
http://www.socio.ethz.ch/publications/spieltheorie

Um Missverständnisse zu vermeiden: Die Vorlesung ist für Hörer/innen und Hörer aller Departemente geeignet. (Nicht nur für D-MATL, D-MAVT)

Folgende Themen werden behandelt:

3. Der Beitrag der Sozialtheorie. Vorstellung und Diskussion ausgewählter Studien zu einzelnen Themenbereichen, z.B.: (1) Die Entstehung sozialer Kooperation, (2) Reputation und Märkte, (3) Soziale Netzwerke u.a.m.

Folien der Vorlesung und weitere Materialien (Fachartikel, Kopien aus Büchern) werden auf der Webseite der Vorlesung zum Download zur Verfügung gestellt. 

Interesse am Thema und Bereitschaft zum Mitdenken.
Upon completion of this course, the student should have acquired:

**Objective**

This series of lectures should enable students to comprehend architecture in its social context. It approaches the architectural profession from two different angles: macro-sociological and micro-sociological.

**Content**

Sociology I deals with the macro-sociological point of view, and investigates the relation between social developments and the production of the built environment. In the first part some central aspects of social change are examined in particular the transition from Fordism to Postfordism and from Modernism to Postmodernism, and the interlinked processes of globalization and regionalization. The second part deals with historical and present-day forms of urbanization. Among other aspects treated here are the changing significance of urban-rural contrasts, the processes of suburbanization and periurbanization, the formation of global cities and metropolitan regions, the growth of new urban configurations in centres (gentrification) and on urban peripheries (edge city, exopolis). In the third part these general processes are illustrated by typical models of urbanization.

**Literature**

**Abstract**

The course teaches multivariate statistical methods such as linear regression, analysis of variance, cluster analysis, factor analysis and logistic regression.

**Objective**

Upon completion of this course, the student should have acquired:

1. Knowledge on the foundations of several methods of multivariate data analysis, along with the conditions under which their use is appropriate
2. Skill in the estimation, specification and diagnostics of the various models
3. Hands-on experience with those methods through the use of appropriate software and actual data sets in the PC lab

**Content**

The course will begin with an introduction to multivariate methods such as analysis of variance and multiple linear regression, where a metric dependent variable is "explained" by two or more independent variables. Then two methods for structuring complex data, cluster analysis and factor analysis will be covered. In the last part, procedures for the analysis of relationships involving dichotomous or polytomous dependent variables (e.g., the choice of a mode of transportation) will be discussed.

**Literature**

Will be announced at the beginning of the course.

**Abstract**

This introductory class in the environmental social sciences covers topics such as environmental behavior, environmental concern, social dilemmas and social norms.

**Objective**

Basic knowledge of the environmental social sciences

**Content**

Overview on current fields of research and their relevance for practical application

**Literature**

**Abstract**

In this ethnographic field research we examine the question, how people are perceiving and creating their environment, and how an urban quality of life is forming. We investigate four neighborhoods in the Zurich Region: upper District 5, Zurich West, Seebach and Glattpark.

**Objective**

Upon completion of this course, the student should have acquired:

1. Knowledge on the foundations of several methods of multivariate data analysis, along with the conditions under which their use is appropriate
2. Skill in the estimation, specification and diagnostics of the various models
3. Hands-on experience with those methods through the use of appropriate software and actual data sets in the PC lab

**Content**

The course will begin with an introduction to multivariate methods such as analysis of variance and multiple linear regression, where a metric dependent variable is "explained" by two or more independent variables. Then two methods for structuring complex data, cluster analysis and factor analysis will be covered. In the last part, procedures for the analysis of relationships involving dichotomous or polytomous dependent variables (e.g., the choice of a mode of transportation) will be discussed.

**Literature**

**Abstract**

This elective course highlights the sociological perspective on architectural practice and provides an introduction to sociological research.

**Objective**

To familiarize themselves with the approaches and perceptions of various different participants.

**Content**

Urban ethnology concentrates on the urban space, on urban actors, on the cityscape and compares cities of different continents and cultures with each other. Urban ethnology investigates symbols and practices representing and participating in the normal course of city life. Urban ethnology understands urban space not only as built environment, but also as a lived cultural and social context. With ethnographic field research the perception of actors in local milieus is investigated. How do they move in the city area? How do they recognize houses, roads and places? How do they hear the city? The perception of local milieus, their obstinacy, creativity and their special way of life is considered significant for better understanding the city as central point of current social development. For ethnographic surveys of the built environment architects nowadays use a number of methods and techniques: participating in observation, interviews, photo and video site inspections in urban rooms, mindmapping etc.

Dr. Heinz Nigg ist Ethnologe und Kulturschaffender

**Abstract**

Cognitive neuroscience bridges two seemingly distinct but closely related disciplines. On one side, there is cognitive psychology and on the other side biology, or more specifically, neuroscience. In terms of research, this relatively young field aims to explain such diverse mental processes as thinking, perceiving, feeling, and reasoning by exploring their underlying biological or neural mechanis
Objective
This course explores selected topics of cognitive neuroscience. The course begins with a basic introduction to the field covering neural anatomy and brain physiology. Contemporary methods used in neuroscientific research (e.g., fMRI, EEG) will also be introduced and their benefits and limits critically reviewed. Using this knowledge, we will discuss some of the classic works in neuroscience in visual perception, memory and emotion. This will be accompanied by some famous cases of patients demonstrating problems in these domains (e.g., people with amnesia or anosognosia). Further topics will include the cognitive and neural processes involved in pain processing, the placebo effect, as well as spatial representation and navigation.

This course targets students at the Bachelor level with no previous experience. The main requirement for this course is an open and critical mind. By the end of the course, the student will be able to identify the major brain structures and to explain the basic functioning of neurons as well as some of the fundamental principles of how our brain works. Students should have an understanding of the methods used to generate the various findings reported in the literature and the media. The course aims to enable and encourage the students to critically evaluate these findings, and what can and cannot be answered with neuroscience techniques. For each of the topics, students should be able to identify the phenomenon, give examples, and discuss one or two of the main theories explaining it.

851-0597-01L Evolutionary Foundations of Social Behavior
Number of participants limited to 20.

Abstract
This lecture will deal with the manifestations of the "selfish gene" principle in human social behavior. Cooperation and competition, selfishness and altruism, gender relations and parent-child conflicts are issues, the evolutionary backgrounds of which will be discussed. Special attention will be paid to the costly signaling theory.

Objective
You will receive an in-depth overview of the application of Darwinian theory on behavioral phenomena. This will enable you to approach the heuristic perspective of the so-called adaptationism program of social phenomena. Finally, you will be able to discern the benefits and the problems of the evolutionary perspective within various scientific disciplines, especially anthropology, psychology, empirical social research and comparative cultural sciences.

<tr>
<td>Abstract</td>
<td>In the last 2500 years, the mind-brain relationship has been articulated in various ways. In these lectures, I will explore the scientific and philosophical aspects of this relationship in the context of relevant cultural, historical and technological processes, with a focus on the modern neurosciences, but I will also discuss works of art and literature. By the end of the lecture, students should be familiar with essential positions in the scientific and philosophical treatment of questions relating the mind to the brain. It should also become clear that some of the most relevant problems in current neurosciences have a long history. According to a myth, the ancient Greek philosopher Democrit dissected animals, because he was in search of the seat of the soul. Current neuroscientists use neuroimaging techniques like functional magnetic-resonance-tomography in order to localize cognitive and emotional qualities in the brain. Between these two dates lies a history of 2500 years, in which the relationship between the mind and the brain has been defined in various ways. Starting with ancient and medieval theories, the lecture will have its focus on modern theories from the nineteenth century onward. I will discuss essential issues in the history of the neurosciences such as localization theories, the neuron doctrine, reflex theory, theories of emotions, neuropsychometrics and the importance of visualizing the brain and its parts, but I will also include works of art and literature.</td>

</tr>
<tr>
<td>Abstract</td>
<td>This seminar is devoted to the introduction into the ideas and concepts of one of the most influential thinkers of the 20th century. We will read selected texts by Freud for getting an overview over his medical, psychological and cultural thinking. 30 years ago it would have been bizarre to ask the question: Who was Sigmund Freud? The influence of psychoanalysis on twentieth century thinking was taken for granted even by those ones who rejected Freud's ideas. In contrast, the question today would be: What are Freud's central theories? We will tackle this question in the seminar and reconstruct Freud's thinking from his early medical writings to those writings, in which he developed a critical view of his time. The aim of the seminar is not only to understand Freud's thinking in historical context, but also to reflect, what it could mean to us in early twentieth century.</td>

</tr>
<tr>
<td>Abstract</td>
<td>Number of participants limited to 40. Being creative may appear to be the most important requirement of the present age: creative thinking, start-ups, project development all seem to promise an ongoing innovation of work and life. Instead of repeating that promise once again, this course asks for the historical conditions of discourses of creativity. We will deal with historical and contemporary theories of inventive imagination, fantasy, and creativity. Looking at artistic, psychological, pedagogical, economic, and entrepreneurial discourses of creativity from the 18th to the 21st century we will discuss their specific contexts in order to uncover historical differences and changes. Is it indeed possible to identify conjunctions between the economicization, scientification and normalization of creativity? Are there any alternatives to the reigning paradigm of creativity? And if so, what are those?</td>

<td>Abstract</td>
<td>This seminar deals with the past, present, and imaginary futures of scientific publishing. We shall discuss the origins and trajectories of specific formats, conventions, and genres as well as examine exemplary historical developments as regards scientific publishing and associated cultures of science. The technological upheavals brought by the &quot;digital age&quot; have put the subject of scientific publishing on the map (again). Open access, copyright, or print-on-demand are just a few of the buzzwords that have defined controversies in recent years. The aim of this seminar is assist students in developing critical perspectives on these contemporary debates - by learning about the history of scientific publishing, including the role of specific publishers and journals, the footnote, or the malleable nature of authorship.</td>

Data: 06.09.2021 13:00 Autumn Semester 2016  Page 641 of 1571
Die Veranstaltung ist ausgebucht

Abstract
The course is designed to provide an overview of the astronomical developments from the ancient Greek world to the 16th century. We are going to use primary sources tackling historical, technical and philosophical questions. Special attention will be paid to the dramatic change in the way people understood the structure of the heavens and the nature of the physical world.

Objective
The course aims at providing a working knowledge of astronomy and cosmology from the ancient world to the 16th century. Upon its completion the students will be able to describe how our knowledge of the heavens changed from Aristotle’s system to the Copernican Revolution. In addition, they will also have acquired an appreciation of the debates about man’s place in the cosmos and the philosophical principles underpinning cosmology.

851-0157-70L The Mathematics of Scientific Racism W 2 credits 1S A. Teicher

Abstract
How did racial scientists determine racial affiliation? In the seminar we will examine the practical challenges and eventual works of physical anthropologists from 1850 to the present. By scrutinizing the scientific toolbox of racial scientists, we will reveal how national affiliation, anti-Semitic perceptions and Gender identity shaped scholars’ choices of graphical and computational methods.

Objective
The aim of the course is to analyze the mutual relations between scientific theories and social perceptions, and to follow the formation of the "scientific mind". The course focuses on racial scientists and on the way their practices of computation and statistical analysis influenced their world-views - and vice versa. The students will be instructed on the way historians of science analyze scientific sources. They will gain a better understanding of the complexities of disciplinary dynamics, social biases and institutional pressures shaping scientific ideas, and learn on the influences such scientific ideas may have on the society as a whole.

Prerequisites / notice
Please note that the seminar will be held in English and most texts will be in English. However, a small portion of the reading material will be in German.

701-0771-00L Environmental Consciousness and Public Relations W 2 credits 2G R. Locher

Number of participants limited to 60.

Sign in until 29.09.2016.

Please describe your expectations. Why do you want to attend this special topic? Do you have any pre-information about the integral model? Do you have any practical experience in environmental communication?

Abstract
"Environmental Consciousness and Public Relations" shows how to communicate about environment and sustainability successfully. We look at campaigns, exhibitions and other public relations measures to learn, how to design and realize good communication.

Objective
You learn how to handle tools and concepts in environmental communication. And you can evaluate communication projects. We also discuss the evolution of consciousness.

Content
- Methods and tools in environmental communication.
- Marketing mix
- Examples of campaigns, events, print products, media relations.
- Integral sustainability

Lecture notes
Handouts

Literature
- Integral Vision; Ken Wilber, 2005

Prerequisites / notice
We will discuss new trends in environmental communication with the focus on integral solutions.

851-0158-07L Worldviews in Conflict W 3 credits 2V W. A. Stahel, H. von Sass, C. aus der Au Heymann

Abstract
Worldviews guide our thoughts and our actions even though we may not be aware of it. They often are realized only when they are confronted with each other. By means of lectures, discussions and contributions of participants, we will examine those worldviews as to the underlying philosophical concepts and their relations to the sciences, philosophy and religion.

Objective
Students of all disciplines shall obtain a basis for their own exploration of worldviews. Prior knowledge of philosophical concepts and history is not required.

Type B: Reflection About Subject-Specific Methods and Contents

Subject-specific courses: Recommended for doctoral, master and bachelor students (after first-year examination only).

Students who already took a course within their main study program are NOT allowed to take the course again.

These course units are also listed under "Type A", which basically means all students can enroll.

D-ARCH

Number of the Course: 851-0724-00L

Title: Property Law for Geometers: Land Registry and Geoinformation Law

Type: B

ECTS: 2

Hours: 2V

Lecturers: M. Huser

Abstract
Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

Objective
Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

Content
Overview of the legal norms of land registry and surveying law.

Lecture notes
Abgegebene Unterlagen: Skript in digitaler Form

Requirements: Property Law (12-722)
851-0705-02L Environmental Law: Topics and Case Studies

**W** 2 credits 2S C. Jäger

**Number of participants limited to 20.**

**Prerequisites:** Environmental Law: Conceptions and Fields (851-0705-01L) offered in spring semester.

**Abstract**

This workshop offers to the students the opportunity to intensify their environmental legal knowledge on the basis of individual topics or cases of their respective programme or professional interest in a guided self-study. They develop a better understanding for the practical application of legal regulations on environmental matters.

**Objective**

The aim of this workshop is to equip students with legal skills and methods to solve or treat problems and questions of the environmental law and foster the understanding on the possibilities and limits of legal problem-solving. The students choose an inquiry with practical relevance. To this end they work out the legal basis demonstrating a legal correct solution or approach to a solution. In doing so, students will get to know legal methods and research possibilities.

**Content**

At the beginning of the workshop the students are introduced to the legal methods and sources as well as in the aim and the process of the workshop. The participants will organize themselves in a team of two persons giving themselves an inquiry on topics of the environmental law. It is also possible to choose questions at the interfaces of e.g. urban law, energy law, transport law. A proposal, which will be presented to the lecturer, as well as an optional Q&A-session in class will facilitate the start. Next the working on topics will follow by self-study. The results will be presented in form of a memo/paper with a maximum of ten pages (excluding graphs and tables). At the end of the workshop, a presentation of ten minutes will be made to the plenum including a question-and-answer session. Class language will be German.

**Lecture notes**

Den Studierenden werden Unterlagen zur juristischen Methoden- und Quellenlehre sowie zum Inhalt und Ablauf des Kurses zu Beginn der Veranstaltung kostenlos abgegeben.

**Literature**

Rechtsgrundlagen, Literatur und Gerichtsentscheide werden themenspezifisch selber recherchiert, unter Mithilfe und Beratung des Dozenten.

**Prerequisites / notice**

Die Veranstaltung erfordert die Bereitschaft, sich aktiv und selbständig mit einer selbstgewählten Fragestellung oder einem eigenen Fallbeispiel aus dem Gebiet des Umweltrechts und allenfalls aus Schnittstellengebieten auszumerzen. Damit die Interaktivität und die Begleitung der Teams gewährleistet werden kann, ist die Teilnehmerzahl auf maximal 16 Personen beschränkt. Es handelt sich um eine Vertiefungsveranstaltung. Der Besuch der Vorlesung "Umweltrecht: Konzepte und Rechtsgebiete" (851-0705-01) ist Voraussetzung.

---

851-0707-00L Space Planning Law and Environment

**W** 2 credits 2S O. Bucher

**Abstract**

System of swiss planning law, Constitutional and statutory provisions, Space planning and fundamental rights, Instruments, Application, legal protection, enforcement, Practical training.

**Objective**

Basic understanding of nature and function of space planning from a legal point of view. Basic knowledge of space planning instruments, relationship between space planning and constitutional law (especially property rights), solving of practical cases.

**Content**

**Lecture notes**

Haller, Walter/Karlen, Peter, Raumplanung-, Bau- und Umweltrecht, 3.A., Zürich 1999

---

851-0252-01L Human-Computer Interaction: Cognition and Usability

**W** 3 credits 2S I. Barisic, C. Hölscher, S. Ognjanovic

**Number of participants limited to 30.**

**Abstract**

This seminar introduces theory and methods in human-computer interaction and usability. Cognitive Science provides a theoretical framework for designing user interfaces as well as a range of methods for assessing usability (user testing, cognitive walkthrough, GOMS). The seminar will provide an opportunity to experience some of the methods in applied group projects.

**Objective**

This seminar will introduce key topics, theories and methodology in human-computer interaction (HCI) and usability. Presentations will cover basics of human-computer interaction and selected topics like mobile interaction, adaptive systems, human error and attention. A focus of the seminar will be on getting to know evaluation techniques in HCI. Students form work groups that first familiarize themselves with a select usability evaluation method (e.g. user testing, GOMS, task analysis, heuristic evaluation, questionnaires or Cognitive Walkthrough). They will then apply the methods to a human-computer interaction setting (e.g. an existing software or hardware interface) and present the method as well as their procedure and results to the plenary. Active participation is vital for the success of the seminar, and students are expected to contribute to presentations of foundational themes, methods and results of their chosen group project. In order to obtain course credit a written essay / report will be required (details to be specified in the introductory session of the course).

---

851-0252-03L Cognition in Architecture - Designing Orientation and Navigation for Building Users

**W** 3 credits 2S V. Schinazi, B. Emo Nax, C. Hölscher

**Number of participants limited to 40.**

**Abstract**

How can behavioral and cognitive science inform architecture? This project-oriented seminar investigates contributions of cognitive science to architectural design with an emphasis on orientation and navigation in complex buildings and urban settings. It includes theories on spatial memory and decision-making as well as hands-on observations of behavior in real and virtual reality.

**Objective**

Taking the perspectives of building users (occupants and visitors) is vital for a human-centered design approach. Students will learn about relevant theory and methods in cognitive science and environmental psychology that can be used to understand human behavior in built environments. The foundations of environmental psychology and human spatial cognition will be introduced. A focus of the seminar will be on how people perceive their surroundings, how they orient in a building, how they memorize the environment and how they find their way from A to B. Students will also learn about a range of methods including real-world experiments, virtual reality environments, eye-tracking and behavior simulation for design. Students will reflect on the roles of designers and other stakeholders with respect to human-centered design and an evidence-based design perspective. The seminar is geared towards a mix of students from architecture / planning, engineering, computer science and behavioral science as well as anybody interested in the relation between design and cognition. Architecture students can obtain course credit in "Vertiefungsfach" or "Wahlfach"
851-0551-03L  Postal Knowledge and the History of Digital Societies   W  3 credits  2S  D. F. Zetti

Abstract
In the second half of the 20th century, postal services have dramatically changed. Communication today is computerbased. The lecture offers problem oriented insights into this sociotechnical process of translation.

Objective
Students become familiar with the mutual interdependence of social and technological change that characterises the history of computing and communication.

Content

851-0125-58L  Philosophy of the Environmental Sciences: An Introduction   An  3 credits  2S  A. Schwarz

Abstract
Environmental knowledge and management is quite common in different research fields and in everyday practice. We will be identifying those concepts, objects and methods that mainly construe what might be called the core of the environmental sciences. This will be done by using different philosophical tools and approaches.

Objective
The environmental sciences cover a wide range of scientific practices and objects and accordingly afford different kinds of scientific knowledge. Additionally, there is an important interplay between the scientific and the societal sphere. In this seminar we will examine likewise central and widespread concepts such as sustainable development or resilience by using philosophical tools that will allow to probe the different uses of those concepts, their semantic range in terms of historical depth and semiotic fields and finally their logical coherence. Another important topic is the philosophical investigation of methods and objects that can be identified in the environmental sciences. Those methods are for instance Life Cycle Assessment or Adaptive Ecosystem Management, technological objects may be a wind engine or a hydropower plant. The latter raise questions of how renewable energies can be assessed and valued, including the more general issue of how values and norms can be embedded in technological objects. This leads us to the third and last complex of topics that focus on current deliberations about possible new ways of existence in the age of the Anthropocene and as a consequence the formation of adequate life styles in our societies. This refers to issues in philosophical and social anthropology and the challenge of climate change.

Number  Title  Type  ECTS  Hours  Lecturers
851-0738-01L  The Role of Intellectual Property in Daily Routine: A Practical Introduction   A  2 credits  2V  C. Soltmann

Abstract
The lecture gives an overview of the fundamental aspects of intellectual property, which plays an important role in the daily routine of engineers. The lecture aims to make participants aware of the various methods of protection and to put them in a position to use this knowledge in the workplace.

Objective
In recent years, knowledge about intellectual property has become increasingly important for engineers. Both in production and distribution and in research and development, engineers are increasingly being confronted with questions concerning the patenting of technical inventions and the use of patent information.

The lecture will acquaint students with practical aspects of intellectual property and enable them to use the acquired knowledge in their future professional life.

Topics covered during the lecture will include:
- The importance of innovation in industrialised countries
- An overview of the different forms of intellectual property
- The protection of technical inventions and how to safeguard their commercialisation
- Patents as a source of technical and business information
- Practical aspects of intellectual property in day-to-day research, at the workplace and for the formation of start-ups.

Case studies will illustrate and deepen the topics addressed during the lecture.

Prerequisites / notice
The lecture is in particular tailored to the needs of the following degree programs: Agricultural science, architecture, civil engineering, computational science and engineering, computer science, electrical engineering and information technology, environmental engineering, geomatic engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics.

For students of chemistry-related degree programs, the lecture ‘Protecting inventions in chemistry’ (851-0738-03) will be offered in the autumn semester.

851-0724-00L  Property Law for Geometers: Land Registry and Geoinformation Law

Abstract
Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

Objective
Overview of the legal norms of land registry and surveying law.

Content
Basic principles of formal and formal land registry law, components of the land register, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of the geo-m-eter. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.

</table>
In the second half of the 20th century, postal services have dramatically changed. Communication today is computer-based. The lecture offers problem-oriented insights into this sociotechnical process of translation.

Objective

Students become familiar with the mutual interdependence of social and technological change that characterises the history of computing and communication.

Content

Number of participants limited to 20.

Abstract
This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference and policy evaluation. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with the statistical Software Stata.

Objective
Students
- have a sound understanding of linear and logit regression
- know strategies to test causal hypotheses using regression analysis and/or experimental methods
- are able to formulate and implement a regression model for a particular policy question and a particular type of data
- are able to critically interpret results of applied statistics, in particular, regarding causal inference
- are able to critically read and assess published studies on policy evaluation
- are able to use the statistical software STATA for data Analysis

Content
The topics covered in the first part of the course are a revision of basic statistics and linear and logit regression analysis. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, and randomized controlled trials mostly used for policy evaluation. The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of 30%. Students are assisted in solving the assignments during the exercises session.

Abstract
This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective
The main goal of this course is to enhance the student's ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 Rs (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access;
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

851-0144-19L Philosophy of Time

Does not take place this semester.
Particularly suitable for students of D-BIOL, D-INFK, D-MATH, D-PHYS

Abstract
This course provides an introduction to philosophical issues surrounding the concept of time. We will treat topics such as: the existence of past, present, and future; the possibility of time travel; the constitution of time consciousness and its possible neurophysiological counterparts; temporal biases in the conduct of our lives; responsibility to future and past generations.
Objective
By the end of the course students are able to describe and compare different theories and concepts of time (physical time, perceptual time, historical time ...). They are able to identify and examine issues concerning time as they occur in various philosophical subdisciplines - especially in philosophy of science, philosophy of mind, metaphysics, and ethics. Students are in a position to critically discuss and evaluate the repercussions of these issues in broader scientific and social contexts.
Part of the course reflects on methods and contents from physics, neuroscience/cognitive science, and logic.

851-0101-53L
Collections in Context: What Do Historians and Scientists Learn from Butterflies, Stones, and Bones?

Abstract
Zurich holds huge scientific collections. They contain objects from around the world, some of them dating back to the 18th century. This interdisciplinary seminar combines perspectives from the history of science and from current scientific disciplines. What do these objects tell us about Zurich's place in the global history of science? What potentials do old collections hold for scientists today?

Objective
The aim of this seminar is threefold: Firstly, students will become familiarised with historiographical approaches to scientific collections. Among them are constructivist approaches that seek to understand scientific knowledge not primarily as a system of objective truths, but rather as an outcome of human 'constructions'. Other approaches deal with the problem of how scientific objects are related to systems of power and oppression, namely in the case of objects collected during the time of European colonialism overseas. Secondly, students will become familiarized with how old collections can yield new insights for current scientists working, e.g., on questions of ecology. Thirdly, the seminar shall serve as a platform to discuss ways of dialogue and possible collaboration between these different approaches.

Students will be expected to read theoretical texts and case studies during semester, participate in discussions with external experts (historians, curators, and scientists), and to write a summarizing essay at the end of the term.

<tr>
<td>Abstract</td>
<td>Environmental knowledge and management is quite common in different research fields and in everyday practice. We will be identifying those concepts, objects and methods that mainly construe what might be called the core of the environmental sciences. This will be done by using different philosophical tools and approaches.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Objective</td>
<td>The environmental sciences cover a wide range of scientific practices and objects and accordingly afford different kinds of scientific knowledge. Additionally, there is an important interplay between the scientific and the societal sphere. In this seminar we will examine likewise central and widespread concepts such as sustainable development or resilience by using philosophical tools that will allow to probe the different uses of those concepts, their semantic range in terms of historical depth and semantic fields and finally their logical coherence. Another important topic is the philosophical investigation of methods and objects that can be identified in the environmental sciences. Those methods are for instance Life Cycle Assessment or Adaptive Ecosystem Management, technological objects may be a wind engine or a hydropower plant. The latter raise questions of how renewable energies can be assessed and valued, including the more general issue of how values and norms can be embedded in technological objects. This leads us to the third and last complex of topics that focus on current deliberations about possible new ways of existence in the age of the Anthropocene and as a consequence the formation of adequate life styles in our societies. This refers to issues in philosophical and social anthropology and the challenge of climate change.</td>

<td>Abstract</td>
<td>The lecture gives students of chemistry-related degree programs an overview of the options to protect inventions and the underlying research efforts. The lecture aims to put the participants in a position to use this know-how in the workplace.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Objective

Research and development play an important role in chemistry-related technology sectors such as inorganic and organic chemistry or pharmacy.

Investments in the development of new substances and active components in these sectors are traditionally secured by patents because publicly known inventions, generally chemical substances, may easily be reproduced by others.

In the last years, the know-how about intellectual property has become increasingly important for chemists and engineers. Both in the production process and in the distribution sector, chemists and engineers are increasingly being confronted with questions concerning the patenting of technical inventions and the use of patent information. As more than three-quarters of all publicly available technical information are available only in patents, it is more and more important for researchers and engineers to be capable of extracting relevant information from the flood of patents.

Patents are not only a powerful measure to protect investments and inventions in chemistry-related sectors but also an important source of information about competitors and potential cooperation partners and about the development of markets. Accordingly, the know-how about patents and patent information has become a key qualification on the strategic level in companies and in the research sector.

The seminar is customised to the needs of chemists and students of related degree programs. Participants will become familiar with practice-oriented aspects of intellectual property and will be enabled to use the acquired knowledge in their future professional life.

Topics covered during the lecture will include:
- The importance of innovation in industrialised countries
- An overview of the different forms of intellectual property
- The protection of technical inventions and how to safeguard their commercialisation
- Patents as a source of technical and business information
- Practical aspects of intellectual property in day-to-day research, at the workplace and for the formation of start-ups
- Special aspects of protecting inventions in chemistry-related sectors, e.g. polymorphs and inventions in the field of nanotechnology.

Case studies will illustrate and deepen the topics addressed during the lecture.

The seminar will comprise practical exercises on how to use and search patent information. Basic knowledge of how to read and evaluate patent documents as well as how to use publicly available patent databases to obtain the required patent information will also be provided.

Prerequisites / notice

The lecture is coordinated in particular to the needs of the following degree programs: Agricultural science, biotechnology, chemical engineering, chemistry, food science, pharmaceutical sciences.

For engineering and physics students, the lecture 'The Role of Intellectual Property in daily routine: A Practical Introduction' (851-0738-01) will be offered in the autumn semester.

851-0180-00L Research Ethics  W  2 credits  2G  G. Achermann
Particularly suitable for students of D-BIOL, D-CHAB, D-HEST

Abstract

This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective

The main goal of this course is to enhance the student's ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is “integrity” in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 R's (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks;
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access;
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- “Introduction to the Responsible Conduct of Research” (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.

Science, Technology, and Policy MSc and MAS in Development and Cooperation have priority.
The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with the statistical Software Stata.

Objective
- have a sound understanding of linear and logit regression
- know strategies to test causal hypotheses using regression analysis and/or experimental methods
- are able to formulate and implement a regression model for a particular policy question and a particular type of data
- are able to critically interpret results of applied statistics, in particular, regarding causal inference
- are able to critically read and assess published studies on policy evaluation
- are able to use the statistical software STATA for data Analysis

Content
The topics covered in the first part of the course are a revision of basic statistics and linear and logit regression analysis. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, and randomized controlled trials mostly used for policy evaluation. The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of 30%. Students are assisted in solving the assignments during the exercises session.

851-0144-20L Philosophical Aspects of Quantum Physics
   Particularly suitable for students of D-CHAB, D-PHYS
   W 3 credits 2S
   N. Sieroika, R. Renner

Abstract
This course provides an introduction to philosophical issues surrounding quantum physics. In particular, we will examine different interpretations of quantum mechanics (such as the many-world interpretation) and the transition between the quantum and the classical physical realm (here phenomena such as decoherence will be highlighted).

Objective
By the end of the course students are able to describe and compare different interpretations of quantum mechanics. They are able to identify and examine issues concerning these different interpretations and issues concerning the transition between quantum and classical descriptions in physics. Students are in a position to critically discuss and evaluate the repercussions of these issues in broader scientific contexts.

851-0125-58L Philosophy of the Environmental Sciences: An Introduction
   Particularly suitable for students of D-ARCH, D-BSE, D-CHAB, D-MTEC, D-USYS
   W 3 credits 2S
   A. Schwarz

Abstract
Environmental knowledge and management is quite common in different research fields and in everyday practice. We will be identifying those concepts, objects and methods that mainly constrain what might be called the core of the environmental sciences. This will be done by using different philosophical tools and approaches.

Objective
The environmental sciences cover a wide range of scientific practices and objects and accordingly afford different kinds of scientific knowledge. Additionally, there is an important interplay between the scientific and the societal sphere. In this seminar we will examine these central and widespread concepts such as sustainable development or resilience by using philosophical tools that will allow to probe the different uses of those concepts, their semantic range in terms of historical depth and semantic fields and finally their logical coherence. Another important topic is the philosophical investigation of methods and objects that can be identified in the environmental sciences. Those methods are for instance Life Cycle Assessment or Adaptive Ecosystem Management, technological objects may be a wind engine or a hydropower plant. The latter raise questions of how renewable energies can be assessed and valued, including the more general issue of how values and norms can be embedded in technological objects. This leads us to the third and last complex of topics that focus on current deliberations about possible new ways of existence in the age of the Anthropocene and as a consequence the formation of adequate life styles in our societies. This refers to issues in philosophical and social anthropology and the challenge of climate change.

851-0125-51L Man and Machine
   Does not take place this semester.
   Particularly suitable for students of D-CHAB, D-HEST, D-MAVT, D-MATL
   W 3 credits 2G
   M. Hampe

Abstract
The lecture gives an overview about the different Man-Machine-Relations since the 16th century. Different models of machines will be important here: the clockwork, the steam engine and the computer.

Objective
The lecture covers the different uses of those concepts, their semantic range in terms of historical depth and semantic fields and finally their logical coherence. Another important topic is the philosophical investigation of methods and objects that can be identified in the environmental sciences. Those methods are for instance Life Cycle Assessment or Adaptive Ecosystem Management, technological objects may be a wind engine or a hydropower plant. The latter raise questions of how renewable energies can be assessed and valued, including the more general issue of how values and norms can be embedded in technological objects. This leads us to the third and last complex of topics that focus on current deliberations about possible new ways of existence in the age of the Anthropocene and as a consequence the formation of adequate life styles in our societies. D-ERDW

Number Title Type ECTS Hours Lecturers
851-0157-69L History of Astronomy
   Particularly suitable for students of D-ERDW, D-MATH, D-PHYS
   Wintersemester ist ausgebucht
   W 3 credits 2S
   S. Mastorakou

Abstract
The course is designed to provide an overview of the astronomical developments from the ancient Greek world to the 16th century. We are going to use primary sources tackling historical, technical and philosophical questions. Special attention will be paid to the dramatic change in the way people understood the structure of the heavens and the nature of the physical world.

Objective
The course aims at providing a working knowledge of astronomy and cosmology from the ancient world to the 16th century. Upon completion the students will be able to describe how our knowledge of the heavens changed from Aristotle's system to the Copernican Revolution. In addition, they will also have acquired an appreciation of the debates about man's place in the cosmos and the philosophical principles underpinning cosmology.

701-0703-00L Environmental Ethics
   W 2 credits 2V
   M. Huppenbauer

Abstract
The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

Objective
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and argumentations to be found within the field of environmental ethics and will have practised these in small case studies.

Content
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)
Lecture notes

Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.
In the part of the course serving as an introduction to general and applied ethics, we shall be using the following textbook: Barbara Bleisch/Markus Huppenbauer: Ethische Entscheidungsfundung. Ein Handbuch für die Praxis, 2nd Edition Zürich 2014

Literature

- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003
- John O’Neill et al., Environmental Values, 2008
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008

General introductions:

- Marcus Düwell et. al (Hrg.), Handbuch Ethik, 2. Auflage, Stuttgart (Metzler Verlag), 2006
- Johann S. Ach et. al (Hrg.), Grundkurs Ethik 1. Grundlagen, Paderborn (mentis) 2008

Prerequisites / notice

I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

Abstract

This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference and policy evaluation. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with the statistical Software Stata.

Objective

Students

- have a sound understanding of linear and logit regression
- know strategies to test causal hypotheses using regression analysis and/or experimental methods
- are able to formulate and implement a regression model for a particular policy question and a particular type of data
- are able to critically interpret results of applied statistics, in particular, regarding causal inference
- are able to critically read and assess published studies on policy evaluation
- are able to use the statistical software STATA for data Analysis

Content

The topics covered in the first part of the course are a revision of basic statistics and linear and logit regression analysis. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, and randomized controlled trials mostly used for policy evaluation. The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs.

Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of 30%. Students are assisted in solving the assignments during the exercises session.

D-HEST

851-0125-51L Man and Machine

Abstract

The lecture gives an overview about the different Man-Machine-Relations since the 16th century. Different models of machines will be important here: the clockwork, the steam engine and the computer.

Objective

On the one hand models of machines had a heuristical value in research on man, e.g. in Harvey's discovery of blood circulation in the 17th century or in brain research in the 20th century. On the other hand these models were always criticized, sometimes polemically, because they are supposedly not adequate for man.

Students should learn about the connections between the history of anthropology and technology and be able at the end of the course to evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

851-0180-00L Research Ethics

Abstract

This course has its focus on the responsible conduct of research (RCR) and the ethical dimensions of the biological and biomedical sciences.

Objective

The main goal of this course is to enhance the student's ability to:
- recognize and identify ethical issues and conflicts,
- analyze and develop well-reasoned responses to the kinds of ethical problems a scientist is likely to encounter.

Additionally, students will become familiar with regulations and ethical guidelines relevant for their research field on the international, governmental, institutional and professional level.

To achieve these objectives, teaching methods will include lectures, discussions, case study work (alone and in groups), moral games, paper work and exercises.
I. Ethics & the Process of Ethical Inquiry

Introduction in Ethics and Research Ethics
- What is ethics? What ethics is not...;
- Awareness: what constitutes an ethical question? Distinguishing ethical questions from other kinds of questions; Science & ethics: a comparison;
- The ethics movement in the biological and health sciences;
- What is research ethics and why is it important?
- Values (personal, cultural & ethical) in science & principles for ethical conduct in research;
- Professional codes of conduct: functions and limitations

Ethical approaches in the conduct of research (Normative Ethics)
- Overview over important theories for research ethics: virtue theories, duty-based theories (rights theory, categorical imperative, prima facie duties), consequentialist theories, other theories);
- The plurality of ethical theories and its consequences;
- The concept of dignity

Moral reasoning I: Arguments
- Why arguments? What is a good argument? The structure of (moral) arguments;
- Deductive and inductive arguments; Validity and soundness;
- Assessing moral arguments

Moral reasoning II: Decision-making
- How (not) to approach ethical issues...; Is there a correct method for answering moral questions?
- Models of method in Applied Ethics: a) Top-down approaches; b) the reflective equilibrium; c) a bottom-up approach: casuistry (or reasoning-by-analogy);
- Is there a right answer?

II. Research Ethics / Responsible Conduct of Research (RCR)

Integrity in Research & Research Misconduct
- What is "integrity" in scientific research? What is research misconduct (falsification, fabrication, plagiarism - FFP) and questionable research practices (QRP)?
- Factors leading to misconduct; Procedure for responding to allegations of research misconduct;
- The confidant of ETH Zurich

Data Management
- Data collection and recordkeeping; Analysis and selection of data;
- Ownership of data; retention and sharing of data;
- Falsification and fabrication of data

Research involving animals
- The moral status of animals; Ethical approaches to animal experimentation: Animal welfare (Peter Singer) and Animal rights (Tom Regan);
- The 3 Rs (replacement, reduction, refinement);
- Ethical assessment of conflicting issues in animal experimentation;
- The dignity of animals in the Swiss constitution;

Research involving human subjects
- History & guidelines (Nuremberg Code; Declaration of Helsinki; Belmont Report; International Ethical Guidelines for Biomedical Research Involving Human Subjects (CIOMS Guidelines); Convention on Human Rights and Biomedicine (Oviedo Convention);
- Informed consent; confidentiality and anonymity; research risks and benefits; vulnerable subjects;
- Clinical trials;
- Biobanks;
- Ethics Committees / Institutional Review Boards (IRB)

Authorship & Peer review
- Criteria for authorship;
- Plagiarism;
- Challenges to openness and freedom in scientific publication;
- Open access
- Peer review

Social responsibility
- What is social responsibility? Social responsibility: whose obligation?
- Public advocacy by researchers

Lecture notes
Course material (handouts, case studies, exercises, surveys and papers) will be available during the lectures and on the course homepage.

Literature
Recommended literature:
- "Introduction to the Responsible Conduct of Research" (http://ori.dhhs.gov/education/products/RCRintro/)

Detailed literature lists for the different topics of the course will be provided in the script/handout or on the course work space.
This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference. Students will be able to use the statistical software STATA for data analysis and to critically read and assess published studies on policy evaluation.

Abstract
Health expenditures constitute about 10% of GDP in OECD countries. Extensive government intervention is a typical feature in health markets. Risk factors to health have been changing with growing importance of lifestyle factors such as smoking, obesity and lack of physical activity. This course gives an introduction to the economic concepts and empirical findings in health economics.

Objective
Introduce students without prior economics background to the main concepts of health economics and policy to enhance students understanding of how health care institutions and markets function. The courses are suitable for students with a select usability evaluation method (e.g. user testing, GOMS, task analysis, heuristic evaluation, questionnaires or Cognitive Walkthrough).

Content
The course gives an introduction to the economic concepts and empirical findings in health economics to enhance students understanding of how health care institutions and markets function. First, the three important decisions made by individuals will be analyzed: What determines the health behaviors, like the intensity of preventive measures like sport, that an individual undertakes? What types and amount of personal health care services does an individual demand? How much health insurance coverage will be purchased? In a second part, the major participants on the supply side of health care markets - physicians, hospitals, nurses and pharmaceutical manufacturers - will be discussed. E.g., how important are financial incentives in the choice of medicine as a career, specialty choice and practice location? What does it mean and imply that a physician is an agent for a patient? How do pharmaceutical firms decide on investments in new products and how can public policy encourage pharmaceutical innovation?

Lecture notes

Es wird mit Folien gearbeitet, die als PDF über die elektronische Dokumentenablage (ILIAS) auf dem System der ETHZ vorgängig abrufbar sind. Auf dem Termin- und Themenplan (ebenfalls online abrufbar) sind Links zu Gesetzestexten und weiteren Unterlagen abrufbar. Schliesslich wird jede Vorlesung auch als Podcast aufgezeichnet, der jedoch nur für die Studierenden mit einem Passwort (erhältlich beim Dozenten) zugänglich sind.

Literature

Ferner will Ursula Widmer eine Vorlesung zum Thema Informationssicherheit an, welche die rechtlichen Aspekte der Sicherheit von ICT-Infrastrukturen und Netzen und der transportierten und verarbeiteten Informationen.

Prerequisites / notice

Die Semestereprüfung ist in Form eines schriftlichen Kurztests (normalerweise MC) in voraussichtlich der letzten Doppelstunde geplant. Es wird angegeben, welche Unterlagen beim jeweiligen Thema den Prüfungsstoff definieren. Der Test wird möglicherweise elektronisch durchgeführt.

Lecture notes

851-0591-00L Digital Sustainability in the Knowledge Society

Particularly suitable for students of D-INFK, D-ITET, D-MATEL, D-MAVT, D-MTEC, D-USYS.

Abstract

How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on strong intellectual property rights are contrasted with open models like, e.g. Open Source/Content/Access. The course discusses consequences from different models and introduces «digital sustainability» as an alternative vision for society.

Objective

At the heart of the discourse is the handling of digital goods and intellectual property in society. Digitization and the Internet allow handling knowledge in a way, which directly contrasts with the traditional understanding of "intellectual property" and the industries based on it. Starting from economic and legal basics, we compare proprietary and open/free models. Sustainable development as a concept is transferred to digital goods, taking into account the particular nature of digital stuff.

After the lecture, you should (hopefully) be able to
- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- using an example, explain the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the free/open source software model to other digital goods (e.g., open content, open access)

Content

Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. «Digitization plus Internet» allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what’s the problem?» The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of "intellectual property", which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetic», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can dictate technical rules, which can take away or restrict the user’s freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible infrastrukture and Netzen und der transportierten und verarbeiteten Informationen.

Lecture notes

Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 656 of 1571
Content: The following books are covered (PDFs freely available online):

Other recommended books are:
1 (general) Chris DiBona et al., Open Sources. Voices from the Open Source Revolution, O'Reilly, 1999.

Prerequisites / notice: For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.

Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the lecture.

851-0585-04L Lecture with Computer Exercises: Modelling and Simulating Social Systems with MATLAB
Number of participants limited to 70.

Content: This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

Lecture notes: The lecture slides will be presented on the course web page after each lecture.

Literature:

Prerequisites / notice: The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

851-0549-00L WebClass Introductory Course History of Technology
Number of participants limited to 100.

Content: WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

Abstract: Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get to know basic theories and practices of the field.

Literature:
[1] N. Sieroka, History of Time, 2S

Prerequisites / notice: Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

851-0551-03L Postal Knowledge and the History of Digital Societies
Number of participants limited to 70.

Abstract: In the second half of the 20th century, postal services have dramatically changed. Communication today is computerbased. The lecture offers problem oriented insights into this sociotechnical process of translation.

Objective: Students become familiar with the mutual interdependence of social and technological change that characterises the history of computing and communication.

851-0144-19L Philosophy of Time
Does not take place this semester.

Content: This course provides an introduction to philosophical issues surrounding the concept of time. We will treat topics such as: the existence of past, present, and future; the possibility of time travel; the constitution of time consciousness and its possible neurophysiological counterparts; temporal biases in the conduct of our lives; responsibility to future and past generations.

Prerequisites / notice: Particularly suitable for students of D-ARCH, D-BAUG, D-HEST, D-INFK, D-ITET, D-MATL, D-MAVT, D-MTEC, D-PHYS.

Literature:

Other recommended books are:
1 (general) Chris DiBona et al., Open Sources. Voices from the Open Source Revolution, O'Reilly, 1999.

Prerequisites / notice: The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

851-0549-00L WebClass Introductory Course History of Technology
Number of participants limited to 100.

Content: WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

Abstract: Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get to know basic theories and practices of the field.

Literature:
[1] N. Sieroka, History of Time, 2S

Prerequisites / notice: Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

851-0551-03L Postal Knowledge and the History of Digital Societies
Number of participants limited to 70.

Abstract: In the second half of the 20th century, postal services have dramatically changed. Communication today is computerbased. The lecture offers problem oriented insights into this sociotechnical process of translation.

Objective: Students become familiar with the mutual interdependence of social and technological change that characterises the history of computing and communication.

851-0144-19L Philosophy of Time
Does not take place this semester.

Content: This course provides an introduction to philosophical issues surrounding the concept of time. We will treat topics such as: the existence of past, present, and future; the possibility of time travel; the constitution of time consciousness and its possible neurophysiological counterparts; temporal biases in the conduct of our lives; responsibility to future and past generations.
Objective
By the end of the course students are able to describe and compare different theories and concepts of time (physical time, perceptual time, historical time ...). They are able to identify and examine issues concerning time as they occur in various philosophical subdisciplines - especially in philosophy of science, philosophy of mind, metaphysics, and ethics. Students are in a position to critically discuss and evaluate the repercussions of these issues in broader scientific and social contexts.

Part of the course reflects on methods and contents from physics, neuroscience/cognitive science, and logic.

851-0144-21L Philosophical Issues and Problems in Theoretical Computer Science

W  3 credits  2V  G. Sommaruga, J. Copeland, D. Proudfoot

Abstract
This course studies philosophical issues concerning computers and computing. Topics include: information (and information content), computational complexity, the Turing Test for computer thought; the "Chinese Room" argument against the possibility of strong AI; connectionist AI; consciousness; the Church-Turing thesis; computational and hypercomputational models of mind; and free will.

- Exhibit a general understanding of the philosophy and history of computing.
- Explain central problems in the field and their potential solutions, independently and at a level requiring in-depth knowledge and critical understanding.
- Communicate clearly in writing about topics in this field.

851-0144-22L Developments in Logic after Gödel: Applications to Theoretical Computer Science

W  3 credits  2V  G. Sommaruga, J. Copeland

Abstract
The course will start by presenting a modern logic, namely (propositional) modal logic, which has turned out to be extremely fruitful and to have numerous interesting applications in computer science, mathematics and philosophy. Subsequently, two of these applications to computer science, tense logic and dynamic logic, and one application to mathematics, provability logic, will be introduced.

- Learn the fundamental concepts of a range of propositional logics
- Learn how to construct proofs in these logics
- Study the interface between mathematical logic and computer science, and mathematical logic and mathematics

860-0006-00L Applied Statistics and Policy Evaluation

W  3 credits  3G  I. Günther, K. Hartgen

Objective
Number of participants limited to 20.

Abstract
This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference and policy evaluation. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with the statistical Software Stata.

- Students have a sound understanding of linear and logit regression
- Know strategies to test causal hypotheses using regression analysis and/or experimental methods
- Are able to formulate and implement a regression model for a particular policy question and a particular type of data
- Are able to critically interpret results of applied statistics, in particular, regarding causal inference
- Are able to critically read and assess published studies on policy evaluation
- Are able to use the statistical software STATA for Data Analysis

Content
The topics covered in the first part of the course are a revision of basic statistics and linear and logit regression analysis. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, and randomized controlled trials mostly used for policy evaluation. The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of 30%. Students are assisted in solving the assignments during the exercise session.

Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. «Digitization plus Internet» allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?»

The problem is that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate way any more, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetics», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Comparably to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)...

As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2030.ethz.ch.

More on teach.digisus.info starting from September. Stay tuned.

Lecture notes

Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

Literature

Content of the following books is covered (PDFs freely available online):

Other recommended books are:
1 (general) Chris DiBona et al., Open Sources: Voices from the Open Source Revolution, O'Reilly, 1999.

Prerequisites / notice

For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.

Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the preparation of the lecture.

4.1 Technical reality

1. Introduction into Philosophy of Technology

851-0125-41L

Introduction into Philosophy of Technology
Particularly suitable for students of D-ITET, D-MATL, D-MAVT

W 3 credits 2V O. Müller

Abstract

Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to a «philosophy of technology» (compensation, objectification, externalisation). For credit point a critical protokoll is to be written.

Objective

The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protokoll is to be written.

851-0727-02L

E-Business-Law
Particularly suitable for students of D-INFK, D-ITET

W 2 credits 2V D. Rosenthal

Abstract

The course deals with the basic legal framework for doing e-business as well as using information technology. It discusses a variety of legal concepts and rules to be taken into account in practice, be it when designing and planning new media business models, be it when implementing online projects and undertaking information technology activities.

Objective

The objective is knowing and understanding key legal concepts relevant for doing e-business, in particularly understanding how e-business is regulated by law nationally and internationally, how contracts are concluded and performed electronically, which rules have to be obeyed in particular in the Internet with regard to third party and own content and client data, the concept of liability applied in e-business and the role of the law in the practical implementation and operation of e-business applications.

Content

Vorgesehene Strukturierung der Vorlesung:
1) Welches Recht gilt im E-Business?
   Internationalität des Internets
   Regulierte Branchen

2) Gestaltung und Vermarktung von E-Business-Angeboten
   Verwendung fremder und Schutz der eigenen Inhalte
   Haftung im E-Business (und wie sie beschränkt werden kann)
   Domain-Namen

3) Beziehung zu E-Business-Kunden
   Verträge im E-Business, Konsumentenschutz
   Elektronische Signaturen
   Datenschutz
   Spam

4) Verträge mit E-Business-Providern

Lecture notes

Es wird mit Folien gearbeitet, die als PDF über die elektronische Dokumentenablage (ILIAS) auf dem System der ETHZ vorgängig abrufbar sind. Auf dem Termin- und Themenplan (ebenfalls online abrufbar) sind Links zu Gesetzesstexten und weiteren Unterlagen abrufbar.

Schliesslich wird jede Vorlesung auch als Podcast aufgezeichnet, der jedoch nur für die Studierenden mit einem Passwort (erhältlich beim Dozenten) zugänglich sind.

Literature

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 659 of 1571
Prerequisites / notice

Die Semestrierprüfung ist in Form eines schriftlichen Kurztests (normalerweise MC) in voraussichtlich der letzten Doppelstunde geplant. Es wird angegeben, welche Unterlagen beim jeweiligen Thema den Prüfungsstoff definieren. Der Test wird möglicherweise elektronisch durchgeführt.

851-0252-01L Human-Computer Interaction: Cognition and Usability  W  3 credits  2S  I. Barisic, C. Hölscher, S. Ognjanovic

Abstract

This seminar introduces theory and methods in human-computer interaction and usability. Cognitive Science provides a theoretical framework for designing user interfaces as well as a range of methods for assessing usability (user testing, GOMS, task analysis, heuristic evaluation, questionnaires or Cognitive Walkthrough). They will then apply the methods to a human-computer interaction setting (e.g. an existing software or hardware interface) and present the method as well as their procedure and results to the plenary. Active participation is vital for the success of the seminar, and students are expected to contribute to presentations of foundational themes, methods and results of their chosen group project. In order to obtain course credit a written essay / report will be required (details to be specified in the introductory session of the course).

851-0585-04L Lecture with Computer Exercises: Modelling and Simulating Social Systems with MATLAB  W  3 credits  2S  D. Helbing, L. Sanders, O. Wooley

Abstract

This course introduces the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

851-0549-00L WebClass Introductory Course History of Technology  W  3 credits  2V  G. Hürlimann

Abstract

WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

Objective

Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get to know basic theories and practices of the field.

Content

WebClass Einführungskurs Technikgeschichte ist eine webgestützte Einführung in die Technikgeschichte. Technikgeschichte untersucht Angebote technischer Entwicklungen, die in bestimmten historischen Kontexten entstanden und von sozialen Gruppen oder ganzen Gesellschaften als Möglichkeit sozialen Wandels wahrgenommen, ausgehandelt und schliesslich genutzt oder vergessen wurden.

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

851-0735-10L Business Law  W  2 credits  2V  P. Peyrot

Abstract

The students shall obtain a basic knowledge about business law. They shall be able to recognize and evaluate issues in the area of business law and suggest possible solutions.
The students shall obtain the following competence:
- They shall obtain a working knowledge on the legal aspects involved in setting up and managing an enterprise.
- They shall be acquainted with corporate functions as contracting, negotiation, claims management and dispute resolution.
- They shall be familiar with the issues of corporate compliance, i.e. the system to ascertain that all legal and ethical rules are observed.
- They shall be able to contribute to the legal management of the company and to discuss legal issues.
- They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

Lecture notes
A comprehensive script will be made available online on the moodle platform.

851-0594-00L International Environmental Politics
W 3 credits
2V T. Bernauer

Objective
The objectives of this course are to (1) gain an overview of relevant questions in the area of international environmental politics from a social sciences viewpoint; (2) learn how to identify interesting/innovative questions concerning this policy area and how to answer them in a methodologically sophisticated way; (3) gain an overview of important global and regional environmental problems.

Content
This course deals with how and why international cooperation in environmental politics emerges, and under what circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

After passing an end-of-semester test (requirement: grade 4.0 or higher) students will receive 3 ECTS credit points. The workload is around 90 hours (meetings, reading assignments, preparation of test).

Lecture notes
Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory.

851-0738-01L The Role of Intellectual Property in Daily Routine: A Practical Introduction
W 2 credits
2V C. Soltmann

Objective
The lecture gives an overview of the fundamental aspects of intellectual property, which plays an important role in the daily routine of engineers. The lecture aims to make participants aware of the various methods of protection and to put them in a position to use this knowledge in the workplace.

Content
In recent years, knowledge about intellectual property has become increasingly important for engineers. Both in production and distribution and in research and development, engineers are increasingly being confronted with questions concerning the patenting of technical inventions and the use of patent information.

The lecture will acquaint students with practical aspects of intellectual property and enable them to use the acquired knowledge in their future professional life.

Topics covered during the lecture will include:
- The importance of innovation in industrialised countries
- An overview of the different forms of intellectual property
- The protection of technical inventions and how to safeguard their commercialisation
- Patents as a source of technical and business information
- Practical aspects of intellectual property in day-to-day research, at the workplace and for the formation of start-ups.

Case studies will illustrate and deepen the topics addressed during the lecture.

Prerequisites / notice
None

851-0252-02L Introduction to Cognitive Science
W 3 credits
2V V. Schinazi, L. Konieczny, T. Thrash

Objective
The lectures provide an overview of the foundations of cognitive science and investigate processes of human cognition, especially perception, learning, memory and reasoning. This includes a comparison of cognitive processes in humans and technical systems, especially with respect to knowledge acquisition, knowledge representation and usage in information processing tasks.

Prerequisites / notice
The lecture is in particular tailored to the needs of the following degree programs: Agricultural science, architecture, civil engineering, computational science and engineering, computer science, electrical engineering and information technology, environmental engineering, geomatic engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics.

For students of chemistry-related degree programs, the lecture ‘Protecting inventions in chemistry’ (851-0738-03) will be offered in the autumn semester.

851-0738-00L Intellectual Property: Introduction
W 2 credits
2V M. Schweizer

Objective
Cognitive Science views human cognition as information processing and provides an inter-disciplinary integration of approaches from cognitive psychology, informatics (e.g., artificial intelligence), neuroscience and anthropology among others. The lectures provide an overview of basic mechanisms of human information processing and various application domains. A focus will be on matters of knowledge acquisition, representation and usage in humans and machines. Models of human perception, reasoning, memory and learning are presented and students will learn about experimental methods of investigating and understanding human cognitive processes and representation structures.
Abstract
The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights). Aspects of competition law are treated insofar as they are relevant for the protection of intellectual creations and source designations. The legal principles are developed based on current cases.

Objective
The aim of this course is to enable students at ETH Zurich to recognize which rights may protect their creations, and which rights may be infringed as a result of their activities. Students should learn to assess the risks and opportunities of intellectual property rights in the development and marketing of new products. To put them in this position, they need to know the prerequisites and scope of protection afforded by the various intellectual property rights as well as the practical difficulties involved in the enforcement of intellectual property rights. This knowledge is imparted based on current rulings and cases.

Another goal is to enable the students to participate in the current debate over the goals and desirability involved in protecting intellectual creations, particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls, patent thickets).

Abstract
This course discusses complex techno-economic systems, their counter-intuitive behaviors, and how their theoretical understanding empowers us to solve some long-standing problems that are currently bothering the world.

Objective
Participants should learn to get an overview of the state of the art in the field, to present it in a well understandable way to an interdisciplinary scientific audience, to develop models for open problems, to analyze them, and to defend their results in response to critical questions. In essence, participants should improve their scientific skills and learn to think scientifically about complex dynamical systems.

Content
This course starts with a discussion of the typical and often counter-intuitive features of complex dynamical systems such as self-organization, emergence, (sudden) phase transitions at “ tipping points”, multi-stability, systemic instability, deterministic chaos, and turbulence. It then discusses phenomena in networked systems such as feedback, side and cascade effects, and the problem of radical uncertainty. The course progresses by demonstrating the relevance of these properties for understanding societal and, at times, global-scale problems such as traffic jams, crowd disasters, breakdowns of cooperation, crime, conflict, social unrests, political revolutions, bubbles and crashes in financial markets, epidemic spreading, and/or “tragedies of the commons” such as environmental exploitation, overfishing, or climate change. Based on this understanding, the course points to possible ways of mitigating techno-socio-economic-environmental problems, and what data science may contribute to their solution.

Prerequisites / notice
Mathematical skills can be helpful.

Abstract
Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of configurations of knowledge.

Objective
Students are familiar with different relations between literature and technology. They can verbalise and analyse central contentions.

Abstract
In the second half of the 20th century, postal services have dramatically changed. Communication today is computerbased. The lecture offers problem oriented insights into this sociotechnical process of translation.

Objective
Students become familiar with the mutual interdependence of social and technological change that characterises the history of computing and communication.

Abstract
The course provides an introduction to the legal principles relevant to data science, as well as the application of these principles to real-world problems. Students will learn the fundamentals of data protection law, with a focus on the EU General Data Protection Regulation (GDPR).

Objective
By the end of the course, students should be able to understand and apply the legal principles underlying data protection and privacy, and to critically evaluate the ethics and implications of data collection and processing.

Content
The course covers key concepts in data protection, including the rights of individuals, the principles of data processing, and the obligations of data controllers and processors. Students will also learn about the role of data protection authorities and the legal remedies available to individuals and organizations.

Prerequisites / notice
None.

Abstract
The course is designed to provide an overview of the astronomical developments from the ancient Greek world to the 16th century. We are going to use primary sources tackling historical, technical and philosophical questions. Special attention will be paid to the dramatic change in the way people understood the structure of the heavens and the nature of the physical world.

Objective
The course aims at providing a working knowledge of astronomy and cosmology from the ancient world to the 16th century. Upon its completion the students will be able to describe how our knowledge of the heavens changed from Aristotle’s system to the Copernican Revolution. In addition, they will also have acquired an appreciation of the debates about man’s place in the cosmos and the philosophical principles underpinning cosmology.

Abstract
The course is designed to provide an overview of the mathematical concepts and theories that underpin the most significant images in the history of mathematics. Students will learn to critically evaluate the role of visual representations in the development of mathematical ideas, and to appreciate the relationship between mathematics and art.

Objective
By the end of the course, students should be able to understand and analyze the mathematical concepts and theories behind the most significant images in the history of mathematics. They will also develop the ability to evaluate the role of visual representations in the development of mathematical ideas.

Content
The course covers a range of mathematical images, from the ancient world to the modern era, and includes examples from diverse fields such as geometry, algebra, analysis, and number theory. Students will learn to critically evaluate the role of visual representations in the development of mathematical ideas, and to appreciate the relationship between mathematics and art.

Prerequisites / notice
Mathematical skills can be helpful.
The lecture series “Images of Mathematics” deals with a few moments in the history of the scientific discipline since the middle of the 19th century when the image of mathematics changed. In particular, it focuses on the consequences of the fact that in the 19th century mathematics started to not only reflect on their own conceptual and methodological foundations in a general manner (which had been done since the dawn of mathematics and was especially a philosophical task), but to formalize them in a strict, mathematical way: the objects of mathematics, its logical language and its proof procedures. Through Cantor’s set theory, the mathematical treatment of logic since Boole and especially through Frege and the formalization of its axioms in a wide ranging discussion involving Zermelo, Fraenkel and others, this self-reflective stance came to the fore.

Yet, the deeper mathematics dug into its foundations, the more radical the problems became. Finally, the optimistic Hilbert program of laying the foundation of mathematics within mathematics and of proving its own consistency as well as its completeness contributed to clarifying of the foundation of mathematics primarily insofar as it was doomed to failure. Gödel proved his famous incompleteness theorems and thereby dismissed at the same time the formalist attempt to reduce mathematical truth to logical provability. His work resulted in detailed insights of the precariousness of the foundation of mathematics and further numerous of productive consequences within mathematics.

Moreover, Gödel’s theorems open many far-reaching and intriguing questions in view of our image of mathematics, questions concerning the conception of mathematical practice and knowledge, the limits of calculability of mathematics and the possible role of computability and machines in mathematics, the relation between the logical proof procedures and the involved intuitive aspects. In short, the image of mathematics is not as static as we sometimes expect it to be, it was radically redrawn by the mathematicians of the 20th century and has since then again been open to diverging interpretations.

Literature

853-0060-00L Current Issues in Security Policy W 3 credits 2V A. Wenger, O. Thränert

Abstract
This course provides an overview of the security implications of so-called “dual-use” technologies, i.e. technologies that can be used for both peaceful and military aims. The course will also cover various policies - in particular arms control - that are discussed and applied by the international community in dealing with such dual-use technologies.

Objective
Participants should gain a solid understanding of security challenges stemming from the use and control of dual-use technologies. In addition, the students should become aware of how researchers can deal with sensitive knowledge regarding research transparency and control.

Content
The aim of the course is to provide participants with an overview of international security politics with a special focus on dual-use technologies. Students will analyze the character of dual-use security risks and of risk-based security strategies and instruments. Thematic areas include the nuclear non-proliferation regime, biological and chemical weapons conventions, missile proliferation, the nuclear programs of Iran and North Korea, cyber and space technologies, as well as robotics and nanotechnology.

Lecture notes
Participants are expected to study the compulsory texts provided at the beginning of the semester via the online platform Moodle.

Literature
A reading list will be distributed at the beginning of the semester.

Prerequisites / notice
An online learning platform serves as a supplement to the course.

D-MATH

Number Title Type ECTS Hours Lecturers
851-0125-41L Introduction Into Philosophy of Technology W 3 credits 2V O. Müller

Abstract
Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to a autonomous philosophy of technology, which had become important also for other philosophical disciplines (e.g. in Heidegger’s philosophy).

Objective
The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protocol is to be written.

851-0549-00L WebClass Introductory Course History of Technology W 3 credits 2V G. Hürlimann

Number
Number of participants limited to 100.

Abstract
WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

Objective
Students are introduced into technological innovations take place within complex economical, political and cultural contexts. They get to know basic theories and practices of the field.

**851-0588-00L**

**Introduction to Game Theory. Models and Experimental Studies**  
Particularly suitable for students of D-MAVT, D-MATL

**W** 2 credits  
**2V** A. Diekmann

**Abstract**  
This course introduces the foundations of game theory. It focuses on models of social interaction, conflict and cooperation, the emergence of cooperation and concepts of strategic decision-making behaviour. Examples, applications and the contrast between theory and empirical results are particularly emphasized.

**Objective**  
Learn the fundamentals, models, and logic of thinking about game theory. Apply game theory models to strategic interaction situations and critically assess game theory’s capabilities through a wide array of experimental results.

**Content**  

In der Vorlesung wird Wert darauf gelegt, Modelle an Beispielen zu demonstrieren und empirische Untersuchungen ("experimentelle Spieltheorie") vorzustellen.

**Lecture notes**  

**Literature**  
Die folgenden Einführungen unterscheiden sich nach Anwendungen und Grad der Formalisierung. Zur Einführung kann man sich eines der folgenden Bücher ansehen, die ab Januar im Handapparat der D-GESS-Bibliothek stehen werden:

**851-0591-00L**

**Digital Sustainability in the Knowledge Society**  
Particularly suitable for students of D-INFK, D-ITET, D-MAVT, D-MATL, D-MTEC, D-USYS.

**W** 2 credits  
**2V** M. M. Dapp

**Abstract**  
How do various interest groups influence the methods of production, distribution, and use of digital resources? Current models focusing on strong intellectual property rights are contrasted with open models like, e.g. Open Source/Content/Access. The course discusses consequences from different models and introduces «digital sustainability» as an alternative vision for society.

**Objective**  
At the heart of the discourse is the handling of digital goods and intellectual property in society. Digitization and the Internet allow handling knowledge in a way, which directly contrasts with the traditional understanding of "intellectual property" and the industries based on it. Starting from economic and legal basics, we compare proprietary and open/*free* models. Sustainable development as a concept is transferred to digital goods, taking into account the particular nature of digital stuff.

After the lecture, you should (hopefully) be able to

- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the political/legal and economic differences between proprietary and open approaches to the production and use of digital goods
- using an example, explain the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the free/open source software model to other digital goods (e.g., open content, open access)
Content
Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. «Digitization plus Internet» allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?»
The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is 500 years old and does not address digital reality in an adequate manner (some cases of «piracy» leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetic», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge. Comparable to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)...

As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2020.ethz.ch. More on teach.digisus.info starting from September. Stay tuned.

Lecture notes
Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

Content of the following books is covered (PDFs freely available online):

Other recommended books are:
1 (general) Chris DiBona et al., Open Sources: Voices from the Open Source Revolution, O'Reilly, 1999.

Prerequisites / notice
For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.

Of course, any interested person is invited to attend the lecture without doing the group assignment. The website is actively used for the participation of interested persons.

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 665 of 1571
Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

A reading list will be distributed at the beginning of the semester.

Participants are expected to study the compulsory texts provided at the beginning of the semester via the online platform Moodle.

The procedure for accumulating CP will be explained at the start of term.

I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

Students should learn about the connections between the history of anthropology and technology and be able at the end of the course to evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and arguments to be found within the field of environmental ethics and will have practised these in small case studies.

Objective
On the one hand models of machines had a heuristic value in research on man, e.g. in Harvey's discovery of blood circulation in the 17th century or in brain research in the 20th century. On the other hand these models were always criticised, sometimes polemically, because they are supposedly not adequate for man.

Studierende sind aufgefordert, eine Prüfung im zweiten letzten Session (11.12.2015) zu schreiben.

The lecture series provides students with an overview of the development of international relations since the end of World War II. The first part of the series deals with the development of and changes in Cold War security policy structures. The second part deals with the period after the transformation of 1989/91; the focus here is on current issues in international security policy.

By the end of the semester, participants should have a solid knowledge of the history and theoretical foundations of International Relations since the end of the Second World War.

Environmental Ethics
The lecture treats the social intercourse with risks of technical systems. The notion of risk and the perception of risk are discussed by case studies (e.g. nanotechnology) and socio-political instruments for decision-making are presented. Methods are presented that can be applied to deal with environmental risks and how they can be used for sustainable innovation.

Traditionally, it is the aim of the lecture to provide an overview of the development of international security politics with a special focus on dual-use technologies. Students will analyze the character of dual-use security risks and of risk-based security strategies and instruments. Thematic areas include the nuclear non-proliferation regime, biological and chemical weapons conventions, missile proliferation, the nuclear programs of Iran and North Korea, cyber and space technologies, as well as robotics and nanotechnology.

Lecture notes
Participants are expected to study the compulsory texts provided at the beginning of the semester via the online platform Moodle.

The lecure is being supported by a website on Moodle. If you have any questions, please contact Lukas Meyer, lukas.meyer@sipo.gess.ethz.ch.

The lecure is being supported by a website on Moodle. If you have any questions, please contact Lukas Meyer, lukas.meyer@sipo.gess.ethz.ch.
Objective

- Getting acquainted to the extended risk concept
- Evaluation of the risks caused by technology within the societal context
- Knowledge about the mode science and society handle current environmental risks (examples gene- and nanotechnology)
- Knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)

Content

- Risks and technical systems (risk categories, risk perception, risk management)
- Illustration with case studies (nanotechnology)
- Implementation (politics, science, media, etc.)
- Decision making (technology assessment, cost/benefit analysis etc.)
- The role of the media
- prospects for future developments

Lecture notes

Copies of slides and selected documents will be distributed

Prerequisites / notice

The lecture is held biweekly (for 2 hours). The dates are 26.9., 3.10. (out of schedule), 24.10, 7.11, 21.11, 5.12, 19.12
Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

**851-0125-58L** Philosophy of the Environmental Sciences: An Introduction

| W | 3 credits | 2S | A. Schwarz |

**Abstract**

Environmental knowledge and management is quite common in different research fields and in everyday practice. We will be identifying those concepts, objects and methods that mainly constitute what might be called the core of the environmental sciences. This will be done by using different philosophical tools and approaches.

**Objective**

The environmental sciences cover a wide range of scientific practices and objects, and accordingly afford different kinds of scientific knowledge. Additionally, there is an important interplay between science and the societal sphere. In this seminar we will examine the different uses of those concepts, their semantic range in terms of historical depth and semantic fields and finally their logical coherence. Another important topic is the philosophical investigation of methods and objects that can be identified in the environmental sciences. These methods are for instance Life Cycle Assessment or Adaptive Ecosystem Management, and technological objects may be a wind engine or a hydropower plant. The latter raise questions of how renewable energies can be assessed and evaluated, including the more general issue of how values and norms can be embedded in technological objects. This leads us to the third and last complex of topics: the focus on current deliberations about possible new ways of existence in the age of the Anthropocene and as a consequence the formation of adequate life styles in our societies. This refers to issues in philosophical and social anthropology and the challenge of climate change.

**363-1050-00L** Conference of Disarmament: Simulation of Negotiations

| W | 3 credits | 2S | M. Ambühl |

**Abstract**

The Global Studies Institute (University of Geneva) is organizing a simulation seminar on nuclear disarmament in collaboration with the Chair of Negotiation and Conflict Management (ETH), experts from the United Nations Institute for Disarmament Research and the Geneva Center for Security Policy.

**Objective**

The simulation is conducted in collaboration with experts and students during a two days seminar at the University of Geneva.

Students will have the possibility to participate in simulated diplomatic negotiations and to analyse and assess the negotiation logic behind the situations. They should gain insight in the basic information on disarmament issues and on the functioning of the Conference on Disarmament as well as on negotiation techniques in general.

**Content**

The simulation project is intended for Master’s or Doctoral students of the Global Studies Institute (GSI) of the University of Geneva, of the ETH and for interested students of the Centre for Security Policy (GCSP). The simulation will be in French and English and is conducted by Prof. Calmy-Rey, former President of Switzerland.

In the lectures, students will be provided with basic information on disarmament issues and on the functioning of the Conference on Disarmament as well as on negotiation techniques in general. Students will take the role of negotiators in the simulation (including the heads of the delegations), of keeper of the minutes or of observers and analysts.

Students will co-develop their mandates for the negotiation and be assisted by experts that are specialized in international negotiations as well as in the topic of disarmament. The negotiation tables will be chaired by former diplomats. Representatives of diplomatic missions in Geneva will play the role of the “Capitals” to which the heads of delegations will have to give account of the ongoing negotiations.

More details on the program, timetable, reading lists and performance assessment will be published here: https://chamilo.unige.ch/home/courses/M165/?id_session=0

The simulation will take place on the 26 and 27 November 2015 at the University of Geneva.

**Languages:** English and French

**Dates/Time/Location (GE = University of Geneva)**

- **22 Sept.** | ETH HG D 22 | 10:15-12:00 | Introduction
- **29 Sept.** | GE Uni Mail Salle 1170 | 10:15-12:00 | Introduction to Negotiation Techniques (Dr. Vitalijis Butenko and Dr. Sibylle Zürcher, ETH)
- **6 Oct.** | ETH HG D 16.2 | 10:15-12:00 | Distribution of the roles, composition of the negotiation tables, preparation of mandates for the HA (humanitarian approach)
- **13 Oct.** | ETH HG D 22 | 10:15-12:00 | Preparation of the mandates for the FMCT (Fissile Material Cut-off Treaty)
- **20 Oct.** | GE Uni Mail Salle 1170 | 10:15-12:00 | No session; Students deepen and summarize their mandates on one page (A4)
- **27 Oct.** | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the mandates I (FMCT)
- **10 Nov.** | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the mandates II (HA)
- **17 Nov.** | GE Uni Mail Salle 1170 | 10:15-12:00 | Preparation Meeting
- **26 & 27 Nov.** | GE Salles 407 et 408 | 10:00-18:00 | Simulation at Uni Dufour
- **1 Dec.** | GE Uni Mail Salle 1170 | 10:15-12:00 | Discussion of the results

**Note:**

The participation in the simulation on 26. and 27 November in Geneva is necessary. The two hours lectures on the 22. September, 6. and 13. October have to be attended in Zürich via conference call (ETH HG D 16.2). The other lectures during the semester can be attended via Skype.

To get the 3 ECTS, students have to participate at the 2 days simulation in Geneva, attend the 3 mandatory lecture parts via conference call or Zurich and write a report of 5 pages at the end of the course.

**Prerequisites / notice**

**363-0565-00L** Principles of Macroeconomics

| W | 3 credits | 2V | J.-E. Sturm |

**Abstract**

This course examines the behaviour of macroeconomic variables, such as gross domestic product, unemployment and inflation rates. It tries to answer questions like: How can we explain fluctuations of national economic activity? What can economic policy do against unemployment and inflation? What significance do international economic relations have for Switzerland?

**Objective**

This lecture will introduce the fundamentals of macroeconomic theory and explain their relevance to every-day economic problems.
This course helps you understand the world in which you live. There are many questions about the macroeconomy that might spark your curiosity. Why are living standards so meagre in many African countries? Why do some countries have high rates of inflation while others have stable prices? Why have some European countries adopted a common currency? These are just a few of the questions that this course will help you answer.

Furthermore, this course will give you a better understanding of the potential and limits of economic policy. As a voter, you help choose the policies that guide the allocation of society's resources. When deciding which policies to support, you may find yourself asking various questions about economics. What are the burdens associated with alternative forms of taxation? What are the effects of free trade with other countries? What is the best way to protect the environment? How does the government budget deficit affect the economy? These and similar questions are always on the minds of policy makers.

Lecture notes
The course webpage (to be found at https://moodle-app2.let.ethz.ch/course/view.php?id=2467) contains announcements, course information and lecture slides.

Literature

We advise you to also buy access to Apila. This internet platform will support you in learning for this course. To save money, you should buy the book together with Apila. This is sold as a bundle (ISBN: 9781473715998).

Besides this textbook, the slides and lecture notes will cover the content of the lecture and the exam questions.

680-0006-00L Applied Statistics and Policy Evaluation

Objective
Students
- have a sound understanding of linear and logit regression
- know strategies to test causal hypotheses using regression analysis and/or experimental methods
- are able to formulate and implement a regression model for a particular policy question and a particular type of data
- are able to critically interpret results of applied statistics, in particular, regarding causal inference
- are able to critically read and assess published studies on policy evaluation
- are able to use the statistical software STATA for data analysis

Content
The topics covered in the first part of the course are a revision of basic statistics and linear and logit regression analysis. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, and randomized controlled trials mostly used for policy evaluation. The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs.

Particularly suitable for students of D-BAUG, D-INFK, D-ITET, D-MATL, D-MAVT.

**Content**

This course introduces first the basic functionalities and features of the mathematical software package MATLAB, such as the simple operations with matrices and vectors, differential equations, statistical tools, the graphical representation of data in various forms, and video animations of spatio-temporal data. With this knowledge, students are expected to implement themselves in MATLAB, models of various social processes and systems, including agent-based models, e.g. models of interactive decision making, group dynamics, human crowds, or game-theoretical models.

Part of this course will consist of supervised programming exercises in a computer pool. Credit points are finally earned for the implementation of a mathematical model from the sociological literature in MATLAB and the documentation in a seminar thesis.

**Lecture notes**

The lecture slides will be presented on the course web page after each lecture.

**Literature**

Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

**Prerequisites / notice**

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further free and unrestricted use.

Particularly suitable for students of D-MATL, D-INFK, D-ITET, D-MTEC, D-PHYS.

**Abstract**

The lecture gives an overview of the fundamental aspects of intellectual property, which plays an important role in the daily routine of engineers. The lecture aims to make participants aware of the various methods of protection and to put them in a position to use this knowledge in the workplace.

Particularly suitable for students of D-BAUG, D-ITET, D-MAVT.
In recent years, knowledge about intellectual property has become increasingly important for engineers. Both in production and distribution and in research and development, engineers are increasingly being confronted with questions concerning the patenting of technical inventions and the use of patent information.

The lecture will acquaint students with practical aspects of intellectual property and enable them to use the acquired knowledge in their future professional life.

Topics covered during the lecture will include:
- The importance of innovation in industrialised countries
- An overview of the different forms of intellectual property
- The protection of technical inventions and how to safeguard their commercialisation
- Patents as a source of technical and business information
- Practical aspects of intellectual property in day-to-day research, at the workplace and for the formation of start-ups.

Case studies will illustrate and deepen the topics addressed during the lecture.

The seminar will comprise practical exercises on how to use and search patent information. Basic knowledge of how to read and evaluate patent documents as well as how to use publicly available patent databases to obtain the required patent information will also be provided.

Prerequisites / notice
The lecture is in particular tailored to the needs of the following degree programs: Agricultural science, architecture, civil engineering, computational science and engineering, computer science, electrical engineering and information technology, environmental engineering, geometric engineering and planning, interdisciplinary sciences, materials science, mathematics, mechanical engineering, physics.

For students of chemistry-related degree programs, the lecture ‘Protecting inventions in chemistry’ (851-0738-03) will be offered in the autumn semester.

<td>Digital Sustainability in the Knowledge Society</td>
<td>2</td>
<td>Particularly suitable for students of D-INFK, D-ITET, D-MATL, D-MAVT, D-MTEC, D-USYS.</td>
</tr>
</tbody>
</table>

Objective

- characterize the nature of digital goods vs. physical goods
- critique the basic concepts of copyright and patent rights
- explain the legal/economic differences between proprietary and open approaches to the production and use of digital goods
- analyze the meaning of digital sustainability and argue why it is relevant for a knowledge society
- transfer the ideas of the free/open source software model to other digital goods (e.g., open content, open access)

Content

Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. «Digitization plus Internet» allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?»

The problem is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetic», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Comparative to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fights against treating software code as private property but as a central cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)... As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2030.ethz.ch.

For administrative and didactic reasons (high level of interaction and credit group assignments on current hot topics), the number of participants is limited to 45.

After the lecture, you should (hopefully) be able to:

- draw conclusions from different models and introduce »digital sustainability« as an alternative vision for society.
- transfer digital goods, taking into account the particular nature of digital stuff.

Prerequisites / notice

Litigation notes

Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.

Lecture topics

- The protection of technical inventions in a way, which directly contrasts with the traditional understanding of "intellectual property" and the industries based on it.

Content

4 More on teach.digisus.info starting from September. Stay tuned.

Literature

- Practical aspects of intellectual property in day-to-day research, at the workplace and for the formation of start-ups.

Lecture notes

- The protection of technical inventions and how to safeguard their commercialisation
- Patents as a source of technical and business information
- Practical aspects of intellectual property in day-to-day research, at the workplace and for the formation of start-ups.

Prerequisites / notice

For students of chemistry-related degree programs, the lecture ‘Protecting inventions in chemistry’ (851-0738-03) will be offered in the autumn semester.

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 671 of 1571
Objective

Students are able to identify basic structures of the legal system. They understand selected topics of public and private law and are able to apply the fundamentals in more advanced law classes.

Content

Basic concepts of law, sources of law. Private law: Contract law (particularly contract for work and services), tort law, property law. Public law: Human rights, administrative law, procurement law, procedural law. Insights into the law of the EU and into criminal law.

Lecture notes

Jaap Hage, Bram Akkermans (Eds.), Introduction to Law, Cham 2014 (Online Resource ETH Library)

851-0738-00L

Intelectual Property: Introduction

Particularly suitable for students of D-ITET, D-MAVT, D-MATL

W 2 credits 2V M. Schweizer

Abstract

The course provides an introduction to Swiss and European intellectual property law (trademarks, copyright, patent and design rights). Aims of competition law are treated as if they are relevant for the protection of intellectual creations and source designations. The legal principles are developed based on current cases.

Objective

The aim of this course is to enable students at ETH Zurich to recognize which rights may protect their creations, and which rights may be infringed as a result of their activities. Students should learn to assess the risks and opportunities of intellectual property rights in the development and marketing of new products. To put them in this position, they need to know the prerequisites and scope of protection afforded by the various intellectual property rights as well as the practical difficulties involved in the enforcement of intellectual property rights. This knowledge is imparted based on current rulings and cases.

Another goal is to enable the students to participate in the current debate over the goals and desirability of protecting intellectual creations, particularly in the areas of copyright (keywords: fair use, Creative Commons, Copyleft) and patent law (software patents, patent trolls, patent thickets).

851-0125-51L

Man and Machine

Does not take place this semester. Particularly suitable for students of D-CHAB, D-HEST, D-MAVT, D-MATL

W 3 credits 2G M. Hampe

Abstract

The lecture gives an overview about the different Man-Machine-Relations since the 16th century. Different models of machines will be important here: the clockwork, the steam engine and the computer.

Objective

On the one hand models of machines had a heuristical value in research on man, e.g. in Harvey's discovery of blood circulation in the 17th century or in brain research in the 20th century. On the other hand these models were always criticised, sometimes polemically, because they are supposedly not adequate for man.

Students should learn about the connections between the history of anthropology and technology and be able at the end of the course to evaluate the critical philosophical arguments that are connected with the metaphor of the machine.

851-0306-05L

Literature and Technology - Simulations, Prototypes, Machines

Particularly suitable for students of D-ITET, D-MAVT, D-MATL

W 3 credits 2S E. Edelmann-Ohler

Abstract

Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of configurations of knowledge.

Objective

Students are familiar with different relations between literature and technology. They can verbalise and analyse central contentions.

Content

851-0551-03L

Postal Knowledge and the History of Digital Societies

Particularly suitable for students of D-ARCH, D-BAUG, D-HEST, D-INFK, D-ITET, D-MAVT

W 3 credits 2S D. F. Zetti

Abstract

In the second half of the 20th century, postal services have dramatically changed. Communication today is computer-based. The lecture offers problem oriented insights into this sociotechnical process of translation.

Objective

Students become familiar with the mutual interdependence of social and technological change that characterises the history of computing and communication.

Content

853-0047-01L

World Politics Since 1945: The History of International Relations (Without Exercises)

Particularly suitable for students of D-ARCH, D-BAUG, D-HEST, D-INFK, D-ITET, D-MAVT

W 3 credits 2V A. Wenger

Abstract

This lecture series provides students with an overview of the development of international relations since the end of World War II. The first part deals with the series of developments and changes in Cold War security policy structures. The second part deals with the period after the transformation of 1989/91; the focus here is on current issues in international security policy.

Objective

By the end of the semester, participants should have a solid knowledge of the history and theoretical foundations of International Relations since the end of the Second World War.

Content

of, "Diploma Supplement"

Literature

Reading:

Prerequisites / notice

The lecture is being supported by a website on Moodle. If you have any questions, please contact Lukas Meyer, lukas.meyer@sipo.gess.ethz.ch.

701-0703-00L

Environmental Ethics

W 2 credits 2V M. Huppenbauer

Abstract

The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.

Objective

On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and argumentations to be found within the field of environmental ethics and will have practised these in small case studies.

Data: 06.09.2021 13:00

Autumn Semester 2016

Page 672 of 1571
Getting acquainted to the extended risk concept

- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

Lecture notes

Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

In the part of the course serving as an introduction to general and applied ethics, we shall be using the following textbook: Barbara Bleisch/Markus Huppenbauer: Ethische Entscheidungsfindung. Ein Handbuch für die Praxis, 2nd Edition Zürich 2014

Literature

- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003
- John O'Neill et al., Environmental Values, 2008
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008

Generel introductions:
- Marcus Düwell et. al (Hrsg.), Handbuch Ethik, 2. Auflage, Stuttgart (Metzler Verlag), 2006
- Johann S. Ach et. al (Hrsg.), Grundkurs Ethik 1. Grundlagen, Paderborn (mentis) 2008

Prerequisites / notice

The procedure for accumulating CP will be explained at the start of term.

I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

701-0791-00L

Environmental History - Introduction and Overview

W 2 credits 2V

D. Speich Chassé

Number of participants limited to 100.

Abstract

Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

Objective

Introduction into environmental history; survey of long-term development of human-nature-interrelations; discussion of selected problems. Improved ability to assess current problems from a historical perspective and to critically interrogate one’s own standpoint.

Lecture notes

Course material is provided on OLAT.

Literature

Uekötter, Frank (Ed.) 2010. The turning points of environmental history, Pittsburgh: University of Pittsburgh Press.

701-0985-00L

Social Intercourse with Current Environmental Risks

W 1 credit 1V

B. Nowack, C. M. Som-Koller

Objective

Getting acquainted to the extended risk concept

- Evaluation of the risks caused by technology within the societal context
- Knowledge about the mode science and society handle current environmental risks (examples gene- and nanotechnology)
- Knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)
- Knowledge about possibilities for sustainable innovation

Content

- Risks and technical systems (risk categories, risk perception, risk management)
- Illustration with case studies (nanotechnology)
- Implementation (politics, science, media, etc.)
- Decision making (technology assessment, cost/benefit analysis etc.)
- The role of the media
- Prospects for future developments

Lecture notes

Copies of slides and selected documents will be distributed

Prerequisites / notice

The lecture is held biweekly (for 2 hours). The dates are 26.9., 3.10. (out of schedule), 24.10, 7.11, 21.11, 5.12, 19.12

853-0725-00L

History Part One: Europe (The Cradle of Modernity, Britain ca. 1789-1939)

W 3 credits 2V

H. Fischer-Tiné

Abstract

Using the concrete example of Britain, the “cradle of modernity”, this lecture offers a survey and analysis of the crucial historical transformations that engendered “modernity” in Europe from the late 18th to the mid 20th centuries.

Objective

At the end of this lecture course, students can: (a) highlight the most important changes in the “long nineteenth century” in Europe (b) explain their long-term effects; and (c) relate these changes to global developments.

Content

The thematic foci include: the economic and social consequences of the industrial revolution, the genesis of political ideologies and social movements, shifts in gender roles, colonialism and imperialism, as well as the emergence of consumerism and a “leisure society.”

Lecture notes

Power Point Slides and sources will be made available at POLYBOX in the course of the semester.

Literature

Mandatory and further reading will be listed on course plan that is made available before the first session.

851-0735-10L

Business Law

W 2 credits 2V

P. Peyrot

Objective

The students shall obtain a basic knowledge about business law. They shall be able to recognize and evaluate issues in the area of business law and suggest possible solutions.

- They shall obtain a working knowledge on the legal aspects involved in setting up and managing an enterprise.
- They shall be acquainted with corporate functions as contracting, negotiation, claims management and dispute resolution
- They shall be familiar with the issues of corporate compliance, i.e. the system to ascertain that all legal and ethical rules are observed.
- They shall be able to contribute to the legal management of the company and to discuss legal issues.
- They shall have an understanding of the law as a part of the corporate strategy and as a valuable resource of the company.

Lecture notes

A comprehensive script will be made available online on the moodle platform.

853-0060-00L

Current Issues in Security Policy

W 3 credits 2V

A. Wenger, O. Thranert

Objective

Participants should gain a solid understanding of security challenges stemming from the use and control of dual-use technologies. In addition, the students should become aware of how researchers can deal with sensitive knowledge regarding research transparency and control.
The aim of the course is to provide participants with an overview of international security politics with a special focus on dual-use technologies. Students will analyze the character of dual-use security risks and of risk-based security strategies and instruments. Thematic areas include the nuclear non-proliferation regime, biological and chemical weapons conventions, missile proliferation, the nuclear programs of Iran and North Korea, cyber and space technologies, as well as robotics and nanotechnology.

Participants are expected to study the compulsory texts provided at the beginning of the semester via the online platform Moodle.

An online learning platform serves as a supplement to the course.

### 851-0585-15L Complexity and Global Systems Science

Prerequisites: solid mathematical skills.

**Abstract**

This course discusses complex techno-socio-economic systems, their counter-intuitive behaviors, and how their theoretical understanding enables us to solve some long-standing problems that are currently bothering the world.

**Objective**

Participants should learn to get an overview of the state of the art in the field, to present it in a well understandable way to an interdisciplinary scientific audience, to develop models for open problems, to analyze them, and to defend their results in response to critical questions. In essence, participants should improve their scientific skills and learn to think scientifically about complex dynamical systems.

**Content**

This course starts with a discussion of the typical and often counter-intuitive features of complex dynamical systems such as self-organization, emergence, (sudden) phase transitions at "tipping points", multi-stability, systemic instability, deterministic chaos, and turbulence. It then discusses phenomena in networked systems such as feedback, side and cascade effects, and the problem of radical uncertainty. The course progresses by demonstrating the relevance of these properties for understanding societal and, at times, global-scale problems such as traffic jams, crowd disasters, breakdowns of cooperation, crime, conflict, social unrests, political revolutions, bubbles and crashes in financial markets, epidemic spreading, and/or "tragedies of the commons" such as environmental exploitation, overfishing, or climate change. Based on this understanding, the course points to possible ways of mitigating techno-socio-economic-environmental problems, and what data science may contribute to their solution.

#### Prerequisites / notice

Mathematical skills can be helpful

#### Content

- does not take place this semester.
- particularly suitable for students of D-CHAB, D-PHYS
- particular attention will be paid to the dramatic change in the way people understood the structure of the heavens and the nature of the physical world.
- particularly suitable for students of D-BIOL, D-INFK, D-MATH, D-PHYS
- students are in a position to critically discuss and evaluate the repercussions of these issues in broader scientific contexts.

#### Prerequisites / notice

Mathematical skills can be helpful
Further literature, in particular regarding computer models in the social sciences, will be provided in the course.

The number of participants is limited to the size of the available computer teaching room. The MATLAB code related to the seminar thesis should be well enough documented for further use by others and must be handed over to the Chair of Sociology, in particular of Modeling and Simulation, for further use and unrestricted use.

- Particularly suitable for students of D-INFK, D-ITET, D-MATL, D-MAVT, D-MTEC, D-USYS

**Abstract**

Environmental knowledge and management is quite common in different research fields and in everyday practice. We will be identifying those concepts, objects and methods that mainly constitute what might be called the core of the environmental sciences. This will be done by using different philosophical tools and approaches.

**Objective**

The environmental sciences cover a wide range of scientific practices and objects and accordingly afford different kinds of scientific knowledge. Additionally, there is an important interplay between the scientific and the societal sphere. In this seminar we will examine likewise central and widespread concepts such as sustainable development or resilience by using philosophical tools that will allow to probe the different uses of those concepts, their semantic range in terms of historical depth and semantic fields and finally their logical coherence. Another important topic is the philosophical investigation of methods and objects that can be identified in the environmental sciences. Those methods are for instance Life Cycle Assessment or Adaptive Ecosystem Management, technological objects may be a wind engine or a hydropower plant. The latter raise questions of how renewable energies can be assessed and valued, including the more general issue of how values and norms can be embedded in technological objects. This leads us to the third and last complex of topics that focus on current deliberations about possible new ways of existence in the age of the Anthropocene and as a consequence the formation of adequate life styles in our societies. This refers to issues in philosophical and social anthropology and the challenge of climate change.

**Content**

Technical reality: Within minutes you can make perfect copies of high-value digital goods of knowledge or culture (as text, audio, video, image or software) and distribute them around the globe -- for free. «Digitization plus Internet» allows for the first time in humankind's history the (theoretically) free access and global exchange of knowledge at minimal cost. A tremendous opportunity for societal development, in north and south. «Cool, so what's the problem?»

The answer is, that this reality poses a fundamental threat to today's business model of the knowledge and culture industries (starting from the music label and Hollywood, via publishers, up to software vendors). Powerful commercial interests are at stake as «knowledge» (the fourth factor of production) will become ever more important in the 21st century. Accordingly, «piracy» and «file-sharing» are attacked with all means. At the core lies the question about the design of property in digital assets. For that, we apply a concept of «intellectual property», which is several hundred years old and does not address digital reality in an adequate manner, sometimes leading to absurd situations. Its original goal seems to get forgotten: to help society develop by spreading knowledge as much as possible.

Using the PC becomes the new cultural technique of the 21st century. In contrast to «reading, writing and arithmetics», this new cultural technique cannot exist in isolation, but depends on a hard- and software infrastructure. This dependency extends to the provider of the infrastructure, who can define technical rules, which can take away or restrict the user's freedom. Even advanced users may have difficulties in recognizing these, often hidden, restrictions and in evaluating their societal relevance. But exactly these invisible consequences we need to understand and investigate, because they decide about access, distribution and usage of digital knowledge.

Comparative to the environmentalist movement of the 60s and 70s, a growing political movement for «Free Software» exists today, with «GNU/Linux» as its most popular symbol. The movement fight against treating software code as private property but as a cultural good available to all without private interests. Based on the success of the Free Software movement, new initiatives extend the concepts to other domains (e.g. scientific knowledge, music)... As a «teaser» to the lecture, you are invited to read the essay «ETH Zurich - A Pioneer in Digital Sustainability!». It can be downloaded from www.essays2030.ethz.ch.

More on teach.digisius.info starting from September. Stay tuned.

**Prerequisites / Literature**

- Slides and other material (both usually in English) will be made available on a weekly basis as the lecture proceeds.
- Content of the following books is covered (PDFs freely available online):

**Further literature**

- 1 (gen.) Chris DiBona et al., Open Sources: Voices from the Open Source Revolution, O'Reilly, 1999.
Abstract
This course focuses on the conditions under which cooperation in international environmental politics emerges and the conditions under which such cooperation and the respective public policies are effective and/or efficient.

Objective
The objectives of this course are to (1) gain an overview of relevant questions in the area of international environmental politics from a social sciences viewpoint; (2) learn how to identify interesting/innovative questions concerning this policy area and how to answer them in a methodologically sophisticated way; (3) gain an overview of important global and regional environmental problems.

Content
This course deals with how and why international cooperation in environmental politics emerges, and under what circumstances such cooperation is effective and efficient. Based on theories of international political economy and theories of government regulation various examples of international environmental politics are discussed: the management of international water resources, the problem of unsafe nuclear power plants in eastern Europe, political responses to global warming, the protection of the stratospheric ozone layer, the reduction of long-range transboundary air pollution in Europe, the prevention of pollution of the oceans, etc.

The course is open to all ETH students. Participation does not require previous coursework in the social sciences.

After passing an end-of-semester test (requirement; grade 4.0 or higher) students will receive 3 ECTS credit points. The workload is around 90 hours (meetings, reading assignments, preparation of test).

Lecture notes
Visiting students (e.g., from the University of Zurich) are subject to the same conditions. Registration of visiting students in the web-based system of ETH is compulsory.

Assigned reading materials and slides will be available at http://www.ib.ethz.ch/teaching.html (select link 'Registered students, please click here for course materials' at top of that page). Log in with your nethz name and password. Questions concerning access to course materials can be addressed to Mike Hudecheck (Mike.Hudecheck@student.ethz.ch.). All assigned papers must be read ahead of the respective meeting. Following the course on the basis of on-line slides and papers alone is not sufficient. Physical presence in the classroom is essential. Many books and journals covering international environmental policy issues can be found at the D-GESS library at the IFW building, Haldeneggsteig 4, B-floor, or in the library of D-USYS.

Literature
Assigned reading materials and slides will be available at http://www.ib.ethz.ch/teaching.html (select link 'Registered students, please click here for course materials' at top of that page). None

851-0705-02L Environmental Law: Topics and Case Studies
W 2 credits 2S C. Jäger

Abstract
Does not take place this semester. Number of participants limited to 20.

Prerequisites: Environmental Law: Conceptions and Fields (851-0705-01L) offered in spring semester.

Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

Lecture notes
Den Studierenden werden Unterlagen zur juristischen Methoden- und Quellenlehre sowie zum Inhalt und Ablauf des Kurses zu Beginn der Veranstaltung kostenlos abgegeben.

Literature
Rechtsgrundlagen, Literatur und Gerichtsentscheide werden themenspezifisch selber rechekicht, unter Mithilfe und Beratung des Dozenten.

Prerequisites / notice
Die Veranstaltung erfordert die Bereitschaft, sich aktiv und selbständig mit einer selbstgewählten Fragestellung oder einem eigenen Fallbeispiel aus dem Gebiet des Umweltrechts und allenfalls aus Schnittstellengebieten auseinanderzusetzen. Damit die Interaktivität und die Begleitung der Teams gewährleistet werden kann, ist die Teilnehmerzahl auf maximal 16 Personen beschränkt. Es handelt sich um eine Vertiefungsveranstaltung. Der Besuch der Vorlesung "Umweltrecht: Konzepte und Rechtsgebiete" (851-0705-01) ist Voraussetzung.

851-0707-00L Space Planning Law and Environment
W 2 credits 2G O. Bucher

Abstract
Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

System of swiss planning law, Constitutional and statutory provisions, Space planning and fundamental rights, Instruments, Application, legal protection, enforcement, Practical training.

Objective
Basic understanding of nature and function of space planning from a legal point of view. Basic knowledge of space planning instruments, relationship between space planning and constitutional law (especially property rights), solving of practical cases.

Content
The Vorlesung basiert wesentlich auf der Mitwirkung der Studenten. Es finden 3 Sitzungen im Hörsaal statt, in welchen sich in der Praxis stellende Probleme erörtert werden. Die Vorbereitung auf die jeweiligen Sitzungen erfolgt an Hand von Fallbeispielen, die aus dem Raumplanungsbereich und der Baurecht, Lösungen von Praktikumsfallen mit je genügender Leistung für die Erlangung der KP. Als Lernhilfe werden Anleitungen und insbesondere ein Musterfall mit Musterlösung zur Verfügung gestellt.

W 2 credits 2V M. Huser

Particularly suitable for students of D-ARCH, D-BAUG, D-USYS

Property Law for Geometers: Land Registry and Geoinformation Law

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 676 of 1571
Abstract
Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).

Objective
Overview of the legal norms of land registry and surveying law.

Content
Basic principles of material and formal land registry law, components of the land register, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of geometer. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.

Lecture notes
Abgegebene Unterlagen: Skript in digitaler Form

Literature
- Meinrad Huser, Schweizerisches Vermessungsrecht, unter besonderer Berücksichtigung des Geoinformationsrechts und des Grundbuchrechts, Beiträge aus dem Institut für schweizerisches und internationales Baurecht der Universität Freiburg/Schweiz, Zürich 2014
- Meinrad Huser, Datenschutz bei Geodaten

Prerequisites / notice
Requirements: Property Law (12-722)

<tr>
<td></td>
<td>Zurich holds huge scientific collections. They contain objects from around the world, some of them dating back to the 18th century. This interdisciplinary seminar combines perspectives from the history of science and from current scientific disciplines. What do these objects tell us about Zurich’s place in the global history of science? What potentials do old collections hold for scientists today? Among them are constructivist approaches that seek to understand scientific knowledge not primarily as a system of objective truths, but rather as an outcome of human ‘constructions’. Other approaches deal with the problem of how scientific objects are related to systems of power and oppression, namely in the case of objects collected during the time of European colonialism overseas. Secondly, students will become familiarized with how old collections can yield new insights for current scientists working, e.g., on questions of ecology. Thirdly, the seminar shall serve as a platform to discuss ways of dialogue and possible collaboration between these different approaches. Students will be expected to read theoretical texts and case studies during semester, participate in discussions with external experts (historians, curators, and scientists), and to write a summarizing essay at the end of the term.</td>

701-0727-00L Politics of Environmental Problem Solving in W 2 credits 2G U. Scheidegger
Abstract

The course focuses on processes and drivers of decision-making on natural resources management issues in developing countries. It gives insights into the relevance of ecological aspects in developing countries. It covers concepts, instruments, processes and actors in environmental politics at the example of specific environmental challenges of global importance.

Objective

After completion of the module, students will be able to:
- Identify and appraise ecological aspects in development cooperation, development policies and developing countries' realities
- Analyze the forces, components and processes, which influence the design, the implementation and the outcome of ecological measures
- Characterize concepts, instruments and drivers of environmental politics and understand, how policies are shaped, both at national level and in multilateral negotiations
- Study changes (improvements) in environmental politics over time as the result of the interaction of processes and actors, including international development organizations
- Analyze politics and design approaches to influence them, looking among others at governance, social organization, legal issues and institutions

Content

Key issues and basic concepts related to environmental politics are introduced. Then the course predominantly builds on case studies, providing information on the context, specifying problems and potentials, describing processes, illustrating the change management, discussing experiences and outcomes, successes and failures. The analysis of the cases elucidates factors for success and pitfalls in terms of processes, key elements and intervention strategies.

Different cases not only deal with different environmental problems, but also focus on different levels and degrees of formality. This ranges from local interventions with resource user groups as key stakeholders, to country level policies, to multi- and international initiatives and conventions. Linkages and interaction of the different system levels are highlighted. Special emphasis is given to natural resources management.

The cases address the following issues:
- Land use and soil fertility enhancement: From degradation to sustainable use
- Common property resource management (forest and pasture): Collective action and property rights, community-based management
- Ecosystem health (Integrated pest management, soil and water conservation)
- Payment for environmental services: Successes in natural resources management
- Climate change and agriculture: Adaptation and mitigation possibilities
- Biodiversity Convention: Implications for conservations and access to genetic resources
- Biodiversity as a means for more secure livelihoods: Agroforestry and intercropping
- The Millennium Development Goals: Interactions between poverty and the environment
- Poverty and natural resources management: Poverty reduction strategies, the view of the poor themselves
- Food security: Policies, causes for insecurity, the role of land grabbing
- Biofuels and food security: Did politics misfire?
- Strategy development at global level: IAASTD and World Development Report 2008

Notes

Information concerning the case studies and specific issues illustrated therein will be provided during the course (uploaded on Moodle).

Prerequisites / notice

The performance assessment will consist of an individual essay to be written by each student based on at least five references in addition to the sources provided in the course. Students can choose from a list of topics. Criteria for assessment will be communicated at the beginning of the course.

701-0743-01L Law and Natural Resources

W 2 credits 2V

Abstract

This course teaches the possibilities and limits of the law in order to protect natural resources and landscapes against harm and nuisance. The learning concept is based on the co-ordinated implementation of the relevant legislations. The complexity of the legal situation will be discussed by analyzing virtual and real law cases and their implementation and planning.

Objective

The students know the opportunities and restrictions which are given by the law when using natural resources. They have insights into the complex environmental legal system and their application in concrete cases. The students are able to formulate typical legal questions, to understand the argumentation of courts and to solve simple legal problems with respect to environmental problems.

Content

- Waldrecht - Natur- und Landschaftsschutzrecht - Wasserrecht - Raumplanungsrecht - Umweltschutzrecht - Verfahrensrecht

Unterrichtssprache: Deutsch

Lecture notes

Den Studierenden werden Unterlagen wie eine Übersicht über den behandelten Stoff auf PP-Folien, typische Gerichtsentscheide, Griffel, A.; Raumplanungs- und Baurecht in a nutshell, Dike Verlag, Zürich/St. Gallen 2012

Literature

Griffel, A.; Raumplanungs- und Baurecht in a nutshell, Dike Verlag, Zürich/St. Gallen 2012

Prerequisites / notice

701-0703-00L Environmental Ethics

W 2 credits 2V

Abstract

The lecture begins with an introduction to applied ethics in general. The main focus is on environmental ethics. Students learn to handle important concepts and positions of environmental ethics. They achieve a deeper understanding of these concepts and positions in applying them to ecological problems and discussing them in case studies.
Environmental History - Introduction and Overview

Objective
On completion of this lecture course you will have acquired the ability to identify and process general and environmental ethical problems. You will be capable of recognising and analysing environmental ethical problems and of working towards a solution. You will have acquired a fundamental knowledge of standpoints and argumentations to be found within the field of environmental ethics and will have practised these in small case studies.

Content
- Introduction to general and applied ethics.
- Overview and discussion of ethical theories relevant to the environment.
- Familiarisation with various basic standpoints within environmental ethics.
- Cross-section topics, such as sustainability, intergenerational justice, protection of species, etc.
- Practising of newly acquired knowledge in case studies (protection of species, climate change, etc.)

Lecture notes
Summaries of the individual sessions will be distributed, including the most important theories and keywords; reading list.

In the part of the course serving as an introduction to general and applied ethics, we shall be using the following textbook: Barbara Bleisch/Markus Huppenbauer: Ethische Entscheidungsfundung. Ein Handbuch für die Praxis, 2nd Edition Zürich 2014

Literature
- Andrew Light/Holmes Rolston III, Environmental Ethics. An Anthology, 2003
- John O'Neill et al., Environmental Values, 2008
- Klaus Peter Rippe, Ethik im ausserhumanen Bereich, Paderborn (mentis) 2008

Prerequisites / notice
The procedure for accumulating CP will be explained at the start of term.

I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

701-0731-00L Environmental Behavior in Social Context

Abstract
This introductory class in the environmental social sciences covers topics such as environmental behaviour, environmental concern, social dilemmas and social norms.

Objective
Basic knowledge of the environmental social sciences

Content
Overview on current fields of research and their relevance for practical application

Lecture notes
- Marcus Düwell et. al. (Hrg.), Handbuch Ethik, 2. Auflage, Stuttgart (Metzler Verlag), 2006
- Johann S. Ach et. al. (Hrg.), Grundkurs Ethik 1. Grundlagen, Paderborn (mentis), 2008

Prerequisites / notice
The procedure for accumulating CP will be explained at the start of term.

I expect participants to be motivated and contribute to discussions, keeping the course interesting and lively.

701-0747-00L Environmental Policy of Switzerland I

Abstract
This course presents the basics of policy analysis and the specific characteristics of Swiss environmental policy. Policy instruments, actors and processes are addressed both theoretically as well as by means of current Swiss environmental policy examples.

Objective
Beyond acquiring basic knowledge about policy analysis, this course teaches students how to analytically address current and concrete questions of environmental policy. Through exercises the students learn about political science concepts and frameworks as well as real-life political decision-making processes. The well-grounded examination of complex political conflict situations is an important precondition for the entry into the (environmental policy) workforce or a future research career.

Content
The processes of change, overuse or destruction of the natural environment through humans have historically placed high demands on social and political institutions. In the interplay between the environment, society and economy, the environmental policy field encompasses the sum of public measures that have the goal to eliminate, reduce or avoid environmental degradation. The course systematically presents the basics of environmental policy instruments, actors, programs and processes as well as their change over time. A key aspect is the distinction between politics and political science and specifically environmental policy.

Lecture notes

Prerequisites / notice
The detailed semester program (syllabus) is made available to the students at the beginning of the semester.

701-0791-00L Environmental History - Introduction and Overview

Abstract
Our society faces a serious ecological crisis. Of what historical dimension is this crisis? How have human societies already in earlier times changed their environment, and, consequently, perhaps also ours? What were the main ecological challenges for societies and how did they change over time? And how did societies adapt to changing environmental conditions?

Objective
Introduction into environmental history; survey of long-term development of human-nature-interrelations; discussion of selected problems. Improved ability to assess current problems from a historical perspective and to critically interrogate one’s own standpoint.

Lecture notes

Prerequisites / notice

701-0985-00L Social Intercourse with Current Environmental Risks

Abstract
The lecture treats the social intercourse with risks of technical systems. The notion of risk and the perception of risk are discussed by case studies (e.g. nanotechnology) and socio-political instruments for decision-making are presented. Methods are presented that can be applied to deal with environmental risks and how they can be used for sustainable innovation.

Prerequisites / notice
Objective
- Getting acquainted to the extended risk concept
- Evaluation of the risks caused by technology within the societal context
- Knowledge about the mode science and society handle current environmental risks (examples gene- and nanotechnology)
- Knowledge about handling risks (e.g. precautionary principle, protection goal, damage definition, ethics)

Content
- Risks and technical systems (risk categories, risk perception, risk management)
- Illustration with case studies (nanotechnology)
- Implementation (politics, science, media, etc.)
- Decision making (technology assessment, cost-benefit analysis etc.)
- The role of the media
- prospects for future developments

Lecture notes
Copies of slides and selected documents will be distributed

Prerequisites / notice
The lecture is held biweekly (for 2 hours). The dates are 26.9., 3.10. (out of schedule), 24.10, 7.11, 21.11, 5.12, 19.12

<td>3G</td>
<td>I. Günther, K. Harttgen</td>
</tr>
</tbody>
</table>

Abstract
This course introduces students to key statistical methods for analyzing social science data with a special emphasis on causal inference and policy evaluation. Students learn to choose appropriate analysis strategies for particular research questions and to perform statistical analyses with the statistical Software Stata.

Objective
Students
- have a sound understanding of linear and logit regression
- know strategies to test causal hypotheses using regression analysis and/or experimental methods
- are able to formulate and implement a regression model for a particular policy question and a particular type of data
- are able to critically interpret results of applied statistics, in particular, regarding causal inference
- are able to critically read and assess published studies on policy evaluation
- are able to use the statistical software STATA for data Analysis

Content
The topics covered in the first part of the course are a revision of basic statistics and linear and logit regression analysis. The second part of the course focuses on causal inference and introduces methods such as panel data analysis, difference-in-difference methods, instrumental variable estimation, and randomized controlled trials mostly used for policy evaluation. The course shows how the various methods differ in terms of the required identifying assumptions to infer causality as well as the data needs. Students will apply the methods from the lectures by solving weekly assignments using statistical software and data sets provided by the instructors. These data sets will cover topics at the interface of policy, technology and society. Solving the assignments contributes to the final grade with a weight of 30%. Students are assisted in solving the assignments during the exercises session.

Language Courses ETH/UZH

Please be advised that your online-registration at the language centre has to be simultaneous (www.sprachenzentrum.uzh.ch) as otherwise your registration for the course will not be valid.

Abstract
This course targets B2/C1 French learners. It is not open to French native speakers.

Objective
The main objective of this course is to practice and improve the four language skills of participants (listening, speaking, reading and writing). Students will have to make a presentation in French on a complex subject, interact in a group, defend a point of view and answer to objections.

Abstract
This course is intended for students who have reached level B2. Participants will train their skills so that they may perform simple contributions during general debates.

Objective
The main emphasis is on spoken skills, with the aim of enabling students to develop their own voice in expressing their views and developing arguments efficiently. The course also nurtures the ability to understand a general meaning in documents concerning aspects of society at large.

Abstract
With a textual approach this course focuses on some complex topics such as the past tense, indirect speech and the subjunctive. The course does not aim at a systematic revision of grammar.

Objective
This course focuses on some complex topics such as the past tense, indirect speech and the subjunctive. The course does not aim at a systematic revision of grammar.
Participants will be expected to make a contribution of CHF 5.00 at the beginning of the course to cover the costs of photocopying.

The aims of the course are to:

- Introduce students to a variety of literary texts in English
- Help students to develop critical, creative, and personal approaches to analyzing literary texts and by extension become more astute readers in general
- Provide students with an opportunity to enhance and practice their argumentation skills in discussions and in writing
- Improve the ways in which students organize their ideas and arguments in a sustained, coherent, and logical manner
- Improve students grammatical and lexical repertoire through reading and discussion
- Impart a life-long interest in literature written in English

A variety of texts, including classical and modern poetry, short stories, and one short novel, are analyzed. Classwork is interactive, with pair, small group, and plenary discussions. Writing tasks are designed to help students produce coherent and well-structured texts. Lexical work helps students to increase their range of vocabulary and allow them to apply freshly acquired vocabulary in speaking and writing.

Other requirements:

- All participants are expected to
  - Attend regularly throughout the semester
  - Participate actively in discussions, group work, and pair work
  - Do at least 3 hours' work a week outside the classroom, including reading and writing
  - Complete written assignments during the semester

NB: This is Part I of a two-part course. Part 2 runs in the spring semester. Each part can be taken on its own. However, a separate enrolment is required for each part.

Important note:

The course is only open to students who register on-line via the Sprachenzentrum website during the registration period (review the SZ website) and who receive on-line confirmation that they have been accepted on this course.

**851-0832-11L Advanced English for Academic Purposes (C1-C2)**

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.unizh.ch).

**Objective**

Participants should already have reached a level of C1 (advanced), as defined in the Council of Europe Global Scale. The course is also open to participants whose level is above C1.

The course aims to train and develop linguistic skills at Mastery level, with a focus on formal and informal lexis, on listening and oral communication skills, increasing fluency, accuracy and complexity of spoken language; writing well-structured descriptive texts and argumentative essays, with the aim to fulfill the language requirements for study at an English speaking university or follow University Masters Courses held in English.

The course covers: a review of vocabulary building and extension, including the Academic Word List and formulaic language; input on academic reading, writing and listening comprehension; and improvement of grammatical accuracy. Special emphasis is placed on individual speaking, argumentative discourse and group discussions, to enhance fluency and confidence. Where possible, students will be asked to reflect on how the course content relates to their own academic disciplines.

Prerequisites / notice

- Participants will be expected to make a contribution of CHF 5.00 at the beginning of the course to cover the costs of photocopying.
- Attend regularly throughout the semester;
- Take part actively in class discussions, group work and pair work;
- do at least 2 hours' work per week outside class, including reading and writing;
- Use the electronic tools provided.
- Complete a portfolio report of four key tasks, aiming to practice the skills focussed on during the semester.

A language certificate from the Language Center is issued on successful completion of the course; Bachelor and Master students of the ETH will receive D-Gess credits and a mark, awarded electronically at the end of the semester. Details will follow at the beginning of the semester.

The course is only open to students who register on-line via the Sprachenzentrum website (in February 2015, please review the SZ webpage) and who receive on-line confirmation that they have been accepted on this course.

**851-0886-00L New Zealand Through Literature and Film (C1-C2)**

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.unizh.ch).

The course is designed for Bachelor and Master students from all disciplines who wish to gain an insight into New Zealand culture, history, society, and politics through New Zealand's rich tradition in literature and film while improving their English language skills further towards C2.
Objective  
The aim is to explore the following questions through texts and film to introduce students to New Zealand and, in a broader sense, to raise their awareness of some of the key issues affecting former colonies from early settlement to the present day: What did New Zealand mean to its early settlers? Where did the settlers come from? How did they live? What is the Treaty of Waitangi, and what is its status today? What does it mean to live in multi-cultural New Zealand today?

Students will learn the discourse used, and issues under consideration, in the analysis and discussion of poetry, prose, and film. They will become aware of various ways of “reading” texts and film, and will improve their skills in planning and writing cohesive essays in which they marshal their views in a convincing and formal manner. Overall, the aims are that students become more discerning readers, improve their skills in expressing their views in written and spoken form clearly and concisely, and gain an understanding of the importance of literature and film to the development of a uniquely New Zealand identity.

Content  
The main activity of the course is the visioning of films in Spanish (Spain and Latin America), giving an emphasis on a specific thematic, geopolitical and cultural spectrum of the Spanish language. It also aims the participant to get familiarized with topics, images, customs, and syntactic competence as well as their understanding of the New Zealand culture by means of written exercises and class discussions.

The course aims to introduce a specific problematic in a Spanish-speaking region or country through the cinema, taking into account the geopolitical and cultural spectrum of the Spanish language. It also aims the participant to get familiarized with topics, images, customs, and syntactic competence as well as their understanding of the New Zealand culture by means of written exercises and class discussions.

The course gives a roughly chronological view of New Zealand’s literary heritage, from Maori settlement to the present day, using selected poems, a short novel, short stories, articles, and films. A key focus is the way New Zealanders’ notion of their own identity has shifted over the years, as expressed by the country’s film-makers and writers working in English, and to a limited degree, in Maori (English translations are provided).

Lecture notes  
no script

Literature  
Handouts, online resources, Moodle platform, and DVDs of a wide range of NZ films (available in the Self-Access Center – NB: No hobbits!)

Prerequisites / notice  
Other requirements:  
All participants are expected to  
* Attend class regularly throughout the semester  
* Participate actively in discussions, group work, and pair work  
* Do at least 3 hours’ work a week outside the classroom, including reading, writing, and watching films  
* Work consistently on their portfolio throughout the semester

Important note:  
The course is only open to students who register on-line via the Sprachenzentrum website during the registration period (review the SZ website) and who receive on-line confirmation that they have been accepted on this course.

851-0846-01L Spanish: Grammar and Pragmatic Communication (B2.1)  
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract  
The course is aimed for students and staff having passed level B1.2 and for those who know and correctly use all indicative tenses, as well as the subjunctive in its present and perfect forms. On the other hand, they should be able to make themselves fluently understood in every day conversations and read intermediate level texts.

Objective  
The course aims towards integrating grammar and oral/written communication. We will present new grammar topics and will introduce them into the oral practice.

Content  
The most important grammatical topic will be the imperfecto and pluscuamperfecto of subjunctive in subordinate structures. Free and directed discussion will be enhanced. We will read diverse text forms from Spanish and Latin American Authors.

Lecture notes  
The teacher will provide the script. A fee of CHF 4.00 for photocopies be collected.

Prerequisites / notice  
The certificate and ETCS points are granted to the students who have complied with the following requirements:

* Participation in the weekly lessons (maximum 3 absences)
* A minimum of 2 hours of self study (reading and grammar exercises)
* Presentation of one of the chosen texts
* Passing of a final exam

Important information for ETH students: The enrollment in this course at the Sprachenzentrum does not enrol the student automatically for the granting of the D-GESS points. Please inform yourself.

851-0846-02L Spanish: Language and Cinema (B2-C1)  
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract  
The main activity of the course is the visioning of films in Spanish (Spain and Latin America), giving an emphasis on a specific thematic, vocabulary, conversation and debate.

Objective  
The course aims to introduce a specific problematic in a Spanish-speaking region or country through the cinema, taking into account the geopolitical and cultural spectrum of the Spanish language. It also aims the participant to get familiarized with topics, images, customs, dialogs and vocabulary, carrying out an observation and then an analysis and comment of these elements.

Content  
We work out some interaction forms focused on observation, presentation and debate. Each student does a presentation of one of the films chosen, pointing out aspects that give path to a discussion. On the other hand, he/she creates a specific glossary to be used during the lesson in which the film will be discussed.

Literature  
The chosen films can be seen / borrowed from the Selbstlernzentrum (http://www.sprachenzentrum.uzh.ch/slz/index.php).

Prerequisites / notice  
The certificate and ETCS points are granted to the students who have complied with the following requirements:

* Participation in the fortnightly lessons (maximum 1 absence)
* The visioning of at least 80% of the films
* Preparation (glossary and thematics) of one of the chosen films
* Entries in the blog and forum of the course

Important information for ETH students: The enrollment in this course at the Sprachenzentrum does not enrol the student automatically for the granting of the D-GESS points. Please inform yourself.

851-0826-04L Italian: Language and Literature (B2-C1)  
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract  
The course aims to approach the Italian language through literature. While reading short stories the participants will deepen their linguistic and syntactic competence as well as their understanding of the Italian culture by means of written exercises and class discussions.

Objective  
The course targets are:  
- to understand complex texts namely literary short stories.  
- to capture lexical and syntactic meanings in texts.  
- to be able to express oneself in a clear and differentiated way in using formulations and structures taken from the texts.  
- to become acquainted with the cultural and social realities characteristic of Italy as described in the short stories.
This course is the first part of a language course which runs over four semesters, covering levels A1 and A2 of the Global European Practice of oral communication and study of basic vocabulary and grammar; focus on noun and adjective structures, personal and

The course covers the areas work, home and personal interests; everyday situations and conversations in hotel, restaurant and shops; Greek Basic Course Part III

Participants can talk and write about themselves and everyday topics using simple sentences. They can take part in simple daily conversations, understand and write simple messages, describe an event in a time sequence, and express wishes, assumptions, and recommendations.

4U

Modern Greek Language I (A1.1) W 2 credits 2U A. Rassidakis Kastrinidis

Abstract

This course is the first part of a language course which runs over four semesters, covering levels A1 and A2 of the Global European Framework. Modern Greek Language I is designed for students who have no or very little command of Modern Greek and covers level A1.1.

Objective

Practice of oral communication and study of basic vocabulary and grammar; focus on noun and adjective structures, personal and possessive pronouns, active verbs (Present Tense) and the use of adverbs. Initiation to web-based activities in Greek and enhancement of interest and activities in Greek language and culture.

Content

- The course book by D. Dimitra & M. Papacheimona, Ellinika tora 1+1 (Greek now 1+1, including 2 audio-CD), units 1-5, Athens 2002, and workbook one. Tetradio Askiseon 1, have been ordered for the course members and are available at "Bücherladen der Stiftung Zentralstelle der Studentenschaft", Schönberggasse 2.
- Web-based activities to support and enhance classroom teaching will be accessible via Moodle, an electronic platform offered by LET of "Zentralstelle der Studentenschaft", Schönberggasse 2.
- A set of 1400 vocabulary cards for the entire coursebook (Ellinika tora 1+1) is available and can be ordered at the beginning of the semester.
- Additional course materials and handouts will  be distributed in class.
- A set of 1400 vocabulary cards for the entire coursebook (Ellinika tora 1+1) is available and can be ordered at the beginning of the semester.

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 683 of 1571
Prerequisites / notice

All course participants are expected to attend regularly and participate actively in class do at least 3 hours’ work at home submit all their written work for correction commit themselves to online-activities in the Moodle-LET online-classroom pass all semester-tests.

All candidates who fulfill the course requirements will receive a language certificate, issued by the Language Center, awarding 2 ECTS credits. D-GESS students will receive on-line credit points and marks, in addition to the LC-certificate.

The course is only open to students who register on-line via the Sprachenzentrum-website and who receive online confirmation that they have been accepted on this course. Please note the limited online-registration period! More Information concerning the courses on http://www.sprachenzentrum.uzh.ch/index.php

851-0885-10L Modern Greek Language III (A2.1) W 2 credits 2U A. Rassidakis Kastrinidis

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract

This is Part III of the Modern Greek language course, running over four semesters. Modern Greek III covers level A2.1 of the Global European Framework and is designed for students who have already attended courses I and II at the Sprachenzentrum UNI/ETHZ, or whose language proficiency is equivalent to level A1.2.

Objective

Extensive vocabulary work (approx. 400 new words); reading of elementary texts; additional practice through speaking only Greek in class; improving listening comprehension; writing short essays (about the past and the future, describing events and personal experience).

Grammar work will focus on verbs (simple past, simple future, subjunctive and imperative; active and passive voice).

Content

Challenging everyday situations; discussion of specific topics (eg. describing pictures and photographs, talking about daily chores); elementary listening comprehension practice (dialogues, talking about events, advertisements); reading comprehension (advertisements, cooking recipes, poems).

Lecture notes

- Audio-visual materials and handouts (photocopies) will be used. Photocopies will be distributed during the semester.
- Web-based activities can be accessed via Moodle platform, supported by LET of ETHZ (http://moodle.let.ethz.ch/).

Prerequisites / notice

All course participants are expected to attend regularly and participate actively in class do at least 3 hours of individual study at home take part actively in online-activities in the Moodle-LET online-classroom submit their written work for correction (Semester-Portfolio) pass the semester-test

All participants who fulfill the course requirements will receive a language certificate, issued by the Language Center, awarding 2 ECTS credits. D-GESS students will receive on-line credit points and marks, in addition to the LC-certificate.

The course is only open to students who register on-line via the Sprachenzentrum-website and who receive on-line confirmation that they have been accepted on this course. Please note the limited online-registration period! More Information concerning the courses on http://www.sprachenzentrum.uzh.ch/index.php

All Modern-Greek-courses at the Sprachenzentrum do not exceed the beginners’ level and therefore are not suitable for greek native speakers. Non-native speakers of greek origin please contact Ms. Rassidakis before enrolling in order to check if the course is not too easy for them.

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 684 of 1571
This course is a sequel to the one-year basic course. Students' level should come up to the level of the basic course (two terms, with two lessons per week). This corresponds to the level A1 of the "European Framework". In case of doubt please contact the teacher prior to the beginning of the term.

Registration for the course at sprachenzentrum.uzh.ch is obligatory! The course is supported by the learning platform OLAT.

The students learn the principles of Polish pronunciation and intonation as well as basic Polish grammar needed to master the course goals.

The course covers the four core skills of listening, speaking, reading and writing. We focus on oral communicative skills as well as pronunciation and grammatical structures.

This is a course for beginners who have no prior knowledge of Polish. Therefore no diagnostic test is required.

Students learn to master a set of basic situations in developing communication skills linked with every day life. Special attention will be given to features of academic culture.

Everyday situations will be covered, for instance introducing yourself and others, living and working in an academic context, personal interests), to ask for information and services (in restaurants, coffeeshops, shops) etc.

The course focuses on speaking, reading comprehension and auding as well as on cultural competence on a A2.2+ level according to the "European Framework".

The students learn the principles of Polish pronunciation and intonation as well as basic Polish grammar needed to master the course goals.

The assessment will embrace:
- a portfolio including exercises done throughout the semester
- a final test assessing the different skills trained.

Requirements for the award of 2 ECTS credits and:
- learning achievement assessed and documented as successful
- no more than 3 absences

851-0861-00L
Arabic I (A1.1) ■

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract
This course forms the first part (level A1) of a five semesters' Arabic course. Its aim is to acquire a basic competence on the level of speaking, hearing skills, and also reading and writing of the Arabic script.

Objective
The participants will be able to adequately respond to selected situations of everyday life. Conversations in everyday life and typical situations while traveling will be taught and exercised. Another important focus is the learning of the Arabic script.

Content
Embedded into communicative situations we will work on the following contents: to greet, to present oneself, to talk about oneself (personal identity, occupation, place of living, etc.), simple telephone calls, to ask for information, to book a room. We will pay special attention to cultural aspects.

Literature
Arabisch Intensiv. Grundstufe. Landesspracheninstitut in der Ruhr-Universität Bochum; Busse Verlag (www.buske.de), 2011

851-0861-01L
Arabic I (A1.1) ■

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Abstract
This class aims at acquiring the elementary language competence on the level of speaking, listening and understanding as well as reading and writing of the Arabic script.

Objective
The participants are able to behave adequately in regard to language and culture in simple, but important everyday situations. Learning and practicing vocabulary and grammar are tailored to acquire sufficient confidence to meet elementary communication needs orally and in writing.

Content
The communicative needs which the practical contents and situations are designed to meet relate to: saying hello, asking about somebody's wellbeing, introducing each other, simple statements about objects and persons, asking for information and services. The participants are expected to do some of their homework on OLAT.

Lecture notes
All teaching material besides the reader will be distributed in the lessons and downloaded on OLAT.

Chinese I (A1.1) ■

Your course registration is only valid with a simultaneous online registration at the language center
Wir arbeiten mit folgendem Lehrmittel:

**Chinese III (A2.1)**
- This course is meant for all students and employees at the University and the ETH Zurich.
- Introduction to the modern standard Chinese language (Mandarin) and script, concentrating on basic vocabulary in Pinyin and Chinese characters, elementary grammar and conversation. The main focus will be on colloquial language.
- Chinês será treinado.

**Chinese II (A1.1)**
- Building on course Chinese I the students will learn to actively master a vocabulary of 300 words. In addition, the course will teach some of the basic grammatical patterns. Exercises in spoken Chinese covering a number of topics are also part of the course-work. The course aims to bring the participants up to level 2 of the new HSK (standardized international Chinese proficiency test).
- Exercícios de gramática básica serão realizados. O número de exercícios de fala em mandarim cobrindo vários tópicos também são parte do curso. O curso pretende levar os participantes até o nível 2 do novo HSK (ensaio internacional de proficiência em chinês).

**Japanese I (A1.1)**
- Elementary introduction to the Japanese language. Students acquire the basic language skills needed for everyday life communicative interactions.
- Introdução ao japonês. Os alunos adquirem as habilidades básicas de língua necessárias para interações diárias.

**Objective**

Level A1.1 of the Common European Framework of Reference for Languages (CEFR).

**Content**

For details see www.sprachenzentrum.unizh.ch

**Lecture notes**

Heinrich Reinfried, "Kompaktehrgang Japanisch" (available at the beginning of the course, later by mail to reinfried@asiaintensiv.ch; also available in English: "Concise course in Japanese")

**Abstract**

Elementary introduction to the Japanese language. Students acquire a basic vocabulary together with the most frequently used sentence structures, as well as the Hiragana and Katakana syllabaries. Reading and writing training includes use of the computer for Japanese text editing.

**Objective**

Everyday conversation / Reading simple texts written with Hiragana and Katakana syllabaries / Writing simple texts about everyday topics using the Hiragana and Katakana syllabaries on the computer

**Content**

For details see www.sprachenzentrum.unizh.ch

**Lecture notes**

1. Heinrich Reinfried "Kompaktehrgang Japanisch" or "Concise Course in Japanese" (English Version)

This will be sold at the beginning of the course or can be ordered directly at www.asiaintensiv.ch.

This will be sold shortly before the beginning of the semester at book shops and the Studentenladen Zentrum (Schönberggasse 2, 8001 Zürich, Tel 044 634 45 03, laderzn@zsuz.ch.ch).

**Abstract**

Training in colloquial Japanese / Reading of common texts in Japanese / Application, consolidation and expansion of the basic vocabulary and sentence structures / Training in hearing

**Objective**

The participants consolidate and broaden the basic knowledge of the modern colloquial language in Japan. One of the focuses is on the acquisition of speech methods for important everyday standard situations. At the same time the grammar knowledge will be repeated and broadened. Higher reading skills will also be strived for by learning approx. 60 new Kanji.

**Content**

For details see www.sprachenzentrum.unizh.ch

**Lecture notes**

We will be using this textbook: "Japanisch Intensiv Grundkurs", LSI, Buske Verlag

**Abstract**

The focus of this course is on the reading of challenging original texts from Japanese media and Japanese contemporary literature. The texts are analyzed and discussed in terms of their content and linguistic features.

**Objective**

By reading selected original texts, students learn strategies for reading texts analytically. The aim is that they are able to handle Japanese sources independently, using appropriate tools.

**Abstract**

The general topic of the course is Augustus. On the basis of didactically prepared texts written by various Latin authors (including Sueton, Augustus) this enigmatic figure who became the first emperor of the Roman Empire is examined.

**Objective**

Students mostly prepare the texts at home for class discussion. Furthermore, important topics of basic grammar are reviewed (exercises). Participants reactivate, review, and improve their language skills (vocabulary, morphology, morphosyntax) by applying these skills to texts in and out of context.

**Prerequisites / notice**

No simultaneous online registration at the language center

**Abstract**

This language course is an introduction to Norwegian (Bokmål) as well as to the country and its culture.

**Objective**

By the end of the course, you will have read some easy Norwegian texts, have written your first own texts, and be able to conduct simple conversations.

**Prerequisites / notice**

European Global Scale grading: A2 (basic user)

You are recommended to take part in the tutorial offered for this course.

**Abstract**

No enrollment to this course at ETH Zurich. Book the corresponding module directly at UZH.

**Objective**

By the end of the course, you will have read some easy Norwegian texts, have written your first own texts, and be able to conduct simple conversations.

<td><strong>Objective</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>The course is targeted at advanced students who have taken an interest in gathering practical research experience in the field of Learning &amp; Instruction. In teams of two, students conduct their own research projects (planning, conducting, analyzing, interpreting, and presenting research); thus, the course requires a high amount of self-directed working. Students are personally advised, and supported in their research project, by one of the researchers serving as lecturers in this course. During the first half the semester, relevant methodological knowledge and skills are practiced during plenary meetings and in students’ independent reading (e.g. generating and testing research questions, designing experiments, and analyzing data in the field of Learning and Instruction)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>

<td>Learning goals include:</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Participants can illustrate and explain basic methods and concepts for research in the fields of Learning and Instruction, e.g. with the help of practical examples.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Participants can generate testable research questions for a topic relevant in the fields of Learning and Instruction.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Participants can design and conduct a study that is relevant for answering their research question.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Participants can summarize and evaluate the main results from a study in the field of learning and Instruction, with regard to the research question being asked.</td>

Please write an email for registration no later than September 1 to: barbara.vettiger@ife.uzh.ch

Simultaneous enrolment in Introductory Internship Geography (651-4219-01L), Practice Lessons for Didactics I an II (651-4219-02L) is compulsory.

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract

Fundamentals (theory and practice) of specialist subject teaching for high-school geography lessons.

Objective

The course introduces students to the practical side of geography teaching. Participants look into the understanding of this school subject over the course of time and learn:

- how to plan their teaching in the context of the valid curricula, including on an interdisciplinary basis,
- how geographical contents can be implemented in didactic and methodological terms so as to ensure that fundamental competences can be imparted to pupils (knowledge, skills, attitudes), with a view to university studies as well,
- how to foster pupils in such a way that they can think independently in terms of spatial competence and can act in a responsible manner.

Content

Thematic Schwerpunkte

- Einführung in die Theorie der Geografliedidaktik.
- Bildungsauftrag der Geografie an Mittelschulen.
- Interesse der Lernenden am Geografieunterricht.
- Unterrichtsgestaltung und -vorbereitung: Sachanalyse, lernzielorientierte Unterrichtsplanung; Didaktische Analyse; Einführung in die Gestaltung von Lernarrangements.
- Mediendidaktik (Arbeiten mit Bildern und Karten).
- Planung einer Unterrichtseinheit (Struktur - Prozess - Verlauf).

Lernformen

Theoretische Konzepte werden präsentiert und an Beispielen diskutiert. Die Studierenden setzen sich mit Methoden aktiv auseinander (z.B. Lernpuzzle, Fallstudie sowie Sozial- und Aktionsformen) und reflektieren dabei ihre eigenen Schulerfahrungen im Fach.

Lecture notes

Unterlagen werden abgegeben.

Lecture notes

Weitere Literaturangaben auf Liste.

Prerequisites / notice

Fachdidaktik I ist gleichzeitig mit dem Einführungspraktikum zu belegen. Sie gilt als Voraussetzung für Fachdidaktik II und III, sowie die FWV II und FWV III. Fachdidaktik II findet nur im Sommersemester statt.

Fachdidaktik III kann parallel zur Fachdidaktik II im Sommersemester oder parallel zur FWV III (Ringvorlesung und FD-Seminar) im Herbstsemester belegt werden.

651-4124-00L Examination Didactics ■

Prerequisites: Successful completion of Geography Didactics of Geography Teaching I, II, III, IV as well as FV I, II, III, Introductory Internship and Internship.

Content

Geprüft werden:

Fähigkeit, Geografie-Unterricht mit Bezug zur eigenen Praxis kritisch und unter verschiedenen Blickwinkeln (inhaltlich, methodisch-didaktisch) zu betrachten, Lernarrangements mit Bezug zum heutigen Bildungs- und Schulfachverständnis zu gestalten und kritisch zu hinterfragen sowie deren möglichen/erzielten Wirkungen zu diskutieren und zu begründen; Unterrichtssituationen zu reflektieren und zu evaluieren.

Unterlagen aus der Fachdidaktischen Ausbildung

Fachdidaktischer Text nach eigener Wahl

Lecture notes

Unterlagen aus der Fachdidaktik

Literaturlisten aus den Fachdidaktiken Geographie I-III

Prerequisites / notice

Die Fachdidaktik-Prüfung ist eine 15 minütige mündliche Prüfung. Sie findet am selben Tag wie die praktische Prüfung (2 Prüfungslektionen plus Kolloquium) statt.

651-4120-00L Geography Didactics IV: Mentored Project ■

Prerequisites: successful participation in Geography Didactics of Geography Teaching I+II+III (651-4239-00L, 651-2500-00L and 651-4118-00L).

Abstract

Mentorierte Arbeit mit Bezug zur Fachdidaktik

Objective

selbständige, theoriegestützte Auseinandersetzung mit konkreter, praxisbezogener Fragestellung zum Geografieunterricht.

Content

selbständige, mentorierte Arbeit zu einem Thema aus der Fachdidaktik mit direktem Bezug zur Lehrpraxis im Fach Geografie (z.B. zu eigenen Übungslektionen und Praktikum oder zur Unterrichtsforschung).

Das Thema wird zu Beginn mit der Mentorin/ dem Mentor festgelegt.

Prerequisites / notice

Frühstes parallel zum Fachdidaktik- Modul III zu belegen (Pflicht für ETH-Studierende)

651-4118-00L Geography Didactics of Geography Teaching III (University of Zurich)

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: 090GG3

Limited number of participants.

Prerequisites: successful participation in Geography Didactics of Geography Teaching I+II (651-4239-00L and 651-2500-00L).

Abstract

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: 090GG3

Limited number of participants.

Prerequisites: successful participation in Geography Didactics of Geography Teaching I+II (651-4239-00L and 651-2500-00L).
Abstract
The Subject Didactics III course unit comprises two blocks: one "Specialisation" block with key subjects from courses I and II and a block on "Information technology in geography teaching" with specific applications.

Objective
In Subject Didactics III, students take a more in-depth, application-oriented look at geography. Students - learn about the options for using ICT to design their geography teaching and also the integral furtherance of pupils' IT competence. They plan an IT lesson, hold it and then evaluate it. - identify the opportunities and limits of illustrating their geography teaching with films, models and experiments. - look into the significance of the subjective theories for learning success and failure and discuss tuition options for a concept change (geographical case studies).

Content
Inhalt
Fachdidaktik III Block "Vertiefung" (1/2 Semester)
- Planung von Unterrichtseinheiten.
Fachdidaktik III Block "ICT im Geografieunterricht" (1/2 Semester)
- Fachspezifische Einsatzmöglichkeiten, Unterrichtshilfen, konkrete Anwendungen und Resultate an Beispielen kritisch reflektieren.

Lernformen
Theoretische Konzepte werden vorgestellt und an typischen Beispielen aus der Praxis illustriert. Beispiele im IT-Bereich werden von Studierenden selbst erarbeitet ("Werkstatt"), präsentiert und diskutiert.

Lecture notes
Unterlagen werden abgegeben.

Literature

Prerequisites / notice
Fachdidaktik III kann im Frühlingsemester parallel zu Fachdidaktik II besucht werden, aber erst nach Fachdidaktik I.

In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter-based and didactic skills they have acquired in the course of their training.

On the basis of a specified topic, the candidate shows that they are in a position
- to develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle
- to analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

Die Studierenden erfahren das Lektionsthema in der Regel 14 Tage vor dem Prüfungstermin. Von der zuständigen Lehrperson erhalten sie Informationen über den Wissensstand der zu unterrichtenden Klasse und können sie vor dem Prüfungstermin besuchen.

Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie spätestens 2 Tage vor der Prüfung (bis 18 Uhr) den beiden Prüfungsexperten ein.

Die gehaltene Lektion wird kriteriumiensiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/ der Kandidatin über die gehaltene Lektion im Rahmen eines Kolloquiums (15 min).

Semester Paper within the Teaching Internship Geography (University of Zurich) (651-4137-00L) is compulsory.

Abstract
In the context of their teaching practice, students compile a portfolio in which they analyse and document selected aspects of their teaching experience.

The provision of insight into their personal, selected and also theoretically-founded:
- study of tuition elements and the compilation of a personal method profile based on subject-didactics assignments.
- processing of key events/happenings experienced during their teaching or teaching practice period (e.g. specialist content; didactic planning, conducting teaching, interaction with the class or individual pupils; communication with the teacher responsible for the teaching practice) in line with the instructions and the advice given in the guide for practical professional training (IGB UZH).

Prerequisites / notice
Bitte bei der Prüfungsanmeldung den schriftlichen Nachweis erbringen, dass die ganze Ausbildung abgeschlossen ist.

Specialised Courses in the Respective Subject with an Educational Focus Geography (651-4237-01L) is compulsory.

It is recommended to attend the lecture series and seminar after Geography Didactics I - III.

Abstract
Current approaches to research which are of relevance to society are presented on the basis of examples and critically examined in respect of their significance for a high-school education in the subject of geography.

Objective
Students
- look at the subject knowledge in its full breadth, on the basis of current approaches to research and with the consideration of specific examples, thereby creating a specialised basis on which to critically examine specialist contents for the school subject of geography, as part of a general education, over the course of time.
- see whether and where current topics from the specialist subject (research) can be incorporated in secondary-school tuition.
- familiarise themselves with questions and forms of cognition-oriented, moderately constructivist tuition.
- can reflect on geography teaching in an aware and theory-based manner.

Content
Vorlesung:
In jeweils in sich geschlossenen Vorlesungen beleuchten Dozierende die gesellschaftliche Relevanz ihrer aktuellen Forschungsansätze an konkreten Beispielen aus der Physischen Geografie und den Erdwissenschaften, der Humangeografie sowie der Methodischen Geografie. Sie thematisieren dabei die Bedeutung der Ansätze für die Gesellschaft, die Auseinandersetzung mit räumlichen Fragestellungen und Problemlösungen und diskutieren die aus ihrem Forschungsansatz und den Ergebnissen resultierenden ethischen Fragen. Sie beleuchten damit die Breite des Fachverständnisses und legen das Fundament für die kritische Auseinandersetzung mit den allgemein bildenden Fachinhalten (Kompetenzen, Fachwissen, Einstellungen), die insbesondere in der gymnasialen Ausbildung im Fach Geographie vermittelt werden sollen.

Lecture notes
Zu jeder Vorlesung werden Folien/Unterlagen abgegeben.

Literature
Wird von den jeweils verantwortlichen Dozierenden zusammengestellt.

Prerequisites /
notice

Es wird sehr empfohlen, dieses Modul parallel zum Unterrichtspraktikum zu besuchen.

University lecturers
Participants conduct a critical examination of regional geography in terms of the understanding of the subject and teaching in schools, and its potential for substantiated tuition is established.

### Objective
Regional geography observes delimited partial areas, mapped to different scales, considering thematic and exemplary aspects. Regional geography features in this form on a large number of geography syllabuses. Against this background, the module comprises two parts. A specialist lecture on the subject takes a specific regional example to highlight current, interdisciplinary topics and case studies. The aim here is to compile specialist contextual knowledge about a region. In an accompanying seminar, this contextual knowledge is then put in the correct practical form for teaching in a school, thus ensuring that the teachers are in a position to configure regional geography teaching that has been duly reflected on from the specialist-subject, didactic and pedagogical angle.

### Content
- **Vorlesung**
  - Übersicht über Themen, die für eine Region typisch sind oder sich in einer Region abspielen (z. B. Arabische Halbinsel, Afrika südlich der Sahara, Asien)
  - Regionale Fallstudien mit interdisziplinärem Charakter
  - Differenzierte Auseinandersetzung mit kulturellen und politischen Fragen und Entwicklungen in einer Region
  - Erarbeiten von bedeutenden fachwissenschaftlichen Debatten zu einer Region

- **Seminar**
  - Regional-thematische Geografie versus traditionelle Länderkunde
  - Geografisches Orientierungswissen: Stellenwert
  - Werteerziehung und Interdisziplinarität im regionalgeogra-fischen Kontext
  - Didaktische Analyse und Planung regionalgeografischen Unterrichts: Von der Sachanalyse über den Einstieg bis zur Bewertung
  - Methoden und Recherche in der Regionalgeografie

### Literature
Folien werden zur Verfügung gestellt.

Regional Geography: Australia and New Zealand

- Vorlesung
  - Übersicht über Themen, die für eine Region typisch sind oder sich in einer Region abspielen (z. B. Arabische Halbinsel, Afrika südlich der Sahara, Asien)
  - Regionale Fallstudien mit interdisziplinärem Charakter
  - Differenzierte Auseinandersetzung mit kulturellen und politischen Fragen und Entwicklungslinien in einer Region
  - Erarbeiten von bedeutenden fachwissenschaftlichen Debatten zu einer Region

**Content**

- Seminar
  - Regional-thematische Geografie versus traditionelle Länderkunde
  - Geografisches Orientierungswissen: Stellenwert
  - Werteverzehnung und Interdisziplinarität im regionalgeograﬁschen Kontext
  - Didaktische Analyse und Planung regionalgeografischen Unterrichts: Von der Sachanalyse über den Einstieg bis zur Bewertung
  - Methoden und Recherche in der Regionalgeografie

**Lecture notes**

Fachwissenschaftliche Aspekte werden in der Form einer Vorlesung präsentiert. Die Studierenden vertiefen nach jeder Stunde die Inhalte und setzen diese im Hinblick auf die Schulpraxis um. Dabei wird ein elektronisches Lernstagebuch geführt und über eine Lernplattform über die schulpрактиlke Umsetzung reflektiert. Es werden auch Materialien zusammengestellt.

**Literature**

Folien werden zur Verfügung gestellt.

Humangeography III (Geographies of Difference)  (Universität Zürich)
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH. 
UZH Module Code: GEO232

Prerequisite: Human Geography II (UZH Module Code: GEO122)

Mind the enrolment deadlines at UZH: 
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
Das Seminar verfolgt das Ziel, ein tieferes Verständnis für sozialwissenschaftliche Grundlagen der Humangeographie zu gewinnen.

Teil GEO232.2:
In der Vorlesung und den Tutorien werden aktuelle wirtschaftsgeographische Themen behandelt. Demonstriert und erklärt wird insbesondere, wie die Wirtschaft mit Grenzen und Grenzziehungen umgeht.

Objective
- Sie vertiefen ihre theoretischen, empirischen und methodischen Fähigkeiten in folgenden Themenbereichen:
  - Gesellschaft und Raum
  - Gesellschaft und Entwicklung
  - Gesellschaft und natürliche Umwelt/Ressourcen
  - Offenheit und Geschlossenheit in Wirtschaft und Gesellschaft
  - Chancen und Herausforderungen einer globalisierten Weltwirtschaft

- Sie sind in der Lage, Verknüpfungen zwischen grundlegenden sozial- und wirtschaftswissenschaftlichen Theorien und deren Konkretisierung in der Geographie herzustellen.
- Sie können die erwähnten Themen mit ausgewähltem Faktenwissen verknüpfen und diskutieren.
- Sie können die Relevanz von weiterführenden wissenschaftlichen Texten diskutieren und mit einem Ausgangstext verknüpfen.
- Sie sind in der Lage, eine Diskussion über wissenschaftliche Themen zu strukturieren und - mit einfachen Moderationstechniken - zu moderieren

Prerequisites / notice
Besuch von GEO122.

Abstract
The course demonstrates geography's interdisciplinary approach to contribute solving urgent challenges ahead of society. Students are encouraged to reflect on the value of interdisciplinary research at discipline level and on their individual interdisciplinary curricula. The course creates awareness of ways that concepts structure our thinking, and how they figure in research and practice.

- Year-end closing and financial statements

Financial Management
- Financial statement analysis
- Financial planning
- Investment decisions

Management Accounting
- Full costing and marginal costing
- Product costing
- Management decisions

651-0032-00L  Geology and Petrography

Abstract
This course gives an overview of the basic concepts of geology and petrography and shows some links to the application of these concepts. The course consists of lectures and exercises in groups. The lectures cover all aspects of the dynamic earth, from the history of the earth, to the formation of rocks, mountains, and oceans, and the degradation processes shaping the uppermost earth's crust.

Objective
This course gives an overview of the basic concepts of geology and petrography and shows some links to the application of these concepts.

Content

Übungen zum Gesteinsbestimmen und Lesen von geologischen, tektonischen und geotechnischen Karten, einfache Konstruktionen.

Lecture notes

Literature
Press, F.; Siever, R.: Allgemeine Geologie, Spektrum Akademischer Verlag, Heidelberg

701-0243-01L  Biology III: Essentials of Ecology

Abstract
This lecture presents an introduction to ecology. It includes basic ecological concepts and the most important levels of complexity in ecological research. Ecological concepts are exemplified by using aquatic and terrestrial systems; corresponding methodological approaches are demonstrated. In a more applied part of the lecture threats to biodiversity and the appropriate management are discussed.

Objective
The objective of this lecture is to teach basic ecological concepts and the different levels of complexity in ecological research: the individual, the population, the community and the ecosystem level.

Content
- Übersicht der aquatischen und terrestrischen Lebensräume mit ihren Bewohnern
- Einfluss von Umweltfaktoren (Temperatur, Strahlung, Wasser, Nährstoffe etc.) auf Organismen; Anpassung an bestimmte Umweltbedingungen
- Populationsdynamik: Ursachen, Beschreibung, Vorhersage und Regulation
- Interaktionen zwischen Arten (Konkurrenz, Koexistenz, Prädation, Parasitismus, Nahrungsnetze)
- Lebensgemeinschaften: Struktur, Stabilität, Sukzession
- Ökosysteme: Kompartimente, Stoff- und Energieflüsse
- Biodiversität: Variation, Ursachen, Gefährdung und Erhaltung
- Aktuelle Naturschutzprobleme und -massnahmen
- Evolutionäre Ökologie: Methodik, Spezialisierung, Koevolution

Lecture notes
Unterlagen, Vorlesungsskript und relevante Literatur sind in der Lehrdokumentenablage abrufbar. Die Unterlagen für die nächste Vorlesung stehen jeweils spätestens am Freitagmorgen zur Verfügung.

In place of the German course 851-0703-03L Introduction to Law for Civil Engineering students can take the French course 851-0709-00L Droit civil.

Number Title Type ECTS Hours Lecturers
851-0703-03L Introduction to Law for Civil Engineering
Only for Civil Engineering BSc, Geomatic Engineering and Planning BSc, Environmental Engineering BSc and Spatial Development and Infrastructure Systems MSc
W 2 credits 2V G. Hertig

Abstract
This class introduces students to basic features of the legal system. Questions of constitutional and administrative law, contract law, tort law, corporate law, as well as litigation are covered.

Objective
Introduction to fundamental questions of public and private law which serves as a foundation for more advanced law classes.

Content
1. Public Law
Constitutional law: sources of law, organization of the state, fundamental rights. Administrative law: administrative decisions, organization of administrative decisions, procedural law, basics of police, environmental and zoning law.

2. Private law

Lecture notes
There are 'Lecture Notes' (in German) for this course.

103-0126-00L Geodetic Reference Systems O 3 credits 2G M. Meindl

Abstract
Fundamentals and theory of geodetic reference systems and frames. Introduction to current international systems as well as to systems for the Swiss national geodetic survey.

Objective
Provision of fundamental knowledge and theory to get familiar with the applications of geodetic reference systems. Special emphasis will be placed on international global systems as well as on the systems of the Swiss national geodetic survey.

Content
Various coordinate systems and transformations; reference systems and frames (inertial, Earth-fixed, topocentric) and associated transformations between the systems; introduction to Earth rotation theory; time systems; Swiss national geodetic survey.

Lecture notes
Script will be provided electronically as pdf file.

Prerequisites / notice
If possible, a field trip to the geodetic fundamental station Zimmerwald (Bern) will be offered.

103-0184-00L Higher Geodesy O 5 credits 4G M. Rothacher

Overview over the entire spectrum of Higher Geodesy

Actual methods of Higher Geodesy. Basics of Shape of the Earth: Geoid determination and deflection of the vertical. Introduction into the most important topics: Satellite Geodesy (GPS) and Navigation; Physical Geodesy and gravity field of the Earth; Astronomical Geodesy and Positioning; Mathematical Geodesy and basics of Geodynamics. Reference systems and applications in National and Global Geomatics.

References in the lecture notes

Type: W

Knowing of most important thematic map types.

First part: Spatial planning on the Commune level with focus on the special land use management
Second part: land re-allocation as an instrument of spatial planning; specific explanations for land re-allocations in rural regions and in construction zones.
Third part: land marketing; the view of investors.

Getting knowledge in spatial planning and land re-allocation as an interactive process.

PART 1: Spatial Planning and Special Land Use Management
- Overview about Spatial Planning on the commune level
- workflows and planning methods on the commune level
- comprehension of the public
- getting knowledge of the special land use management

PART 2: Methods of Land Re-Allocation
- Intensions and principles of land re-allocation
- implementation of the land re-allocation
- land re-allocation in construction zones
- amelioration

PART 3: Agricultural Planning

Lecture notes

Lecture notes and slides (in German) can be downloaded from the PLUS homepage.

Download: http://www.irl.ethz.ch/plus/education

References in the lecture notes

Project Management

General introduction to the development, the life cycle and the characteristics of projects. Introduction to, and experience with, the methods and tools to help with the preparation, evaluation, organisation, planning, controlling and completion of projects.

To introduce the methods and tools of project management. To impart knowledge in the areas of project organisation and structure, project planning, resource management, project controlling and on team leadership and team work.

- From strategic planning to implementation (Project phases, goals, constraints, and feasibility)
- Project leadership (Leadership, Teams)
- Project organization (Structure)
- Project planning (Schedule, cost and resource planning)
- Project controlling
- Risk and Quality Management
- Project completion

Lecture notes

Yes

The transparencies will be available for download from the website at least one week before each class.

Copies of all necessary documents will be distributed at appropriate times.

Railway Infrastructures (Transportation II)

Fundamentals of railroad technology and interactions between track and vehicles, network development and infrastructure planning, planning of rail infrastructure, planning and design of railway stations, construction and dimensioning of tracks, approval and beginning service on complex infrastructure facilities, special issues of maintenance.

Teaches the basic principles of public transport network and topology design, geometrical design, dimensioning and construction as well as the maintenance of rail infrastructures. Teaches students to recognize the interactions between the infrastructure design and the production processes. Provides the background for Masters degree study.

Fundamentals of the layout of a line; track geometry; switches and crossings; design of station platforms. (3) Infrastructure design: Fundamentals of the layout of a line; track geometry; switches and crossings; design of station platforms. (4) Construction of railway infrastructures: Assembly and evolution of the railway track; elements of the railway track; dimensioning of the track; track stability. (5) Approval and beginning service on complex infrastructure facilities: Definitions and limitations; fundamentals of the legal situation; test and approval processes; processes of putting railway systems into operation. (6) Maintenance of railway infrastructures: Fundamentals of infrastructure maintenance; kinds of deprevations; supervision methods; steps of infrastructure maintenance; estimation of maintenance need; methods to minimize maintenance costs.

Course notes will be provided in German. Slides are made available some days before each lecture.

References to technical literature will be included in the course script. An additional list of literature will be given during the course.

Thematic Cartography

Thematic map types (focus on quantitative information), analysis of themes and application, base maps, generalisation

Knowing of most important thematic map types.

Ability to design adequate thematic maps from statistical data.

**Introduction to Mathematical Optimization**

*W* 5 credits  2V+1U  D. Adjiashvili

**Abstract**

Introduction to basic techniques and problems in mathematical optimization, and their applications to problems in engineering.

**Objective**

The goal of the course is to obtain a good understanding of some of the most fundamental mathematical optimization techniques used to solve linear programs and basic combinatorial optimization problems. The students will also practice applying the learned models to problems in engineering.

**Content**

Topics covered in this course include:

- Linear programming (simplex method, duality theory, shadow prices, ...).
- Basic combinatorial optimization problems (spanning trees, network flows, knapsack problem, ...).
- Modelling with mathematical optimization: applications of mathematical programming in engineering.

**Literature**

Information about relevant literature will be given in the lecture.

**Prerequisites / notice**

This course is meant for students who did not already attend the course "Mathematical Optimization", which is a more advance lecture covering similar topics and more.

---

**Principles of Microeconomics**

**W** 3 credits  2G  M. Filippini

**Abstract**

The course introduces basic principles, problems and approaches of microeconomics.

**Objective**

The learning objectives of the course are:

(1) Students must be able to discuss basic principles, problems and approaches in microeconomics. (2) Students can analyse and explain simple economic principles in a market using supply and demand graphs. (3) Students can contrast different market structures and describe firm and consumer behaviour. (4) Students can identify market failures such as externalities related to market activities and illustrate how these affect the economy as a whole. (5) Students can apply simple mathematical treatment of some basic concepts and can solve utility maximization and cost minimization problems.

**Lecture notes**

Lecture notes, exercises and references can be downloaded via Moodle.

**Literature**

The book also can be used for this course "Principles of Macroeconomics" (Sturm)

For students taking only the course "Principles of Microeconomics" there is a shorter version of the same book:

Complementary:

---

**Electives**

The entire course programs of ETH Zurich and the University of Zurich are open to the students to individual selection.

**Recommended Electives of Bachelor Degree Programme**

**Number**

<table>
<thead>
<tr>
<th>252-1425-00L</th>
<th>Geometry: Combinatorics and Algorithms</th>
</tr>
</thead>
</table>

**Type**  W+  6 credits  2V+2U+1A  B. Gärtner, E. Welzl, M. Hoffmann, A. Pilz

**Abstract**

Geometric structures are useful in many areas, and there is a need to understand their structural properties, and to work with them algorithmically. The lecture addresses theoretical foundations concerning geometric structures. Central objects of interest are triangulations. We study combinatorial (Does a certain object exist?) and algorithmic questions (Can we find a certain object efficiently?)

**Objective**

The goal is to make students familiar with fundamental concepts, techniques and results in combinatorial and computational geometry, so as to enable them to model, analyze, and solve theoretical and practical problems in the area and in various application domains. In particular, we want to prepare students for conducting independent research, for instance, within the scope of a thesis project.

**Content**

Planar and geometric graphs, embeddings and their representation (Whitney's Theorem, canonical orderings, DCEL), polygon triangulations and the art gallery theorem, convexity in R^d, planar convex hull algorithms (Jarvis Wrap, Graham Scan, Chan's Algorithm), point set triangulations, Delaunay triangulations (Lawson flips, lifting map, randomized incremental construction), Voronoi diagrams, the Crossing Lemma and incidence bounds, line arrangements (duality, Zone Theorem, ham-sandwich cuts), 3-SUM hardness, counting planar triangulations.

**Lecture notes**

Yes

**Literature**

**Prerequisites / notice**

Prerequisites: The course assumes basic knowledge of discrete mathematics and algorithms, as supplied in the first semesters of Bachelor Studies at ETH.

Outlook: In the following spring semester there is a seminar "Geometry: Combinatorics and Algorithms" that builds on this course. There are ample opportunities for Semester-, Bachelor- and Master Thesis projects in the area.

---

**Cartography Seminar**

**W** 4 credits  9S  L. Hurni

Abstract
The Bachelor Programme concludes with the Bachelor Thesis. This project is supervised by a professor. Writing up the Bachelor Thesis encourages students to show independence and to produce structured work.

Objective
Encourages students to show independence, to produce scientifically structured work and to apply engineering working methods.

Content
The contents base upon the fundamentals of the Bachelor Programme. Students can choose from different subjects and tasks. The thesis consists of both a written report and an oral presentation.

Geomatic Engineering and Planning Bachelor - Key for Type

Key for Type

- **O**: Compulsory
- **W**: Eligible for credits
- **W+**: Eligible for credits and recommended
- **E-**: Recommended, not eligible for credits
- **Z**: Courses outside the curriculum
- **Dr**: Suitable for doctorate

Key for Hours

- **V**: lecture
- **G**: lecture with exercise
- **U**: exercise
- **S**: seminar
- **K**: colloquium
- **P**: practical/laboratory course
- **A**: independent project
- **D**: diploma thesis
- **R**: revision course / private study

ECTS European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.

### Lecture notes

### Literature

---

### Major in Space Geodesy and Navigation

#### Number | Title | Type | ECTS | Hours | Lecturers
---|---|---|---|---|---
103-0187-01L | Space Geodesy | O | 4 credits | 3G | M. Rothacher

#### Abstract

#### Objective

Understanding the major observation techniques in space geodesy as modern methods applied in Earth system monitoring (geometry, rotation and gravity field of the Earth and the atmosphere), in national surveying and navigation.

#### Content

Overview of GPS, VLBI, Satellite and Lunar Laser Ranging (SLR/LLR), Satellite Radar Altimetry with the basic principles, the instruments and observation equations. Modelling of the station motions and the estimation of station coordinates. Basics of wave propagation in the atmosphere. Signal propagation in the ionosphere and troposphere for the different observation techniques and the determination of atmospheric parameters. Equation of motion of the unperturbed and perturbed satellite orbit. Osculating and mean orbital elements. General and special perturbation theory and the determination of satellite orbits.

#### Lecture notes

Script M. Rothacher “Space Geodesy”

---

103-0657-01L | Signal Processing, Modeling, Inversion | O | 3 credits | 2G | A. Geiger

#### Abstract

Timeseries analysis, orthogonal decomposition, interpretation of measurements, Parameterestimation and Inversion of analytical and voxel-type models

#### Objective

Students are able to analyse data in view of specific scientific questions and interpretations. They have basic methodologies at hand to mathematically formulate engineering and scientific problems. Students know terminologies and basic methodologies in order to be able to further study the expert literature.

#### Content

Timeseries analysis, fourier transformation, DFT, auto-, crosscorrelation, ARMA Interpretation of measurements, Parameterestimation and Inversion of analytical and voxel-type models, resolution, uncertainties

#### Lecture notes

Lecture notes

Geoprocessing

Alain Geiger

#### Prerequisites / notice

Courses corresponding to: Analysis I+II, Geoprocessing and Parameterestimation, Linear Algebra I

---

103-0627-00L | Astro and Gravity Lab | W | 5 credits | 4P | S. Guillaume

#### Abstract

Knowledge of up-to-date astro-geodetic methods aiming at the determination of the direction of the local plumb line in terms of astronomical latitude and longitude.

#### Objective

Knowledge of the astro-geodetic methods aiming at the determination of the direction of the local plumb line in terms of astronomical latitude and longitude.

#### Content

Earth- and space fixed coordinate systems and their changes in time, basic astronomic calculation procedures, time scales, time keeping, transformations, star catalogues, computation of precise apparent places, relevant methods for the determination of latitude/longitude, CCD technique and astrometry, application of deflections of the vertical as regards the geod determination.

**Abstract**

- Solving engineering problems with modern methods of parameter estimation for network adjustment in a real-world scenario; choosing adequate mathematical models, suitable data-flow and performing software
- Learn to solve engineering problems with modern methods of parameter estimation in a real-world scenario.
- Analysis of the given problem, selection of effective mathematical models, use of appropriate software.
- Assignment of tasks; selected documentation
- Prerequisite: Statistics and Probability Theory, Geoprocessing and Parameterestimation, Geodetic Reference Systems and Networks
- The course will provide the basics and principles of Radar Remote Sensing (specifically Synthetic Aperture Radar (SAR)) and its imaging techniques for the use of environmental parameter estimation.
- The course should provide an understanding of SAR techniques and the use of the imaging tools for bio/geophysical parameter estimation. At the end of the course the student has the understanding of:
  1. SAR basics and principles,
  2. SAR polarimetry,
  3. SAR interferometry and
  4. environmental parameter estimation from multi-parametric SAR data
- The course is giving an introduction into SAR techniques, the interpretation of SAR imaging responses and the use of SAR for different environmental applications. The outline of the course is the following:
  1. Introduction into SAR basics and principles
  2. Introduction into electromagnetic wave theory
  3. Introduction into scattering theory and decomposition techniques
  4. Introduction into SAR interferometry
  5. Introduction into polarimetric SAR interferometry
  6. Introduction into bio/geophysical parameter estimation (classification/segmentation, soil moisture estimation, earth quake and volcano monitoring, forest height inversion, wood biomass estimation etc.)

**Lecture notes**

- Handouts for each topic will be provided
- Complete literature listing will be provided during the course.

**Objective**

- Nature, role and importance of cadastral systems and related concepts such as land administration, land registration and spatial data infrastructures (SDIs).
- The students will get an understanding of the nature, role and importance of cadastral systems and related concepts such as land administration, land registration and spatial data infrastructures (SDIs). The Swiss cadastral system as well as a range of international approaches both in developed and developing countries will be reviewed.
- Origins and purposes of cadastral systems
- Importance of documentation
- Basic concepts of cadastral systems (real estate, legal basis, conceptual principles, property-ownership, property types)
- Swiss cadastral system:
  - legal basis
  - organization
  - technical elements
  - methods of data acquisition and maintenance
  - profession
  - quality assurance
- Digital revolution, access to data
- Benchmarking and evaluation of cadastral systems
- International trends, developments and initiatives

**Content**

- see: http://www.geo21.ch/ethz/
- see also: http://www.geo21.ch/ethz/

**Literature**

**Adequate mathematical models, suitable data-flow and performing software**

**Prerequisites / notice**

- Particularly suitable for students of D-ARCH, D-BAUG, D-USYS
- Fundamental concepts of Land Register Law and Land Surveying Law (substantive and procedural rules of Land Register Law, the parts and the relevance of the Land Register, process of registration with the Land Register, legal problems of land surveying, reform of the official land surveying).
- Overview of the legal norms of land registry and surveying law.
- Basic principles of material and formal land registry law, components of the land register, consequences of the land register, the registration process, legal problems of surveying, the reform of official surveying, liability of the geom-eter. The lecture unit is carried out within a frame of 8 sessions (2 hours): the first hour of each is given in the form of a lecture, the second in the form of a case-study.
- Abgegebene Unterlagen: Skript in digitaler Form
- Pflichtlektüre: Meinrad Huser, Schweizerisches Vermessungsrecht, unter besonderer Berücksichtigung des Geoinformationsrechts und des Grundbuchrechts, Bteglage aus dem Institut für schweizerisches und internationales Baurecht der Universität Freiburg/Schweiz, Zürich 2014
- Meinrad Huser, Schweizerisches Vermessungsrecht, unter besonderer Berücksichtigung des Geoinformationsrechts und des Grundbuchrechts, Zürich 2014
- Meinrad Huser, Geo-Informationsrecht, Rechtlicher Rahmen für Geographische Informationssysteme, Zürich 2005

Prerequisites / notice

651-4016-00L Geophysical Geodesy W 3 credits 2G N. Houlié

Abstract
The course is an introduction to the concepts of geodesy applied to the seismic cycle and to the monitoring of ground deformation.

Objective
a) Students are introduced to various geodetic techniques and to their most famous applications in Earth Sciences;
b) Students are able to independently conceptualize 1) the inter seismic strain accumulation for an earthquake and 2) inflation of a spherical reservoir (i.e. magma chamber of a volcano) or 3) water level change within aquifer. c) Students are then introduced to new techniques linking seismology and geodesy.

Content
1. Plate Tectonics before Space Geodesy.
3. The seismic cycle monitoring (Moment release, seismology, Stress transfer)
4. Space geodetic techniques (VBLI, gravity, etc.)
5. Presentation of GPS and Applications 1 (positioning, rigid plate motions)
6. GPS networks in the world. Development of tectonic geodesy and Applications 2 (Practical on inter-seismic deformation)
7. Presentation of InSAR, psSAR, etc. Applications to earthquake. Post-seismic deformation.
8. GPS and deformation related to volcanoes (Practical on Mogi source)
9. GPS, Strain, Stress and Plate motion.
10. InSAR applied to subsidence and small deformation.
11. Troposphere sounding. Accuracies of GPS and InSAR.
12. GPS and geodynamics
13. Future of GPS. Future of InSAR.
14. GPS and normal modes?

Lecture notes
Slides. Script in English is planned. PDF of articles cited.

Literature
See webpage

Prerequisites / notice
Prerequisite:
Of advantage: Higher Geodesy Basics; Physical Geodesy and Geodynamics I; Seismotectonics

The grading is based on participation, homework sets, and a final oral presentation. There is no final exam.

- Meinrad Huser, Darstellung von Grenzen zur Sicherung dinglicher Rechte, in ZBGR 2013, 238 ff.
- Meinrad Huser, Datensicherheit bei Geodaten
- Requirements: Property Law (12-722)

**Objective**
- Explain and apply the model-driven approach based on standards
- Know and use interoperability types
- Know transfer formats and reformat with 1:1 processors
- Explain object-oriented modelling (with graphic and text)
- Know and use communication technologies and OGC Web services
- UML, EBNF, INTERLIS, ITF, XML, awk, FME
- Know and apply appropriate software tools

**Content**
Semantic interoperability of GIS is in the main part of this lecture and means to transform back and forth (geo-) data with same content but different structure. The reduction of the necessary programming amount to a modest minimum is provided by the system-independent model-driven approach. Its elements reality selection, conceptual modelling, flexible standard formats, 1:1 processors and semantic transformation are presented and used. As generally useful tools are introduced and applied the conceptual schema languages UML and INTERLIS, the flexible transfer formats ITF, XML the ILI-Checker, the efficient reformatting tool awk and for the semantic transformation UMLT and FME.

**Condition for participation:** Successful bachelor lecture GIS II

In the course, methods for the identification and measurement of landscape characteristics, as well as measures and implementation of landscape planning are taught. Landscape planning is put into the context of the environmental systems (soil, water, air, climate, flora and fauna) and discussed with regard to socio-political questions of the future.
### Objective

The aims of this course are:

1. To illustrate the concept of landscape planning, the economic relevance of landscape and nature in the context of the environmental systems (soil, water, air, climate, flora and fauna).
2. To show landscape planning as an integral information system for the coordination of different instruments by illustrating the aims, methods, instruments and their functions in landscape planning.
3. To show the importance of ecosystem services.
4. To point out basic information about nature and landscape: Analysis and assessment of the complex interactions between landscape elements, effects of existing and foreseeable utilization of space (nature goods and services and landscape functions).
5. To identify and measure the characteristics of landscape.
6. To learn how to use the instrument of GIS appropriately in landscape planning.

### Content

In this course, the following topics are discussed:

- Definition of the concept of landscape
- Landscape change
- Landscape planning
- Methods, instruments and aims of landscape planning (politics)
- Socio-political questions of the future
- Environmental systems, IUCN Red List, ecological connectivity
- Urban landscape services
- Practice of landscape planning
- Use of GIS in landscape planning

### Lecture notes

No script. The documentation, consisting of presentation slides are partly handed out and are provided for download on the PLUS website.

### Prerequisites / notice

The contents of the course will be illustrated in the associated lecture 103-0347-01 U (Landscape Planning and Environmental Systems (GIS Exercises)). An combination of courses is recommended.

### 103-0337-00L Site and Project Development

### Literature

- **Notice**
  - The course will be held in English and no prior knowledge on R is required.
The course provides the necessary knowledge to develop models supporting the solution of given planning problems. This is done by
Landscape Planning and Environmental Systems (GIS, S. Huber, S. U. A. Weidmann
Theory and Methodology of Spatial Planning
M. Nollert
System and Network Planning
The course provides the necessary knowledge to develop models supporting the solution of given planning problems. Examples of such
The course content of the lecture Landscape Planning and Environmental Systems (103-0347-00 V) will be illustrated.
To show the importance of ecosystem services.
To identify and measure the characteristics of landscape.
Learn how to use the instrument of GIS appropriately in landscape planning.
**Content**
- Environmental systems, IUCN Red List, ecological connectivity
- Calculating urban landscape services
- Practice of landscape planning
- Use of GIS in landscape planning
- Modelling
- Landscape analysis
- Landscape metrics

**Lecture notes Literature**
No script. The documentation, consisting of presentation slides are partly handed out and are provided for download on the PLUS website.

**Prerequisites / notice**
Will be named in the lecture.

**3. credits**
- Environmental systems, IUCN Red List, ecological connectivity
- Landscape analysis
- Landscape metrics

**Objectives**
- To introduce students to the European dimension of planning, including its historical and contemporary developments.
- To explore the role of planners in the European context.
- To analyze the impact of European policies on spatial development.

**Literature**

**Pre-requisites / notice**
Only for master students, otherwise a special permission by the lecturer is required.

Approach with Cost Benefit Analysis in Transport

Abstract
The course presents cost benefit analysis and related evaluation methods in transport and introduces the survey methods used to derive the monetary values of non-market goods.

Objective
Familiarity with the essential methods of project appraisal

Content
Cost-Benefit-Analysis; multi-criteria analysis; European guidelines; stated response methods; travel cost approach and others; Valuation of travel time savings; valuation of traffic safety

Lecture notes
Handouts

Literature

101-0449-00L
Management, Marketing, Quality
W 6 credits 4G U. A. Weidmann

Abstract
Transport and administrative policy, international and national regulation, business management of public transport companies, marketing, advertising and pricing; quality management

Objective
Comprehension of the transport and administrative policy as well as of the regulation of public transport companies. To develop a full understanding of the three important public transport system operations management processes: (1) Business management; (2) Marketing; (3) Quality control. The course will teach essential working techniques in each of these processes.

Content
(1) Transport and administrative policy: Goals of the state related to public transports, governmental activities in public transport, regulation.
(2) Business management in public transport enterprises: goals of public transport companies, goals of the business management; management of public transport on the different management levels, business organization. (3) Marketing, advertising and pricing: Fundamentals and goals; marketing strategies and concepts in public transports; marketing tools; putting marketing into action. (4) Quality control: Quality in transport systems; goals of quality management; structuring quality control measures; collecting quality data in an operating service; use of quality control systems for service optimization.

Lecture notes
Course notes will be provided in German. Slides will be made available.

Literature
References to technical literature will be included in the course script. An additional list of literature will be given during the course.

Prerequisites / notice
Lectures System and Network Planning as well as Systems Dimensioning and Capacity recommended.

363-1065-00L
Design Thinking: Human-Centred Solutions to Real World Challenges

W 5 credits 5G A. Cabello Llamas, F. Rittiner, S. Brusoni, C. Hölscher, M. Meboldt

Abstract
The goal of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will work in teams to solve a set of design challenges that are organized as a one-week, a three-week, and a final six-week project in collaboration with an external project partner.

Information and application: www.sparklabs.ch/ethz

Objective
During the course, students will learn about different design thinking methods and tools. This will enable them to:
- Generate deep insights through the systematic observation and interaction of key stakeholders.
- Engage in collaborative ideation with a multidisciplinary (student) team.
- Rapidly prototype and iteratively test ideas and concepts by using various materials and techniques.

Content
The purpose of this course is to equip the students with methods and tools to tackle a broad range of problems. Following a Design Thinking approach, the students will learn how to observe and interact with key stakeholders in order to develop an in-depth understanding of what is truly important and emotionally meaningful to the people at the center of a problem. Based on these insights, the students ideate on possible solutions and immediately validated them through quick iterations of prototyping and testing using different tools and materials. The students will work in multidisciplinary teams on a set of challenges that are organized as a one-week, a three-week, and a final six-week project with an external project partner. In this course, the students will learn about the different Design Thinking methods and tools that are needed to generate deep insights, to engage in collaborative ideation, rapid prototyping and iterative testing.

Design Thinking is a deeply human process that taps into the creative abilities we all have, but that get often overlooked by more conventional problem solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols. Design Thinking provides an integrated way by incorporating tools, processes and techniques from design, engineering, the humanities and social sciences to identify, define and address diverse challenges. This integration leads to a highly productive collaboration between different disciplines.

For more information and the application visit: http://sparklabs.ch/ethz

Prerequisites / notice
Class attendance and active participation is crucial as much of the learning occurs through the work in teams during class. Therefore, attendance is obligatory for every session. Please also note that the group work outside class is an essential element of this course, so that students must expect an above-average workload.

Electives ETH Zurich

Course Catalogue of ETH Zurich

Seminar Work

Number Title Type ECTS Hours Lecturers

Abstract
Introduction to general scientific working methods and skills in the core fields of geomatics. It includes a literature study, a review of one of the articles, a presentation and a report about the literature study.
Objective

Learn how to search for literature, how to write a scientific report, how to present scientific results, and how to critically read and review a scientific article

Content

A list of themes for the literature study are made available at the beginning of the semester. A theme can be selected based on moodle.

Prerequisites / notice

Agreement with one of the responsible professors is necessary

### Interdisciplinary Project Work

Abstract

Working on a concrete interdisciplinary task in Geomatics

Objective

Promote independent, structured and scientific work in an interdisciplinary context; learn to apply engineering methods; deepen the knowledge in the field of the treated task.

Content

The project work is supervised by a professor. Students can choose from different subjects and tasks.

Prerequisites / notice

The project can be carried out in German upon mutual agreement between supervisor and student.

### GESS Science in Perspective

Recommended GESS Science in Perspective (Type B) for D-BAUG.

see GESS Science in Perspective: Type A: Enhancement of Reflection Capability

see GESS Science in Perspective: Language Courses ETH/UZH

### Master’s Thesis

Before starting the Master’s thesis, students must have
a. obtained the Bachelor's degree;
b. fulfilled all specified admission conditions, if any;
c. acquired at least 90 credits in the Master's programme, including 12 credits in the area of the interdisciplinary project.

Abstract

The Master Programme concludes with the Master Thesis, which has to be done in one of the chosen Majors and has to be completed within 16 weeks. The Master Thesis is supervised by a professor and shall attest the students ability to work independently and to produce scientifically structured work.

Objective

To work independently and to produce a scientifically structured work.

Content

The topics of the Master Thesis are published by the professors. The Topic can be set also in consultation between the student and the professor.

### Course Units for Additional Admission Requirements

The courses below are only available for MSc students with additional admission requirements.

<tr>
<td>103-0115-AAL</td>
<td>Geodetic Metrology II</td>
<td>E-</td>
<td>5 credits</td>
<td>4R</td>
<td>A. Wieser</td>
</tr>
</tbody>
</table>

Abstract

Advanced topics in geodetic metrology with focus on instrumental and methodic aspects for applications with higher accuracy demands.

Objective

The students acquire enhanced knowledge regarding the operating mode, the application and the limitations of modern geodetic standard instruments. They will be able to properly select, test and apply these instruments for geodetic tasks with higher accuracy requirements. They will get acquainted with the typical workflow from the preparation of the field works to the digital or plotted plan. Finally, the students will be introduced to specific geodetic tasks related to construction and civil engineering.

Content

- The geomatics workflow
- Propagation of light in the atmosphere
- The modern total station
- Terrestrial Laserscanning
- Digital levels
- Field tests
- Traverses
- Trigonometric leveling
- Precision leveling
- Route planning and transition curves
- Earthworks: Area and cubature

Lecture notes

Slides and documents for enhanced study and further reading will be provided online.

notice
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Abstract
Introduction to the most important sensors, operation and calculation methods of Geodetic Metrology

Objective
Getting to know the most important sensors, operation and calculation methods of Geodetic Metrology

Content
Overview on the different domains of geodetic metrology
Geodetic instruments and sensors
Determination of 3D-coordinates with GNSS, total sttaion and levelling
Calculation methods of geodetic metrology
Survey and staking-out methods

Lecture notes
Slides and additional material used in the associated regular course Geodätische Messtechnik GZ (in German) are provided in electronic
form.

Literature

References and other materials will be distributed by the supervisors.

Enrolment ONLY for MSc students with a decree declaring
this course unit as an additional admission requirement.

Abstract
The lecture course discusses the basic concepts, approaches and methods of transport planning in both their theoretical and practical contexts.

Objective
The course introduces the basic theories and methods of transport planning.

Content
Basic theoretical links between transport, space and economic development; basic terminology; measurement and observation of travel
behaviour; methods of the four stage approach; cost-benefit analysis.

Literature

References and other materials will be distributed by the supervisors.

Enrolment ONLY for MSc students with a decree declaring
this course unit as an additional admission requirement.

Abstract
Basic knowhow about communication with spatial information by using plans and maps, about the most important design rules and
production methods for map graphics.

Objective
Acquire basic knowhow about communication with spatial information by using plans and maps, about the most important design rules and
production methods for map graphics. Ability to assess existing products with respect to their content-related and design quality. Ability to
design proper plans and well designed legends for basic maps.

Content
Definitions "map" and "cartography", map types, current tasks and situation of cartography, map history, spatial reference systems, map
projections, map conception and workflow planning, map design, analog and digital map production technology, prepress technology,
printing technology, topographic maps, map critics.

Lecture notes
Will be distributed module by module

Literature

References and other materials will be distributed by the supervisors.

Enrolment ONLY for MSc students with a decree declaring
this course unit as an additional admission requirement.

Abstract
Modern methods of Higher Geodesy. Basics of Shape of the Earth: Geoid determination and deflection of the vertical. Introduction into the
most important topics: Satellite Geodesy and Navigation; Physical Geodesy and gravity field of the Earth; Astronomical Geodesy and
Positioning; Mathematical Geodesy and basics of Geodynamics. Reference systems and applications in National and Global Geomatics.

Objective
Overview over the entire spectrum of Higher Geodesy

Lecture notes
References and other materials will be distributed by the supervisors.

Enrolment ONLY for MSc students with a decree declaring
this course unit as an additional admission requirement.

Abstract
Introduction and basics in mathematics of geometric geo-objects in the three-dimensional space (with exercises).

Objective
Basics, structures and processes in modern geovisualisation and computer graphics.
Exercises in 2D and 3D computer graphics with software from desktop publishing, GIS, and computer visualisation.

Lecture notes
References and other materials will be distributed by the supervisors.

Enrolment ONLY for MSc students with a decree declaring
this course unit as an additional admission requirement.

Abstract
Fundamentals in geoinformation technologies; database principles, including modeling of spatial information, geometric and semantic
models, topology and metrics; practical training with GIS software.

Objective
Know the fundamentals in geoinformation technologies for the realization, application and operation of geographic information systems in
engineering projects.
The students are capable of analysing measurements with appropriate methods. They can optimally extract model parameters from Image Processing.

Students will be able to carry out the following phases of a GIS project: data modelling, mobile data acquisition and analysis, Web publication of data and integration of interoperable geospatial web services into a Spatial Data Infrastructure (SDI).

This course provides basic knowledge on parameter estimation and data processing. The necessary mathematical and statistical methods are developed and are applied to actual examples in geomatics.

The course deals with advanced methods in spatial data analysis in theory as well as in practical exercises.

- Understanding the theoretical principles in spatial data analysis.
- Understanding and using methods for spatial data analysis.
- Detecting common sources of errors in spatial data analysis.
- Advanced practical knowledge in using appropriate GIS-tools.

The course conveys the basics of photogrammetry. Its aim is to equip students with an understanding of the principles, methods and applications of image-based measurement.

The objective of this lecture is to introduce the basic concepts of image formation and explain the basic methods of signal and image processing.

Understanding core methods and algorithms in image processing and computer vision and the underlying signal processing foundations. Applying image processing algorithms to relevant problems in photogrammetry and remote sensing.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
The lecture introduce into the main-features of spatial planning. Attended will be the themes planning as a national responsibility, instruments of spatial planning, techniques for problem-solutions in spatial planning and the swiss concept for regional planning.

Objective
- To get to know the interaction between the community and our living space and their resulting conflicts.
- Link theory and practice in spatial planning.
- To get to know instruments and facilities to process problems in spatial planning.

Abstract
Spatial planning is concerned with the foresighted design of the built and un-built environment. Starting points are spatially relevant problems that need to be explored, clarified and solved. The cornerstone of the course is formed by an independent exploration by the student of two Zurich city quarters that involves investigating specific spatially relevant conditions, recognizing regularities and relevant problems.

Abstract
The self-study course compromises the following readings:
- Lynch, Kevin: «The Image of the City»,
- Alexander, Christopher et al.: «A Pattern Language»,
- Mikolet, Anne and Pürckhauer, Moritz: «Urban Code», and
- «SIDAJA - Spatial and Infrastructure Development: An Integrated Approach».

Objective
Getting knowledge in spatial planning and land re-allocation as an interactive process.

Abstract
Introduction to programming in Java. Procedural foundations of programming and outlook to object oriented programming. Variables, types, assignments, control structures (branch, loop), data structures, algorithms, line graphics, graphical user interface. Writing small programs. Working with a professional programming environment (Eclipse).

Objective
The students will be able to write simple programs and to modify existing programs.

Content
In the exercises students train programming skills (in the programming language JAVA). Students can solve the exercises on their own laptop or in the computer labs at ETH. The software used in this course runs on MS Windows, MacOS X and Linux.

**Linear Algebra and Numerical Analysis**

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

**Abstract**

Introduction to Linear Algebra and Numerical Analysis for Engineers. This reading course is based on chapters from the book "Introduction to Linear Algebra" by Gilbert Strang (SIAM 2009), and "A first Course in Numerical Methods" by U. Ascher and C. Greif (SIAM, 2011).

**Objective**

To acquire basic knowledge of Linear Algebra and some aspects of related numerical methods and the ability to apply basic algorithms to simple problems.

**Content**

* Linear systems of equations: Gaussian elimination, row echelon form, theory about existence and uniqueness of solutions (Strang Ch. 2 and 3.4)
* Mathematical modelling by linear systems (e.g. networks, trusses) (Strang, parts of Ch. 8)
* Column space, null space and rank of matrices (Strang 3.2, 3.3)
* Linear combinations, linear (in)dependence, bases, dimension theorem for matrices (Strang 3.5, 3.6)
* Inner product, orthogonality, length in Euclidean space (Strang 4.1, 4.2)
* Least squares solutions and orthogonalization (Gram-Schmidt and QR) (Strang 4.3, 4.4)
* Linear mappings, matrix representation and change of basis (Strang Ch. 7)
* Determinants and diagonalization of matrices (eigenvalues and eigenvectors) (Strang 6.1, 6.2, 6.5, 6.6)
* Diagonalization applied to linear differential and difference equations. (Strang 6.3)
* Numerical methods for solving linear systems of equations (Ascher/Greif 5.1, MATLAB Documentation of `)
* Interpolation with polynomials and splines (Ascher/Greif Ch. 10 and 11)

**Literature**

**Prerequisites / notice**

Knowledge of elementary calculus
Stochastics (Probability and Statistics) E- 4 credits 9R M. Kalisch

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract

Introduction to basic methods and fundamental concepts of statistics and probability theory for non-mathematicians. The concepts are presented on the basis of some descriptive examples. Learning the statistical program R for applying the acquired concepts will be a central theme.

Objective

The objective of this course is to build a solid fundamend in probability and statistics. The student should understand some fundamental concepts and be able to apply these concepts to applications in the real world. Furthermore, the student should have a basic knowledge of the statistical programming language "R".

Content

From "Statistics for research" (online)
Ch 1: The Role of Statistics
Ch 2: Populations, Samples, and Probability Distributions
Ch 3: Binomial Distributions
Ch 6: Sampling Distribution of Averages
Ch 7: Normal Distributions
Ch 8: Student's t Distribution
Ch 9: Distributions of Two Variables

From "Introductory Statistics with R (online)"
Ch 1: Basics
Ch 2: The R Environment
Ch 4: Descriptive statistics and tables
Ch 5: One- and two-sample tests
Ch 6: Regression and correlation

This lecture is important as an Introduction to the Master Programme

Abstract

The lecture series are held by all scientific disciplines involved in the HPK-Master programme and are meant to acquaint the students with the different ambitions, methods and techniques of each discipline. Furthermore, the lectures should serve as a "helpdesk" and "workshop" for all theses written within the M.A. programme.

Objective

The interdisciplinary lecture series are exclusively addressed to the students of the HPK-M.A. programme. They provide an insight into all the disciplines which participate in the M.A. programme and their specific demands, approaches, problems and techniques. Subsequent to the lectures, there will be an opportunity to discuss difficulties occurring within the procedures of thesis-writing. The series should provide and secure a substantial, methodological and formal orientation within the disciplines taught in the M.A.-program.

Prerequisites / notice

Dates: Thursday, 10-12

851-0125-18L Self-Ownership - Philosophical and Juridical Perspectives

W    3 credits    2G

Abstract

Rights in Objects are founded by an inalienable Self-Ownership. These Idea ist central for personal rights. We speak of my body, my genes, my name, my portrait, my ideas oder ways of expression.

Objective

Participants will make acquaintance with founding texts of the natural rights property concept (John Locke). They will see the connection between inalienable self-ownership, prohibition of slavery, derivative commercial rights and modern personal rights. They will learn about the problems of self-ownership today concerning property in one's body and intellectual property. Critical alternatives to the property paradigm will be discussed.

Content

Texts by Locke, Nozick, Christman, Otsuka, Rasmussen, Schneider, Stirrer, Fichte and Forschner. Founding of property right in self-ownership (Locke), revival of this concept in Nozick and his egalitarian critics. Critique of the concept of self-ownership related to property in one's body. Looking back to the personal self-relatedness that comes up again in Intellectual Property and in modern personal rights.

Literature

Text, Seminarplan und Literaturliste in ILIAS Lehrdokumentenablage.

851-0125-18L History and Philosophy of Knowledge: Goals, Methods and Work Techniques

Only for History and Philosophy of Knowledge MSc.

851-0125-18L Mind and Brain

W    3 credits    2V

M. Hagner

Abstract

In the last 2500 years, the mind-brain relationship has been articulated in various ways. In these lectures, I will explore the scientific and philosophical aspects of this relationship in the context of relevant cultural, historical and technological processes, with a focus on the modern neurosciences, but I will also discuss works of art and literature.

Objective

By the end of this lecture, students should be familiar with essential positions in the scientific and philosophical treatment of questions relating the mind to the brain. It should also become clear that some of the most relevant problems in current neurosciences have a long history.

Content

According to a myth, the ancient Greek philosopher Democrit dissected animals, because he was in search of the seat of the soul. Current neuroscientists use neuroimaging techniques like functional magnetic-resonance-tomography in order to localize cognitive and emotional qualities in the brain. Between these two dates lies a history of 2500 years, in which the relationship between the mind and the brain has been defined in various ways. Starting with ancient and medieval theories, the lecture will have its focus on Nozick and his egalitarian critics. Critique of the concept of self-ownership related to property in one's body. Looking back to the personal self-relatedness that comes up again in Intellectual Property and in modern personal rights.

Additional lectures and other offers. Works of art and literature. Argumentation in history and philosophy. Important role of the arts in the modern ages.

Literature

Texts by Locke, Nozick, Christian, Otsuka, Rasmussen, Schneider, Stirrer, Fichte and Forschner. Founding of property right in self-ownership (Locke), revival of this concept in Nozick and his egalitarian critics. Critique of the concept of self-ownership related to property in one's body. Looking back to the personal self-relatedness that comes up again in Intellectual Property and in modern personal rights.

851-0549-00L WebClass Introductory Course History of Technology

W    3 credits    2V

G. Hürlimann

Number of participants limited to 100.

Abstract

WebClass Introductory Course History of Technology is an introductory course to the history of technology. The students are challenged to discover how technological innovations take place within complex economical, political and cultural contexts. They get introduced into basic theories and practices of the field.

Objective

Students are introduced into how technological innovations take place within complex economical, political and cultural contexts. They get to know basic theories and practices of the field.

Autumn Semester 2016

Page 723 of 1571
Since antiquity philosophy reflects about and evaluates technology. The technical developments in the 19th and 20th century have led to a autonomous philosophy of technology, which had become important also for other philosophical disciplines (e.g. in Heidegger's philosophy).

The course gives an overview on the main schools in the philosophy of technology. Students should learn to analyse and evaluate different philosophies of technology (compensation, objectification, externalisation). For credit point a critical protokoll is to be written.

- To gain an overview of the history of the transition of large technical systems
- To recognize current challenges in the energy system to understand the theoretical frameworks and concepts for studying transitions
- To demonstrate knowledge on the role of policy and politics in energy transitions

Climate change, access to energy and other societal challenges are directly linked to the way we use and create energy. Both the recent United Nations Paris climate change agreement and the UN Sustainable Development Goals make a fast and extensive transition of the energy system necessary.

This course introduces the social and environmental challenges involved in the energy sector and discusses the implications of these challenges for the rate and direction of technical change in the energy sector. It compares the current situation with historical socio-technical transitions and derives the consequences for policy-making. It then introduces theoretical frameworks and concepts for studying innovation and transitions. It then focuses on the role of policy and policy change in governing the energy transition, considering the role of political actors, institutions and policy feedback.

The course has a highly interactive (seminar-like) character. Students are expected to actively engage in the weekly discussions and to give a presentation (15-20 minutes) on one of the weekly topics during that particular session. The presentation (30%) and participation in the discussions (20%) will form one part of the final grade, the remaining 50% of the final grade will be formed by a final exam.

A reading list will be provided via moodle.ethz.ch at the beginning of the semester.

This course is particularly suited for students of the following programmes: MA Comparative International Studies; MSc Energy Science & Technology; MSc Environmental Sciences; MSc Management, Technology & Economics; MSc Science, Technology & Policy; ETH & UZH Phd programmes.

Part of the course reflects on methods and contents from physics, neuroscience/cognitive science, and logic.

It is useful to know which fellowships are available or to know the causes of frequent occurrence of extreme weather. These truths are of particular importance, especially in philosophy of science, philosophy of mind, metaphysics, and ethics. Students are in a position to critically discuss and evaluate the repercussions of these issues in broader scientific and social contexts.

Part of the course reflects on methods and contents from physics, neuroscience/cognitive science, and logic.

Particularly suitable for students of D-BIOL, D-INFK, D-MATH, D-PHYS

The course provides an introduction to philosophical issues surrounding the concept of time. We will treat topics such as: the existence of past, present, and future; the possibility of time travel; the constitution of time consciousness and its possible neurophysiological counterparts; temporal biases in the conduct of our lives; responsibility to future and past generations.

By the end of the course students are able to describe and compare different theories and concepts of time (physical time, perceptual time, historical time ...). They are able to identify and examine issues concerning time as they occur in various philosophical subdisciplines - especially in philosophy of science, philosophy of mind, metaphysics, and ethics. Students are in a position to critically discuss and evaluate the repercussions of these issues in broader scientific and social contexts.

The course focuses on the relation between nature and social culture. It examines the philosophical, political, and socio-cultural thinking about the relation between nature and society. The course addresses the role of policy and politics in managing the transition of the energy sector. It introduces theoretical frameworks and concepts for studying innovation and transitions. It then focuses on the role of policy and policy change in governing the energy transition, considering the role of political actors, institutions and policy feedback.

The course is particularly suited for students of the following programmes: MA Comparative International Studies; MSc Energy Science & Technology; MSc Environmental Sciences; MSc Management, Technology & Economics; MSc Science, Technology & Policy; ETH & UZH Phd programmes.

This course introduces the social and environmental challenges involved in the energy sector and discusses the implications of these challenges for the rate and direction of technical change in the energy sector. This course is particularly suited for students of the following programmes: MA Comparative International Studies; MSc Energy Science & Technology; MSc Environmental Sciences; MSc Management, Technology & Economics; MSc Science, Technology & Policy; ETH & UZH Phd programmes.

Part of the course reflects on methods and contents from physics, neuroscience/cognitive science, and logic.
The Archives of Contemporary History provide 75 video interviews with contemporary witnesses who report on their missions abroad for Swiss humanitarian aid and development cooperation. Based on selected interviews the motives of their commitment and the experience in a foreign country are examined.

The course provides basic knowledge about the beginnings of modern development aid and its increasing professionalism. It aims for a critical and historically informed reflection on the transfer of knowledge and technology between the first and the third world. Furthermore it sharpens the critical awareness of the possibilities and limitations of retrospective accounts of eyewitnesses.

The course series "Images of Mathematics" deals with the formalization of the objects and the logical language of mathematics from Hilbert to Gödel and considers its consequences in view of our conception of mathematical practice and knowledge, the limits of calculability and computability in mathematics, and the logical proof procedures and the involved intuitive aspects.

The lecture series will present philosophical problems of theoretical mathematics in the 20th century and will discuss the consequences of formalization and axiomatization. It aims at a critical reflection on the modern images of mathematics.

The lecture series "Images of Mathematics" deals with a few moments in the history of the scientific discipline since the middle of the 19th century when the image of mathematics changed. In particular, it focuses on the consequences of the fact that in the 19th century mathematics started to not only reflect on its own conceptual and methodological foundations in a general manner (which had been done since the dawn of mathematics and was especially a philosophical task), but to formalize them in a strict, mathematical way: the objects of mathematics, its logical language and its proof procedures. Through Cantor’s set theory, the mathematical treatment of logic since Boole and especially through Frege and the formalization of its axioms in a wide ranging discussion involving Zermelo, Fraenkel and others, this self-reflexive stance came to the fore.

Yet, the deeper mathematics dug into its foundations, the more radical the problems became. Finally, the optimistic Hilbert program of laying the foundation of mathematics within mathematics and of proving its own consistency as well as its completeness contributed to clarifying of the foundation of mathematics primarily insofar as it was doomed to failure. Gödel proved his famous incompleteness theorems and thereby dismissed the same time the formalist attempt to reduce mathematical truth to logical provability. His work resulted in detailed insights in the precariousness of the foundation of mathematics and further numerous of productive consequences within mathematics.

Moreover, Gödel’s theorems open many far-reaching and intriguing questions in view of our image of mathematics, questions concerning the conception of mathematical practice and knowledge, the limits of calculability of mathematics and the possible role of computability and machines in mathematics, the relation between the logical proof procedures and the involved intuitive aspects. In short, the image of mathematics is not as static as we sometimes expect it to be, it was radically redrawn by the mathematicians of the 20th century and has since then again been open to diverging interpretations.

The lectures give an overview about the different Man-Machine-Relations since the 16th century. Different models of machines will be important here: the clockwork, the steam engine and the computer.

The lecture series provides a general introduction to literary theory and presents the important theories dealing with knowledge and its role in and as literature.

The lecture series provides an introduction into Epistemology and its historical development.
The course will be run as a book reading club. The first session will provide a short introduction as to how to explore a particular text (that is papers for non-specialists in an academic context); to gain insights into the cultural, historical and philosophical contexts of science and the public.

Objective
- conceptions of fundamental epistemological concepts
- sensitivity to epistemological questions
- capacity to reflect epistemological theories
- capacity to discuss epistemological theories
- reading philosophical texts (including English texts)

Abstract
In this course we will examine fundamental questions of epistemology, e.g. What is knowledge? How are we to conceive of perception? Which beliefs are rational and justified? How do we acquire knowledge? By discussing a selection of seminal philosophical texts we will study fundamental epistemological theories.

Objective
- conceptions of fundamental epistemological concepts
- sensitivity to epistemological questions
- capacity to reflect epistemological theories
- capacity to discuss epistemological theories
- reading philosophical texts (including English texts)

Objective
Das Seminar gibt einen Einblick in den Forschungsbereich der Narrativen Medizin als Teilbereich der Medizinischen Geisteswissenschaften. Erzählungen spielen eine vielfältige Rolle, wenn es um Gesundheit und Krankheit geht.

Objective
Ziel der Veranstaltung ist es, eine eigenständige kritische Perspektive auf Erzählungen von Gesundheit und Krankheit zu ermöglichen. Im Seminar werden daher unterschiedliche Arten von aktuellen Texten und Materialien zur Rolle von medizinischen Narrativen kritisch mit einander diskutiert.

Abstract
The idea of cyclical time is found in ancient pieces of wisdom (Pythagoreans, Plato, Buddhism) as reincarnation or memory, but also in Nietzsche as eternal return, in Deleuze as repetition, in Freud as repetition compulsion. We investigate the concept of repetition in combination with difference as a positive mode of thinking change.

Objective
Understanding of the various forms and functions of repetition on the basis of texts by Plato (anamnesis), Freud (repetition compulsion), Kierkegaard (narration), Nietzsche (eternal return as cosmological and ethical principle), Deleuze (time synthesis and repetition of the future), Poincaré's theorem of recurrence.
This seminar is devoted to the introduction into the ideas and concepts of one of the most influential thinkers of the 20th century. We will

851-0306-05L Literature and Technology - Simulations, Prototypes, Machines
W 3 credits 2S E. Edelmann-Oehler
Abstract Literature about technology transposes models, products and procedures of scientific progress into the logic of poetry. This literature
converts not only technology into fiction, but it also creates new cultural and social contextualisations, which reveal alternative readings of
configurations of knowledge.
Objective Students are familiar with different relations between literature and technology. They can verbalise and analyse central contents.
Content Im Seminar lesen wir unter anderem Texte von E.T.A. Hoffmann, Franz Kafka, Georg Kaiser und Max Frisch.
851-0551-03L Postal Knowledge and the History of Digital Societies
W 3 credits 2S D. F. Zetti
Abstract In the second half of the 20th century, postal services have dramatically changed. Communication today is computerbased. The lecture
offers problem oriented insights into this sociotechnical process of translation.
Objective Students become familiar with the mutual interdependence of social and technological change that characterises the history of computing
and communication.
Content Die Palette postalischer Produkte, Dienstleistungen und Personalien ist spannend und vielfältig. (Liebes-)Briefe und Geldsendungen, Boten

und Archivquellen werden solche Objekte, Figuren und Dienste auf ihre kultur-, technik- und wirtschaftshistorische Dimensionen hin
Jahrzehnten wurden der Verkehr und die Korrespondenzen der Post mit den Anforderungen rechnergestützter Verständigung kompatibel.
Die Vorlesung bietet einen problemorientierten Einblick in diesen soziozwecktechnischen Übersetzungsprozess.
851-0157-66L Who was Sigmund Freud?
W 3 credits 2S M. Hagner
Abstract 30 years ago it would have been bizarre to ask the question: Who was Sigmund Freud? The influence of psychoanalysis on twentieth
century thinking was taken for granted even by those ones who rejected Freud's ideas. In contrast, the question today would be: What are
Freud's central theories? We will tackle this question in the seminar and reconstruct Freud's thinking from his early medical writings to
those writings, in which he developed a critical view of his time. The aim of the seminar is not only to understand Freud's thinking in
historical context, but also to reflect, what it could mean to us in early twentyfirst century.
851-0127-28L Death - The Secret Problem of Life
W 3 credits 2S H. Wiedebach
Abstract No detective novel without a corpse, no religion without knowledge about death and life, no large transplantation of an organ without
certificate for the donor's death. Is a dead person always a corpse? - Death is part of life and yet stands simultaneously in opposition to it.
We cling to life and nonetheless wish to have the option to commit suicide. Do we know what we really want in that case?
Objective Discussion of 1) several conceptions of death in history, 2) determination of death in a medical sense (brain-death, etc.). 3) The search for
a personal view about life and death. 4) The practice of a precise manner of speaking based on reflection.
Literature Leistungsnachweise der Studenten: - Es besteht Anwesenheitspflicht. Einmaliges Fehlen ist möglich mit Entschuldigung. Als Ersatz die Sitzung wird eine 4-seitige Darstellung des diskutierten Textes geliefert. - Ab dem 2. Seminartermin erfolgt im Voraus pro Sitzung (d.h. insgesamt 6mal) eine 2-seitige Darstellung bzw. Stellungnahme zu einem vorgegebenen Text. - Die 2-seitigen Darstellungen müssen bis Dienstag Abend in der Woche vor der nächsten Sitzung vorliegen, damit wir Zeit haben, sie zu lesen. - Statt einer der 6 Kurzdarstellungen kann ein einführendes Referat (15 min, max. 2 Personen) gehalten werden, - MA-Studenten Philosophie und Geschichte des Wissens schreiben zusätzlich einen 5-seitigen Essay zu Michael Theunissen: "Die Gegenwart des Todes im Leben". - Ihre Texte schicken Sie bitte an die eigens eingerichtete Email-Adresse: grundpfa_btdet@etzh.ch
Formalia (Minimalanforderungen): - Schriftbild; Zeilenabstand 1,5, Schriftgröße 12, Seitenabstand 2,5cm, Schriftart: Arial. Times New Roman. - Vor- und Nachname, Matrikelnummer, Veranstaltungsname, Dozent, E-Mail-Adr., Studiengang.
- organisatorische Rückfragen bitte an den Assistenten Raphael Salvi: raphael.salvi@phil.gess.ethz.ch
851-0144-20L Philosophical Aspects of Quantum Physics
W 3 credits 2S N. Sieroka, R. Renner
Abstract This course provides an introduction to philosophical issues surrounding quantum physics. In particular, we will examine different
interpretations of quantum mechanics (such as the many-world interpretation) and the transition between the quantum and the classical
physical realm (here phenomena such as decoherence will be highlighted).
Objective By the end of the course students are able to describe and compare different interpretations of quantum mechanics. They are able to
identify and examine issues concerning these different interpretations and issues concerning the transition between quantum and classical
descriptions in physics. Students are in a position to critically discuss and evaluate the repercussions of these issues in broader scientific
contexts.
Contrary to intuitive expectations, the German term "Witz" is not only an instance of the comical, but also a form of knowledge that plays on

Being creative may appear to be the most important requirement of the present age: creative thinking, start-ups, project development all seem to promise an ongoing innovation of work and life. Instead of repeating that promise once again, this course asks for the historical conditions of discourses of creativity.

W
3 credits
2S
M. Wulz, V. Wolff

This seminar deals with the present, past, and imaginary futures of scientific publishing. We shall discuss the origins and trajectories of specific formats, conventions, and genres as well as examine exemplary historical developments as regards scientific publishing and associated cultures of science.

W
3 credits
2S
N. Guettler, M. Stadler

The technological upheavals wrought by the "digital age" have put the subject of scientific publishing on the map (again). Open access, copyright, or print-on-demand are just a few of the buzzwords that have defined controversies in recent years. The aim of this seminar is assist students in developing critical perspectives on these contemporary debates - by learning about the history of scientific publishing, including the role of specific publishers and journals, the footnote, or the malleable nature of authorship.

W
2 credits
1S
A. Telcher

How did racial scientists determine racial affiliation? In the seminar we will examine the practical challenges and eventual works of physical anthropologists from 1850 to the present. By scrutinizing the scientific toolbox of racial scientists, we will reveal how national affiliation, anti-Semitic perceptions and Gender identity shaped scholars' choices of graphical and computational methods.

W
2 credits
1S
A. Telcher

The aim of the course is to analyze the mutual relations between scientific theories and social perceptions, and to follow the formation of the "scientific mind". The course focuses on racial scientists and on the way their practices of computation and statistical analysis influenced their world-views - and vice versa. The students will be instructed on the way historians of science analyze scientific sources. They will gain a better understanding of the complexities of disciplinary dynamics, social classes and institutional pressures shaping scientific ideas, and learn on the influences such scientific ideas may have on the society as a whole.

W

A. Telcher

The seminar shall serve as a platform to discuss ways of dialogue and possible collaboration between these different approaches. Firstly, students will become familiarized with historiographical approaches to scientific collections. Among them are constructivist approaches that seek to understand scientific knowledge not primarily as a system of objective truths, but rather as an outcome of human 'constructions'. Other approaches deal with the problem of how scientific objects are related to systems of power and oppression, namely in the case of objects collected during the time of European colonialism overseas. Secondly, students will become familiarized with how old collections can yield new insights for current scientists working, e.g., on questions of ecology. Thirdly, the seminar shall serve as a platform to discuss ways of dialogue and possible collaboration between these different approaches.

Abstract
The colloquium of the ZGW focuses on present developments, debates and perspectives in the field of history of knowledge. On the second and fourth date there will be public events in the Cabaret Voltaire.

Objective
The colloquium deals with the general problems, questions and methods of the interdisciplinary research field "The History of Knowledge". Knowledge has become one of the existential conditions of modern societies and it increasingly determines their dynamics. Therefore, it is getting more and more relevant to develop a differentiated analysis of the epistemic, social and cultural constraints of the production, circulation and the decay of knowledge. In addition, the colloquium asks after the cultural and ethical resonances of knowledge not only within science but also in relation to art, literature, technology, everyday life, and so on.

Prerequisites / notice
Short notice about program changes are possible and will be communicated through the ZGW newsletter. Please register with www.zgw.ethz.ch/de/newsletter.html

Credit points can be gained by regular attending and by writing an essay. In addition to the five colloquia there will be a deepening seminar on offer (lecturer K. Espahangizi).

Free childcare available.

Abstract
The fortnightly colloquium provides a forum for PhD students and postdoctoral researchers to present and discuss their current work. Half of the slots are reserved for presentations by invited external scholars.

Objective
PhD students will have an opportunity to improve their presentation skills and obtain an important chance to receive feedback both from peers and more advanced scholars.

862-0004-03L Philosophical Colloquium (HS 2016) W 2 credits 1K L. Wingert

Abstract
Ph.D. students, post docs, members of staff, and senior colleagues from other philosophy departments will report on their work in progress. Furthermore, promising new philosophical articles and parts of new philosophical books will be studied.

Objective
Ideas and arguments dealing with systematic problems especially in epistemology, ethics, political philosophy, and the philosophy of mind will be scrutinized and elaborated.

Master's Thesis
The work on the master-thesis is supervised by one of the teachers that are allowed to offer tutorials for it, named in the Leitfaden.

Number Title Type ECTS Hours Lecturers
862-0500-00L Master's Thesis O 30 credits 64D Supervisors
A student is only permitted to commence the Master thesis if
a. the Bachelor degree programme has been completed
b. any additional requirements for admission to the degree programme have been fulfilled
c. all credits have been acquired in the categories basic courses and major courses and at least 6 credits have been acquired in the category research colloquium

Abstract
The Master's thesis gives a thorough historical, philological or philosophical analysis of a topic related to the experimental or formal sciences or to technology. It incorporates the relevant research literature on this topic as well as first attempts at original research.

Objective
The master thesis gives a thorough historical, philological or philosophical analysis of a topic related to the experimental or formal sciences or to technology. It incorporates the relevant research literature on this topic as well as first attempts at original research.

ECTS European Credit Transfer and Accumulation System

Special students and auditors need special permission from the lecturers.
Students understand mathematics as a language for modeling and as a tool for solving practical problems in natural sciences.

Objectives

1. Students understand mathematics as a language for modeling and as a tool for solving practical problems in natural sciences.
2. Students can analyze models, describe solutions numerically or calculate them explicitly if need be. They can solve examples as well as their practical applications manually and using computer algebra systems.

Content

1. Einführung in die Differential- und Integralrechnung von Funktionen einer Variablen und Anwendungen:
2. Siehe Lernmaterialien > Literatur
   - L. Papula, Mathematik für Ingenieure und Naturwissenschaftler, 11. Auflage, Vieweg und Teubner
   - Th. Wihler, Mathematik für Naturwissenschaften, 2 Bände: Einführung in die Analyse, Einführung in die Lineare Algebra; Haupts-Verlag Bern, UTB
   - Ch. Blatter, Lineare Algebra; VDF
The role of computer science in science
- Human Movement Science and Sport: movement analysis, biomechanical measurement techniques
- Health: biomedical model and classification of diseases, salutogenesis and ICF, prevention and rehabilitation, therapy, epidemiology.

The lectures are presented in the Powerpoint format. These are available on the WEB for ETH students over the nethz (Moodle). Some sections of the text-book must be studied by self-instruction.

Some of the lectures are given in the English language. Certain sections of the text-book must be studied by self-instruction.

The following topics are covered: modeling and simulations, introduction to programming, visualizing multi-dimensional data, introduction matrices, managing data with lists and tables and with relational databases, universal methods for algorithm design.

The students learn to
- understand the role of computer science in science,
- to control computer and automate processes of problem solving by programming,
- choose and apply appropriate tools from computer science,
- process and analyze real-world data from their subject of study,
- handle the complexity of real-world data,
- know universal methods for algorithm design.

1. The role of computer science in science
2. Introduction to Programming with Python
3. Modeling and simulations
4. Introduction to Matrices with Matlab
5. Visualizing multidimensional data
6. Data management with lists and tables
7. Data management with a relational database
8. Universal methods for algorithm design

This course is based on application-oriented learning. The students spend most of their time working through projects with data from natural science and discussing their results with teaching assistants. To learn the computer science basics there are electronic tutorials available.

This course is based on application-oriented learning. The students spend most of their time working through projects with data from natural science and discussing their results with teaching assistants. To learn the computer science basics there are electronic tutorials available.

Abstract
Delivery of practical insight into research methods relevant to the field by means of demonstrations and small projects in the areas of Human Movement Science and Sport, Medical Technology, Molecular Health Sciences, and Neurosciences.

Objective
Students can experience research methods that may arise in the field of Health Sciences and Technology.

Content
- Human Movement Science and Sport: movement analysis, biomechanical measurement techniques
- Medical Technology: prostheses
- Molecular Health Sciences: metabolism, behaviour
- Neurosciences: neurological measurement techniques, neurorehabilitation
- Clinical Research

Abstract
The goal of this course is to provide students with a wide general understanding in cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

Objective
The goal of this course is to provide students with a wide general understanding cell biology. With this material as a foundation, students have enough of a cell biological basis to begin their specialization not only in cell biology but also in related fields such as biochemistry, microbiology, pharmacological sciences, molecular biology, and others.

Content
The focus is animal cells and the development of multicellular organisms with a clear emphasis on the molecular basis of cellular structures and phenomena. The topics include biological membranes, the cytoskeleton, protein sorting, energy metabolism, cell cycle and division, viruses, extracellular matrix, cell signalling, embryonic development and cancer research.

Lecture notes
The lectures are presented in the Powerpoint format. These are available on the WEB for ETH students over the nethz (Moodle). Some lectures are available on the ETH WEB site in a live format (Livestream) at the above WEB site.

Literature

Prerequisites / notice
Some of the lectures are given in the English language. Certain sections of the text-book must be studied by self-instruction.
Abstract
This course will provide insight into various aspects of medical device design such as patient needs assessment, product specification, research and technical design, validation, regulatory affairs and clinical evaluation.

Objective
The goal of this lecture series is to enable the students to (i) identify the principal functional requirements for a medical device, (ii) to understand the mechanical properties of natural tissues and synthetic biomaterials, (iii) to apply this information and a basic knowledge of mechanics in the calculation of implant performance, (iv) to develop a plan for the pre-clinical evaluation and regulation of a new device.

Content
1. Introduction to Medical Technology
2. Design Process
3. Mechanics
4. Mechanics of Materials
5. Tissue Mechanics
6. Prostheses: Biomechanics and Design
7. Prostheses: Biomaterials, Surfaces and Wear
8. Allografts: Heart Valves
9. Preclinical Evaluation
10. Regulatory Affairs (MepV, FDA, CE)
11. Intellectual Property
12. Group Work and Presentation

Short overview of human anatomy, physiology and general pathology. Movement- and sports biomechanics deals with the attributes of the human body and their link to mechanics. The course includes topics as well as the methods of an experimental science are taught. The student should learn to identify, communicate and solve physical problems in his/her own field of science. The lecture follows the book "Physics" by Paul A. Tipler.

**Abstract**

Theory and application of thermodynamics and energy conversion in biological systems with focus on the cellular level.

**Objective**

Theory and application of energy conversion at the cellular level. Understanding of the basic features governing solutes transport in the principal systems of the human cell. Connection of characteristics and patterns from other fields of engineering to biofluidics. Heat and mass transport processes in the cell, generation of forces, work and relation to biomedical technologies.

**Content**

Mass transfer models for the transport of chemical species in the human cell. Organization and function of the cell membrane and of the cell cytoskeleton. The role of molecular motors in cellular force generation and their function in cell migration. Description of the functionality of these systems and of analytical experimental and computational techniques for understanding of their operation. Introduction to cell metabolism, cellular energy transport and cellular thermodynamics.

**Prerequisites / notice**

Material in the form of hand-outs will be distributed.

**Abstract**

Signals arise in most engineering applications. They contain information about the behavior of physical systems. Systems respond to signals and produce other signals. In this course, we explore how signals can be represented and manipulated, and their effects on systems. We further explore how we can discover basic system properties by exciting a system with various types of signals.

**Objective**

Master the basics of signals and systems. Apply this knowledge to problems in the homework assignments and programming exercise.

**Content**

**Prerequisites / notice**

Lecture notes available on course website.

**Abstract**

Microrobotics is an interdisciplinary field that combines aspects of robotics, micro and nanotechnology, biomedical engineering, and materials science. The aim of this course is to expose students to the fundamentals of this emerging field. Throughout the course students are expected to submit assignments. The course concludes with an end-of-semester examination.

**Objective**

The objective of this course is to expose students to the fundamental aspects of the emerging field of microrobotics. This includes a focus on physical laws that predominate at the microscale, technologies for fabricating small devices, bio-inspired design, and applications of the field.

**Content**

Main topics of the course include:
- Scaling laws at micro/nano scales
- Electrostatics
- Electromagnetism
- Low Reynolds number flows
- Observation tools
- Materials and fabrication methods
- Applications of biomedical microrobots

**Prerequisites / notice**

The lecture will be taught in English.
151-0917-00L  Mass Transfer  W  4 credits  2V+2U  R. Büchel, S. E. Pratsinis

Abstract
This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

Objective
This course presents the fundamentals of transport phenomena with emphasis on mass transfer. The physical significance of basic principles is elucidated and quantitatively described. Furthermore the application of these principles to important engineering problems is demonstrated.

Content
Fick's laws; application and significance of mass transfer; comparison of Fick's laws with Newton's and Fourier's laws; derivation of Fick's 2nd law; diffusion in dilute and concentrated solutions; rotating disk; dispersion; diffusion coefficients, viscosity and heat conduction (Pr and Sc numbers); Brownian motion; Stokes-Einstein equation; mass transfer coefficients (Nu and Sh numbers); mass transfer across interfaces; Reynolds- and Chilton-Colburn analogies for mass-, heat-, and momentum transfer in turbulent flows; film-, penetration-, and surface renewal theories; simultaneous mass, heat and momentum transfer (boundary layers); homogeneous and heterogenous reversible and irreversible reactions; diffusion-controlled reactions; mass transfer and first order heterogenous reaction. Applications.

Literature

Prerequisites / notice
Two tests are offered for practicing the course material. Participation is mandatory.

227-0045-00L  Signals and Systems I  W  4 credits  2V+2U  H. Bölcskei

Abstract
Signal theory and systems theory (continuous-time and discrete-time); Signal analysis in the time and frequency domains, signal spaces, Hilbert spaces, generalized functions, linear time-invariant systems, sampling theorems, discrete-time signals and systems, digital filter structures, Discrete Fourier Transform (DFT), finite-dimensional signals and systems, Fast Fourier Transform (FFT).

Objective
Introduction to mathematical signal processing and system theory.

Content
Signal theory and systems theory (continuous-time and discrete-time); Signal analysis in the time and frequency domains, signal spaces, Hilbert spaces, generalized functions, linear time-invariant systems, sampling theorems, discrete-time signals and systems, digital filter structures, Discrete Fourier Transform (DFT), finite-dimensional signals and systems, Fast Fourier Transform (FFT).

Lecture notes
Lecture notes, problem set with solutions.

327-0103-00L  Fundamental Materials Science  W  3 credits  3G  M. Niederberger, N. Spencer, P. Uggowitzer

Abstract
Fundamental knowledge and understanding of the atomistic and macroscopic concepts of material science.

Objective
Basic concepts in materials science.

Content
Atomic structure
Atomic bonds
Crystalline structure, perfection - imperfection
Diffusion
Mechanical and thermal properties
Phase diagrams
Kinetics
Structural materials
Electric, magnetic and optical properties of materials
Materials selection criteria

376-0130-00L  Laboratory Course in Exercise Physiology  W  3 credits  4P  C. Spengler

Objective
Number of participants limited to 48.

Abstract
Conduct physical performance tests and measurements that are typically used to assess performance of athletes and/or patients and that deepen the understanding of physiological processes in response to physical exertion.

Objective
Gain hands-on experience in exercise physiology and consolidate knowledge on physiological adaptations to different types and degrees of physical activity and climatic influences. Learn fundamental assessment techniques of the muscular system, the cardio-respiratory system and of whole-body performance, learn scientifically correct data analysis and interpretation of results. Insight into today's Sports Medicine.

Content
Laboratory course:
Various exercise tests assessing human performance and assessments of physiological responses to activity (examples are VO2max-test, Conconi-Tests, Determination of anaerobic threshold, Cooper-Test, 1-repetition maximum test, lactate minimum test), dynamometry, mechanography, body composition etc.). Insight into measurements in Sports Medicine.

Lecture notes
Tutorial on Laboratory Experiments in Exercise Physiology
( Editor: Exercise Physiology Lab)

Literature
Schmidt/Lang/Heckmann: Physiologie des Menschen, Springer-Verlag, Heidelberg

Prerequisites / notice
Desirable:
Exercise Physiology Lecture (concomitantly or passed; is selection criterion in case of more applications than lab spaces)

376-1033-00L  History of Sports  W  2 credits  2V  M. Gisler

Abstract
Comprehension for development and changes of sports from the ancient world to the presence. Description of sports in services of national idea, from education and health promotion from the middle of the 18th century till this day.

Objective
Understanding for the development and adaptation of sports from the ancient world to present times.

Content

Lecture notes
Ein Skript für die aktuelle Veranstaltung wird abgegeben.

376-1107-00L  Sport Pedagogy  W  2 credits  2V  D. Seiler Hubler

Abstract
Comprehension for development and changes of sports from the ancient world to the presence. Description of sports in services of national idea, from education and health promotion from the middle of the 18th century till this day.

Objective
Understanding for the development and adaptation of sports from the ancient world to present times.

Content

Lecture notes
Ein Skript für die aktuelle Veranstaltung wird abgegeben.

Literature
Central aspects of Sport related pedagogy will be handled in these lectures. These aspects cover, amongst others, the subject and tasks of Sport related pedagogy. Furthermore, the general and sports relevant foundations of Sport related pedagogy will be covered.

To gain basic knowledge of sports pedagogy and to recognize starting points for applied sports pedagogical intervention in schools.

Inhaltliche Schwerpunkte der Vorlesung sind:
- Einführung in die Sportpädagogik und die pädagogische Psychologie des Sportunterrichts
- Bedeutung des Sports im Jugendalter
- Zeitgemäßer Sportunterricht
- Sport und Leistung
- Heterogenität im Sportunterricht
- Sport und Gesundheit
- Geschlechterfragen im Sport
- Soziale und moralische Entwicklung im Sportunterricht

Unterrichtsmaterialien zu den einzelnen Veranstaltungen werden den Studierenden zur Verfügung gestellt.

This lecture is intended as an introduction to sport psychology and imparts knowledge on selected areas of the subject. Students are given insight into different work areas of sport psychology. In order to understand what «sport psychology» is, it is necessary to explain the essence and tasks of sport psychology and what it relates to, and to work out an underlying basis for key topics, such as cognition and emotions. Students' expertise is furthered by presenting and providing more in-depth treatment of additional topics of sport psychology. Selected intervention forms are intended to provide insight into applied sport psychology and ensure that mental processes and their impact in sport can be recognised. Case studies and practical exercises (e.g. objective training) are intended to prompt students to reflect to a greater extent on the forms in which sport psychology can be applied in their practice of sports and to integrate these in their teaching.

Main Topics
- Introduction to sport psychology
- Cognitions in sports: mental rehearsal and mental training
- Emotions and stress
- Motivation: goal-setting in sports
- Career and career transition in elite sport
- Coach-Athlete-Interaction
- Psychological aspects of sport-injury rehabilitation
- Group dynamics in sport

The economy and the media: dependencies, consequences, scandals
Social inequalities and distinctions: gender differences and group behavior
Conflicts and politics: sports organizations, doping, violence

Selected materials for the lecture are available under www.LSSFB.ch --> Lehre

Selected findings of movement sciences concerning deterioration, overload and regeneration of the musculoskeletal system are an important basis for an ergonomic working environment. The following topics are covered: Muscle fatigue during the 8-hour day, use of the computer mouse, backaches, Tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, measuring procedures, psycho-social model. Furthermore, evidence based methods for a healthy work design will be presented.

Consolidated findings of movement sciences concerning deterioration, overload and regeneration of the musculoskeletal system are an important basis for an ergonomic working environment. The following topics are covered: Muscle fatigue during the 8-hour day, use of the computer mouse, backaches, Tendinitis, nerve compression, epidemiology, prevention, rehabilitation, laws, measuring procedures.

- Cognitions in sports: mental rehearsal and mental training
- Group dynamics in sport

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 739 of 1571
The lecture deals with problems of tumor epidemiology (causes, mortality, incidence). Cancer is delineated as a multi-step process. Classes of chemical compounds that induce cancer are discussed as well as the reactive metabolites that may be built from. Covalent binding to DNA is discussed and different types of mutations resulting therof. A selection of proto-oncogenes and tumor suppressor genes is presented. Their function will be discussed as well as the changes which are found in these genes in tumor cells, starting from single nucleotide exchanges up to large deletions. The reason for genetic predisposition to cancer will be discussed as well as cancer relevant aspects of cell cycle regulation. Phenomenons like angiogenesis and metastasis are presented as well as the mechanisms that protect the genome from mutagenic damage. Further subjects address old and new strategies of cancer treatment. Personalised cancer treatment.

Subject of the lecture. Students will have ample time for preparation during lecture time.

The lecture requires an active participation of the students. All students will participate in individual or group work focussing on specific subject of the lecture. Students will have ample time for preparation during lecture time.

The lecture is given under the following circumstances.

Lecture schedule: 
The lecture “Introduction in Exercise Therapy” is prerequisite.

Additional informations are given during the lecture.

376-1665-00L Training and Coaching I W 3 credits 2G O. Buholzer

Abstract The combining of training and coaching as in the example of sport analysis, which has an effect on youth training and athlete development

Objective
- To develop basics for a differentiate analyses of sports (model)
- To develop a profile of requirements for specific sports
- To develop competencies of training with youth and talents
- To develop the basics of talent training in theory and practice
- To observe athletes in case studies, make judgments and conclusion

Content Das Modell der Sportartenanalyse
Die Relevanz der einzelnen Leistungsfaktoren
Das Modell der Wettkampfanalyse
Folgerungen für das Training und Coaching in der Sportart
Folgerungen für das Nachwuchstraining
Folgerungen für die Athletenauswahl, Athletenbeobachtung und -betreuung
Das Nachwuchs- und Talenttraining (Sichtung, Selektion, Förderung)
Projekte aus der Praxis (Talent- und Nachwuchstraining)
Praxisinput zum Thema Koordination, motorische Grundbedürfnisse, Kraft und Gesundheit
Praxisbeispiele erarbeiten und planen
Konkrete Athletenbeobachtung

Lecture notes Die Skript- (Lektionsunterlagen) werden im Rahmen des Semesters abgeben und auf Homepage veröffentlicht.

Prerequisites / notice lecture "Introduction in Exercise Therapy" ist prerequisite
Practical Basics in Sports and Exercise Therapy

Abstract
Import knowledge of practical basics of Sports and Exercise Therapy

Objective
The members are able to transform the knowledge from the previous courses in practical situations of Sports and Exercise Therapy. They learn basic aspects to design therapy lessons.

Content
communication/conversation with patients
psychoregulation: relaxation

Lecture notes
script will be on lern-platform

Prerequisites / notice
The courses "Introduction in Sports and Exersice Therapy" and has been completed successfully.

Spinal Cord Injury and Exercise

Prerequisite: Anatomy and Physiology

Abstract
Intensive discussion concerning complications of a spinal cord injury and their consequences on trainability and exercise performance of persons sitting in a wheelchair. Overview on the clinical application of exercise testing as well as on the implementation of sport scientific findings to optimise performance of spinal cord injured subjects in rehabilitation and elite sports.

Objective
Knowledge of the pathophysiology and the concomitant complications of a spinal cord injury and the consequences for physical exercise and trainability during rehabilitation as well as in recreational and elite sport.

Content
The following issues will be discussed: Epidemiology and etiology of spinal cord injury; complications and consequences of spinal cord injury; trainability/exercise physiology and spinal cord injury; history and organisation of wheelchair sports; elite sport and spinal cord injury research and development.

Physical Chemistry I (for Biology and Pharmacy)

Abstract

Objective
Understanding the fundamental thermodynamical properties of chemical and biological systems.

Content

Lecture notes
in process, will be distributed at the beginning of the first lecture

Literature

Medicinal Chemistry I

Abstract
The lectures give an overview of selected drugs and the molecular mechanisms underlying their therapeutic effects in disease. The historical and modern-day methods by which these drugs were discovered and developed are described. Structure-function relationships and the biophysical rules underlying ligand-target interactions will be discussed and illustrated with examples.

Objective
Basic understanding of therapeutic agents with respect to molecular, pharmacological and pharmaceutical properties.

Content
Molecular mechanisms of action of drugs. Structure function and biophysical basis of ligand-target interactions

Lecture notes
Will be provided in parts before each individual lecture.
Prerequisites / notice

535-0421-00L Galenical Pharmacy I W 2 credits 2G J.-C. Leroux, B. A. Gander

Abstract
Principles and technologies for the manufacturing of dosage forms and drug delivery systems. Knowledge of pharm. excipients, materials, containers, liquid and semi-solid dosage forms, their production, function, quality and application. Comprehension of molecular interactions in solution and colloidal systems. Comprehension of interfacial phenomena and stabilization measures in dosage forms.

Objective
Knowledge of the most important pharmaceutical excipients, materials, containers, liquid and semi-solid dosage forms, of their production, function, quality, stability and application. Comprehension of the molecular interactions in solution and colloidal systems. Comprehension of interfacial phenomena and stabilization measures in disperse dosage forms.

Content
Introduction and overview of important fundamentals, principles and technologies for the development and manufacturing of dosage forms and drug delivery systems. Overview of the most important pharmaceutical excipients and polymers, their structure, properties and processing; importance of materials properties for containers. Pharmaceutical solvents, fundamentals of solubility and solubilization of drugs. Water treatment processes, sterilization techniques and quality requirements of pharmaceutical water. Parenteral dosage forms and liquid opthalmics. Surfactants, micelle formation and colloidal systems. Liquid suspensions and emulsions. Stabilization measures in dosage forms.

535-0521-00L Pharmacology and Toxicology I W 2 credits 2V U. Quitterer

Abstract
The two-semester lecture course will provide a detailed understanding of the fundamentals of drug action and the mechanisms of action and therapeutic use of the important classes of drugs. The lectures are intended for students of pharmaceutical sciences.

Objective
The lectures will provide a comprehensive survey of pharmacology and toxicology. Special emphasis is placed on the interrelationship between pharmacological, pathophysiological and clinical aspects.

Content
Topics include disease-relevant macroscopic, microscopic, pathobiochemical and functional disturbances of specific organs and organ systems. The lectures integrate disease pathology with mechanisms of drug action, usage, metabolism, pharmacokinetics, side effects, toxicity, contraindications and dosage of relevant drug classes. Basic principles of clinical pharmacology and pharmacotherapy will be covered.

Lecture notes
Für jede Vorlesung wird ein Skript abgegeben, das eine Zusammenfassung mit den wichtigsten Stichpunkten beinhaltet.

535-0810-00L Gene Technology W 2 credits 2G D. Neri

Abstract
The course will provide a solid overview of the science and issues in gene technology and its pharmaceutical applications.

Objective
The aim of the lecture course is to provide a solid overview of gene technology, with a special focus on drug development. Topics: Antibody phage technology, DNA-encoded chemistry, protein modification technology, genome sequencing, transcriptomics, proteomics, functional genomics, principle of drug discovery. The course is suited for advanced undergraduate and early graduate students in pharmaceutical sciences or related fields.
## 1. Antibody phage technology
- The antibody molecule
- V genes, CDRs, basics of antibody engineering
- Principles of phage display
- Phagemid and phage vectors
- Antibody libraries
- Phage display selection methodologies
- Other phage libraries (peptides, globular proteins, enzymes)
- Alternative screening/selection methodologies
- DNA-encoded chemical libraries

## 2. Proteins: chemical modification and detection of biomolecular interactions
- Homo- and hetero-dimerization of proteins
- Chemical modifications of proteins
- Antibody-drug conjugates
- Radioactive labeling of proteins
- Kinetic association and dissociation constants
- Affinity constant: definition and its experimental measurement

## 3. Genomics: Applications to Human Biology
- Protein cloning and expression
- DNA sequencing
- Some foundations of genetic analysis
- Knock-out technologies
- Transcriptomics
- Proteomics
- Recombinant vaccines

## 4. Pharmaceuticals: Focus on Discovery
- Ligand Discovery
- Half-life extension
- Cancer therapy
- Gene therapy

### Lecture notes
- Skript "Gene Technology" by Prof. Dario Neri and slides of the lecture

### 535-0830-00L Pharmaceutical Immunology
- **W** 2 credits 2G
- D. Neri, C. Halin

#### Abstract
Get Students familiar with basic Immunological concepts of pharmaceutical relevance.

#### Objective
Get Students familiar with basic Immunological concepts of pharmaceutical relevance.

#### Content
 Chapters 1 - 11 of the Janeway's ImmunoBiology, by Kenneth Murphy (9th Edition; Garland).

#### Literature
Janeway's ImmunoBiology, by Kenneth Murphy (9th Edition).

### 551-0309-00L Concepts in Modern Genetics
- **W** 6 credits 4V
- Y. Barral, D. Bopp, A. Hajnal, M. Stoffel, O. Voinnet

#### Abstract
Concepts of modern genetics and genomics, including principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

#### Objective
This course focuses on the concepts of classical and modern genetics and genomics.

#### Content
The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

#### Lecture notes
Scripts and additional material will be provided during the semester.

#### Prerequisites / notice
This course is a co-production of the University of Zurich and ETH Zurich, and will be taught in English. The course takes place on Monday afternoon at ETH Hoenggerberg, and on Tuesday morning at UZH Irchel.

### 551-0317-00L Immunology I
- **W** 3 credits 2V
- A. Oxenius, M. Kopf

#### Abstract
Introduction into structural and functional aspects of the immune system.

#### Objective
Basic knowledge of the mechanisms and the regulation of an immune response.

#### Content
- Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histoincompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

#### Lecture notes
Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien"

#### Literature

#### Prerequisites / notice
Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

### 551-0319-00L Cellular Biochemistry (Part I)
- **W** 3 credits 2V
- U. Kutay, R. I. Enchev, B. Kormmann, M. Peter, I. Zemp

#### Abstract
Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.
R. Aebersold

Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry.

The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.

Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular transport and targeting; vesicular trafficking and phagocytosis; post-transcriptional regulation of gene expression.

Materials supporting the lectures and exercises will be made available via Moodle.

A comprehensive script is available in the HCI-Shop. A summary of the part ”Spectroskopie“ defines the relevant material for the exam.

To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English.

Abstract

Storage, handling and analysis of large datasets have become essential in biological research. The course will introduce students to a number of applications of bioinformatics in biology. Freely accessible software tools and databases will be explained and explored in theory and praxis.

Objective

Introduction to Bioinformatics I: Concepts and Applications (formerly Bioinformatics I) will provide students with the theoretical background of approaches to store and retrieve information from large databases. Concepts will be developed how DNA sequence information can be used to understand phylogenetic relationships, how RNA sequence relates to structure, and how protein sequence information can be used for genome annotation and to predict protein folding and structure. Students will be introduced to quantitative methods for measuring gene expression and how this information can be used to model gene networks. Methods will be discussed to construct protein interaction maps and how this information can be used to simulate dynamic molecular networks.

In addition to the theoretical background, the students will develop hands-on experiences with the bioinformatics methods through guided exercises. The course provides students from different backgrounds with basic training in bioinformatics approaches that have impact on biological, chemical and physics experimentation. Bioinformatics approaches draw significant expertise from mathematics, statistics and computational science.

Although "Introduction to Bioinformatics I" will focus on theory and praxis of bioinformatics approaches, the course provides an important foundation for the course "Introduction to Bioinformatics II: Fundamentals of computer science, modeling and algorithms" that will be offered in the following semester.
This lecture is the first part of a one-year course. It offers insights into the fundamentals and applications of Food Microbiology.

Contents

1. Consumer Behaviour I

2. Food Microbiology I

Abstract

The course provides an introduction to Biochemistry / Molecular Biology with some emphasis on chemical and biophysical aspects.

Objective

Topics include the structure-function relationship of proteins / nucleic acids, protein folding, enzymatic catalysis, cellular pathways involved in bioenergetics and the biosynthesis and breakdown of amino acids, glycans, nucleotides, fatty acids and phospholipids, and steroids. There will also be a discussion of DNA replication and repair, transcription, and translation.

Lecture notes

none

Literature

Prerequisites / notice

Some of the lectures are given in the English language.

551-1323-00L  Fundamentals of Biology II: Biochemistry and Molecular Biology  W  4 credits  4V  K. Locher, N. Ban, R. Glockshuber, E. Weber-Ban

Abstract

The course offers insights into the basics, practical consequences and applications of Food Microbiology.

Objective

Include basic microbiology of the different bacteria, yeasts and molds present in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

Lecture notes

none

Literature

752-2120-00L  Consumer Behaviour I  W  2 credits  2V  M. Siegrist, C. Keller, B. S. Süüterlin

Abstract

Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

Objective

Introduction in consumer research. The following aspects will be emphasized in the course: Consumer decision making, individual determinants of consumer behavior, environmental influences on consumer behavior, influencing consumer behavior

752-4005-00L  Food Microbiology I  W  3 credits  2V  M. Loessner

Abstract

This lecture is the first part of a one-year course. It offers insights into the fundamentals and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts and molds present in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

Objective

The lecture offers insights into the basics, practical consequences and applications of Food Microbiology. Contents include basic microbiology of the different bacteria, yeasts, molds and protozoa in foods, as well as the occurrence and control of foodborne pathogens and spoilage organisms.

The focus of this first part of the lecture will be on the organisms, but also on the factors which determine spoilage and foodborne disease.

Content

1. History of Food Microbiology
   1.1. Short synopsis of foodborne microorganisms
   1.2. Spoilage of Foods
   1.3. Foodborne Disease
   1.4. Food Preservation
   1.5. VIP's of Food Microbiology
   2. Overview of Microorganisms in Foods
   2.1 Origin of foodborne Microorganisms
   2.2. Bacteria
   2.3. Yeasts
   2.4. Molds
   3. Microbial Spoilage of Foods
   3.1. Intrinsic and Extrinsic Parameters
   3.2. Meats, Seafoods, Eggs
   3.3. Milk and Milk Products
   3.4. Vegetable and Fruit Products
   3.5. Miscellaneous (baked goods, nuts, spices, ready-to-eat products)
   3.6. Drinks and Canned Foods
   4. Foodborne Disease
   4.1. Significance and Transmission of Foodborne pathogens
   4.2. Staphylococcus aureus
   4.3. Gram-positive Sporeformers (Bacillus & Clostridium)
   4.4. Listeria monocytogenes
   4.5. Salmonella, Shigella, Escherichia coli
   4.6. Vibrio, Yersinia, Campylobacter
   4.7. Brucella, Mycobacterium
   4.8. Parasites
   4.9. Viruses and Bacteriophages
   4.10. Mycotoxins
   4.11. Bioactive Amines
   4.12. Miscellaneous (Antibiotic-resistant Bacteria, Biofilms)

Lecture notes

Electronic copies of the presentation slides (PDF) and additional material will be made available for download.

Literature

Recommendations will be given in the first lecture

752-6001-00L  Introduction to Nutritional Science  W  3 credits  2V  M. B. Zimmermann, C. Wolfrum

Abstract

This course introduces basic concepts of micro- and macronutrient nutrition. Macronutrients studied include fat-soluble and water-soluble vitamins, minerals and trace elements. Macronutrients include proteins, fat and carbohydrates. Special attention is given to nutrient digestion, bioavailability, metabolism and excretion with some focus on energy metabolism.

Objective

To introduce the students to the both macro- and micronutrients in relation to food and metabolism.
The course is divided into two parts. The lectures on micronutrients are given by Prof. Zimmermann and the lectures on macronutrients are given by Prof. Wolfrum. Prof. Zimmermann discusses the micronutrients, including fat-soluble vitamins, water-soluble vitamins, minerals and trace elements. Prof. Wolfrum introduces basic nutritional aspects of proteins, fats, carbohydrates and energy metabolism. The nutrients are described in relation to digestion, absorption and metabolism. Special aspects of homeostasis and homeothesis are emphasized.

Lecture notes
There is no script. Powerpoint presentations will be made available.

Selected Topics in Physiology Related to Nutrition
W 3 credits 2V W. Langhans

Abstract
Gives the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand.

Objective
Some basic knowledge in physiology is recommended for this course, which revisits important physiological topics, emphasizing their relation to nutrition. The aim is to give the students background knowledge necessary for a basic understanding of the complex relationships between food composition and nutrition on one hand and the functioning, as well as the malfunctioning, of major organ systems on the other hand. For students with a background in medicine, pharmacy or biology, the course is useful as a review of previously acquired knowledge. Major topics are basic neuroanatomy and neurophysiology; general endocrinology; the physiology of taste and smell; nutrient digestion and absorption; intermediary metabolism and energy homeostasis; and some aspects of cardiovascular physiology and water balance.

Lecture notes
Handouts for each lecture will be made available every week: http://www.fpb.ethz.ch/teaching/handouts.html

752-6403-00L
Nutrition and Performance
W 2 credits 2V S. Mettler, M. B. Zimmermann

Abstract
The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

Objective
To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Content
The course will cover elementary aspects of sports nutrition physiology including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

Lecture notes
Lecture slides and required handouts will be available on the ETH website.

Literature
Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

Prerequisites / notice
General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English

It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

853-0033-00L
Leadership I
W 3 credits 2V F. Kernic

Abstract
The lectures "Leadership I" (WS) and "Leadership II" (SS) have been designed as a two-semester lecture series, but may also be followed independently of one another or in reverse order. "Leadership I" covers the following fields: leadership basics, leadership theories and leadership styles, the concept of leadership responsibility and the role of communication in practical leadership.

Objective
The aim of this lecture is to give students an introductory overview of relevant topics regarding leadership research and practice, thus enabling them to gain a deeper understanding of the leadership phenomenon. Students should understand different concepts of leadership in the complex interaction between individuals, groups, organisation, context and situation. They should be informed about the evolution of the understanding of mankind in relation to working processes and its impact on organizations and the understanding of leadership theory in the past 100 years. They should grasp the concept of leadership responsibility (leadership ethics) and be able to derive consequences for leadership in practical situations. They should recognize the fundamental importance of communication in leadership situations and receive input which enables them to communicate adequately in specific situations.

Prerequisites / notice
The 1-hour written exam will take place during the last lecture in the semester.

### Abstract
This course looks into scientific theories and also empirical studies on human learning and relate them to the school.

### Objective
Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.

### Content
Thematische Schwerpunkte:
- Lernen als Verhaltensänderung und als Informationsverarbeitung: Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzerwerb unter besonderer Berücksichtigung des Wissentransfers; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotion und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen

Lernformen:

Lecture notes
Folien werden zur Verfügung gestellt.

### Literature

### Prerequisites / notice
This lecture is only apt for students who intend to enrol in the programs "Lehrdiplom" or "Didaktisches Zertifikat". It is about learning in childhood and adolescence.

### Abstract
In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

### Objective
At the end of the seminar, participants will be in a position to
- describe the scientific fundamentals of test theory and test structure,
- evaluate examples of scientifically-developed tests in their application context,
- if necessary, critically question the performance assessment that they employ in practice and professionalise it still further.

### Content
Die konkreten Inhalte des Seminars ergeben sich aufgrund der Präferenzen der Teilnehmenden und der daraus abgeleiteten Themenübersicht für Vorträge und Seminararbeiten. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben und erläutert. Schwerpunkte der Themenvorschläge sind:
- Testentwicklung,
- Gütekriterien von Tests,
- Aufgabenkonstruktion,
- Datenauswertung,
- Rasch-Modell,
- Internationale Vergleichstests,
- Zulassungsstests

### Lecture notes
Im Verlaufe des Semesters werden einzelne Unterlagen in den Veranstaltungen abgegeben. Dazu gehören auch die Handouts der verschiedenen, studentischen Vorträge.

### Literature
Als Grundlagenliteratur werden folgende Werke empfohlen:
- Weitere Literatur wird in der Lehrveranstaltung genannt.

### Prerequisites / notice
Die Leistungsanforderungen richten sich im Umfang nach der Zahl zu erwerbender ECTS-Punkte, wobei 1 ECTS-Punkt einem Zeitaufwand von ca. 30 Arbeitsstunden entspricht. ETHZ-Studierende können im Rahmen dieser Veranstaltung 3 ECTS-Punkte erwerben. Dazu sind folgende Leistungen zu erbringen:
- Präsenz und aktive mündliche Mitarbeit in der Lehrveranstaltung (MA)
- Pflichtlektüre entsprechend der Angaben in der Lehrveranstaltung
- Referat (RE)
- Schreiben einer schriftlichen Arbeit

### Objective
Participants are exemplarily introduced to different research methods used in research on learning and instruction and learn to weigh advantages and disadvantages of these approaches.

### Abstract
In the colloquium we discuss scientific projects concerning the teaching in mathematics, computer science, natural sciences and technology (STEM). The colloquium is conducted by the professorships participating in the Competence Center EduETH (ETH) and in the Institute for Educational Sciences (UZH).

### Objective
Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: 200a968
Number of participants limited to 20.
The successful participation in EW1 ("Human Learning") and EW2 ("Designing Learning Environments for School") is recommended, but not a mandatory prerequisite.

Abstract
In this class, students will learn concepts and skills for coping with psychosocial demands of teaching.

Objective
Students possess theoretical knowledge and practical competences to be able to cope with the psychosocial demands of teaching.

(1) They know the basic rules of negotiation and conflict management (e.g., mediation) and can apply them in the school context (e.g., in conversations with parents).
(2) They can apply diverse techniques of classroom management (e.g., prevention of disciplinary problems in the classroom) and know relevant authorities for further information (e.g., legal conditions).

851-0242-06L

Cognitively Activating Instructions in MINT Subjects

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Abstract
This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

Objective
- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

Prerequisites / notice
Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

851-0242-07L

Human Intelligence

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

Number of participants limited to 30.

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Abstract
The focus will be on the book "Intelligenz: Grosse Unterschiede und ihre Folgen" by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

Objective
- Understanding of research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

851-0242-08L

Research Methods in Educational Science

Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).

Number of participants limited to 30.

This course unit can only be enrolled after successful participation in, or during enrollment in the course "Human Learning (EW 1)".

Abstract
Literature from the learning sciences is critically discussed with a focus on research methods. At the first meeting, working groups will be assembled and meetings with those will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

Objective
- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

Objective
Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.  
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.  
- They learn the skills of the teaching trade.  
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.  
- They learn to assess pupils’ work.  
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Abstract
The mentored paper is designed to bring together the findings from the FD1 and the FD2. By using various teaching techniques and methods a semester plan, which is based on various curricula will be elaborated for a given topic.

Objective
1. The students have planned a curriculum for a semester course.
2. Students reflect on formative and summative ways such a teaching unit to examine and implement parts of it.
3. The students have implemented parts of the semester curriculum.
4. The students deal with the question to what extend teaching techniques, teaching methods but also sequences of self-study must be involved in the planning.

Abstract

Objective
Overview of the most important concepts of image formation, perception and analysis, and Computer Vision. Gaining own experience through practical computer and programming exercises.

Content
The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course then turns to the steps that are necessary to arrive at the discrete images that serve as input to algorithms. The next part describes necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention and methods for object tracking will be presented. Several techniques are discussed to extract three-dimensional information about objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

Prerequisites
Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.

The course language is English.

Number of participants limited to 6.

The participants will be chosen based on a short motivation letter. Please send this letter to S. Rodighiero (main lecturer) as soon as possible.

Abstract
The introductory course on Scanning Electron Microscopy (SEM) emphasizes hands-on learning. Using 2 SEM instruments, students have the opportunity to study their own samples, or standard test samples, as well as solving exercises provided by ScopeM scientists.

Objective
- Set-up, align and operate a SEM successfully and safely.
- Accomplish imaging tasks successfully and optimize microscope performances.
- Master the operation of a low-vacuum and field-emission SEM and EDX instrument.
- Perform sample preparation with corresponding techniques and equipment for imaging and analysis.
- Acquire techniques in obtaining secondary electron and backscatter electron micrographs.
- Perform EDX qualitative and semi-quantitative analysis.

Content
During the course, students learn through lectures, demonstrations, and hands-on sessions how to setup and operate SEM instruments, including low-vacuum and low-voltage applications. This course gives basic skills for students new to SEM. At the end of the course, students with no prior experience are able to align a SEM to obtain secondary electron (SE) and backscatter electron (BSE) micrographs and to perform energy dispersive X-ray spectroscopy (EDX) qualitative and semi-quantitative analysis. The procedures to better utilize SEM to solve practical problems and to optimize SEM analysis for a wide range of materials will be emphasized.

- Discussion of students' sample/interest
- Introduction and discussion on Electron Microscopy and instrumentation
- Lectures on electron sources, electron lenses and probe formation
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM
- Brief description and demonstration of the SEM microscope
- Practice on beam/specimen interaction, image formation, image contrast (and image processing)
- Student participation on sample preparation techniques
- Scanning Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities
- Lecture and demonstrations on X-ray micro-analysis (theory and detection), qualitative and semi-quantitative EDX and point analysis, linescans and spectral mapping
- Practice on real-world samples and report results

Prerequisites
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551- 1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.

Abstract
The introductory course on Transmission Electron Microscopy (TEM) provides theoretical and hands-on learning for new operators, utilizing lectures, demonstrations, and hands-on sessions.

Literature
- Overview of TEM theory, instrumentation, operation and applications.
- Alignment and operation of a TEM, as well as acquisition and interpretation of images, diffraction patterns, accomplishing basic tasks successfully.
- Knowledge of electron imaging modes (including Scanning Transmission Electron Microscopy), magnification calibration, and image acquisition using CCD cameras.
- To set up the TEM to acquire diffraction patterns, perform camera length calibration, as well as measure and interpret diffraction patterns.
- Overview of techniques for specimen preparation.

Content
Using two Transmission Electron Microscopes the students learn how to align a TEM, select parameters for acquisition of images in bright (BF) and dark field (DF), perform scanning transmission electron microscopy (STEM) imaging, phase contrast imaging, and acquire electron diffraction patterns. The participants will also learn basic and advanced use of digital cameras and digital imaging methods.

- Introduction and discussion on Electron Microscopy and instrumentation.
- Lectures on electron sources, electron lenses and probe formation.
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM.
- Brief description and demonstration of the TEM microscope.
- Practice on beam/specimen interaction, image formation, image contrast (and image processing).
- Demonstration of Transmission Electron Microscopes and imaging modes (Phase contrast, BF, DF, STEM).
- Student participation on sample preparation techniques.
- Transmission Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities.
- TEM alignment, calibration, correction to improve image contrast and quality.
- Electron diffraction.
- Practice on real-world samples and report results.

Literature
- Detailed course manual

Prerequisites / notice
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551-1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.

363-0301-00L Work Design and Organizational Change W 3 credits 2G G. Grote

Abstract
Good work design is crucial for individual and company effectiveness and a core element to be considered in organizational change. Meaning of work, organization-technology interaction, and uncertainty management are discussed with respect to work design and sustainable organizational change. As course project, students learn and apply a method for analyzing and designing work in business settings.

Objective
- Know effects of work design on competence, motivation, and well-being
- Understand links between design of individual jobs and work processes
- Know basic processes involved in systematic organizational change
- Understand the interaction between organization and technology and its impact on organizational change
- Understand relevance of work design for company performance and strategy
- Know and apply methods for analyzing and designing work

Content
- Work design: From Adam Smith to job crafting
- Effects of work design on performance and well-being
- Approaches to analyzing and designing work
- Modes of organizational change and change methods
- Balancing stability and flexibility in organizations as design criterium
- The organization-technology interaction and its impact on work design and organizational change
- Example Flexible working arrangements
- Strategic choices for work design

Literature
A list of required readings will be provided at the beginning of the course.

Prerequisites / notice
The course includes the completion of a course project to be conducted in groups of four students. The project entails applying a particular method for analyzing and designing work processes and is carried out by means of interviews and observations in companies chosen by the students.

363-0790-00L Technology Entrepreneurship W 2 credits 2V U. Claesson, B. Clarysse

Abstract
Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding.

This course offers the fundamentals in theory and practice of entrepreneurship in new technology ventures. Main topics covered are success factors in the creation of new firms, including founding, financing and growing a venture.

Objective
This course provides theory-grounded knowledge and practice-driven skills for founding, financing, and growing new technology ventures. A critical understanding of dos and dont's is provided through highlighting success factors in the creation of new firms, including founding, financing and growing a venture.

Content
See course website: http://www.entrepreneurship.ethz.ch/sresources/courses/tech-entrepreneurship.html

376-0130-00L Laboratory Course in Exercise Physiology W 3 credits 4P C. Spengler

Number of participants limited to 48.

Abstract
BWS: Mandatory for "Exercise physiology". HST: Possible from the 5th semester on.

Conduct physical performance tests and measurements that are typically used to assess performance of athletes and/or patients and that deepen the understanding of physiological processes in response to physical exertion.

Objective
Gain hands-on experience in exercise physiology and consolidate knowledge on physiological adaptations to different types and degrees of physical activity and climatic influences. Learn fundamental assessment techniques of the muscular system, the cardio-respiratory system and of whole-body performance, learn scientifically correct data analysis and interpretation of results. Insight into today's Sports Medicine.

Content
Laboratory course:
Various exercise tests assessing human performance and assessments of physiological responses to activity (examples are VO2max-test, Conconi-Tests, Determination of anaerobic threshold, Cooper-Test, 1-repetition maximum test, lactate minimum test), dynamometry, mechanography, body composition etc.). Insight into measurements in Sports Medicine.

### 376-0203-00L Movement and Sport Biomechanics

**W** 4 credits 3G  B. Taylor, R. List, S. Lorenzetti

**Abstract**
Learning to view the human body as a (bio-) mechanical system. Making the connections between everyday movements and sports activity with injury, discomfort, prevention and rehabilitation.

**Objective**
Students are able to describe the human body as a mechanical system. They analyse and describe human movement according to the laws of mechanics.

**Content**
Movement- and sports biomechanics deals with the attributes of the human body and their link to mechanics. The course includes topics such as functional anatomy, biomechanics of daily activities (gait, running, etc.) and looks at movement in sport from a mechanical point of view. Furthermore, simple reflections on the loading analysis of joints and various situations are discussed. Additionally, questions covering the statics and dynamics of rigid bodies, and inverse dynamics, relevant to biomechanics are investigated.

### 376-0207-00L Exercise Physiology

**W** 4 credits 3G  C. Spengler

**Abstract**
This course provides an overview over molecular and systemic aspects of neuromuscular, cardiovascular and respiratory adaptations to acute and chronic exercise as well as the interactions of the different systems influencing factors, e.g. genetics, gender, age, altitude/depth, heat/cold, with respect to performance and health.

**Objective**
The aim of this course is to understand molecular and systemic aspects of neuromuscular, cardiovascular and respiratory adaptations to acute and chronic exercise as well as the interaction of the different systems regarding health-relevant aspects and performance in healthy people and persons with selected diseases. Furthermore, students will understand the influence of genetics, gender, age, altitude/depth, heat and cold on the named factors.

**Content**
History of Exercise Physiology, research methods, fibertype heterogeneity and its functional significance, neural control of muscle force, molecular nad cellular mechanisms of muscle adaptation to resistance, endurance and stretching exercise, interindividual variability in the response to training, cardiorespiratory and metabolic responses to acute and chronic exercise, sex differences relevant to exercise performance, exercise in hot and cold environment, children and adolescents in sport and exercise, exercise at altitude and depth, aging and exercise performance, exercise for health, exercise in the context of disease.

**Literature**
Recommended textbooks:
- Anatomy and Physiology I + II

### 376-0815-00L Writing your Master's Thesis: Natural Sciences and Engineering C1-C2

**W** 2 credits 2V  S. Milligan

**Abstract**
*Does not take place this semester.*
Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Number of participants limited to 15 (3 courses are available).

**Objective**
We’ll prepare you to produce your MSc thesis. You’ll learn how to structure your thesis, write scientific English, and manage your writing efficiently. You’ll receive detailed feedback on work in progress.

**Content**
The course covers the writing context; the writing process; structuring sentences, paragraphs, longer sections (such as introduction, methods, results, and discussion), and whole texts; presenting and integrating non-textual elements such as graphs and tables; and editing and correcting drafts and proofs. Each lesson comprises a mixture of elements, including specialist input, individual tasks, pairwork, and groupwork. Active participation is expected.

### 376-1030-00L History of Sports

**W** 2 credits 2V  M. Gisler

**Abstract**
Geschichte und Entwicklung des Sports als Sportart. Besonderer Schwerpunkt auf die Entwicklung der modernen Sportart, von der Antike bis zur Gegenwart.

**Objective**
Understanding the development and adaptation of sports from the ancient world to present times.

**Content**

**Literature**
Ein Skript für die aktuelle Veranstaltung wird abgegeben.

### 376-1107-00L Sport Pedagogy

**W** 2 credits 2V  D. Seiler Hubler

**Abstract**
Critical aspects of Sport related pedagogy will be handled in these lectures. These aspects cover, amongst others, the subject and tasks of Sport related pedagogy. Furthermore, the general and sports relevant foundations of Sport related pedagogy will be covered.

**Objective**
To gain basic knowledge of sports pedagogy and to recognize starting points for applied sports pedagogical intervention in schools.
These lectures deal with the current changes in society and sport and provide an overview of the many different problems and perspectives of sport sociology.

The lectures set out to:
- present the different dimensions, functions and interrelationships of present-day sport
- provide an introduction to the central theories and models of (sport) sociology
- show how far sport reflects society and how it changes and becomes more differentiated in the process
- take current examples from newspapers, magazines and television to highlight the sociological view of sport.

Content
Sport and social change: developments and trends

The economy and the media: dependencies, consequences, scandals

Social inequalities and distinctions: gender differences and group behavior

Conflicts and politics: sports organizations, doping, violence

Lecture notes
Selected materials for the lecture are available under www.LSSFB.ch --> Lehre

Literature

A detailed program with additional references will be delivered at the beginning of the lecture.

376-1117-00L Sociology of Sport

Abstract
These lectures deal with the current changes in society and sport and provide an overview of the many different problems and perspectives of sport sociology.

Objective
The lectures set out to:
- present the different dimensions, functions and interrelationships of present-day sport
- provide an introduction to the central theories and models of (sport) sociology
- show how far sport reflects society and how it changes and becomes more differentiated in the process
- take current examples from newspapers, magazines and television to highlight the sociological view of sport.

Content
Sport and social change: developments and trends

The economy and the media: dependencies, consequences, scandals

Social inequalities and distinctions: gender differences and group behavior

Conflicts and politics: sports organizations, doping, violence

Lecture notes
Selected materials for the lecture are available under www.LSSFB.ch --> Lehre

Literature

A detailed program with additional references will be delivered at the beginning of the lecture.

376-1117-00L Sport Psychology

Abstract
This lecture is intended as an introduction to sport psychology and imparts knowledge on selected areas of the subject.

Objective
Students are given insight into different work areas of sport psychology. In order to understand what ‘sport psychology’ is, it is necessary to explain the essence and tasks of sport psychology and what it relates to, and to work out an underlying basis for key topics, such as cognition and emotions. Students’ expertise is furthered by presenting and providing an insight into the additional topics of sport psychology. Selected intervention forms are intended to provide insight into applied sport psychology and ensure that mental processes and their impact in sport can be recognised. Case studies and practical exercises (e.g. objective training) are intended to prompt students to reflect to a greater extent on the forms in which sport psychology can be applied in their practice of sports and to integrate these in their teaching.

Content
Main Topics
- Introduction to sport psychology
- Cognitions in sports: mental rehearsal and training
- Emotions and stress
- Motivation: goal-setting in sports
- Career and career transition in elite sport
- Coach-Athlete-Interaction
- Psychological aspects of sports-injury rehabilitation
- Group dynamics in sport

Lecture notes
Unterrichtsmaterialien zu den einzelnen Veranstaltungen werden den Studierenden zur Verfügung gestellt.

Literature

376-1177-00L Human Factors I

Abstract
Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people's satisfaction & overall performance.

Objective
The goal of the lecture is to empower students in better understanding the applied theories, principles, and methods in various applications. Students are expected to learn about how to enable an efficient and qualitatively high standing interaction between human and the environment, considering costs, benefits, health, and safety as well. Thus, an ergonomic design and evaluation process of products, tasks, and environments may be promoted in different disciplines. The goal is achieved in addressing a broad variety of topics and embedding the discussion in macroscopic factors such as the behavior of consumers and objectives of economy.

Content
- Physiological, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry, Digital Human Models
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

Literature
- Gabriel Salvendy, Handbook of Human Factors and Ergonomics, 4th edition (2012), is available on NEBIS as electronic version and for free to ETH students
- Further textbooks are introduced in the lecture
- Brouchures, checklists, key articles etc. are uploaded in ILIAS

376-1179-00L Applications of Cybernetics in Ergonomics

Abstract
Cybernetics systems have been studied and applied in various research fields, such as applications in the ergonomics domain. Research interests include the man-machine interaction (MMI) topic which involving the performance in multi-model interactions, quantification in gestalt principles in product development; or the information processing matter.

Objective
To learn and practice cybernetics principles in interface designs and product development.

Content
- Fitt's law applied in manipulation tasks
- Hick-Hyman law applied in design of the driver assistance systems - Vigilance applied in quality inspection
- Accommodationvergence crosslink function
- Cross-link models in neurobiology- the ocular motor control system
- Human performance in optimization of production lines
Rehabilitation Engineering II: Rehabilitation of Sensory and Vegetative Functions

W 3 credits 2V

R. Rien, R. Gassert, L. Marchal Crespo

Abstract
Rehabilitation Engng is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective
Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

Content
Introduction, problem definition, overview
Rehabilitation of visual function
- Anatomy and physiology of the visual sense
- Technical aids (glasses, sensor substitution)
- Retina and cortex implants
Rehabilitation of hearing function
- Anatomy and physiology of the auditory sense
- Hearing aids
- Cochlea Implants
Rehabilitation and use of kinesthetic and tactile function
- Anatomy and physiology of the kinesthetic and tactile sense
- Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Role of displays in motor learning
Rehabilitation of vestibular function
- Anatomy and physiology of the vestibular sense
- Rehabilitation strategies and devices (e.g. BrainPort)
Rehabilitation of vegetative Functions
- Cardiac Pacemaker
- Phrenic stimulation, artificial breathing aids
- Bladder stimulation, artificial sphincter
Brain stimulation and recording
- Deep brain stimulation for patients with Parkinson, epilepsy, depression
- Brain-Computer Interfaces
Literature

Introductory Books:

Selected Journal Articles and Web Links:

Prerequisites / notice

Target Group:
Students of higher semesters and PhD students of
- D-MAVT, D-ITET, D-INFK, D-HEST
- Biomedical Engineering, Robotics, Systems and Control
- Medical Faculty, University of Zurich

Students of other departments, faculties, courses are also welcome

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

376-1714-00L Bio compatible Materials W 4 credits 3G K. Maniura, J. Möller, M. Zenobi-Wong

Abstract

Introduction to molecules used for biomaterials, molecular interactions between different materials and biological systems (molecules, cells, tissues). The concept of biocompatibility is discussed and important techniques from biomaterials research and development are introduced.

Objective

The class consists of three parts:
1. Introduction into molecular characteristics of molecules involved in the materials-to-biology interface. Molecular design of biomaterials.
2. The concept of biocompatibility.
3. Introduction into methodology used in biomaterials research and application.

Content

Introduction into native and polymeric biomaterials used for medical applications. The concepts of biocompatibility, biodegradation and the consequences of degradation products are discussed on the molecular level. Different classes of materials with respect to potential applications in tissue engineering and drug delivery are introduced. Strong focus lies on the molecular interactions between materials having very different bulk and/or surface chemistry with living cells, tissues and organs. In particular the interface between the materials surfaces and the eukaryotic cell surface and possible reactions of the cells with an implant material are elucidated. Techniques to design, produce and characterize materials in vitro as well as in vivo analysis of implanted and explanted materials are discussed.

In addition, a link between academic research and industrial entrepreneurship is established by external guest speakers.

Lecture notes

Handouts can be accessed online.

**Abstract**
Students will learn to import, process and graphically present experimental data using the MATLAB computing environment. Both the data and the methods of analysis will be typical for experiments in Human Movement Science (i.e. kinematics, kinetics and electromyography).

**Objective**
Students will acquire the ability to independently lead, plot, and process kinematic, kinetic and electromyographical data using the MATLAB computing environment.

**Content**
Drawbacks of Excel; Possibilities in MATLAB: Import of several data formats; Plot of one and more signals; Removing of an offset and filtering of data based on self-written functions; Normalisation and parametrisation of data; Reliability; Interpolation, Differentiation and Integration in MATLAB.

**Literature**
During the lecture, several electronically available MATLAB introductions are indicated. Course-specific scripts will be provided by the lecturer.

**Prerequisites / Notice**
A Laptop with MATLAB installed (v2009 or higher) and wireless internet access is mandatory. Two students can share a laptop if necessary. A MATLAB student version can be obtained at Stud-IDES for free.

**Abstract**
Intensive discussion concerning complications of a spinal cord injury and the consequences on trainability and exercise performance of persons sitting in a wheelchair. Overview on the clinical application of exercise testing as well as on the implementation of sport scientific findings to optimise performance of spinal cord injured subjects in rehabilitation and elite sports.

**Objective**
Knowledge of the pathophysiology and the concomitant complications of a spinal cord injury and the consequences for physical exercise and trainability during rehabilitation as well as in recreational and elite sport.

**Content**
The following issues will be discussed: Epidemiology and etiology of spinal cord injury; complications and consequences of spinal cord injury; trainability/exercise physiology and spinal cord injury; history and organisation of wheelchair sports; elite sport and spinal cord injury.

**Prerequisites / Notice**
Voraussetzung: Vorlesung Anatomie/Physiologie besucht!
Based on practical examples out of sport, everyday movement and therapy, students use and compare different methods of movement analysis.

Objective

Students are able to assess human movement using different methods of movement analysis.

Content

During the course students get acquainted with different methods of movement analysis such as: functional, morphological, clinical, mechanical, and others.

Based on practical examples, these methods are used and compared. The examples range from sport, everyday movement and therapy, such as hockey, gymnastics, acrobatics, badminton, gait / running and strength training. In the first phase of the class, the different approaches are applied. In the second phase, small teams are working on individual projects. These will be discussed and presented in plenum.

Lecture notes

Class material will be distributed using the moodle platform.

551-1153-00L Systems Biology of Metabolism W 4 credits 2V U. Sauer, N. Zamboni, M. Zampieri

Number of participants limited to 15.

Abstract

Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

Objective

Develop a deeper understanding of how relevant biological problems can be solved, thereby providing advanced insights to key experimental and computational methods in systems biology.

Content

The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics.

For each particular problem studied, we will work out how the various methods work and what their capabilities/limits are. The problem areas range from microbial metabolism to cancer cell metabolism and from metabolic networks to regulation networks in populations and single cells. Key methods to be covered are various modeling approaches, metabolic flux analyses, metabolomics and other omics.

Lecture notes

Script and original publications will be supplied during the course.

Prerequisites / notice

The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

752-6105-00L Epidemiology and Prevention W 3 credits 2V M. Puhan, R. Heusser

Information for UZH students: Enrolment to this course unit only possible at ETH. No enrolment to module CS16_101 at UZH.

Please mind the ETH enrolment deadlines for UZH students: https://www.ethz.ch/en/studies/non-degree-courses/special-students/special-students-university-of-zurich.html

Abstract

The module Epidemiology and prevention describes the process of scientific discovery from the detection of a disease and its causes, to the development and evaluation of preventive and treatment interventions and to improved population health.

Objective

The overall goal of the course is to introduce students to epidemiological thinking and methods, which are critical pillars for medical and public health research. Students will also become aware on how epidemiological facts are used in prevention, practice and politics.

Content

The module Epidemiology and prevention follows an overall framework that describes the course of scientific discovery from the detection of a disease to the development of prevention and treatment interventions and their evaluation in clinical trials and real world settings. We will discuss study designs in the context of existing knowledge and the type of evidence needed to advance knowledge. Examples form nutrition, chronic and infectious diseases will be used in order to show the underlying concepts and methods.

752-6151-00L Public Health Concepts W 3 credits 2V R. Heusser

Abstract

The module "public health concepts" offers an introduction to key principles of public health. Students get acquainted with the concepts and methods of epidemiology. Students also learn to use epidemiological data for prevention and health promotion purposes. Public health concepts and intervention strategies are presented, using examples from infectious and chronic diseases.

Objective

At the end of this module students are able:
- to interpret the results of epidemiological studies
- to critically assess scientific literature
- to know the definition, dimensions and determinants of health
- to plan public health interventions and health promotion projects

Content

Concepts of descriptive and analytical epidemiology, study designs, measures of effect, confounding and bias, screening, surveillance, definition of health and health promotion, health dimensions and health determinants, prevention strategies, public health interventions, public health action cycle, epidemiology and prevention of infectious and chronic diseases (HIV, Tuberculosis, Obesity, Public health nutrition).

Lecture notes

Handouts are provided to students in the classroom.

Prerequisites / notice

Language of the course is english

752-6403-00L Nutrition and Performance W 2 credits 2V S. Mettler, M. B. Zimmermann

Abstract

The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

Objective

To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Content

The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

Lecture notes

Lecture slides and required handouts will be available on the ETH website.

Literature

Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

Prerequisites / notice

General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

Language: English

It is strongly recommended to attend the lectures. The lecture (including the handouts) is not designed for distance education.

Major in Human Health, Nutrition and Environment

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 760 of 1571
The module "public health concepts" offers an introduction to key principles of public health. Students get acquainted with the concepts and intervention strategies are presented, using examples from infectious and chronic diseases.

Methods of epidemiology. Students also learn to use epidemiological data for prevention and health promotion purposes. Public health nutrition, chronic and infectious diseases will be used in order to show the underlying concepts and methods.

Guidelines will be handed out in the beginning.

Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication)

- How to identify need?
- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
- How to measure success?
- Outcome variables
- Improving the translational process
- Challenges of communication?
- How independent is translational science?
- Academic boundary conditions vs. industrial influences

Positive and negative examples will be illustrated by distinguished guest speakers.

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 761 of 1571
Attendees will learn which information is contained in genetic sequencing data and how to extract information from them using computational tools. The main concepts introduced are:

- stochastic models in molecular evolution
- phylogenetic & phylodynamic inference
- maximum likelihood and Bayesian statistics

Attendees will apply these concepts to a number of applications yielding biological insight into:

- epidemiology
- pathogen evolution
- macroevolution of species

The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments from the output of the sequencers. We then present methods to directly analyze this alignment (such as BLAST algorithm, GWAS approaches). Second, we introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Third, we employ evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phylodynamics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades. Students will be trained in the algorithms and their application both on paper and in silico as part of the exercises.

- Optimization of B cell responses by intelligent design of new vaccines
- mechanisms of immunopathology
- reaction of immune cells to infection
- maximum likelihood and Bayesian statistics
- stochastic models in molecular evolution
- macroevolution of species
- pathogen evolution
- exercise of computational tools
- To apply knowledge in interdisciplinary projects
- To work in teams
- To present scientific results in written and oral form.

Recommendations will be given in the first lecture. Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism with the human host and the microbial pathogen. Hosts will include animals, plants and humans.

Lecture notes
Publications and class notes can be downloaded from a web page announced during the lecture.

Literature
Papers will be assigned and downloaded from a web page announced during the lecture.

701-1703-00L  
Evolutionary Medicine for Infectious Diseases  
W  3 credits  2G  A. Hall  

Abstract
This course explores infectious disease from both the host and pathogen perspective. Through short lectures, reading and active discussion, students will identify areas where evolutionary thinking can improve our understanding of infectious diseases and, ultimately, our ability to treat them effectively.

Objective
Students will learn to (i) identify evolutionary explanations for the origins and characteristics of infectious diseases in a range of organisms and (ii) evaluate ways of integrating evolutionary thinking into improved strategies for treating infections of humans and animals. This will incorporate principles that apply across any host-pathogen interaction, as well as system-specific mechanistic information, with particular emphasis on bacteria and viruses.

Content
We will cover several topics where evolutionary thinking is relevant to understanding or treating infectious diseases. This includes: (i) determinants of pathogen host range and virulence, (ii) dynamics of host-parasite coevolution, (iii) pathogen adaptation to evade or suppress immune responses, (iv) antimicrobial resistance, (v) evolution-proof medicine. For each topic there will be a short (~30 minutes) introductory lecture, before students independently research the primary literature and develop half a page of discussion points and questions, followed by interactive discussion in class.

Literature
Students will read the primary literature on each topic, and in places we will use the following books:

- Schmid Hampel 2011 Evolutionary Parasitology
- Stearns & Medzhitov 2016 Evolutionary Medicine

Prerequisites / notice
A basic understanding of evolutionary biology, microbiology or parasitology will be advantageous but is not essential.

752-4009-00L  
Molecular Biology of Foodborne Pathogens  
W  3 credits  2V  M. Loessner, M. Schuppler  

Abstract
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks. Another focus lies on the currently available methods and techniques useful for the various purposes, i.e., detection, differentiation (typing), and antimicrobial agents.

Content
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks? Which methods are best suited for what approach? Last, but not least, the role of bacteriophages in microbial pathogenicity will be highlighted, in addition to various applications of bacteriophage for both diagnostics and antimiicrobrial intervention.

Lecture notes
Electronic copies of the presentation slides (PDF) and additional material will be made available for download to registered students.

Literature
Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until approx. 11:15 h), with no break!

Module: Nutrition and Health

752-2122-00L  
Food and Consumer Behaviour  
W  2 credits  2V  M. Siegrist, C. Hartmann  

Abstract
This course focuses on food consumer behavior, consumer's decision-making processes and consumer's attitudes towards food products.

Objective
The course provides an overview about the following topics: Factors influencing consumer's food choice, food and health, attitudes towards new foods and food technologies, labeling and food policy issues.

752-5103-00L  
Functional Microorganisms in Foods  
W  3 credits  2G  C. Lacroix, T. de Wouters, L. Meile, C. Schwab  

Abstract
This integration course will discuss new applications of microorganisms with functional properties in food and functional food products. Selected topics will be used to illustrate the rapid development but also limits of basic knowledge for applications of functional microorganisms to produce food with high quality, safety and potential health benefits for consumers.

Objective
To understand the principles, roles and mechanisms of microorganisms with metabolic activities of high potential for application in traditional and functional foods utilization with high quality, safety and potential health benefits for the consumers. This course will integrate basic knowledge in food microbiology, microbial physiology, biochemistry, and technology.

Content
This course will address selected and current topics on new applications of microorganisms with functional properties in food and functional food products and characterization of functionality and safety of food bacteria. Specialists from the Laboratory of Food Biotechnology, as well as invited speakers from the industry will contribute to the selected topics as follows:

- Probiotics and Prebiotics: Probiotics, functional foods and health, towards understanding molecular modes of probiotic action; Challenges for the production and addition of probiotics to foods; Prebiotics and other microbial substrates for gut functionality.
- Bioprotective Cultures and Antimicrobial Metabolites: Antifungal cultures and applications in foods; Antimicrobial peptide-producing cultures (bacteriocins) for enhancing food quality and safety; Development of new protective cultures, the long path from research to industry.
- Legal and Protection Issues Related Functional Foods
- Industrial Biotechnology of Flavor and Taste Development
- Safety of Food Starter Cultures and Probiotics

Students will be required to complete a group project on food products and ingredients with of from functional bacteria. The project will involve information research and analysis followed by an oral presentation and short written report.

752-6101-00L  
Dietary Etiologies of Chronic Disease  
W  3 credits  2V  M. B. Zimmermann  

Abstract
A list of references will be given at the beginning of the course for the different topics presented during this course.

Objective
After completing this course, students will be able to understand:
Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication)

Content
What is translational science and what is it not?
How to identify need?
- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
How to measure success?
- Outcome variables
- Improving the translational process
Challenges of communication?
- How independent is translational science?
- Academic boundary conditions vs. industrial influences
Positive and negative examples will be illustrated by distinguished guest speakers.

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 765 of 1571
Objective: The objective of this course is to expose students to the fundamental aspects of the emerging field of microrobotics. This includes a focus on physical laws that predominate at the microscale, technologies for fabricating small devices, bio-inspired design, and applications of the field.

Content: Main topics of the course include:
- Scaling laws at micro/nano scales
- Electrostatics
- Electromagnetism
- Low Reynolds number flows
- Observation tools
- Materials and fabrication methods
- Applications of biomedical microrobots

Lecture notes: The powerpoint slides presented in the lectures will be made available in hardcopy and as pdf files. Several readings will also be made available electronically.

Prerequisites / notice: The lecture will be taught in English.
Synchrotron-based X-ray micro- and nano-tomography is today a powerful technique for non-destructive, high-resolution investigations of a wide range of materials. The high-brilliance and high-coherence of third generation synchrotron radiation facilities allow quantitative, three-dimensional imaging at the micro and nanometer scale and extend the traditional absorption imaging technique to edge-enhanced and phase-sensitive measurements, which are particularly suited for investigating biological samples.

The lecture includes a general introduction to the principles of tomographic imaging from image formation to image reconstruction. It provides the physical and engineering basics to understand how imaging beamlines at synchrotron facilities work, looks into the recently developed phase contrast methods, and explores the first applications of X-ray nano-tomographic experiments.

The course finally provides the necessary background to understand the quantitative evaluation of tomographic data, from basic image analysis to complex morphometrical computations and 3D visualization, keeping the focus on biomedical applications.
### 327-0505-00L Surfaces, Interfaces and their Applications I

**Abstract**
After being introduced to the physical/chemical principles and importance of surfaces and interfaces, the student is introduced to the most important techniques that can be used to characterize surfaces. Later, liquid interfaces are treated, followed by an introduction to the fields of tribology (friction, lubrication, and wear) and corrosion.

**Objective**
To gain an understanding of the physical and chemical principles, as well as the tools and applications of surface science, and to be able to choose appropriate surface-analytical approaches for solving problems.

**Content**
- Introduction to Surface Science
- Physical Structure of Surfaces
- Surface Forces (static and dynamic)
- Adsorbates on Surfaces
- Surface Thermodynamics and Kinetics
- The Solid-Liquid Interface
- Electron Spectroscopy
- Vibrational Spectroscopy on Surfaces
- Scanning Probe Microscopy
- Introduction to Tribology
- Introduction to Corrosion Science

**Lecture notes**

**Literature**

**Prerequisites / notice**
- Chemistry: General undergraduate chemistry including basic chemical kinetics and thermodynamics
- Physics: General undergraduate physics including basic theory of diffraction and basic knowledge of crystal structures

### 327-2125-00L Microscopy Training SEM I - Introduction to SEM

**Abstract**
The introductory course on Scanning Electron Microscopy (SEM) emphasizes hands-on learning. Using 2 SEM instruments, students have the opportunity to study their own samples, or standard test samples, as well as solving exercises provided by ScopeM scientists.

**Objective**
- Set-up, align and operate a SEM successfully and safely.
- Accomplish imaging tasks successfully and optimize microscope performances.
- Master the operation of a low-vacuum and field-emission SEM and EDX instrument.
- Perform sample preparation with corresponding techniques and equipment for imaging and analysis.
- Acquire techniques in obtaining secondary electron and backscatter electron micrographs.
- Perform EDX qualitative and semi-quantitative analysis.

**Content**
- During the course, students learn through lectures, demonstrations, and hands-on sessions how to setup and operate SEM instruments, including low-vacuum and low-voltage applications.
- This course gives basic skills for students new to SEM. At the end of the course, students will be able to align a SEM, to obtain secondary electron (SE) and backscatter electron (BSE) micrographs, and to perform energy dispersive X-ray spectroscopy (EDX) qualitative and semi-quantitative analysis.

**Literature**
- Detailed course manual

**Prerequisites / notice**
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551-1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.
The participants will be chosen based on a short motivation letter. Please send this letter to S. Rodighiero (main lecturer).

**Abstract**
The introductory course on Transmission Electron Microscopy (TEM) provides theoretical and hands-on learning for new operators, utilizing lectures, demonstrations, and hands-on sessions.

**Objective**
- Overview of TEM theory, instrumentation, operation and applications.
- Alignment and operation of a TEM, as well as acquisition and interpretation of images, diffraction patterns, accomplishing basic tasks successfully.
- Knowledge of electron imaging modes (including Scanning Transmission Electron Microscopy), magnification calibration, and image acquisition using CCD cameras.
- To set up the TEM to acquire diffraction patterns, perform camera length calibration, as well as measure and interpret diffraction patterns.
- Overview of techniques for specimen preparation.

**Content**
Using two Transmission Electron Microscopes the students learn how to align a TEM, select parameters for acquisition of images in bright field (BF) and dark field (DF), perform scanning transmission electron microscopy (STEM) imaging, phase contrast imaging, and acquire electron diffraction patterns. The participants will also learn basic and advanced use of digital cameras and digital imaging methods.

- Introduction and discussion on Electron Microscopy and instrumentation.
- Lectures on electron sources, electron lenses and probe formation.
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM.
- Brief description and demonstration of the TEM microscope.
- Practice on beam/specimen interaction, image formation, Image contrast (and image processing).
- Demonstration of Transmission Electron Microscopes and imaging modes (Phase contrast, BF, DF, STEM).
- Student participation on sample preparation techniques.
- Transmission Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities.
- TEM alignment, calibration, correction to improve image contrast and quality.
- Electron diffraction.
- Practice on real-world samples and report results.

**Literature**
- Detailed course manual

**Prerequisites / notice**
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551-1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.

**363-0790-00L Technology Entrepreneurship**

**W** 2 credits 2V U. Claesson, B. Clarysse

**Abstract**
Technology ventures are significantly changing the global economic picture. Technological skills increasingly need to be complemented by entrepreneurial understanding.

This course offers the fundamentals in theory and practice of entrepreneurship in new technology ventures. Main topics covered are success factors in the creation of new firms, including founding, financing and growing a venture.

**Objective**
This course provides theory-grounded knowledge and practice-driven skills for founding, financing, and growing new technology ventures. A critical understanding of dos and don'ts is provided through highlighting and discussing real life examples and cases.

**376-0815-00L Writing your Master's Thesis: Natural Sciences and Engineering C1-C2**

**W** 2 credits 2V S. Milligan

Does not take place this semester.

Your course registration is only valid with a simultaneous online registration at the language center (www.sprachenzentrum.uzh.ch).

Number of participants limited to 15 (3 courses are available).

**Abstract**
We'll prepare you to produce your MSc thesis. You'll learn how to structure your thesis, write scientific English, and manage your writing efficiently. You'll receive detailed feedback on work in progress.

**Objective**
By the end of the course students are able to plan, draft, and edit academic English papers and theses; structure and write clear texts in a style which is acceptable to their academic discourse community; manage the writing process efficiently; select formal vocabulary and use it in a generally accurate and correct manner; choose and use generally suitable grammatical structures, punctuation, and orthographic conventions, assess their own effectiveness as writers of academic English, and identify areas in which further development is needed.

**Content**
The course covers the writing context; the writing process; structuring sentences, paragraphs, longer sections (such as introduction, methods, results, and discussion), and whole texts; presenting and integrating non-textual elements such as graphs and tables; and editing and correcting drafts and proofs. Each lesson comprises a mixture of elements, including specialist input, individual tasks, pairwork, and groupwork. Active participation is expected.

**363-1065-00L Design Thinking: Human-Centred Solutions to Real World Challenges**

**W** 5 credits 5G A. Cabello Llamas, F. Rittiner, S. Brusoni, C. Hölscher, M. Meboldt

Due to didactic reasons, the number of participants is limited to 30.

All interested students are invited to apply for this course by sending a one-page motivation letter until 14.9.16 to Florian Rittiner (rittiner@ethz.ch).

Additionally please enroll via mystudies. Places will be assigned after the first lecture on the basis of your motivation letter and commitment for the class.

**Abstract**
The goal of this course is to engage students in a multidisciplinary collaboration to tackle real world problems. Following a design thinking approach, students will work in teams to solve a set of design challenges that are organized as a one-week, a three-week, and a final six-week project in collaboration with an external project partner.

Information and application: www.sparklabs.ch/ethz
During the course, students will learn about different design thinking methods and tools. This will enable them to:

- Generate deep insights through the systematic observation and interaction of key stakeholders.
- Engage in collaborative ideation with a multidisciplinary (student) team.
- Rapidly prototype and iteratively test ideas and concepts by using various materials and techniques.

The purpose of this course is to equip the students with methods and tools to tackle a broad range of problems. Following a Design Thinking approach, the students will learn how to observe and interact with key stakeholders in order to develop an in-depth understanding of what is truly important and emotionally meaningful to the people at the center of a problem. Based on these insights, the students ideate on possible solutions and immediately validate them through quick iterations of prototyping and testing using different tools and materials. The students will work in multidisciplinary teams on a set of challenges that are organized as a one-week, a three-week, and a final six-week project with an external project partner. In this course, the students will learn about the different Design Thinking methods and tools that are needed to generate deep insights, to engage in collaborative ideation, rapid prototyping and iterative testing.

Design Thinking is a deeply human process that taps into the creative abilities we all have, but that get often overlooked by more conventional problem solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols. Design Thinking provides an integrated way by incorporating tools, processes and techniques from design, engineering, the humanities and social sciences to identify, define and address diverse challenges. This integration leads to a highly productive collaboration between different disciplines.

The purpose of this course is to equip the students with methods and tools to tackle a broad range of problems. Following a Design Thinking approach, the students will learn how to observe and interact with key stakeholders in order to develop an in-depth understanding of what is truly important and emotionally meaningful to the people at the center of a problem. Abstract
Rehabilitation Engng is the application of science and technology to ameliorate the handicaps of individuals with disabilities to reintegrate them into society. The goal is to present classical and new rehabilitation engineering principles applied to compensate or enhance motor, sensory, and cognitive deficits. Focus is on the restoration and treatment of the human sensory and vegetative system.

Objective
Provide knowledge on the anatomy and physiology of the human sensory system, related dysfunctions and pathologies, and how rehabilitation engineering can provide sensory restoration and substitution.

Content
Introduction, problem definition, overview
- Rehabilitation of visual function
  - Anatomy and physiology of the visual sense
  - Technical aids (glasses, sensor substitution)
  - Retina and cortex implants
- Rehabilitation of hearing function
  - Anatomy and physiology of the auditory sense
  - Hearing aids
  - Cochlea Implants
- Rehabilitation and use of kinesthetic and tactile function
  - Anatomy and physiology of the kinesthetic and tactile sense
  - Tactile/haptic displays for motion therapy (incl. electrical stimulation)
- Rehabilitation of vestibular function
  - Anatomy and physiology of the vestibular sense
  - Rehabilitation strategies and devices (e.g. BrainPort)
- Rehabilitation of vegetative Functions
  - Cardiac Pacemaker
  - Phrenic stimulation, artificial breathing aids
  - Bladder stimulation, artificial sphincter
  - Brain stimulation and recording
    - Deep brain stimulation for patients with Parkinson, epilepsy, depression
    - Brain-Computer Interfaces

Virtual Reality has the potential to support medical training and therapy. This lecture will derive the technical principles of multi-modal (auditory, haptic, tactile etc.) input devices, displays and rendering techniques. Examples are presented in the fields of surgical training, intra-operative augmentation, and rehabilitation. The lecture is accompanied by practical courses and excursions.

**Objective**

Provide theoretical and practical knowledge of new principles and applications of multi-modal simulation and interface technologies in medical education, therapy, and rehabilitation.

**Content**

Virtual Reality has the potential to provide descriptive and practical information for medical training and therapy while relieving the patient and/or the physician. Multi-modal interactions between the user and the virtual environment facilitate the generation of high-fidelity sensory impressions, by using not only visual and auditory modalities, but also kinesthetic, tactile, and even olfactory feedback. On the basis of the existing physiological constraints, this lecture will derive the technical requirements and principles of multi-modal input devices, displays, and rendering techniques. Several examples are presented that are currently being developed or already applied for surgical training, intra-operative augmentation, and rehabilitation. The lecture will be accompanied by several practical courses on graphical and haptic display devices as well as excursions to facilities equipped with large-scale VR equipment.

**Target Group:**

Students of higher semesters and PhD students of - D-MAVT, D-ITET, D-INFK, D-HEST - Biomedical Engineering, Robotics, Systems and Control - Medical Faculty, University of Zurich - Students of other departments, faculties, courses are also welcome

**Prerequisites / notice**

This lecture is independent from Rehabilitation Engineering I. Thus, both lectures can be visited in arbitrary order.

**376-1351-00L Micro/Nanotechnology and Microfluidics for Biomedical Applications**  
**W**  
2 credits  
2V  
E. Delamarche

**Abstract**

This course is an introduction to techniques in micro/nanotechnology and to microfluidics. It reviews how many familiar devices are built and can be used for research and biomedical applications. Transistors for DNA sequencing, beamers for patterning proteins, hard-disk technology for biosensing and scanning microfluidics for analyzing tissue sections are just a few examples of the covered topics.

**Objective**

The main objective of the course is to introduce micro/nanotechnology and microfluidics to students having a background in the life sciences. The course should familiarize the students with the techniques used in micro/nanotechnology and show them how micro/nanotechnology pervades through life sciences. Microfluidics will be emphasized due to their increasing importance in research and medical applications. The second objective is to have life students less intimidated by micro/nanotechnology and make them able to link instruments and techniques to specific problems that they might have in their projects/studies. This will also help students getting access to the ETHZ/IBM Nanotech Center infrastructure if needed.

**Content**

Mostly formal lectures (2 x 45 min), with a 2 hour visit and introduction to cleanroom and micro/nanotechnology instruments, last 3 laboratory sessions and lab visits.

**Prerequisites / notice**

The course language is English. Basic experience in Information Technology and Computer Science will be of advantage. More details will be announced in the lecture.

**376-1504-00L Physical Human Robot Interaction (pHRI)**  
**W**  
4 credits  
2V+2U  
R. Gassert, O. Lambercy

**Abstract**

This course focuses on the emerging, interdisciplinary field of physical human-robot interaction, bringing together themes from robotics, real-time control, human factors, haptics, virtual environments, interaction design and other fields to enable the development of human-oriented robotic systems.

**Objective**

The objective of this course is to give an introduction to the fundamentals of physical human robot interaction, through lectures on the underlying theoretical/mechatronics aspects and application fields, in combination with a hands-on lab tutorial. The course will guide students through the design and evaluation process of such systems.

By the end of this course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and design safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the defined design requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement and test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) investigate and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

**Content**

This course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neurophysiology and psychophysics, principles of human-robot interaction systems (kinematics, mechanical transmissions, robot sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance, force control, haptic rendering basics and issues in device design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical human-robot interaction, laboratory sessions and lab visits.

Students will attend periodic laboratory sessions where they will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://www.relab.ethz.ch/education/courses/phri/request-ethz-haptic-paddle-hardware-documentation.html), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, damping, time delays, sampling rate, sensor quantization, etc.) during rendering of different mechanical properties.

**Lecture notes**

Will be distributed through the document repository before the lectures.

http://www.relab.ethz.ch/education/courses/phri.html

Prerequisites / notice
Notice:
The registration is limited to 26 students.
There are 4 credit points for this lecture.
The lecture will be held in English.
The students are expected to have basic control knowledge from previous classes.

http://www.relab.ethz.ch/education/courses/phi.html

4 credits

Practical exercises and demonstrations on topics including sterile cell culture, light microscopy and histology, protein and gene expression analysis, and viability assays are covered. The advantages of 3D cell cultures will be discussed and practical work on manufacturing and evaluating hydrogels and scaffolds for tissue engineering will be performed in small groups. In addition to practical lab work, the course will teach skills in data acquisition/analysis.

Clinical and Movement Biomechanics

Measurement and modeling of the human movement during daily activities and in a clinical environment.

The students are able to analyse the human movement from a technical point of view, to process the data and perform modeling with a focus towards clinical application.

This course includes study design, measurement techniques, clinical testing, accessing movement data and analysis as well as modeling with regards to human movement.

Trauma biomechanics in an interdisciplinary research field investigating the biomechanics of injuries and related subjects such as prevention. The lecture provides an introduction to the basic principles of trauma biomechanics.

This lecture serves as an introduction to the field of trauma biomechanics. Emphasis is placed on the interdisciplinary nature of impact biomechanics, which uses the combination of fundamental engineering principles and advanced medical technologies to develop injury prevention measures. Topics include: accident statistics and accident reconstruction, biomechanical response of the human to impact loading, injury mechanisms and injury criteria, test methods (including crush tests), computer simulations using multi-body and finite element modelling techniques, aspects of passive safety of vehicles (focusing on restraint systems and vehicle compatibility). Real world examples mainly from automobile safety are used to augment lecture material.

Handouts will be made available.

Colloquium in Biomechanics

Getting insight into actual areas and problems of biomechanics.

Current topics in biomechanics presented by speakers from academia and industry.

Principles and main methods in biostatistics with emphasis on practical aspects. Experimental and observational studies. Regression and analysis of variance. Introduction into survival analysis.

Getting an overview of the problems and statistical methods used in health sciences. Practise in using the software R to analyze data and interpreting the suits.

Applied Biostatistics

Principles and main methods in biostatistics with emphasis on practical aspects. Experimental and observational studies. Regression and analysis of variance. Introduction into survival analysis.

Getting an overview of the problems and statistical methods used in health sciences. Practise in using the software R to analyze data and interpreting the suits.

401-0629-00L

Objective
As the first step, real structures on clean surfaces including surface reconstructions and surface relaxations, defects in crystals are presented, before the preparation of clean metallic, semiconducting, oxidic and organic surfaces are introduced.

The atomic processes on surfaces are activated by the increase of the substrate temperature. They can be studied using scanning tunneling microscopy (STM) and atomic force microscopy (AFM). The combination with molecular beam epitaxy (MBE) allows determining the sizes of the critical nuclei and the other activated processes in a hierarchical fashion. The evolution of the surface morphology is characterized by the density and size distribution of the nanostructures that could be quantified by means of the rate equation analysis, the mean-field nucleation theory, as well as the scaling theory. The surface morphology is further characterized by defects and nanostructure's shapes, which are based on the strain relieving mechanisms and kinetic growth processes.

Objective
High-resolution electron diffraction is complementary to scanning probe techniques and provides exact mean values. Some phenomena are quantitatively described by the kinematic theory and perfectly understood by means of the Ewald construction. Other phenomena need to be described by the more complex dynamical theory. Electron diffraction is not only associated with elastic scattering but also inelastic excitation mechanisms that reflect the electronic structure of the surfaces studied. Low-energy electrons lead to phonon and high-energy electrons to plasmon excitations. Both effects are perfectly described by dipole and impact scattering.

Objective
Thin-films of rather complex organic materials are often quantitatively characterized by photons with a broad range of wavelengths from ultra-violet to infra-red light. Asymmetries and preferential orientations of the (anisotropic) molecules are verified using the optical dichroism and second harmonic generation measurements. These characterization techniques are vital for optimizing the preparation of medical implants and the determination of tissue's anisotropies within the human body.

Objective
Cell-surface interactions are related to the cell adhesion and the contractile cellular forces. Physical means have been developed to quantify these interactions. Other physical techniques are introduced in cell biology, namely to count and sort cells, to study cell proliferation and metabolism and to determine the relation between cell morphology and function.

Objective
3D scaffolds are important for tissue augmentation and engineering. Design, preparation methods, and characterization of these highly porous 3D microstructures are also presented.

Objective
Visiting clinical research in a leading university hospital will show the usefulness of the lecture series.

Cellular Biochemistry (Part I)

W 3 credits 2V

Abstract
Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and
regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and
signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

Objective
The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of
physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular
characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and

content
Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and

Content
Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular
transport and targeting; vesicular trafficking and phagocytosis; post-transcriptional regulation of gene expression.

Literature
Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

Prerequisites / notice
To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be
taught in English.

Translational Science for Health and Medicine

Objective
After completing this course, students will be able to understand:

Content
What is translational science and what is it not?

- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
- How to measure success?
- Outcome variables
- Improving the translational process
- Challenges of communication?
- How independent is translational science?
- Academic boundary conditions vs. industrial influences

Translational Science for Health and Medicine

Abstract
Translational science is a cross disciplinary scientific research that is motivated by the need for practical applications that help people. The
course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key
features into their future projects.

Objective
After completing this course, students will be able to understand:

Content
What is translational science and what is it not?

- How to identify need?

- Disease concepts and consequences for research
- Basics about incidence, prevalence etc., and orphan indications
- How to choose the appropriate research type and methodology
- Ethical considerations including ethics application
- Pros and cons of different types of research
- Coordination of complex approaches incl. timing and resources
- How to measure success?
- Outcome variables
- Improving the translational process
- Challenges of communication?
- How independent is translational science?
- Academic boundary conditions vs. industrial influences

Positive and negative examples will be illustrated by distinguished guest speakers.

Concepts in Modern Genetics

Abstract
Concepts of modern genetics and genomics, including principles of classical genetics; yeast genetics; gene mapping; forward and reverse

Objective
This course focuses on the concepts of classical and modern genetics and genomics.
Content
The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of euchromatic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

Lecture notes
Scripts and additional material will be provided during the semester.

Prerequisites / notice
This course is a co-production of the University of Zurich and ETH Zurich, and will be taught in English. The course takes place on Monday afternoon at ETH Hoenggerberg, and on Tuesday morning at UZH Irchel.

Abstract
The introductory course on Scanning Electron Microscopy (SEM) emphasizes hands-on learning. Using 2 SEM instruments, students have the opportunity to study their own samples, or standard test samples, as well as solving exercises provided by ScopeM scientists.

Objective
- Set-up, align and operate a SEM successfully and safely.
- Accomplish imaging tasks successfully and optimize microscope performances.
- Master the operation of a low-vacuum and field-emission SEM and EDX instrument.
- Perform sample preparation with corresponding techniques and equipment for imaging and analysis
- Acquire techniques in obtaining secondary electron and backscatter electron micrographs
- Perform EDX qualitative and semi-quantitative analysis

Content
During the course, students learn through lectures, demonstrations, and hands-on sessions how to setup and operate SEM instruments, including low-vacuum and low-voltage applications.

This course gives basic skills for students new to SEM. At the end of the course, students with no prior experience are able to align a SEM, to obtain secondary electron (SE) and backscatter electron (BSE) micrographs and to perform energy dispersive X-ray spectroscopy (EDX) qualitative and semi-quantitative analysis. The procedures to better utilize SEM to solve practical problems and to optimize SEM analysis for a wide range of materials will be emphasized.

- Discussion of students' sample/interest
- Introduction and discussion on Electron Microscopy and instrumentation
- Lectures on electron sources, electron lenses and probe formation
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM
  - Brief description and demonstration of the SEM microscope
  - Practice on beam/specimen interaction, image formation, image contrast (and image processing)
  - Student participation on sample preparation techniques
  - Scanning Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities
  - Lecture and demonstrations on X-ray micro-analysis (theory and detection), qualitative and semi-quantitative EDX and point analysis, line scans and spectral mapping
- Practice on real-world samples and report results

Literature
- Detailed course manual

Number of participants limited to 6.

Prerequisites / notice
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551-1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.

Abstract
The introductory course on Transmission Electron Microscopy (TEM) provides theoretical and hands-on learning for new operators, utilizing lectures, demonstrations, and hands-on sessions.

Objective
- Overview of TEM theory, instrumentation, operation and applications.
- Alignment and operation of a TEM, as well as acquisition and interpretation of images, diffraction patterns, accomplishing basic tasks successfully.
- Knowledge of electron imaging modes (including Scanning Transmission Electron Microscopy), magnification calibration, and image acquisition using CCD cameras.
- To set up the TEM to acquire diffraction patterns, perform camera length calibration, as well as measure and interpret diffraction patterns.
- Overview of techniques for specimen preparation.

Content
Using two Transmission Electron Microscopes, the students learn how to align a TEM, select parameters for acquisition of images in bright field (BF) and dark field (DF), perform scanning transmission electron microscopy (STEM) imaging, phase contrast imaging, and acquire electron diffraction patterns. The participants will also learn basic and advanced use of digital cameras and digital imaging methods.

- Introduction and discussion on Electron Microscopy and instrumentation.
- Lectures on electron sources, electron lenses and probe formation.
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM.
  - Brief description and demonstration of the TEM microscope.
  - Practice on beam/specimen interaction, image formation, Image contrast (and image processing).
  - Demonstration of Transmission Electron Microscopes and imaging modes (Phase contrast, BF, DF, STEM).
  - Student participation on sample preparation techniques.
- Transmission Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities.
- TEM alignment, calibration, correction to improve image contrast and quality.
- Electron diffraction.
- Practice on real-world samples and report results.

Literature
- Detailed course manual

Does not take place this semester.

Number of participants limited to 6.

The participants will be chosen based on a short motivation letter. Please send this letter to S. Rodighiero as soon as possible.
376-0815-00L  Writing your Master’s Thesis: Natural Sciences and Engineering C1-C2

Abstract: We'll prepare you to produce your MSc thesis. You'll learn how to structure your thesis, write scientific English, and manage your writing efficiently. You'll receive detailed feedback on work in progress.

Objective: By the end of the course students are able to plan, draft, and edit academic English papers and theses; structure and write clear texts in a style which is acceptable to their academic discourse community; manage the writing process efficiently; select formal vocabulary and use it in a generally accurate and correct manner; choose and use generally suitable grammatical structures, punctuation, and orthographic conventions, assess their own effectiveness as writers of academic English, and identify areas in which further development is needed.

Content: The course covers the writing context; the writing process; structuring sentences, paragraphs, longer sections (such as introduction, conclusion); using research sources, avoiding plagiarism; understanding the role of figurative language in academic English; using appropriate register in academic English; choosing and using appropriate means of argumentation; selecting and using appropriate means of presentation; editing and correcting drafts and proofs. Each lesson comprises a mixture of elements, including specialist input, individual tasks, pairwork, and groupwork. Active participation is expected.

551-0223-00L  Immunology III

Abstract: This course provides a detailed understanding of:
- Development and selection of CD4 and CD8 T cells, natural killer T cells (NKT), and regulatory T cells (Treg)
- NK T cells and responses to lipid antigens
- Differentiation, characterization, and function of CD4 T cell subsets such as Th1, Th2, and Th17
- Overview of cytokines and their effector function
- Co-stimulation (signals 1-3)
- Dendritic cells
- Evolution of the "Danger" concept
- Cells expressing Pattern Recognition Receptors and their downstream signals
- T cell function and dysfunction in acute and chronic viral infections

Objective: Obtain a detailed understanding of:
- The development, activation, and differentiation of different types of T cells and their effector mechanisms during immune responses.
- Recognition of pathogenic microorganisms by the host cells and molecular events thereafter.
- Signals for maturation of naive B cells to antibody producing plasma cells and memory B cells.
- Optimization of B cell responses by intelligent design of new vaccines

Literature: O&O

Prerequisites / notice: Immunology I and II recommended but not compulsory

551-0317-00L  Immunology I

Abstract: Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

Objective: Introduction into structural and functional aspects of the immune system. Basic knowledge of the mechanisms and the regulation of an immune response.

Content: Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histocompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

Lecture notes: Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien"

Literature: O&O

Prerequisites / notice: Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

551-0512-00L  Current Topics in Molecular and Cellular Neurobiology

Abstract: The course is a literature seminar or "journal club". Each Friday a student, or a member of the Suter Lab in the Institute of Molecular Health Sciences, will present a paper from the recent literature.

Objective: The course introduces you to recent developments in the fields of cellular and molecular neurobiology. It also supports you to develop your skills in critically reading the scientific literature. You should be able to grasp what the authors wanted to learn i.e. their goals, why the authors chose the experimental approach they used, the strengths and weaknesses of the experiments and the data presented, and how the work fits into the wider literature in the field. You will present one paper yourself, which provides you with practice in public speaking.

Literature: O&O

Prerequisites / notice: Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 777 of 1571
You will present one paper yourself. Give an introduction to the field of the paper, then show and comment on the main results (all the papers we present are available online, so you can show original figures with a beamer). Finish with a summary of the main points and a discussion of their significance.

You are expected to take part in the discussion and to ask questions. To prepare for this you should read all the papers beforehand (they will be announced a week in advance of the presentation).

Presentations will be made available after the seminars. Presentations will be made available after the seminars. You must attend at least 80% of the journal clubs, and give a presentation of your own. At the end of the semester there will be a 30 minute oral exam on the material presented during the semester. The grade will be based on the exam (45%), your presentation (45%), and a contribution based on your active participation in discussion of other presentations (10%).

**551-0571-00L From DNA to Diversity (University of Zurich)**

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.
UZH Module Code: BIO336

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

**Abstract**
The evolution of the various body-plans is investigated by means of comparison of developmentally essential control genes of molecularly analysed model organisms.

**Objective**
By the end of this module, each student should be able to
- recognize the universal principles underlying the development of different animal body plans.
- explain how the genes encoding the molecular toolkit have evolved to create animal diversity.
- relate changes in gene structure or function to evolutionary changes in animal development.

**Key skills:**
By the end of this module, each student should be able to
- present and discuss a relevant evolutionary topic in an oral presentation
- select and integrate key concepts in animal evolution from primary literature
- participate in discussions on topics presented by others

**551-1003-00L Methods of Biological Analysis**

**Abstract**
529-1042-00
Principles of the most important separation techniques and the interpretation of molecular spectra.

551-1003-00
The course will teach the basis and typical applications of methods for the analysis of nucleic acid sequences, mass spectrometric analysis of proteins and proteomes and advanced light and fluorescent imaging methods.

**Objective**
529-1042-00
Knowledge of the necessary basics and the possibilities of application of the relevant spectroscopical and separation methods in analytical chemistry.

551-1003-00
Knowledge of the theoretical basis of the methods for nucleic acid sequence analysis, mass spectrometry based protein and proteome analysis and advanced light and fluorescent imaging methods, and an understanding of the application of these principles in experimental biology.

**Content**
529-1042-00

551-1003-00
The course will consist of lectures covering the theoretical and technical base of the respective analytical methods and of exercises where typical applications of the methods in modern experimental biology are discussed.

529-1042-00
A comprehensive script is available in the HCI-Shop. A summary of the part "Spektroskopie" defines the relevant material for the exam.

551-1003-00
Materials supporting the lectures and exercises will be made available via Moodle.

**Literature**
529-1042-00

**Prerequisites / notice**
529-1042-00
Prerequisites:
- 529-1001-01 V "Allgemeine Chemie I (für Biol./Pharm.Wiss.);"
- 529-1001-00 P "Allgemeine Chemie I (für Biol./Pharm.Wiss.);"
- 529-1011-00 G "Organische Chemie I (für Biol./Pharm.Wiss.);"

**551-1105-00L Glycobiology**

**Abstract**
Structural principles, nomenclature and different classes of glycosylation. The different pathways of N- and O-linked protein glycosylation and glycolipid biosynthesis in prokaryotes and eukaryotes are discussed. Specific glycan binding proteins and their role in deciphering the glycan code are presented. The role of glycans in infectious diseases, antigen mimicry and autoimmunity are discussed.

**Objective**
Detailed knowledge in 1) the different areas of prokaryotic and eukaryotic glycobiology, in particular in the biosynthesis of glycoproteins and glycolipids, 2) the cellular machinery required for these pathways, 3) the principles of carbohydrate/protein interaction, 4) the function of lectins, 5) the role of glycans in infectious disease.

**Notice**
You are expected to take part in the discussion and to ask questions. To prepare for this you should read all the papers beforehand (they will be announced a week in advance of the presentation). Presentations will be made available after the seminars. You must attend at least 80% of the journal clubs, and give a presentation of your own. At the end of the semester there will be a 30 minute oral exam on the material presented during the semester. The grade will be based on the exam (45%), your presentation (45%), and a contribution based on your active participation in discussion of other presentations (10%).

### Content
Structure and linkages; analytical approaches; N-linked protein glycosylation (ER, Golgi); glycan-assisted protein folding and quality control; O-linked protein glycosylation; glucosaminoglycans; glycolipids; prokaryotic glycosylation pathways; lectins; glycans and infectious disease

### Prerequisites / notice
The course will be in English. It will include the preparation of short essays (marked) about defined topics in Glycobiology.

**Abstract**
Basic aspects of virology, the viral mechanisms for transfer of genetic material into cells, different vector-systems and target cells, animal models, specific applications for inborn diseases of the immune system and of metabolism, adverse effects, and new developments of vector systems will be taught.

**Objective**
Knowledge of important viral and non-viral vector systems.
Knowledge of application in human diseases.
Knowledge of limiting factors.

**Abstract**
Starting from contemporary biological problems related to metabolism, the course focuses on systems biological approaches to address them. In a problem-oriented, this-is-how-it-is-done manner, we thereby teach modern methods and concepts.

**Objective**
Develop a deeper understanding of how relevant biological problems can be solved, thereby providing advanced insights to key experimental and computational methods in systems biology.

**Content**
The course will be given as a mixture of lectures, studies of original research and guided discussions that focus on current research topics. For each particular problem studied, we will work out how the various methods work and what their capabilities/limits are. The problem areas range from microbial metabolism to cancer cell metabolism and from metabolic networks to regulation networks in populations and single cells. Key methods to be covered are various modeling approaches, metabolic flux analyses, metabolomics and other omics.

**Lecture notes**
Script and original publications will be supplied during the course.

**Prerequisites / notice**
The course extends many of the generally introduced concepts and methods of the Concept Course in Systems Biology. It requires a good knowledge of biochemistry and basics of mathematics and chemistry.

**Abstract**
Milestones in Immunology: on old concepts and modern experiments.

**Objective**
The course will cover six grand topics in immunology (B cells, innate immunity, antigen presentation, tumor immunity, thymus and T cells, cytotoxic T cells and NK cells) and for each grand topic four hours will be allocated. During the first double hour, historical milestone papers will be presented by the supervisor providing an overview on the development of the conceptual framework and critical technological advances. The students will also prepare themselves for this double lecture by reading the historical milestone papers and contributing to the discussion. In the following lecture up to four students will present each a recent high impact research paper which emerged from the landmark achievements of the previously discussed milestone concepts.

**Content**
Milestones and current topics of innate immunity, antigen presentation, B cells, thymus and T cells, cytotoxic T cells and NK cells, and tumor immunology.

**Literature**
Original and review articles will be distributed by the lecturer.

**Abstract**
During this Masters level seminar style course, students will explore current research topics in cellular biochemistry focused on the structure, function and regulation of selected cell components, and the consequences of dysregulation for pathologies.

**Objective**
Students will work with experts toward a critical analysis of cutting-edge research in the domain of cellular biochemistry, with emphasis on normal cellular processes and the consequences of their dysregulation. At the end of the course, students will be able to introduce, present, evaluate, critically discuss and write about recent scientific articles in the research area of cellular biochemistry.

**Content**
Guided by an expert in the field, students will engage in classical round-table style discussions of current literature with occasional frontal presentations. Students will alternate as discussion leaders throughout the semester, with the student leader responsible to briefly summarize key general knowledge and context of the assigned primary research paper. Together with the faculty expert, all students will participate in discussion of the primary paper, including the foundation of the biological question, specific questions addressed, key methods, key results, remaining gaps and research implications.

**Literature**
The literature will be provided during the course.

**Abstract**
The course provides an introduction to Biochemistry / Molecular Biology with some emphasis on chemical and biophysical aspects.

**Objective**
Topics include the structure-function relationship of proteins / nucleic acids, protein folding, enzymatic catalysis, cellular pathways involved in bioenergetics and the biosynthesis and breakdown of amino acids, glycans, nucleotides, fatty acids and phospholipids, and steroids. There will also be a discussion of DNA replication and repair, transcription, and translation.

**Lecture notes**
None

**Literature**
*mandatory: "Biochemistry", 8th edition, Palgrave Macmillan, International edition (the English version will be reordered at the Polybuchhandlung)

**Prerequisites / notice**
Some of the lectures are given in the English language.

---

**Data:** 06.09.2021 13:00
**Autumn Semester 2016**
**Page 779 of 1571**
This course explores infectious disease from both the host and pathogen perspective. Through short lectures, reading and active participation, the students will form a deep understanding of the process of biological design including model representation of a biological system, its thorough analysis, and the subsequent experimental implementation of the system and the related problems. Attendees will learn which information is contained in genetic sequencing data and how to extract information from them using computational tools. The main concepts introduced are:

- stochastic models in molecular evolution
- phylogenetic & phylodynamic inference
- maximum likelihood and Bayesian statistics

Attendees will apply these concepts to a number of applications yielding biological insight into:

- epidemiology
- pathogen evolution
- macroevolution of species

### Content

The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments from the output of the sequencers. We then present methods to directly analyze this alignment (such as BLAST algorithm, GWAS approaches). Second, we introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Third, we employ evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer geneologies and phylogens. We finally introduce the field of phyldynamics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (e.g. HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades. Students will be trained in the algorithms and their application both on paper and in silico as part of the exercises.

### Literature

The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:

- Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST

### Prerequisites / notice

Basic knowledge in linear algebra, analysis, and statistics will be helpful. Some programming experience will be useful for the exercises, but is not required. Programming skills will not be tested in the examination.

### Lecture notes

Slides of the lecture will be available online.

https://www.bsse.ethz.ch/cevo/education/cb-materials.html

### Objective

Attendees will apply these concepts to a number of applications yielding biological insight into:

- epidemiology
- pathogen evolution
- macroevolution of species

Students will read the primary literature on each topic, and in places we will use the following books:

- Schmid Hempel 2011 Evolutionary Parasitology
- Stearns & Medzhitov 2016 Evolutionary Medicine

A basic understanding of evolutionary biology, microbiology or parasitology will be advantageous but is not essential.

**752-4009-00L Molecular Biology of Foodborne Pathogens**

**Abstract**
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

**Objective**
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks. Another focus lies on the currently available methods and techniques useful for the various purposes, i.e., detection, differentiation (typing), and antimicrobial agents.

**Content**
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks? Which methods are best suited for what approach? Last, but not least, the role of bacteriophages in microbial pathogenicity will be highlighted, in addition to various applications of bacteriophage for both diagnostics and antimicrobial intervention.

**Lecture notes**
Electronic copies of the presentation slides (PDF) and additional material will be made available for download to registered students.

**Prerequisites / notice**
Recommendations will be given in the first lecture

**752-6101-00L Dietary Etiologies of Chronic Disease**

**Objective**
To examine and understand the protective effect of foods and food ingredients in the maintenance of health and the prevention of chronic disease, as well as the progression of complications of the chronic diseases.

**Content**
The course evaluates food and food ingredients in relation to primary and secondary prevention of chronic diseases including diabetes, gastrointestinal diseases, kidney disease, cardiovascular disease, arthritis and food allergies.

**Lecture notes**
There is no script. Powerpoint presentations will be made available on-line to students.

**Prerequisites / notice**
No compulsory prerequisites, but prior completion of Human Nutrition I + II (Humanernährung I+II) is strongly advised.

**752-6105-00L Epidemiology and Prevention**

**Abstract**
The module Epidemiology and prevention describes the process of scientific discovery from the detection of a disease and its causes, to the development and evaluation of preventive and treatment interventions and to improved population health.

**Objective**
The overall goal of the course is to introduce students to epidemiological thinking and methods, which are critical pillars for medical and public health research. Students will also become aware of how epidemiological facts are used in prevention, practice and politics.

**Content**
The module Epidemiology and Prevention follows an overall framework that describes the course of scientific discovery from the detection of a disease to the development of prevention and treatment interventions and their evaluation in clinical trials and real world settings. We will discuss study designs in the context of existing knowledge and the type of evidence needed to advance knowledge. Examples form nutrition, chronic and infectious diseases will be used in order to show the underlying concepts and methods.

**Abstract**
Translational science is a cross disciplinary scientific research that is motivated by the need for practical applications that help people. The course should help to clarify basics of translational science, illustrate successful applications and should enable students to integrate key features into their future projects.

**Objective**
After completing this course, students will be able to understand: Principles of translational science (including project planning, ethics application, basics of resource management and interdisciplinary communication)

**Content**
What is translational science and what is it not? How to identify need? - Disease concepts and consequences for research - Basics about incidence, prevalence etc., and orphan indications How to choose the appropriate research type and methodology - Ethical considerations including ethics application - Pros and cons of different types of research - Coordination of complex approaches incl. timing and resources How to measure success? - Outcome variables - Improving the translational process Challenges of communication? How independent is translational science? - Academic boundary conditions vs. industrial influences Positive and negative examples will be illustrated by distinguished guest speakers.

#### Electives

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 781 of 1571
The lecture requires reading of book chapters, handouts and original scientific papers. Further information will be given in the individual lectures and are mentioned on OLAT.

The main focus is on the development of the NS: Early development of the NS, cellular processes, nerve fiber growth, building of synapses and neuronal networks.

The course covers the development of the nervous system (NS) with a focus on neurogenesis and migration, axon growth, synapse development, and neuronal networks. Further information will be given in the individual lectures and are mentioned on OLAT.

The topics include principles of classical genetics; yeast genetics; gene mapping; forward and reverse genetics; structure and function of eukaryotic chromosomes; molecular mechanisms and regulation of transcription, replication, DNA-repair and recombination; analysis of developmental processes; epigenetics and RNA interference.

The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

The course is a co-production of the University of Zurich and ETH Zurich, and will be taught in English. The course takes place on Monday afternoon at ETH Hoenggerberg, and on Tuesday morning at UZH Irchel.

---

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 782 of 1571
The first part of the course starts off from an overview of existing and emerging applications that need computer vision. It shows that the realm of image processing is no longer restricted to the factory floor, but is entering several fields of our daily life. First it is investigated how the parameters of the electromagnetic waves are related to our perception. Also the interaction of light with matter is considered. The most important hardware components of technical vision systems, such as cameras, optical devices and illumination sources are discussed. The course is turned to the steps that are necessary to arrive at the image acquisition and transmission of nerve impulses necessary preprocessing steps of image analysis, that enhance image quality and/or detect specific features. Linear and non-linear filters are introduced for that purpose. The course will continue by analyzing procedures allowing to extract additional types of basic information from multiple images, with motion and depth as two important examples. The estimation of image velocities (optical flow) will get due attention. Techniques for object recognition will be presented. Several real-life applications will be focused on. Some of them involve the recognition of objects and scenes. Finally, approaches for the recognition of specific objects as well as object classes will be discussed and analyzed.

**Lecture notes**

Course material Script, computer demonstrations, exercises and problem solutions

**Prerequisites / notice**

Prerequisites:

- Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.

The course language is English.

**227-1037-00L**

**Introduction to Neuroinformatics**

| W | 6 credits | 2V+1U | K. A. Martin, M. Cook, V. Mante, M. Pfeiffer |

**Abstract**

The course provides an introduction to the functional properties of neurons. Particularly the description of membrane electrical properties (action potentials, channels), neuronal anatomy, synaptic structures, and neuronal networks. Simple models of computation, learning, and behavior will be explained. Some artificial systems (robot, chip) are presented.

**Objective**

Understanding computation by neurons and neuronal circuits is one of the great challenges of science. Many different disciplines can contribute their tools and concepts to solving mysteries of neural computation. The goal of this introductory course is to introduce the monocolours of physics, maths, computer science, engineering, biology, psychology, and even philosophy and history, to discover the challenges and puzzles that we all face in taking on this major 21st century problem and how each discipline can contribute to discovering solutions.

**Content**

This course considers the structure and function of biological neural networks at different levels. The function of neural networks lies fundamentally in their wiring and in the electro-chemical properties of nerve cell membranes. Thus, the biological structure of the nerve cell needs to be understood if biologically-realistic models are to be constructed. These simpler models are used to estimate the electrical current flow through dendritic cables and explore how a more complex geometry of neurons influences this current flow. The active properties of nerves are studied in order to understand both sensory transduction and the generation of neural activity. The concept of local neuronal circuits arises in the context of the rules governing the formation of nerve connections and topographic projections within the nervous system. Communication between neurons in the network can be thought of as information flow across synapses, which can be modified by experience. We need an understanding of the action of inhibitory and excitatory neurotransmitters and neuromodulators, so that the dynamics and logic of synapses can be interpreted. Finally, the neural architectures of feedforward and recurrent networks will be discussed in the context of co-ordination, control, and integration of sensory and motor information in neural networks.

**227-1045-00L**

**Readings in Neuroinformatics (University of Zurich)**

| W | 3 credits | 1S | G. Indiveri, M. Cook, D. Kiper |

**Objective**

It is a commonplace that scientists rarely cite literature that is older than 10 years and when they do, they usually cite one paper that serves as the representative for a larger body of work that has long since been incorporated anonymously in textbooks. Worse than that, many authors have not even read the papers they cite in their own publications. This course, Foundations of Neuroscience is one antidote. Thirteen major areas of research have been selected, which cover the key concepts that have led to our current ideas of how the nervous system is built and functions. We will read both original papers and explore the conceptual links between them and discuss the "sociology" of science, the pursuit of basic science questions over a century of research.

**Content**

It is a commonplace that scientists rarely cite literature that is older than 10 years and when they do, they usually cite one paper that serves as the representative for a larger body of work that has long since been incorporated anonymously in textbooks. Worse than that, many authors have not even read the papers they cite in their own publications. This course, Foundations of Neuroscience is one antidote. Thirteen major areas of research have been selected, which cover the key concepts that have led to our current ideas of how the nervous system is built and functions. Unusually, we will explore these areas of research by reading the original publications, instead of reading someone else's digested summary from a textbook or review. By doing this, we will learn how the discoveries were made, what instrumentation was used, how the scientists interpreted their own findings, and how their work, often over many decades and linked together with related findings from many different scientists, generate the current views of mechanism and structure of the nervous system. To give one concrete example, in 1890 Roy and Sherrington showed that there was a neural activity-dependent regulation of blood flow in the brain. One hundred years later, Ogawa discovered that they could use Nuclear Magnetic Resonance (NMR) to measure a blood oxygen-level dependent (BOLD) signal, which they showed was neural activity-dependent. This discovery led to the development of human functional Magnetic Resonance Imaging (fMRI), which has revolutionized neuropsychology and neuropsychiatry. We will read both these original papers and explore the conceptual links between them and discuss the sociology of science, which in this case, the pursuit of basic science questions over a century of research, led to an explosion in applications. We will also explore the personalities of the scientists and the context in which they made their seminal discoveries. Each week the course members will be given original papers to read for homework, they will have to write a short abstract for each paper. We will then meet weekly with the course leader (KACM) and an assistant for an hour-or-so long interactive seminar. An intimate knowledge of the papers will be assumed so that the discussion does not center simply on an explication of the contents of the papers. Assessment will in the form of a written exam in which the students will be given a paper and asked to read and write a short abstract of the contents.

**227-1047-00L**

**Consciousness: From Philosophy to Neuroscience (University of Zurich)**

| W | 3 credits | 2V | D. Kiper, A. Gamma |

**Objective**

The course language is English.

**Content**

Mind the enrolment deadlines at UZH:

http://www.uzh.ch/studies/application/mobilitaet_en.html

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

Basic concepts of mathematical analysis and linear algebra. The computer exercises are based on Linux and C.
No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH.

UZH Module Code: INI410

Mind the enrolment deadlines at UZH:
http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
This seminar reviews the philosophical and phenomenological as well as the neurobiological aspects of consciousness. The subjective features of consciousness are explored, and modern research into its neural substrate, particularly in the visual domain, is explained. Emphasis is placed on students developing their own thinking through a discussion-centered course structure.

Objective
The course's goal is to give an overview of the contemporary state of consciousness research, with emphasis on the contributions brought by modern cognitive neuroscience. We aim to clarify concepts, explain their philosophical and scientific backgrounds, and to present experimental protocols that shed light on a variety of consciousness related issues.

Content
The course includes discussions of scientific as well as philosophical articles. We review current schools of thought, models of consciousness, and proposals for the neural correlate of consciousness (NCC).

Lecture notes
None

Prerequisites / notice
We display articles pertaining to the issues we cover in the class on the course's webpage. Since we are all experts on consciousness, we expect active participation and discussions!

327-2125-00L Microscopy Training SEM I - Introduction to SEM  W  1 credit  3P  S. Rodighiero, A. G. Bittermann, K. Kunze, J. Reuteler

Objective
- Set-up, align and operate a SEM successfully and safely.
- Accomplish imaging tasks successfully and optimize microscope performances.
- Master the operation of a low-vacuum and field-emission SEM and EDX instrument.
- Perform sample preparation with corresponding techniques and equipment for imaging and analysis.
- Acquire techniques in obtaining secondary electron and backscatter electron micrographs.
- Perform EDX qualitative and semi-quantitative analysis.

Content
During the course, students learn through lectures, demonstrations, and hands-on sessions how to setup and operate SEM instruments, including low-vacuum and low-voltage applications. This course gives basic skills for students new to SEM. At the end of the course, students with no prior experience are able to align a SEM, to obtain secondary electron (SE) and backscatter electron (BSE) micrographs and to perform energy dispersive X-ray spectroscopy (EDX) qualitative and semi-quantitative analysis. The procedures to better utilize SEM to solve practical problems and to optimize SEM analysis for a wide range of materials will be emphasized.

- Discussion of students' sample/interest
- Introduction and discussion on Electron Microscopy and instrumentation
- Lectures on electron sources, electron lenses and probe formation
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM
- Brief description and demonstration of the SEM microscope
- Practice on beam/specimen interaction, image formation, image contrast (and image processing)
- Student participation on sample preparation techniques
- Scanning Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities
- Lectures and demonstrations on X-ray micro-analysis (theory and detection), qualitative and semi-quantitative EDX and point analysis, linescans and spectral mapping
- Practice on real-world samples and report results

Literature
- Lecture notes

Prerequisites / notice
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551- 1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.

327-2126-00L Microscopy Training TEM I - Introduction to TEM  W  1 credit  3P

Objective
- Overview of TEM theory, instrumentation, operation and applications.
- Alignment and operation of a TEM, as well as acquisition and interpretation of images, diffraction patterns, accomplishing basic tasks successfully.
- Knowledge of electron imaging modes (including Scanning Transmission Electron Microscopy), magnification calibration, and image acquisition using CCD cameras.
- To set up the TEM to acquire diffraction patterns, perform camera length calibration, as well as measure and interpret diffraction patterns.
- Overview of techniques for specimen preparation.

Abstract
The introductory course on Transmission Electron Microscopy (TEM) provides theoretical and hands-on learning for new operators, utilizing lectures, demonstrations, and hands-on sessions.

Content
- Overview of techniques for specimen preparation.
- Lecture and demonstrations on X-ray micro-analysis (theory and detection), qualitative and semi-quantitative EDX and point analysis, linescans and spectral mapping.
- Practice on real-world samples and report results.

Literature
- Lecture notes

Prerequisites / notice
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551- 1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.
Using two Transmission Electron Microscopes the students learn how to align a TEM, select parameters for acquisition of images in bright field (BF) and dark field (DF), perform scanning transmission electron microscopy (STEM) imaging, phase contrast imaging, and acquire electron diffraction patterns. The participants will also learn basic and advanced use of digital cameras and digital imaging methods.

- Introduction and discussion on Electron Microscopy and instrumentation.
- Lectures on electron sources, electron lenses and probe formation.
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM.
- Brief description and demonstration of the TEM microscope.
- Practice on beam/sample interaction, image formation, Image contrast (and image processing).
- Demonstration of Transmission Electron Microscopes and imaging modes (Phase contrast, BF, DF, STEM).
- Student participation on sample preparation techniques.
- Transmission Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities.
- TEM alignment, calibration, correction to improve image contrast and quality.
- Electron diffraction.
- Practice on real-world samples and report results.

Literature
- Detailed course manual

Prerequisites / notice
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551-1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.

376-0221-00L Methods and Concepts in Human Systems Neuroscience and Motor Control

Objective
This course will prepare students for experimental work as it is typically done during the master thesis. The goal is to gain hands-on experience with measurement and analysis methods relevant for Humans Systems Neuroscience and Motor control (nerve/brain stimulation, EMG, EEG, psycho-physical paradigms etc). Students read scientific material, set up experiments, perform measurements in the lab, analyse data, apply statistics and write short reports or essays.

Content
- Lectures on electron sources, electron lenses and probe formation.
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM.
- Brief description and demonstration of the TEM microscope.
- Practice on beam/sample interaction, image formation, Image contrast (and image processing).
- Demonstration of Transmission Electron Microscopes and imaging modes (Phase contrast, BF, DF, STEM).
- Student participation on sample preparation techniques.
- Transmission Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities.
- TEM alignment, calibration, correction to improve image contrast and quality.
- Electron diffraction.
- Practice on real-world samples and report results.

Literature
- Detailed course manual

Prerequisites / notice
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551-1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.

376-0815-00L Writing your Master's Thesis: Natural Sciences and Engineering C1-C2

Objective
This course will prepare students for experimental work as it is typically done during the master thesis. The goal is to gain hands-on experience with measurement and analysis methods relevant for Humans Systems Neuroscience and Motor control (nerve/brain stimulation, EMG, EEG, psycho-physical paradigms etc). Students read scientific material, set up experiments, perform measurements in the lab, analyse data, apply statistics and write short reports or essays.

Content
- Lectures on electron sources, electron lenses and probe formation.
- Lectures on beam/specimen interaction, image formation, image contrast and imaging modes.
- Lectures on sample preparation techniques for EM.
- Brief description and demonstration of the TEM microscope.
- Practice on beam/sample interaction, image formation, Image contrast (and image processing).
- Demonstration of Transmission Electron Microscopes and imaging modes (Phase contrast, BF, DF, STEM).
- Student participation on sample preparation techniques.
- Transmission Electron Microscopy lab exercises: setup and operate the instrument under various imaging modalities.
- TEM alignment, calibration, correction to improve image contrast and quality.
- Electron diffraction.
- Practice on real-world samples and report results.

Literature
- Detailed course manual

Prerequisites / notice
No mandatory prerequisites. Please consider the prior attendance to EM Basic lectures (551-1618-00V; 227-0390-00L; 327-0703-00L) as suggested prerequisite.

376-1177-00L Human Factors I

Objective
Every day humans interact with various systems. Strategies of interaction, individual needs, physical & mental abilities, and system properties are important factors in controlling the quality and performance in interaction processes. In the lecture, factors are investigated by basic scientific approaches. Discussed topics are important for optimizing people's satisfaction & overall performance.

Content
- Body spaces and functional anthropometry, Digital Human Models
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

Literature
- Gavriel Salvendy, Handbook of Human Factors and Ergonomics, 4th edition (2012), is available on NEBIS as electronic version and for free to ETH students
- Further textbooks are introduced in the lecture
- Brouches, checklists, key articles etc. are uploaded in ILIAS

376-1179-00L Applications of Cybernetics in Ergonomics

Objective
This course provides hands-on experience with measurement and analysis methods relevant for Humans Systems Neuroscience and Motor control (nerve/brain stimulation, EMG, EEG, psycho-physical paradigms etc). Students read scientific material, set up experiments, perform measurements in the lab, analyse data, apply statistics and write short reports or essays.

Content
- Psychophysical, physical, and cognitive factors in sensation and perception
- Body spaces and functional anthropometry, Digital Human Models
- Experimental techniques in assessing human performance and well-being
- Human factors and ergonomics in system designs, product development and innovation
- Human information processing and biological cybernetics
- Interaction among consumers, environments, behavior, and tasks

Literature
- Gavriel Salvendy, Handbook of Human Factors and Ergonomics, 4th edition (2012), is available on NEBIS as electronic version and for free to ETH students
- Further textbooks are introduced in the lecture
- Brouches, checklists, key articles etc. are uploaded in ILIAS

Data: 06.09.2021 13:00 Autumn Semester 2016 Page 785 of 1571
Abstract
Cybernetics systems have been studied and applied in various research fields, such as applications in the ergonomics domain. Research interests include the man-machine interaction (MMI) topic which involving the performance in multi-model interactions, quantification in gestalt principles in product development; or the information processing matter.

Objective
To learn and practice cybernetics principles in interface designs and product development.

Content
- Fitt's law applied in manipulation tasks
- Hick-Hyman law applied in design of the driver assistance systems
- Vigilance applied in quality inspection
- Accommodation/vergence crosslink function
- Cross-link models in neurobiology- the ocular motor control system
- Human performance in optimization of production lines

Literature

376-1414-00L Current Topics in Brain Research (HS) W 1 credit 1.5K M. E. Schwab, F. Helmchen, S. Jessberger, I. Mansuy, further lecturers

Abstract
Different national and international scientific guests are invited to present and discuss their actual scientific results.

Objective
To exchange scientific knowledge and data and to promote communication and collaborations among researchers.

Content
Different scientific guests working in the field of molecular cognition, neurochemistry, neuromorphology and neurophysiology present their latest scientific results.

Lecture notes
no handout

Literature
no literature

376-1504-00L Physical Human Robot Interaction (pHRI) W 4 credits 2V+2U R. Gassert, O. Lambercy

Number of participants limited to 26.

Abstract
This course focuses on the emerging, interdisciplinary field of physical human-robot interaction, bringing together themes from robotics, real-time control, human factors, haptics, virtual environments, interaction design and other fields to enable the development of human-oriented robotic systems.

Objective
The objective of this course is to give an introduction to the fundamentals of physical human robot interaction, through lectures on the underlying theoretical/mechatronics aspects and application fields, in combination with a hands-on lab tutorial. The course will guide students through the design and evaluation process of such systems.

By the end of this course, you should understand the critical elements in human-robot interactions - both in terms of engineering and human factors - and use these to evaluate and design safe and efficient assistive and rehabilitative robotic systems. Specifically, you should be able to:

1) identify critical human factors in physical human-robot interaction and use these to derive design requirements;
2) compare and select mechatronic components that optimally fulfill the defined design requirements;
3) derive a model of the device dynamics to guide and optimize the selection and integration of selected components into a functional system;
4) design control hardware and software and implement and test human-interactive control strategies on the physical setup;
5) characterize and optimize such systems using both engineering and psychophysical evaluation metrics;
6) investigate and optimize one aspect of the physical setup and convey and defend the gained insights in a technical presentation.

Content
This course provides an introduction to fundamental aspects of physical human-robot interaction. After an overview of human haptic, visual and auditory sensing, neurophysiology and psychophysics, principles of human-robot interaction systems (kinematics, mechanical transmissions, robot sensors and actuators used in these systems) will be introduced. Throughout the course, students will gain knowledge of interaction control strategies including impedance/admittance and force control, haptic rendering basics and issues in device design for humans such as transparency and stability analysis, safety hardware and procedures. The course is organized into lectures that aim to bring students up to speed with the basics of these systems, readings on classical and current topics in physical human-robot interaction, laboratory sessions and lab visits.

Students will attend periodic laboratory sessions where they will implement the theoretical aspects learned during the lectures. Here the salient features of haptic device design will be identified and theoretical aspects will be implemented in a haptic system based on the haptic paddle (http://www.relab.ethz.ch/education/courses/phri/request-ethz-haptic-paddle-hardware-documentation.html), by creating simple dynamic haptic virtual environments and understanding the performance limitations and causes of instabilities (direct/virtual coupling, friction, damping, time delays, sampling rate, sensor quantization, etc.) during rendering of different mechanical properties.

Lecture notes
Will be distributed through the document repository before the lectures.
http://www.relab.ethz.ch/education/courses/phri.html
### Literature

### Prerequisites / notice

Notice: The registration is limited to 26 students.

There are 4 credit points for this lecture.

The lecture will be held in English.

The students are expected to have basic control knowledge from previous classes.

http://www.relab.ethz.ch/education/courses/phri.html

### 551-0317-00L

**Immunology**

<table>
<thead>
<tr>
<th>W</th>
<th>3 credits</th>
<th>2V</th>
<th>A. Oxenius, M. Kopf</th>
</tr>
</thead>
</table>

**Abstract**

Introduction into structural and functional aspects of the immune system.

**Objective**

Basic knowledge of the mechanisms and the regulation of an immune response.

**Content**

- Introduction and historical background
- Innate and adaptive immunity, Cells and organs of the immune system
- B cells and antibodies
- Generation of diversity
- Antigen presentation and Major Histocompatibility (MHC) antigens
- Thymus and T cell selection
- Autoimmunity
- Cytotoxic T cells and NK cells
- Th1 and Th2 cells, regulatory T cells
- Allergies
- Hypersensitivities
- Vaccines, immune-therapeutic interventions

**Lecture notes**

Electronic access to the documentation will be provided. The link can be found at "Lernmaterialien".

**Prerequisites / notice**

Immunology I (WS) and Immunology II (SS) will be examined as one learning entity in a "Sessionsprüfung".

### 551-0319-00L

**Cellular Biochemistry (Part I)**

<table>
<thead>
<tr>
<th>W</th>
<th>3 credits</th>
<th>2V</th>
<th>U. Kutay, R. I. Enchev, B. Kommann, M. Peter, I. Zemp, further lecturers</th>
</tr>
</thead>
</table>

**Abstract**

Concepts and molecular mechanisms underlying the biochemistry of the cell, providing advanced insights into structure, function and regulation of individual cell components. Particular emphasis will be put on the spatial and temporal integration of different molecules and signaling pathways into global cellular processes such as intracellular transport, cell division & growth, and cell migration.

**Objective**

The full-year course (551-0319-00 & 551-0320-00) focuses on the molecular mechanisms and concepts underlying the biochemistry of cellular physiology, investigating how these processes are integrated to carry out highly coordinated cellular functions. The molecular characterisation of complex cellular functions requires a combination of approaches such as biochemistry, but also cell biology and genetics. This course is therefore the occasion to discuss these techniques and their integration in modern cellular biochemistry.

The students will be able to describe the structural and functional details of individual cell components, and the spatial and temporal regulation of their interactions. In particular, they will learn to explain the integration of different molecules and signaling pathways into complex and highly dynamic cellular processes such as intracellular transport, cytoskeletal rearrangements, cell motility, cell division and cell growth. In addition, they will be able to illustrate the relevance of particular signaling pathways for cellular pathologies such as cancer.

**Content**

Structural and functional details of individual cell components, regulation of their interactions, and various aspects of the regulation and compartmentalisation of biochemical processes.

Topics include: biophysical and electrical properties of membranes; viral membranes; structural and functional insights into intracellular transport and targeting; vesicular trafficking and phagocytosis; post-transcriptional regulation of gene expression.
Lecture notes
Scripts and additional material will be provided during the semester. Please contact Dr. Alicia Smith for assistance with the learning materials. (alicia.smith@bc.biol.ethz.ch)

Literature
Recommended supplementary literature (review articles and selected primary literature) will be provided during the course.

Prerequisites / notice
To attend this course the students must have a solid basic knowledge in chemistry, biochemistry and general biology. The course will be taught in English.

551-1145-00L Viral and non-Viral Vectors for Human Gene-Therapy - W from Pathogens to Safe Medical Applications
2 credits 3V
University lecturers

No enrolment to this course at ETH Zurich. Book the corresponding module directly at UZH; UZH Module Code: BIO708

Mind the enrolment deadlines at UZH: http://www.uzh.ch/studies/application/mobilitaet_en.html

Abstract
Basic aspects of virology, the viral mechanisms for transfer of genetic material into cells, different vector-systems and target cells, animal models, specific applications for inborn diseases of the immune system and of metabolism, adverse effects, and new developments of vector systems will be taught.

Objective

752-4009-00L Molecular Biology of Foodborne Pathogens
3 credits 2V M. Loessner, M. Schuppler

Abstract
The course offers detailed information on selected foodborne pathogens and toxin producing organisms; the focus lies on relevant molecular biological aspects of pathogenicity and virulence, as well as on the occurrence and survival of these organisms in foods.

Objective
Detailed and current status of research and insights into the molecular basis of foodborne diseases, with focus on interactions of the microorganism or the toxins they produce with the human system. Understanding the relationship between specific types of food and the associated pathogens and microbial risks. Another focus lies on the currently available methods and techniques useful for the various purposes, i.e., detection, differentiation (typing), and antimicrobial agents.

Content
Molecular biology of infectious foodborne pathogens (Listeria, Vibrio, E. coli, Campylobacter, etc) and toxin-producing organisms (Bacillus, Clostridium, Staphylococcus). How and under which conditions will toxins and virulence factors be produced, and how do they work? How is the interaction between the human host and the microbial pathogen? What are the roles of food and the environment? What can be done to interfere with the potential risks? Which methods are best suited for what approach? Last, but not least, the role of bacteriophages in microbial pathogenicity will be highlighted, in addition to various applications of bacteriophages for both diagnostics and antimicrobial intervention.

Lecture notes
Electronic copies of the presentation slides (PDF) and additional material will be made available for download to registered students.

Literature
Recommendations will be given in the first lecture

Prerequisites / notice
Lectures (2 hours) will be held as a single session of approximately 60+ minutes (10:15 until approx. 11:15 h), with no break !

752-6403-00L Nutrition and Performance
2 credits 2V S. Mettler, M. B. Zimmermann

Abstract
The course introduces basic concepts of the interaction between nutrition and exercise and cognitive performance.

Objective
To understand the potential effects of nutrition on exercise performance, with a focus on concepts and principles of nutrition before, during and after exercise.

Content
The course will cover elementary aspects of sports nutrition physiology, including carbohydrate, glycogen, fat, protein and energy metabolism. A main focus will be to understand nutritional aspects before exercise to be prepared for intensive exercise bouts, how exercise performance can be supported by nutrition during exercise and how recovery can be assisted by nutrition after exercise. Although this is a scientific course, it is a goal of the course to translate basic sports nutrition science into practical sports nutrition examples.

Lecture notes
Lecture slides and required handouts will be available on the ETH website.

Literature
Information on further reading will be announced during the lecture. There will be some mandatory as well as voluntary readings.

Prerequisites / notice
General knowledge about nutrition, human biology, physiology and biochemistry is a prerequisite for this course. The course builds on basic nutrition and biochemistry knowledge to address exercise and performance related aspects of nutrition.

The course is designed for 3rd year Bachelor students, Master students and postgraduate students (MAS/CAS).

Language: English

Practical Training and Semester Project

Practical Training and Semester Project only for majors below-mentioned:
- Human Movement Science and Sport
- Health Technologies
- Molecular Health Sciences
- Neurosciences

Number Title Type ECTS Hours Lecturers
376-2110-00L Internship 12 Weeks (Research or Job Oriented) W 15 credits 34P Professors

Abstract
Practical Training Internships are either research-oriented for exercising scientific (laboratory) methods or job-related for giving insight into the future world of work (industry, services, school).

Objective
Students should exercise scientific working and/or get realistic insights into future jobs. This version of internships lasts for at least 12 weeks full time equivalent.

376-2111-00L Internship 8 Weeks (Research or Job Oriented) W 10 credits 23P Professors

Abstract
Practical Training Internships are either research-oriented for exercising scientific (laboratory) methods or job-related for giving insight into the future world of work (industry, services, school).

Objective
Students should exercise scientific working and/or get realistic insights into future jobs. This version of internships lasts for at least 8 weeks full time equivalent.

376-2112-00L Internship 4 Weeks (Research or Job Oriented) W 5 credits 11P Professors

Abstract
Practical Training Internships are either research-oriented for exercising scientific (laboratory) methods or job-related for giving insight into the future world of work (industry, services, school).

Objective
Students should exercise scientific working and/or get realistic insights into future jobs.

Prerequisites / notice

Prerequisites: familiarity with the basic notions from Calculus, in particular those of function and derivative.

Assistance:
Tuesdays and Wednesdays 17-19h, in Room HG E 41.
Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Learning to view the human body as a (bio-) mechanical system. Making the connections between everyday movements and sports activity with injury, discomfort, prevention and rehabilitation.

Objective
"Students are able to describe the human body as a mechanical system. They analyse and describe human movement according to the laws of mechanics."

Content
Movement- and sports biomechanics deals with the attributes of the human body and their link to mechanics. The course includes topics such as functional anatomy, biomechanics of daily activities (gait, running, etc.) and looks at movement in sport from a mechanical point of view. Furthermore, simple reflections on the loading analysis of joints in various situations are discussed. Additionally, questions covering the statics and dynamics of rigid bodies, and inverse dynamics, relevant to biomechanics are investigated.

---

**406-0062-AAL**  
**Physics I**

Enrolment ONLY for MSc students with a decree declaring this course unit as an additional admission requirement.

Any other students (e.g. incoming exchange students, doctoral students) CANNOT enrol for this course unit.

Abstract
Introduction to the concepts and tools in physics: mechanics of point-like and rigid bodies, elasticity theory, elements of hydrostatics and hydrodynamics, periodic motion and mechanical waves.

Objective
Introduction to the scientific methodology. The student should develop his/her capability to turn physical observations into mathematical models, and to solve the latter.

The student should acquire an overview over the basic concepts in mechanics.

Content

Chapters: 1, 2, 3, 4, 5, 6 (without: 6-5, 6-6, 6-8), 7, 8 (without 8-9), 9, 10 (without 10-10), 11 (without 11-7), 13 (without 13-13, 13-14), 14 (without 14-6), 15 (without 15-3, 15-5)

**Abstract**

This course discusses the quantisation of fields in order to introduce a coherent formalism for the combination of quantum mechanics and special relativity. Topics include:
- Relativistic quantum mechanics
- Quantisation of bosonic and fermionic fields
- Interactions in perturbation theory
- Scattering processes and decays
- Radiative corrections

**Objective**

The goal of this course is to provide a solid introduction to the formalism, the techniques, and important physical applications of quantum field theory. Furthermore it prepares students for the advanced course in quantum field theory (Quantum Field Theory II), and for work on research projects in theoretical physics, particle physics, and condensed-matter physics.

**Abstract**

Topics to be covered in Phenomenology of Particle Physics I:
- Relativistic kinematics
- Decay rates and cross sections
- The Dirac equation
- From the S-matrix to the Feynman rules of QED
- Scattering processes in QED
- Experimental tests of QED
- Hadron spectroscopy
- Unitary symmetries and QCD
- QCD and alpha_s running
- QCD in e^+e^- annihilation
- Experimental tests of QCD in e^+e^- annihilation

**Objective**

Introduction to modern particle physics

**Content**

Topics to be covered in Phenomenology of Particle Physics I:
- Relativistic kinematics
- Decay rates and cross sections
- The Dirac equation
- From the S-matrix to the Feynman rules of QED
- Scattering processes in QED
- Experimental tests of QED
- Hadron spectroscopy
- Unitary symmetries and QCD

**Abstract**

Low energy particle physics provides complementary information to high energy physics with colliders. In this lecture, we will concentrate on selected experiments, using mainly neutrons and muons, which have significantly improved our understanding of particle physics today. The course aims to provide an introduction to selected advanced topics in low energy particle physics with neutrons and muons. Besides the sensitivity to effects related with new physics (e.g. lepton flavor violation, symmetry violations, CPT tests, search for electric dipole moments, new low mass exchange bosons etc.), low energy physics provides the best test of QED (electron g-2), the best tests of bound-state QED (atomic physics and exotic atoms), precise determinations of fundamental constants, information about the CKM matrix, precise information on the weak and strong force even in the non-perturbative regime etc.

The course will focus on the discussion of fundamental problems and ground-breaking experiments:
- Production and characteristics of muon and neutron beams
- Ultracold neutron production
- Measurement of the neutron lifetime and electric dipole moment
- The neutron in the gravitational field and its electric charge
- Muon and neutron decay correlations
- Lepton flavour violations with muons to search for new physics
- What atomic physics can do for particle physics and vice versa
- Laser experiments at accelerators
- From myonic hydrogen to the proton structure and bound-state QED
- From pionic hydrogen to the strong interaction and effective field theories
- etc.
Experimental Methods and Instruments of Particle Physics

Objective
Acquire an in-depth understanding and overview of the essential elements of experimental methods in particle physics, including accelerators and experiments.

Content
1. Examples of modern experiments
2. Basics: Bethe-Bloch, radiation length, nucl. interaction length, fixed-target vs. collider, principles of measurements: energy- and momentum-conservation, etc.
3. Physics and layout of accelerators
4. Charged particle tracking and vertexing
5. Calorimetry
6. Particle identification
7. Analysis methods: invariant and missing mass, jet algorithms, b-tagging
8. Special detectors: extended airshower detectors and cryogenic detectors
9. MC simulations (GEANT), trigger, readout, electronics

Lecture notes
Slides are handed out regularly, see http://www.physik.uzh.ch/en/teaching/PHY461/HS2016.html

Event: 402-0725-00L
Title: Experimental Methods and Instruments of Particle Physics

Prerequisites / notice

Literature
Golub, Richardson & Lamoreaux: "Ultra-Cold Neutrons"
Rauch & Werner: "Neutron Interferometry"
Carlie & Willis: "Experimental Neutron Scattering"
Byrne: "Neutrons, Nuclei and Matter"
Klapdor-Kleingrothaus: "Non Accelerator Particle Physics"
Einführung in die Kern- und Teilchenphysik / Introduction to Nuclear- and Particle-Physics

Astro-Particle Physics I

Abstract
This lecture gives an overview of the present research in the field of Astro-Particle Physics, including the different experimental techniques. In the first semester, main topics are the charged cosmic rays including the antimatter problem. The second semester focuses on the neutral components of the cosmic rays as well as on some aspects of Dark Matter.

Objective
Successful students know:
- experimental methods to measure cosmic ray particles over full energy range
- current knowledge about the composition of cosmic ray
- possible cosmic acceleration mechanisms
- correlation between astronomical object classes and cosmic accelerators
- information about our galaxy and cosmology gained from observations of cosmic ray

Content
First semester (Astro-Particle Physics I):
- definition of 'Astro-Particle Physics'
- important historical experiments
- chemical composition of the cosmic rays
- direct observations of cosmic rays
- indirect observations of cosmic rays
- 'extended air showers' and 'cosmic muons'
- 'knee' and 'ankle' in the energy spectrum
- the 'anti-matter problem' and the Big Bang
- 'cosmic accelerators'

Lecture notes

Event: 402-0713-00L
Title: Astro-Particle Physics I

Prerequisites / notice

Literature
A. Biland
D.O. Caldwell, Current Aspects of Neutrino Physics, Springer.
P. De Forcrand
Klapdor-Kleingrothaus: "Non Accelerator Particle Physics"
Einführung in die Kern- und Teilchenphysik / Introduction to Nuclear- and Particle-Physics

Particle Physics in the Early Universe

Abstract
Does not take place this semester.

Prerequisites
Prerequisites: Particle Physics Phenomenology 1 or Quantum Field Theory 1

Background, relic abundances and primordial nucleosynthesis, baryogenesis, dark matter and more.

Background, relic abundances and primordial nucleosynthesis, baryogenesis, dark matter and more.

Objective
To gain familiarity with the formalism of lattice field theories and their numerical simulation methods.

Content
- introduction to key concepts on the interface of Particle Physics and Early Universe cosmology. Topics include inflation and inflationary
- background and the computational tools, like Monte Carlo simulations, used for the quantitative study of quarks and gluons.
- Track- and vertex-detectors, calorimetry, particle identification.
- Basics and concepts of particle detectors.
- Track- and vertex-detectors, calorimetry, particle identification.
- Charged particle tracking and vertexing
- Calorimetry
- particle identification
- analysis methods: invariant and missing mass, jet algorithms, b-tagging
- special detectors: extended airshower detectors and cryogenic detectors
- MC simulations (GEANT), trigger, readout, electronics
- experimental methods to measure cosmic ray particles over full energy range
- current knowledge about the composition of cosmic ray
- possible cosmic acceleration mechanisms
- correlation between astronomical object classes and cosmic accelerators
- information about our galaxy and cosmology gained from observations of cosmic ray

Lecture notes
See lecture home page: http://ihp-lx2.ethz.ch/AstroTeilchen/

Event: 402-0849-00L
Title: Introduction to Lattice QCD

Prerequisites
Recommended: Quantum Field Theory 2, Advanced Field Theory, General Relativity

Literature

Event: 402-0787-00L
Title: Neutrino Physics

Objective
To gain familiarity with the formalism of lattice field theories and their numerical simulation methods.

Content
- theoretical basis and selected experiments to determine the properties of neutrinos and their interactions (mass, spin, helicity, chirality, oscillations, interactions with leptons and quarks).
- introduction to the physics of neutrinos with special consideration of phenomena connected with neutrino masses.
- the aim of the course is to give a self-contained introduction into finite group theory as well as Lie theory from a physicists point of view. Abstract mathematical constructions will be illustrated with examples from physics.
With this course the students will receive a detailed introduction to the physics of the Higgs boson in the Standard Model. They will acquire the necessary theoretical background to understand the main production and decay channels of the Higgs boson at high-energy colliders, and the corresponding experimental signatures.

Suggested textbooks:

- Higgs Hunter's Guide

The former title of this course unit was "The Physics Beyond the Standard Model". If you already got credits for "The Physics Beyond the Standard Model" (402-0898-00L), you cannot get credits for "The Physics of Electroweak Symmetry Breaking" (402-0898-00L).

402-0898-00L The Physics Electroweak Symmetry Breaking

Objective

The aim is to understand the need of physics beyond the Standard Model, the basic techniques of model building in theories BSM and the elements of collider physics required to analyze their phenomenological implications. After an introduction to the SM and alternative theories of electroweak symmetry breaking, we will investigate these issues in the context of models with warped extra dimensions.

Prerequisites / notice

Does not take place this semester.

Literature

- Beyond Standard Model
- Higgs Hunter's Guide
- pseudo-observables / EFT
- Future:
  - off-shell measurements
  - Dissect on analysis
  - combine information from all channels
  - differential measurements
  - main channels overview
  - LHC:
  - TeVatron searches
  - LEP1: measurements at the Z-pole
  - LEP2: towards the limit mH<114 GeV

Experimental part:

- Main topics:
  - reminders of statistics: likelihoods, hypothesis testing
  - reminders of multivariate techniques: Neural Networks, Decision Trees
  - Radiative corrections and the screening theorem
  - theoretical constraints on the Higgs mass; the hierarchy problem

Content

Objective

After the course the student should have a good knowledge of some of the most relevant theories beyond the Standard Model and have the techniques to understand those theories that have not been surveyed in the course. He or she should be able to compute the constraints on any model of new physics, its successes explaining current experimental data and its main phenomenological implications at colliders.

The course introduces the theory and phenomenology of the recently discovered Higgs boson. With this course the students will receive a detailed introduction to the physics of the Higgs boson in the Standard Model. They will acquire the necessary theoretical background to understand the main production and decay channels of the Higgs boson at high-energy colliders, and the corresponding experimental signatures.

Does not take place this semester.

402-0899-65L Higgs Physics

Objective

With this course the students will receive a detailed introduction to the physics of the Higgs boson in the Standard Model. They will acquire the necessary theoretical background to understand the main production and decay channels of the Higgs boson at high-energy colliders, and the corresponding experimental signatures.

Content

Here is the rough plan of the topics, however the actual pace may vary relative to this plan.

- Particle Accelerators an Overview
- Relativity for Accelerator Physicists
- Building Blocks of Particle Accelerators
- Lie Algebraic Structure of Classical Mechanics and Applications to Particle Accelerators
- Symplectic Maps & Analysis of Maps
- Particle Tracking
- Linear & Circular Machines
- Cyclotrons
- Free Electron Lasers
- Collective effects in linear approximation
- Preview of Particle Accelerator Physics and Modeling II

Literature

Particle Accelerator Physics, H. Wiedemann, ISBN-13 978-3-540-49043-2, Springer

Prerequisites / notice

This lecture is also suited for PhD. students

Abstract

An introduction to the theoretical aspects and experimental tests of QCD, with emphasis on perturbative QCD and related experiments at colliders.

Objective

Knowledge acquired on basics of perturbative QCD, both of theoretical and experimental nature. Ability to perform simple calculations of perturbative QCD, as well as to understand modern publications on theoretical and experimental aspects of perturbative QCD.

Content

- QCD Lagrangian and Feynman Rules
- QCD running coupling
- Parton model
- Altarelli-Parisi equations
- Basic processes
- Experimental tests at lepton and hadron colliders
- Measurements of the strong coupling constant

Literature

2) R. K. Ellis, W. J. Stirling, B. R. Webber : "QCD and Collider Physics" (Cambridge Monographs on Particle Physics, Nuclear Physics & Cosmology)

Prerequisites / notice

Will be given as block course, language: English. For students of both ETH and University of Zurich.

Abstract

This course provides a comprehensive introduction to two advanced topics in Quantum Field Theory: Effective Field Theories (EFTs) and Supersymmetry (SUSY).

Content

- the BFKL Hamiltonian as an integrable model
- the matching procedure
- Chiral Lagrangians
- The SM as an EFTs
- The SUSY algebra
- Superspace and superfields
- Supersymmetric field theories
- Supersymmetric gauge theories
- Supersymmetry breaking
- The Minimal supersymmetric Standard Model

Literature

Prerequisites / notice

QFT-I (mandatory) and QFT-II (highly recommended).

Abstract

The goal of the course is to help the audience to keep abreast of the strong advances there have been in the study of the high energy limit of scattering amplitudes in the last decade.

Objective

The goal of the course is to help the audience to keep abreast of the strong advances there have been in the study of the high energy limit of scattering amplitudes in the last decade.

Content

- the BFKL Hamiltonian as an integrable model
- the analytic structure of the Mueller-Navelet jet cross sections in QCD
- the analytic properties of N=4 SYM amplitudes in multi-Regge kinematics

Prerequisites / notice

follow-up of the block course "An Introduction to the Perturbative Pomeron and to the BFKL Equation in QCD and in N=4 SYM"

Optional Subjects in Mathematics

Number Title
401-3531-00L Differential Geometry I

This course counts as a core course in the Bachelor's
This course unit is an alternative if no suitable "Proseminar Theoretical Physics" is available or if the proseminar is already overbooked.

Supervisors
- F. Nessi-Tedaldi
- V. Geshkenbein

During the semester break participating students stay for 4 weeks at CERN and perform experimental work relevant to our particle physics projects. Dates to be agreed upon.

Abstract
- Differential geometry in $\mathbb{R}^n$: theory of curves, submanifolds and immersions, inner geometry of hypersurfaces, Gauss map and curvature, Theorema Egregium, special classes of surfaces, Theorem of Gauss-Bonnet, Poincaré Index Theorem. The hyperbolic space.
- Differential topology: differentiable manifolds, manifold bundle, immersions and embeddings in $\mathbb{R}^n$, Sard's Theorem, transversality, mapping degree and intersection number, vector bundles, vector fields and flows, differential forms, Stokes' Theorem.

Literature
- Curves in $\mathbb{R}^n$, inner geometry of hypersurfaces in $\mathbb{R}^n$, curvature, Theorema Egregium, special classes of surfaces, Theorem of Gauss-Bonnet, Hyperbolic space. Differentiable manifolds, tangent bundle, immersions and embeddings, Sard's Theorem, mapping degree and intersection number, vector bundles, vector fields and flows, differential forms, Stokes' Theorem.

Functional Analysis I

W 10 credits 4V+1U M. Struwe

This course counts as a core course in the Bachelor's degree programme in Mathematics. Holders of an ETH Zurich Bachelor's degree in Mathematics who didn't use credits from neither 401-3461-00L Functional Analysis I nor 401-3462-00L Functional Analysis II for their Bachelor's degree still can have recognised this course for the Master's degree.

Furthermore, at most one of the three course units
- 401-3461-00L Functional Analysis I
- 401-3531-00L Differential Geometry I
- 401-3601-00L Probability Theory

can be recognised for the Master's degree in Mathematics or Applied Mathematics.

Abstract
- Baire category; Banach and Hilbert spaces, bounded linear operators; three fundamental principles: Uniform boundedness, open mapping/closed graph theorem, Hahn-Banach; convexity; dual spaces; weak and weak* topologies; Banach-Alaoglu; reflexive spaces; compact operators and Fredholm theory; closed range theorem; spectral theory of self-adjoint operators in Hilbert spaces.

- **W**: Eligible for credits
- **E-**: Recommended, not eligible for credits
- **Z**: Courses outside the curriculum
- **Dr**: Suitable for doctorate

### Key for Hours

- **V**: lecture
- **G**: lecture with exercise
- **U**: exercise
- **S**: seminar
- **K**: colloquium
- **P**: practical/laboratory course
- **A**: independent project
- **D**: diploma thesis
- **R**: revision course / private study

### ECTS

- European Credit Transfer and Accumulation System

- Special students and auditors need special permission from the lecturers.

**Computer Science (General Courses)**

1. **Computer Science for Non-Computer Scientists**
   - **Number**: 252-0834-00L
   - **Title**: Information Systems for Engineers
   - **Type**: Z
   - **ECTS**: 4 credits
   - **Hours**: 2V+1U
   - **Lecturers**: R. Marti

   **Abstract**
   Foundations of information systems from a user's viewpoint. The focus is on structured data: relational databases, the data language SQL, designing relational databases. Additional topics: Information Retrieval (searching documents), and estimating their relevance and authority with respect to free-text queries; XML as a format for data exchange; Characteristics and processing of "Big Data"

   **Objective**
   Following the course should enable students to
   1. answer non-trivial queries on existing relational databases by formulating (entry-level) SQL statements, as well as to add new database content and to update or delete existing content,
   2. formalize facts as perceived in the real world in terms of the entity-relationship model, and derive a set of normalized relations (tables) which define the structure of a relational database
   3. explain how a database management system (DBMS) essentially works and what kind of services it provides
   4. understand how a web search engine such as Google basically works
   5. know and apply the core concepts to structure and query XML-documents
   6. list the characteristics of "Big Data" and know the basics of processing "Big Data"

   **Content**
   Die Lehrveranstaltung vermittelt Grundlagen und Konzepete von Informationssystemen aus der Sicht eines Anwenders.

   Im Zentrum stehen relationale Datenbanksysteme, die Abfrage- und Datenmanipulationssprache SQL, sowie der Entwurf bzw. die Strukturierung relationaler Datenbanken. Dieser Stoff wird auch in praktischen Übungen vertieft.

   Weitere Themen sind der Umgang mit unstruktierten und semistrukturierten Daten, die Integration von Daten aus verschiedenen autonomen Informationssystemen, sowie eine Übersicht der Architektur von Datenbanksystemen.

   **Literature**
   Vorlesungsunterlagen (PowerPoint Folien, teilweise auch zusätzlicher Text) werden auf der Web-Site publiziert. Der Kauf eines Buches wird nicht vorausgesetzt.

   Als englisichsprachiges Werk kann z.B.
   - empfohlen werden (Umfang: 1349 Seiten).

   **Prerequisites / notice**
   Voraussetzung:
   - Elementare Kenntnisse von Mengenlehre und logischen Ausdrücken.

2. **Computer Science I**
   - **Number**: 252-0835-00L
   - **Title**: Computer Science I
   - **Type**: Z
   - **ECTS**: 4 credits
   - **Hours**: 2V+2U
   - **Lecturers**: F. O. Friedrich Wicker

   **Abstract**
   The course covers the fundamental concepts of computer programming with a focus on systematic algorithmic problem solving. Taught language is C++. No programming experience is required.

   **Objective**
   Primary educational objective is to learn programming with C++. When successfully attended the course, students have a good command of thinking of a computer scientist.

   Secondary goals are an algorithmic computational thinking, understanding the possibilities and limits of programming and to impart the way of thinking of a computer scientist.

   **Content**
   The course covers fundamental data types, expressions and statements, (Limits of) computer arithmetic, control statements, functions, arrays, structural types and pointers. The part on object orientation deals with classes, inheritance and polymorphy, simple dynamic data types are introduced as examples. In general, the concepts provided in the course are motivated and illustrated with algorithms and applications.

   **Lecture notes**
   A script written in English will be provided during the semester. The script and slides will be made available for download on the course web page.

   **Literature**
   - Bjørn Stroustrup: Einführung in die Programmierung mit C++, Pearson Studium, 2010

   **Prerequisites / notice**
   From AS 2013, an admission to the exam does not any more formally require an attending of the recitation sessions. Handing in solutions to the weekly exercise sheets is thus not mandatory, but we strongly recommend it.

   Examination is a one hour-long written test.

3. **Informatics**
   - **Number**: 252-0839-00L
   - **Title**: Informatics
   - **Type**: Z
   - **ECTS**: 2 credits
   - **Hours**: 2G
   - **Lecturers**: L. E. Fässler, M. Dahinden

   **Abstract**
   The course covers fundamental concepts of computer programming with a focus on systematic algorithmic problem solving. Taught language is C++. No programming experience is required.

   **Objective**
   Primary educational objective is to learn programming with C++. When successfully attended the course, students have a good command of thinking of a computer scientist.

   Secondary goals are an algorithmic computational thinking, understanding the possibilities and limits of programming and to impart the way of thinking of a computer scientist.

   **Content**
   The course covers fundamental data types, expressions and statements, (Limits of) computer arithmetic, control statements, functions, arrays, structural types and pointers. The part on object orientation deals with classes, inheritance and polymorphy, simple dynamic data types are introduced as examples. In general, the concepts provided in the course are motivated and illustrated with algorithms and applications.

   **Lecture notes**
   A script written in English will be provided during the semester. The script and slides will be made available for download on the course web page.

   **Literature**
   - Bjørn Stroustrup: Einführung in die Programmierung mit C++, Pearson Studium, 2010

   **Prerequisites / notice**
   From AS 2013, an admission to the exam does not any more formally require an attending of the recitation sessions. Handing in solutions to the weekly exercise sheets is thus not mandatory, but we strongly recommend it.

   Examination is a one hour-long written test.
Abstract
Students learn to apply selected concepts and tools from computer science for working on interdisciplinary projects. The following topics are covered: modeling and simulations, visualizing multi-dimensional data, managing data with lists and tables and with relational databases, introduction to programming, universal methods for algorithm design.

Objective
The students learn to:
- choose and apply appropriate tools from computer science,
- process and analyze real-world data from their subject of study,
- handle the complexity of real-world data,
- know universal methods for algorithm design.

Content
1. Modeling and simulations
2. Visualizing multidimensional data
3. Data management with lists and tables
4. Data management with a relational database
5. Introduction to macro programming
6. Introduction to programming with Python

Lecture notes
All materials for the lecture are available at www.gdi.ethz.ch

Prerequisites / notice
This course is based on application-oriented learning. The students spend most of their time working through projects with data from natural science and discussing their results with teaching assistants. To learn the computer science basics there are electronic tutorials available.
Abstract
The unit "Computer Science in Secondary School Mathematics" addresses key contributions of computer science to general education, the tight relations between the algorithmic and the mathematical way of thinking, and the thoughtful choice of computer science topics for high school mathematics classes.

Objective
The general goal of the course consists in presenting ways to teach fundamentals of computer science, which are closely related to contents and methods of mathematics. After attending the course unit, a mathematics teacher is able to teach selected fundamentals of computer science in mathematics classes.

Content
The main topics of the course unit "Computer Science in Secondary School Mathematics" represent a scientific and didactic added value for mathematics classes.

- In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.
- They develop the understanding of fundamental scientific concepts such as algorithm, program, complexity, determinism, computation, automata, verification, testing, security of a cryptosystem and secure communication. They reflect on ways to embed them into a scientifically sound and didactically sustainable mathematics course.
- The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.
- The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

THEORETICAL COMPUTER SCIENCE

**252-0057-00L**

**Theoretical Computer Science**

**Abstract**

Concepts to cope with: a) what can be accomplished in a fully automated fashion (algorithmically solvable) b) How to measure the inherent difficulty of tasks (problems) c) What is randomness and how can it be useful? d) What is nondeterminism and what role does it play in CS? e) How to represent infinite objects by finite automata and grammars?

**Objective**

Learning the basic concepts of computer science along their historical development

**Content**

This lecture gives an introduction to theoretical computer science, presenting the basic concepts and methods of computer science in its historical context. We present computer science as an interdisciplinary science which, on the one hand, investigates the border between the possible and the impossible and the quantitative laws of information processing, and, on the other hand, designs, analyzes, verifies, and implements computer systems.

The main topics of the lecture are:

- alphabets, words, languages, measuring the information content of words, representation of algorithmic tasks
- finite automata, regular and context-free grammars
- complexity theory and NP-completeness
- design of algorithms for hard problems

**Lecture notes**

The lecture is covered in detail by the textbook "Theoretical Computer Science".

**Literature**

Basic literature:

Further reading:

More exercises and examples in:

6. A. Asteroth, Ch. Baier: Theoretische Informatik

**Prerequisites / notice**

During the semester, two non-obligatory test exams will be offered.

SYSTEMS PROGRAMMING AND COMPUTER ARCHITECTURE

**252-0061-00L**

**Systems Programming and Computer Architecture**

**Abstract**

Introduction to computer architecture and system programming:

Instruction sets, storage hierarchies, runtime structures with an emphasis on computers as engines for the execution of compiled programs. Interaction between system software and the hardware. Problems that arise from the final representation, performance measurement and tuning, and program portability issues are covered.

**Objective**

The objective is to allow students to understand all aspects of the execution of compiled (C) programs on modern architectures -- the instruction set, the storage resources (registers, stack, memory), input/output, the impact of compiler decisions, and the interaction between the operating system and hardware. Two main themes are correctness issues (esp. those that arise from the finite representation of data) and performance issues (incl. measurement and tuning issues). The interface to the operating system is discussed to prepare for subsequent classes on more advanced systems topics.

The two key goals are:

1) To equip students with a thorough understanding of how to write correct programs that run fast on modern computer, and
2) How to write correct and efficient low-level systems code.

This course does not cover how to design or build a processor or computer.
This course provides an overview of "computers" as a platform for the execution of (compiled) computer programs. This course provides a programmer's view of how computer systems execute programs, store information, and communicate. The course introduces the major computer architecture structures that have direct influence on the execution of programs (processors with registers, caches, other levels of the memory hierarchy, supervisor/kernel mode, and I/O structures) and covers implementation and representation issues only to the extent that they are necessary to understand the structure and operation of a computer system.

The course attempts to expose students to the practical issues that affect performance, portability, security, robustness, and extensibility. This course provides a foundation for subsequent courses on operating systems, networks, compilers and many other courses that require an understanding of the system-level issues. Topics covered include: machine-level code and its generation by optimizing compilers, address translation, input and output, trap/event handlers, performance evaluation and optimization (with a focus on the practical aspects of data collection and analysis).

The course is based in part on "Computer Systems: A Programmer's Perspective" (2nd Edition) by R. Bryant and D. O'Hallaron, with some additional material.

**Abstract**

This course uses compilers as example to expose modern software development techniques.

**Objective**

Learn principles of compiler design, gain practical experience designing and implementing a medium-scale software system.

**Content**

This course uses compilers as example to expose modern software development techniques. The course introduces the students to the fundamentals of compiler construction. Students will implement a simple yet complete compiler for an object-oriented programming language for a realistic target machine. Students will learn the use of appropriate tools (source code parsers, tokenizers, parser generators); the implementation language is Java. Throughout the course, students learn to apply their knowledge of theory (automata, grammars, stack machines, program transformation) and well-known programming techniques (module definitions, design patterns, frameworks). A programming project with asynchronous multiprocessing (shared memory, spin locks, concurrency). To get familiar with message passing communication, some of the exercises will be devoted to a practical lab where participants will develop software for a mobile platform (smartphones).

**Literature**

- Deuflhard and Hohmann, "Numerische Mathematik I", DeGruyter, 2002

**Prerequisites / notice**

The course will be accompanied by programming exercises in C++ relying on the template library EIGEN. Familiarity with C++, object oriented and generic programming is an advantage. Participants of the course are expected to learn C++ by themselves.

### Major in Computational Science

The lecture 151-0107-20L High Performance Computing for Science and Engineering I in the autumn semester can only together with the lecture 401-0686-10L High Performance Computing for Science and Engineering II in the spring semester be accredited as compulsory course.

</tbody>
</table>

**Abstract**

Controlled distributed algorithms (mutual exclusion, logical clocks), communication models (RPC, synchronous/asynchronous communication, broadcast, events, tuple spaces), middleware, service- and resource-oriented architectures (SOAP, REST), security, fault-tolerance (failure models, consensus), replication (primary copy, 2PC, 3PC, Paxos, quorum systems), shared memory (spin locks, concurrency).

**Objective**

Become acquainted with pertinent technologies and architectures of distributed systems.

**Content**

We present the characteristics and concepts of distributed systems, and discuss distributed control algorithms (flooding, mutual exclusion, logical clocks), communications models (remote procedure call, client-server models, synchronous and asynchronous communication), abstract communication principles (broadcast, events, tuple spaces), name services, communication middleware for open systems (e.g., REST, SOAP), infrastructure for ad hoc networking (JINI), cloud computing, and mechanisms for security and safety. Having a distributed system may permit getting away with failures and malfunctions of parts of the system. We discuss fault-tolerance issues (models, consensus, agreement) as well as replication issues (primary copy, 2PC, 3PC, Paxos, quorum systems, distributed storage) and problems with asynchronous multiprocess (shared memory, spin locks, concurrency). To get familiar with message passing communication, some of the exercises will be devoted to a practical lab where participants will develop software for a mobile platform (smartphones).

- M. Hanke-Bourgeois "Grundlagen der Numerischen Mathematik und des wissenschaftlichen Rechnens", BG Teubner, 2002
- Deuflhard and Hohmann, "Numerische Mathematik I", DeGruyter, 2002

**Prerequisites / notice**

The course provides an in-depth introduction to the core concepts of computer graphics, image processing, multimedia and computer vision. The course forms a basis for the specialization track Visual Computing of the CS master program at ETH.

**Objective**

Course topics will include: Graphics pipeline, perception and color models, camera models, transformations and projection, projections, lighting, shading, global illumination, texture, sampling theorem, Fourier transforms, image representations, convolution, linear filtering, diffusion, nonlinear filtering, edge detection, optical flow, image and video compression.

**Content**

In theoretical and practical homework assignments students will learn to apply and implement the presented concepts and algorithms.

**Lecture notes**

A scriptum will be handed out for a part of the course. Copies of the slides will be available for download. We will also provide a detailed list of references and textbooks.

**Literature**

- 151-0107-20L High Performance Computing for Science and Engineering (HPCESE) I W 4 credits 4G M. Troyer, P. Chatzidoukas

**Abstract**

The course provides an introduction to the field of human-computer interaction, emphasising the central role of the user in system design. Through detailed case studies, students will be introduced to different methods used to analyse the user experience and shown how these can inform the design of new interfaces, systems and technologies.

**Objective**

The goal of the course is that students should understand the principles of user-centred design and be able to apply these in practice.

**Content**

The course will introduce students to various methods of analysing the user experience, showing how these can be used at different stages of system development from requirements analysis through to usability testing. Students will get experience of designing and carrying out user studies as well as analysing results. The course will also cover the basic principles of interaction design. Practical exercises related to touch and gesture-based interaction will be used to reinforce the concepts introduced in the lecture. To get students to further think beyond traditional system design, we will discuss issues related to ambient information and awareness.

**Abstract**

This lecture gives an overview of the requirements and the architecture of parallel computer systems, performance, reliability and costs.

**Objective**

Understand the function, the design and the performance modeling of parallel computer systems.
**Cell and Molecular Biology for Engineers I**

A. Steger

The course gives an introduction into cellular and molecular biology, specifically for students with a background in engineering. The focus will be on the basic organization of eukaryotic cells, molecular mechanisms and cellular functions. Textbook knowledge will be combined with results from recent research and technological innovations in biology.

**Objective**

After completing this course, engineering students will be able to apply their previous training in the quantitative and physical sciences to modern biology. Students will also learn the principles how biological models are established, and how these models can be tested.

**Content**

Lectures will include the following topics: DNA, chromosomes, RNA, protein, genetics, gene expression, membrane structure and function, vesicular traffic, cellular communication, energy conversion, cytoskeleton, cell cycle, cellular growth, apoptosis, autophagy, cancer, development and stem cells.

In addition, three journal clubs will be held, where one/two publications will be discussed (part I: 1 Journal club, part II: 2 Journal Clubs). For each journal club, students (alone or in groups of up to three students) have to write a summary and discussion of the publication. These written documents will be graded and count as 25% for the final grade.

**Prerequisites**

Basics of computer architecture.

**Literature**

**Seminar**

- **Software Engineering Seminar**
  - **Number**: 252-2600-05L
  - **Title**: Software Engineering Seminar
  - **Type**: W
  - **ECTS**: 2
  - **Hours**: 2S
  - **Lecturers**: M. Vechev

  **Abstract**

  The course is an introduction to research in software engineering, based on reading and presenting high quality research papers in the field. The instructor may choose a variety of topics or one topic that is explored through several papers.

  **Objective**

  The objective of this seminar is to learn how to present a technical topic in computer science to an audience of peers.

  **Content**

  The technical content of this course falls into the general area of software engineering but will vary from semester to semester.

- **Foundations of Eiffel-Programming**
  - **Number**: 252-2610-00L
  - **Title**: Foundations of Eiffel-Programming
  - **Type**: Z
  - **ECTS**: 0
  - **Hours**: 2G
  - **Lecturers**: H. Lehner

  **Objective**

  The students will:
  - learn Eiffel-specific language concepts and terminology
  - understand the basic concepts of object-oriented programming using Eiffel
  - are able to apply this knowledge to solve algorithmic tasks on their own
  - can write software specifications using Eiffel contracts

  **Content**

  Complementary service for the lecture "Einführung in die Programmierung" of the fall semester 2015 for students in the bachelor regulations 08.

Abstract
The Bachelor thesis is the final requirement of the BSc program and is supervised by one of the D-INFK professors. The thesis encourages students to show and produce a scientifically structured work.

Objective
In their BSc thesis students should demonstrate their ability to carry out independent, structured scientific work.

Prerequisites / notice
The supervisor of the thesis defines the task, start and end date.

A written report will be prepared on the scientific studies carried out, followed by a final presentation.

The thesis must be handed in within 6 months.

**Human Learning (EW1)**

*Title*  
This course is only for students who intend to enrol in the programs "Teaching Diploma" or "Teaching Certificate".  
*Abstract*  
This course looks into scientific theories and also empirical studies on human learning and relates them to the school.  
*Objective*  
Anyone wishing to be a successful teacher must first of all understand the learning process. Against this background, theories and findings on the way humans process information and on human behaviour are prepared in such a manner that they can be used for planning and conducting lessons. Students additionally gain an understanding of what is going on in learning and behavioural research so that teachers are put in a position where they can further educate themselves in the field of research into teaching and learning.  
*Content*  
Thematical Schwerpunkte:  
- Lernen als Verhaltensänderung und als Informationsverarbeitung:  
- Das menschliche Gedächtnis unter besonderer Berücksichtigung der Verarbeitung symbolischer Information; Lernen als Wissenskonstruktion und Kompetenzentwicklung unter besonderer Berücksichtigung des Wissenstransfers; Lernen durch Instruktion und Erklärungen; Die Rolle von Emotionen und Motivation beim Lernen; Interindividuelle Unterschiede in der Lernfähigkeit und ihre Ursachen: Intelligenztheorien, Geschlechtsunterschiede beim Lernen

*Prerequisites / Literature*  
Lernformen:

*Lecture notes / Notice*  
Folien werden zur Verfügung gestellt.

*Prerequisites / Literature*  

*Objective*  
In this seminar, students establish the scientific fundamentals of performance measurement and educational diagnostics and study them on the basis of different current issues.

*Content*  
Die konkreten Inhalte des Seminars ergeben sich aufgrund der Präferenzen der Teilnehmenden und der daraus abgeleiteten Themenübersicht für Vorträge und Seminararbeiten. Im Rahmen der Startveranstaltung wird eine Liste mit möglichen Themen abgegeben und erläutert. Schwerpunkte der Themenvorschläge sind:
- Testentwicklung
- Gütekriterien von Tests
- Aufgabenkonstruktion
- Datenauswertung
- Rasch-Modell
- Internationale Vergleichstests
- Zulassungstests

*Prerequisites / Literature*  
- Zulassungstests
- e-learning

*Objective*  
At the end of the seminar, participants will be in a position to describe the scientific fundamentals of test theory and test structure.

*Content*

*Objective*  
In this coloquium we discuss scientific projects concerning the teaching in mathematics, computer science, natural sciences and technology (STEM). The colloquium is conducted by the professorships participating in the Competence Center EduCat ETH and in the Institute for Educational Sciences (IUS).

*Objective*  
Participants are exemplarily introduced to different research methods used in research on learning and instruction and learn to weigh advantages and disadvantages of these approaches.

*Prerequisites / Literature*  
- Zulassungstests
- e-learning

*Objective*  
In this course students establish the scientific fundamentals of test theory and test structure.

*Content*  
Lecturers

*Prerequisites / Literature*  
- Zulassungstests
- e-learning

*Objective*  
In this seminar, students establish the scientific fundamentals of test theory and test structure.
In this class, students will learn concepts and skills for coping with psychosocial demands of teaching.

(1) They know the basic rules of negotiation and conflict management (e.g., mediation) and can apply them in the school context (e.g., in conversations with parents).

(2) They can apply diverse techniques of classroom management (e.g., prevention of disciplinary problems in the classroom) and know relevant authorities for further information (e.g., legal conditions).

**851-0242-05L** Cognitively Activating Instructions in MINT Subjects

- **Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).**
- This course unit can only be enrolled after successful participation in, or during enrollment in the course “Human Learning (EW 1)”.

**Abstract**

This seminar focuses on teaching units in chemistry, physics and mathematics that have been developed at the MINT Learning Center of the ETH Zurich. In the first meeting, the mission of the MINT Learning Center will be communicated. Furthermore, in groups of two, the students will intensively work on, refine and optimize a teaching unit following a goal set in advance.

**Objective**

- Get to know cognitively activating instructions in MINT subjects
- Get information about recent literature on learning and instruction

**Prerequisites / notice**

Für eine reibungslose Semesterplanung wird um frühe Anmeldung und persönliches Erscheinen zum ersten Lehrveranstaltungstermin ersucht.

**851-0242-07L** Human Intelligence

- Enrolment only possible with matriculation in Teaching Diploma or Teaching Certificate (excluding Teaching Diploma Sport).
- Number of participants limited to 30.
- This course unit can only be enrolled after successful participation in, or during enrollment in the course “Human Learning (EW 1)”.

**Abstract**

The focus will be on the book “Intelligenz: Grosse Unterschiede und ihre Folgen” by Stern and Neubauer. Participation at the first meeting is obligatory. It is required that all participants read the complete book. Furthermore, in two meetings of 90 minutes, concept papers developed in small groups (5 - 10 students) will be discussed.

**Objective**

- Understanding research methods used in the empirical human sciences
- Getting to know intelligence tests
- Understanding findings relevant for education

**851-0242-08L** Research Methods in Educational Science

- Number of participants limited to 30.
- This course unit can only be enrolled after successful participation in, or during enrollment in the course “Human Learning (EW 1)”.

**Abstract**

Literature from the learning sciences is critically discussed with a focus on research methods.

At the first meeting, working groups will be assembled and meetings with those will be set up. In the small groups students will write critical essays about the read literature. At the third meeting, we will discuss the essays and develop research questions in group work.

**Objective**

- Understand research methods used in the empirical educational sciences
- Understand and critically examine information from scientific journals and media
- Understand pedagogically relevant findings from the empirical educational sciences

**Subject Didactics and Professional Training**

Simultaneous enrolment in Introductory Practical in Computer Science - course 272-0201-00L is compulsory.

**Abstract**

The unit “Subject Didactics of Computer Science I” addresses key contributions of computer science to general education. The course deals with the thoughtful choice of educational contents for computer science classes, which takes into account its comprehensibility for different age groups as well as didactic approaches suitable for a successful knowledge transfer.

**Objective**

The general objective of the course consists in highlighting the tight connection between the mathematical and algorithmic way of thinking and the approaches adopted by engineering disciplines, and in reflecting on teaching approaches for sustainable computer science teaching activities.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.
The course "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The chosen topics support the young learners in developing a unique and indispensable way of thinking, in enhancing their understanding of our world as well as in achieving university education entrance qualifications.

The main topics of the course unit "Subject Didactics of Computer Science I" are the didactics of finite state automata, of formal languages and of the introduction to programming. The unit focuses on contents of computer science that contribute to general education. This involves the understanding of fundamental scientific concepts such as algorithm, complexity, determinism, computation, automata, verification, testing and programming language as well as the way to embed them into a scientifically sound and didactically sustainable computer science course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

**Lecture notes**

Underlagen und Folien werden zur Verfügung gestellt.

**Prerequisites / notice**

Lehrdiplom-Studierende müssen diese Lerneinheit zusammen mit dem Einführungspraktikum Informatik - 272-0201-00L - belegen.

<td>Learning the basic concepts of game theory and mechanism design, acquiring the computational paradigm of self-interested agents, and using these concepts in the computational and algorithmic setting.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The Internet is a typical example of a large-scale distributed computer system without central control, with users that are typically only interested in their own good. For instance, they are interested in getting high bandwidth for themselves, but don't care about others, and the same is true for computational load or download rates. Game theory provides a particularly well-suited model for the behavior and interaction of such selfish users and programs. Classic game theory dates back to the 1930s and typically does not consider algorithmic aspects at all. Only a few years back, algorithms and game theory have been considered together, in an attempt to reconcile selfish behavior of independent agents with the common good.

This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.

Outline:
- Introduction to classic game-theoretic concepts.
- Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity.
- Speed of convergence of natural game playing dynamics such as best-response dynamics or regret minimization.
- Techniques for bounding the quality-loss due to selfish behavior versus optimal outcomes under central control (a.k.a. the 'Price of Anarchy').
- Design and analysis of mechanisms that induce truthful behavior or near-optimal outcomes at equilibrium.
- Selected current research topics, such as Google's Sponsored Search Auction, the U.S. FCC Spectrum Auction, Kidney Exchange.

Lecture notes
No lecture notes.

Literature
"Game Theory and Strategy", Philip D. Straffin, The Mathematical Association of America, 5th printing, 2004

Several copies of both books are available in the Computer Science library.

Prerequisites / notice
Audience: Although this is a Computer Science course, we encourage the participation from all students who are interested in this topic.
Requirements: You should enjoy precise mathematical reasoning. You need to have passed a course on algorithms and complexity. No knowledge of game theory is required.

252-0417-00L Randomized Algorithms and Probabilistic Methods W 7 credits 3V+2U+1A A. Steger, E. Welzl

Abstract
Las Vegas & Monte Carlo algorithms; inequalities of Markov, Chebyshev, Chernoff; negative correlation; Markov chains: convergence, rapidly mixing; generating functions; Examples include: min cut, median, balls and bins, routing in hypercubes, 3SAT, card shuffling, random walks

Objective
After this course students will know fundamental techniques from probabilistic combinatorics for designing randomized algorithms and will be able to apply them to solve typical problems in these areas.

Content
Randomized Algorithms are algorithms that "flip coins" to take certain decisions. This concept extends the classical model of deterministic algorithms and has become very popular and useful within the last twenty years. In many cases, randomized algorithms are faster, simpler or just more elegant than deterministic ones. In the course, we will discuss basic principles and techniques and derive from them a number of randomized methods for problems in different areas.

The objective is for the students:

Mentored Work Subject Didactics Computer Science

The course "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The course deals with the thoughtful choice of educational contents for computer science classes, which takes into account its comprehensibility for different age groups as well as didactic approaches suitable for a successful knowledge transfer.

Objective

The general objective of the course consists in highlighting the tight connection between the mathematical and algorithmic way of thinking and the approaches adopted by engineering disciplines, and in reflecting on teaching approaches for sustainable computer science teaching activities.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to express themselves using a comprehensible and refined professional language, both in a spoken and a written way, and they master the basic terminology of computer science. Besides the English terms, they are familiar with the corresponding German expressions. The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

The students are able to independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

They can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Content

The course "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The chosen topics support the young learners in developing a unique and indispensable way of thinking, in enhancing their understanding of our world as well as in achieving university education entrance qualifications.

The main topics of the course "Subject Didactics of Computer Science I" are the didactics of finite state automata, of formal languages and of the introduction to programming. The unit focuses on contents of computer science that contribute to general education. This involves the understanding of fundamental scientific concepts such as algorithm, complexity, determinism, computation, automata, verification, testing and programming language as well as the way to embed them into a scientifically sound and didactically sustainable computer science course.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

Lecture notes

Unterlagen und Folien werden zur Verfügung gestellt.

Literature

Prerequisites / notice

Lehrdiplom-Studierende müssen diese Lerneinheit zusammen mit dem Einführungspraktikum Informatik - 272-0201-00L - belegen.

272-0103-00L Mentored Work Subject Didactics Computer Science 2 credits 4A J. Hromkovic, G. Serafini

Objective

In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

The objective is for the students:

- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.

- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

Abstract

In their mentored work on subject didactics, students put into practice the contents of the subject-didactics lectures and go into these in greater depth. Under supervision, they compile tuition materials that are conducive to learning and/or analyse and reflect on certain topics from a subject-based and pedagogical angle.

### Prerequisites

- **Autumn Semester 2016**

### Content

The objective is for the students:
- to be able to familiarise themselves with a tuition topic by consulting different sources, acquiring materials and reflecting on the relevance of the topic and the access they have selected to this topic from a specialist, subject-didactics and pedagogical angle and potentially from a social angle too.
- to show that they can independently compile a tuition sequence that is conducive to learning and develop this to the point where it is ready for use.

### Literature

Die Arbeit sollte vor Beginn des Praktikums abgeschlossen werden.
In the context of an examination lesson conducted and graded at a high school, the candidates provide evidence of the subject-matter-based and didactic skills they have acquired in the course of their training.

Objective
- to develop and conduct teaching that is conducive to learning at high school level, substantiating it in terms of the subject-matter and from the didactic angle
- to analyze the tuition they have given with regard to its strengths and weaknesses, and outline improvements.

Content
Die Studierenden erfahren das Lektionsthema in der Regel eine Woche vor dem Prüfungstermin. Von der zuständigen Lehrperson erhalten sie Informationen über den Wissensstand der zu unterrichtenden Klasse und können sie vor dem Prüfungstermin besuchen.
Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie bis am Vortag um 12 Uhr den beiden Prüfungsexperten ein.

Die gehaltene Lektion wird kritericmsbasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidats/ der Kandidatin über die gehaltene Lektion im Rahmen eines kurzen Kolloquiums.

Lecture notes / notice
Dokument: Schriftliche Vorbereitung für Prüfungslektionen.
Nach Abschluss der übrigen Ausbildung.

---

272-0205-01L Examination Lesson I in Computer Science Simultaneous enrolment in "Examination Lesson II in Computer Science" (272-0205-02L) is compulsory.

Teaching Diploma in 2 Subjects in One-Step Procedure: no courses from this category have to be completed.

Number Title Type ECTS Hours Lecturers
272-0400-00L Mentored Work Specialised Courses in the Respective Subject with Educational Focus Computer Sc A O 2 credits 4A J. Hromkovic, G. Serafini

Abstract
In the mentored work on their subject specialisation, students link high-school and university aspects of the subject, thus strengthening their teaching competence with regard to curriculum decisions and the future development of the tuition. They compile texts under supervision that are directly comprehensible to the targeted readers - generally specialist-subject teachers at high-school level.

Objective
- to familiarise themselves with a new topic by obtaining material and studying the sources, so that they can selectively extend their specialist competence in this way.
- to independently develop a text on the topic, with special focus on its mathematical comprehensibility in respect of the level of knowledge of the targeted readership.
- To try out different options for specialist further training in their profession.

</tr>
</tbody>
</table>

Prerequisites / notice:

- The course requires solid basic knowledge in analysis, statistics and numerical methods for CSE as well as practical programming experience for solving assignments.
- Students should at least have followed one previous course offered by the Machine Learning Institute (e.g., CIL or LIS) or an equivalent course offered by another institution.
The Internet is a typical example of a large-scale distributed computer system without central control, with users that are typically only interested in their own good. For instance, they are interested in getting high bandwidth for themselves, but don't care about others, and the same is true for computational load or download rates. Game theory provides a particularly well-suited model for the behavior and interaction of such selfish users and programs. Classic game theory dates back to the 1930s and typically does not consider algorithmic aspects at all. Only a few years back, algorithms and game theory have been considered together, in an attempt to reconcile selfish behavior of independent agents with the common good.

This course discusses algorithmic aspects of game-theoretic models, with a focus on recent algorithmic and mathematical developments. Rather than giving an overview of such developments, the course aims to study selected important topics in depth.

Outline:
- Introduction to classic game-theoretic concepts.
- Existence of stable solutions (equilibria), algorithms for computing equilibria, computational complexity.
- Speed of convergence of natural game playing dynamics such as best-response dynamics or regret minimization.
- Techniques for bounding the quality-loss due to selfish behavior versus optimal outcomes under central control (a.k.a. the 'Price of Anarchy').
- Design and analysis of mechanisms that induce truthful behavior or near-optimal outcomes at equilibrium.
- Selected current research topics, such as Google's Sponsored Search Auction, the U.S. FCC Spectrum Auction, Kidney Exchange.

Lecture notes
No lecture notes.

Literature
"Game Theory and Strategy", Philip D. Straffin, The Mathematical Association of America, 5th printing, 2004

Prerequisites / notice
Several copies of both books are available in the Computer Science library.

Audience: Although this is a Computer Science course, we encourage the participation from all students who are interested in this topic.

Requirements: You should enjoy precise mathematical reasoning. You need to have passed a course on algorithms and complexity. No knowledge of game theory is required.

Compulsory Elective Courses
Further course offerings from the category Educational Science are listed under "Programme: Educational Science for Teaching Diploma and TC".

Additional Requirements (ETH-Masterstudents in PHYS/MATH/CSE)

Abstract
Concepts to cope with: a) what can be accomplished in a fully automated fashion (algorithmically solvable) b) How to measure the inherent difficulty of tasks (problems) c) What is randomness and how can it be useful? d) What is nondeterminism and what role does it play in CS? e) How to represent infinite objects by finite automata and grammars?

Objective
Learning the basic concepts of computer science along their historical development

Content
This lecture gives an introduction to theoretical computer science, presenting the basic concepts and methods of computer science in its historical context. We present computer science as an interdisciplinary science which, on the one hand, investigates the border between the possible and the impossible and the quantitative laws of information processing, and, on the other hand, designs, analyzes, verifies, and implements computer systems.

The main topics of the lecture are:
- alphabets, words, languages, measuring the information content of words, representation of algorithmic tasks
- finite automata, regular and context-free grammars
- Turing machines and computability
- complexity theory and NP-completeness
- design of algorithms for hard problems

Lecture notes
The lecture is covered in detail by the textbook "Theoretical Computer Science". Basic literature:

Further reading:

More exercises and examples in:
6. A. Asteroth, Ch. Baier: Theoretische Informatik

Prerequisites / notice
During the semester, two non-obligatory test exams will be offered.
Introduction to computer architecture and system programming:

Instruction sets, storage hierarchies, runtime structures with an emphasis on computers as engines for the execution of compiled programs. Interaction between system software and the hardware. Problems that arise from the final representation, performance measurement and tuning, and program portability issues are covered.

The objective is to allow students to understand all aspects of the execution of compiled (C) programs on modern architectures - the instruction set, the storage resources (registers, stack, memory), input/output, the impact of compiler decisions, and the interaction between the operating system and hardware. Two main themes are correctness issues (esp. those that arise from the finite representation of data) and performance issues (incl. measurement and tuning issues). The interface to the operating system is discussed to prepare for subsequent classes on more advanced systems topics.

The two key goals are:

1) To equip students with a thorough understanding of how to write correct programs that run fast on modern computer, and
2) How to write correct and efficient low-level system code.

This course does not cover how to design or build a processor or computer.

This course provides an overview of "computers" as a platform for the execution of (compiled) computer programs. This course provides a programmer's view of how computer systems execute programs, store information, and communicate. The course introduces the major computer architecture structures that have direct influence on the execution of programs (processors with registers, caches, other levels of the memory hierarchy, supervisor/kernel mode, and I/O structures) and covers implementation and representation issues only to the extent that they are necessary to understand the structure and operation of a computer system.

The course attempts to expose students to the practical issues that affect performance, portability, security, robustness, and extensibility. This course provides a foundation for subsequent courses on operating systems, networks, compilers and many other courses that require an understanding of the system-level issues. Topics covered include: machine-level code and its generation by optimizing compilers, address translation, input and output, trap/event handlers, performance evaluation and optimization (with a focus on the practical aspects of data collection and analysis).

The course is based in part on "Computer Systems: A Programmer's Perspective" (2nd Edition) by R. Bryant and D. O'Hallaron, with some additional material.

**Computer Science as Second Subject**

Important: You can only enrol in the courses of subject didactics and professional training as a subsidiary subject if you have not more than 12 CP left for additional requirements.

Simultaneous enrolment in Introductory Practical in
The unit "Subject Didactics of Computer Science I" addresses key contributions of computer science to general education. The course deals with the thoughtful choice of educational contents for computer science classes, which takes into account its comprehensibility for different age groups as well as didactic approaches suitable for a successful knowledge transfer.

The general objective of the course consists in highlighting the tight connection between the mathematical and algorithmic way of thinking and the approaches adopted by engineering disciplines, and in reflecting on teaching approaches for sustainable computer science teaching activities.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

They encourage the autonomy of the learners, manage to work with diverse target groups and to establish a positive learning environment.

The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

The main topics of the course unit "Subject Didactics of Computer Science I" are the didactics of finite state automata, of formal languages and of the introduction to programming. The unit focuses on contents of computer science that contribute to general education. This involves understanding of fundamental scientific concepts such as algorithm, complexity, determinism, computation, automata, verification, testing and programming language as well as the way to embed them into a scientifically sound and didactically sustainable computer science course.

The students are able to produce detailed, matured, linguistically correct and design-wise appealing teaching materials.

The main objective of the course consists in highlighting the tight connection between the mathematical and algorithmic way of thinking and the approaches adopted by engineering disciplines, and in reflecting on teaching approaches for sustainable computer science teaching activities.

The students understand the fundamental concepts of computer science in the context of a broad and deep knowledge. Through this understanding, they manage to prepare teaching materials for a successful knowledge transfer and to pass their passion for the subject on to their pupils.

The students know various teaching methods as well as their advantages and disadvantages. They can handle inhomogeneous prior knowledge of the learners inside a class. Besides holding classes, the students do care about the individual pupil support.

In a semester exercise, the students develop and document an adaptive teaching unit for computer science. They learn to employ the didactics methods and techniques that are introduced at the beginning of the semester.

Abstract

Students apply the insights, abilities and skills they have acquired within the context of an educational institution. They observe 10 lessons and teach 20 lessons independently. Two of them are as assessed as Examination Lessons.

Objective

- Students use their specialist-subject, educational-science and subject-didactics training to draw up concepts for teaching.
- They are able to assess the significance of tuition topics for their subject from different angles (including interdisciplinary angles) and impart these to their pupils.
- They learn the skills of the teaching trade.
- They practise finding the balance between instruction and openness so that pupils can and, indeed, must make their own cognitive contribution.
- They learn to assess pupils’ work.
- Together with the teacher in charge of their teacher training, the students constantly evaluate their own performance.

Content

Anlässlich der Hospitationen erläutert die Praktikumslehrperson ihre fachlichen, fachdidaktischen und pädagogischen Überlegungen, auf deren Basis sie den Unterricht geplant hat und tauscht sich mit dem/der Studierenden aus. Die von dem/der Studierenden gehaltenen Lektionen werden vor- und nachbesprochen.

Die Themen für die beiden Prüfungslektionen am Schluss des Praktikums erfahren die Studierenden in der Regel eine Woche vor dem Prüfungstermin. Sie erstellen eine Vorbereitung gemäss Anleitung und reichen sie bis am Vortrag um 12 Uhr den beiden Prüfungsexperten (Fachdidaktiker/-in, Departementsvertreter/-in) ein. Die gehaltenen Lektionen werden kriteriumsbasiert beurteilt. Die Beurteilung umfasst auch die schriftliche Vorbereitung und eine mündliche Reflexion des Kandidaten/der Kandidatin über die gehaltenen Lektionen im Rahmen eines kurzen Kolloquiums.

**Abstract**

Students learn how to solve algorithmic problems given by a textual description (understanding problem setting, finding appropriate modeling, choosing suitable algorithms, and implementing them). Knowledge of basic algorithms and data structures is assumed; more advanced material and usage of standard libraries for combinatorial algorithms are introduced in tutorials.

**Objective**

The objective of this course is to learn how to solve algorithmic problems given by a textual description. This includes appropriate problem modeling, choice of suitable (combinatorial) algorithms, and implementing them (using C/C++, STL, OGAL, and BGL).

**Abstract**

Machine learning algorithms provide analytical methods to search data sets for characteristic patterns. Typical tasks include the classification of data, function fitting and clustering, with applications in image and speech analysis, bioinformatics and exploratory data analysis. This course is accompanied by practical machine learning projects.

**Objective**

Students will be familiarized with the most important concepts and algorithms for supervised and unsupervised learning; reinforce the statistics knowledge which is indispensable to solve modeling problems under uncertainty. Key concepts are the generalization ability of algorithms and systematic approaches to modeling and regularization. A machine learning project will provide an opportunity to test the machine learning algorithms on real world data.

**Content**

- Topics covered in the lecture include:
  - Bayesian theory of optimal decisions
  - Maximum likelihood and Bayesian parameter inference
  - Classification with discriminant functions: Perceptrons, Fisher's LDA and support vector machines (SVM)
  - Ensemble methods: Bagging and Boosting
  - Regression: least squares, ridge and LASSO penalization, non-linear regression and the bias-variance trade-off
  - Non parametric density estimation: Parzen windows, nearest neighbour
  - Dimension reduction: principal component analysis (PCA) and beyond

**Lecture notes**

No lecture notes, but slides will be made available on the course webpage.

**Literature**

**Prerequisites / notice**

The course requires solid basic knowledge in analysis, statistics and numerical methods for CSE as well as practical programming experience for solving assignments. Students should at least have followed one previous course offered by the Machine Learning Institute (e.g., CIL or LIS) or an equivalent course offered by another institution.

**Abstract**

Study of fundamental concepts, models and computational methods for the analysis of complex biological networks. Topics: Systems approaches in biology, biology and reaction network fundamentals, modeling and simulation approaches (topological, probabilistic, stoichiometric, qualitative, linear / nonlinear ODEs, stochastic), and systems analysis (complexity reduction, stability, identification).

**Objective**

The aim of this course is to provide an introductory overview of mathematical and computational methods for the modeling, simulation and analysis of biological networks.

**Content**

- Biology has witnessed an unprecedented increase in experimental data and, correspondingly, an increased need for computational methods to analyze this data. The explosion of sequenced genomes, and subsequently, of bioinformatics methods for the storage, analysis and comparison of genetic sequences provides a prominent example. Recently, however, an additional area of research, captured by the label "Systems Biology", focuses on how networks, which are more than the mere sum of their parts' properties, establish biological functions. This is essentially a task of reverse engineering. The aim of this course is to provide an introductory overview of corresponding computational methods for the modeling, simulation and analysis of biological networks.

- We will start with an introduction into the basic units, functions and design principles that are relevant for biology at the level of individual cells. Making extensive use of example systems, the course will then focus on methods and algorithms that allow for the investigation of biological networks with increasing detail. These include (i) graph theoretical approaches for revealing large-scale network organization, (ii) probabilistic (Bayesian) network representations, (iii) structural network analysis based on reaction stoichiometries, (iv) qualitative methods for dynamic modeling and simulation (Boolean and piece-wise linear approaches), (v) mechanistic modeling using ordinary differential equations (ODEs) and finally (vi) stochastic simulation methods.

| 263-5001-00L | Introduction to Finite Elements and Sparse Linear System Solving | W    | 4 credits | 2V+1U | P. Arbenz |
| **Abstract** | The finite element (FE) method is the method of choice for (approximately) solving partial differential equations on complicated domains. In the first third of the lecture, we give an introduction to the method. The rest of the lecture will be devoted to methods for solving the large sparse linear systems of equation that is typical for the FE method. We will consider direct and iterative methods. |
| **Objective** | Students will know the most important direct and iterative solvers for sparse linear systems. They will be able to determine which solver to choose in particular situations. |
| **Content** | I. THE FINITE ELEMENT METHOD |
| | (1) Introduction, model problems. |
| | (2) 1D problems. Piecewise polynomials in 1D. |
| | (3) 2D problems. Triangulations. Piecewise polynomials in 2D. |
| | (4) Variational formulations. Galerkin finite element method. |
| | (5) Implementation aspects. |
| | II. DIRECT SOLUTION METHODS |
| | (6) LU and Cholesky decomposition. |
| | (7) Sparse matrices. |
| | (8) Fill-reducing orderings. |
| | III. ITERATIVE SOLUTION METHODS |
| | (9) Stationary iterative methods, preconditioning. |
| | (10) Preconditioned conjugate gradient method (PCG). |
| | (11) Incomplete factorization preconditioning. |
| | (12) Multigrid preconditioning. |
| | (13) Nonsymmetric problems (GMRES, BiCGstab). |
| | (14) Indefinite problems (SYMMLQ, MINRES). |
| Prerequisites / notice | Prerequisites: Linear Algebra, Analysis, Computational Science. The exercises are made with Matlab. |

| 636-0017-00L | Computational Biology | W    | 4 credits | 3G   | T. Stadler, C. Magnus |
| **Abstract** | The aim of the course is to provide up-to-date knowledge on how we can study biological processes using genetic sequencing data. Computational algorithms extracting biological information from genetic sequence data are discussed, and statistical tools to understand this information in detail are introduced. |
Objective

Attendees will learn which information is contained in genetic sequencing data and how to extract information from them using computational tools. The main concepts introduced are:
- stochastic models in molecular evolution
- phylogenetic & phylodynamic inference
- maximum likelihood and Bayesian statistics

Attendees will apply these concepts to a number of applications yielding biological insight into:
- epidemiology
- pathogen evolution
- macroevolution of species

Content

The course consists of four parts. We first introduce modern genetic sequencing technology, and algorithms to obtain sequence alignments from the output of the sequencers. We then present methods to directly analyze this alignment (such as BLAST algorithm, GWAS approaches). Second, we introduce mechanisms and concepts of molecular evolution, i.e. we discuss how genetic sequences change over time. Third, we employ evolutionary concepts to infer ancestral relationships between organisms based on their genetic sequences, i.e. we discuss methods to infer genealogies and phylogenies. We finally introduce the field of phyldynamics. The aim of that field is to understand and quantify the population dynamic processes (such as transmission in epidemiology or speciation & extinction in macroevolution) based on a phylogeny. Throughout the class, the models and methods are illustrated on different datasets giving insight into the epidemiology and evolution of a range of infectious diseases (HIV, HCV, influenza, Ebola). Applications of the methods to the field of macroevolution provide insight into the evolution and ecology of different species clades. Students will be trained in the algorithms and their application both on paper and in silico as part of the exercises.

Lecture notes

Slides of the lecture will be available online.
https://www.bsse.ethz.ch/cevo/education/cb-materials.html

Literature

The course is not based on any of the textbooks below, but they are excellent choices as accompanying material:
- Drummond, A. & Bouckaert, R. 2015. Bayesian evolutionary analysis with BEAST

Prerequisites / notice

Basic knowledge in linear algebra, analysis, and statistics will be helpful. Some programming experience will be useful for the exercises, but is not required. Programming skills will not be tested in the examination.

151-0104-00L Uncertainty Quantification for Engineering & Life Sciences

W 4 credits 3G P. Koumoutsakos

Abstract

Quantification of uncertainties in computational models pertaining to applications in engineering and life sciences. Exploitation of massively available data to develop computational models with quantifiable predictive capabilities. Applications of Uncertainty Quantification and Propagation to problems in mechanics, control, systems and cell biology.

Objective

The course will teach fundamental concept of Uncertainty Quantification and Propagation (UQ+P) for computational models of systems in Engineering and Life Sciences. Emphasis will be placed on practical and computational aspects of UQ+P including the implementation of relevant algorithms in multicore architectures.

Content

Topics that will be covered include: Uncertainty quantification under parametric and non-parametric modelling uncertainty, Bayesian inference with model class assessment, Markov Chain Monte Carlo simulation, prior and posterior reliability analysis.

Lecture notes

The class will be largely based on the book: Data Analysis: A Bayesian Tutorial by Devinderjit Sivia as well as on class notes and related literature that will be distributed in class.

Literature

1. Data Analysis: A Bayesian Tutorial by Devinderjit Sivia
2. Probability Theory: The Logic of Science by E. T. Jaynes
3. Class Notes

Prerequisites / notice

Fundamentals of Probability, Fundamentals of Computational Modeling

Seminar Computational Science

Number Title Type ECTS Hours Lecturers

252-5701-00L Advanced Topics in Computer Graphics and Vision W 2 credits 2S M. Gross, O. Sorkine Hornung

Abstract

This seminar covers advanced topics in computer graphics, such as modeling, rendering, animation, real-time graphics, physical simulation, and computational photography. Each time the course is offered, a collection of research papers is selected and each student presents one paper to the class and leads a discussion about the paper and related topics.

Objective

The goal is to get an in-depth understanding of actual problems and research topics in the field of computer graphics as well as improve presentations and critical analysis skills.

Content

This seminar covers advanced topics in computer graphics, including both seminal research papers as well as the latest research results. Each time the course is offered, a collection of research papers are selected covering topics such as modeling, rendering, animation, real-time graphics, physical simulation, and computational photography. Each student presents one paper to the class and leads a discussion about the paper and related topics.

Lecture notes

no script

Literature

Individual research papers are selected each term. See http://graphics.ethz.ch/ for the current list.

Prerequisites / notice

Prerequisites:
The courses "Computer Graphics I and II" (GDV I & II) are recommended, but not mandatory.

263-3800-00L Advanced Operating Systems W 6 credits 2V+2U+1A T. Roscoe

Abstract

This course is intended to give students a thorough understanding of design and implementation issues for modern operating systems, with a particular emphasis on the challenges of modern hardware features. We will cover key design issues in implementing an operating system, such as memory management, scheduling, protection, inter-process communication, device drivers, and file systems.
The goals of the course are, firstly, to give students a broader perspective on OS design than that provided by knowledge of Unix or Windows, building on the material in a standard undergraduate operating systems class, and secondly, to provide them with practical experience in dealing directly with the concurrency, resource management, and abstraction problems confronting OS designers and implementers.

This course is intended to give students a thorough understanding of design and implementation issues for modern operating systems, with a particular emphasis on the challenges of modern hardware features. We will cover key design issues in implementing an operating system, such as memory management, scheduling, protection, inter-process communication, device drivers, and file systems.

The course is based around a milestone-oriented project, where students work in small groups to implement major components of a microkernel-based operating system. The final assessment will be a combination grades awarded for milestones during the course of the project, a final written report on the work, and a set of test cases on the final code.

Data: 06.09.2021 13:00  Autumn Semester 2016  Page 824 of 1571
Objective
The seminar will cover topics related to data processing using new hardware in general and hardware accelerators (GPU, FPGA, specialized processors) in particular.

Content
The general application areas are big data and machine learning. The systems covered will include systems from computer architecture, high performance computing, data appliances, and data centers.

Prerequisites / notice
Students taking this seminar should have the necessary background in systems and low level programming.
